The depression that followed the Wall street crash of 1929 made th deep inroads into the Ford fortune, and in one depression year it wa mated that he had lost about $68,000,000. The Ford interests also considerable sum in attempting to stave off the Detroit banking cr Feb. 1933 although the amount was never publicly divulged.

An ardent foe of the New Deal and organized labour, Ford fought attempts to organize his plants. However, after the United Auto Workers (C.I.O.) secured 70% of the votes in an election held National Labor Relations board auspices in June 1941, Ford signed con with the union and acquiesced to the majority of its demands.

Ford, who had retired as active head of the Ford Motor Co. in leaving his son, Edsel, in the presidency, resumed active manageme 1943 after the latter's death. In late 1945 he retired anew, handing ov controls of the company to his grandson, Henry Ford II. Henry Ford died in his home at Dearborn, Mich.

**Forster-Cooper, Clive** (April 3, 1880–Aug. 23), British zoologist.
**Forteviot, John Dewar,** 2nd Baron (March 17, 1885–Oct. 24), British i trialist.
**France, Wesley George** (June 19, 1892–Dec. 4), U.S. research chemist.

**Frazier, Lynn Joseph** (Dec. 21, 1874–Jan. 11), U.S. politician, was bo Steele county, Minn., the son of a midwestern farmer. He attende University of North Dakota, Grand Forks, N.D., from 1897 to 1901.

In 1916 he ran for governor of North Dakota on the Republican ti support of the Non-Partisan league gave him victory and he was re-el in 1918 and 1920, but a coalition of Republicans and Democrats def him on his try for a fourth term in 1921.

The following year (1922), he was elected to the U.S. senate, again the aid of the Non-Partisan league, and he was re-elected in 1928 and After his first year in the upper house, the Republicans alleged Frazier had repudiated their policy and read him out of the party.

During his 18-year tenure in the senate, Frazier was regarded a farmer's champion and helped introduce the various Frazier-Lemke dealing with farm mortgages. While the first of the measures was dec unconstitutional by the supreme court in 1935, the second was uphel third was defeated in congress on grounds that it would lead to inflati

Frazier also gained notice for his ardent support of the prohibition am ment and the cash bonus for veterans of World War I. In foreign poli was a confirmed noninterventionist and before the outbreak of World II, he proposed a constitutional amendment that would bar the U.S. participating in armed conflicts.

He lost his bid for a fourth senate term in 1940. He died after a lo ness, at a hospital in Riverdale, Md.

**Frolich, Finn Haakon** (Aug. 13, 1868–Sept. 5), U.S. sculptor, artist.
**Funck-Brentano, Frantz** (July 15, 1862–June 13), French historian.

**Fyffe, Will** (1885–Dec. 14), Scottish comedian, was born in Dundee, Scot The preparation for his career as one of the most popular character c dians of British stage and screen began when, at the age of seven, he a in a stock company started by his father. Later, as a young man, he to with other companies, always acting "straight" parts. He made his d as a comedian in a touring revue; his character sketches became so po that in 1921 he scored an immediate success at the London Pavilion and given a place in the next Royal Variety performance. From that tim ward his popularity was ensured. He added to it in the 1930s by appear serious screen parts; the most successful was that of the Scottish shephe *Owd Bob*, in which he showed the strong acting ability that underla music-hall achievements. His services in the entertainment of the troo World War II were rewarded by his being appointed a C.B.E. (Comma Order of the British Empire). He died in St. Andrews hospital after an dent.

**Gaffney John Jerome** (March 5, 1891–Nov. 21), U.S. naval officer.
**Gardner, Oliver Max** (March 22, 1882–Feb. 6), U.S. politician, govern official.

**Garvin, James Louis** (1868–Jan. 23), British journalist and editor, wa 35 years the influential editor of the London Sunday paper *Observer*. D his early youth in Cheshire, his mother who intended him for a career i civil service, succeeded, at the cost of much sacrifice, in providing him courses in science and the languages. Garvin began to earn a living in ness as bookkeeper and foreign correspondent clerk. He had mast French and Spanish, to which two languages he later added German. entered journalism at the age of 17 with a letter he sent to the editor o *Eastern Morning News* at Hull. The paper printed it as a special si article, and other contributions followed. At the age of 23, he became p reader of the *Newcastle Chronicle* and later a member of that paper's edit staff. But not before he started, in 1900, to contribute regular article *The Fortnightly Review*, the London Liberal monthly, did his writings r wider circles. Many of these articles were devoted to foreign affairs published under various pseudonyms of which "Calchas" became known. After an introduction to the proprietor of the London *Daily graph*, he became leader writer on that paper. For a short time, he ed *The Outlook*, a weekly paper of some influence, but of insecure finances. great opportunity came in 1908 when Lord Northcliffe, who had bought Sunday paper *Observer* in 1905, but failed to make a success of it, took into partnership and made him editor. Garvin turned it into one of the influential and one of the most successful British Sunday papers. Until despite a change of ownership in 1915, Garvin's long leaders were of siderable importance both in reflecting opinion held in circles close to government of the day, and, conversely, in shaping that opinion. W Garvin left the *Observer* in 1942, for a time he transferred his leader to *Sunday Express*, but finally returned to the *Daily Telegraph* with a wee article on world affairs.

Garvin's activities were not, however, confined to editing the *Obse* From 1926 to 1932, he was, with Franklin Hooper of New York, j editor of the 14th edition of *Encyclopædia Britannica*. He also wrote a b on British empire problems under the title *Economic Foundation of Empire* (1914) and a *Life of Joseph Chamberlain* in four volumes, of wh three had appeared at the time of his death.

**Geiger, Roy Stanley** (Jan. 25, 1885–Jan. 23), U.S. marine corps officer, rn in Middleburg, Fla. He studied law at Stetson university, DeLand, a., graduating in 1907, but instead of taking up a legal career, he enlisted the marine corps. Commissioned as a 2nd lieutenant in 1909, he served in ba, Panamá, the Philippines, China, Haiti and Nicaragua. Geiger took up ght training and was the 5th marine officer to win his wings. He commanded squadron in the 1st marine aviation group in France during World War I d was awarded the navy cross. Later, he served as director of marine iation (1931–35) and in the autumn of 1941, he was commanding general the 1st marine air wing.

In World War II Geiger held many important commands in the Pacific eatre. At Guadalcanal (1942), he organized and led the 1st marine air ng and had over-all command of aviation units of the combined services. e was awarded the gold star for his distinguished service in that campaign. ter, he was recalled to Washington to take up his former post as head of arine aviation. Returning to active duty in Nov. 1943, Geiger participated the amphibious operations during the battle for Bougainville, succeeding . Gen. Alexander A. Vandegrift as commander of army and marine rces in that area. In the summer of 1944 he commanded the expeditionary rce that reconquered Guam and the following April, headed marine corps visions in the Okinawa landings. Promoted to the rank of lieutenant neral in June 1945, Geiger was made commander of the Pacific fleet marine rce later that month (June 22, 1945). His last assignment was as com- ander of the fleet marine force. General Geiger, who was expecting to re- e Feb. 1, 1947, died at Bethesda, Md.

**rge II** (July 20, 1890–April 1), king of the Hellenes, was born at Tatoi ar Athens, the eldest son of King Constantine, and succeeded to the rone for the first time in 1922. Deposed on March 25, 1924, after a series uprisings, he spent the next 11 years in exile until his recall by the Greek sembly in 1935. For his biography, see *Encyclopædia Britannica*. On t. 28, 1940, the day that Italy began the invasion of Greece, George as- med command of the army. On April 23, 1941, when nazi troops approach- Athens, George fled with his government to Crete. A month later he left r Cairo, and finally reached London, via South Africa, on Sept. 22, 1941, here he established his government-in-exile. With the approach of Ger- any's defeat, the resistance movement in Greece showed itself opposed to eorge's unconditional return to the throne, and in Dec. 1944 he consented the appointment of Archbishop Damaskinos as regent. A plebiscite was ld in Sept. 1946 which resulted in a majority in favour of his return, and the end of September he resumed his reign for the third time. He died ddenly in Athens and was succeeded by his brother Paul.

**lach, Charles L.** (Sept. 14, 1895–May 5), U.S. congressman.

**son, Sir John Watson** (Aug. 9, 1885–March 19), British civil engineer.

**ord, Charles L.** (March 15, 1871–Aug. 23), U.S. congressman.

**ert, Samuel T.** (Aug. 29, 1881–March 4), U.S. business executive.

**. Mac Donald** (1884–Jan. 14), British artist, architect, cartographer.

**espie, William** (Nov. 3, 1870–Sept. 13), U.S. mathematician.

**ser, Rudolph W.** (1888?–Sept. 4), U.S. zoologist.

**ichen, Lady Helena** (1873?–Jan. 28), British painter, sculptor.

**ver, Robert Hall** (Oct. 17, 1871–March 23), U.S. clergyman.

**dschmidt, Victor Moritz** (1888–March 20), Norwegian mineralogist.

**nberg, Moses** (Feb. 8, 1866–Feb. 12), U.S. chemist.

**dland, Walter Samuel** (Dec. 22, 1863–March 12), U.S. editor, publisher d politician, was born at Sharon, Wis. A student at Lawrence college, ppleton, Wis., he later taught in district schools and studied law in his are time. He was admitted to the Wisconsin bar in 1885 and set up practice Wakefield, Mich. But two years later, he decided upon a venture in the wspaper business and founded the *Wakefield Bulletin*. In succeeding ears, he was associated with a number of small-town Wisconsin newspapers owner, publisher or editor.

During his lifetime, Goodland was active in Republican politics. He was ayor of Racine, Wis., 1911–15; a delegate to several national conventions; ember of the state senate, 1926–30, 1930–34 and was elected lieutenant vernor for the 1938, 1940 and 1942 terms.

Upon the death of Governor-elect Orland Loomis, Goodland became act- g governor of Wisconsin on Jan. 3, 1943, and was elected governor for the 945–47 term. His tenure was marked by a program of strict economy, and e also gave his support for greater aid to the state's welfare and educational stitutions. He died at Madison, Wis.

**dspeed, Charles Barnett** (Feb. 8, 1885–Feb. 23), U.S. civic leader, poli- ician.

**re, Howard Mason** (Oct. 12, 1887–June 20), U.S. politician and govern- ent official was born at Clarksburg, W.Va., and was graduated from West irginia university, Morgantown, W. Va., in 1900 with a B.A. degree. As- istant secretary of agriculture in President Calvin Coolidge's cabinet uring 1923–24, he was appointed in Nov. 1924 secretary of agriculture, hich post he held until March 4, 1945, when he was sworn in as governor f West Virginia.

Gore died in Clarksburg.

**tt, Edgar Nathaniel** (May 2, 1887–July 17), U.S. aeroplane manufacturer.

**ttlieb, Leon A.** (Nov. 15, 1878–Jan. 13), U.S. Yiddish author, journalist.

**udy, Frederic William** (March 8, 1865–May 11), U.S. type designer, was orn in Bloomington, Ill. He developed his interest in typography while orking in a Chicago bookshop and spent long hours in studying type. After everal unsuccessful ventures in printing establishments, he began designing is own type faces.

In the early 1900s, he and his wife founded their own type firm, the Village ress, in Park Ridge, Ill., a Chicago suburb. The venture was not a success nancially, and the Goudys moved east, finally locating their press in an ld mill in Marlboro, N.Y.

Devoting all of his efforts after 1913 to pure design, Goudy made the illage Press one of the most celebrated presses in the country. Its editions, xtremely limited in number, were set in types of his own design.

The outstanding artistry of Village Press issues soon established oudy as one of the great contemporary masters of type designing. He reated more than 100 type faces, many of which were ranked by experts ith the most beautiful ever moulded. Among these were *Goudy Old Style*, *Goudy 30*, *Village*, *Bertham*, *Kennerly* and *Forum*, as well as a new Hebrew type face made for the University of Palestine.

Unfortunately, the mill which housed his Marlboro plant burned to the ground in 1939 and with it were destroyed 75 or more of his original type designs.

Goudy, who received many national and international awards for his work in beautifying modern typography, wrote the following books: *The Alphabet* (1918), *Elements of Lettering* (1921), *Typologia* (1940) and an autobiography, *A Half-Century of Type-Design and Typography* (1946).

He died at his home in Marlboro, N.Y.

**Gower, Pauline Mary de Peauly** (1911?–March 2), British aviatrix.

**Grant, George Washington** (1870?–April 4), U.S. sports promoter.

**Gray, Finly H.** (July 24, 1864–May 8), U.S. congressman.

**Greene, Roger Sherman** (May 29, 1881–March 27), U.S. physician.

**Greer, Sir Harry** (Sept. 18, 1876–March 20), British M.P., industrialist.

**Greig, Sir Robert Blyth** (March 23, 1874–Nov. 29), British agricultural authority.

**Gretton, John Gretton,** 1ST BARON OF STAPLEFORD (Sept. 1, 1867–June 2), British peer.

**Grzesinki, Albert Carl Wilhelm** (1879–Dec. 31), German politician, police official.

**Gustavus Adolphus,** PRINCE OSCAR FREDERIC ARTHUR EDMOND (April 22, 1906–Jan. 26), hereditary prince of Sweden, was born in Stockholm, the eldest son of Crown Prince Gustavus Adolphus and his first wife, Princess Margaret of Connaught. A versatile athlete, the prince was a member of the Swedish Olympic equestrian team at the 1936 games in Berlin. He was an outstanding steeplechase rider and a champion fencer and was chairman of various motor and aviation as well as athletic organizations. On Oct. 20, 1932, he married Princess Sibylle of Saxe-Coburg-and-Gotha, a second cousin. (Both were descendants of Queen Victoria and Prince Albert.) Prince Gustavus Adolphus was killed in an aeroplane crash near Copenhagen. His death placed his nine-month-old son Prince Carl Gustavus, second in line of succession to the throne of Sweden.

**Hagan, James** (?     –Sept. 1), U.S. playwright.

**Hahn, Reynaldo** (Aug. 9, 1874–Jan. 27), French composer.

**Hallett, George Hervey** (Dec. 30, 1870–Aug. 12), U.S. educator, mathematician.

**Halliday, John** (Sept. 14, 1880–Oct. 17), U.S. actor.

**Hamilton, Sir Ian Standish Monteith** (Jan. 16, 1853–Oct. 12), British army officer, was born at Corfu and educated for a military career at Wellington and Sandhurst. He served with distinction with his regiment on active service in India, Africa and Burma, and in several staff appointments in India until 1898. He fought in the South African War and was later appointed chief of staff to Lord Kitchener. He returned to England having been appointed a K.C.B. and promoted to lieutenant general. He was later appointed adjutant general at the war office and in 1910 was promoted to G.C.B. On the outbreak of World War I he was given a command in England, and in 1915 was sent to command the expedition to the Dardanelles. He was recalled in Oct. 1915 and received no further command. In 1919 he received the G.C.M.G. and many foreign orders. After retiring in 1920 he became chief representative of the British legion in the metropolitan area. From 1932–35 he was lord rector of Edinburgh university. He was for many years the colonel of his old regiment, the Gordon Highlanders.

His publications included: *A Staff Officer's Scrap Book* (1906-07), *The Millennium?* (1918), *Gallipoli Diary* (1920), *When I Was a Boy* (1939), *Listening for the Drums* (1944); and in 1942 he wrote *Jean*, a memoir of his wife whom he had married in 1887. He died in London. (*See* also *Encyclopædia Britannica.*)

**Hammer, Trygve** (Sept. 6, 1878–June 28), U.S. painter, sculptor.

**Hannah, John** (Nov. 27, 1921–June 7), British aviation hero of World War II.

**Harbord, James Guthrie** (March 21, 1866–Aug. 20), U.S. army officer, was born in Bloomington, Ill. For his early career, see *Encyclopædia Britannica*. Gen. Harbord, who was Gen. John J. Pershing's chief of staff during World War I, retired from the army with the rank of lieutenant general. He was president of the Radio Corporation of America from 1923 to 1930 and chairman of the board from 1930 until his death in Rye, N.Y.

**Harcourt, George** (Oct. 11, 1868–Oct. 1), British painter.

**Harding, Arthur McCracken** (Sept. 3, 1884–Dec. 24), U.S. educator.

**Hardt, (Friedrich Wilhelm) Ernst** (May 9, 1876–Jan. 9?), German author.

**Harewood, Henry George Charles Lascelles,** 6TH EARL OF (Sept. 9, 1882–May 24), British peer.

**Harley, John Hunter** (1865–Jan. 11), British author, journalist.

**Harper, George McLean** (Dec. 31, 1863–July 14), U.S. educator, was born in Shippensburg, Pa., and was educated at Princeton university (receiving his Ph.D. degree in 1891) and at the Universities of Göttingen and Berlin.

After a brief fling at journalism in 1884 as copy reader and reporter for a New York paper and as an assistant editor on *Scribner's* magazine (1887–89), he returned to Princeton in 1889 as a French instructor. By 1895 he held the Woodhull chair in the romance languages department, and in 1900 he was appointed Holmes professor of belles-lettres and English language and literature. A quarter of a century later, he was made Woodrow Wilson professor of literature, retiring as professor emeritus in 1932. A close friend and supporter of President Wilson, Dr. Harper edited Wilson's speeches for publication in 1918.

Dr. Harper's works include: *Masters of French Literature* (1901), *The Life of Charles Augustin Sainte-Beuve* (1909), *William Wordsworth, His Life, Works and Influence* (1916), *John Morley and Other Essays* (1920), *Wordsworth's French Daughter* (1921), *Dreams and Memories* (1922), *Spirit of Delight* (1928) and *Literary Appreciations* (1937).

He died at Princeton, N.J.

**Harris, Sir (Charles) Alexander** (June 28, 1855–March 26), British colonial official.

**Harris, Paul Percy** (April 19, 1868–Jan. 27), U.S. lawyer.

**Hartog, Sir Philip Joseph** (March 2, 1864–June 27), British educator.

**Hawes, Harry Bartow** (Nov. 15, 1869–July 31), U.S. politician.

**Haynes, George Henry** (March 20, 1866–Oct. 30), U.S. educator.

**Hecht, Selig** (Feb. 8, 1892–Sept. 19), U.S. biophysicist and authority in the field of vision, was born in Glogow, Austria, and was taken to the United States in childhood. He was graduated with a B.S. degree from City college, New York City, N.Y., in 1913, and obtained his Ph.D. degree from Harvard university in 1917.

Until his appointment to the faculty of Columbia university, New York City, in 1926, Dr. Hecht was a national research fellow in physical chemistry and physiology and did work at laboratories in the U.S., England and Italy.

An authority in a wide range of scientific fields, Dr. Hecht was a member of the American Society of Naturalists, the American Society of Zoologists, the American Physiological society and the Optical Society of America.

His fame rested principally on his work in measuring the minimum number of light quanta detectable by the human eye and his research in colour discrimination and the theory of colour vision. For his work in the field of optics, he was awarded the Frederic Ives medal in 1941; he also received the Townsend Harris medal the following year for his scientific accomplishments.

During World War II, Dr. Hecht worked on vision problems for the armed forces and in 1946, he was made a member of the Emergency Committee of Atomic Scientists, headed by Dr. Albert Einstein. In the latter capacity, Dr. Hecht lectured on atomic energy, and his work *Explaining the Atom* (1947) was lauded by critics as a lucid exposition of nuclear energy for the layman.

He died of coronary thrombosis at his home in New York City, N.Y.

**Heinrichs, Jacob** (March 2, 1860–Aug. 30), U.S. missionary, educator.
**Hellinger, Mark** (March 21, 1903–Dec. 21), U.S. writer, film producer.
**Hellman, Milo** (March 26, 1872–May 11), U.S. orthodontist and anthropologist.
**Hely-Hutchinson, Victor** (Dec. 26, 1901–March 11), British composer, pianist, conductor.
**Henderson, Lucius** (1860?–Feb. 18), U.S. actor, producer.

**Henson, Herbert Hensley** (Nov. 8, 1863–Sept. 27), bishop of Durham from 1920 to 1939, was born at Broadstairs. In the year that he took his degree at Oxford he was elected to a fellowship at All Souls; after seven years in a large industrial parish in Barking, Essex, and five in charge of St. Mary's hospital, Ilford, he was nominated to a canonry of Westminster and the rectory of St. Margaret's, where he became a defender of modernism. In 1917, in spite of the protests of those who considered him too extreme a modernist, he was appointed as bishop of Hereford, and in 1920, after establishing himself as a successful bishop at Hereford, he was translated to the famous see of Durham. At the age of 76 he retired, but in 1940 was reinstated by the prime minister as a canon of Westminster. He died at his home near Ipswich. (*See* also *Encyclopædia Britannica.*)

**Herbert, Henry** (1878?–Feb. 20), U.S. actor.
**Hermine, Princess** (Dec. 17, 1887–Aug. 7), wife of Kaiser Wilhelm II.
**Hetzel, Ralph Dorn** (Dec. 31, 1882–Oct. 3), U.S. educator.
**Hickman, Emily** (July 12, 1880–June 12), U.S. historian, educator.
**Higgins, Edward John** (1864–Dec. 14), British leader of Salvation Army.
**Hill, Arthur Dehon** (June 25, 1869–Nov. 29), U.S. lawyer.

**Hill, Grace Livingston** (April 16, 1865–Feb. 23), U.S. novelist, was born in Wellsville, N.Y., the daughter of a Presbyterian minister. She studied at the Cincinnati Art school and Elmira college, Elmira, N.Y. Mrs. Hill wrote novels for a hobby until the death of her husband in 1899 left her with two small children and no income. She then converted her "hobby" into a livelihood. A prolific writer, she turned out more than three books a year. In her lengthy career as an author, she produced more than 100 novels and her publishers reported that more than 4,000,000 copies of her works had been sold in the U.S. alone. Many of these books were highly sentimentalized and carried sugar-coated "moral" messages. At one point in her career she quit a publisher who had asked her to "soften" or diminish the quantity of moralizing in her books. One of her most widely-read novels was *The Enchanted Barn* (1918). Among her other works are *A Chautauqua Idyl* (1887), *Marcia Schuyler* (1908), *The War Romance of the Salvation Army* (1918), *The Challengers* (1932), *The Sound of the Trumpet* (1943) and *All Through the Night* (1945). Under the pseudonym of Marcia Macdonald she wrote *The Honor Girl* (1927), *Found Treasure* (1928), *Out of the Storm* (1929) and *The White Lady* (1930). Mrs. Hill died at her home in Swarthmore, Pa.

**Hodges, Frank** (April 30, 1887–June 3), British politician, labour leader.
**Hoffenstein, Samuel** (1890?–Oct. 6), U.S. writer.
**Hogarth, Alfred Moore** (June 29, 1876–March 12?), British entomologist.
**Hogate, Kenneth Craven** (July 27, 1897–Feb. 11), U.S. publisher.
**Holland, Sir Thomas Henry** (Nov. 22, 1868–May 15), British geologist, mineralogist.

**Homer, Louise** (April 28, 1871–May 6), U.S. operatic singer, was born Louise Dilworth Beatty in Sewickley, Pa., near Pittsburgh. For her early career, see *Encyclopædia Britannica.* Mme. Homer, who made her debut in Vichy, France, in 1898, became one of the stars of the Metropolitan Opera Company in New York.

Retiring from the Metropolitan after the 1918–19 season, she played with the Chicago Civic Opera in 1920, the San Francisco and Los Angeles Opera companies in 1926 and again returned to the Metropolitan in 1927, continuing thereafter to give recitals throughout the country. During her later years, she resided in Winter Park, Fla., where she died.

**Hooley, Ernest Terah** (1858?–Feb. 11), British financier.

**Hopkins, Sir Frederick Gowland** (June 30, 1861–May 16), British biochemist, was born in Eastbourne, East Sussex, England, and was educated at private schools. For his early career, see *Encyclopædia Britannica.* A pioneer in vitamin research, Sir Frederick and Dr. Christiaan Eijkman were joint winners of the Nobel Prize for physiology and medicine in 1929.

Although best known for his studies in vitamins, Sir Frederick, together with Sir Walter Fletcher, made important contributions to the understanding of chemical changes accompanying muscular contractions; he also isolated the glutathione substance, an important factor in power of living tissues to use oxygen.

He was elected president of the Royal society in 1930 and of the British Association for the Advancement of Science in 1933. On his retirement in 1943 at the age of 82, he attributed the long span of his working largely to his vitamin-buttressed diet. He died at Cambridge, Eng

**Horta, Baron Victor** (1861?–Sept. 8), Belgian architect.
**Houghton, Will H.** (1887?–June 14), U.S. clergyman.
**Howard, Sir Albert,** (Dec. 8, 1873–Oct. 20), British agricultural scienti
**Howe, Arthur Millidge** (June 28, 1867–Oct. 13), U.S. editor.
**Howell, Williamson S., Jr.** (1891?–May 22), U.S. diplomat.
**Hubbard, John W.** (1863?–June 3), U.S. industrialist.
**Huberman, Bronislaw** (Dec. 19, 1882–June 16), U.S. violinist.

**Huch, Ricarda** (July 18, 1864–Nov. 17), German poet and historical no was born at Brunswick, Germany. For her early career, see *Encyclo Britannica.* Considered by critics as one of Germany's greatest w writers, Frau Huch received the Goethe prize in 1931. Among her works were studies of Garibaldi; of the Italian revolutionary Count Fe Confalonieri, who was condemned to life imprisonment for his particip in the Piedmontese revolt of 1821; and of Martin Luther. She di Frankfort-on-Main, Germany.

**Huhner, Max** (June 30, 1873–Nov. 8), U.S. urologist.
**Hunloke, Sir Philip** (1868–April 1), British yachtsman.
**Huntington, Ellsworth** (Sept. 16, 1876–Oct. 17), U.S. geographer.
**Huntoon, Louis Doremus** (Jan. 28, 1869–Feb. 22), U.S. mining engineer, e tor.
**Hutchings, Richard Henry** (Aug. 28, 1869–Oct. 28), U.S. psychiatrist.
**Isham, Mary Keyt** (Aug. 20, 1871–Sept. 28), U.S. psychoanalyst, neurol
**Jackson, Sir (Francis) Stanley** (Nov. 21, 1870–March 9), British cricketer politician.
**Jaggard, William** (1867?–April 27), British Shakespearean authority.
**James, Henry** (1879–Dec. 13), U.S. author.
**Jelf, Sir Arthur Selborne** (Oct. 10, 1876–Feb. 26), British colonial official.
**Jennings, Herbert Spencer** (April 8, 1868–April 14), U.S. zoologist, genet
**Jervey, James Postell** (Nov. 14, 1869–March 12), U.S. army officer, ma matician.
**Jewell, Edward Alden** (March 10, 1888–Oct. 11) U.S. art critic.
**Job, Thomas** (Aug. 10, 1900–July 31), U.S. playwright, educator.
**Johns, Joshua L.** (Feb. 27, 1881–March 16), U.S. lawyer, banker, politicia
**Johnson, Irving Peake** (Nov. 5, 1866–Feb. 28), U.S. clergyman.
**Johnson, Treat Baldwin** (March 29, 1875–July 28), U.S. chemist, educator.
**Johnston, George Napier** (Aug. 1867–April 3), Canadian army officer.
**Jones, Grinnell** (Jan. 14, 1884–June 23), U.S. educator, chemist.
**Jordan, Elizabeth** (1867?–Feb. 24), U.S. author.
**Kaplanoff, Prince Irban-Khan** (1887?–Oct. 10), Russian tzarist army off
**Kaufman, Herbert** (March 6, 1878–Sept. 6), U.S. author, editor.
**Kay, Sir Robert Newbald** (Aug. 6, 1869–Feb. 24), British M.P., church lea
**Keeble, Glendinning** (Feb. 24, 1887–July 20), U.S. educator.
**Kennet, Lady Kathleen** (?–July 25), British sculptress.
**Kenward, Sir Harold** (1894?–Aug. 28), British motorcar manufacturer.
**Keppel, Sir Colin (Richard)** (Dec. 3, 1862–July 9), British naval officer.
**Kerrigan, J. Warren** (1880?–June 9), U.S. motion-picture actor.
**Ketcham, Victor Alvin, Sr.** (Aug. 7, 1883–July 20), U.S. educator.
**Keyser, Cassius Jackson** (May 15, 1862–May 8), U.S. educator, mathe cian.
**Khan, Sir Shafa'at Ahmad** (1893–July 18), Indian political leader.
**Kilvert, Margaret Cameron** (Dec. 21, 1867–Feb. 4), U.S. author.
**King, Caroline Blanche** (1867?–Dec. 2), U.S. editor, author.
**Kirby, C. Valentine** (1875–Sept. 27), U.S. art educator.
**Kirk, Raymond V.** (May 3, 1901–May 27), U.S. Catholic leader, educator
**Knight, Howard Roscoe** (June 23, 1889–Oct. 7), U.S. social worker.
**Kraus, Rene Raoul** (Nov. 3, 1902–July 16), Austrian writer, politician.

**La Guardia, Fiorello H.** (Dec. 11, 1882–Sept. 20), U.S. politician, was in Manhattan's lower east side, of Italian-Jewish parentage. He pa his boyhood in an army post in Arizona where his father, an army b master, was stationed and finished high school in Prescott, Ariz.

At the age of 19, La Guardia worked in U.S. consulates in Buda Hungary, and Trieste, Austria, and was consular agent at Fiume, Hung when he was 22. Returning to New York soon afterward, he worked as a terpreter at Ellis Island, meanwhile studying law.

In 1916, La Guardia was elected to the U.S. house of representative the Republican ticket. During World War I, he served with the U.S. a air forces on the Italian front, was wounded twice, was promoted to rank of major and received the Italian war cross.

On his return home, La Guardia in 1919 was elected president of York's board of aldermen, but gave up the post in 1922 to run again for house of representatives, to which he was elected. In congress he ali himself with Republican liberals and the La Follette progressives and w he was re-elected in 1924, it was as the nominee of the Socialist and Prog sive parties.

La Guardia was defeated by Tammany and old-line Republicans in first try for the New York mayoralty in 1929, but in 1934, he was ele on a Republican-Fusion ticket and was re-elected in 1937 and 1941. He not run for re-election in 1945.

The new mayor broke Tammany's grip in the city and succeeded lar in giving New York an honest administration. But his efforts were colourful and the peppery and aggressive "Little Flower," rushing to fire tongue-lashing politicos, made excellent newspaper copy not only in York but all over the country.

La Guardia was director of the Office of Civilian Defense during W War II, and from March to Dec. 1946 he was director-general of the Un Nations Relief and Rehabilitation administration. He died at his hom Riverdale, the Bronx, N.Y.

**Lamotte, Arthur** (1871?–July 17), U.S. explosives expert.
**Langdon, William Chauncy** (April 21, 1871–April 11), U.S. historian, lib tist.
**Langworthy, William Franklin** (1864?–July 23), U.S. biologist.
**Larimore, Earle** (Aug. 2, 1899–Oct. 23), U.S. actor.

**Larkin, James** (1878–Jan. 30), Irish labour leader, was born in Liverp and worked as a dock labourer. In 1906 he successfully organized the d workers of Belfast. He increased demands for better pay and conditi and his campaign eventually led to his trial and sentence for sedition in 191 ublin. Soon afterward released, he visited England but was not welcomed English labour leaders. He spent most of World War I in the United ates. In 1917 he was found guilty of criminal anarchy, was imprisoned d, in 1922, deported. On his return to Ireland he raised a dockers' strike. e visited Moscow in 1924 but later denied that he was communist. He was ected to the Dail in 1927 but his seat was made vacant because he had been clared bankrupt in 1925. He was again elected in 1937 and took his seat, s bankruptcy being soon afterward annulled. Though still titular head of e Workers' Union of Ireland, in his later years he had ceased to be active. e died in Dublin.

**am, George W.** (1870?–Feb. 25), Canadian educator.

**es, Lewis Edward** (Sept. 13, 1883–April 23), U.S. penologist, was born Elmira, N.Y., son of Harry Lewis Lawes, an employee of the state reformatory.

Running away from home at the age of 17, he joined the army. Upon mpleting his "hitch" three years later, he returned to New York state and, llowing in his father's footsteps, became a guard at Clinton prison, Dannemora, N.Y. He later worked at the Auburn and Elmira penal institutions, as superintendent of New York city's reformatory on Hart's Island and in 19 Gov. Alfred Smith appointed him chief warden of Sing Sing prison in ssining, N.Y.

At Sing Sing, Lawes initiated the principle that prisons should rehabilitate ther than punish its inmates, a concept then regarded as novel and danrously radical. He destroyed class distinctions among prisoners and forced l inmates to wear the same prison uniform regardless of their status or ealth in the outside world. He also instituted prison theatricals, installed fety devices in prison workshops, encouraged athletics, particularly basell and football, and arranged moving picture performances. Later he ranged to have each cell equipped with individual radio earphones.

Lawes was sternly opposed to capital punishment and was honorary esident of the American League to Abolish Capital Punishment. His putation as a constructive penologist grew rapidly and he served as delate at several international prison congresses in Europe. Retiring as arden of Sing Sing in 1941, Lawes thereafter devoted himself to lecturing d writing. Among his works are *Man's Judgment of Death* (1923); *Life d Death in Sing Sing* (1928); *20,000 Years in Sing Sing* (1932); *Cell 202, ng Sing*; *Invisible Stripes*, *Meet the Murderer* (1940) and *Stone and Steel* 941).

He died at his home in Garrison, N.Y.

**rence, Arabella Susan** (1871–Oct. 24), British politician.

**erc de Hautecloque, Jacques Philippe** (1902–Nov. 28), French soldier, was rn in 1902 near Amiens and studied at the military school of Saint-Cyr. n leaving it in 1924 he became a cavalry officer, but later returned as an structor. At the outbreak of World War II he served in France as a capin; he was wounded and taken prisoner in 1940, but escaped to England to in the Free French movement under General Charles de Gaulle. He was most immediately sent to the Cameroons and then to the Chad territory. is famous march from Fort Lamy in Equatorial Africa to join the British h army for the attack on the Mareth line in 1943 distinguished him as one the outstanding young commanders of the war. After the North African mpaign he went to England to raise and train the French 2nd armoured vision, which took part, under his command, in the invasion of Normandy June 1944. Again he made a spectacular march, this time leading the vision into Paris. Later, as part of the French army, troops of the same vision were the first to enter Strasbourg on Nov. 23, 1944; General Leclerc as governor of the city early in 1945. In the same year he was appointed mmander-in-chief of French Indo-China, and officially changed his name om Philippe, Vicomte de Hautecloque, to Leclerc de Hautecloque, using s wartime pseudonym. He died in an aircraft accident in French North frica, where from April 1947 he had held the appointment of inspector the forces of land, air and sea.

**mte du Noüy, Pierre** (1883?–Sept. 22), French scientist.

**of Fareham, Arthur Hamilton Lee,** 1st Viscount (Nov. 8, 1868–July 21), Brith statesman, was born at Bridport, England. He had a military education at e Royal Military academy, Woolwich, served in the royal artillery and later ecame professor of strategy and tactics at the Royal Military college of anada. He was military attaché with the U.S. army during the Spanishmerican War of 1898 and later served as military attaché in Washington. aving retired from the army in 1900, he was elected Unionist (Conservave) member of parliament for Fareham, Dorset.

He became private secretary to the secretary of state for war and, in 902, civil lord of the admiralty, a post he held until Nov. 1905. During orld War I, he served as staff colonel with the British expeditionary forces France. In 1915 he joined the ministry of munitions then under David loyd George. He continued to serve in Lloyd George's administration s director general of food production, 1917–18, minister of agriculture and sheries 1919–21, and first lord of the admiralty, 1921-22. He retired from ctive political life in 1922 upon the resignation of Lloyd George. In 1917 e presented Chequers, his country house in Buckinghamshire, to the nation, s the official country residence of the British prime minister; in 1921 the ouse and the estate of about 1,500 ac. were put at the government's disposal. 1940 he published a volume of memoirs under the title *A Good Innings*.

**Gallienne, Richard** (Jan. 20, 1866–Sept. 14), British poet and critic.
**man, Philip** (Nov. 9, 1861–March 21), U.S. investment banker.

**nard, Benjamin (Benny)** (April 7, 1896–April 18), U.S. pugilist, was born as enjamin Leiner, and grew up in the slums of Manhattan's east side. He ntered the professional boxing ring in 1912. Agile in footwork and a talnted defensive fighter, Leonard defeated Freddie Welsh, British world's ghtweight champion, in a nondecision fight in 1915. Rematched with the riton two years later (1917), he upset predictions that his "powder-puff" unch would result in his defeat and knocked out the champion.

Leonard successfully defended his crown for eight years, meeting all omers. His most famous ring encounters were with Lew Tendler, whom he et twice, and with Johnnie Dundee, perennial contender, who battled Leoard eight times. His fights with Tendler were regarded as ring classics and endler later claimed that on one occasion he was "talked out" of the ampionship by Leonard.

Abiding by his mother's wishes, Leonard retired from the ring in 1925, undefeated. Having lost most of his fortune in the 1929 crash, he attempted a comeback as a welterweight in 1932. But Leonard's age and long absence from the ring tripped up his ambitions and he was knocked out by Jimmy McLarnin, welterweight champion.

During World War II, Leonard served as a lieutenant commander in the U.S. maritime service. He died suddenly of a heart attack while refereeing a bout in a New York city arena, April 18.

**Leonard, Veador** (1888?–Sept. 11), U.S. physician, research chemist.
**Lerch, Archer Lynn** (Jan. 12, 1894–Sept. 11), U.S. army officer.
**Letts, Ira Lloyd** (May 29, 1889–Nov. 24), U.S. jurist.
**Lever, Sir (Samuel) Hardman** (April 18, 1869–July 1), British financial authority.
**Lewin, Kurt** (Sept. 9, 1890–Feb. 12), U.S. educator, psychologist.
**Lewis, Ernest Irving** (Feb. 11, 1873–July 1), U.S. government official, journalist.
**Lillie, Frank Rattray** (June 27, 1870–Nov. 5), U.S. zoologist.
**Lion, Leon M.** (March 12, 1879–March 28), British actor, author, producer.
**Lloyd, Francis Ernest** (Oct. 4, 1868–Oct. 17), U.S. botanist.
**Lloyd, Sir John Edward** (May 5, 1861–June 20), British historian.
**Lofting, Hugh** (Jan. 14, 1886–Sept. 26), Anglo-U.S. writer.
**Lonergan, Augustine** (May 20, 1874–Oct. 18), U.S. lawyer, politician.

**Loring, John Alden** (March 6, 1871–May 8), U.S. naturalist, was born in Cleveland, O. Educated at the Owego Free academy, Owego, N.Y., he also studied at zoological gardens in Europe.

He was field naturalist for the U.S. biological survey from 1892 to 1897 and curator of animals at the New York Zoological park from the latter year to 1901. He was also field naturalist for the U.S. National museum at which time he was commissioned to collect specimens of European birds and mammals. Travelling throughout the continent on this mission, he collected 913 mammal specimens, two of which were at that time unknown to scientists.

Accompanying President Theodore Roosevelt during the latter's expedition and hunting trip to Africa in 1909–10, as field naturalist representing the Smithsonian institution, he penned his adventures and experiences in *Through Africa with Roosevelt*.

He died in Owego, N.Y.

**Lowrey, Bill Greene** (May 25, 1862–Sept. 2), U.S. educator, congressman.

**Lubitsch, Ernst** (Jan. 29, 1892–Nov. 30), U.S. motion picture director, was born in Berlin, Germany. After receiving his early training under Max Reinhardt, Lubitsch became an actor in the pioneer cinema days. Later, however, he found that his forte was directing and by 1918 he had become one of the best-known of the continental directors.

Unfettered by romantic traditions, Lubitsch turned out in European studios such sturdy film fare (for his epoch) as *Passion* and *Gypsy Blood* and developed such actors as Emil Jannings and Pola Negri, whom he later introduced to U.S. audiences.

In 1922, he went to the United States at the invitation of Mary Pickford to direct one of her productions. He thereafter remained in the U.S., soon becoming one of Hollywood's top directors.

In March of 1947, Lubitsch was awarded a special "Oscar" at the annual presentation of awards by the Academy of Motion Picture Arts and Sciences for his "contributions to the industry in twenty-five years as a director."

Among his better-known productions were: *Madame Dubarry*, *The Marriage Circle*, *The Student Prince*, *The Patriot*, *Love Parade*, *Monte Carlo*, *The Smiling Lieutenant*, *Merry Widow*, *Ninotchka*, *Design for Living*, *Bluebeard's Eighth Wife*, *Shop Around the Corner*, *Heaven Can Wait*, *Desire*, *Royal Scandal* and *Cluny Brown*.

He died at his home in Bel Air, Calif.

**Lucas, Robert H.** (Aug. 8, 1888–Oct. 13), U.S. politician.

**Lytton, Victor Alexander George Robert Lytton,** 2nd Earl of (Aug. 9, 1876–Oct. 25), British diplomat and government official, was born in Simla, India. He was educated at Eton and Trinity college, Cambridge, and married Pamela Chichele-Plowden in 1902. He was appointed civil lord of the admiralty in 1916, and thereafter held numerous responsible government positions. He was undersecretary of state for India (1920–22), governor of Bengal (1922–27) and viceroy and acting governor of India (1925).

Lord Lytton headed the Indian delegation to the League of Nations assemblies in 1927 and 1928, later was appointed British delegate to the league, and in Jan. 1932 was named chairman of the League of Nations commission which went to Manchuria to investigate the controversy between China and Japan. The report of the Lytton commission included proposals for a solution to the problem which were adopted by the league assembly, and this led to the withdrawal of Japan from league membership.

Lord Lytton was the author of *Life of Edward Bulwer, First Lord Lytton* (1913), *Old Treasure* and *New Treasure* (1934), *Anthony Viscount Knebworth—A Record of Youth* (1935), *The Web of Life* (1938), *Pundits and Elephants* (1942) and *Love Incarnate* (1945). He died at his home in Knebworth, Hertfordshire, Eng.

**McAfee, Joseph E.** (April 4, 1870–March 14), U.S. educator.
**McCartan, Edward** (Aug. 16, 1879–Sept. 20), U.S. sculptor.
**McCollum, Earl** (June 7, 1889–Feb. 4), U.S. newspaper publisher.
**McConathy, Osbourne** (Jan. 15, 1875–April 2), U.S. musician.

**MacGill, Helen Gregory** (1870?–Feb. 27), Canadian jurist and welfare worker, was born in Hamilton, Ont., and was educated at the University of Toronto. The only woman in her class, she received her M.A. degree in 1888. In her early career, she was a newspaper reporter, and one of her assignments took her to Japan to write a series of articles on social conditions in that country. Later, she returned to the United States to continue her newspaper work, and carried on a campaign for reform of state institutions and for laws to improve the conditions of women and children in industry. At the time of the death in 1900 of her first husband, Dr. F. C. Flesher, she was employed on a large St. Paul daily. She was remarried in 1902 to J. H. MacGill, a former classmate, and moved to Vancouver to practise law. In 1917, Mrs. MacGill became the first woman in British Columbia ever to hold the dual position of juvenile court judge and justice of the peace. She held this post until 1929, and was reappointed to it in 1934. Named a member of the British Columbia Minimum Wage board in 1918, she helped draft the board's first regulations. She was also chairman of the Greater Vancouver Mothers

Pension board, 1920-21. Mrs. MacGill, who retired as judge of the Vancouver juvenile court in Jan. 1945, died in Chicago.

**McGovney, Dudley Odell** (June 23, 1877–Oct. 15), U.S. educator, law authority.
**Machado, Manuel** (1874–Jan. 19), Spanish poet.
**Machen, Arthur** (1863–Dec. 15), British author.
**Mackay, J. Harold** (1875?–March 18), Canadian photographer.
**McKeever, Emmet G.** (1893?–July 9), U.S. oil industrialist.
**Mackensen, Hans-Georg Viktor von** (1883–Oct. 20?), German diplomatist.
**Mackinder, Sir Halford John** (Feb. 15, 1861–March 6), British geographer, parliamentarian, economist.

**McLaughlin, Andrew Cunningham** (Feb. 14, 1861–Sept. 24), U.S. historian and educator, was born in Beardstown, Ill. Graduated from the University of Michigan in 1882, he taught history there until 1906 when he joined the University of Chicago as chairman of the history department, a post he held until 1927.

Upon retiring from active academic life, Dr. McLaughlin devoted several years to writing his opus, *A Constitutional History of the United States*, which appeared in 1935 and which won the Pulitzer prize the following year. Among his other publications are *A History of the American Nation* (1899), *The Confederation and the Constitution* (1905), *The Courts, the Constitution and Parties* (1912), *America and Britain* (1918) and *Steps in the Development of American Democracy* (1920).

Dr. McLaughlin was at various times president of the American Historical association, managing editor of the *American Historical Review* and director of the Carnegie institution's bureau of historical research. He died at his home in Chicago, Ill.

**McLean, Evalyn Walsh** (Aug. 1, 1886–April 26), U.S. society woman, was born in Colorado, the daughter of an Irish millwright who discovered one of the richest gold veins in the state. She inherited the fortune left by her father, and in 1907 married Edward Beale McLean, heir of the family that published the *Cincinnati Enquirer* and the *Washington Post*.

In 1909, McLean gave his wife the Hope diamond, a 44½-carat Indian blue stone which is believed to be a portion of the Regent or Pitt diamond that was stolen with other crown jewels during the French Revolution.

Legend has it that ownership of the Hope diamond brings disaster and tragedy to its possessors. Accordingly, Mrs. McLean's divorce, the death of her eldest son in an auto accident, the death of her daughter from an overdose of sleeping tablets, subsequent confinement of her husband in a mental institution and sundry other misfortunes that befell the family were attributed by some to the Hope "jinx." While Mrs. McLean during her lifetime refused to give credence to the popular superstition surrounding the stone, wearing it on many occasions, a provision of her will stipulated that the gem was to be left in trust for her grandchildren; it would therefore not be worn for at least 20 years after her death.

She died at her home in Washington, D.C.

**McMurtrie, Edith** (?–May 30), U.S. painter, art teacher.

**MacNair, Harley Farnsworth** (July 22, 1891–June 22), U.S. educator and authority on far eastern affairs, was born in Greenfield, Pa., and received his Ph.D. degree from the University of California in 1922. Dr. MacNair was on the faculty of St. John's university in Shanghai for 20 years, starting as an instructor and rising to dean of the department of history and government. In the early 1920s he was dean of the East China summer school, a contributing editor of two important English language reviews on China and was a member of the editorial staff of the *Chinese Recorder*.

Returning to the U.S., he joined the University of Washington, Seattle, Wash., as associate professor of far eastern government and diplomacy, and became professor of far eastern history and institutions at the University of Chicago in 1928.

An authority on China and far eastern affairs, Dr. MacNair was a consultant for the far eastern section of the Office of Strategic Services during World War II.

Among his books are: *China's New Nationalism and Other Essays* (1925), *China's International Relations and Other Essays* (1926), *China in Revolution* (1931), *Modern Far Eastern History* (1934) and *The Real Conflict Between China and Japan* (1938). Dr. MacNair died in Chicago, Ill.

**McNaugher, John** (Dec. 30, 1857–Dec. 11), U.S. theologian.
**MacNeil, Hermon Atkins** (1866–Oct. 2), U.S. sculptor.
**McNicoll, Sir Walter Ramsay** (May 27, 1877–Dec. 25), Australian army officer.
**McQuillan, Hugh** (1898?–Aug. 26), U.S. baseball player.
**Maidstone, Leslie Owen,** SUFFRAGAN BISHOP OF (Feb. 4, 1886–March 2), British clergyman.
**Malisoff, William Marias** (March 14, 1895–Nov. 16), U.S. biochemist.
**Manchester, William Angus Drogo Montagu,** 9TH DUKE OF (March 3, 1877–Feb. 9), British peer.
**Mann, Albert Russell** (Dec. 26, 1880–Feb. 21), U.S. educator, agricultural economist.
**Mannheim, Charles** (1893–Jan. 9), Hungarian sociologist.
**Mansfield, Joseph Jefferson** (1861?–July 12), U.S. congressman.
**Marlow, Georges** (1872–April 10?), Belgian poet.
**Marquet, Albert** (March 27, 1875–June 14), French painter.
**Marston, William Moulton** (May 9, 1893–May 2), U.S. psychologist.
**Martin, Francis** (Oct. 3, 1878–June 1), U.S. jurist.
**Martinez Sierra, Gregorio** (May 6, 1881–Oct. 1), Spanish writer.
**Martini, Arturo** (Aug. 11, 1889–March 22), Italian sculptor.
**Mathers, Frederick Francis** (Oct. 17, 1871–April 14), Nova Scotian government official.
**Mattirolo, Oreste** (Dec. 7, 1856–Dec. 5), Italian botanist.
**Maurey, Max** (1870?–Feb. 27), French playwright.
**Maxwell, George Lawrence** (July 11, 1896–Jan. 3), U.S. educator.
**Michener, Edward** (Aug. 18, 1867–June 16), Canadian politician.
**Mildmay of Flete, Francis Bingham Mildmay,** 1ST BARON (April 26, 1861–Feb. 8), British sportsman, M.P.
**Miles, Vincent Morgan** (Oct. 16, 1885–Aug. 20), U.S. government official.
**Mitchell, Abe** (1887?–June 11), British golfer.

**Mitscher, Marc Andrew** (Jan. 26, 1887–Feb. 3), U.S. naval officer, was born in Hillsboro, Wis. A graduate of the U.S. Naval academy at Annapolis,
(1910), he took up naval aviation in Oct. 1915, and in 1919 attempte
first naval transatlantic flight, but was forced down in the Azores. I
years preceding World War II, he continued his association with the n
aviation section and by 1941 had risen to the rank of rear admiral.
following year, he commanded the aircraft carrier "Hornet" from w
Gen. James Doolittle's army bombers took off to bomb Tokyo, April 18, 1

Adm. Mitscher participated in most of the important naval engagem
in the Pacific war theatre, including the Midway battle (June 1942) an
Battle for the Solomons (1943). In 1944 he was given command of
Force 58, then described as "the most powerful and destructive naval
in the history of sea warfare." During that year, Mitscher's force took
in the Marshall Islands invasion, the attack on Truk, the Marianas inva
and the battles of the Philippine sea and Leyte gulf. On May 11, 1945,
Mitscher, who was directing naval-air operations off the Ryukyus, narr
escaped death when two Japanese Kamikaze planes crashed on the de
the carrier "Bunker Hill," his flagship, taking the lives of at least 373
members.

Relieved of his active command in July 1945, he was returned to W
ington as deputy chief of naval air operations. The following Decemb
was promoted to the rank of a full admiral and on Sept 21, 1946, he
made commander in chief of the U.S. Atlantic fleet. He died at the No
Naval Station hospital, Norfolk, Va.

**Moldenhauer, Paul** (Dec. 2, 1876–Feb. 19?), German economist, politicia
**Monahan, Peter Joseph** (1882–May 6), Canadian Catholic cleric.
**Monroe, Paul** (June 7, 1869–Dec. 6), U.S. educator.

**Monsky, Henry** (Feb. 4, 1890–May 2), U.S. Jewish leader, was born in Om
Neb. Graduated from Creighton university, Omaha, in 1912 with an L
degree, he was admitted to the Nebraska bar the same year. He joine
B'nai B'rith lodge, eventually becoming international president of
Jewish fraternal order. He was also a member of the board of truste
Father Flanagan's "Boys' Town" in Nebraska and chairman of the Juv
Delinquency board set up by Tom Clark, U.S. attorney general.

An ardent Zionist, Monsky was one of the leaders in the campaign
establishing a national Jewish homeland in Palestine. As chairman of
Interim committee of the American Jewish conference, he pleaded
establishment of such a state in testifying before the Anglo-American C
mittee of Inquiry in its Washington sessions in early 1946.

In 1945 Monsky served as consultant to the United States delegatio
the United Nations conference in San Francisco. He died of a heart at
in New York city, N.Y.

**Montgomery-Massingberd, Sir Archibald (Armar)** (Dec. 6, 1871–Oct.
British army officer.

**Monzie, Anatole de** (1876–Jan. 11), French lawyer, politician and autho
**Moody, Paul Dwight** (April 11, 1879–Aug. 18), U.S. educator, churchma

**Moore, Grace** (Dec. 5, 1901–Jan. 26). U.S. operatic and concert singer,
born in Jellico, Tenn. At the age of 17, she sang in a concert with
celebrated Giovanni Martinelli. Though critics gave her high praise,
appearance did not provide her with an immediate entree into opera.

In 1926 she went to Europe where she studied under Richard Barthel
and Mary Garden. After appearing at La Scala in Milan, she was sig
to appear at the Metropolitan opera in New York. Her debut in the
of Mimi in *La Bohème* in 1928 was widely publicized in advance. Cri
acclaim emphasized the sparkle and vivacity of her acting.

Remaining with the Metropolitan for three seasons, she gave not
performances in the role of Juliet in *Romeo and Juliet*, of Marguerit
*Faust*, Michaela in *Carmen* and in the title role of *Manon Lescaut*.
July 15, 1931, she was married to Valentin Parera.

After a disappointing first venture in motion pictures, Miss Moore sc
a box-office success in *One Night of Love*. Her subsequent films were
well received.

In 1935 Miss Moore appeared in London and gave a command perfo
ance for Queen Mary, and during World War II, she toured U. S. a
camps under the auspices of U. S. O. Camp Shows, Inc.

In July 1946 Miss Moore went to Europe on a prolonged tour. It
during this itinerary that she boarded a plane at the airport near Co
hagen, Denmark, intending to fly to Sweden. The plane, however, cras
shortly after its take off and Miss Moore and 21 other occupants were kil

**Moore, John Bassett** (Dec. 3, 1860–Nov. 12), U.S. jurist, was born in Smyr
Del. For his early career, see *Encyclopædia Britannica*. One of the co
try's leading authorities on international law, Moore was professor of in
national law and diplomacy at Columbia university from 1891 to 192
member of the Permanent Court of Arbitration at The Hague (1912–
and a judge of the Permanent Court of International Justice (1921–28).
confirmed pessimist regarding the chances for maintaining universal pe
Dr. Moore argued in 1933 that the cost of guaranteeing peace was so gr
that unless a nation were willing to sacrifice all its manpower and resour
in the effort, it had better adhere to its own neutrality.

Author of numerous works in his field, Dr. Moore wrote *Pending Neut
ity Proposals, Their False Conceptions and Misunderstandings* (1936). T
*Digest of International Law*, a monumental eight-volume work of which
was editor, was published in 1937.

He died at his home in New York city, N.Y.

**Mora, Jo (Joseph Jacinto)** (Oct. 22, 1876–Oct. 10), U.S. sculptor, author
**Morales, Carlos Alberto** (April 26, 1888–Dec. 11), Nicaraguan politician.
**Morgan, William A.** (1872?–May 27), U.S. financier, industrialist.
**Morriss, Hilda** (1888?–June 12), U.S. author.
**Mortimer, Stanley Grafton** (Dec. 11, 1890–April 5), U.S. racquets player

**Mottistone, John Edward Bernard Seely,** 1ST BARON OF (May 31, 1868–Nov.
British soldier, politician and author, was educated at Harrow and Trin
college, Cambridge. For his early career, see *Encyclopædia Britann*
After retiring from the army and active politics, Lord Mottistone produ
a number of books including *Adventure* (1930), *Fear and Be Slain* (19
*Launch* (1932), *For Ever England* (1932), *My Horse Warrior* (1934)
*Paths of Happiness* (1938). He died at his home in London.

**Moulton, Warren Joseph** (Aug. 30, 1865–May 7), U.S. educator, theologi
**Muller-Ury, Adolfo** (March 28, 1864–July 6), U.S. artist.

**nson, Edward Lyman** (Dec. 27, 1868–July 7), U.S. army medical officer.

**rray, Sir (George) Evelyn (Pemberton)** (July 25, 1880–March 30), British overnment official.

**sser, John Herr** (June 9, 1883–Sept. 5), U.S. physician, educator.

**gano, Osami** (1880–Jan. 5), Japanese naval officer, was born in June at Kochi, Japan. After graduating from the naval academy in 1900, he atended the naval staff college. In 1913 he was a language officer in the J.S., where he studied law at Harvard university and took courses at the Var college. As naval attaché in Washington, 1920–23, he participated in he Washington Naval conference of 1921–22 and later represented his ountry at other international conferences, including the London Naval onference in 1935–36, and the Geneva Naval Limitations conference. At he London meeting, Nagano withdrew his delegation in protest over the roposed 5–5–3 ratio and rejected Pres. Franklin D. Roosevelt's proposal f a 20% naval reduction. In 1936 Nagano became navy minister in Premier Koki Hirota's cabinet and was named naval chief of staff in April 1941. Early Japanese naval successes after Pearl Harbor earned Nagano a reputation as a naval strategist, but subsequent reverses at the hands of the J.S. fleet led to his ouster as chief of staff, Feb. 21, 1944. Interviewed by U.S. correspondent after the war, Nagano declared that he took full reponsibility for the Pearl Harbor attack. He was one of 28 Japanese officials ormally accused in April 1946 of war crimes and was standing trial in Tokyo before the International War Crimes Tribunal at the time of his leath.

**sh, Philip Curtis** (Aug. 28, 1890–May 6), U.S. educator.

**ilson, Nellie** (April 5, 1873–May 26), U.S. historian and educator, was born n Philadelphia, Pa., and was graduated with an A.B. degree from Bryn Mawr college, Bryn Mawr, Pa., in 1893. Miss Neilson, who also received ier Ph.D. from Bryn Mawr, taught history there from 1902 to 1903 and hen joined the faculty at Mt. Holyoke college, South Hadley, Mass., as history professor. Later appointed chairman of the history department, she wrote a number of important historical works dealing with economic and social conditions of mediaeval England. She was active in the American Historical association, and was elected president of that body in 1943, the first woman ever to hold that position. Miss Neilson also was the first woman to have a volume published in the *Oxford Studies in Social and Legal History*, the first to edit a yearbook for the Selden society and the first to have an article published in the *Harvard Law Review*.

She retired from Mt. Holyoke in 1939, becoming professor emeritus. Miss Neilson's works, published in the United States or England, include: *Economic Conditions on the Manors of Ramsey Abbey* (1899), *Customary Rents* (1910), *The Terrier of the Fleet* (1920), *The Cartulary of Bilsington* (1927) and *Medieval Agrarian Economy* (1936).

Miss Neilson died in South Hadley, Mass.

**lson, Thomas Horatio Nelson,** 4TH EARL (Dec. 21, 1857–Sept. 30), British peer.

**wstead, Robert** (Sept. 11, 1859–Feb. 16), British entomologist.

**chols, Spencer Van Bokkelen** (July 30, 1882–June 30), U.S. author, publicist.

**cholson, Meredith** (Dec. 9, 1866–Dec. 21), U.S. novelist, diplomat.

**cholson, Sir Sydney Hugo** (Feb. 9, 1875–May 30), British organist.

**rdhoff, Charles Bernard** (Feb. 1, 1887–April 12), U.S. author, was born in London, England, of American parents who returned to the United States while he was still a child. Graduated from Harvard university in 1909, he served in World War I and was successively an ambulance driver in France, a pilot in the Lafayette escadrille and, after the United States entered the conflict, an aviator in the U.S. army.

Following the armistice, Nordhoff and James Norman Hall, also a member of the French flying corps, collaborated in writing a history of the escadrille. Continuing their collaboration, Nordhoff and Hall went to Tahiti. Nordhoff married a native woman whom he divorced in 1941.

Meanwhile the Nordhoff-Hall combination produced a number of books, starting with *Faery Lands of the South Seas* (1921). Their most popular work, however, was *Mutiny on the Bounty* (1932), which was subsequently made into a successful moving picture.

Other Nordhoff-Hall books were *Falcons of France* (1929), *The Hurricane* (1935), *The Dark River* (1938), *Botany Bay* (1941) and *The High Barbaree* (1945). Nordhoff also wrote four books by himself, all of which were published between 1919 and 1928.

He died during the night of April 11–12 in Santa Barbara, Calif.

**orman, Fred** (March 21, 1882–April 17), U.S. congressman.

**bici, Amedeo** (July 15, 1877–May 21), U.S. business executive.

**'Brien, Howard Vincent** (July 11, 1888–Sept. 30), U.S. journalist and author, was born in Chicago. After graduating from Yale university (1910), he edited several magazines and took a flier in advertising. In World War I he served as a lieutenant in the U.S. field artillery.

In 1928, O'Brien joined the Chicago *Daily News* as book editor and four years later he started a column, entitled "All Things Considered." The column was given a choice spot on the editorial page and replaced the "Sharps and Flat" daily feature, the title of which had been originated by Eugene Field.

Although he wrote a number of books, O'Brien was particularly known in the midwest as a columnist. He touched on a wide variety of subjects with a simple, humble sincerity that won him a wide readership. Especially famous was his column entitled, "So Long, Son," written as a tribute to his son who had been killed in World War II. The tribute was reprinted in pamphlet form and was dramatized on the air. His books include: *New Men for Old* (1912), *Trodden Gold* (1922), *The Thunderbolt* (1923), *Wine, Women and War* (1926) and *An Abandoned Woman* (1930).

Bedridden the last year of his life, O'Brien persisted in writing his column from "Cell 308," the name he gave his hospital room, until his illness became so acute that he could no longer continue.

O'Brien died in Evanston, Ill.

**'Donnell, John Hugh** (June 2, 1895–June 12), U.S. educator, was born in Grand Rapids, Mich. A year after his graduation from Notre Dame university, Notre Dame, Ind., in 1916, he entered the Congregation of the Holy Cross, the religious society which conducts the university, and was ordained a priest in 1921.

From 1922 to 1940, with the exception of a three-year period (1931–34), when he served as president of St. Edward's university in Austin, Tex., Father O'Donnell was associated with Notre Dame in teaching or administrative posts.

He was prefect of discipline and director of student welfare at Notre Dame from 1923 to 1930, vice-president of the university from 1934 to 1940 and acting president from Jan. to July 1940. In the latter month he was chosen as president.

Father O'Donnell, who retired from the university's presidency in July 1946, died in South Bend, Ind.

**O'Leary, John** (July 18, 1881–Oct. 27), U.S. labour official.

**Orczy, Emmuska,** BARONESS (MRS MONTAGUE BARSTOW) (1865–Nov. 12), British novelist, was born in Tarnaörs, Hungary, the only child of Baron Felix Orczy. She was educated in Brussels and Paris, and at the age of 16 went to London to study painting at the Heatherley school of art, exhibiting at the Royal academy while still a student.

She began writing in 1900 with a series of detective stories for the *Royal Magazine*, and in 1905 produced the novel *The Scarlet Pimpernel* from one of her own short stories. This story of romantic adventure during the French revolution was to make her reputation as a popular novelist, but it had no success until she and her husband cast it in the form of the play which ran in London for four years. Immense sales of the novel followed; from that time forward she wrote many successful tales of adventure. Besides other stories of the Scarlet Pimpernel, some of her best-known books were *Beau Brocade*, (1908), *The Laughing Cavalier* (1914), and *The Honourable Jim* (1924), all written in the same sword-and-cloak tradition. Her last book, *Will-o'-the-Wisp* appeared in 1947; her memoirs were published in 1946. She died in London.

**Orsini, Prince Domenico Napoleone** (Nov. 7, 1868–March 21), Italian nobleman, Vatican lay official.

**Osgood, Wilfred Hudson** (Dec. 8, 1875–June 20), U.S. naturalist.

**Owen, Derwyn Trevor** (July 29, 1876–April 9), primate of the Anglican Church in Canada, was born in Twickenham, England. Educated at Trinity university, Toronto, Ont., Canada, he was ordained a deacon in 1900 and a priest the following year. He served as curate, rector and dean of several Anglican churches in Toronto and Hamilton from 1902 to 1925 and was consecrated bishop of Niagara in 1925, bishop of Toronto in 1932, becoming archbishop of Toronto and Anglican primate of all Canada in 1934. The archbishop, who had long crusaded for a united church became the first president of the Canadian Council of Churches in 1944.

He died of a heart attack in Toronto.

**Owen, Robert Latham** (Feb. 3, 1856–July 19), U.S. politician, was born in Lynchburg, Va., and studied at Washington and Lee university. Owen was of part Cherokee blood, and his energetic espousal of Indian causes won him national publicity. He was active in checking efforts to dispossess Cherokees and other tribes of their land in the Indian Territory in what is now Oklahoma. Largely through his efforts, the national Banking act was extended over the Indian territory, and he was responsible also for establishing the U.S. court in the territory.

In the 1890s Owen, acting as lawyer for various Indian tribes which had instituted actions against the government, succeeded in recovering large sums for the eastern and western Cherokees, the Choctaws and Chickasaws.

In 1901 Owen authored the act of congress that gave citizenship to the 70,000-odd Indians in the territory and also was instrumental in securing its passage.

When Oklahoma was admitted to statehood in 1907, Owen was elected to the U.S. senate. He remained in the senate until 1925, where he led the fight for ratifying the League of Nations covenant and participated in the drafting of the Federal Reserve act and the Farm Loan act. He died in Washington, D.C.

**Padway, Joseph Arthur** (July 25, 1891–Oct. 8), U.S. labour lawyer, was born in Leeds, Yorkshire, Eng. Emigrating to the United States in his youth, he studied at Marquette university, Milwaukee, Wis., graduating in 1912, and practised law in Milwaukee. Padway became general counsel to the Wisconsin State Federation of Labor in 1915, and achieved national prominence during the strike against the Kohler factory in 1934. In 1938, he was engaged by the American Federation of Labor as full-time general counsel and thereafter was recognized as its spokesman.

When he assumed this position, the A.F. of L. was engaged on a program to amend the Wagner act which it had regarded as partial to the C.I.O. Padway subsequently brought much of the litigation between the two unions before the U.S. supreme court. He also found himself in opposition to the investigation of the building trades unions proposed by Thurman Arnold (then head of the justice department's antitrust division), and to the antitrust action brought against James C. Petrillo, head of the Musicians union, an A.F. of L. affiliate.

During World War II, he represented the A.F. of L. during army and navy conferences on hiring policy and he opposed such wartime legislation as the Smith-Connally antistrike law, the Ball-Burton-Hatch labour bill and also attacked the constitutionality of the Lea bill which threatened to curb Petrillo's activities. Padway was one of the counsels for John L. Lewis during the latter's trial in 1946 when the federal government obtained an injunction against the coal strike and won its case.

Mr. Padway was addressing the A.F. of L. annual convention in San Francisco, Calif., when he suffered a stroke, and died a few hours later.

**Pardo, Jose** (Feb. 24, 1864–Aug. 4), Peruvian statesman.

**Parker, Frank** (Sept. 21, 1872–March 13), U.S. army officer.

**Parmelee, Cullen Warner** (July 27, 1874–Aug. 20), U.S. ceramics expert.

**Passfield, Sidney James Webb,** 1ST BARON (July 13, 1859–Oct. 13), British statesman and political economist, was born in London. Although he was a cabinet member in two Labour governments, he was never a conspicuous public figure; the works of historical research, political propaganda and public service for which he and his wife were responsible formed the greater part of his achievements. For his early life, see *Encyclopædia Britannica*.

After his resignation from the government in 1931, he retired from active politics and turned to the completion of his studies and investigations. In

1943, with the death of Lady Passfield, his long and remarkable partnership with "Beatrice Webb" came to an end. He died at Liphook, Hampshire.

**Paterson, Sir Alexander** (Nov. 20, 1884–Nov. 7), British penologist.

**Patiño, Simón Ituri** (June 1, 1862–April 20), Bolivian multimillionaire industrialist and "tin king," was born on June 1 in Cochabamba, of poor parents. While working in a general store, he acquired ownership of a mine from an Indian who could not pay a $250 debt. Believing that the mine contained rich silver lodes, Patiño was disappointed when he discovered that it consisted only of tin. However, European agents seeking new sources of tin to replace the worked-out lodes of Cornwall and Saxony, offered him a $5,000 loan to work his mine.

The European and North American demand for tin increased enormously, and Patiño's "wall of tin" became a source of immense wealth. Eventually he became owner of the largest tin deposits in the world, as well as other mining properties, banks and railroads.

He went abroad in 1922 and never returned to Bolivia. However, he was considered an important political factor in that country, because tin was the chief source of its income. He was Bolivian minister to Spain, 1920–26. and to France, 1926–41. During World War II, he lived for a short while in the United States and then moved to Buenos Aires, Arg., where he died.

**Patterson, John Henry** (Nov. 10, 1867–June 20?), British army officer.
**Peale, Arthur Lincoln** (1868?–March 1), U.S. writer.
**Pelletier, George** (1882?–Jan. 20), Canadian newspaper executive.
**Penrose, Stephen Beasley Linnard** (Dec. 20, 1864–April 29), U.S. educator.
**Pepper, William** (May 14, 1874–Dec. 3), U.S. medical educator.
**Perkins, Maxwell Evarts** (Sept. 20, 1884–June 17), U.S. editor, publisher.

**Perry, James De Wolf** (Oct. 3, 1871–March 20), U.S. Episcopal bishop, was born in Germantown, Pa. Graduated from Harvard university in 1892 with an M.A. degree and with a B.D. from the Cambridge Theological school, Cambridge, Mass., in 1895, he entered the Episcopal Church as a deacon in the latter year and was advanced to the priesthood in 1896. After serving as rector in several eastern seaboard churches, he was consecrated in 1911 as seventh bishop of Rhode Island. Elected presiding bishop of the church in 1930 for a temporary period, Dr. Perry was re-elected in 1931 for the full six-year term. The position of presiding bishop, analogous to that of the archbishop of Canterbury in England, made Dr. Perry the ranking Episcopal churchman in the United States. In 1933 Bishop Perry made a five-month tour of Episcopal missions in the orient to investigate charges of maladministration; on his return to the United States, he asserted that the "copious criticisms" levelled at the missions abroad were not justified. Dr. Perry, who was overseer at Harvard from 1937 to 1943, died in Summerville, S.C.

**Petit de Julleville, Pietro,** CARDINAL (Nov. 22, 1876–Dec. 10), French Catholic prelate, was born at Digione, son of Louis Petit de Julleville, French historian of literature. Ordained in 1903, Msgr. Petit de Julleville served as chaplain with the French army during World War I, and was elevated to the rank of bishop in 1927. Nine years later, he was named archbishop of Rouen and primate of Normandy. During World War II, Msgr. Petit de Julleville refused to leave Rouen and remained in the city during the German occupation. On Feb. 18, 1946, he was proclaimed a cardinal at the Vatican consistory. He died in Rouen.

**Petkov, Nikola Dimitrov** (1889–Sept. 23), Bulgarian democratic leader, was from the beginning of his career in politics a member of the Agrarian National Union which, after World War I, supported and sought to represent politically the large peasant class of Bulgaria. Its leader, Alexander Stambolisky, was murdered in 1923, and from that time until World War II its leading members, among whom was Petkov, fought an unequal battle against arbitrary government; Petkov himself spent many years in prisons or concentration camps because of his bold opposition. He was interned during the early years of World War II, but later became one of the leaders of the Bulgarian resistance movement. When underground activity had enabled the party to seize power in Sept. 1944, he signed the Moscow armistice that ranked Bulgaria among the Allies. He became deputy prime minister but his efforts to co-operate with his Communist colleagues were unsuccessful, and in Aug. 1945 he and his fellow-agrarians resigned, going into public opposition. The elections of autumn 1946, although discredited by the western powers because of the open intimidation exercised over the voters, nevertheless resulted in a total for the Agrarian party of one-third of the votes; Petkov's public conclusion that the country should therefore be governed by a Communist-Agrarian coalition aroused the full hostility of his opponents, and he was presently arrested in June 1947 and charged with plotting a military coup d'état.

His trial in Sofia in August resulted in a sentence of death. Representations from the British and U.S. governments asking for a suspension of the sentence were rejected, giving rise to serious protest in both countries. Petkov's appeal to the Bulgarian supreme court was dismissed. He was hanged in the Sofia central prison. (*See* also BULGARIA.)

**Phillimore, Godfrey Walter Phillimore,** 2ND BARON (Dec. 29, 1879–Nov. 28), British peer.
**Phillips, Oscar L.** ("SANTA CLAUS") (1890?–April 5), U.S. postal employee.
**Pickford, Sir Alfred Donald** (May 20, 1872–Oct. 7), British government official.
**Pierce, Henry J.** (Aug. 29, 1859–Aug. 7), U.S. utilities executive.

**Planck, Max** (April 23, 1858–Oct. 3), German physicist, was born at Kiel. His father, who was professor of constitutional law at Kiel university and later at Göttingen, was joint author of the Prussian civil code. At 17 he began his studies at Munich, and three years later attended courses at Berlin university, where his attention was first directed to thermodynamics by the teachings of Gustav Kirchhoff. After five years as an assistant at Munich he became professor of physics at Kiel; in 1889 he left Kiel for Berlin as professor extraordinarius, and in 1892 succeeded Kirchhoff in the chair of experimental physics, where he remained for the rest of his teaching life.

Planck shares with Albert Einstein the main credit for having initiated the revision of physical concepts which has been in progress during the 20th century. His great discovery of the quantum of action was announced in a paper "On the Distribution of Energy in a Normal Spectrum" to the German Physical society on Dec. 14, 1900, and from that time his reputation as a physicist grew until he was regarded as the *doyen* of international science. In 1912 he was appointed permanent secretary to the Prussian Academy for Science, and in the year 1913–14 was rector of Berlin university. The N prize for physics was awarded to him in 1918. In 1929, after having b foreign member for three years, he was awarded the Royal Society's C medal; and in 1930 he became president of the Kaiser Wilhelm society highest academic post in Germany.

He died at Göttingen. (See *Encyclopædia Britannica*).

**Plant, James Stuart** (Aug. 3, 1890–Sept. 7), U.S. psychiatrist.
**Plunket, Benjamin John** (Aug. 1, 1870–Jan. 27), Irish clergyman.
**Popham, Sir Henry Bradshaw** (Aug. 1, 1881–April 15), British colonial off
**Porter, Henry Hobart** (March 12, 1865–Feb. 9), U.S. public utility execu
**Post, Alice Thacher** (June 8, 1853–Feb. 2), U.S. editor, author.
**Pott, Francis Lister Hawks** (Feb. 22, 1864–March 7), U.S. educator.
**Potter, John Milton** (Oct. 22, 1906–Jan. 9), U.S. educator.
**Powell, John Benjamin** (April 18, 1886–Feb. 28), U.S. journalist.
**Powerscourt, Mervyn Richard Wingfield,** 8TH VISCOUNT (July 16, 1880–M 21), British peer.
**Preston, Frances Folsom (Cleveland)** (July 21, 1864–Oct. 29), widow of P dent Grover Cleveland.
**Prévité-Orton, Charles William** (Jan. 16, 1877–March 11), British histo
**Priest, George Madison** (Jan. 25, 1873–Feb. 18), U.S. educator.
**Puddester, Sir John Charles** (Oct. 4, 1881–April 22), Newfoundland gov ment official.

**Raczkiewicz, Wladyslaw** (Jan. 29, 1885–June 6), Polish statesman, was in Kutaisi, Georgia, the son of a distinguished lawyer. He took up law, g uating at Tarbu (Dorpat) university in Estonia, and shortly afterwar tablished a practice at Minsk. A conscript in the Russian army in 1914 served as lieutenant until the 1917 March revolution. He then took a l ing part in the organization of a Polish army on the eastern front. After restoration of Polish independence in 1918 he helped to organize the adr istration of the eastern provinces. In the Polish republic he was four ti minister of the interior, *voyevod* (governor) of the Wilno province (1926– and, until 1939, *voyevod* of the province of Pomorze. When President Ig Moscicki resigned at Kuty, on Sept. 17, 1939, he appointed Raczkiewic his successor. The latter, on reaching Paris on Sept. 30, 1939, formed a Polish government with Gen. W. Sikorski as prime minister. On June 1940, after the collapse of France, he went to London. As president of republic he showed extreme devotion to his constitutional duties and up the interests of the Polish nation with wisdom and dignity. When on Ju 1945, Great Britain and the United States recognized the new Polish gov ment formed in Moscow, Raczkiewicz refused to resign, declaring tha would do so only at the wish of a freely elected and representative P *sejm* (parliament). He died at Ruthin Castle nursing home, Wales.

**Raeburn, Henry Raeburn Macbeth** (Sept. 24, 1860–Dec. 6?), British artist.
**Ramsden, Walter** (1859?–March 26), British biochemist.
**Ramuz, Charles Ferdinand** (1878–May 23), Swiss novelist.

**Rayleigh, Robert John Strutt,** 4TH BARON (Aug. 28, 1875–Dec. 13), British ph icist, was the eldest son of the third Baron Rayleigh, the discoverer of arg He was educated at Eton and Trinity college, Cambridge, and for sev years did successful research work at the Cavendish laboratory there. 1908 he became professor of physics at the Imperial College of Science Technology, South Kensington. Giving up this post in 1919, he devoted rest of his life to research, carried out in the private laboratory at his hom Terling, Essex. His work covered a wide range, but his most important c tributions to science were made in studies in radioactivity and spectrosco Among the public offices to which he was elected by virtue of his emi position in British science were those of chairman of the executive commi of the National Physical laboratory, president of the 1938 meeting of British association, president of the Physical society (1934–36) and fore secretary of the Royal society (1929–34). He also served on the advis council of the Department of Scientific and Industrial Research. He die Terling.

**Read, Thomas Thornton** (Feb. 10, 1880–May 29), U.S. mining engineer, edu tor.
**Reed, Albert Alison** (May 5, 1866–Nov. 28), U.S. educator.
**Reed, Henry Morrison** (Sept. 16, 1880–Aug. 12), U.S. industrialist.
**Reeves, James Aloysius Wallace** (Feb. 8, 1892–March 7), U.S. ecclesiast educator.

**Reid, Ogden Mills** (May 16, 1882–Jan. 3), U.S. newspaper editor, was bor New York city, the son of Whitelaw Reid, editor in chief and part owne the *New York Tribune.* Young Reid studied politics, economics and law the University of Bonn and at Yale university, receiving his law degree fr the latter institution in 1907. The following year, he joined the staff of *Tribune* as a cub reporter, and after "learning the ropes" he was made m aging editor in 1912 and editor a year later. It was generally said that R insisted on one fundamental principle—that of writing news "straig without favouring either the paper's editorial or advertising policy. In 19 the *Tribune* acquired the *New York Herald* from Frank A. Munsey. T purchase price was said to have been $5,000,000. The two papers were fu and the new daily became the *New York Herald Tribune.* Reid was edi of the *Herald Tribune* and president of the Herald Tribune company. died in New York city.

**Reynolds, Thomas** (1879?–Jan. 25), British theatrical producer, director.

**Riach, Nancy** (1927–Sept. 15), Scottish swimming champion, was born Ap 6, 1927, in Motherwell. She first attracted attention when in 1938 at the of 11 she won a schoolgirls' championship at Motherwell, competing agai girls 4 years her senior. When she was 15 she broke her first Scottish reco and 2 years later 28 records; Scottish native, Scottish all-comers and Brit were standing to her credit. At the time of her death seven of her times mained unbeaten. Her remarkable successes were the result of a strict tra ing schedule. In 1947 she was granted leave from her teaching at the Han ton academy in order to train for the 100-yd. free-style European champio ship at Monte Carlo, Monaco, but while there she was taken ill with infant paralysis and died in her 21st year.

**Richardson, Ernest Gladstone** (Feb. 24, 1874–Sept. 5), U.S. clergyman.
**Richardson, James Parmelee** (May 29, 1878–March 24), U.S. educator.
**Riess, Ernst** (Nov. 19, 1865–June 12), U.S. educator.
**Rikhter, Andrei** (1871?–April 2), soviet plant physiologist.

**ins, Leonard H.** (April 2, 1877–June 24), U.S. writer.
**rts, Kingsley** (Dec. 29, 1893–Nov. 21), U.S. medical economist, surgeon.
**rtson, Alexander George Morison** (Sept. 3, 1867–Aug. 21), Hawaiian ist, government official.
**ison, John Wesley** (Jan. 6, 1866–May 30), U.S. Methodist bishop, ssionary.
**ison, Victor** (Aug. 16, 1886–Jan. 8), U.S. medical historian.

**guez, Manuel (Manolete)** (July 5, 1917–Aug. 29), Spanish matador, was n in Córdoba, Spain. The son of a bullfighter, he absorbed the atmosphere d drama of the arena from his earliest youth and was schooled in technique d tactics by his father. Manolete, as he was later known, began his prosional career at the age of 17, became a full-fledged matador at 19 and ore he was 30, was ranked by many experts as the equal of such famed tadors as Juan Belmonte and Joselito.

An individual stylist, Manolete disdained the dramatic flourish and oper- d with a minimum of movement in the *corrida*. Opinions on the persony of Manolete varied. Some sources decried his apparent arrogance and empted to minimize his technique; others maintained that his so-called ceit was merely confidence, which they described as the basic requisite of successful bullfighter. Manolete's popularity with the crowds was unestioned, however, as witnessed by the fortune he amassed (estimated at 000,000) during his 13-year career as a matador in Spain and Mexico.

He was wounded in a bullfight in Linares, Spain, by a ferocious Miura ll, who gored the matador in the thigh. Manolete died the following morn- from shock and loss of blood.

**ch, Nikolai Konstantinovich** (Oct. 10, 1874–Dec. 13), Russian-born Orialist, scientist and painter, was born in St. Petersburg, Russia, where he died law and painting. For his early career, see *Encyclopædia Britannica.* prolific artist, Roerich produced more than 3,000 paintings in his lifee, of which 1,006 are exhibited in the Roerich museum in New York city. her of his canvases are hung in the Louvre, the Victoria and Albert musein London and in other famous art galleries throughout the world. Also an Orientalist of considerable distinction Prof. Roerich excavated historic burials in Pondichéry, French India, in 1930 and headed the U.S. partment of agriculture's expedition into central Asia (1934–35) in search drought-resisting plants.

Among his publications, which have appeared also in Russian, Japanese d Spanish, are *Complete Works* (1914), *The Messenger* (1925), *Himalaya* 26), *Joys of Sikkim* (1928), *Altai Himalaya* (1929), *Heart of Asia* (1930), *alm of Light* (1931), *Fiery Stronghold* (1933) and *Gates into the Future* 36).

His death at Kulu, in the Punjab area of India, was announced in a distch from Bombay.

**, Angel H.** (1882–July 24), Argentine cancer specialist.
**rs, James Gamble** (March 3, 1867–Oct. 1), U.S. architect.
**no, Santi** (1875–Nov. 3), Italian jurist.
**ebeck, Arnold** (May 8, 1885–Nov. 14), U.S. sculptor.

**schild, Henri de,** Baron (July 26, 1872–Oct. 12), French physician, finanr and playwright, was born in Paris, the son of Baron James Rothschild. was one of the first Rothschilds to depart from the family tradition of ernational finance, to become a scientist and playwright.

In science, he devoted himself to a study of infantile diseases and later ployed part of his inheritance to set up free milk stations for French rkers. He also founded the Pierre Curie institute in Paris, to promote the re of cancer with radium.

As a playwright, he wrote under the pseudonym André Pascal, producing veral successful plays, notably *La Rampe* (1909), *Le Caducée* (1921) and *ritage* (1924). He also built the Théâtre Pigalle, one of the most modern d luxurious houses in Paris.

After World War I, the baron was active in the Zionist movement. He d to Brazil when the Germans invaded France in 1940, and the Vichy gime confiscated his extensive land and art holdings and revoked his ench citizenship. However, after Allied forces liberated France, the new vernment restored both his citizenship and property. He died at his tate, Castel Beau Cidre, in Jouxtens, Switz.

**ell, Ross Erastus** (Sept. 22, 1884–Sept. 6), U.S. marine corps officer.
**diger, William Carl,** (March 29, 1874–July 4), U.S. educator.

**brooke, James Henry** (July 29, 1870–Feb. 1), British clergyman, studied Midland and University colleges, Nottingham, and at Berlin and Halle iversities and received his M.A. degree from the University of London. r. Rushbrooke, who was minister of churches in Derby and London in 02, became Baptist commissioner for Europe in 1929. Thereafter, he was sociated with the Baptist World alliance, serving that group as its eastern cretary, 1925–28, general secretary, 1928–39 and president, 1939–47. uring his long connection with the Baptist Church, he travelled throughout e world, participated in many international conferences and organized Bapst World congresses in Toronto, 1928, in Berlin, 1934, and Atlanta, Ga., 39. Pledging himself to help eliminate religious repression, he made pernal appeals to heads of state in many lands in behalf of religious freedom. fter the war, he was named chairman of the Special Committee for Baptist econstruction in Europe. Dr. Rushbrooke was the author of *The Baptist ovement in the Continent of Europe* (1915), *Some Chapters of European aptist History* (1929); co-author of *Baptists in Europe* (1920) and editor of *he Peacemaker* (1908–14) and of *Goodwill* (1915–20). He died in Bristol, ngland.

**ell, John Henry** (Nov. 14, 1872–March 6), U.S. marine corps officer.
**ell, Thomas Hendrick** (April 12, 1885–April 5), U.S. surgeon, educator.

**, James Hugh** (Dec. 15, 1886–Nov. 23), U.S. prelate, was born in Indianolis, Ind. He studied at universities in the U.S. and Rome, receiving his .D. degree from the Roman academy in 1908 and his S.T.D. degree from e College of Propaganda in Rome a year later.

He was ordained in 1909, but not before he received a special dispensation om the Catholic authorities in Rome because of his extreme youth—he was ly 22 at the time. He then served as professor of psychology at St. Mary the Woods college, Indiana, from 1911 to 1921 and was executive secary of the National Catholic Welfare conference, 1920–28.

In 1922, he joined the Catholic university in Washington, D.C., as an instructor of philosophy, becoming a full professor in 1929 and serving as rector from the latter year until 1935 when he was appointed bishop of Omaha. Ten years later he became the first archbishop of Omaha.

Known as an able statesman, Msgr. Ryan went to South America in 1939 at the behest of Pres. Franklin D. Roosevelt to seek "a closer cultural relationship between the countries of this hemisphere."

Msgr. Ryan was the author of *A Catechism of Catholic Education* (1922), *An Introduction to Philosophy* (1924), *The Encyclicals of Pope Pius XI* (1927) and *The Peace Points of Pope Pius XII* (1942). He died in Omaha, Neb.

**Saint-Auban, Emile de Bruneau de** (June 19, 1858–May 2), French attorney.

**Salisbury, James Edward Hubert Gascoyne-Cecil,** 4th Marquess (Oct. 23, 1861–April 4), British politician, was educated at Eton and University college, Oxford. He entered the house of commons in 1885 as member for Darwen, Lancashire. He lost that seat in 1892, but from 1893 until 1903 represented Rochester, Kent. He served in the South African War, but in 1900 entered the government headed by his father, Lord Salisbury (3rd marquis), as undersecretary of state for foreign affairs. Upon his father's death in 1903, he succeeded to the marquisate and entered the house of lords and became lord privy seal.

He took an active part in defense of Conservative politics, opposing, in particular, the radical reform budget of 1909. During World War I, Lord Salisbury served in the army reaching the rank of major general. He was lord president of the council and deputy leader of the house of lords (1922–Jan. 1924). In Nov. 1924 Lord Salisbury returned to office as lord privy seal, and in 1925, became Conservative leader of the house of lords, a post he held until 1931. He served on the committee of imperial defense and also, in 1934, on the parliamentary joint committee on Indian constitutional reform. Lord Salisbury was succeeded by his eldest son, Viscount Cranborne. *See* also *Encyclopædia Britannica.*

**Salotti, Carlo,** Cardinal (July 25, 1870–Oct. 24), Italian prelate, was born in Grotte di Castro, Italy. Completing his ecclesiastical studies in the Roman seminary, he received degrees in civil and canonical law and in letters, and in ensuing years established a reputation as philosopher, author and lawyer.

In 1930, Mgr. Salotti was elevated to the titular bishopric of Palestrina and on Dec. 16, 1935, he was proclaimed a cardinal. His church titles included advocate of saints and consistorial lawyer, under-promoter of the faith, promoter general of the faith and prefect of the Congregation of Rites. He had promoted more than 100 causes for canonization, including that of Joan of Arc in 1920. On the other hand, he had also had the duty of marshalling all possible arguments against a proposed canonization so as to make sure that no unworthy candidate would receive sanctificatory approbation.

Cardinal Salotti founded many religious clubs, and was active in Catholic missionary work. He died in Rome.

**Sampson, Emma Speed** (Dec. 1, 1868–May 7), U.S. author.

**Sanatescu, Constantin** (1885–Nov. 8), Rumanian politician and army officer, served as military attaché in Paris and London in the '20s and was promoted to the rank of a general in 1935.

After the outbreak of World War II, Sanatescu was chief of the Rumanian delegation to Moscow in 1940. He then went into temporary eclipse until Aug. 26, 1944, when King Michael, confronted with the need of cleansing his government of pro-fascist elements before the arrival of the red army, arrested Marshal Antonescu and set up a government with Sanatescu as premier.

The soviet occupation authorities tolerated the Sanatescu regime until the autumn of 1944 when it complained that the premier had failed to carry out the armistice terms, to purge pro-fascist elements and to restore movable soviet property taken by Rumanians during their occupation of the Ukraine.

Under Russian pressure, Sanatescu reformed his cabinet on Nov. 4, 1944, and placed Communists in key posts. His government was short-lived, lasting only 28 days, and he resigned Dec. 2. He died in Bucharest.

**Satterlee, Herbert Livingston** (Oct. 31, 1863–July 14), U.S. lawyer.
**Saunders, Margaret Marshall** (April 13, 1861–Feb. 15), Canadian author.
**Schoellkopf, Paul Arthur** (March 7, 1884–Sept. 30), U.S. utilities executive.
**Schultz, John Richie** (Dec. 12, 1884–Aug. 11), U.S. educator.
**Schwarz, Franz Xaver** (Nov. 27, 1875–Dec. 14?), German politician.
**Scott, Duncan Campbell** (Aug. 2, 1862–Dec. 18), Canadian writer.
**Scott, John Adams** (Sept. 15, 1867–Oct. 26), U.S. educator.

**Scott, William Berryman** (Feb. 12, 1858–March 29), U.S. geologist and educator, was born in Cincinnati, O., a great-great-grandson of Benjamin Franklin on his mother's side. After receiving his A.B. degree from Princeton university in 1877, he spent several years studying abroad, returning to Princeton in 1883 as an assistant in geology. The following year, he became professor of geology and palaeontology, a post he held for 46 years.

One of the leading vertebrate palaeontologists in the United States, Dr. Scott was a recognized authority on fossil mammals and travelled to such remote areas as Zululand and Patagonia in search of fossil remains. He was awarded numerous medals from geological societies abroad as well as in the United States for his achievements and continued his research after his retirement from Princeton in 1930 as professor emeritus. Dr. Scott was the author of *An Introduction to Geology* (1897), *A History of Land Mammals in the Western Hemisphere* (1913), *The Theory of Evolution* (1917) and *Physiography* (1922). He died at Princeton, N.J.

**Scrymgeour, Edwin** (July 28, 1866–Feb. 1), British prohibitionist.
**Seitz, George Albert** (March 13, 1897–Oct. 24), U.S. naval officer.
**Seldte, Franz** (June 29, 1882–April 1), German politician.

**Selfridge, Harry Gordon** (Jan. 11, 1864–May 8), British businessman, was born at Ripon, Wis. For his early career, see *Encyclopædia Britannica.* Retiring as an executive of Marshall Field & Co. in Chicago after amassing a fortune, he went to London in 1906 and there organized the firm of Selfridge & Co., Ltd., which eventually became the largest and most successful department store in England. By the time he retired from active management of Selfridge's in 1939, he had developed his company into a massive organization employing 13,000 people and operating a $50,000,000 chain of department stores in the principal shopping centres of Britain. Selfridge, who acquired British citizenship in 1937, died in London.

**Senn, Thomas J.** (Dec. 21, 1871–Feb. 11), U.S. naval officer.
**Severinghaus, Willard Leslie** (Jan. 28, 1882–Aug. 28), U.S. physicist.
**Shankland, Sherwood Dodge** (April 6, 1874–May 27), U.S. educator.
**Shaw, Albert** (July 23, 1857–June 25), U.S. editor, writer.
**Shaw, William Edward** (July 2, 1869–Feb. 22), U.S. educator.
**Sheehan, Robert Francis, Jr.** (Dec. 5, 1879–April 16), U.S. psychiatrist.
**Shelley, Harry Rowe** (June 8, 1858–Sept. 12), U.S. composer, organist.
**Shepard, James Edward** (Nov. 3, 1875–Oct. 6), U.S. educator.
**Shiel, Matthew Phipps** (July 21, 1865–Feb. 17), British novelist.
**Shonle, Horace Abbot** (May 14, 1892–Feb. 24), U.S. research chemist.
**Shutts, Frank Barker** (Sept. 11, 1870–Jan. 7), U.S. newspaper publisher, lawyer.
**Simpson, W. S.** (1870?–March 28), Canadian grain expert.
**Sinnock, John Ray** (July 8, 1888–May 14), U.S. designer, engraver.
**Sladen, Douglas (Brooke Wheelton)** (Feb. 5, 1856–Feb. 12), British novelist, biographer.

**Smith, Gipsy Rodney** (March 31, 1860–Aug. 4), British evangelist, was born in England of parents of gipsy stock. He had no formal schooling, was mostly self-educated and developed his fluent command of English by constant reading of the Bible. At the age of 16, he became a convert to Methodism and developed into an impassioned and persuasive evangelist.

Smith roamed the world on his evangelical missions, exhorting sinners of all races and creeds on five continents to eschew their ways of evil for the good life. He preached in barns and meadows, warehouses and tents, churches and halls and attracted huge congregations; some of the throngs that attended his sermons were said to have numbered more than 100,000 persons.

At one time in his career, he was associated with Gen. William Booth but broke with the latter, who eventually developed his mission into the Salvation Army.

As "special missioner" of the National Free Church council (1897–1912), Smith started the evangelical journeys on the "sawdust trail" that led him twice around the world. During World War I, he spent three and one half years among British troops on the western front for which service he received the Order of the British Empire. He continued his roving evangelical assignments until he was well past 80.

He was the author of several works, including an autobiography, *Gipsy Smith, His Life and Work* (1906); *As Jesus Passed By* (1905); *Your Boys* (1918); *Real Religion* and *Evangelistic Talks* (1929); and *The Beauty of Jesus* (1932).

He died on board the vessel "Queen Mary."

**Smith, Harold Dewey** (June 6, 1898–Jan. 23), U.S. government official.
**Smith, Harriet Lummis** (?–May 9), U.S. novelist.
**Smith, June C.** (March 24, 1876–Feb. 7), U.S. jurist.
**Smith, Marion** (Nov. 16, 1884–Sept. 9), U.S. lawyer.
**Smith, Roy E.** (1883?–Feb. 11), U.S. soil chemist, educator.
**Snell, Earl Wilcox** (July 11, 1895–Oct. 28), U.S. politician.
**Snow, William Josiah** (Dec. 16, 1868–Feb. 27), U.S. army officer.
**Sowell, Ingram Cecil** (Aug. 3, 1889–Dec. 21), U.S. naval officer.
**Spaulding, Oliver Lyman** (June 27, 1875–March 27), U.S. army officer.

**Speer, Robert Elliott** (Sept. 10, 1867–Nov. 23), U.S. clergyman, was born at Huntingdon, Pa. A graduate of Princeton university, 1889, he entered its Theological seminary the following year, but before completing his studies was named to the secretaryship of the Presbyterian Board of Foreign Missions. He held that post until his retirement in 1937 after which he devoted his remaining years to writing.

Although a layman, he rose to top position in the church—that of moderator—in 1927 and was a leading authority on foreign missions. He travelled to posts in the near east and the Orient and spent three years in South America.

Dr. Speer was the author of *Missions and Modern History* (1904), *Christianity and the Nations* (1910) and *Race and Race Relations* (1924). He died in Bryn Mawr, Pa.

**Spencer, John Oakley** (1858?–May 24), U.S. educator.

**Spilsbury, Sir Bernard Henry** (1877–Dec. 17), British pathologist, was educated at Manchester grammar school and Magdalen college, Oxford; he received his medical training at St. Mary's hospital, London, and after qualifying in 1905 became a research worker under Sir Almroth Wright. Lectureships held by him included those in morbid anatomy and histology at St. Bartholomew's hospital, London, and in medicine and toxicology in the London School of Medicine for Women and University College Hospital Medical school, London. He was knighted in 1923.

Spilsbury's contributions to the solution of crime by scientific methods gained him a world-wide reputation; his first important appearance as a scientific witness for the crown took place in 1910, when his examination of evidence played a vital part in the notorious Dr. Hawley Crippen case. In 1922 the new office of pathologist to the home office was created for him and he figured prominently in many murder trials and other famous cases until the end of his life; in 1934, the year of his retirement, he became honorary pathologist. He was found dead in his laboratory in the department of pharmacology, University college, London.

**Stanton, Charles Spelman** (March 13, 1868–July 31), U.S. editor.
**Starbuck, Edwin Diller** (Feb. 20, 1866–Nov. 18), U.S. educator, author, philosopher.
**Stein, Leo** (1872?–July 29), U.S. author, art critic.
**Stephen, Campbell** (March 29, 1884–Oct. 24), British Labourite M.P.
**Stephenson, Sir Henry Kenyon** (Aug. 16, 1865–Sept. 20), British industrialist, educator, politician.
**Stewart, Robert Wright** (March 11, 1866–Feb. 24), U.S. corporation executive, industrialist.
**Stoddard, Henry Luther** (Oct. 7, 1861–Dec. 13), U.S. journalist.
**Stone, Julius Frederick, Sr.** (June 1, 1855–July 25), U.S. manufacturer.
**Stradbroke, George Edward John Mowbray Rous,** 3RD EARL OF (Nov. 19, 1862–Dec. 19), British army officer.

**Street, Julian** (April 12, 1879–Feb. 19), U.S. novelist, essayist and gastronomical authority, was born in Chicago, Ill. Educated at Ridley college, St. Catharines, Ont., Canada, he joined the staff of the *New York Mai* *Express* in 1899 and was the paper's dramatic editor, 1900–01. He we Europe in 1902 and spent many years in France, shuttling betwee Riviera and Paris. He became renowned as an authority on French coo and wines. As several of his books were devoted to popularizing the Fr gastronomical arts, the French government bestowed upon him the Le of Honour for his efforts in this direction. Street was elected to the Nat Institute of Arts and Letters in 1924 and the next year (1925), he awarded an O. Henry Memorial prize of $500 for one of his short sto He spent the latter years of his life in the United States and was a me of the board of directors of a wine importing firm. Among his work *Abroad at Home* (1914), *Mysterious Japan* (1921), *Rita Coventry* (19 *Where Paris Dines* (1929), *Wines* (1933), *Men, Machines and Morals* (1 and, in collaboration with Booth Tarkington, *The Country Cousin.* S died at his home in Lakeville, Conn.

**Streeter, Edward Clark** (1875?–June 17), U.S. medical authority, curat
**Stubbs, Sir Reginald Edward** (Oct. 13, 1876–Dec. 7), British colonial off
**Suardo, Count Giacomo** (Aug. 25, 1883–May 19), Italian fascist politicia
**Sullivan, Daniel Giles** (1882–April 8), New Zealand commerce minister.

**Sultan, Daniel Isom** (Dec. 9, 1885–Jan. 14), U.S. army officer, was bor Oxford, Miss. After graduating from the United States military acad in 1907, he joined the army, spending most of his 40 years in service a engineering officer. He served in the Philippines, 1916–17, where he he to build the defenses at Corregidor. During most of World War I, he stationed in Washington, but toward the close of the conflict was assig to the A.E.F. general staff in France. After his return, he attended Command and General Staff school and later served in Nicaragua w over a ten-year period (1921–31), he surveyed and inspected the route a projected canal. During this time, he also was a member of the boar engineers for rivers and harbours at Washington, 1926–29, and in 193 was named engineer-commissioner for the District of Columbia.

At the start of World War II, Gen. Sultan was commander of the division at Camp Shelby, Miss., later becoming chief of the 8th army co In Jan. 1944 he was named deputy commander under Gen. Joseph Stilwell in the China-Burma-India theatre of war. The following Octo he was made commander in chief of the Burma-India theatre—one of commands that had made up the former C.B.I. One of his chief contr tions in that theatre was his speed-up of supplies to China by land, r and air transport.

Lt. Gen. Sultan (promoted Sept. 1944), was made inspector genera the army after his return to the United States in 1945. He die Washington, D.C.

**Summerlin, George Thomas** (Nov. 11, 1872–July 1), U.S. diplomat.
**Surles, Alexander Day** (Aug. 14, 1886–Dec. 6), U.S. army officer.
**Sussman, Otto** (Jan. 31, 1879–Feb. 3), U.S. mining executive.
**Sutton, Sir George Augustus** (Sept. 21, 1869–Nov. 7), British newspa executive.
**Tai Hsu** (1889–March 17), Chinese Buddhist leader.
**Talbot, Benjamin** (1864–Dec. 16), British inventor.

**Tanguay, Eva** (1878–Jan. 11), U.S. vaudeville and musical comedy star, was born in Marbleton, Que., Canada, went to the U.S. with her parent an early age. An expressive child, she showed a talent for acting and tained her first footlight role at the age of eight in *Little Lord Fauntle* She later went "through the mill," acting in variety, stock troupes and m cal comedies and by the time she was 20, she was regarded as a finis comedienne. At the turn of the century, Miss Tanguay shocked Victo audiences with her daring costume—or lack of costume—and her ris songs, and by 1910 she was an established and popular star on Broadw Her earnings were phenomenal but she lost her fortune during the stock m ket crash of 1929. Simultaneously her health and vision failed, bringing career to an abrupt end. She spent the last two decades of her life a virt recluse, bed-ridden and mostly forgotten. She died at her Hollywood, Ca cottage.

**Tate, Mavis Constance** (1893?–June 5), British M.P.
**Taussig, Joseph Knefler** (Aug. 30, 1877–Oct. 29), U.S. naval officer.
**Taverner, Percy A.** (1876?–May 9), Canadian ornithologist.

**Tello, Julio César** (April 11, 1880–June 4), Peruvian scientist, was bor Huarochiri, Peru. He received his doctor of medicine degree from the U versity of San Marcos in Lima in 1909, a master of arts degree in 1911 fr Harvard, and a doctor of science degree from San Marcos in 1918 and t studied at the University of Berlin.

Dr. Tello, who was a professor of anthropology successively at the U versity of San Marcos and the Catholic University of Lima, was also edi of the review *Inca*, official organ of the archaeological museum of the U versity of San Marcos. He was director of the Peruvian Archaeologi museum, honorary curator of Andean archaeology at Harvard university a a fellow of the Royal Anthropological institute of London.

Internationally known for his studies and discoveries of prehisto Andean civilization, Dr. Tello was co-leader of a scientific expedition to Pisco region of Peru in 1925. During its trip to the Paracas peninsula, expedition found evidences of a civilization existing in Peru at least 1,0 years before Christ.

Representative for Peru to many international scientific congresses, Tello was a recognized authority on Peruvian history. Among his works *Introducción a la historia antigua del Perú* (1921) and *Antiguo Perú* (192 He died in Lima.

**Thaw, Harry Kendall** (Feb. 11, 1871–Feb. 22), U.S. millionaire.
**Thomas, Albert Ellsworth** (Sept. 16, 1872–June 18), U.S. author.
**Thomas, Cecil Vincent** (Sept. 17, 1892–Nov. 28), U.S. educator.
**Thomas, William Isaac** (Aug. 13, 1863–Dec. 5), U.S. sociologist.
**Thomson, Robert Boyd** (Sept. 16, 1870–July 31), Canadian botanist.
**Thomson, Sir William** (Dec. 31, 1856–Aug. 6), South African educator.
**Thwaites, Sir William** (June 9, 1868–June 22), British army officer.
**Timmermans, Felix** (1886–Jan. 24), Belgian writer.

**Tiso, Josef** (1887–April 18), Slovakian politician and ecclesiast, becam Catholic priest in 1909, joined the Slovak autonomy movement after Wo War I and became one of the leading figures in the profascist Hlinka gua

When the Prague government granted autonomy to the Slovaks after the unich pact in the fall of 1938, Father Tiso was made prime minister of ovakia. Ousted from this post on March 10, 1939, he was reinstated within ortnight by the Germans.

After the reich severed Slovakia from the body politic of Czechoslovakia d gave it complete independence, Tiso was elected first president of the w state, Oct. 26, 1939.

During World War II, he allied Slovakia with Germany, instituted repres- e measures against left-wing and liberal elements among both Czechs and ovaks and ordered Slovak troops to help Germans in quelling the partisan rising in the spring of 1944.

Arrested by U.S. 3rd army troops on May 21, 1945, he was turned over to e reconstituted Czechoslovak government which ordered his imprisonment await trial as a traitor.

After a long trial, which opened in Bratislava Dec. 2, 1946, Tiso was found ilty of: conspiring against the Czechoslovak republic, suppressing demo- atic freedom and establishing a fascist dictatorship, warring against Poland d the soviet union and committing war crimes. He was sentenced to ath.

In its 215-page verdict, the national court made a clear distinction be- een Tiso's political and religious activities and made no statements in- lving the church in his guilt.

He was hanged in the Bratislava jail.

**orov, Kosta (Konstantin)** (July 13, 1889–March 17?), Bulgarian diplomat- , writer.
**r, Sidney** (April 28, 1874–Feb. 12), U.S. actor.
**ns, Charles B.** (1861?–Feb. 20), U.S. authority on drug addiction.
**dway, Allen Towner** (Sept. 16, 1867–Feb. 16), U.S. politician.
**dwell, Aaron Louis** (Dec. 23, 1866–June 24), U.S. biologist, educator.
**, Leonardus Jacobus Anthonius** (1876–March 5), Netherlands banker.
**chi, Tito** (May 1, 1864–Feb. 12), Italian papal diplomat.

**nan, Martha Ellen** (Nov. 25, 1852–July 26), mother of Harry S. Truman, rd president of the United States, was born on the Parrish farm, the site of hich is now part of Kansas City, Mo. She was the daughter of Solomon oung, a freighter who ran emigrant trains along the Overland trail.

In 1863 Solomon Young and his entire family were exiled by Jayhawkers om their homestead because of their Confederate sympathies and sent to e Platte country. A year after the end of the Civil War, the Youngs were rmitted to return to their farm.

Solomon Young became a wealthy freighter during the reconstruction era d Martha therefore was spared many of the hardships associated with the e of western frontierswomen. She was an excellent horsewoman and a od dancer and attended the Baptist College for Women in Lexington, Ky. e married John Anderson Truman on Dec. 28, 1881, and went with her sband to Lamar, Mo., where he became a stock trader and ran a large rm.

Her son, Harry, was born on the Lamar farm. She had two other chil- en, a son, J. Vivian, and a daughter, Mary Jane. The children were eply attached to their mother and it was said that Harry Truman, when set by difficulties during his political career, often sought and abided by r counsel.

She took a critical view of his acceptance of the vice-presidential nomina- on in 1944, complaining that it was a shame that he was abandoning his job senator when he was doing so well at it.

After he succeeded to the presidency in 1945, Mrs. Truman was quoted as ying: "I never wished for Harry to be president some day as all American others are supposed to do. I never even thought he might be considered r vice-president."

Mrs. Truman held positive convictions which she would utter frankly at terviews. After President Truman was sworn in, his mother visited the hite House. It was reported that when her son offered to let her sleep in braham Lincoln's bed, she exclaimed: "I wouldn't sleep in the bed that at man used."

Mrs. Truman never fully recovered from the effects of a fractured hip that e suffered during a fall in her home in Feb. 1947. Although the casts had een removed by May, her condition became worse and she died at her home Grandview, Mo., as the president was flying to her bedside.

**y, James (Jim)** (June 3, 1891–June 22), U.S. author, was born on June 3 ear St. Marys, O., one of six children. Orphaned in his childhood, he lived in n asylum until he was 11 and spent the next seven years as a farmhand. At he age of 18, Tully took to hoboing. In the next decade he was successively prize fighter, circus roustabout, tree surgeon and general handyman at any b that would pay the price of a meal.

Despite his lack of formal schooling, he read voraciously, became self- ducated, wrote verse, some of which was published when he was 20, and orked as a reporter for an Akron newspaper. His first novel, *Emmett awler* (1922), was well received by critics. In this and in succeeding books, ully established a reputation as one of the minor leaders of the realistic chool, better than most but not quite measuring up to the so-called "giants f the age"—Theodore Dreiser, Ernest Hemingway, John Steinbeck and ames Farrell.

His principal failing, according to critics, was his lack of subtlety. Never- heless, by the close of the twenties, Tully was an established novelist and a rosperous scenario writer. His books made money but were not attuned to he new stream of political and social developments ushered in by the New eal era and his works were virtually ignored by the incoming younger gen- rations. Making his home in Hollywood in the later years of his life, he was omewhat of a celebrity in the film capital and his truculent but always renchant comments on the state of the country and the literary world, as ell as his propensity for mauling Hollywood actors, made good newspaper opy.

Among his works are *Beggars of Life* (1924), *Circus Parade* (1927), *Shad- ws of Men* (1929), *Blood on the Moon* (1931), *Men in the Rough* (1933), *A ollywood Decameron* (1937), *Children of Thieves* (1939), *Men I Remember* 1940), *Biddy Brogan's Boy* (1941), *A Dozen and One* (1942) and *Rave afferty* (1943).

He died in Hollywood, Calif.

**bay, Gabriel** (1901–Nov. 17), Colombian diplomat.
**el, Zelig** (July 30, 1890–March 12), U.S. Yiddish writer.

**Tyrrell, William George Tyrrell, 1st Baron** (Aug. 17, 1866–March 14), British diplomatist.
**Underwood, Elmer** (1860?–Aug. 17), U.S. photographer.
**Vacaresco, Helene** (1866–Feb. 17), Rumanian writer.
**Valentin, R. J. M. Veit** (1885–Jan. 12), German historian.
**Van Boeijen, Hendrik** (May 23, 1889–March 30), Netherlands politician.
**Vanderpool, Frederick William** (May 8, 1877–Feb. 14), U.S. composer.
**Vannest, Charles Garrett** (June 7, 1880–May 23), U.S. author, educator, historian.
**Varenne, Alexandre** (?     –Feb. 16), French politician, diplomat.
**Velloso, Pedro Leão** (Jan. 13, 1887–Jan. 16), Brazilian diplomat.

**Victor Emanuel III** (Nov. 11, 1869–Dec. 28), king of Italy 1900-1946, was born at Naples, the son of King Humbert I and Margherita of Savoy-Genoa. He ascended the throne of Italy on Aug. 9 and 11, 1900, after the assassination of King Humbert. See *Encyclopædia Britannica.*

After the coming to power of fascism in 1922, King Victor Emanuel was overshadowed by Benito Mussolini, the duce. It was not until July 25, 1943, that the king broke away from this subjection when, after a vote of no confidence, moved by Count Dino Grandi, was passed in the fascist grand council against Mussolini, the king dismissed Mussolini and had him arrested. He appointed Marshal Pietro Badoglio as prime minister in his place. Negotiations were opened secretly with the Allies, and the signing of an armistice on Sept. 3 was publicly announced on Sept. 8. On the same day the king fled by car from Rome, just as the Germans were entering the city, to reach southern Italy under the protection of the Allied armies.

His reign came to an end on June 5, 1944, the day after the liberation of Rome, when he transferred his royal powers to his son Prince Humbert as lieutenant governor of the realm; but he retained the title of king of Italy until May 9, 1946, when he formally abdicated, three weeks before a referendum which turned Italy into a republic. His exile was spent in Egypt, and it was in a suburb at Alexandria that he died from congestion of the lungs.

**Villeneuve, Jean-Marie Rodrigue, Cardinal** (Nov. 2, 1883–Jan. 17), Canadian prelate, was born at Sacré-Coeur de Montreal, Que., the son of a French-Canadian shoemaker. Studying for the priesthood, he was ordained in 1907 at the age of 23—the earliest age under which ordainment is permissible under Catholic canon law. He taught morals, philosophy, liturgy and canon law at the University of Ottawa, at which institution he served as professor of philosophy from 1907 to 1913 and of theology from 1913 to 1920.

In 1930 Mgr. Villeneuve was named bishop of Gravelbourg in Saskatchewan, and the following year he became archbishop of Quebec. Two years later (1933) he was elected to the College of Cardinals.

Soon becoming a power in Canadian politics because of his role as the spiritual leader of the country's more than 5,000,000 Catholics, he served on several occasions as mediator in labour-management disputes. More frequently, he took a leading role in pressing anticommunist activities in Quebec; he was also a stanch foe of the Social Credit movement. The cardinal was strongly opposed to "absolute freedom of the press" insofar as that concept furnished "revolutionaries" with an opportunity to air their ideas. He also objected to woman suffrage on grounds that it would destroy family life and paternal authority.

Mgr. Villeneuve was a noninterventionist before World War II, but after Canada's entry into the conflict, he changed his stand, urging French Canadians to enlist in the armed forces and register for the draft. He died in Alhambra, Calif.

**Volpi di Misurata, Count Giuseppe** (Nov. 19, 1877–Nov. 16), Italian industrialist and politician, was born in Venice, Italy. For his early career, see *Encyclopædia Britannica.* One of Italy's wealthiest prewar industrialists and financiers, Count Volpi was a member of the Italian senate, a one-time minister of finance and president of the fascist chamber of manufacturers under Mussolini.

Volpi left the government in 1928 to attend to his private fortunes and the following year he helped organize the European Electric corporation, a combine of U.S., Swiss and Italian interests.

Shortly after the Axis conquest of Yugoslavia in 1941, Volpi served Mussolini as president of the Italian-Croatian economic mission. His enthusiasm for Mussolini waned, however, under successive Allied military triumphs and in the spring of 1943, he was suspected of plotting with Italian industrialists to break with Hitler and conclude a separate peace. When these rumours reached the ears of Mussolini, the duce ousted Volpi from the chamber of manufacturers. Volpi fled to Switzerland where he lived until a week before his death. He returned to Rome to enter a nursing home and died there.

**Volstead, Andrew J.** (1860–Jan. 20), U.S. politician and lawyer, was born in Goodhue county, Minn. Educated at St. Olaf's college and Decorah institute, he was admitted to the bar in 1884. He practised law in Granite Falls, Minn., where he was, at one time, president of the board of education, town attorney and mayor. Volstead was Republican representative to congress from Minnesota from 1903 to 1923. An unobtrusive back-bencher, he was catapulted into the national limelight as the author of the Volstead prohibition act, which was passed over a presidential veto in Oct. 1919 and became the 18th amendment to the constitution. (It was repealed in 1933.) He lost his campaign for re-election to the house in 1922 and after expiration of his term returned to private practice in Granite Falls where he died. (See *Encyclopædia Britannica.*)

**Walker, Meriwether Lewis** (Sept. 30, 1869–July 29), U.S. army officer.
**Wall, Frank Jerome** (May 8, 1886–Nov. 18), U.S. railway executive.
**Walsh, Arthur** (Feb. 26, 1896–Dec. 13), U.S. politician.

**Walsh, David Ignatius** (Nov. 11, 1872–June 11), U.S. politician, was born in Leominster, Mass. Graduated in 1893 from Holy Cross university with an A.B. degree and from Boston University Law school four years later, he entered politics and built up a following in the predominantly Irish Catholic areas of industrial Massachusetts. He served as lieutenant governor of the state in 1913 and as governor in 1914 and 1915. In 1918 he was elected to the United States senate. Although defeated by the Republican landslide of 1924, he was elected two years later to fill a two-year vacancy and was re-elected in 1928, 1934 and 1940. During the national elections of Nov. 1946, he was submerged in another Republican landslide, losing to Henry

Cabot Lodge, his Republican opponent, by about 325,000 votes.

During his first term, Walsh's senatorial opponents dubbed him “Ireland's senator” because of his vigorous support of the Irish independence movement. Later Walsh regarded himself as a progressive and friend of organized labour. While he supported Roosevelt during his first two terms, he frowned upon the third term and looked upon the fourth term with acute distaste. He favoured wage-and-hour legislation, but denounced the president's supreme court reorganization plan. A noninterventionist in the prewar years, Walsh battled the administration on foreign policy, lend-lease and trade of 50 over-age destroyers for British bases. He died in Boston, Mass.

**Walsh, Edward J.** (1877–March 22). U.S. clergyman, educator.
**Warfield, William** (Dec. 4, 1891–March 16), U.S. engineer, geologist.
**Washburn, Ives** (May 24, 1887–Feb. 5), U.S. publisher.
**Watson, Hugh Hammond,** (Nov. 10, 1885–May 24), U.S. consular official.
**Watt, Robert J.** (July 16, 1894–July 24), U.S. labour leader.
**Wauchope, Sir Arthur Grenfell** (March 1, 1874–Sept. 14), British army officer.
**Weaver, Rufus Washington** (June 3, 1870–Jan. 31), U.S. clergyman.
**Webster, Benjamin** (June 2, 1864–Feb. 26), British actor.
**Weed, Clarence Moores** (Oct. 5, 1864–July 18), U.S. naturalist, educator.
**Weller, Ovington E.** (Jan. 23, 1862–Jan. 5), U.S. politician.
**Wells, Harry Edward** (1874?–May 24), U.S. chemist, educator.
**White, William Charles** (Sept. 3, 1874–Aug. 11), U.S. tuberculosis authority.

**Whitehead, Alfred North** (Feb. 15, 1861–Dec. 30), British mathematician and philosopher, was born at Ramsgate, Kent, and was educated at Sherborne school and Trinity college, Cambridge, where he was elected a fellow in 1887 and in due course became senior mathematical lecturer. In 1903 he was elected a fellow of the Royal society. After he had been made lecturer in applied mathematics and mechanics at University college, London, in 1911, and later reader in geometry, he was appointed professor of applied mathematics at the Imperial College of Science, London, in 1914 and held the post until he accepted the chair of philosophy at Harvard university in 1924. This he held until 1937 and made the United States his home. He was president of the Mathematical association in 1915–16, and of Section A of the British association in 1916. In 1922 he was the first recipient of the James Scott prize of the Royal society of Edinburgh; in 1925 he was awarded the Royal society's Sylvester medal and in 1930 the Butler medal of Columbia university; he was elected a fellow of the British academy in 1931. In 1945 he received the Order of Merit.

Whitehead's main interest and most important work lay where the fields of mathematics, logic and philosophy converged. His first important work was *A Treatise on Universal Algebra* (1898). In collaboration with Bertrand (later Earl) Russell he published *Principia Mathematica* in three volumes (1910–13), an outstanding work in the history of logic and of mathematics. Among other works he published *The Principle of Relativity* (1922), giving an alternative interpretation to that of Albert Einstein, and worked out his philosophy in *Science and the Modern World* (1926), *Process and Reality* (1929), *Adventures of Ideas* (1933), extending it in *Religion in the Making* (1926), *Nature and Life* (1934) and *Modes of Thought* (1938). His philosophical thought was remarkable and important for its reconciliation of metaphysics with science. He died at Cambridge, Mass.

**Whitfield, Arthur** (Oct. 13. 1868–Jan. 31), British dermatologist, educator.
**Whitman, Charles Seymour** (Aug. 28, 1868–March 29), U.S. lawyer, politician.
**Whitmore, Frank Clifford** (Oct. 1, 1887–June 24), U.S. educator, scientist.
**Wickenden, William Elgin** (Dec. 24, 1882–Sept. 1), U.S. educator.

**Wilkinson, Ellen Cicely** (1891–Feb. 6), British politician, was the daughter of a Manchester cotton operative, and worked her way by scholarships to Manchester university, where she took an M.A. degree. She became a schoolteacher, but soon took to political journalism, joining the Independent Labour party in 1912. In 1913 she became an organizer of the National Union of Women's Suffrage Societies and later of the workers in the distributive and allied trades. During World War I she endorsed the pacifist attitude of the Independent Labour party. She joined the Communist party on its formation in Britain in 1920, went to Moscow in 1921 and in 1923 was elected a Communist member of Manchester city council. She had left the Communist party when, in 1924, she was first elected to parliament as a Labour member for the Middlesborough East constituency, which she held until 1931. She returned to parliament in 1935 as Labour member for Jarrow. In 1936 she headed the Jarrow unemployed in their hunger march to London. During World War II she joined Winston Churchill's government as parliamentary secretary, first to the ministry of pensions and later to the ministry of home security. In the latter capacity, she did much to develop and improve air raid protection and the fire-watching organization. In Clement Attlee's Labour government, she became minister of education. She was not only an able debater in the commons, but also proved a capable administrator. She even achieved success as a legislator, in securing, in 1938 as a private member, the passage of a useful act to curb abuses in hire-purchase sales contracts.

**Willard, Frederic Wilson** (April 16, 1881–Aug. 11), U.S. metallurgist.
**Williams, Clement Clarence** (Feb. 21, 1882–Feb. 20), U.S. educator, engineer.
**Williams, Sir John Fischer** (Feb. 26, 1870–May 17), British jurist.
**Willshire, Sir Gerard (Arthur) Maxwell-** (Aug. 21, 1892–April 1) British actor.
**Wilson, Carroll Atwood** (May 12, 1886–June 27), U.S. Lawyer, industrialist.

**Wilson, James (Jimmy)** (July 23, 1900–June 1), U.S. baseball player and manager, was born in Philadelphia, Pa. He joined the Philadelphia Phillies baseball team in 1923 as a catcher and played with the team until 1928 when he was traded to the St. Louis Cardinals. He returned to Philadelphia as a manager in 1934 and went to Cincinnati as a player-coach five years later (1939). The hero of the 1939 world series in which the Cincinnati Reds beat the Detroit Tigers, Wilson was given, on the strength of this performance, the job of managing the Chicago Cubs in late 1940.

As his record with the Chicago team was only mediocre, he was retired in May 1944, and he returned to Cincinnati as coach. Later he entered the citrus produce business in Florida.

He died in Bradenton, Fla.

**Wilson, Lachlan Chisholm** (July 11, 1871–April 9), Australian army officer.

**Winant, John Gilbert** (Feb. 23, 1889–Nov. 3), U.S. diplomatist and government official, was born in New York city. He studied history at Princeton under Woodrow Wilson and after graduating from the university, he became a teacher at a prep school in Concord, N.H.

In 1917, Winant was elected to the New Hampshire house of repres tives, but upon entry of the U.S. into World War I, he left the legislatu join the army. In 1921, he was elected to the state senate and two y later, he was returned to the state lower house. In 1925, Winant was ele governor of the state. His tenure ended in 1926, but he was elected aga 1931, and held office for two consecutive terms.

During the second period of his governorship, Winant acted with ma vigour to neutralize the effects of the depression. His administration in duced old-age benefits, minimum wages and emergency relief and was pecially active in taking measures to prevent farm and home foreclosu

In 1935, Pres. Franklin D. Roosevelt appointed the liberal New Eng Republican to head and organize the newly-created Social Security bo Later Winant became assistant director and then director of the Internat al Labour Office.

In 1941, Roosevelt named Winant as U.S. ambassador to Great Britai position that Winant held throughout World War II. Pres. Harry S. man in Jan. 1946 appointed him to the additional post of U.S. representa on the U.N. Economic and Social council. Winant later relinquished ambassadorial post to devote all of his time to his U.N. duties.

An account of his tenure as ambassador and an evaluation of the Un Nations was contained in his work, *Letter from Grosvenor Square,* which peared about 15 days after Mr. Winant shot and killed himself in his ho at Concord, N.H.

**Winship, Blanton** (Nov. 23, 1869–Oct. 9), U.S. army officer.
**Wissler, Clark** (Sept. 18, 1870–Aug. 25), U.S. anthropologist.
**Wood, John Wilson** (Aug. 4, 1866–Aug. 7), U.S. missionary.
**Woodruff, Lorande Loss** (July 14, 1879–June 23), U.S. biologist, educator.

**Woolley, Mary Emma** (July 13, 1863–Sept. 5), U.S. educator, was born South Norwalk, Conn. Educated at Brown university—the first woma receive an A.B. degree there (1894)—she joined the Wellesley college facu in 1895, becoming head of the department of biblical history and literat four years later; in 1900, Miss Woolley was made president of Mt. Holy college, a post she held until her retirement 37 years later.

An energetic and militant pacifist, Miss Woolley was appointed by P Herbert Hoover as one of the U.S. delegates to the Geneva Disarmament c ference in 1932. At the time she declared: “Women rush in where diplom fear to tread and do a lot to make this world a better place to live in.” was reappointed to the Geneva post by Pres. Franklin D. Roosevelt in 19

Miss Woolley wrote a number of books, including *Early History of Colonial Post Office* (1894) and *Internationalism and Disarmament* (19 and she was co-author of *A Hundred Years of Mt. Holyoke College* (194 She died at Westport, N.Y.

**Woolworth, Charles Sumner** (Aug. 1, 1856–Jan. 7), U.S. merchant, was b in Rodman, N.Y. When his brother, Frank W. Woolworth, first concei the idea for a “five-and-ten-cent” store, the two went into business in L caster, Pa., where Charles Woolworth became manager of the first su establishment to bear the Woolworth name. The venture did not fare w and the brothers moved to Scranton, where in 1881 they established anot store on a partnership basis. Charles Woolworth bought out his broth interests and branched out with a chain of stores in New York, Pennsylva and Maine. In 1912, his company and several other chain businesses, w a total of nearly 600 stores, were incorporated in New York as the F. Woolworth Co., with Frank Woolworth as president and Charles as vi president. The latter succeeded to the presidency after his brother's dea in 1919, and expanded the Woolworth chain to approximately 2,000 sto across the country and in Canada and Cuba. At the time of his death he honorary chairman of the board of directors; he had retired as board ch man in 1944. Woolworth died in Scranton, Pa.

**Worcester, David** (1908?–June 20?), U.S. educator.

**Wright, Sir Almroth Edward** (Aug. 10, 1861–April 30), British bacteriolog studied at Trinity college, Dublin, where he took his degree in 1882. main field of study was then modern literature. He later turned to law, having accepted a medical travelling prize from Dublin university, he stud medicine at Leipzig, Strasbourg and Marburg and took his M.B., B.Ch. a M.D. in Dublin in the 1880s. He became a demonstrator of pathology Cambridge university in 1887, and went to Sydney university as profes of pathology in 1889. After his return to England in 1892, he became p fessor of pathology at the army medical school at Netley, a post he held ten years. During this period, he started the study of antityphoid vacci and together with Surgeon Major D. Semple, began a series of success inoculations against typhoid. Despite opposition from professional quart his method of immunization was tested on a large scale during the Sou African war when among the troops inoculated the typhoid rate was less th one-sixth of that recorded among troops not so inoculated. Further tests India proved conclusive, the typhoid and mortality rates among unprotec troops being about 11 to 12 times higher than among those inoculated. 1902 Wright became pathologist at St. Mary's hospital, London, and la directed its institute of pathology and research. He was also appoin professor of pathology at London university. During World War I, he consulting physician to the British forces and co-operated with the Belg and French army medical services in practically stamping out typhoid fe in the Allied armies. At St. Mary's, Sir Alexander Fleming, the discovere penicillin, was one of Wright's outstanding pupils. Wright held many tinctions and honorary degrees, both British and foreign. Apart from n erous scientific papers, he was the author of a sharp attack on female suffr published in 1913 under the title *The Unexpurgated Case against Wom Suffrage.* (*See* also *Encyclopædia Britannica.*)

**Wright, Arthur Davis** (March 24, 1885–May 10), U.S. educator.
**Wright, James Harris** (Feb. 21, 1907–Sept. 28), U.S. foreign service officer
**Yaw, Ellen Beach** (Sept. 18, 1869–Sept. 10), U.S. concert singer.
**Zeligowski, Lucien** (1865?–July 10?), Polish army officer.
**Zivkovitch, Petar** (1879–Feb. 3), Yugoslav politician, army officer.

**Obstetrics:** *see* GYNAECOLOGY AND OBSTETRICS.

**Occupational Therapy for the Wounded:** *see* MEDIC REHABILITATION OF DISABLED VETERANS.

## cupied Areas, Administration of.

In military-occupied
as, the year 1947 was marked by a gradual transition from
cern with ordinary control matters to a consideration of
ors affecting long-range plans for the future of Germany
Japan. In Austria and Korea, the United States govern-
nt endeavoured unsuccessfully to reach an agreement for
hdrawal of all occupation forces in compliance with previous
dges to the government and people of liberated countries.
e military occupation of the Venezia Giulia area of Italy all
came to an end, with only a small detachment of about
oo U.S. army specialists remaining on the Italian mainland
l in the international city of Trieste.

ack of agreement on a peace treaty for Germany as well as
ure to agree on a date for the withdrawal of troops from
stria and Korea reflected the larger area of disagreement be-
en the United States and the Union of Soviet Socialist Re-
blics which dominated nearly all developments in foreign
irs during the year. Nowhere was the sharp conflict be-
en U.S. and Russian interests more pronounced than in the
upied areas, where unity at the top diplomatic and military
els was an indispensable prerequisite for successful imple-
ntation of immediate and long-range policies.

ailure to reach an agreement with the Soviet Union on
nomic unification of Germany, as provided by the Potsdam
t of 1945, led the United States and Great Britain to effect
economic merger of their zones, effective Jan. 1, 1947.

No progress was made, however, toward the treatment of all
rmany as an economic unit. In Japan, occupation was con-
ed almost exclusively to U.S. troops, with administrative
thority vested in the Supreme Commander for the Allied
wers (S.C.A.P.) and policy-making responsibility in the Far
stern commission (F.E.C.). Korea remained divided at the
th parallel of latitude, with soviet troops in the north and
S. army personnel in the south. Austria continued under
adripartite occupation by U.S., Russian, British and French
ops, although the country was treated as a single entity with
popularly elected government.

Two meetings of foreign ministers, convened to deal specifi-
lly with German and Austrian affairs, were held during the
ar. The first, at Moscow from March 10 to April 24, ended
almost complete disagreement. The second began in London
Nov. 24, and ended Dec. 15 with no further progress. Efforts
itiated by the United States in 1947 for a Japanese peace
eaty conference were thwarted by disagreements among the
wers as to membership in the conference and voting pro-
dure. No peace treaty was required for Korea, but a decision
the simultaneous withdrawal of troops from that country
s pending in the United Nations.

Swift progress was made in both Germany and Japan in the
osecution of top-ranking war leaders. American prosecutors,
ngly and often in combination with representatives of other
cupying powers, pressed their cases against German and Jap-
ese war lords.

The United States government continued its policy of re-
rning to German, Japanese, Austrian and Korean hands the
llest measure of control over their own affairs consistent with
e safety and security of the Allied Powers. Accordingly, the
ar saw broad expansion of local administrative power in all
cupied areas.

Operating under an appropriation of $600,000,000 for the
48 fiscal year (July 1, 1947–June 30, 1948),—supplemented
a deficiency appropriation of $340,000,000—the state de-

partment and the army were able to assure a modest standard of living only with the assistance of foreign relief funds. Food and housing conditions in Germany ranged from adequate in the rural areas to poor in the bombed-out urban developments. The U.S. zone of Austria, poor in indigenous food sources, was sustained only by foreign relief from the United States and the United Nations Relief and Rehabilitation administration, which was discontinued. The civilian population of Japan was not able to attain an adequate standard of living from its own resources. In Korea, a serious food shortage existed, requiring emergency assistance from the United States.

A brief analysis of the progress in U.S. administration of each occupied territory during 1947 follows.[1]

**Germany.**—From the beginning of the occupation, United States authorities had recognized the importance of re-education of the German people to the ways of democracy. This was particularly true as regards German youth, who had been subjected to nazi propaganda after 1933. In the absence of four-power agreement, the United States government undertook in 1947 a broad expansion of opportunities for Germans in culture, education and public information.

The extension of educational opportunities was limited in 1947 by the shortage of teachers as well as school textbooks. The closing of the U.N.R.R.A. university at Munich was also harmful. However, at a meeting of the Laenderrat Committee of Culture and Politics, it was agreed that universities throughout the zone would accept equitable portions of the former U.N.R.R.A. student body. For adults, the chief medium for mass education was the *Volkshochschule,* which opened branch schools in many sectors of the zone, thus permitting Germans by the thousands to learn the democratic processes familiar to Americans.

In the United States zone, 18 universities and their academic equivalents provided higher education for 45,000 German students during 1947. A total of 1,482 secondary and vocational schools were attended by 525,000 students.

The United States also set up youth centres in all large cities of its zone in an attempt to encourage German youngsters to join in organized recreation. Competitive sports continued to be a favourite youth outlet. In Hesse, a two-week track and field meet, the largest since World War II, attracted more than 2,500 athletes.

In addition, several international youth meetings were held with a view to decreasing the isolation of German youth. Two world-wide conferences were attended by delegates from German youth groups. The first, the World Christian Youth conference in Oslo, was attended by 15 official delegates from all 4 zones of Germany. The second, a Socialist Youth conference in Denmark, was attended by seven members of Die Falken, a Hesse group.

The year was marked by a return of many newspapers and magazines to German control and the licensing of several additional publications. As of Aug. 31, 48 German-language newspapers were licensed in the U.S. occupied areas. Military government officials reiterated continuously throughout the year the policy that German editors would be responsible for the contents of their newspapers. In keeping with this policy military government revoked the publishing license of three German newspapers, mainly because their actions and policies were not in keeping with the mission of U.S. military government. These newspapers were the *Frankfurter Neue Presse* and the *Frankfurter Rundschau,* both of Frankfurt, and the *Nordsee Zeitung* of Bremerhaven. The United States government continued to translate books and periodicals for dissemination Germany. The total number of book and pamphlet titles p lished from May 8, 1945, to Aug. 31, 1947, was 3,894; the nu ber of available current periodicals rose to 315 at the end 1947.

In August, arrangements were completed for the exchange programs and personnel between Swiss radio stations and U.S.-controlled stations. These arrangements, initiating resum tion of international cultural relations in accordance with July directive, also included provisions for German radio c respondents to cover special assignments in Switzerland a Swiss correspondents to reciprocate on assignments in Germa

As of Aug. 31, a total of 425 performances of music by U.S. composers had been presented throughout Germany. this total, 311 performances were presented in the United Sta zone. The number of theatres in the United States zone r during 1947 to 1,050, with a total seating capacity of appro mately 380,000.

In October, the U.S. military governor announced a new formation drive would be put into effect in the U.S. zone aim at countering soviet propaganda.

In a step intended to further the democratic reorientation the German people, the United States government on March announced a policy permitting the exchange of certain categor of persons between the United States and Germany. The a rangement of projects and the selection of individuals in accor ance with this policy was made to include specific needs in t fields of education and religion and in fields important to form lation of public opinion.

**Japan.**—On March 27 a policy decision of the Far Easte commission for revision of the Japanese educational syste stated that "special emphasis should be placed on the teachi of the sanctity of the pledged word in all human relations and advised that the revision of the system should be primari the responsibility of the Japanese themselves. The policy stat ment outlawed teaching of state Shintoism and placed the le sons of democracy as the objective of the new system.

In 1947, approximately 19,000,000 students attended abo 40,000 schools of all levels. More than 500,000 teachers we gradually learning to make the adjustment from the authorit tive methods of classroom management to the democrat process of teaching. New editions of textbooks were printe A nation-wide program of screening all educational personn was set up by the Japanese government under supervision S.C.A.P. and F.E.C.

The School Education law passed by the diet on March provided for the extension of compulsory, free education on step-by-step basis from six to nine years for all Japanese chi dren. It was planned to make the eighth year compulsory star ing in 1948 and the ninth year as soon as practicable from th standpoint of availability of schoolrooms, teachers and fund

The S.C.A.P. directives of 1946 calling for removal of r strictions on religious freedom were implemented during 194 with transfer to shrines and temples of title to state-owne lands for religious purposes. The number of Christian churc members was estimated at about 500,000, but the number Christian sympathizers rose to an estimated 2,000,000.

The large task of freeing all media of public informatio from national government domination and restriction continue throughout 1947. Professional, civic and governmental agencie were encouraged by S.C.A.P. to work out co-ordinated and continuing information programs.

The number of daily newspapers increased from 53 at th close of World War II to 155 on Aug. 31. About 2,000 newspapers and journals of tabloid format—including dailies, semi weeklies, weeklies—were published.

---

[1] The sections which follow deal only with social and educational phases of the history of occupied territories in 1947. For political and economic developments, *see* AUSTRIA; GERMANY; JAPAN; KOREA. *See* also FOREIGN MINISTERS' CONFERENCES; PEACE TREATIES; PRISONERS OF WAR; REFUGEES; WAR CRIMES.

Continued technical and programming assistance was given Broadcasting Corporation of Japan, and a number of new grams patterned on U.S. techniques were instituted. Mobile jection units continued to exhibit educational films to weekly liences averaging 179,000 people, a fivefold increase over the rage weekly audience during 1946. The S.C.A.P. Informa- n library in Tokyo continued to make available to Japanese ders 3,000 reference books, 10,000 pamphlets, 500 current iodicals and 17 newspapers, all in English.

During 1947 the incidence of communicable diseases had, in ny cases, been reduced to the lowest level in Japanese his- y. Under occupational supervision, about 20,000 sanitary ms operated in the country, and 120,000 Japanese were lead- in urging community sanitation. Approximately 700 health ntres were established in the country to handle public clinical es.

The United Nations committee commented favourably on the ective control of narcotics in Japan.

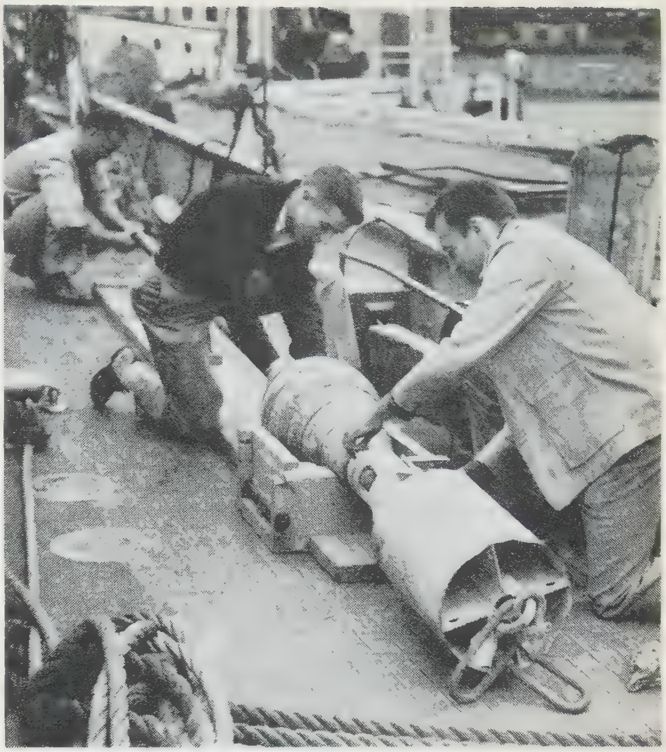
**Austria.**—The task of re-educating the Austrian people to mocracy was largely entrusted to the Austrian government, pervised by the United States representative on the Allied uncil. In addition, the United States government announced March 31 a policy permitting the interchange of certain egories of persons between the United States and Austria. der the policy a carefully selected group of Austrian special- s in educational, religious and cultural work was to be per- tted entry into the United States for brief periods of observa- n and training. Similarly, U.S. personnel would be permitted go to Austria to work with agencies and individuals in the rementioned fields.

Previously, on March 16, the United States government had nounced a policy on exchanges of cultural materials between e United States and Austria.

**Korea.**—One of the most important problems faced by ad- nistrators of Korea in 1947 was the incidence of disease. The adequacies of public health services under the Japanese, the stwar disruption, floods and lack of trained personnel and edical equipment posed grave problems for occupation author- es. The U.S. and Korean officials, with limited facilities at eir disposal, improved the general condition of the civilian pulation somewhat, but the incidence of many noncommuni- ble diseases such as malaria was still increasing as 1947 ended.

From the outset of military occupation, U.S. officials were nfronted with the gigantic task of remodelling the entire orean educational system, which had suffered seriously from panese control. It was estimated that only 25% to 30% of e Korean people were literate in 1945. Subsequently, U.S. ilitary government broadened educational opportunities for oreans, encouraged the study of Korean language and culture orbidden under Japanese rule) and provided in-service train- g in various occupations.

In 1947 the military government continued its task of re- acing Japanese language textbooks with those written in orean. Maximum use was made of existing school facilities ith the result that more Koreans were attending school than at y time in the history of the country. As a further step, the nited States government created in Korea an education in- itute staffed by outstanding U.S. educational and vocational aining specialists. This followed a survey in June by a five- an mission on the need for revamping the information and lucational administration of Korea. Other recommendations the mission were studied by the state department and the my. (C. E. Sn.)



"CORING TUBE" being assembled by members of a U.S. expedition to the mid-Atlantic ridge in 1947. On entering the ocean bed, the tube was filled with sediment from which scientists hoped to learn more of the geological history of the earth

**Oceanography.** Several major oceanographic expeditions of 1947 had as their primary purpose studies of marine sediments and the geology of the ocean basins. Under the direction of Hans Pettersson, the Swedish auxiliary schooner "Albatross" collected extremely long cores of bottom sediments from the Mediterranean, the North Atlantic and the tropical Pacific.

An intensive study of the Gulf of Mexico was undertaken by the U.S. research vessel "Atlantis," which also carried out a geophysical reconnaissance of a section of the mid-Atlantic ridge, south of the Azores.

Interest in submarine geology had been greatly stimulated by development of new instruments. Recording sonic-sounding machines showed details of the bottom topography even from the greatest depths. Improvements in coring tubes made it possible to secure samples ten metres or more in length; since the rate of sedimentation is relatively slow in midocean, these samples reflected changes in conditions over several million years. Radioactive and magnetic means of dating the sediments were devised, while the study of the foraminifera contained in the cores revealed the marked changes in climate or of the depth of the water that may have occurred.

The fact that through radio navigational techniques the position of a vessel could now be accurately determined relative to shore stations as much as 1,500 mi. away greatly facilitated many types of oceanographic research. For the first time from a moving vessel it became possible to gain a good measure of the strength and direction of the surface currents. Frequent accurate fixes also greatly improved the usefulness of all sonic soundings and made it practical to observe the shapes of bottom structures such as submerged sea mounts and canyons. In Norway and France trials were in progress on the use of sonic instruments for locating fish.

**Ohio.** A north central state of the United States, popularly known as the "Buckeye state." It officially became a state of the union on Feb. 19, 1803. Area 41,222 sq.mi., including 100 sq.mi. of water; pop. (1940) 6,907,612, of whom 2,294,626 were rural and 4,612,986 urban; native white 6,047,265, foreign-born white 519,266, Negro 339,461, other races 1,620. Capital, Columbus (306,087). Other cities of more than 100,000 were Cleveland (878,336), Cincinnati (455,610), Toledo (282,349), Akron (244,791), Dayton (210,718), Youngstown (167,720) and Canton (108,401). In 1944 the bureau of the census estimated the population of the state at 6,836,667.

**History.**—Thomas J. Herbert, Republican of Cleveland, was inaugurated as the 56th governor of Ohio on Jan. 13, 1947. Other elected state officers were: lieutenant governor, Paul M. Herbert; secretary of state, Edward J. Hummel; treasurer, Don H. Ebright; attorney general, Hugh S. Jenkins.

The 97th Ohio general assembly met in regular session from Jan. 6 to June 30, 1947. In that period it enacted 245 new laws and approved submission to the electorate of three proposed amendments to the state constitution. Among the laws were those requiring co-operatives to pay the same corporation franchise tax as corporations for profit; allocating sales tax revenue to local government fund; permitting banks to close on Saturdays; authorizing municipalities to acquire property for parking lots; increasing pay of election officials; authorizing acceptance from the federal government of Fletcher General hospital at Cambridge as a state mental institution; extending jurisdiction of the state highway patrol; authorizing state subsidy to local pension systems and fixing pensions of policemen and firemen; increasing benefits under state teachers' retirement system; providing for county and township zoning of unincorporated areas; changing the automobile licence fee to a flat rate of $10.

At the general election Nov. 4, 1947, Ohio voters approved four amendments to the state constitution. One called for the payment of about $300,000,000 in bonuses to veterans of World War II. The others restricted the expenditure of gasoline and motor vehicle taxes to the construction of highways, increased the terms of probate judges from four to six years and increased the number of members on the State Sinking Fund commission.

A special session of the general assembly met Dec. 4 and 5 and enacted 12 measures requested by Gov. Herbert. The most important of these granted pay increases to state employees, transferred $20,000,000 to the soldiers' bonus fund, gave the welfare department an additional $6,000,000, authorized cities and counties to submit welfare and operating levies under a 60% vote requirement at either primary or general elections and corrected an error in the distribution of gasoline tax funds so the state highway department could use the funds for construction and maintenance of roads.

**Education.**—In 1947 Ohio had 3,400 elementary schools with an enrolment of 702,650 and a teaching staff of 22,001; 1,122 secondary schools, with an enrolment of 335,823 and a teaching staff of 15,154; 122 junior high schools, with an enrolment of 69,984 and a teaching staff of 2,594; 1,000 kindergarten classes, with an enrolment of 37,836 and a teaching staff of 658. Clyde Hissong was state director of education in 1947.

Ohio has six state universities: Ohio State university at Columbus, Ohio university at Athens, Kent State university at Kent, Miami university at Oxford, Bowling Green State university at Bowling Green and Wilberforce university at Wilberforce.

**Social Insurance and Assistance, Public Welfare and Related Program** The average number of recipients of general relief in Ohio in 1947 19,076 and total relief granted was $9,378,256. The average numbe ceiving aid for the aged was 121,506 and they received a total of $ 646,401; aid to dependent children, 9,274 cases, receiving a tota $7,360,829; aid to the blind, 3,243 cases, receiving a total of $1,407, Estimated weeks of unemployment compensated in 1947 were 2,374, and the benefit payments were estimated at $43,890,000.

Ohio has 22 mental hygiene institutions with an average daily pop tion in 1947 of 30,165, 4 penal institutions with an average daily p lation of 7,699 and 2 industrial schools with an average daily popula of 1,137.

The total cost of operating and maintaining the institutions under department of public welfare in 1947 was $21,678,049. The directo the department was Charles L. Sherwood.

**Communications.**—Ohio had 87,021.57 mi. of highways in 1947 out of municipalities. Of this total, 16,167.87 mi. were classified as s 29,012.09 mi. as county and 41,841.61 mi. as township. Total state penditures on highways in 1947 were $62,150,000. The director of department of highways was Murray D. Shaffer.

The state had 8,400 mi. of railroads, 300 airports and landing fie 4,115 mi. of airlines in operation within its boundaries and 2,112, telephones.

**Banking and Finance.**—There were 432 state and private banks in O with deposits (Oct. 6, 1947) of $3,787,016,830 and resources of 067,280,409. There were 241 active national banks in the state w deposits (June 30, 1947) of $3,064,693,000 and resources of $3,292,6 000. State-chartered savings and loan associations numbered 498 w total resources (June 30, 1947) of $1,076,972,544. There were 127 eral savings and loan associations with total assets (estimated as of D 31, 1947) of $560,500,000.

The state budget for the 1947–48 biennium was $687,341,606. though state revenues reached an all-time high, the general assem approved the expenditure of all those funds plus about $90,000,000 the $100,000,000 surplus with which it began the year. A large port of the money went for capital improvements. Sales tax revenue in 1 went to a new record high of $129,288,000.

**Agriculture.**—The total harvested acreage of principal crops in Ohio 1947 was 10,157,000; in 1946, 10,601,000. Total cash receipts from fa marketings in Ohio in the Jan.-Oct. 1947 period were $846,719,000 compared with $669,386,000 in the same period of 1946. The 1947 m keting receipts consisted of $615,919,000 from livestock and products a $230,800,000 from crops.

As in much of the rest of the country, an excess of rainfall in spring months delayed planting in Ohio with the result that a sma number of acres were planted and the yield per acre was poorer, dr ping from 49 bu. to 41 bu. in the case of corn. Yields are indicated Table I.

**Table I.—*Leading Agricultural Products of Ohio, 1947 and 1946***

| Crop | 1947 | 1946 | Value, 1947 |
|---|---|---|---|
| Corn, bu. | 138,826,000 | 178,409,000 | $319,299,0 |
| Wheat, bu. | 49,028,000 | 48,522,000 | 140,710,0 |
| Oats, bu. | 19,058,000 | 62,235,000 | 23,822,0 |
| Barley, bu. | 390,000 | 502,000 | 702,0 |
| Rye, bu. | 510,000 | 289,000 | 1,198,0 |
| Buckwheat, bu. | 651,000 | 340,000 | 1,275,0 |
| Popcorn, lb. | 6,240,000 | 27,495,000 | 190,0 |
| Hay, tons | 3,602,000 | 3,895,000 | 66,637,0 |
| Soybeans, bu. | 17,575,000 | 16,254,000 | 65,027,0 |
| Tobacco, lb. | 22,710,000 | 21,060,000 | 11,014,0 |
| Sugar beets, tons | 158,000 | 234,000 | 1,900,0 |
| Maple syrup, gal. | 160,000 | 80,000 | 645,0 |
| Apples, bu. | 3,038,000 | 2,350,000 | 8,354,0 |
| Peaches, bu. | 1,020,000 | 553,000 | 2,800,00 |
| Pears, bu. | 229,000 | 135,000 | 549,00 |
| Grapes, tons | 15,400 | 12,500 | 2,310,00 |
| Cherries, tons | 2,400 | 2,300 | 669,00 |
| Potatoes, bu. | 5,460,000 | 7,560,000 | 8,418,0 |

**Manufacturing.**—The total value of manufactures in Ohio in 1939 w $4,584,665,659, total employment 686,089 and total wages and salari paid $1,033,426,673. No census of manufactures had been taken after 19 but the Ohio bureau of unemployment compensation reported that betwe Jan. 31, 1945, and Jan. 31, 1946, 4,039 employers established new bus nesses or expanded old ones. In that period the number of employe covered by unemployment compensation increased from 50,544 to 54,58

**Mineral Production.**—The total value of mineral production in Ohio 1946, exclusive of pig iron, ferroalloys and grindstones, was $243,637,0 as compared with $196,663,000 in 1945. A law enacted by the gener assembly in June requiring strip coal mining companies to level mine areas and plant them with trees, shrubs and grass, was opposed by a doze companies who sought to have it declared unconstitutional. (P. BY.)

**Table II.—*Principal Mineral Products of Ohio, 1946 and 1945***

| Mineral | Value, 1946 | Value, 1945 |
|---|---|---|
| Pig Iron | $240,218,956 | $258,959,8 |
| Bituminous coal | 100,675,000 | 92,911,0 |
| Coke | 69,357,225 | 70,381,8 |
| Natural gas | 29,400,000 | 24,490,0 |
| Clay and clay products | 45,842,837 | 22,657,6 |
| Stone | 19,069,169 | 13,966,7 |
| Lime | 12,926,310 | 11,693,6 |
| Ferroalloys | 8,884,960 | 11,166,24 |
| Sand and gravel | 11,105,652 | 7,985,0 |
| Cement | 13,293,126 | 7,356,27 |
| Petroleum | 7,910,000 | 7,240,0 |
| Salt | 4,160,011 | 3,997,75 |

**io State University.** This institution of higher education is located at Columbus, O. rmally established as a land-grant institution in 1870, it ened its doors on Sept. 17, 1873, to a student body of 17. e university admits both women and men. It has ten col- es: agriculture, arts and sciences, commerce and administra- n, dentistry, education, engineering, law, medicine, pharmacy d veterinary medicine; a graduate school; and eight special ools: aviation, fine and applied arts, home economics, jour- ism, music, nursing, optometry and social administration. aduate work is offered through the doctor of philosophy de- e. Appropriations of $18,641,000 were approved for construc- n in 1947–48 of a medical centre ($8,000,000), new physics, itation and central service buildings and others, as well as eral new laboratories and additions to existing buildings. The iversity operates on a four-quarter plan, enabling most stu- nts to complete their studies in three calendar years. (For sta- tics of endowment, enrolment, faculty, library volumes, etc., UNIVERSITIES AND COLLEGES.) (H. L. B.)

**ls and Fats, Vegetable and Animal:** *see* VEGETABLE LS AND ANIMAL FATS.

**klahoma.** A west south central state, admitted as the 46th state, Nov. 16, 1907. The name "Oklahoma" is om the Choctaw Indian words meaning "red people" and was st applied to the Indian territory in 1866. The popular name ooner state" was from the term "sooner" used in referring to person who entered and staked a claim sooner than the law owed when the first public lands in the Indian territory were ened by the run for homesteads, April 22, 1889. Area 69,283 .mi., including water surface, of which 387 sq.mi. are in 188 tificial lakes of more than 10 ac. in size and 71,000 farm ponds less than 10 ac. Pop. 2,336,434 (1940), of which approxi- ately 62% was rural. Approximately 87% was white, 7% egro, 4% Indian, 2% foreign-born. On July 1, 1944, the bu- au of census estimated the civilian population of Oklahoma at 64,679. Oklahoma City (1940 census) (204,424), the capital, d Tulsa (142,157) are the two largest cities.

**History.**—State officers during 1947 included the following ll candidates of the Democratic party elected for 4-year terms Nov. 1946): Roy J. Turner, governor; James E. Berry, lieu- nant governor; Wilburn Cartwright, secretary of state; A. S. J. haw, state auditor; Mac Q. Williamson, attorney general; John . Connor, state treasurer; Oliver Hodge, state superintendent public instruction. Legislation enacted by the 21st state legis- ture (bicameral system, convened Jan. 1947) included reor- nization of the state highway department and creation of a ate highway commission of eight members; disorganization of rtain rural school districts whereby 1,408 school districts were olished and annexed to those adjoining or near at hand; a unicipal airports act; and a mental health law creating a state epartment of mental health and providing for the appointment f a medical director to have charge of all state mental institu- ons.

**Education.**—The total enrolment in Oklahoma public schools (term of 46–47) was 508,697 pupils (elementary and high school), with 18,192 achers. The cost of maintaining elementary and secondary schools in e state was approximately $55,000,000. State institutions of higher arning included the University of Oklahoma (Norman), the Oklahoma gricultural and Mechanical College (Stillwater), the Oklahoma College r Women (Chickasha), an agricultural and mechanical college (Good- ell), a Negro university (Langston) and institute of technology Veatherford) and five colleges primarily for teacher training (Ada, va, Durant, Edmond, Tahlequah). There were 18 two-year junior lleges recognized by the state board of education, including 6 state- vned junior colleges, 1 military academy (Claremore) and 4 inde- ndent junior colleges with church affiliations. There were also six dependent senior colleges with church affiliations.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—On Jan. 1, 1948, the department of public welfare reported 96,278 persons receiving old-age assistance with an average of $42.43 each per month; 22,964 families receiving aid, with an average of $36.30 per family, for 57,038 dependent children, and 2,578 blind persons receiving an average of $42.79 each per month. State-supported hospitals, eleemosynary, penal and reformatory institutions were two tuberculosis sanatoriums, nine hospitals (including six mental and one annex), two orphanages, three schools for deaf and blind, four schools of correction, one penitentiary and one subpenitentiary.

**Communication.**—The Oklahoma department of highways spent during the period Jan. 1, 1947, to Nov. 30, 1947, for contract construction $17,983,951.82 and, in addition, for maintenance contract work $2,445,118, making a total of $20,429,069.82 for roadway construction during the 11-month period. The total public open-road mileage in the state for 1947 was approximately 100,000 mi., and the highway department was responsible for a highway system of 10,138 mi. Railroad and electric mileage approximated 6,170 mi., not including sidings.

**Agriculture.**—Total harvested acreage of crops in 1947 was 13,722,000 ac. compared with 13,290,000 ac. in 1946 (figures revised in Dec. 1947) and 12,981,000 ac. in the 10-yr. (1936–45) average. An all-time record wheat crop, plus increase in the dollar value of other major crops in 1947, made possible the highest farm value of all agricultural products in the history of Oklahoma. The state department of agriculture estimated the total value of principal crops, livestock, poultry and dairy products at $794,656,000, an increase of $129,813,000 over the 1946 estimate of $664,843,000.

*Leading Agricultural Products of Oklahoma, 1947 and 1946*

| | 1947 | 1946* |
|---|---|---|
| Wheat, bu. | 104,734,000 | 88,262,000 |
| Corn, bu. | 22,896,000 | 25,882,000 |
| Oats, bu. | 33,276,000 | 24,780,000 |
| Peanuts, lb. | 151,125,000 | 117,130,000 |
| Broomcorn, tons | 11,200 | 15,000 |
| Grain sorghums (forage and silo), tons | 900,000 | 1,439,000 |
| Grain sorghums, bu. | 5,181,000 | 7,314,000 |
| All hay, tons | 1,819,000 | 1,490,000 |
| Cotton, bales | 325,000 | 262,000 |

*Revised Dec. 1947 by U.S. department of agriculture.

**Manufacturing.**—Total pay rolls for covered employment in Oklahoma for the four quarters beginning Oct. 1, 1946, and ending Sept. 30, 1947, were $149,713,390, with a monthly average of 57,712 persons employed. In addition to the manufacture of petroleum by-products, the manufacture of lumber, cement and products from glass sands and the printing business in Oklahoma were big industries.

**Mineral Production.**—Minerals produced in Oklahoma include petroleum, natural gas, natural gasoline, liquefied petroleum gases, asphalt, zinc, lead, coal, stone, sand and gravel, clay and salt. The state corporation commission reported 140,334,201 bbl. of petroleum produced in the year ending Dec. 1, 1947. Approximate figures for 1947 production of other minerals in the state include 440,000,000 gal. natural gasoline and products, 420,000,000,000 cu.ft. natural gas, 18,000 tons lead concentrate, 103,000 tons zinc concentrate, 3,050,000 tons coal. The total estimated value of all minerals in the state for 1947 was $420,000,000.

**Ontario.** One of the two central provinces of Canada, Ontario was admitted to the union in 1867. The area is 412,582 sq.mi., with 12% fresh water; pop. (1941) 3,787,655; (1946 est.) 4,189,000. The chief cities (1946 assessor's est.) are Toronto, the provincial capital (696,555); Hamilton (178,686); Ottawa (165,362); Windsor (119,823).

**History.**—Progressive-Conservative Premier George Drew remained in office during 1947. The legislature sat twice, in March and October. Motorists and pedestrians were granted financial protection against irresponsible drivers under the amended Highway Traffic act. The Workmen's Compensation act was revised to cover all occupational diseases. The minimum weekly wage for female employees was raised to $16.80. Annual liquor profits reached a new high of $26,800,500. At the close of 1946, Ontario's gross debenture debt stood at $214,648,074 (1945: $198,411,736).

After a 30-year ban, liquor in cocktail lounges or bars returned to Ontario. The survey of the Manitoba-Ontario boundary, halted ten years before because of lack of men and equipment, was completed. The Ontario Hydro-Electric commission was actively constructing 7 new generating plants, totalling 900,000 h.p., at a cost of $250,000,000. About 5,800 United Kingdom immigrants flew to Ontario under a scheme sponsored by the department of planning and development.

Two royal commissions reported. Justice Dalton C. Wells found marked inefficiency in production and distribution of milk and recommended producer co-operatives, free competition and municipal distribution as a public utility. Maj. Gen. Howard Kennedy reported on forestry and recommended appointment of government representatives to timber-operating companies, planting of 100,000 ac. a year for ten years, and limiting cut on provincial timber land to annual growth.

**Education.**—Enrolment in educational institutions in the 1944–45 school year was 756,089. The Rt. Hon. Vincent Massey, former Canadian high commissioner to London, replaced Dr. H. J. Cody as chancellor of the University of Toronto. The province established 52 annual research scholarships. The government budgeted $38,504,057 for education costs, an increase of $24,000,000 over 1943.

**Transportation.**—A two-lane highway between Toronto and Oshawa was opened. The government began a four-year $200,000,000 road-construction program. A 103-mi. roadway joined the Red Lake mining district with the Trans-Canada Highway system. The Temiskaming and Northern Ontario railway changed its name to the Ontario Northland railway.

**Agriculture.**—Heavy spring rains cut intended acreage by 30%, resulting in a loss of about $35,000,000 to Ontario farmers. Apple production was 371,200 bbl., 53% more than the 1946 yield. The agriculture department fostered northern Ontario settlement by allotting $393,000 as subsidies for land clearing, breaking, draining. The total number of livestock (horses, cattle, sheep, swine) in 1946 was 6,049,000 (1944: 5,889,000).

**Production.**—The gross value of 1945 production was $5,051,713,237. The net value was $2,499,527,223, which was 41.09% of Canada's total. The per capita production was $624.26.

**Mining and Industry.**—The value of 1945 mineral production was: platinum $26,688,646; copper $29,772,270; nickel $61,982,133; gold $62,576,089. Shipment of iron ore during 1947 was greater than in any previous year. Of 555 factory extensions in Canada, 348 were in Ontario. By November about 60,000 more persons were employed in Ontario manufacturing than at the same time in 1946. (C. Cy.)

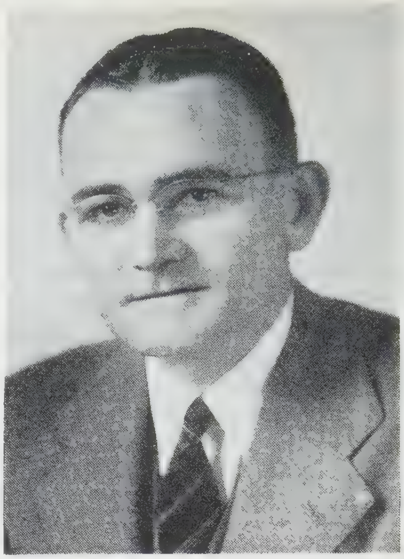
## Oregon.

A Pacific northwest state of the United States, admitted to the union Feb. 14, 1859, the 33d state. Area, 96,981 sq.mi., including 631 sq.mi. of water; pop. (1940) 1,089,684. Capital, Salem (30,908); chief city Portland (305,394). In the latter part of 1947 the U.S. bureau of the census announced a revised population figure for Oregon of 1,517,000 as of July 1, 1947. The bureau announced for the Portland metropolitan area a population of 534,422, as of 1947.

**History.**—The 44th regular session of the Oregon legislature was held in Salem in the early part of 1947. The legislature appropriated $75,213,603 for state expenses, a substantial increase over previous sessions. Much of the increase was to cover greater costs of education. The legislature passed a bill for a state sales tax and referred the proposal to popular vote. The election was held on Oct. 7 and the proposal was defeated. At the same election Oregon voters defeated a proposal for a tax on cigarettes amounting to two cents a packet. As a result of the 1947 legislative session the state income tax was increased by the process of reducing the exemption, and in addition a withholding law was put into effect covering the state income tax. A husband-wife community property law was also passed.

As a result of an aeroplane crash on the evening of Oct. 28, 1947, Oregon suffered the loss of three of its top executives: Governor Earl Snell, Secretary of State Robert S. Farrell, Jr., and Senate President Marshall E. Cornett. The death of Governor Snell and Sena Cornett autom cally elevated John Hall of Portland the governorship, cause of his posit as speaker of house of represen tives. The new gov nor appointed Earl Newbry of Ashla secretary of state, a Newbry assumed fice Nov. 3, 1947.



JOHN H. HALL, who succeeded Gov. Earl Snell of Oregon when the latter was killed in a plane crash on Oct. 28, 1947

Oregon's postwar construction proble were taken in th stride. Unemploym did not present a unsurmountable d culties, despite fact that there was substantial increase state population in 1947 over 1946, amounting to about 65,o

The housing situation showed an improvement, which was c to the large number of dwellings built in 1946 and 1947, though there were many areas where facilities were in sh supply. The shortages were particularly noticeable in vicinity of establishments for higher education.

**Education.**—During the school year 1946–47 there were 243,711 pu in public schools, including 64,662 in high schools. There were 8, teachers. For the year 1946–47 the value of school properties, includ buildings, grounds and equipment, was $65,825,032. The superintende of public instruction is an elective office, and was held in 1947 by Putnam.

**Communications.**—As of Dec. 31, 1946, there were 7,207 mi. of prim and secondary highways in Oregon, of which 6,574 mi. were impro with various types of surfacing. As of Dec. 31, 1946, there were 3, mi. of steam railways, not including second main track, sidings, etc.

In 1945 the Oregon state highway commission adopted a three-y postwar construction program calling for an expenditure of $36,000,0 for additions and betterments. This was in addition to a federal for highway program calling for about $5,000,000, later expanded to ta care of access roads to make merchantable timber more readily availab The highway program had not been completely realized due to vari shortages, but generally good progress was made at the most critical lo tions. State contracts to the value of $15,400,000 were let in 1947. May 31, 1947, there were 418,302 registered automobiles in the sta not including 58,980 trucks.

Oregon's water-borne foreign commerce showed a substantial increa In December it was announced by the department of commerce that Oregon customs district moved dry cargo, export and import, amounti to 1,459,000 long tons during the first eight months of the year. T tonnage was greater than that moved by any other Pacific coast custo district for the same period. The Oregon customs district includes ports of Astoria, Coos bay, Portland and St. Helens, Ore., and Vancou and Longview, Wash.

**Finance.**—As of July 1, 1947, Oregon's state gross bonded debt w $15,741,440, against which there were sinking funds and other applica assets amounting to $14,545,688, leaving a balance of debt of $1,195,7 The assessed valuation of Oregon for 1946 was $1,120,333,779, the hig est after 1930.

**Agriculture.**—Total cash income of Oregon farmers in 1946 was $35 079,000, of which $9,102,000 represented government payments.

*Principal Agricultural Products of Oregon, 1947 and 1946*

| Crop | 1947 (est.) | 1946 |
|---|---|---|
| Corn, bu. | 1,170,000 | 1,172,0 |
| Oats, bu. | 10,030,000 | 9,782,0 |
| Barley, bu. | 10,863,000 | 9,452,0 |
| All wheat, bu. | 21,932,000 | 25,168,0 |

**Manufacturing.**—For the first nine months of 1947 Oregon's industri pay rolls amounted to $626,473,000, as compiled by the state unemplo ment compensation commission. This figure is to be compared to the su of $799,000,000 for the calendar year 1944, the previous high recor It was estimated that the 1947 total would be in excess of $830,000,00 In 1947 sound expansion took place in small manufacturing, food pr duction and processing and in the lumber business.

The demand for lumber and plywood continued heavy. In Dec. 194 the state forester estimated that Oregon's lumber output for the calend year would be approximately 6,250,000,000 bd.ft. Many mills report that their output was adversely affected by transportation shortages.

The centre of lumber production in Oregon had shifted from the Por land-Columbia river area to the southwest counties of the state, and pa ticularly to the Coos bay area. (L. A. McA.)

## teopathy.

Enrolment in the six osteopathic colleges, located in Chicago, Ill., Des Moines, Ia., Kansas y and Kirksville, Mo., Los Angeles, Calif., and Philadelphia, ., was the largest since 1941. A long list of qualified students, ny with baccalaureate degrees, could not be admitted be- ise entering freshmen classes were filled. Expansion of the leges and associated teaching hospitals proceeded as rapidly funds became available. In the osteopathic progress fund npaign more than $1,500,000 had been subscribed for sup- t of the approved colleges, almost all of the money being ovided by members of the osteopathic profession.

During 1947 a research project in neurophysiology at the rksville College of Osteopathy and Surgery, Kirksville, Mo., s aided by a grant from the U.S. public health service.

Doctors of osteopathy were appointed and were serving in department of medicine and surgery of the Veterans' ad- nistration, following the implementation of public law 293 th congress).

Under federal regulations implementing the Hospital Survey d Construction act, public law 725 (79th congress), the par- ipation of osteopathic physicians and surgeons in the locating d building of hospitals, where needed, was provided. Many ctors of osteopathy were appointed to hospital advisory coun- s under enabling statutes in the various states.

During the 51st annual convention of the American Osteo- thic association in Chicago, the board of trustees approved 63 eopathic hospitals for the training of interns and an addi- nal 114 were placed on the registered list. Sixteen osteo- thic hospitals were approved for training in the specialties. so during this meeting ground was broken for the construc- n of a permanent headquarters building for the association Chicago's near north side. The building was scheduled for mpletion sometime in 1948.

On Dec. 1, 1947, membership in the American Osteopathic sociation stood at the all-time high of 8,237, or 73% of the ,239 practising osteopathic physicians and surgeons.

(R. E. D.)

## ttawa.

The capital of Canada is at the confluence of the Ottawa and Rideau rivers in the province of Ontario d covers 8.3 sq.mi. Pop. (1941 census) 154,951; (1947) 192,003 (plus 30,202 in suburbs). The houses of parliament are on a high cliff overlooking the Ottawa river.

The 100th anniversary of the incorporation of Ottawa fell on July 28, 1947. The first Marian congress in Canadian history, which attracted 200,000 visitors, was held in the capital June 18–22. After a lapse of 6 years, the Central Canada exhibition was revived with new record attendance of 324,192 (1941: 247,794). The housing situation remained bad, with 750 residents living in temporary quarters, including summer shacks, even in winter. Traffic fatalities for the year were 14 deaths (1946: 11 deaths). The board of control passed a smoke control bylaw. The University of Ottawa, only Canadian official bilingual university, acquired additional property for a $1,000,000 medical building. Development of a national capital of the Ottawa-Hull area moved forward, with the department of public works filing expropriation notices on 10.3 sq.mi. (C. Cy.)

## Oxford University.

In the academic year 1946–47 the number of undergraduates rose to 5,559 men and 1,121 women, compared with 3,219 men and 928 women in 1946; the total was 1,657 higher than in 1939. Almost 90% of the men in residence, excluding those from overseas, were ex-service. Many of them were married, and most were older than the ordinary undergraduate, so that university conditions were generally abnormal. Although only one university and no college building remained requisitioned, overcrowding was serious, and the residential limit (2½ mi. from the centre of the city) was relaxed.

Two new professorships were established; a third in modern history, and one in psychology (G. Humphrey), which took its place for the first time as a subject of a final honour school of philosophy, psychology and physiology.

It was decided that the clinical course which Oxford had established for its medical students during World War II, when the London schools were dispersed, should be continued permanently, a development that was envisaged when Lord Nuffield's endowment for medicine was given in 1937. The government grant for the quinquennium beginning in Oct. 1947 was arranged: for general purposes it was to be £465,500 in the first year, rising by 5% annually to £555,000; the grant for medical education was £100,000 in 1947–48 and was to be reviewed later. Additional grants, apart from those for nonrecurrent purposes, might be made for special purposes. Benefactions included: £80,000 for three years for nuclear gamma rays research in the Clarendon laboratory; £17,000 from H. N. Spalding and his wife for books for devastated universities of Europe and Asia; £1,000 from Dr. E. Ruffini for the endowment of a Luca Ruffini travelling scholarship; £25,000, under the will of Sir Henry Wellcome, for purchase of premises for a laboratory of human nutrition; and a fund for the endowment of a Laurence Binyon prize.

In October Dr. W. T. S. Stallybrass, principal of Brasenose college, was elected vice-chancellor of the university in place of Sir Richard Livingstone.

Bibliography.—*The Oxford University Handbook; Oxford University Gazette* (Oct. 9, 1947) supplement 2, containing the vice-chancellor's review of the year; *Oxford* (the magazine of the Oxford society). (D. V.)

## Pacific Islands, British.

These islands include the colony of Fiji (consisting of a number of islands), the British Solomon Islands protectorate, the Gilbert and Ellice Islands colony and the protected state of Tonga. Area: Fiji: 7,055 sq.mi.; Solomon Islands protectorate: 12,400 sq.mi.; Gilbert and Ellice Islands colony: 345 sq.mi.;

Tonga: 250 sq.mi. Pop.: Fiji (1947 est.): 260,000 (Fijians and Indians, in approximately equal numbers, together represent about 90% of the total); Solomon Islands (1937): 89,568 (the great majority Melanesians); Gilbert and Ellice Islands (1940 est.): 34,202 (mainly Polynesians); Tonga (1945 est.): 40,668 (all but about 1,100 being Tongans, a Polynesian race closely allied to the Maoris and Samoans). General administrative or supervisory authority over the whole area is vested in the governor of Fiji (appointed by the British crown) who also holds the office of high commissioner for the western Pacific. His headquarters are at Suva, the capital of Fiji. In the colony of Fiji he is assisted by an executive council (containing unofficial as well as official members) and by a legislative council on which all sections of the community are represented (in some cases by election). Both in the Gilbert and Ellice Islands and in the Solomon Islands the high commissioner's authority is exercised through a resident commissioner. Tonga is governed by its own sovereign (Queen Salote), assisted by a privy council, a cabinet and a legislative assembly (mainly elective); the British government is represented by an agent and consul who is responsible to the high commissioner at Suva. Governor of Fiji and high commissioner for the western Pacific: Sir Brian Freeston (appointed 1947).

**History.**—The most important event of 1947, as affecting the British Pacific islands, was the creation of an international South Pacific commission. This was the outcome of a conference held at Canberra, Australia, early in the year and attended by representatives of Australia, New Zealand, the United Kingdom, the United States, France and the Netherlands. An agreement establishing the new commission was signed *ad referendum* on behalf of the six governments in Feb. 1947. Its constitution and functions were similar in many respects to those of the Caribbean commission already operating in the West Indian area. It was to be a consultative and advisory body to the participating governments on matters affecting the economic and social development of the nonself-governing territories within its scope. Each participating government was to be represented by two commissioners. At least two regular sessions were to be held every year. The question of the commission's permanent headquarters was reserved for further consideration; meanwhile, as a temporary arrangement, it would function from Sydney. The Australian and New Zealand governments were authorized to take the necessary steps to set the machinery in motion. A South Pacific conference was also to be set up, of which the first session would be called within two years of the ratification of the agreement and further sessions thereafter at intervals not exceeding three years. The object of the conference was to ensure that representatives of the local inhabitants and of interested official and nonofficial institutions should be associated with the work of the commission.

Early in 1947 the constitution of Fiji was amended in a number of respects; the governor's power of veto was abolished, the franchise was extended to civil servants and the qualifications required for Indian voters were brought into line with those required for European voters. The year witnessed economic and administrative developments both in Fiji and in the other territories falling within the sphere of the British high commissioner. Schemes sanctioned under the Colonial Developments and W fare act included substantial grants to the Solomon Islands p tectorate (£16,800 for the purchase of vessels for local admi tration; £48,880 for the development of medical services; £19,900 for the purchase and erection of bridges).

**Finance and Trade.**—The unit of currency in Fiji is the Fiji po (linked to sterling at the fixed rate of £F.111 = £100); in the Solom the Gilbert and Ellice Islands and Tonga, United Kingdom and A tralian notes and coin are legal tender; Tonga has a local issue of rency notes. Revenue (1946): Fiji £1,976,941; Solomons £61,655; bert and Ellice Islands £65,308; Tonga £93,000. Expenditure: £1,949,447; Solomons £275,970; Gilbert and Ellice Islands £233,1 Tonga £90,000. The Solomons and Gilbert and Ellice Islands rece grants-in-aid from the British treasury. Imports: Fiji (1946) £3,217,0 Solomons (1941) £92,000; Gilbert and Ellice Islands (1939) £143,0 Tonga (1946) £219,000. Exports: Fiji (1946) £3,247,000; Solom (1941) £134,000; Gilbert and Ellice Islands (1939) £230,000; To (1946) £171,000. Sugar is the most important agricultural product Fiji and constitutes much the largest item in the exports of the colo Other exported products include copra, gold and fruit (mainly banana The chief product (and export) of the Solomons is copra; that of Gilbert and Ellice Islands, phosphate of lime. The exports of Tonga confined to copra and bananas (neither in any large quantities).

(J. E. Sh.

## Pacific Islands, French.

The latest statistics availa in 1947 for this French colo were: area (Society, Tuamotu, Tubuai and Marquesas island 1,545 sq.mi.; pop. (est. Dec. 31, 1939) 45,000 (white *c.* 3,700 (census 1941) 51,000. Capital: Papeete, in Tahiti (pop. cens 1941, 11,614). Governor: Jacques Tallec.

**Trade and Communication.**—Foreign trade (1945): imports 202,500,0 francs; exports 186,600,000 francs. Roads (1938): Tahiti 92 m Raiaetea 22 mi.; and Moorea 37 mi.; shipping entered (1943): vessels, tonnage 160,943.

**Finance.**—Revenue and expenditure (est. 1944) balanced at 43,449,0 francs. Exchange rate, 1947: 1 franc = 0.84 U.S. cents.

**Production.**—Export (1945): copra 19,050 short tons; natural ph phates 255,359 short tons; vanilla 137 short tons; nacre 832 short to other products 12,100 short tons.

## Pacific Islands under Trusteeship.

The former German possessions in the western Pacific compri part of New Guinea with adjacent archipelagos, Western Samo the Marshall, Caroline, Palau and Marianas (Ladrone) islan and the island of Nauru. Statistics for these territories a given in the accompanying table. For capital towns and go ernors of New Guinea, Western Samoa and Nauru, *see* BRITIS EMPIRE.

**History.**—On Feb. 17, 1947, the United States, which st remained in military occupation of the Japanese mandat islands, formally presented to the United Nations Security cou cil its proposal, originally published Nov. 1946, for putting t islands under United Nations trusteeship, to be administered b the United States under conditions which would grant th country exclusive military, naval, air and economic rights a make the islands "an integral part of the United States." T U.S.S.R. accepted the proposals as "entirely fair," taking in

ount the decisive role played by the U.S. forces in that atre of war. Opposition, based mainly on legalistic grounds, ; shown by Australia and Great Britain, but after several ournments unanimous approval of the proposal was given April 2. Provision was made that the agreement could not altered, amended or terminated without the consent of the ninistering authority. It was approved by the house of repre- tatives on July 11 and by the senate on July 14. The islands, v designated "The Territory of the Pacific," were placed ler civil administration, temporarily under the navy depart- nt, on July 19, and later split into four district governor- ps: the Marianas, W. Carolines, E. Carolines and Marshalls. Great Britain, Australia and New Zealand submitted a draft eement for the joint trusteeship of Nauru to the United tions in October. The assembly approved the agreement on v. 2 (*see* TRUSTEE TERRITORIES). (J. RA.)

**cifism.** By far the most important event of 1947 from the standpoint of pacifists was the consummation in lia of independence from British rule. There was no dis- eement among commentators about the important role yed in that achievement by the nonviolent techniques advo- ed and applied under the leadership of Mohandas K. Gandhi l perhaps even more by the mahatma's spiritual contribution oted in his conviction of the power of truth and nonviolence. Observers were divided in their opinions as to the extent to ich Gandhi's methods and general leadership were called in estion by the communal riots and the Pakistan-India strife ich followed the declaration of independence. Gandhi himself pressed great discouragement, yet at a highly critical moment ife in Calcutta ceased as the result of a typically Gandhian . He went to live in the same house with the Moslem leader the city who was regarded by the Hindus as chiefly responsi- for attacks upon them. Quiet soon descended on the city d continued throughout the rest of the year.

A world pacifist conference to be held in India, originally heduled for Jan. 1948, was projected for Jan. 1949. The dele- es, consisting of leaders of pacifist churches and organiza- ns, would be limited to about ten from each continent, and uld spend a week in a religious "retreat" and would then ntinue the conference at Rabindranath Tagore's school, San- iketan.

The Nobel Peace prize for 1947 was awarded to the American iends Service committee and the Service Committee of iends in London. The Nobel committee emphasized the re- ious pacifist faith of Quakers as the inspiration for their tensive nonpolitical and nonsectarian relief activities.

In the United States pacifists welcomed expiration of the war- ne Selective Service act on March 31, 1947. This was accom- nied by the liquidation of the remaining alternative service ojects in which conscientious objectors had been engaged ivilian public service).

The president's amnesty board under the chairmanship of rmer Justice Owen J. Roberts was charged with examination all cases of convicted selective-service violators (15,805 as of ov. 24, 1947). It entirely rejected the proposal made by a mber of organizations that a general amnesty be proclaimed. its report, the board classified the cases which it had examined dividually as follows: wilful violators or nonconscientious ob- ctors, approximately 10,000, of whom half had previously been nvicted of crimes including "murder, rape, burglary, etc."; hovah's Witnesses, approximately 4,300; conscientious ob- ctors, approximately 1,000; others, 500.

Of the total number, 618 had already been pardoned under a esidential proclamation making pardon available for men who ter conviction entered the armed forces. Approximately 900 more were eligible for such pardons. The board recommended pardons (restoration of civil rights) to 1,523 of the remaining 14,287. These included Americans of Japanese descent who would willingly have served in the armed forces but for the fact that "they deeply resented classification as undesirables." Only a small percentage of the 5,300 classified by the board itself as Jehovah's Witnesses or conscientious objectors were included in the 1,523 recommended for pardon. The board held that pardon should be granted only to such conscientious objectors as held formal religious beliefs, excluding those whose objection to war was based on "intellectual, political, or sociological" grounds. President Truman published the board's report and proclaimed pardons as recommended on Dec. 23, 1947. The action was greeted by numerous protests not only from pacifists but from religious leaders and advocates of civil liberties. Critics pointed out that millions of pardons had been granted to Germans and Japanese who had fought against the United States, and that the board and the president were not only laying down a narrow definition of conscience but apparently were applying a religious test.

Pacifist and nonpacifist forces were successful in putting off the adoption of universal military training by congress. On the other hand, they deplored extension of the conscription act by the British labour government.

In the failure to make a general peace and in the deterioration of international relations, especially between the U.S.S.R. and the United States, pacifist writers found confirmation of their analysis of the nature and effects of war. Many of them supported United Nations activities and joined in urging U.S. aid for European recovery, but increasingly they urged a complete abandonment of reliance on military force and especially the scrapping of atomic and bacterial weapons.

**Painting.** The predominance of nonobjective and expressionistic painting continued throughout 1947. There was an ever-widening acceptance of the abstract formalism which had outlived its life span in Europe a quarter of a century before. As for expressionism and all its variations, the U.S. orientation was quite unlike the original German or French expressionism. It had grown into a maturity and perfection attained by only a few European artists.

One change, however, became notable on the exhibition scene —the decline of the once-fashionable surrealism. It could perhaps be said that the various pictorial symbolisms on which surrealism relied had become, if not exhausted, at least so standardized as to have lost their esoteric meaning. A case in point was the work of Eugène Berman, in which all the romantic and nostalgic paraphernalia of a surrealism derived from the Venetian baroque had reverted to merely decorative stage settings. As in Berman's work, so in the work of many other surrealistic painters mechanistic routine had overtaken original impulses. Nevertheless, the art juries had not yet got round to fully recognizing this fact, and Berman received top honours at the Chicago Art institute.

In 1947 the Art Institute of Chicago staged an enormous and successful survey of realistic and abstract art which broke the tradition of more than half a century of showing an annual all-American exhibition. Almost one-third of the exhibitors were completely unknown in the exhibition field, but competed easily with the best established painters. In many instances they proved superior to the regular exhibitors along New York's 57th street.

Most of the prize-winning paintings and museum accessions of 1947 belonged to the modern school. The Museum of Mod-

Above: "MARINE STILL LIFE," a dock scene in tempera by Zoltan Sepeshy which took prize at the Carnegie institute's exhibition of "Painting in the United States, 1947"

Above: "THE VILLAGE STREET," one of a portfolio of 20 canvases painted by Evelyn Stiasny as a high school student, which won for her the major 1947 scholarship award of the School Art League of New York city

Above: MAX WEBER'S "Flute Soloist," a prize-winning painting at the fo annual art competition sponsored by the Pepsi-Cola Co.

Left: "END OF AN ERA" by Mitchell Siporin, awarded the Logan medal at 51st annual exhibition by artists of Chicago and vicinity, held at the Art In tute of Chicago in the summer of 1947

Art in New York had taken the lead, but during 1947 prac- ly every major museum or art institute throughout the coun- bowed to the trend of the times. Museum directors, art cs, writers on aesthetics and heads of various university art artments became active supporters of the new ideology.

uring 1947 the number of galleries showing exclusively non- ective art doubled. The show at the Art Institute of Chicago ght to light whatever abstract painting was done in the ted States, and it was a valid conclusion that academism is limited to representational art, for the nonobjective had become patently academic.

ealism was given little or no consideration. With the excep- of the National Academy of Art and the Carnegie exhibi- in Pittsburgh, where an ultraconservative jury selected con- tional paintings for the top honours, comparatively few ntings following realistic tendencies received recognition in form of prizes or museum purchase. There was good reason, ever, for the decline of the school of realism. It had become domain of the commercial artists, who were best equipped ompete with the photographic image. Although realism has y facets, in principle it vies with the camera eye. Artists find that their skill for photographic rendition is inade- te, or who cannot entice any new sensations from nature, invariably to the subjective or the abstract.

major event in 1947, although it did not appear as such at time, was the exhibition of French contemporary painting he Whitney Museum of American Art in New York, limited painters less than 40 years of age. Playing host to foreign tors, the museum unwittingly strengthened the reputation of . art far more effectively than the annual display of native alone could have done. It was made clear that, whatever the ghts reached in the art of France, they were matched in the of the United States, with equal or better craftsmanship, our, colour sense and taste. Rather unusual was the unani- us condemnation of the French show by the art critics, in- ding those who had staunchly supported anything coming m France.

As for the two painters generally referred to as the greatest the time—Henri Matisse and Pablo Picasso—there was little vs about the former, but Picasso soared to unprecedented v heights of popularity. News magazines as well as art publi- ions carried many sensational features exploiting all the esses and incongruities of his recent paintings.

Another favourite in the exhibition field in 1947 was the Brit- sculptor, Henry Moore. Although he was little known in United States (there had been one exhibition of his draw- s in 1946), his show at the Museum of Modern Art received eral acclaim.

His modernism, seen in the use of radical distortions and rk simplifications, was immediately acceptable to contem- ary taste.

The German painter Max Beckmann, perhaps the most power- representative of the school of distortionists, went to the ited States to teach at Washington university in St. Louis. hough lacking Moore's taste, tact and his decorative refine- nt, Beckmann seemed in spite of his shortcomings to be the erior artist. His call to St. Louis witnessed the anxiety of ne of the midwestern institutes to share in the modern art vement. (*See* also SCULPTURE.) (FR. T.)

## ints and Varnishes.

In 1947, for the first time in history, paint sales in the United tes exceeded $1,000,000,000, being about 35% greater than 1946. The high prices of linseed, soya and other oils, trace- e to a general shortage of fats and to a government flax price port program, were reflected in higher prices of paint products. Raw material shortages continued, particularly in titanium dioxide and in phthalic and maleic anhydrides.

Tung oil from China was again available in good volume and at prices competitive with domestic oils. Linseed oil from Argentina was in shorter supply, but castor beans from Brazil resumed their large contribution to the paint industry in the form of dehydrated castor oil. This availability of tung and castor oils made important the fortification of soya oil to replace linseed oil in many uses. Tall oil, despite its slow drying, increased in paint use because of its low price and the availability of pentaerythritol and the fast drying oils to fortify it. Solvents continued in short supply.

Phthalic anhydride increased in demand for alkyd resins for architectural and industrial finishes, in competition with its increasing use in plasticizers, for vinyl resins, and became short in supply, despite an all-time high production of 140,000,000 lb.

Styrene, having become abundant and cheap for the synthetic rubber industry, was used in copolymerization with drying oils to make fast drying finishes. Cyclopentadiene, available in quantity from both coal tar and petroleum sources, was also used for copolymerization with oils, as well as for the older solid resins.

Phenol ether resins were announced commercially as a combination of the better features of phenolic and alkyd resins and were used without modification in baking finishes and also esterified with drying oil acids to produce films of superior drying and durability.

Vinyl polymers expanded in both volume of production and diversity of type, the latter including both alkyd miscible solutions and emulsions which dry to transparent continuous films.

In the field of pigments, stainless steel flakes were offered as more corrosion resisting than aluminum.

Paint of higher fire resistance was promised by several new components, but none showed wide adaptability to conventional paint use. (JO. C. W.)

## Pakistan, Dominion of.

Pakistan consists of four provinces, viz.: East Bengal, capital Dacca; North-West Frontier province, capital Peshawar; West Punjab, capital Lahore; Sind, capital Karachi.

Population of Pakistan: 70,000,000 (approximately); area: 361,000 sq.mi. Capital: Karachi. National flag: green and white; the white portion, which is one quarter of the flag, stands for the non-Moslem minorities; on the green portion appears a white crescent and heraldic star. Governor general and president of the constituent assembly: Mohammed Ali Jinnah; prime minister: Liaquat Ali Khan. (For history, *see* INDIA. *See* also INDIA, DOMINION OF.)

The Punjab, or land of five rivers, lies along the course of the Indus and its confluents, upon whose waters it mainly depends for its livelihood. Its principal crops are wheat, barley, millets, pulses and sugar cane. Mineral resources are small. The Punjab, originally a Mogul province, was conquered by the Sikhs under Ranjit Singh at the end of the 18th century. Their short-lived empire was overthrown by the British in 1849. The majority of the inhabitants are Moslem by religion. The Punjab has always been the home of martial races, and furnished the best troops to the Indian army. The principal languages are Urdu and Punjabi.

The North-West Frontier province, inhabited by Pathan tribes, is strategically important because of the Khyber and other passes, which are the gateways of India. The Pathans are a freedom-loving race, managing their affairs democratically in *Jirghas* or tribal assemblies. They had little desire for amalgamation with the Punjab, though they by a bare majority decided, chiefly on religious grounds, to enter Pakistan. There was a considerable body, under the leader of the "red shirts," Abdul Ghaffar Khan, which at one time had leanings toward the Indian National congress. The language is Pashtu.

Sind, the province lying at the mouth of the Indus, was of little importance before the British conquest in 1843. It has a mixed Baluchi and Hindu population. Since then its prosperity was greatly enhanced by the rise of the seaport of Karachi and the construction of the Sukkur barrage, which has irrigated 5,500,000 ac. of barren desert. This area is now the chief wheat-producing district of India.

To the west of the Punjab lies Baluchistan. It is composed of British Baluchistan, which was by plebiscite absorbed into Pakistan, and the state of Kalat, which was recognized by Pakistan as an independent sovereign state. This placed the garrison town of Quetta, which commands the all-important Bolan pass, under the control of Pakistan. The great Baluchi state of Bahawalpur, with an area of 16,400 sq.mi. and a population of 1,500,000, acceded to Pakistan.

Eastern Bengal was overrun by the Moslems at the end of the 12th century. It is a land of rivers, tributaries of the Ganges and Brahmaputra. These serve as highways, and bring down the alluvial soil which makes it one of the most fertile countries in the world. Its products include tea, indigo, jute, timber and many kinds of grain. It has a good port in Chittagong.

(H. G. Rn.)

## Palaeontology, Vertebrate.

**General.**—A paper of general interest in 1947 was the study of the microscopic composition of coprolites from the Bridger Eocene of Wyoming (W. H. Bradley). S. P. Welles published some of the results of work in the lower Triassic Moenkopi formation of North America that furnished a partly new assemblage of vertebrates.

**Fishes.**—The exoskeletons of some of the most primitive jawless fishes (*Dartmuthia* by Gustav Wängsjö, *Tremataspis* by R. H. Denison) were subjected to microscopic study. E. I. White discussed the heterostracean genus *Phialaspis* and D. H. Dunkle erected a new genus of arthrodire, *Bungartius*, from the Devonian Cleveland shales. Among others, new genera of palaeoniscid fishes were reported by Carlos Rusconi and a late Cretaceous polyodontid from Montana was described by Archie MacAlpin. Anatol Heintz proposed a new systematic division of the lower vertebrates based on anatomical peculiarities of the nasal region in crossopterygians. Bobb Schaeffer described an Eocene serranid from Patagonia and several Cretaceous and Tertiary Actinopterygii from Brazil; Louis Hussakoff reported a new pycnodont from the Cretaceous of Arkansas.

**Amphibians.**—The most significant contribution was A. S. Romer's *Review of the Labyrinthodontia*, in which these forms are grouped into Temnospondyli and Anthracosauria. The latter embody the Embolomeri and the Seymouriamorpha that may have given rise to the reptiles. Ichthyostegalia, Rhachitomi, Trematosauria and the Stereospondyli make up the temnospondyls with the Anura considered as a possible side line of the Edopsoidea among the Rhachitomi. The classification of the Triassic stegocephalians was discussed by Tage Nilsson.

**Reptiles.**—The cranial morphology of the Diadectidae (E. C. Olson) was further investigated with the result of a proposal of a change in reptilian classification. Two subclasses are distinguished, the Parareptilia and the Eureptilia. The former include the Diadecta (with Seymouriamorpha, Diadectomorpha, Procolophonia, Pareiosauria) and the Chelonia. The Eureptilia contain the Captorhina, Synapsida, Parapsida, Euryapsida and the Diapsida. A new procolophonid (*Candelaria*) from the Triassic of Rio Grande do Sul, Brazil, was reported by L. I. Price, and A. M. Macgregor mentioned the discovery of reptilian remains from the Madumbisa shales of Rhodesia. Papers on fossil turtles included the description of a *Clemmys* from the Plio of the Ukraine (L. I. Khosatsky), an anosteirine form f Manchuria, the redescription of the pelomedusid *Taphros olssoni* from Peru (Rainer Zangerl), and further work on osteology of *Testudo praeextans* (C. W. Gilmore). Alfredo B reported a new *Placochelys* from the Rhaetic of the Lomba C. W. Gilmore proposed a new genus of crocodile, *Procaima dea,* from the Eocene of Utah and Robert Hoffstetter presen a study of fossil lizards of the family Gekkonidae. An art by F. R. Parrington dealt with the cranial anatomy of cynodonts.

**Birds.**—Madelaine Friant contributed several papers on av osteology. One was concerned with the procoracoid in bi another with the wing of *Rhea* and yet another with the ta metatarsus in terrestrial types (Struthio).

**Mammals.**—Some of the results of the Sven Hedin Exp tion to N.W. China were made known by Birger Bohlin. Simplicidentata, Artiodactyla, Perissodactyla and Primates f western Kansu were described. Carlos Rusconi mentioned ma malian remains (hegetotheriids, propalaeoplophoids) from Juan, Argentina, and a Miocene mammalian fauna from Bea Buttes, Oregon, was discussed by R. E. Wallace. A semipopu article by Emil Kuhn informed about the status of prehisto research especially in the region of Switzerland. C. L. Ga presented a paper on the sabre-tooth creodont, *Machaero eothen,* from the Bridger Eocene, and mention was made some recently discovered fossil insectivores (Jean Viret). new genus of European deer was reported by José F. de Villa Comella and D. M. S. Watson reviewed the evolution of Proboscidia. M. F. Skinner and O. C. Kaisen attempted a ta nomic clarification of the genus *Bison,* based on an extens study of much Alaskan material.

Among articles on primates with especial emphasis on qu tions of human evolution were J. A. Kälin's general presentat of the problem of human phylogeny, and Franz Weidenreic *Apes, Giants and Man* which gives orientation of the pres status of the discussion. Robert Broom and S. W. H. Schep devoted a study to the South African ape-men, Australopit cinae; skull casts of *Pithecanthropus* and *Sinanthropus* w discussed by C. N. Kappers, and, finally, new fossil finds of a or primitive men from Kenya were reported by L. S. B. Leak

(R. Zl.)

## Palestine.

Palestine lies on the western edge of As bounded on the west by the Mediterranean, the southwest by Egypt, on the south by the Gulf of Aqaba, the east by Trans-Jordan, on the northeast by Syria and on north by Lebanon. Area: 10,159 sq.mi.; pop. (est. Dec. 1946) 1,887,214 (excluding British forces). Chief towns (p est. 1944): Jerusalem (cap., 155,314); Haifa (125,498); Ja (93,493); Tel Aviv (155,277). Languages: English, Arabic, H brew and Yiddish. Religion: (1944) Moslem 1,061,277; Jew 528,702; Christian 135,547. High commissioner: Lt.-Gen. Alan Gordon Cunningham.

**History.**—The year 1947 was one of great significance in t history of Palestine. Political tension and internal disorc culminated in the recognition by the United Nations gene assembly of the unworkability of the British mandatory syste of government in Palestine and the decision to establish inc pendent Arab and Jewish states, with Jerusalem as an int national city.

Throughout 1946 the British government had searched for means of reconciling the various interests concerned with t country. About the turn of the year the Zionist congress me ing in Basle abandoned Dr. Chaim Weizmann's leadership a rejected his plea for Jewish participation in the London conf

called to discuss the government's plan for a federal Pales-
Zionist opinion was strongly in favour of the early estab-
ent of a Jewish state and of unrestricted immigration into
stine. At the same time the Arab states were strengthening
rganization of the Arab league, in which the principal uni-
element was the opposition of its seven members to Zion-
spirations. Faced with the intransigent attitude of both
s and Jews to a compromise solution of the problem, the
sh government decided at the end of February to refer
natter to the United Nations.

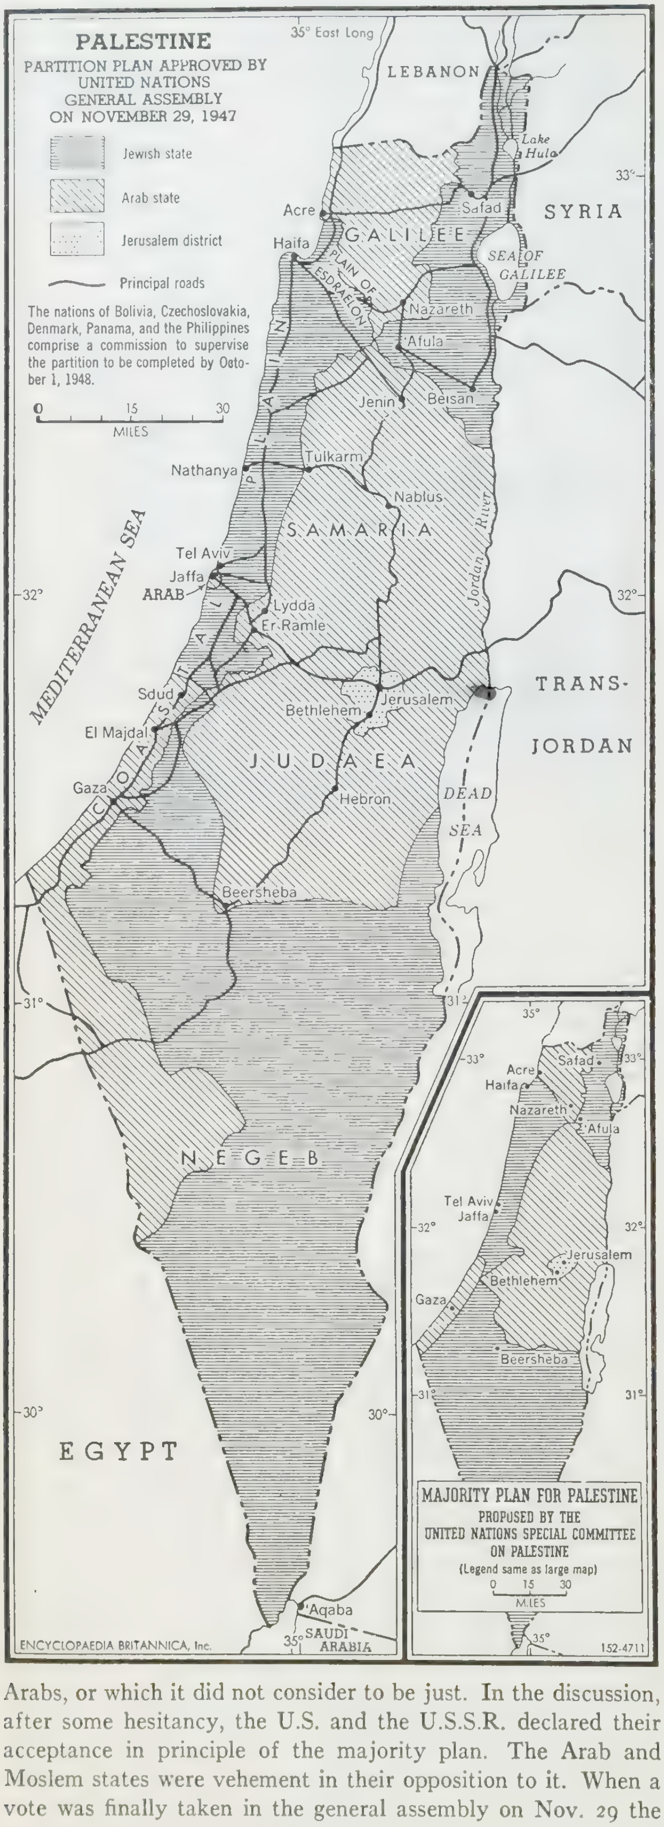
April 28, 1947, a special session of the general assembly
ed at Flushing Meadows, N.Y., with the question of Pales-
as the sole item on its agenda. Representatives of the Pales-
Arab higher committee and of the Jewish agency were
ed to attend the meeting in order to present their cases. On
15 the assembly decided to set up a United Nations special
mittee on Palestine (U.N.S.C.O.P.) composed of representa-
of 11 countries (Australia, Canada, Czechoslovakia, Guate-
, India, Netherlands, Iran, Peru, Sweden, Uruguay and
oslavia) who were to prepare a report by Sept. 1 and make
mmendations for submission to the next assembly.

Palestine itself the internal political situation showed no
of improvement. Throughout the year the country was the
e of frequent outbursts of terrorism and internecine strife;
Holy Land resembled an armed camp. Jewish terrorists of
extremist Irgun Zvai Leumi and Stern groups continued
r attacks on British troops and police. At the same time
anah, the secret Jewish paramilitary organization, vigorously
inued its policy of organizing Jewish immigration from Eu-
to Palestine in defiance of the government's regulations.
ge numbers of immigrant ships were intercepted off the coast
alestine by the royal navy and the passengers transferred to
rnment camps in Cyprus. During 1947 a total of 24,000
ons were dealt with in this manner with approximately half
number subsequently reshipped to Palestine. In an attempt
discourage this traffic the British government decided to
e an example of the 4,500 immigrants who arrived off Pales-
on July 18 on board the "Exodus 1947" (previously the
esident Warfield"). Instead of dispatching them to Cyprus the immigrants were trans-shipped to the French port whence they had sailed and when they refused to disembark were sent after innumerable delays and after enduring great hardships to Hamburg, where they were forcibly disembarked and finally lodged in displaced persons camps in the British occupation zone of Germany. The incident raised an outcry from Jews and Christians on both sides of the Atlantic and the experiment was not repeated. Of the many acts of terrorism, none created a more profound impression than the hanging of two British sergeants by Irgun Zvai Leumi at the end of July. Fatal casualties in Palestine from Aug. 1945 to Aug. 1947 were officially stated to be 141 British, 56 Jews, 44 Arabs and 10 others.

UNCERTIFIED Jewish immigrants resisting British soldiers who boarded their schooner at Haifa, Palestine, to transfer them to a ship bound for Cyprus

The U.N.S.C.O.P. report of Sept. 1 contained 11 unanimous recommendations, of which the first and most important was that the mandate should terminate and that the independence of Palestine should be achieved at the earliest possible date. In addition, there were: (1) a majority plan which proposed that Palestine should be constituted into an Arab and a Jewish state, with Jerusalem an international city, all combined under a scheme of economic unity, and (2) a minority plan which advocated an independent federal state for the whole country. The United Nations general assembly met at Flushing Meadows on Sept. 16, and on Sept. 23 it decided to set up a special *ad hoc* committee comprising representatives of all member-states to discuss the problem of Palestine. Once again, the Arab higher committee and the Jewish agency were invited to send representatives to present their respective cases. In a declaration of Sept. 26, when the debate was opened, and subsequently on Oct. 16, the British delegate accepted the 11 unanimous recommendations of the U.N.S.C.O.P. report and gave particular emphasis to the first two. He made it clear, however, that while he would not support the majority plan, neither would he oppose it, but he stressed the fact that his government would not accept responsibility "either alone or in a major role" for the enforcement of a scheme which was not agreed to by both Jews and

RN GANG members in a Jewish trench in Palestine during 1947. This
p was an armed faction of illegal status which was responsible for a num-
of bombings and terrorist raids in the Holy Land during the year



Arabs, or which it did not consider to be just. In the discussion, after some hesitancy, the U.S. and the U.S.S.R. declared their acceptance in principle of the majority plan. The Arab and Moslem states were vehement in their opposition to it. When a vote was finally taken in the general assembly on Nov. 29 the motion in favour of the establishment of separate Jewish and Arab states and an international city of Jerusalem was approved by 33 votes to 13 with 10 abstentions and one absentee. At the same time a commission composed of the representative Czechoslovakia, Denmark, Bolivia, Panamá and the Philipp was appointed to supervise the execution of the U.N. deci The result of the vote was hailed with delight by the suppo of the Jewish agency and with bitter resentment by the A The reception of the news in Palestine was the signal for an mediate outburst of rioting and bloodshed which, up to Dec was reported to have cost the lives of not less than 84 Jews Arabs and 7 British; serious rioting took place in Aden, inv ing the death of some 75 Jews and 36 Arabs, and disturba were also reported from Syria. (D. F. K

**Education.**—Arab public system maintained by the government 1944 scholars, elementary 62,783; secondary 959; postmatriculation 48. In there was a total of 904 public schools with about 80,000 schc Moslem private schools: scholars, elementary 13,752; secondary 14 Christian private schools: scholars, elementary 24,417; secondary 2 Special and agricultural schools: scholars 131. In Hebrew schools scholars were divided as follows: public schools (elementary and kin garten) 60,913; secondary 10,688; technical, agricultural and sp schools 1,532. Yiddish private schools (elementary and kinderga scholars 17,697; secondary schools and training colleges 1,894; v tional, agricultural and special schools 5,267. Hebrew university, Je lem: teaching staff 193; students 595.

**Banking and Finance.**—Revenue (est. 1947–48) £P.21,881,104; ex diture £P.23,559,681; public debt (March 31, 1946) £P.8,585,900; in circulation (July 1, 1947) £P.44,908,000; exchange rate (1947): (Palestine pound) = £1 sterling = 402.7 U.S. cents.

**Trade and Communication.**—Overseas trade (merchandise) 1946: ports £P.70,431,800; exports £P.24,484,900. Roads (1945): for weather 1,551 mi., seasonal 961 mi.; railways (1942) broad gauge mi.; narrow gauge (Hejaz railway) 111 mi. Airways (1946) passen arriving 8,781; leaving 9,180; freight unloaded 112 short tons; lo 82 short tons; mail unloaded 39 short tons; loaded 19 short tons. M vehicles (Dec. 1946) cars 6,169, taxis 1,356, buses 1,536, comme 7,651, motorcycles 2,816, tractors 17. Telephones (June 1947) 25, Radio licences (1947) 103,090.

**Agricultural and Mineral Production.**—Production, 1946 (in short to wheat 86,172; barley 70,604; durrah 40,565; maize (for seed) 63, sesame 8,103; kersennah 6,968; tobacco 926; tomatoes 79,078; pota 52,052; total vegetables 313,343; melons and watermelons 118, olives 8,576; grapes 58,887; bananas 9,780; figs, almonds and other citrus fruits 133,670; groundnut oil 5,802; coconut oil 3,364; marga 4,659; soap 9,934; cement 280,767; beer 7,765,788 U.S. gal.; 1,561,767 U.S. gal.; fish landed (in short tons) 4,329; citrus (cases) oranges 5,012,699; lemons 173,122; grapefruit 892,708.

## Panamá.

A republic of Central America adjoining So America. It is bisected by the Canal Zone, wh is leased to the United States. Area: 28,575 sq.mi., pop. (1 census): 622,576, both exclusive of the Canal Zone, which a population of 51,827. The capital is Panamá city (111,8 Other cities are Colón (44,393), Davíd (9,222), Chitré (4,7 La Chorrea (4,434) and Santiago (4,253). Language: Spani religion: Roman Catholic. President in 1947: Dr. Enrique Jiménez.

**History.**—Announcement of candidacies for the 1948 pr dential election and popular opposition to occupation of air-b sites by the United States dominated the political developme of 1947.

The proadministration Liberal Union coalition chose Domi Díaz Arosemena as its presidential candidate in April; but of its component groups, the National Revolutionary party, d sented and in August selected as its own standard-bearer J Isaac Fábrega, a former minister of foreign affairs. In Nove ber the Democratic Front presented Dr. José Joaquín Vallari ambassador to the U.S., to whom the Renovador party a pledged support, and the Authentic National Revolution party put forth Dr. Arnulfo Arias Madrid, the former presid and ardent nationalist.

The approaching election made the government particula responsive to public opinion, and when the United States fai to withdraw from the air-base sites on expiration of its previ lease, a popular reaction prevented ratification of a new agr ment. The public attitude was expressed by nationalistic dem strations in June, September and December, mostly instiga by student organizations.

The protracted diplomatic negotiations hinged largely on h of time the United States would occupy the 14 sites r a new lease. Panamá's proposal for a ten-year lease, re- ble by renegotiation rather than by option, was rejected he United States on Nov. 12. However, the resignation of ign Minister Ricardo J. Álfaro paved the way for a new ement, signed Dec. 10. This one, authorizing a ten-year pation with an option for five more years (ten more for nore important Río Hato base), was rejected by Panamá's lative assembly on Dec. 22. The rejection was by unani- s vote in the assembly as about 10,000 demonstrators out- protested against the treaty. A willingness to negotiate was expressed by Pres. Jiménez and the new foreign min- , Francisco Arosemena Forte, but the year ended with the ed States evacuating all its establishments within the re- ic.

other foreign relations, Panamá refused to recognize the administration in Nicaragua and expressed disapproval of Allied treaty of peace with Italy, signed in Paris on Feb. 10.

**ucation.**—In 1942 Panamá had 670 primary schools with an enrol- of 74,039; 29 intermediate schools enrolling 8,407 and a national rsity with 847 students. In 1947 the Inter-American university with nrolment of 1,200 students was officially incorporated into the na- l university. As of Jan. 1, 1947, there were 59 motion-picture res with a total seating capacity of 46,630.

**ance.**—The monetary unit is the balboa, maintained at par with the dollar. The national budget for the fiscal year 1946–47 estimated ues and expenditures balancing at $38,178,303. The outstanding nal debt amounted to $15,386,000 in 1946.

**ade and Resources.**—During 1946, exports amounted to $6,800,000 507,137 in 1945) while imports were valued at $56,100,000 ($45,- 25 in 1945). During the first 6 months of 1947, exports totalled 0,000 and imports $28,700,000. Bananas, ordinarily comprising of the exports, suffered heavy storm damage in 1947, but shipments g the first 7 months were normal (approximately 3,000,000 stems). rts were chiefly manufactured goods and construction materials. minary crop forecasts for 1947–48 estimated rice production at 7,000 bu. (2,606,000 in 1945–46); sugar 10,000 tons (9,000 in ); potatoes 68,000 bu. (51,000 in 1946). Exports in 1946 included (41,781,000 lb.), rubber (138 tons), abacá fibre (2,385,124 kg.), e hides (32,653 units).

**mmunications.**—Railroads measured 458 mi. in 1945, and there were 7 mi. of transitable highways (399 mi. unimproved). The new na- l airport, designed to accommodate 80 commercial planes daily, opened to traffic in 1947. The phenomenal growth of the nation's hant marine, through transfers from foreign registry, continued, a total of 1,500 ships (2,000,000 tons) registered as of Feb. 1947.

## n American Union.

Changes in organization and direction marked the development of Pan American Union during 1947. At the same time a first was made in the reorganization of the whole inter-American tem, and extensive studies were undertaken in anticipation of completion of this process at the Ninth International Con- ence of American States, scheduled to convene at Bogotá, ombia, on March 30, 1948.

At the meeting of the governing board of the Pan American ion held on March 12, 1947, Dr. Alberto Lleras, former presi- t of Colombia, was elected director general for the term iring Dec. 31, 1954. He thus became the first Latin American occupy the office, which, since the establishment of the union 1890, had always been filled by a North American. The rd thereby gave effect to the resolution on the reorganization the inter-American system adopted at the Inter-American nference on Problems of War and Peace held at Mexico City 1945, which stipulated that term of office of the direc- general should be ten years, that he should not be suc- ded by a person of the same ionality.

The governing board at the meeting of July 23, 1947, also approved a plan for reorganization of the internal services of the Pan American Union, under which the technical and administrative divisions of the organization would be grouped into five major departments, as follows: international law and organization, economic and social affairs, cultural affairs, information and administrative services.

At the meeting of the governing board held on Nov. 10, 1947, Dr. Juan Bautista de Lavalle of Peru and Dr. José A. Mora of Uruguay, were elected chairman and vice-chairman, respectively, for 1948.

**Inter-American System.**—From Aug. 15 to Sept. 2, 1947, the Inter-American Conference for the Maintenance of Continental Peace and Security met at Petrópolis, near Rio de Janeiro, Brazil. The treaty of reciprocal assistance signed at that meeting gave permanent form to the principles incorporated in the act of Chapultepec signed at Mexico City in 1945. (*See* INTER-AMERICAN DEFENSE CONFERENCE.)

The treaty provided that the governing board of the Pan American Union should act as the provisional organ of consultation until a meeting of the ministers of foreign affairs of the American republics could be arranged. The treaty thus represented the first specific delegation of political powers to the governing board in line with the general principle laid down at the 1945 Mexico City conference.

In anticipation of the Bogotá conference in 1948, the governing board completed preparation of a project for an organic pact of the inter-American system, to embody for the first time in a single instrument the basic features of the international organization of the American republics.

Other projects prepared during 1947 for presentation at Bogotá included a draft declaration of the rights and duties of states and another on the international rights and duties of man; a comprehensive treaty embodying procedures for the pacific settlement of international disputes between American republics, drawn up by the Inter-American Juridical committee of Rio de Janeiro; and a basic agreement of economic co-operation, formulated by the Inter-American Economic and Social council. (*See* also ARGENTINA; FASCISM; INTER-AMERICAN DEFENSE BOARD; UNITED NATIONS.) (W. MR.)

## Paper and Pulp Industry.

The estimated U.S. production of paper and paperboard in 1947 was about 21,000,000 tons—a new high record which did not, however, meet consumption requirements in most branches of the industry.

Table I.—*U.S. Paper Production*

| | 1940 | 1943 | 1946 |
|---|---|---|---|
| Newsprint | 1,056,304 | 811,309 | 775,042 |
| Groundwood | 550,453 | 585,673 | 770,433 |
| Book | 1,666,488 | 1,592,878 | 1,919,400 |

States in 1945 was 20,282,050 tons; by the end of 1948 it was expected to reach 23,540,910 tons.

**Canada.**—Total production of paper grade wood pulp was about 10% higher in 1947 than in 1946. The production of newsprint rose by about 8%. There was a small increase in Newfoundland (about 9,300 tons). Among Canada's peacetime industries, pulp and paper continued to stand first in employment, total wages paid, export values, net value of production and capital invested. There were 113 Canadian pulp and paper mills in 1947, of which 35 were newsprint mills.

**Table IV.—*Canadian Paper Production***

*Includes chemical pulp screenings.

**United Kingdom.**—The paper industry in Great Britain suffered from the coal shortage during 1947; before this crisis the mills operated at 35% of capacity. Since fuel allocations were cut 50%, the output, particularly of newsprint mills, was reduced to 17.5% of capacity. Imports of papers were limited by the dollar shortage. In 1938 total paper and paperboard production was 2,501,230 tons and imports 1,070,706 tons. In 1946 production was 1,735,190 tons and imports 326,750 tons. In 1938 paper and paperboard exports were 176,441 tons and in 1946, 113,904 tons. (R. G. M.)

**Paprika:** *see* Spices.
**Papua:** *see* British Empire.

**Paraguay.** A landlocked republic in south-central South America, bounded north and east by Brazil, south by Argentina, and west by Bolivia. Area 149,807 sq.mi. Population 1947 (off. est.) 1,200,000. Racially the people are a homogeneous blend of Spanish, Portuguese and Italian stocks, with a good deal of Guaraní Indian blood discernible especially in the remote areas. Official language: Spanish. The Guaraní tongue has survived more than the blood, but is secondary and recessive. Capital and chief centre: Asunción, pop. (1945 est.) 172,400. Other cities: Villarica 30,176, Concepción 16,007, Encarnación 15,610. The official religion is Roman Catholic. President in 1947: Gen. (Marshal) Higinio Morínigo.

**History.**—On Jan. 13, 1947, the Febrerista (leftist) cabinet members broke up the coalition government, leaving the Colorado and military members in charge. The issue was whether President Morínigo would pledge himself not to run for the presidency again, which the Febreristas did not desire. The government ordered the army garrisons at Concepción in the north and the Chaco in the west to arrest all Febrerista officers, whereupon an abortive revolt occurred at Asunción and successful revolts at Concepción and Lopez de Fillipis. Morínigo quested aid from neighbouring governments, but declined t mediation on the ground that it would encourage Communi Keeping his crack cavalry and artillery regiments in the so he sent a conscripted 2nd army by land against Concepción, trusting general command to Col. Federico Smith.

The rebels in the north were led by Col. (ex-president) Ra Franco, and commanded by Lt. Cols. Fabian Zaldivar, Alfr Galleano and Aureliano Mendoza. They established a five-m cabinet and three radio propaganda stations; and were joine May by the two principal naval units, the gunboats "Paragu and "Humaita," commanded by Rolando Ibarra. Working w untrained troops and through difficult terrain, Col. Smith able to capture Concepción at the end of July; but the re army escaped and appeared on the outskirts of the capi Asunción, on Aug. 10, while the gunboats and river stea "Ituzaingo" also threatened the city. The Brazilian ambassa who had attempted to mediate, withdrew to Brazil and fore the end of the Morínigo government; but the loyal and w trained cavalry and artillery defeated the rebels complet within a few days, and the gunboats took refuge in Argent Col. Franco fled by plane, and the revolt came to a sudden e It had been supported by the Liberal party members, many whom were well-to-do exiles in Argentina where they were friendly terms with the anti-Perón propertied class. Presid Perón of Argentina, having given assistance to an unascerta able extent to President Morínigo during the revolt, met w the latter Oct. 28 and negotiated a preliminary economic rangement, said to involve a long-range $55,000,000 loan Paraguay; thus expanding his southern economic bloc, Arg tine-led. The Morínigo government later announced that e tions would be held, both for the presidency and the house representatives, on Feb. 15, 1948.

**Education.**—In 1946 the 2,000 elementary schools, of which a la share give three years' instruction, had at least 65,000 pupils; and t were 6 agricultural (secondary) schools, of which some had had ex sive reorganization under U.S. agricultural advisers. National nor schools and a national junior college were maintained. The ministe education, Dr. Guillermo Enciso Velloso, was named ambassador to United States in 1947.

**Defense.**—Paraguay's strategic situation beside the frontiers of the great rival powers of South America, coupled with its conspicuous re tation for military prowess in two of the three great wars of the co nent, give importance to its armed forces. Prior to the revolt of 1947 army, based on conscription, numbered at least 8,000, and this figure temporarily increased. The (river) navy, guarding Paraguay's much-u fluvial system and communication with the outside world, numbered s 1,400. At least 50% of the national budget is devoted to defense.

**Finance.**—The unit of Paraguayan currency is the guarani, which 1947 was continued stable at 32.4 U.S. cents. All foreign exchange tr actions are controlled by the National Bank of Paraguay. The natio revenues increased during 1946, but were affected in 1947 by the c war. The 1944 budget was some $10,000,000, the national debt b only $22,000,000. Note circulation in 1946 was more than $10,000,

**Trade and Communication.**—Paraguayan exports in 1946 reached a high of $28,277,000, while imports rose to $22,112,000. The chief exp are canned corned beef, cotton fibre, cattle hides, quebracho extract, h wood and cedar logs, tobacco, yerba maté and petitgrain oil. The imp are highly diversified, consisting of cotton and some woollen text machinery, consumers' goods and foodstuffs of temperate zone origin.

The Argentine (Dodero) line of river steamships from Buenos A handles most of Paraguay's freight and passenger traffic; but a Brazi subsidized line connects with Brazilian and Uruguayan ports and g as far north as Corumbá (Brazil). The standard-gauge Central rail of Paraguay (British and Argentine) runs from Asunción south through the best farm and forest areas to connect by car ferries Encarnación-Posadas with the Argentine railways, but its through tr (one train per week) is small. It carries close to 2,000,000 passen and 400,000 tons of freight annually. A Brazilian branch railway f Campo Grande (Matto Grosso) to Concepción in the north of east Paraguay was not yet in operation to any great extent in 1947. Th were in 1947 about 500 mi. of modern highways, of which only were macadam; and Route II, eastward from Asunción, had not b carried through to the Brazilian border, so that there were no effec connections between Paraguay and its friendly northeastern neighbo

Excellent air connections with Asunción are maintained by Pan Am can World Airways, Panair do Brazil, the Corporación Sudameric (Argentine river hydroplanes), and two military lines (Brazilian Argentine). The Paraguayan government sustains a national air line connecting the capital with the north and the Chaco. The number telephones in Paraguay in 1945 was fewer than 4,000, and there w fewer than 200 telegraph offices. There were five radio stations and 16, receiving sets. Automobiles numbered 2,500.

**griculture.**—Paraguay is primarily a cattle country. The cotton crop become the mainstay of the smaller farmers, ranging up to 50,000 ; but the 1947 crop, excellent in volume and quality, could not be 'ested fully because of the protracted revolt. The staple food, and est crop, is mandioca; and bananas and citrus fruits are also staples hough not for export). Paraguay is usually more than self-sufficient ugar production, with yields up to 16,000 tons; and grows some rice.

**anufactures.**—There are important cotton textile mills in central and hern Paraguay, with minor silk and woollen mills. Plywood is a ving forest industry, and vegetable oil crushing is substantial and ving. In addition there is some flour milling, beer brewing, and pro- ion of glass bottles, matches, tobacco manufactures, furniture, soap and wear.

**ines and Forests.**—There are no minerals in Paraguay, and the active oleum explorations in the Chaco by the Union Oil Co. of California not yielded practical results when 1947 ended. Limestone and manese exist in good quantity and quality, but the absence of fuels and es prevents the establishment of cement and smelting plants. The nsive Paraguayan stands of timber are scattered and not uniform, and wood is too hard for many common uses; but the floating of logs to entina continues on a fairly large scale. (W. Ft.)

## rents and Teachers, National Congress of.

e National Congress of Parents and Teachers, the P.T.A., s founded in 1897 as the National Congress of Mothers. As April 1947 its membership was composed of 4,486,855 ents, teachers and other interested persons, of whom more n 1,100,000 were men. These members were organized into out 28,000 local parent-teacher associations, functioning in h of the 48 states, the District of Columbia, and Hawaii.

The P.T.A. recognizes no social, economic, political, cultural, religious distinctions among its membership. Anyone may n who is concerned with promoting the welfare of children d youth in home, school, church and community.

School education, health, world understanding and parent and nily life education were the four areas of a national fourint program selected for special emphasis by the administran of the National congress. In 1947 objectives were estabhed for each area and definite projects for achieving those jectives were initiated by local P.T.A.'s throughout the untry.

In the crucial area of school education the parent-teacher embership was particularly active in working for legislation at would provide federal financial aid for public, tax-supported hools. A united effort was also made to alleviate the shortage teachers, to raise the level of teachers' salaries, to elevate e prestige of the profession and to bring about a more equal stribution of educational opportunities for all children. Partly a result of parent-teacher influence, many state legislatures ssed measures that increased teachers' salaries.

A special project to aid teachers of war-torn countries was ccessfully carried out by P.T.A.'s in the spring of 1947. Aproximately 2,600 kits were filled with personal and school-room cessities at a cost of $65,000 and were shipped overseas.

The National congress carried on a far-reaching and codinated program in the field of health. National, state and cal parent-teacher leaders worked together to bring about the tension of public health services to all communities. As in st years, the congress supported school-lunch legislation and onsored the annual Summer Round-Up of the Children, a edical checkup of children entering school for the first time. fety education in all its phases was also stressed.

World understanding has long been a major objective of the rent-teacher organization. In 1947 the president of the National congress served as a member of the U.S. national commison for the United Nations Educational, Scientific and Cultural ganization, and an official observer for the congress attended ssions of the United Nations.

The National Congress of Parents and Teachers co-operated th Northwestern university at Evanston, Ill., in establishing three-year course of study and research in the field of home d school relationships. Starting in Sept. 1948 this course was to be conducted as part of the regular curriculum of the university's school of education and would be implemented by a grant from the National congress. During the summer of 1947 the parent-teacher organization also joined Northwestern university in sponsoring a summer workshop in parent-teacher leadership and a conference on language in human relations.

PARAGUAYAN revolutionists who took part in the 1947 revolt against the government of Gen. Higinio Morínigo. They wished to be photographed at prayer to dispel charges of communist domination in their movement

To promote parent and family life education, the National congress conducts an extensive publications program of books, leaflets, pamphlets and other informational material. Particularly important are the monthly *National Parent-Teacher: The P.T.A. Magazine* and a monthly newssheet, the *National Congress Bulletin.* The 50th birthday of the organization was marked by the publication of a *Jubilee History* of the parent-teacher movement from its beginnings. Also during 1947 the National congress again sponsored *The Baxters,* a weekly radio program.

The office of the National Congress of Parents and Teachers was in 1947 located at 600 S. Michigan Blvd., Chicago 5, Ill. (M. W. H.)

## Paris.

Capital and largest city of France, pop. (1946) 2,725,374.

The municipal elections of Oct. 19, 1947, produced a municipal council as follows: R.P.F. (*Rassemblement du Peuple Français*—Gaullists) 52; Communists 25; Socialists 8; M.R.P. (*Mouvement Républicain Populaire*—Catholic Progressives) 5. The former council was composed of Communists 27; M.R.P. 14; Socialists 12; other groups, mainly of the right, 37. On Nov. 17, Pierre de Gaulle, younger brother of Gen. Charles de Gaulle, was elected president of the municipal council, by 51 votes to 25 for a Communist candidate and 8 for a Socialist. The Communists walked out of the council chamber after a violent scene in which they accused the R.P.F. councillors of being "Vichyites" and "collaborators."

During 1947 great progress was made in reopening the museums of Paris. From the Louvre collection the older schools of art were on exhibition at the Petit Palais and the impressionists at the Jeu de Paume while big changes were being made in their normal home. The Galérie du Louvre was reopened on Oct. 17, after being completely redecorated. All the national collections

LEAFLETS and loudspeakers on radio trucks brought the news of the day to Parisians during the seven-day lock-out following a slowdown by press operators in Paris early in 1947

from the far east were being regrouped in the Musée Guimet, which was already partly open.

The staffs of many of the big department stores struck on June 19 for higher pay, returning on June 27 after their demands had been substantially conceded. On Oct. 11 a small breakaway union of Métro (underground railway) employees struck for higher wages; this action was supported the following day when the Confédération Générale du Travail came out in favour of wage increases for all transport workers in the Paris region. The strike came to an end on Oct. 20, after the unions and the government had agreed upon a 25% wage increase. During the stoppage the government organized an improvised service of trucks and other vehicles. Further strikes which caused stoppages in many industries in the Paris region occurred during November.

The number of students at the Sorbonne reached higher figures than ever before—45,414, of which 1,520 were foreigners.

During the summer meetings were held between the foreign ministers of Britain, France and the U.S.S.R., and from July to September the Committee of European Economic Co-ordination on the U.S. offer of aid to Europe met at the Quai d'Orsay.

## Parliament, Houses of.

During the second session of parliament, which was prorogued on Oct. 20, 1947, 54 public acts were added to the statute book, compared with more than 80 in the first session. These included two nationalization measures (of inland transport and of the electricity supply industry); bills for the better planning and control of development and use of the land; for continuing the centralized buying of cotton; to continue conscription for five years from Dec. 31, 1948; and for company law reform. The transport and electricity bills were passed through the house of commons under the "guillotine," used for the first time in the standing committees, whereby amendments are voted on without discussion.

The king, accompanied by the queen and Princess Elizabeth, opened the third session on Oct. 21. The speech from the throne, outlining the proposed legislation, mentioned bills to nationalize the gas industry; to amend the Parliament act, 1911; to abol the Poor law; and to provide a new basis of exchequer gra to local authorities.

Important debates in the house of commons not involv legislation included one for setting up a royal commission on control, management and ownership of the press; and anot on the constitution of the committee of privileges which quires into complaints of breach of privilege. Its chairman h hitherto usually been the leader of the house, but when Herb Morrison sought to delegate this duty to a minister of low status, a change which the house approved after a stormy bate, Winston Churchill, as leader of the opposition, also wi drew. In October, on the appointment of the committee for t third session, W. J. Brown, Independent, made a further p test on the constitution of the committee. Three inquiries we held and reported on. W. J. Brown had complained of pressu being brought to bear on him by a trade union.

In April, Garry Allighan, Labour member for Gravesen wrote an article in *World's Press News* on the manner in whi newspapers obtained information from members. The arti contained allegations against members which were proved to unfounded. The committee declared that Allighan hims had sold reports of confidential party meetings to the *Eveni Standard.* The committee found him guilty of "an aggravat contempt of the house and . . . a gross breach of privilege." a free vote of the house in October he was expelled by 1 votes to 75. Evelyn Walkden, Labour member for Doncast who also supplied confidential reports, was "severely rep manded." The editor and political correspondent of the *Eveni News* were called to the bar of the house for refusing to answ questions put by the committee, and the editor of *World's Pre News* was called to the bar and reprimanded by the speaker.

The cabinet was reshuffled twice; once in April, when Lo Pethick-Lawrence (secretary of state for India and Burma) signed and was succeeded by the earl of Listowel, and Lo Pakenham succeeded John B. Hynd as the minister responsi for the occupation of Germany and Austria; and again in Oct ber when 12 ministers resigned. Sir Stafford Cripps was a pointed minister for economic affairs, and was succeeded at t board of trade by Harold Wilson. Emanuel Shinwell left t ministry of fuel and power to become secretary of state for w without a seat in the cabinet. Philip Noel-Baker entered t cabinet as secretary of state for commonwealth relations (fo merly the dominions office), and Arthur Woodburn, secretary state for Scotland.

Hugh Dalton, as chancellor of the exchequer, introduced tw budgets during the year, on April 15 and on Nov. 12. On No 13, after apologizing to the house of commons for "a grave i discretion" in revealing his budget proposals to a newspap correspondent before his speech, Dalton resigned from the go ernment and was succeeded by Sir Stafford Cripps, who retaine general responsibility for economic affairs.

On Dec. 17, the house of commons voted allowances of £25 000 to Princess Elizabeth (duchess of Edinburgh), in addition t £15,000 granted under the Civil List act, 1937, and £10,000 t the duke of Edinburgh. A Labour back-bench amendment t reduce the grant to Princess Elizabeth by £5,000 was defeate by 291 votes to 165, and the select committee's proposals we carried without a division.

The house of lords met for one day during the summer reces to discuss the economic situation, but the government coul not agree to a general debate. On Nov. 10, Herbert Morriso lord president of the council, moved the second reading of two-clause bill to reduce the veto of the house of lords, whic had been fixed in the Parliament act, 1911, as two years, to o year. An opposition amendment to reject the bill was defeate

345 votes to 194.

In the house of lords Viscounts Wavell and Mountbatten of rma were created earls; Lord Jowitt, the lord chancellor, and nley Bruce, former prime minister of Australia, were created counts, and 15 new baronies were created. (*See* also Cabinet embers; Government Departments and Bureaus.)

(L. Du.)

**rodi, Alexandre** (1901– ), French government official, was born June 1, in Paris. He udied law and became master of appeals in the French Coun- of State and later secretary general of the National Eco- mic council; in 1938 he was named director general of the nistry of labour. During the German occupation, he was tive in the underground. He was president of the under- ound press commission, one of the guiding spirits of the Paris urrection in Aug. 1944 and minister of labour and social se- rity in Gen. Charles de Gaulle's provisional government ept. 1944–Nov. 1945). Parodi was named permanent delegate pril 12, 1946) to the United Nations Security council, replac- Henri Bonnet. On May 17, he became president of the coun- under the rotation plan. He supported Dr. Oscar Lange's oposal that the U.N. member states break off diplomatic rela- ons with Spain on grounds that the Franco regime was a threat world peace but sided with the U.S. and Britain in discussions Greece and on atomic energy. In 1947, Parodi was named to embership on the Security council's new commission for con- ntional armaments, and on April 28 of that year he was ected as one of the 7 vice-presidents of the assembly's 14-man neral committee.

**atel, Vallabhbhai** (1876– ), Hindu government official, who studied law in London, de- loped a flourishing practice in India as a criminal lawyer. fter meeting Gandhi in 1915, Patel joined the latter's fledgling ovement and in the succeeding years built up the All-India ongress party into a powerful political machine.

In the party machinery, Gandhi made policy or laid down a ne to follow and Patel put it through. An able organizer as ell as an astute political "boss," Patel managed the election mpaign of 1937, in which the Congress party scored an over- helming victory, as well as many civil disobedience campaigns.

Patel's revolutionary activities were not appreciated by the ritish authorities and he spent at least half of the period from 931 to 1947 in prison. By 1947, he rose to eminence as one of ne powers to reckon with in Indian politics. On one side, he ad the respect of the Indian peasantry who had bestowed upon im the unofficial title of "Sardar" (generalissimo). On the ther, he had the confidence of wealthy Hindu and Parsee indus- ialists who contributed heavily to the Congress party.

In the first all-Indian government formed by Jawaharlal ehru on Sept. 2, 1946, Patel was made minister of home affairs, formation and broadcasting. After partition of India into indu and Moslem states, he was given the same portfolio in ne government of the dominion of India.

**atents.** The United States patent office in the year 1947 granted a total of 22,433 patents, which included ,102 for designs, 52 for plants and 130 reissues. This was a ecrease of 2,342 from the total of 24,775 patents granted in 946.

Applications for patents filed in the U.S. patent office for the rst 11 months of 1947 totalled 76,517. For the entire year 946, a total of 91,994 applications were filed; nearly 250,000 pplications had been received from Jan. 1, 1945. Approxi- ately 150,000 applications were awaiting action by the office in Dec. 1947; in addition, about 70,000 cases were awaiting response from applicants and attorneys to office actions. In an effort to cope with this backlog the patent office was expanding its staff of examiner personnel, training the recruits and instituting administrative and other reforms.

Trade-marks registered (8,981) and renewed (6,140) during 1947 totalled 15,121, compared with 13,841 in 1946. Applications for registration of trade-marks filed in the first 11 months of 1947 (26,698) and for renewals (4,562) totalled 31,260, nearly 4,000 more than the record filing for the entire year 1946. Some of this increase is attributable to the New Trade-mark act which became effective July 5, 1947. Rules of practice in trade-mark cases, for use under the new act, had been prepared and together with the statutes and other information were published in a newly styled booklet.

Approximately 19,000 patents had been entered on the register of patents available for licence or sale after it was established in May 1945. About 7,000 were added during 1947. Patents listed on the register are published in the *Official Gazette*.

The patent office had by 1947 granted more than 2,430,000 patents, printed copies of which may be purchased for 25 cents each; designs and trade-marks cost 10 cents each. During the year ended June 30, 1947, nearly 5,500,000 copies of patents were distributed, 500,000 going to libraries and 1,250,000 to foreign countries under exchange agreements.

During 1947 the patent office was actively engaged in the administration of the Boykin act (public law 690, 79th congress) which extends temporarily the time for filing applications for patents, and for taking other actions in the patent office, not capable of being done during World War II. Certain portions of this act were extended to a date not later than Feb. 29, 1948, by public law 220, 80th congress. After congress ratified the treaties of peace with Italy, Hungary, Bulgaria and Rumania, legislation (public law 380, 80th congress) was enacted to carry into effect certain parts of the treaties relating to patents. Since this law provides for the filing of patent applications, it is administered by the patent office. With certain limitations it also permits filing by nationals of Germany and Japan.

Innovations and improvements in the patent office made during the year to carry out a policy of better service to the public include institution of a perpetual inventory system of printed copies of patents, availability of complete, prewar search room facilities on Saturdays and evenings, the printing on copies of patents of references cited during pendency of the application, and abolition of certain restrictions on interviews with examiners.

Net receipts for the fiscal year ended June 30, 1947, were $4,815,260.47, an increase over the preceding year of $312,977.30, and obligations incurred under all patent office appropriations amounted to $7,262,472.27 as compared with $5,914,470.40 for the preceding year.

(L. C. K.)

**Paul I** (1901– ), king of the Hellenes, was born on Dec. 14 in Athens, second son of King Constantine and Queen Sophia. On June 11, 1917, he left Greece with his father and his elder brother, the future King George II; he came back to Athens on Dec. 6, 1920, after the Greek people had recalled Constantine to the throne. Having been graduated from the naval college Prince Paul joined the Greek navy, wherein lay his principal interest. When King Constantine abdicated in 1922 and was succeeded by Prince George, Prince Paul became *diadoch* or heir presumptive. During King George's exile (1924–35), Prince Paul spent many years in England and visited the United States. A keen sportsman, he gained his pilot's wings in 1936. He returned to Greece when, after the restoration of monarchy, he resumed his service with the Greek navy. On Jan. 9, 1938, he married Princess Frederika of Brunswick (born April 11, 1917). They had one son, Prince Constantine, born at Psychico, on June 2, 1940, and two daughters, Princess Sophia, born in 1939, and Princess Irene, born in Capetown in 1942. Prince Paul succeeded to the throne on the sudden death of King George II on April 1, 1947.

**"Pay-as-you-earn" System:** *see* TAXATION.

**Peace Treaties.** The peace treaties with Italy, Rumania, Bulgaria, Hungary and Finland, completed by the Council of Foreign Ministers in Dec. 1946, were signed on Feb. 10, 1947; that with Italy at Paris, the others at Moscow. Repeated threats to the contrary, the Yugoslav government signed the Italian treaty, which the Italian Constituent assembly had declined to accept or reject.

At Paris the Italian government protested against the "imposed" treaty, and Foreign Minister Count Carlo Sforza urged Italy's claim to peaceful revision. Agitation for revision had thus begun before the treaty came into force. On July 31 the Italian Constituent assembly appealed to France not to annex the Alpine territories assigned to it. In a message of Aug. 2 Secretary of State Marshall encouraged Italy to seek revision of the treaty through the United Nations or in bilateral negotiations. Panamá, Ecuador and Costa Rica had previously protested the terms of the treaty, and on Aug. 21 seven Latin American countries, led by Argentina, introduced a resolution asking the General assembly of the United Nations to recommend its revision. This resolution, placed on the assembly's agenda over the opposition of the soviet-led bloc, failed to come up during the second regular session.

The treaties came into force on Sept. 15, 1947, having been ratified by the United Kingdom on April 29, by the United States on June 14, by France on June 17, and, after long uncertainty as to its intentions, by the Soviet Union on Aug. 29. Despite violent criticisms, the treaty was ratified by the Italian Constituent assembly on July 31 by a vote of 262–68. Hungarian, Rumanian, Bulgarian and Finnish ratifications were completed by late August, and on Sept. 15 the five former axis states were again legally at peace and eligible for admission to the United Nations. The implied promise of membership was not fulfilled during 1947, however, because of disagreements among the great powers.

Under the treaties soviet forces were to evacuate Bulgaria, and British and U.S. forces were to leave Italy, within 90 days, while an unspecified number of soviet troops could remain in Hungary and Rumania to maintain lines of communication with soviet forces in Austria. In December the soviet government announced evacuation of Bulgaria. The final withdrawal of U.S. troops from Italy, first announced for Dec. 2, was hastily postponed during a period of sharp internal strife in Italy, until Dec. 14.

The shares of the Italian navy assigned to them under the treaty were renounced by the U.S. and British governments on Oct. 4 and Nov. 3. To this extent Italian pride was salved, and the Italian government was spared the expense of repairing and outfitting these vessels, which instead were scrapped. On Dec. 16 the four major Allies allowed the Italian government to scrap its remaining submarines instead of sinking them at sea. In October the Yugoslav government renounced $25,000,000 in reparations allotted to it under the treaty with Bulgaria.

The Italo-Austrian agreement on the South Tyrol was reported to be working moderately well. Use of German in education, administration and daily life was fully protected, in contrast to pre-1943 conditions, but there was no agreement concerning the repatriation of former inhabitants who had b moved to Germany and Austria under the German-Italian agr ment of 1940.

Coming into force of the Italian treaty gave effect to minor Alpine areas assigned to France except for Tende-Brig the only inhabited area, which, under French constitutional pr tice, became part of France after a plebiscite held on Oct. 11

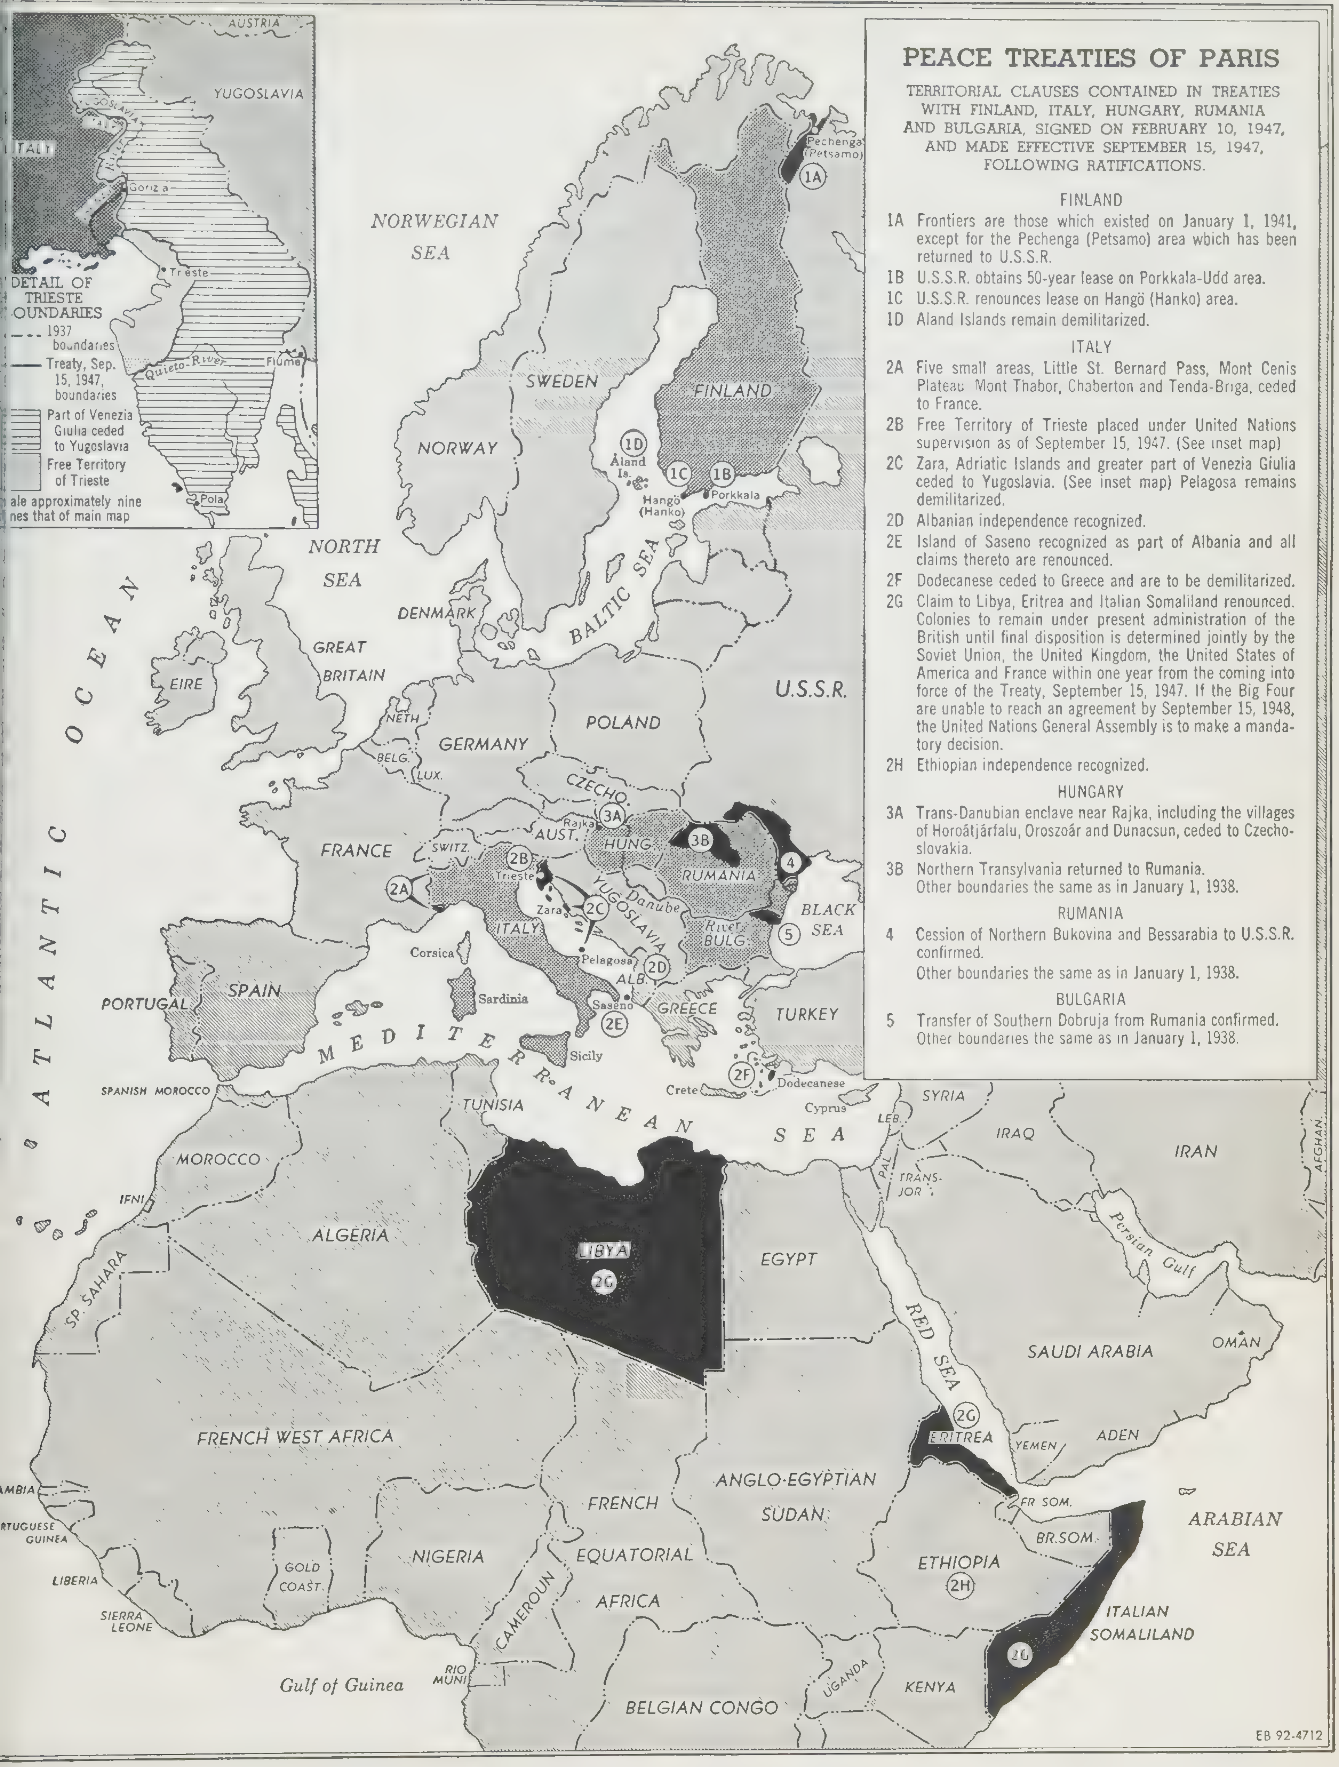
By an agreement of June 1946 the future of the forn Italian colonies was to be determined in the first instance the four major Allies, within one year of the coming into fo of the treaty. The British government invited France, U.S.S.R. and the United States to confer on this problem London on June 6. On June 5, however, the conference w called off, because the soviet government held that negot tions could begin only after the treaty had been ratified. Me ing intermittently from Oct. 3–29, the deputies and the co mission of investigation agreed to grant hearings on the futu of the colonies to all signatories of the treaty, plus Egypt. Oct. 29 the French delegation circulated a memorandum p posing rectifications in the frontier between Eritrea and Fren Somaliland, in addition to earlier and extensive claims to we ern and southern Tripolitania. After long debates the comm sion agreed on a schedule for its visits to the colonies and s June 7, 1948, as the deadline for its report to the deputies.

During March and April a four-power commission assist by Italian and Yugoslav representatives marked out the pr visional boundaries between Italy, Yugoslavia and the futu Free Territory of Trieste. Meanwhile some 90% of the peop of Pola, assigned by the treaty to Yugoslav sovereignty, m grated to Italy. Serious incidents occurred on Sept. 15–16 wh Yugoslav troops attempted to advance beyond the provision demarcation lines in Venezia Giulia. British and U.S. forces 5,000 men each took up positions in the city of Trieste and i immediate environs while Yugoslav forces continued to occup the part of Istria assigned to the Free Territory. In the absen of great-power agreement on a governor for the territory, Angl U.S. and Yugoslav military authorities continued to administ the area in two disjointed segments. (*See* TRIESTE, THE FR TERRITORY OF.)

On July 11 the United States government took the first form step toward drafting a peace treaty with Japan. It propose that a conference of the 11 countries represented in the F Eastern commission (Australia, Canada, China, France, Indi Netherlands, New Zealand, Philippines, United Kingdon U.S.S.R., United States) meet on Aug. 17 at San Francisc Calif., or Washington, D.C., to prepare a draft treaty, whic would then be submitted to a general conference of countries a war with Japan. Decisions in the preliminary conference, th U.S. held, should be adopted by a simple two-thirds' majorit without giving the great powers veto rights.

The proposal met with general approval except on the part o China and the Soviet Union. A Chinese note of July 24 pro posed that decisions be adopted by a vote of two-thirds, includ ing the votes of three out of the four great powers (China United Kingdom, U.S.S.R., United States). On July 22 th soviet government, denouncing the U.S. proposal as a "viola tion" of the Potsdam agreement on treaty procedure, insiste that the treaty be drafted by the four great powers, each of th latter to retain the veto right. It also maintained that only th four powers, by agreement, could issue an invitation to a con ference. The United States government denied that the Pots dam agreement applied to the drafting of the Japanese treat and insisted that the 11 states represented in the Far Easter commission had a special interest in all matters relating to th treatment of Japan.

A compromise was advanced informally on Oct. 18 by th



## PEACE TREATIES OF PARIS

TERRITORIAL CLAUSES CONTAINED IN TREATIES WITH FINLAND, ITALY, HUNGARY, RUMANIA AND BULGARIA, SIGNED ON FEBRUARY 10, 1947, AND MADE EFFECTIVE SEPTEMBER 15, 1947, FOLLOWING RATIFICATIONS.

FINLAND

1A Frontiers are those which existed on January 1, 1941, except for the Pechenga (Petsamo) area wbich has been returned to U.S.S.R.

1B U.S.S.R. obtains 50-year lease on Porkkala-Udd area.

1C U.S.S.R. renounces lease on Hangö (Hanko) area.

1D Aland Islands remain demilitarized.

ITALY

2A Five small areas, Little St. Bernard Pass, Mont Cenis Plateau Mont Thabor, Chaberton and Tenda-Briga, ceded to France.

2B Free Territory of Trieste placed under United Nations supervision as of September 15, 1947. (See inset map)

2C Zara, Adriatic Islands and greater part of Venezia Giulia ceded to Yugoslavia. (See inset map) Pelagosa remains demilitarized.

2D Albanian independence recognized.

2E Island of Saseno recognized as part of Albania and all claims thereto are renounced.

2F Dodecanese ceded to Greece and are to be demilitarized.

2G Claim to Libya, Eritrea and Italian Somaliland renounced. Colonies to remain under present administration of the British until final disposition is determined jointly by the Soviet Union, the United Kingdom, the United States of America and France within one year from the coming into force of the Treaty, September 15, 1947. If the Big Four are unable to reach an agreement by September 15, 1948, the United Nations General Assembly is to make a mandatory decision.

2H Ethiopian independence recognized.

HUNGARY

3A Trans-Danubian enclave near Rajka, including the villages of Horoátjárfalu, Oroszoár and Dunacsun, ceded to Czechoslovakia.

3B Northern Transylvania returned to Rumania.
Other boundaries the same as in January 1, 1938.

RUMANIA

4 Cession of Northern Bukovina and Bessarabia to U.S.S.R. confirmed.
Other boundaries the same as in January 1, 1938.

BULGARIA

5 Transfer of Southern Dobruja from Rumania confirmed.
Other boundaries the same as in January 1, 1938.

inese foreign minister, Wang Shih-chieh, under which the eaty would be drafted by 11 states, with retention of the eat-power veto. It was intimated that China would not attend e conference without soviet participation, since such a step might be interpreted as a derogation from the agreement not to enter into separate negotiations with Japan (article 2, Sino-Soviet treaty, Aug. 14, 1945). Formally transmitted to the other three governments on Nov. 17, this proposal was rejected by the soviet government, which insisted upon exclusive competence of the four powers, and by the British government, which was even more determined since the Canberra conference not to impose a subordinate role upon the British dominions in making peace with Japan.

The British Commonwealth conference, held at Canberra between Aug. 26 and Sept. 1, had also shown that the commonwealth governments, five of them prospective members of the 11-power conference, were in agreement on the broad lines of the peace, especially on the necessity for complete demilitarization and continuing supervision of Japan. Some differences were apparent over the extent to which reparations should be exacted.

Upon the adoption of a new constitution, by which Japan was declared disarmed "forever," it was suggested in several quarters that Japan's security should be placed under a United Nations guarantee. There were also persistent reports that the United States would seek a strategic trusteeship over the Ryukyu Islands, or at least over Okinawa. Chinese circles were reported divided on whether to press China's claim to the Ryukyus. U.S. and British commonwealth thinking was reported to be turning against the idea of large-scale removals of Japanese industrial equipment as reparation, in favour of promoting a larger Japanese contribution to the development of the despoiled nations of the far east through deliveries from current production and through revival of Japanese trade. Unofficial Japanese views also favoured current deliveries as against removals of capital equipment. (*See* articles on individual nations concerned; *see* also FOREIGN MINISTERS' CONFERENCES; INTERNATIONAL LAW.) (P. E. M.)

**Peaches:** *see* FRUIT.

**Peanuts.** The 1947 production of peanuts in the United States was estimated at 2,251,000,000 lb.—the sixth consecutive crop of more than 2,000,000,000 lb. The crop compared with 2,038,355,000 lb. harvested in 1946 and a ten-year average of 1,672,885,000 lb. The 1947 yield was 667 lb. per ac. compared with 649 lb. in 1946 and 719 lb. for the ten-year average. Acreage was 3,378,000 compared with 2,383,000 for the previous ten years and 1,900,000 ac. in the prewar decade. The top yields were harvested in Virginia, 1,230 lb. per ac., North Carolina 1,175 lb. and New Mexico, 1,100 lb. In Georgia, the leading peanut state, the average yield was 715 lb. per ac. and in Alabama 650 lb.

*U.S. Peanut Production 1947, 1946 and 10-yr. Average, 1936–45*

(In thousands of pounds)

| State | 1947 | 1946 | 10-yr. average |
|---|---|---|---|
| Georgia | 780,780 | 716,900 | 561,373 |
| Texas | 372,725 | 395,005 | 211,538 |
| North Carolina | 343,100 | 272,875 | 304,772 |
| Alabama | 293,800 | 259,600 | 269,178 |
| Virginia | 199,260 | 191,250 | 169,892 |
| Oklahoma | 151,125 | 117,130 | 49,150 |
| Florida | 65,625 | 46,500 | 57,460 |
| South Carolina | 16,900 | 16,900 | 15,831 |
| New Mexico | 15,400 | 8,200 | 6,836 |
| Mississippi | 4,875 | 5,250 | 10,584 |
| Tennessee | 3,750 | 4,250 | 6,322 |
| Arkansas | 2,800 | 3,375 | 7,882 |
| Louisiana | 1,500 | 1,120 | 4,118 |

The price of peanuts, which at the beginning of 1947 stood at an average of about $8.90 per 100 lb., rose to $10 in May and then declined slightly. The government supported peanut prices by purchases through growers co-operation associations at about the same rate, $172 per ton, as in 1946. Loans could be made until Jan. 1948.

World peanut production in 1947 was estimated at 9,800,000 tons by the U.S. department of agriculture—a small increase over 1946, but less than the 10,160,000-ton record of 1943 and slightly above the prewar average of 9,530,000 tons for 1935–39. Increased production in the United States, India, Netherlands Indies and French Africa slightly overbalanced the reducti in China, Nigeria and Argentina. The greatest development peanut growing was in Belgian Congo where the acreage h been doubled since 1939. The British government provi tractor equipment, and the 64,000-ton crop of 1946 was pected to increase to more than 680,000 tons by 1952. (*See* a CHEMURGY; FOOD RESEARCH.) (J. C. Ms.)

**Pears:** *see* FRUIT.

**Peat.** There is little if any demand for peat for fuel in t United States, it being mainly used for soil impro ment, either added directly or as a constituent of mixed f tilizer, where it also serves to keep the fertilizer from caki The domestic industry was recovering from the adverse effe of World War II, with production increasing from 97,000 sh tons in 1944 to 107,000 tons in 1945 and 140,700 tons in 19 At the same time imports rose from 64,383 tons to 77,673 t and 84,078 tons. While the domestic output accounted for 6 of the supply on a tonnage basis, imports comprised more th 70% of the total value. (G. A. Ro.)

**Pecans:** *see* NUTS.

**Penicillin:** *see* CHEMOTHERAPY; MEDICINE; UROLOGY.

**Pennsylvania.** A middle Atlantic state of the U.S. and o of the original 13 states of the union, pop larly known as the "Keystone state." Area, 45,333 sq.mi., i cluding 288 sq.mi. of inland water; pop. (1940) 9,900,180, whom 8,453,729 were native-born white, 973,260 foreign-bo white and 470,172 Negroes. The urban population in 1940 nu bered 6,586,877 and the rural 3,313,303. Capital, Harrisbu (83,893). Cities with a larger population: Philadelphia (1,93 334); Pittsburgh (671,659); Scranton (140,404); Erie (11 955); Reading (110,568); Allentown (96,904); Wilkes-Bar (86,236). The Pennsylvania state planning board estimated t state's total population including its citizens in military servi as of Aug. 1946, at 10,238,012. The U.S. census estimate civilian population, July 1, 1947, was 10,281,000.

**History.**—Elected to the U.S. senate, Edward Martin r signed the gubernatorial chair Jan. 2, 1947, and was followed Lieutenant Governor John C. Bell, who headed the interi administration until James H. Duff was inaugurated as Pennsy vania's 34th governor on Jan. 21.

The 1947 legislature made extensive appropriations for t construction of mental hospitals, for public health, conservatio education, highway construction and veterans' aid. Emergen taxes were levied on a variety of luxury items. A Tax Equaliz tion commission was created to study the structure of state a local tax systems.

Implementing the conservation program begun in 1945, a la was enacted to control certain coal stripping practices in t anthracite field. The regulations, designed to prevent the poll tion of the state streams by communities and industries, we vigorously enforced.

The high prosperity of the state is reflected in the records f both agricultural and industrial production in 1947. Farm i come reached a record high. Factory pay rolls for the first ni months of 1947 were 24% above those for the same period 1946. Employment made a new peacetime record. The Pennsy vania state employment service placed 6,500 handicapped pe sons during the first nine months of 1947.

A significant special election of the year attracting nation interest was the contest between Franklin H. Lichtenwalte (Rep.), speaker of the house, and Phil H. Storch (Dem.) f

Bucks-Lehigh 8th congressional district seat left vacant by death of Charles L. Gerlach. Polling a heavy rural vote, ntenwalter won by a majority of 16,000. Both Democratic Republican presidential nominating conventions were sched- l for Philadelphia's Convention hall in 1948.

he principal officers in 1947 included: James H. Duff, gov- or; Daniel B. Strickler, lieutenant governor; T. McKeen dsey, attorney-general; William S. Livengood, Jr., secretary nternal affairs; G. Harold Wagner, auditor general; Ramsey Black, state treasurer; and George W. Maxey, chief justice.

**ducation.**—Statistics for 1945–1946, the latest year for which com- e figures were available, show an enrolment of 1,521,213 pupils in public schools of Pennsylvania, including 40,748 in the kindergarten, 348 in the elementary division and 563,117 in the secondary schools. ilarly, there were 589 kindergarten teachers, 33,090 elementary teach- 23,806 giving instruction in high schools and 1,962 supervising offi- . The total expenditure, including current expense, capital outlay, debt service was $224,117,721, of which $187,857,977 was for ent expenses. School districts supplied 76% of their receipts from taxation, with the state and federal governments contributing the aining 24%.

**ocial Insurance and Assistance, Public Welfare and Related Programs.**— ing 1947, expenditures by the department of public assistance totalled 4,000,000, including $68,000,000 state funds and $36,000,000 fed- funds. The assistance rolls contained an average of 90,000 old-age stance cases, 38,000 cases receiving aid to dependent children, 30,000 eral assistance cases, 14,000 blind pensioners.

he state maintains eight penal and correctional institutions for the port of which a biennial appropriation of $12,000,000 was made for 7–49. In addition, it owns and operates 10 medical and surgical pitals, which received an appropriation of $6,500,000; 4 institutions the feeble-minded and epileptic, $8,300,000; 18 mental hospitals, ,000,000; and contributed $12,781,275 for the aid of privately- rated hospitals and homes.

**ommunications.**—Of the approximately 100,000 mi. of highways in 7, 40,900 mi. were on the highway system and were under the super- on of the Pennsylvania department of highways. Included in this l were 683 mi. in the cities of Pennsylvania and 2,147 mi. in the oughs. As of Nov. 30, 1947, 36,400 mi. were of improved type, leav- 4,500 mi. unimproved. In addition, there were 160 mi. of superhigh- operated by the Pennsylvania Turnpike commission.

**anking and Finance.**—On Oct. 6, 1947, there were 360 state banks, uding 8 savings banks, with assets of $4,870,818,107.37. These e banks had total deposits of $4,378,020,458.65.

n addition, there were as of Dec. 31, 1946, 802 building and loan ociations with assets of $390,698,946.42.

On Oct. 6, 1947, there were 655 national banks located in Pennsyl- ia, with assets of $7,043,991,000. The deposits of these national ks totalled $6,307,490,000.

Appropriations from the general fund and motor licence fund for the nnium ending May 31, 1949, were $769,280,749. The estimated re- pts were $895,721,080. The gross debt Oct. 31, 1947, was $74,688,000, ich securities in the sinking fund reduced to a net of $38,269,753.

**Agriculture.**—The total gross farm income for 1946 was $748,987,000, luding $648,898,000 in cash receipts from farm marketings and $27,- 3,000 in federal government payments.

Table I.—*Leading Crops of Pennsylvania, 1946 and 1947*

| Crop | Production 1946 | Production 1947 | Acreage 1947 | Yield per acre 1947 | Value 1947 |
|---|---|---|---|---|---|
| n, bu. | 59,340,000 | 57,460,000 | 1,352,000 | 42.5 | $140,777,000 |
| wheat, bu. | 19,912,000 | 22,296,000 | 929,000 | 24.0 | 53,510,000 |
| ts, bu. | 30,033,000 | 19,865,000 | 685,000 | 29.0 | 21,852,000 |
| ley, bu. | 3,942,000 | 4,059,000 | 123,000 | 33.0 | 6,088,000 |
| , bu. | 341,000 | 279,000 | 18,000 | 15.5 | 558,000 |
| kwheat, bu. | 2,394,000 | 1,938,000 | 125,000 | 15.5 | 3,682,000 |
| atoes, bu. white) | 20,066,000 | 17,985,000 | 109,000 | 165.0 | 30,574,000 |
| acco, lb. | 58,808,000 | 61,100,000 | 39,400 | 1,551.0 | 19,940,000 |
| hay, tons | 3,804,000 | 3,651,000 | 2,437,000 | 1.5 | 63,892,000 |
| ples, bu. | 9,360,000 | 6,612,000 | | | 14,877,000 |
| aches, bu. | 1,716,000 | 1,920,000 | | | 4,608,000 |
| ars, bu. | 318,000 | 262,000 | | | 563,000 |
| erries, tons | 5,300 | 5,100 | | | 1,291,000 |
| apes, tons | 18,700 | 17,500 | | | 1,925,000 |

**Manufacturing.**—In 1946 there were 17,516 manufacturing establish- nts in the state, employing 1,565,449 persons to whom $3,463,883,000 s paid in wages and salaries. The capital invested was $4,018,- 0,000 and the value of the goods produced was $12,010,975,100. Included as part of the latter amount, value added by manufacture was $5,412,180,100. The value of the product of the principal industries for 1940 and 1946 is shown in Table II.

Table II.—*Principal Industries of Pennsylvania, 1946 and 1940*

| Industry | Value of Products 1946 | Value of Products 1940 |
|---|---|---|
| tals | $4,678,357,900 | $2,944,848,400 |
| tiles | 1,756,269,100 | 795,457,200 |
| od | 1,964,498,300 | 740,801,600 |

| per and printing | 729,168,400 | 372,074,400 |
| ther | 383,526,500 | 174,963,900 |
| acco products | 152,664,100 | 92,272,300 |
| nber and its remanufacturing | 185,137,500 | 79,733,100 |

**Mineral Production.**—The value of the principal mineral products of the state in 1940 and 1945 is shown in Table III.

Table III.—*Principal Mineral Products of Pennsylvania, 1945 and 1940*

| Important Mineral Products | Value 1945 | Value 1940 |
|---|---|---|
| Bituminous coal | $433,627,000 | $237,333,374 |
| Anthracite | 323,944,435 | 205,490,000 |
| Pig iron | 361,684,919 | 282,666,561 |
| Petroleum | 46,680,000 | 39,700,000 |
| Natural gas | 40,270,000 | 41,733,000 |
| Cement | 25,549,621 | 38,350,998 |
| Stone | 22,266,706 | 19,855,478 |

(J. H. Df.)

## Pennsylvania, University of.

An institution of higher learning at Philadelphia, Pa. Buildings especially designed to house the army and navy reserve officers training corps units and their equipment were completed during the year 1947, as was a new laboratory for the school of veterinary medicine. An additional building also was acquired for use by the school of education.

Accessions through gift and purchase brought the total number of volumes in the university library and departmental libraries to 1,034,000. A rare-book room, with a specially trained administrative staff and a capacity of 30,000 vols., was opened in the main library to house extensive and valuable collections in various fields.

In the Moore school of electrical engineering a new electronic supercalculator to be known as the E.D.V.A.C. (electronic discrete variable computer) was under construction for the army ordnance department. With a so-called "mercury tank memory" as one of its most distinctive features, the E.D.V.A.C. is designed to excel the army's world-famous E.N.I.A.C. (electronic numerical integrator and computer) in capacity to solve mathematical problems and in speed of over-all operation, but is far more compact and less costly. The E.N.I.A.C. also was built in the Moore school for the ordnance department of the army.

Of particular significance among curricular developments was the announcement of a program of Indian and related Asian studies, including both teaching and research. Made possible by a grant of $155,000 from the Carnegie corporation and one of $60,000 from the Rockefeller foundation, the program was to be in full operation in the fall of 1948. (For statistics of endowment, enrolment, faculty, library volumes, etc., *see* UNIVERSITIES AND COLLEGES.) (G. W. McC.)

## Permanent Joint Board on Defense (U.S. and Canada).

There are six U.S. members of the board, four of which represent the army, the navy and the air force, with one member from the department of state and a civilian chairman appointed by the president. There are five Canadian members representing the air force, army and navy, with one member from the department of external affairs and a civilian chairman appointed by the cabinet.

The two governments announced on Feb. 12, 1947, that they had decided to continue in peacetime the close co-operation which had existed between their armed forces during World War

II. The announcement declared that collaboration would include the interchange of service personnel; co-operation and exchange of observers in connection with exercises and tests; standardization of arms, equipment, organization and methods of training; mutual and reciprocal availability of military, naval and air facilities in each country and transit of military aircraft and public vessels of the one country through the territory of the other with a minimum of formality. The announcement stated that no treaty, executive agreement or contractual obligation had been entered into, and that either country might at any time discontinue collaboration. The two governments declared that they believed this arrangement was a contribution to the stability of the world and to the establishment through the United Nations of an effective system of world-wide security. A copy of the statement was sent by each government to the secretary general of the United Nations for circulation to all its members.

(W. E. Th.)

## Perón, Doña María Eva Duarte de

(1919– ), wife of the Argentine president, Juan Domingo Perón, was born on May 7 in Los Toldos, a village in Buenos Aires province. She became an actress and in 1943 she met Juan Perón, then undersecretary of war.

They were secretly married in Oct. 1945 and about four months later Perón was elected president.

As "first lady," Señora Perón had no official job or title. Nevertheless, her power in the government was considerable. She was frequently called Perón's "minister without portfolio," and the liberal opposition referred to the Perón ménage as the "dual presidency." Señora Perón went to Europe in the summer of 1947 as an unofficial "goodwill ambassador." In Madrid, she received a 21-gun salute and conferred with Gen. Francisco Franco. After touring Spain, she went to Rome and was received in private audience by Pope Pius XII on June 27; communist demonstrations in Rome marred her Italian visit. On July 21 she arrived in Paris and was received officially by Pres. Vincent Auriol and Foreign Minister Georges Bidault. She returned to Buenos Aires on Aug. 23 and was accorded a triumphal reception.

## Perón, Juan Domingo

(1895– ), president of Argentina, was born on Oct. 8 near Lobos, a small town south of Buenos Aires, and was educated in military schools, becoming a full lieutenant in the army by the time he was 20 years old. He became one of the leaders of the G.O.U. (Grupo de Oficiales Unidos), a clique of nationalistic young army officers which was instrumental in the coup d'état that overthrew the regime of Pres. Ramón S. Castillo, June 4, 1943. In succeeding governments, Perón was the power behind the throne, although he held only minor political posts. When Gen. Edelmiro Farrell became president in Feb. 1944, he promptly raised Perón to the war ministry and then to the vice-presidency. In 1945, Perón consolidated his grip on the government, despite a short-lived army coup, staged Oct. 9, which ousted him from power for a two-week period. On his return, he became more strongly entrenched than ever, was elected president (Feb. 24, 1946) on the Labour party ticket and was inaugurated the following June 4.

In 1947, Perón called on his supporters to crush his opponents—"stubborn oligarchs," "politicians," "the enemy press," and "native communists." On May 1, he announced a plan to modernize the army but denied that he intended to engage in an arms race with neighbouring countries. He also professed a "vehement desire for peace." With the ratification by the Argentine congress of the Act of Chapultepec and the United Nations charter, Perón had declared that the era of "misunderstandings" with the other western hemisphere countries
closed. And the restored relationship, particularly with
United States, was further strengthened in 1947 by the f
scale participation of Perón's government in the Inter-Am
can Defense conference at Rio de Janeiro, Brazil.

**Persia:** *see* IRAN.

## Peru.

A west coast republic in South America, bounded
Ecuador and Colombia on the north, Brazil and Bol
on the east, Chile on the south and the Pacific on the w
Area: 482,258 sq.mi.; pop. (1945 est.): 7,652,718. Racial
tribution is estimated at 52.9% white and mestizo and 45.
Indian. The capital is Lima (pop. est. 750,000); other ci
(with pop. by 1940 census unless indicated otherwise) are Cal
(84,438), Arequipa (79,185), Cusco (1945 est. 45,230), Truj
(1945 est. 41,589), Iquitos (34,231), Chiclayo (32,646), Hu
cayo (28,679), Sullana (22,344), Ica (21,437) and Piura (1
est. 29,674). President in 1947: José Luis Bustamante y Rive

**History.**—The assassination of Francisco Grana Garland
Jan. 7 precipitated a sensational crisis, with political and ot
repercussions, at the beginning of the year. Grana Garland w
a prominent Lima industrialist and publisher of *La Prensa,* c
of the capital's leading papers. The cabinet resigned two da
later and on Jan. 12 a new cabinet, with Rear Adm. José
Alzamora as premier and Dr. Enrique García Sayán as fore
minister, was sworn in. The cabinet reorganization after
assassination left that group without members of the Peopl
party (Apristas), although the Apristas and their party al
continued in control of both houses of congress. Apristas
came increasingly critical of government policies thereafter d
ing the year. The regular session of congress opened on July
but a party deadlock in the senate prevented normal function
for some time. Pres. Bustamante on Sept. 2 declared a state
siege in an effort to end a five-day "illegal" general strike wh
had partly paralyzed the Lima-Callao area; an incidental eff
of the decree was to postpone by-elections in certain politica
doubtful areas. On Oct. 31, an 11-man cabinet, including
military men, was sworn in; the navy minister, Rear Ad
Roque Saldias, headed the cabinet.

Labour difficulty was considerable, the most serious instan
being the Lima general strike from Aug. 28 to the beginning
September, during the course of which 48 union leaders we
arrested. The government during the year created a nation
housing corporation. It also signed a health agreement wi
Ecuador providing for research on malaria and other fronti
diseases and exchange of personnel and experience. The Ca
negie institution of Washington, D.C., turned over to the Per
vian government its magnetic observatory at Huancayo in t
Andes during 1947.

**Finance.**—The monetary unit is the sol, valued on Oct. 31, 1947,
15.38 cents, official rate, and 6.45 cents, free rate, U.S. currency. T
budget for 1947 was presented March 6 to balance at 946,000,0
soles; some of the items in it were: congress 10,291,241; president 1,75
400; justice 19,170,193; interior 119,751,369; foreign relations 18,94
939; education 147,872,178; finance 213,616,207; war 107,982,388 a
navy 36,890,124. Revenue collections for the first six months of 19
were 387,800,000 soles, 82% of the budget estimate of collections
that period; the figure for the same period in 1946 was 289,100,0
soles. The 1946 fiscal year closed with a deficit of 8,000,000 sol
1.11% of the budget figure. Total gold and foreign-exchange holdin
Jan. 1, 1947, were about $40,000,000. Exchange applications for t
first quarter of 1947 were $109,000,000 and exchange receipts we
$28,000,000 for the same period. The government took steps to conser
foreign exchange by considerably tightening import regulations. A lo
of up to $25,000,000 was authorized April 10 for irrigation proje
in the departments of Piura and Lambayeque in northern Peru. It w
announced June 26 that the government was unable to agree with
Foreign Bondholders' Protective council on settlement of $90,000,000
debt defaulted in 1932 and that the government would directly approa
the bondholders.

**Trade and Communications.**—Imports for the first five months of 19
were 242,613 metric tons valued at 431,812,916 soles (same period
1946: 216,499 tons valued at 286,378,588 soles); exports for the first f

nths of 1947 totalled 645,949 metric tons valued at 393,461,117 soles
me period in 1946: 759,569 tons valued at 367,654,052 soles). Duty
ections for the same period were 95,016,523 soles (1946: 49,915,487
s). Export of petroleum products for the first quarter of 1947 was
57,294 bbl. and for the second quarter 1,557,556 bbl. Export of
ious products in 1946 included: copper 26,119 metric tons; lead 44,-
metric tons; zinc 59,242 metric tons; gold 4,036 kg.; silver 312
ric tons; wolfram 450 metric tons; vanadium 594 metric tons; anti-
ny 1,096 metric tons; gasoline 3,174,201 bbl.; fuel oil 2,137,063 bbl.;
de oil 1,648,066 bbl.; Diesel oil 810,876 bbl.; kerosene 452,448 bbl.
clining production led some experts to predict an end of petroleum
orts by 1953.

The government on March 8 acquired the Pato air base at Talara and
planes and miscellaneous equipment from the United States for $714,-
. On March 11, Peru concluded a civil air lines agreement with Cuba.
e Fawcett Aviation company of Peru was awarded the Inter-American
ety award for 1946 for having flown 41,000,000 passenger mi. without
ident.

**griculture.**—The estimate of cotton production in 1947 was 1,275,000
ntals of 46 kg. (1946: 1,599,178 quintals). The tobacco crop for
7 was estimated at 1,800,000 kg. (1946: 1,567,615 kg.). Tobacco
cks on hand July 31 were 1,854,740 kg., including 1,699,001 kg. of
nestic tobacco and the rest for blending. The estimate of 1947 sugar
duction was 400,000 metric tons (1946: 377,646 tons). Cottonseed
duction in 1947 was estimated at 100,000 metric tons (1946: 119,-
; tons). The ministry of agriculture was reorganized during the
r, with emphasis on decentralization. It began developing a ten-year
gram to stimulate production; this would involve an application to
Export-Import bank for a loan to finance purchase of machinery and
ecticides. Total cost of the irrigation program inaugurated April 10
s estimated at 191,000,000 soles; 50% was expected to be spent for
iipment, materials and services from the United States.

**Manufacturing and Mining.**—Tobacco processing in 1946 produced 1,504,-
5,000 cigarettes, 1,524,230 cigars and 842 kg. of pipe tobacco; estimate
cigarette production for 1947 was 1,600,000,000. The estimate of
47 guano production was 150,000 metric tons. Crude oil and natural
soline production for the first six months of 1947 was 6,800,043 bbl.
e number of producing oil wells June 30 was 3,011 as against 3,215
Jan. 1, 1946. A proposal for establishment of a government-controlled
l corporation was considered in 1947; anthracite and bituminous
erves, it was estimated, were 2,000,000,000 cu.m.

1). (R. H. FN).

## etroleum.

World oil production during 1947 undoubtedly exceeded that of 1946 and broke an all-time
cord. Outside of the United States, the principal increases
ere registered in the middle east and possibly the U.S.S.R., al-
ough no official information as to the latter country was avail-
le. Gains were made in South American production. In the
S., the estimated total production was 1,839,600,000 bbl.
mpared with 1,733,424,000 bbl. in 1946 and 1,402,228,000
l. in 1941.

The attempt by the Soviet Union to make an oil pact with
an was defeated by the Iranian parliament late in the year.
n agreement granting oil concessions to soviet Russia in northern Azerbaijan province had been negotiated early in 1946 following the soviet delay in withdrawing their military forces from Iran. It provided for a joint Iranian-soviet oil company to exploit deposits in the province, with the soviets controlling 51%. The U.S.S.R. protested the rejection of the pact.

Another significant development in the middle east was the approval granted by the U.S. department of commerce to the Trans-Arabian Pipe Line company to ship 20,000 tons of pipe to Saudi Arabia during the fourth quarter of 1947. The Iraq Petroleum company was expected to complete its new 16-in. pipe line from Kirkuk to Haifa by the end of 1947. The company already had two 12-in. lines from the Kirkuk field to Haifa and to Tripoli, respectively, with a combined capacity of 96,000 bbl. daily. The new line would provide an additional daily capacity of 120,000 bbl.

The Trans-Arabian Pipe Line company was to construct 1,040 mi. of 30- and 31-in. pipe line with a capacity of 300,000 bbl. daily to a new shipping port to be constructed near Sidon, Lebanon. This was scheduled for completion about Jan. 1, 1950.

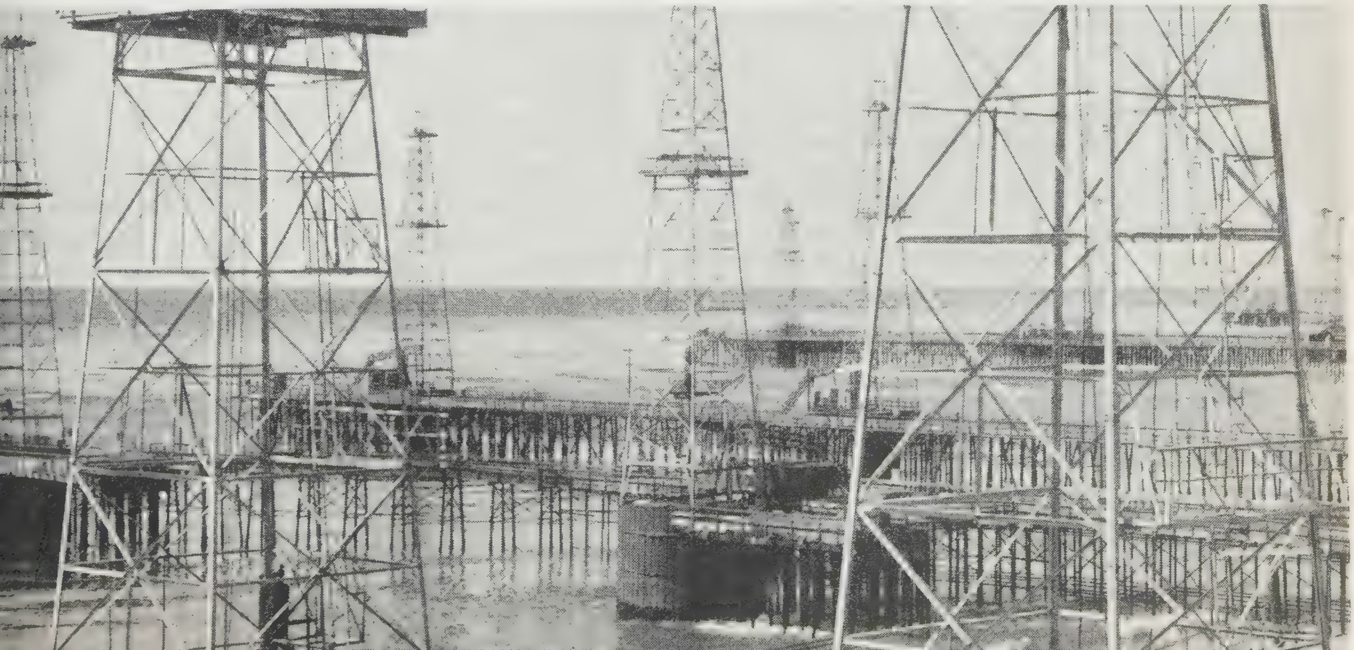
Middle East Pipe Line Co. was preparing to construct during 1950 and 1951 about 900 mi. of the biggest-inch oil pipe line yet planned, with a throughput capacity of 500,000 bbl. to 550,000 bbl. daily from Abadan and the Burghan field in Kuwait, to a Mediterranean terminus yet to be selected. Iraq Petroleum company was also planning the construction during 1952 and 1953 of a new 24-in. line, capacity about 250,000 bbl. daily, from Kirkuk to Tripoli.

These new transcontinental carriers, with Iraq Petroleum company's existing lines, would provide total pipe-line outlet from middle east oil fields to Mediterranean ports of 1,300,000 bbl. daily by Jan. 1, 1954, or shortly thereafter.

The Anglo-Iranian Oil company's refinery at Abadan had been enlarged to a capacity of 400,000 bbl. per day. Four other middle east refineries: the Arabian American at Ras Tanura, the Bahrein Petroleum company refinery on Bahrein Island, the consolidated Refineries Ltd. at Haifa and the Iraq Petroleum company's small refinery at Tripoli accounted for a total of 730,000 bbl. a day. Substantial additions were planned.

By overland shipment to the Mediterranean, the projected Arabian lines would save shipments to points west of Suez that otherwise must be made by tanker through the Red sea and the Suez canal to Port Said, involving a canal toll and an expensive tanker haul of 3,650 mi. At a lower cost by pipe line the oil would be carried only approximately 1,000 mi. to an eastern Mediterranean loading port and thence by tanker to destination.

ERRICKS of undersea oil wells in California affected by the U.S. supreme
urt decision of June 23, 1947, which declared tidal oil lands the property
the federal government rather than the state



The U.S.S.R. during 1947 retained its grip on the oil producing countries of Rumania, Poland, Hungary and to some extent Austria, while fighting against the Marshall plan for the economic relief of the 16 European nations which lined up for the plan. The interim aid program of the Marshall plan adopted by the U.S. congress late in the year included the furnishing of petroleum to these countries and left to the responsibility of the president a provision that commodities in short supply in the U.S. should be furnished whenever possible from outside sources. U.S. oil production, while breaking all records, was only just about meeting domestic requirements and therefore the bulk of the oil supplied under the interim aid program would come from the middle east and other outside oil areas.

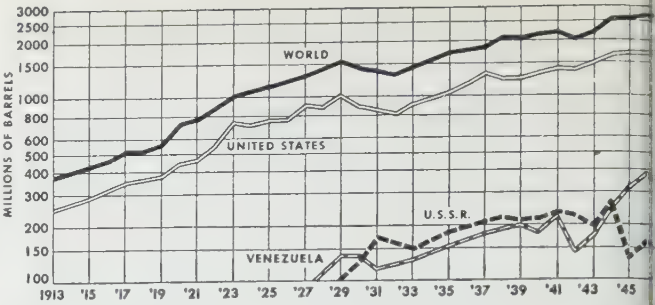
There was a heavy demand for petroleum products in the British Isles, France and other European countries despite civilian restrictions on the use of automobiles. This demand reflected the acute coal situation. The shortage of coal placed a heavy burden on oil for use as fuel. Europe's oil requirements therefore, were not primarily gasolines, but rather residual fuel to replace or supplement coal in power plants, factories and transportation systems. The use of oil for ships had also increased beyond all expectations because of the extensive war losses of coal-burning ships, and their replacement with oil-burning ships.

According to estimates made by B. Brewster Jennings, president of the Socony-Vacuum Oil company, presented at the annual meeting of the American Petroleum institute in Nov. 1947, oil consumption for the world, excluding the U.S. and also the Soviet Union because so little was known about the latter country, would approximate 2,700,000 bbl. daily in 1947 compared with 1,900,000 bbl. daily in 1938. By 1950 the consumption of these countries was expected to be 3,200,000 bbl. daily; by 1960, 4,500,000 bbl. daily, an increase of 1,800,000 or 67% over 1947. By comparison, the U.S., consuming in 1947 about 5,400,000 bbl. daily, was expected by 1960 to require 6,800,000 bbl. daily—an increase of 1,400,000 bbl. or 28%. In other words, oil consumption in Europe was expected to increase at a rate much faster than in the U.S.

In the U.S., consumption of oil products set new high records in 1947. Because of transportation shortages and lack of adequate quantities of steel and other materials for needed expansion of pipe lines, refineries and other facilities, gasoline and fuel oils became scarce in certain areas. This situation brought about some voluntary rationing on the part of oil suppliers and appeals to users for conservation of gasoline and fuel oil.

Prices of crude oil and petroleum products increased substantially during 1947. Pres. Truman asked congress to authorize rationing and price control of fuel oil and gasoline in case of public necessity. The U.S. petroleum industry representatives appearing before various congressional investigating committees asked freedom from re-establishment of controls such as were exercised during World War II and pointed out that the industry was making estimated record capital investments of more than $4,000,000,000 in the two-year period 1947–48 to meet rising demands for its products.

It was estimated that 35,000 new oil wells, a new high record, were drilled in 1947, including more than 5,000 wells for exploratory purposes in the hope of finding additional oil reserves. In the production division alone, the industry planned to make capital outlays estimated at more than $2,000,000,000 in the two-year period.



TOTAL WORLD PRODUCTION OF PETROLEUM and output of the thr principal producing countries, as compiled by *The Mineral Industry*

Plans were under way for construction of refinery facilities having a capacity of about 450,000 bbl. of crude daily, but the completion of these installations would take from 6 to 24 months from the start of work. There was a prospect that this figure would be augmented in the near future. Expenditures for refining facilities in the two years were estimated to exce $1,100,000,000.

Pipe line construction planned during the two-year period i volved an aggregate investment of approximately $440,000,00 and about $480,000,000 would be spent expanding distributi and marketing facilities.

In 1947 export licensing restrictions on motor gasoline, ker sene, gas oil and distillate fuel oil and residual fuel oil we established under the office of international trade, departme of commerce. The amounts of products to be exported durin a quarterly period were determined on the basis of a unifor questionnaire sent to all foreign governments that had bee buying oil in the U.S., requesting end-use information and d tailed figures on consumption, their own production, stocks o hand and other statistics.

The U.S.S.R. alone among these countries refused to furnis the desired information, and thereby cut itself off from U. supplies. No licences were issued for shipments to the Sovi Union after June 30, 1947, except for limited quantities whic then were in process of loading on the west coast and thos only to avoid hardship to U.S. companies, commerce depar ment officials explained. (*See* also Business Review.)

## Philadelphia.

Philadelphia is the third largest city of th United States; and although the 1940 cen sus gave the population as 1,931,334, it was estimated that th population in 1947 was about 2,100,000. Mayor: Berna Samuel (1948–52).

As rapidly as building supply shortages would permit, Phil delphia, under its Republican administration, was going ahea with a six-year improvement program of $322,700,000. Wor totalling $81,000,000 was already under way by the end of 194 Of this amount, $6,500,000 was for extension of the Mark street subway from 32nd to 36th streets; it also included ne bridges and highway extensions.

The city allocates $13,000,000 a year for health and welfa services and hospitals.

In addition to many new housing developments, new co struction was planned by private concerns. A seven-man re control commission was established to settle tenant-landlo disputes.

The Better Philadelphia exhibition sponsored by the city an its citizens, revealed what the community would look like i the future.

Construction was started on a new elementary school costi $1,150,000. Plans were almost completed for two senior hig schools, a vocational-technical high school, a junior high scho and three elementary schools, which would cost approximate $17,000,000.

The sum of $8,500,000 was being spent to rehabilitate Phil delphia's waterworks, and $11,200,000 was being used to i ve and build new sewage-disposal plants.

The Civil Aeronautics authority allocated $650,000 to South-st airport, and $15,000,000 was appropriated for airport im-vement, including a terminal building at Southwest airport, h other improvements to be built as needed.

mprovements were being made to piers, including a new pier south Philadelphia along the Delaware river front. Plans re being developed to make the port of Philadelphia second none in the country.

Playgrounds, recreation facilities and junior guidance projects re planned in increasing numbers, with an allocation of $7,-,000 for these purposes. Juvenile delinquency decreased rply during the year. (B. SA.)

**ilanthropy:** *see* DONATIONS AND BEQUESTS.

## ilately.

The year 1947 brought an important philatelic centenary—the centennial of the issuance of post-e stamps in the U.S. Since the centenary exhibition for the th of all postage stamps originally planned for London in 40 had to be abandoned because of World War II, the Cen-iary International Philatelic exhibition (commonly called pex) in New York was planned to be the greatest such owing of stamps ever assembled. That the foreign exhibits re restricted was not the fault of the planners but rather of difficulties of postwar transportation. As it was, the Cipex ibit was impressive and great. Saul Newbury of Chicago n the grand award with his collection of U.S. 19th century ues.

The more than 175,000 persons who visited Cipex saw the st public showing in more than a decade of the world's most-blicized stamp, the unique British Guiana "1-penny in colour the 6-pence" error of 1856.

The next International Stamp Exhibition was set for 1948, d Basel, Switz., was selected as the site.

**New Issues.**—In honour of Cipex, the United States issued souvenir sheet carrying replicas of the 1847 issue—five-cent d ten-cent values. A special three-cent stamp and a five-cent amped envelope were also issued. Six other three-cent stamps ere issued as commemoratives during the year by the U.S.—r Thomas A. Edison; for Joseph Pulitzer; for the medical ofession; for the "Constitution," better known as "Old Iron-des," for the state of Utah and for the Everglades National rk in Florida. For the first time after 1886, a letter-sheet was sued, a ten-cent air mail variety for foreign mail. New 5-cent mall size), 10-cent, 15-cent and 25-cent air mails were also oduced.

New Zealand had an interesting stamp-issuing year. The nual health stamps for 1947 portrayed the beloved statue of ros in Picadilly square, London. For the first time after 1890, hen they first appeared, the life insurance department stamps New Zealand dropped their adaptation of England's Eddy-one light as the exclusive design and blossomed forth in seven coloured stamps.

The wedding of Princess Elizabeth of England brought an-ouncement of bridal issues from Australia and Canada. Britain self used a special cancellation for ten days, embodying a ime of wedding bells on a true lover's-knot entwining the itials "E" and "P."

Luxembourg issued a set honouring Gen. George S. Patton, Jr., d the U.S. war-dead fallen on its soil. Franklin D. Roosevelt amps were issued by 17 countries, while the centenary of U.S. stage stamps was commemorated by Mexico, Belgium and onaco. The visit of U.S. President Harry S. Truman to Brazil as noted by that country with a stamp issue.

**Errors.**—Since errors in stamps often mean rare varieties, collectors are constantly on the lookout for these. However, errors in design that are not corrected by new issues merely bring embarrassment to the authorities who prepared them. The philatelic pundits discovered that the cannon depicted on the new U.S. "Constitution" stamp are British guns and that the portrait of Lt. John Shortland on the Australian Newcastle centenary issue was actually that of the discoverer's father. Neither stamp was reissued.

**"Stamps for the Wounded."**—This organization, which provides stamps and accessories for veterans in U.S. hospitals, continued its work on a nation-wide scale during 1947. The donations of time, stamps and materials continued to help hospitalized men pass weary hours. Most philatelic societies and clubs co-operated with personnel and material gifts.

**Literature.**—The 1948 edition of *Scott's Catalogue* (published in 1947) continued to revise the numbering system of the stamps of the U.S., begun in 1946, and the revision of editing was extended to Canadian issues.

The magazine *Philately,* announced in 1946, suspended publication, after influencing other magazines to new formats and general improvements.

Several new books and two important revisions appeared in 1947. *The Romance of Stamp Collecting,* by Ernest A. Kehr, and a colourful junior book on the theme of the U.S. centenary, *America's Stamps,* by Maud and Miska Petersham, appeared. *So You're Collecting Stamps,* by Mannel Hahn, which first appeared in 1940, was issued in a revised edition, and two volumes of *The U.S. Commemoratives of the 20th Century,* originally written in collaboration with Beverly King, were revised by Max Johl. (M. HA.)

## Philippines, Republic of the.

The Republic of the Philippines comprises an archipelago lying about 800 mi. off the east coast of Asia, and stretching from Formosa on the north to Borneo on the south.

The total area is approximately 115,000 sq.mi. The official census of 1939 gave the population as 16,000,303, including 117,487 Chinese, 29,057 Japanese and 8,709 U.S. citizens. The population was estimated in 1946 at 18,846,800. Principal cities (census of 1939): Manila (capital, 623,492); Cebu (146,817); Zamboanga (131,455); Davao (95,546); Iloilo 90,480; Legaspi 41,468.

**History.**—July 4, 1947, marked the completion of the first year of Philippine independence. The first elections since the establishment of the republic were held the following Nov. 11, and constituted an impressive triumph for the Liberal party. Seven of the eight senatorial seats were won by Liberal candidates; one lone Nacionalista, Camilo Osias, emerged victorious in the senatorial elections. Despite their failure to win many offices, the Nacionalistas showed unexpected strength.

During the first year of the republic important steps had been taken to provide for national security. A military base agreement was concluded with the U.S. on March 14, 1947, and a military assistance agreement on March 21. Vigorous steps were also taken by the Philippine government to reorganize and democratize the Philippine army.

The People's court continued to try accused collaborators during 1947, with results that were far from impressive. Difficulties in securing witnesses and arranging trials hampered the efforts of Solicitor Generals Lorenzo Tanada and Manuel Lim. Much talk was heard during 1947 of the possibility of an amnesty for accused collaborationists, but the administration continued to deny that such action was planned.

The main problem continuing to confront the Philippines was that of economic rehabilitation and reconstruction. U.S. Am-

FILIPINO WOMEN receiving U.S. money payments in May 1947, for past services rendered to U.S. forces during the World War II fighting in northern Luzon

bassador Paul V. McNutt, reviewing conditions in the Philippines on Nov. 27, 1946, had described the Philippines as ". . . a land ravaged, brutalized, burnt over, destroyed, economically crippled, psychologically shocked, and physically devastated. . . ." The great destruction and economic chaos resulting from the war made independence for the Philippines all the more difficult. Nevertheless, despite these great handicaps much progress was made during the first year and a half of Philippine independence in reviving the economic life of the country. The trade agreement with the United States continued to be the basic stimulus for revival of trade. Under terms of this act, free trade was to exist between the two countries until 1954, after which date duties would be assessed progressively at the rate of 5% each year until 1974, when all preferential trade relations were scheduled to cease. In a national plebiscite of March 11, 1947, the Filipino people accepted the "equal rights amendment" to their constitution as stipulated by the agreement, which was thus brought into full effect.

Philippine export trade developed rapidly. Exports of Philippine products during 1947 totalled $53,028,693, not including re-exports amounting to $11,158,831. Of the 1946 exports, about 73% went to the U.S. Imports totalled $295,858,574, of which 87% derived from the U.S. and Hawaii. Imports totalled $280,335,333 during the first six months of 1947, and exports $125,339,900.

The 1947–48 crop of Philippine sugar was estimated to be 429,929 short tons from a total area planted of 73,752 hectares. Shipments of copra for the first 9 months of 1947 totalled 681,930 long tons, also 25,000 tons of inedible coconut oil equivalent to about 40,000 tons of copra. Abaca production was 586,412 bales during the first 9 months. The tobacco crop in the Cagayan valley was estimated at 107,000 quintals, and the crops in La Union, Pangasinan, and Ilocos provinces were estimated to total about 50,000 quintals.

**Progress of the Rehabilitation Program.**—During 1947 the various U.S. agencies concerned with implementation of the Philippine Rehabilitation act (passed by the U.S. congress in 1946) made progress in carrying out this program. Included among these agencies were the army engineers, public health service, weather bureau, coast and geodetic survey, fish and wi life service, Public Roads administration, U.S. Maritime co mission, and Civil Aeronautics administration.

The Philippine War Damage commission faced one of t most difficult tasks of all agencies in attempting to disburse t $400,000,000 authorized in the act. By the end of 1947, ho ever, the commission was rapidly increasing the tempo of payments and was playing a vital role in the reconstruction many public buildings, schools and hospitals. Most of the su plus property granted the Philippines under the Rehabilitati act had also been received by the end of 1947.

In his message on the state of the nation on January 27, 194 President Manuel A. Roxas declared that "the consistent thre running through the entire program I have outlined for the in mediate future of our country is industrialization." A firm technical engineers and technicians appointed to survey the r public's industrial potential presented a report popularly know as the "Beyster report" which indicated possible small-scale i dustrial development for the republic in the years to come.

In September the U.S. had agreed upon the formation of joint finance commission to consider the financial and budgeta problems of the Philippine government and to make recom mendations regarding taxes, budget, public debt, currency an banking reforms, exchange and trade problems and reconstru tion and development. This commission began its work Manila in Jan. 1947 and after six months of study present its report, which provided basic information concerning t Philippine financial situation. The commission urged that t Philippines take advantage of extraordinary U.S. expenditur in the islands and suggested that encouragement be given imports of capital equipment for the reconstruction of farm mines, fisheries and factories. Imports of luxury goods an other nonessentials should be strictly limited, according to t commission. The report proposed in summary: (1) a progra for the conservation of foreign exchange for economic develo ment; (2) a taxation program designed to reduce the budg deficit to manageable proportions in the fiscal year 1948 and eliminate it in the fiscal year 1949; (3) a domestic borrowin program to cover the deficit in fiscal year 1948 and to provi capital funds thereafter; (4) a strengthening and expanding banking and credit facilities to assist both private and publ financing; (5) the establishment of a central bank and a man aged monetary system to assist the government in implementin the above program.

Nevertheless, there were certain long-range economic nee of the Philippines which could not be met out of current fund and it was believed that the government would attempt obtain certain project loans from various banking and cred sources. Projects such as those for the development of hydr electric power plants at Maria Cristina falls and at Caliray River falls required immediate capital. (E. W. Ml.)

## Philology.

In the varied fields of philological study durin 1947 there was an attempt on the one hand t assess the loss of important source material in World War I and to resume undertakings that had been interrupted by hostil ties. On the other hand, there was an evaluation of the status o investigation in many fields and the shaping of plans for initia ing new undertakings.

It was still too early to determine accurately what importan manuscripts, incunabula and rare books were war losses. Pre liminary reports indicated that the loss among documents o this type probably was not heavy; they were usually given to priority in bombproof shelters, and such damage as occurre was frequently the result of the immediate postwar confusion It was still quite possible that some manuscripts reported mis like that of the *Hildebrandslied,* might be discovered in un- l hideaways. Apparently more serious was the destruction nuch standard reference material and important stocks of ndary sources. A survey of damage to German scholarly ries was contained in Georg Leyh's *Die deutschen wissen- ftlichen Bibliotheken nach dem Krieg* (Tuebingen, 1947).

luch of the important material which had been collected for ionary projects in Europe previous to the war apparently saved. The Egyptian dictionary records, for instance, were again in the hands of the Berlin academy. But the task of ganizing staffs was difficult, and the scarcity of paper and ting materials limited actual publication. The middle Eng- dictionary centre at the University of Michigan reported dy progress in collecting and organizing material. A short ionary based on modern U.S. usage and directed by a num- of linguistic scholars made its appearance: *The American lege Dictionary,* published in trade and text editions.

lew outlets for publication aided in replacing some of the ualties of the war years. Several new periodicals representing ide range of interests welcomed philological material. Among se were the *Journal of Cuneiform Studies,* published by the erican Schools of Oriental Research at New Haven, Conn.; *dia Linguistica,* of Lund, Sweden, concerned with general blems in linguistics; *Symposium,* issued by Syracuse uni- sity in Syracuse, N.Y., emphasizing modern languages and ratures other than English; and *Die Welt des Orients,* for tern studies, appearing under the editorship of Ernst Michel Wuppertal-Ronsdorf, Germany. *Word,* which started its eer in 1945 as a venture of the Linguistic Society of New rk, offered a further outlet for philological contributions pite some delay in appearance.

he philological aspects of Biblical scholarship were accorded ention in the survey, *The Study of the Bible Today and To- rrow,* edited by Harold R. Willoughby.

Among programs at U.S. universities which offered promise philological development were those in east European studies Indiana university, where Finno-Ugric investigation was to eive special attention, and those in near eastern studies at inceton, emphasizing Arabic, Turkish and Persian.

Plans were under way to preserve valuable European material d, if possible, to distribute copies widely in the United States. though intended primarily as a precautionary measure, this ve should eventually stimulate U.S. research. (G. J. M.)

## hilosophy.

Philosophy in 1947 followed the same general lines of postwar development that had ap- ared in 1946: (1) French existentialism still held the atten- n of the public and dominated the conversation of the inter- ed but untechnical layman; (2) although students of sym- lic logic and semantics, particularly the logical positivists, nt on with their researches, the already well-developed op- sition to the more extreme claims of positivism reached a w vigour of statement; (3) U.S. scholars continued to probe o their own tradition and seek a stronger basis for and a arer justification of the ideals of democracy; (4) political ilosophers strove for such an assessment of man, the state d historic process as would clarify the complex and critical e in which they lived; (5) notable special studies in the his- y of philosophy and in systematic philosophy were published.

Jean Paul Sartre's *Existentialism* appeared in English transla- n. It contained his reply to the charges of various critics, luding both communists and Christians, that existentialism ited a mood of "desperate quietism," that it dwelt on human gradation, that it disregarded human solidarity, and that it ored the reality and seriousness of human efforts, leaving ly caprice as a principle of conduct. Sartre answered that since existence precedes essence (that is, since there is no fixed human nature), man shapes his own character and destiny, and this implies the responsibility of each person for all men and a demand for decisive action within a social context. Though the subjective self is the real starting point, Sartre argued, other selves are just as real as it and are the condition of its own existence; though there is no universal human nature, there is a universal human condition in which every man is involved; and since no God exists to take care of him, man is condemned to freedom, and in his forlornness and despair is confronted with the terrible responsibility of making himself and his society whatever they are to be. This view Sartre called a tough optimism, denying that it was either quietism, pessimism or a discouragement to action.

The opposition to the excessive claims of positivism, and especially the protest against irrationalism, came from diverse quarters, revealing a deep and widespread concern for a return to a view of man's nature which would do justice to his higher powers and restore belief in the dignity of reason. Empiricist as well as rationalist sought for a valid corrective to the belief in the relativity of knowledge and of ethical standards which had weakened liberalism between World Wars I and II and had given rise to cynicism and philosophical irresponsibility.

Paul Weiss, in *Nature and Man,* maintained, on a naturalistic basis, an ethic of freedom and responsibility. But this naturalism was not at all that of the existentialists, for nature itself became transformed into a realm containing value as well as fact. Weiss resisted the absorption of man into a meaningless or brutal nature on the one hand and his absorption into a Hegelian absolute on the other. The reality of the individual with his uniqueness and his specific concerns was vigorously defended, although a common and absolute good toward which human life is oriented was equally upheld. "Man is a natural being with a fixed core, directed toward a good which is pertinent to all that exists." (Paul Weiss, *Nature and Man.* Copyright, 1947, by Henry Holt and Company, Inc.)

In the volume *Our Emergent Civilization,* edited by Ruth Nanda Anshen (published by Harper and Brothers, 1947), the reaction against positivism, materialism and existentialism was explicit. That "objectivity of reason in human affairs which leads to the establishment of justice" was strongly defended, in the editor's introductory essay, as against the view which makes reason the mere subjective tool of biological needs. In the second essay, Brand Blanshard, also cogently defending the existence of an independent, objective factor accessible to reason which can and at times does control the course of our thought, took as his special targets three prominent denials of this thesis: (1) the reduction of thought to neurological processes; (2) the psychoanalytic explanation of thought in terms of the subconscious; and (3) the subjectivism of logical positivism. Several other distinguished philosophers, writing in the same volume, carried forward the criticism of contemporary materialistic naturalism as related to other problems of man and civilization.

Another careful analysis of the modern overemphasis upon the subjective aspect of reason and its resultant irrationalism was given in *Eclipse of Reason* by Max Horkeimer, who traced the series of relentless steps by which modern thinkers came to reject the Greek view of objective truth. He showed how the modern view, so useful in dispelling dogmatism and superstition, itself spawned a host of evils such as ideological lies, deceptive propaganda, obscurantism and reaction, until not only man's mind but even man himself had become a means rather than an end. His solution was not to return to dogmatic philosophy, still less to authoritarian religion, but rather to probe more deeply into the historic relationship between spirit and nature.

In similar vein, Arthur E. Murphy in a paper, "Ideals and

Ideologies: 1917–1947," protested the reduction of philosophical ideas to mere toys, tools or weapons and hoped for a return to philosophical responsibility in which ideas and ideals may be regarded as "reasons addressed to a community" functioning persuasively in the common life and serving as a basis for reasonable social change (*Philosophical Review,* Arthur E. Murphy, Sage School of Philosophy, Cornell university, Ithaca, N.Y., 1947). Donald Williams in *The Ground of Induction* (Harvard University Press, 1947) warned that the skeptical claim that there is no foundation for empirical judgments "will slowly shatter civilized life and thought" for it is "to deny that reason and good-will have a purchase on reality."

Clarence Irving Lewis in *An Analysis of Knowledge and Evaluation,* a work hailed by many empiricists as the most important book of the year, tried valiantly to find a satisfactory middle way, on empirical assumptions, between a transcendental view of value on the one hand and Protagorean relativism and moral skepticism on the other.

*Essays in Science and Philosophy,* by Alfred North Whitehead, a collection of previously scattered writings, rounded out a distinguished career. Notable among historical studies was Harry Wolfson's *Philo.* Arnold Toynbee's *A Study of History,* published in 1946, continued to dominate the field of philosophies of history. (E. L. Mn.)

## Phosphates.

The heavy demand for fertilizers in the war ravaged countries was rapidly stimulating world output of phosphates, and the 1946 world total is back about to the prewar level.

*World Production of Phosphates, 1941–46*

(In thousands of short tons)

| | 1941 | 1942 | 1943 | 1944 | 1945 | 1946 |
|---|---|---|---|---|---|---|
| Algeria | 492.2 | 368.8 | 84.7 | 242.9 | 442.4 | 644. |
| Egypt | 123.1 | 362.0 | 347.9 | 350.7 | 385.1 | ? |
| France | 108.8 | 125.0 | 144.4 | 102.5 | 66.8 | 93.0 |
| French Oceania | 211.9 | 194.1 | 207.7 | 224.1 | 285.5 | ? |
| Indo-China | 78.4 | 140.9 | 93.1 | 7.7 | — | ? |
| Morocco, French | 543.5 | 788.6 | 888.7 | 1,592.7 | 1,272.2 | 3,068.4 |
| Sweden | 34.3 | 87.5 | 159.0 | 177.3 | ? | ? |
| Tunisia | 1,186.2 | 969.7 | 368.9 | 575.7 | 778.7 | 1,543.1 |
| United States (sales) | 5,252.4 | 5,201.6 | 5,741.4 | 6,021.9 | 6,503.5 | 7,684.0 |
| Total | 10,483 | 8,488 | 8,311 | 9,561 | 9,837 | 13,100 |

**United States.**—Production rose from 6,047,708 short tons in 1945 to 8,029,100 tons in 1946, and sales from 6,503,530 tons to 7,683,999 tons, both new high records. Consumption increased from 6,112,566 tons to 7,041,565 tons. (G. A. Ro.)

## Photography.

Many of the important developments in photography during 1947 were in the fields of science and industry. "Nuclear track" photographic plates recorded the splitting of atoms, rocket photography became a reality, the automatic Mirar camera gave a complete radar chart of navigation conditions, and important new developments took place in colour processes. All these new applications of photography pointed up the need for trained operators in the more specialized photographic fields.

Perhaps the most spectacular event in photography during 1947 took place on March 7, 1947, when the highest aerial photograph ever made, showing 200,000 sq.mi. of the earth's surface, was taken from an altitude of 101 mi. This amazing photograph by the U.S. navy, was exposed automatically in a V-2 rocket at White Sands Proving Ground in New Mexico and actually showed the curvature of the earth. Two aerial cameras were installed amidship in the rocket. They operated automatically, taking pictures through infra-red filters to eliminate the usual aerial haze.

**Colour Photography.**—Kodak Ektacolor was announced on Aug. 25 as a revolutionary new negative colour film that could be processed by the photographer. A three-layer cut-sheet film for standard cameras using sheet film holders, it simplified the making of colour prints and photo-mechanical reproductions eliminating the need for masking and for separation negativ

After development, Ektacolor has a negative colour ima combined with positive coloured masks, which give it an ov all orange appearance. The effective printing colours are co plementary to those in the original subject. The colou couplers incorporated in the film effect automatic colour c rection. In colour print making from positive colour films su as Kodachrome and Ektachrome (a positive film announced Kodak in 1946), colour correction is achieved by making o or more masks (low density black and white negative image and binding them in register to the positive colour transparen Ektacolor eliminates these steps. The film is slower than oth colour films. Black and white prints may be made fro Ektacolor negatives for use as proofs.

Positive printing matrices may be made directly on the ne Kodak Pan Matrix film, from the original Ektacolor negati with the appropriate colour filters.

Kodak Pan Masking film became available for prepari masks for colour transparencies. In use, the new masking fil is exposed through the colour transparency by filtered ligh After development it is taped in register with the original a forms a colour-correcting and contrast-reducing mask whi improves the results in the final reproduction.

A new improved type of Ansco Color Printon was put in production with softer gradation, cleaner whites and more bri liant colours. The improvement in colour print quality ma possible by these changes represented a real advance in thre colour photography for the making of colour prints from colo transparencies. Simplified processing formulas and a wider co trol of contrast during development were additional features.

**New Cameras and Equipment.**—In the United States the were important developments in cameras and in photograph equipment. Graflex, Inc., released a new line of Pacemak cameras which included the Speed Graphic line with focal pla shutters and the Crown Graphics without this built-in featur These cameras were a complete redesign of the former Ann versary Speed Graphic cameras. The focal plane shutters the Pacemaker Speed Graphic cameras were simpler to opera and more accurate in exposure timing, and contained built- flash synchronization contacts.

A Kodak Flash Bantam camera, equipped with f/4.5 Anasti mat special lens was introduced for the amateur photograph during the year by the Eastman Kodak company. Another ne product designed for the advanced amateur and profession photographer was the 4x5 Kodak Master View camera. Th camera had a monorail track 19 in. long to permit the fro or back of the camera to be racked back and forth for focusin

Eastman Kodak company disclosed an interesting account March of how they had secretly built 1,000 miniature M (match box) cameras for use by the Office of Strategic Servic and underground forces during World War II. The MB came could be concealed in the hand and made negatives about on half inch square which could be enlarged later. Kodak also su plied vestpocket darkroom kits containing several rolls of mm. film, developing and fixing chemicals in pill form and oth small items. The MB camera made about 30 exposures on 2 of 16 mm. film. The 1-in. f/5 lens had one stop to close t aperture to f/11. The shutter operated at a speed of 1/50 se A close-up lens was also provided when using the MB came for copying documents and similar material.

Argus, Inc., introduced its 35 mm. Argus Model 21 came equipped with the new Markfinder direct-vision viewer. Th new view finder, a development of the wartime illuminated gu sight contained guide lines to indicate picture limits and cro lines for centring the subject. The Markfinder showed 25 re of the picture area than was actually recorded on the film. wever, the guide lines served as marks for the actual picture ming. Argus also brought out its Minca camera for the low- ced camera market. The Minca was equipped with an f/9.7 mm. lens and a fixed shutter operating at 1/80 sec. The nera uses Bantam-size film, making a 26x38-mm. negative.

Ansco produced the Panda and the Rediflex cameras during 47. These were both inexpensive cameras taking 12 $2\frac{1}{4}$x$2\frac{1}{4}$-in. tures on 620 roll film. Such cameras showed a trend toward wider use of new war-tested materials in small cameras. e camera bodies were made of polystyrene plastic. In Decem- Ansco made a formal showing of the new Ansco Reflex nera, which had been announced a year previously. It was newhat similar to the well-known Rolleiflex.

Kodak announced a line of Commercial f/6.3 Ektar lenses rrected for the most exacting uses by commercial photog- phers, using the modern black and white or colour emulsions. ey were fitted in the No. 3 Ilex Acme Synchro shutters. The x Optical company announced its new No. 2 Acme Synchro itter with top speed of 1/300 sec. for use with $6\frac{1}{2}$-in. f/4.5 ses. The outside diameter of the shutter, which had a built- mechanism for flash synchronization, was only $2\frac{3}{4}$ in.

A new line of Rapax shutters was brought out by the Wollen- Optical company, known as the Standard Rapax, "X" Syn- romatic-Rapax, and the Full Synchromatic-Rapax. The "X" pe had a built-in contact for flashing the electronic high- eed flashtubes and the Full Synchromatic-Rapax had a built- synchronizer for use with the standard flashlamps. Wollen- also introduced the Raptar series of lenses for various pho- graphic uses.

Trivision, the lenticular system of producing third dimen- nal still pictures, was nearly ready for public showing by the d of 1947. Bausch & Lomb Optical company delivered the st $14\frac{1}{2}$-in. f/2.2 Trivision lens to the Naval Experimental ronautical laboratory during the year. The lens was 8 in. in ameter to give maximum depth perception. The Trivision film ed with this lens was embossed with minute ridges or lenticu- tions, to give the direct vision stereoscopic effect without the e of spectacles or a special viewing device.

High-speed electronic flash lighting was applied to a new ship- ard enlarger to provide continuous enlargement without the fficulty of interference from shipboard vibrations. With this uipment, exposures could be timed at 1/10,000 sec.

**Cameras for Specialized Purposes.**—In the scientific and dustrial fields there were a number of important new camera evelopments. Fairchild Camera and Instrument corporation roduced the 35 mm. Mirar camera (marine investigators rada d record). This camera automatically recorded on 35 mm. m the image appearing on a vessel's radar scope, thereby pro- ding reliable and tamper-proof legal evidence for court cases volving marine accidents. It also made possible the radar arting of harbours, rivers and coast lines as an additional aid navigation.

The Mirar camera system was composed of three separate, terchangeable units assembled to form a single operating unit: camera body, a magazine accommodating 100 ft. of standard mm. roll film, and a periscope for transmitting, by means of irrors, the scope image to the camera lens while at the same me permitting the image to be viewed by the operator.

The camera body was equipped with a prefocused 35 mm. 2.3 Baltar lens; diaphragm stops from f/2.3 to f/16 were pro- ded. A sequence control mechanism within the camera operat- g control permitted the camera to take a picture of every cle of radar antenna scan, every other scan, 3 consecutive ans out of every 12, or 5 consecutive scans out of 60.

DOCUMENTARY photograph of a tenement on Chicago's west side, taken by Wayne Miller while on a 1946–47 Guggenheim fellowship. A group of photographs by Miller was exhibited at the Museum of Modern Art, N. Y., during Oct.–Nov. 1947

A new Oscillo-Record camera by Fairchild made photographic records of high-speed transients, stationary patterns of periodically recurring phenomena, or any type of phenomena that could be put on a cathode-ray oscilloscope. A 35 mm. roll film camera, electronic film speed control unit, periscope cone, mount, cables and data card unit comprised the complete assembly of the camera. Either an f/2.8 or f/1.5 lens was available. A shutter, adjustable for speeds up to 1/400 sec., was supplied for taking single exposures but was not used when making continuous motion recordings. Film transport speed could be varied from 1 in. per minute to 3,600 in. per minute. With a 100-ft. reel, the camera could operate from 20 sec. to 20 hr.; with the 1,000-ft. film magazine, from $3\frac{1}{3}$ min. to $8\frac{1}{3}$ days. The rate of film movement was automatically registered along the film edge and handwritten data could be recorded directly on the film. Direct observation of the cathode-ray tube while the camera was operating was made possible through the use of the periscope cone.

A cut-sheet film Fluoro-Record camera supplemented the Fairchild Roll Film Fluoro-Record camera (announced in 1946) and was designed specifically for small-scale chest X-raying surveys. The fluoride coated lens is rated at f/1.5 with a focal length of approximately $4\frac{3}{8}$ in. No shutter is provided because exposure time is determined by the duration of the image on the X-ray unit's fluorescent screen.

**The Electron Microscope.**—After World War II many large electrical concerns in Europe designed electron microscopes for commercial production. The instruments were both electrostatic and magnetic and incorporated a number of ingenious features. One of these new instruments was produced by the Philips company in Eindhoven, Holland.

From the photographic point of view, two new devices developed for the electron microscope were of interest. The first was a new method of determining the exact focus of the instrument which is quite analogous to the use of a coupled range finder on a photographic camera. This device consisted of deflecting plates which deflect the electron beam bombarding the specimen. The arrangement was such that the specimen was illuminated alternately by two parallel beams arriving from different directions. This resulted in doubling the out-of-focus final image; the displacement between the two images was determined by the degree to which the system was out of focus. The system made it extremely easy for the relatively inexperienced operator to achieve exact focus. The basic idea of deflecting the illumination was introduced by the Philips company in their instrument. The Radio Corporation of America (RCA) modified it in their own lens by using a square wave alternating deflecting potentials. Thus, in the Philips system an enhanced blurring of the image in the out-of-focus condition was achieved, while in the RCA instrument two sharp and separated images were observed.

The other development, which came entirely from the RCA laboratory, was an extremely high contrast magnetic objective lens. In electron microscope lenses, unlike ordinary lenses, the contrast in the image is controlled by the size of the aperture used, the contrast increasing as the aperture is decreased. The new objective had two components, the first with a focal length ten times longer than normal (22 mm., instead of 2.2 mm.) so that the same effective numerical aperture could be achieved with diaphragm openings ten times greater. With this it was possible to achieve numerical apertures as small as $5 \times 10^{-4}$ ($f = 1/2000$). While such small apertures result in considerable loss of resolving power, because of diffraction phenomena and Abbe's law, they give an enormous improvement in the contrast obtainable, with the result that internal structures of bacteria can be observed where the older type of lens shows a complete blank. This lens had already resulted in some startling discoveries concerning the growth of the bacteriophage particles within the bacterial cells.

Eastman Kodak company announced the development of a "photographic memory" camera for use by the U.S. navy in a large electronic calculator. This new camera would record mathematical data at superhuman speed—1,000 numbers, of 12 digits each, every second. The electronic calculator controlled and presented information in the form of spots of light on the face of a cathode-ray tube, resembling the viewing tube of a television receiver. The Kodak "memory" camera would then photograph each pattern of spots as it was produced by the moving electronic beam within the tube. Thus the numbers were permanently recorded. The film goes through a rapid development and then is projected onto photoelectric tubes for reading.

**Other Developments.**—In the field of sensitized films and paper the Eastman Kodak company produced: Kodak Velite paper for making contact prints in normal artificial illumination, eliminating the use of a darkroom; Kodak Platino paper for enlarging purposes; Kodak Illustrators' Azo paper, a contact printing paper designed for the commercial photographer; Kodagraph Autopositive paper developed to give high contrast in modern drawing reproduction.

Special "nuclear track" photographic plates made in the Eastman Kodak laboratories were used by scientists to picture actual atomic fission and to study action of highly charged nuclear particles. These sensitized plates were supersensitive to the electrical charges carried by atomic particles. At the same time they were relatively insensitive to light, which affects ordinary film, and to X-rays. When a highly charged particle sped into the emulsion a dotted line of affected silver grains was produced. This was the path of the nuclear particle through the emulsion.

The Kalart camera was the first completely new design postwar cameras. Made by the Kalart company of Stamfo Conn., it featured many innovations for a camera using $3\frac{1}{4}$x cut-sheet films. The built-in features included batteries operating the front shutter, flashing the photoflash lamps a illuminating the focuspot in the range finder. There were u usual safety devices to ensure the making of exposures. A p ture could not be made until the dark slide was withdrawn, th preventing any blanks as in the case of the ordinary pr cameras using cut-sheet films. Also the flash would not opera until the shutter was cocked and the dark slide withdrawn, th preventing misfiring of lamps.

The combination range finder and view finder was built in the camera body, and could be operated from either the rig or left side of the camera. The same dual operation was al possible with the built-in body release for the front shutt which was operated electrically. Within the view finder the was an illuminated rectangle indicating the actual picture ar covered on the film. When both eyes were kept open this illum nated rectangle appeared to be seen externally in the subje field of view. In this way the photographer could see the lim of the picture area superimposed upon the subject area in fro of the camera. This was the first time that such a view find system had ever been put on a camera.

Other features of the Kalart camera included mechanical sy chronizing adjustment from 0 to 20 milliseconds, interchang able lenses, triple extension bellows, automatic focusing bra and the usual rising and sliding front lensmount. There were n visible wires on the camera for the operation of the flashlamp The flashlamp reflectors were inserted into brackets and aut matically attached for flash use.

There were few changes during the year in the field of syn chronized flash photography. The Kalart company produce the Kalart Compak Battery-Flector, a Master Battery Case an Paraplanatic Reflector, the Synchrostrob for repeating flas tubes and a Sistogun Model II for use on the Speed Graph focal-plane shutters.

A new Kodaslide 1,000-watt projector was an important add tion to projectors using 2x2-in. lantern slides. With continue increase in the use of colour slides, this new Kodak projecto would be important for use in larger rooms and to project large brilliant image. Kodak also brought out a Brown Tone for making warm-tone prints and a ready-to-use Durol deve oper for photofinishers.

The new Agiflex, first all-British postwar camera, was show in England the latter part of the year. This single-lens refle camera made $2\frac{1}{4}$x$2\frac{1}{4}$ pictures with an f/3.5 Agilux Anastigma lens of 8 cm. focal length and a focal plane shutter. In appear ance it was similar to the prewar Korelle Reflex camera.

**Pictorial Photography.**—Revived interest in amateur pho tography during 1947 was nowhere more evident than in th pictorial field. According to the *American Annual of Photog raphy,* 3,041 pictorialists had one or more photographs accepte in a recognized salon with a total of 17,498 prints being exhib ited to the public—an increase of $33\frac{1}{3}\%$ over 1946.

The Museum of Modern Art in New York city presente three photographic exhibitions during the year of unusual inte est. One was a magnificent display of the work of Alfred Stieg litz. Another presented the candid shots of the great Frenc photographer, Henri Cartier-Bresson. A smaller show displaye the work of Leonard McCombe, Wayne Miller and Home Page. Announcement was made in the fall of the appointmen of Edward J. Steichen as director of the museum's departmen of photography.

The Photographic Society of America, largest organizatio of amateur photographers in the world, continued to grow, pass the 7,500 mark. With 34% of its membership actively en-ged in pictorial photography, the interest of the others lay in ch fields as colour, nature, technology, photo-journalism and tion pictures. (*See* also MOTION PICTURES; NEWSPAPERS D MAGAZINES; TELEVISION; X-RAYS AND RADIOLOGY.)

(W. D. MN.)

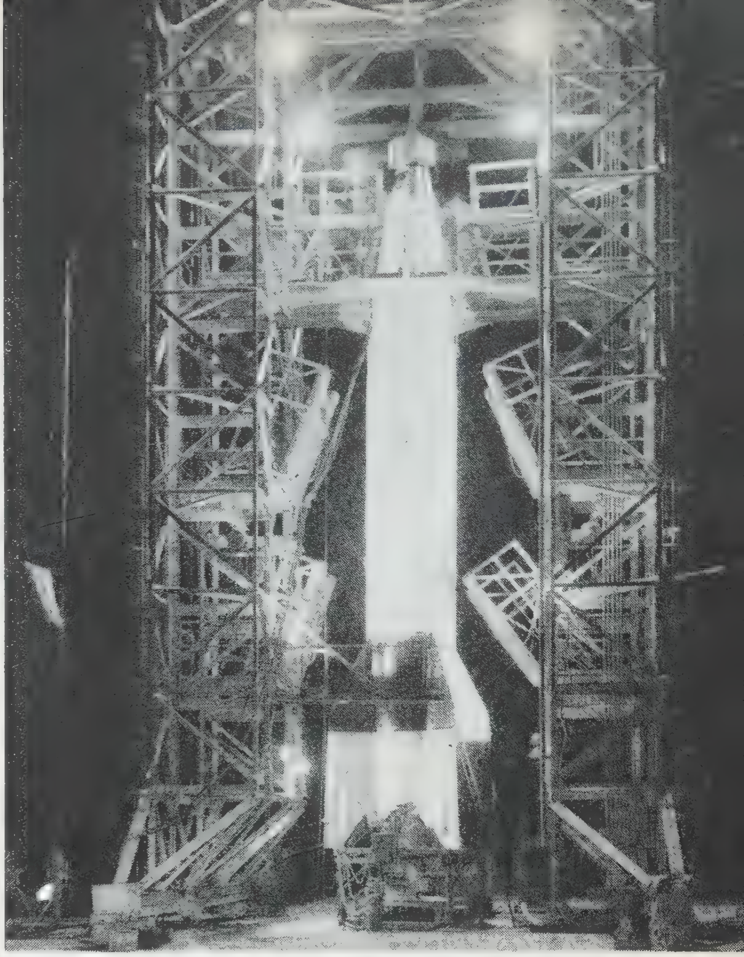
**YSICS.** The year 1947 was not marked by any discovery of such importance as to demand a re-evaluation of sting crucial experimental evidence upon which the funda-ntal concepts of physics were based. A great deal of work, dden during the years of World War II, was released for pub-ation. It was believed that "declassification" had made public arly all fundamental progress in nuclear physics, with the ception of a few numerical constants of great importance in sion. In the U.S., in 1947 the world's most active research ntre of physics, the need for trained physicists in government boratories, the strong demand from industrial organizations, d the high enrolments of students in colleges and universities mbined to create an acute shortage of trained personnel hich would require at least several years to ease. Never were S. physicists in so good a position to do good service.

**Accelerating Machines.**—Modifications of the cyclotron d betatron had been discussed theoretically in the literature r nearly two years, with the purpose of creating beams of rticles of greater energy than the standard instruments could tain. The modification consisted in adding the synchrotron inciple, often called the principle of phase stability, to the achines in their conventional form, following an idea sug-sted independently by V. Veksler in the U.S.S.R. and by M. McMillan in the U.S. The modified instruments were lled synchrotrons when their use was restricted to electron celeration, and synchro-cyclotrons when the design was for e acceleration of ions only. The most notable example of the tter type was the 184-in. instrument in the radiation labora-ry of the University of California. The 184-in. dimension dicated the diameter of the two circular pole pieces.

Although this instrument was originally planned as a con-entional cyclotron, it was adapted to the synchro-cyclotron rinciple, and developments were contained in two important apers appearing in *The Physical Review.* The first of these, D. Bohm and L. L. Foldy (*Physical Rev.,* 72: 649) treated e theoretical problem of starting an ion beam in the accelerat-g chamber. The second, by W. M. Brobeck, E. O. Lawrence, R. MacKenzie, E. M. McMillan, R. Serber, D. C. Sewell, M. Simpson, and R. L. Thornton (*Physical Rev.,* 71: 449), ecorded the initial performance of the instrument. That the ork of eight scientists could be recorded within the limits of two-page article was merely a sign that physics dealt with uch large and complex machines that a whole team was re-uired to design, adjust and maintain each of them.

Tests were made with hydrogen ions (protons) and with elium ions (alpha-particles), and though direct measurements f the energies reached were not made, it was expected that hese would be 195 and 390 Mev. respectively. The latter figure exactly twice the former on account of the double charge arried by the alpha-particle. The energies fall in the range hich was theoretically needed to carry out systematic experi-ents on the production of mesons. Since knowledge of the eson's properties appeared to be the key to a proper under-tanding of the forces in the nucleus, reports of new experi-ents, planned or performed, with particles from the synchro-yclotron were awaited eagerly.

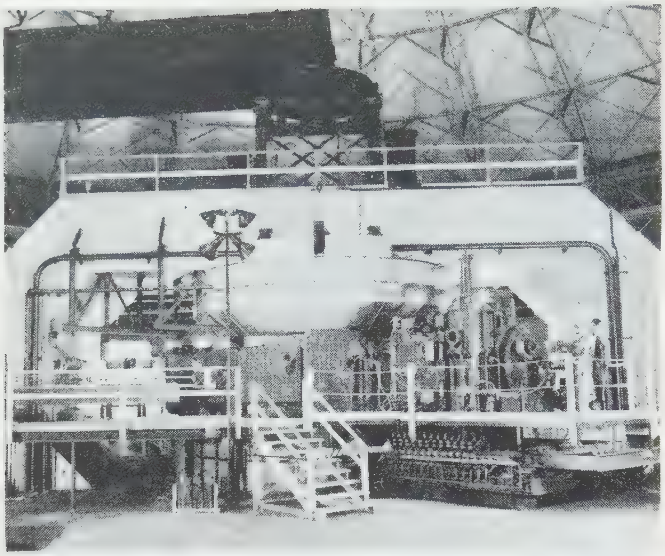
Although the pole pieces were 184 in. in diameter, it was not ossible to use the whole of the inter-polar volume effectively. or a variety of reasons, difficulties occurred in keeping the ion eam up to full strength as it spiralled outward from the centre of the dees. These difficulties were not overcome completely. The ion beam was good as far as a diameter of 80 in., after which it fell rapidly, and was lost at 164 in.



**V-2 ROCKET** on its launching stand ready for test firing, as part of an upper atmosphere research program conducted by the U.S. army and scientists of the Naval Research laboratory in 1947

Columbia university was busy with preliminary work on a 450,000,000-v. synchro-cyclotron, and larger instruments of the "race-track" variety were being designed to reach the 1,000,000,000-v. mark.

**The Uranium Pile.**—The active material of an atomic bomb, either uranium 235 or plutonium, had to be separated or manufactured in pure form from natural uranium. During World War II the preparation of these materials on a military scale was carried on only in the U.S., although scientists of other nationalities were called in to help. Plutonium was one of the final products created in a chain-reacting pile, usually of uranium and graphite. In 1945, Great Britain began to set up her own atomic energy research establishment at Harwell, where a uranium-graphite pile was operated for the first time in Europe in Aug. 1947. An account of this event under the encouraging title "Peaceful Applications of Nuclear Fission" was carried by *Nature,* 160: 451 (1947) in the form of a report of speeches made by J. D. Cockroft and others at the British association meeting in Dundee. Cockroft, the director of the establishment, emphasized that the pile was a potential though not a certain new source of power for the world. The low-power pile at Harwell, designed for experimental work only, contained several hundred tons of graphite, and probably tens of tons of uranium. So dense is uranium, however, that only about one per cent by volume was composed of that metal. Surrounding it was a concrete shield about five feet thick. Loading the pile, which meant inserting uranium in spaces purposely left in the graphite, occupied ten days. During loading, the neutron flux increased steadily, and towards the end, very rapidly, as the



THE 184-IN. SYNCHRO-CYCLOTRON, based on the principle of stable orbits, which was being used in nuclear research at the Radiation laboratory of the University of California at Berkeley in 1947

multiplication constant increased towards the critical value, unity.

This first Harwell pile was a low-power one, designed for operation at about 50 kw. Its chief function was to be the production of radioactive isotopes for use as tracer elements in physiology, metallurgy and other sciences.

A second pile for the study of power production was to be built at Harwell, using uranium sheathed in aluminum, to prevent oxidation and escape of fission products. The presence of aluminum set a serious limitation on the use of the pile for power production (via steam) since it is thermodynamically impossible with ordinary condensers to achieve high efficiency in a steam turbine operated at a temperature low enough to preserve the essential properties of the aluminum sheathing. This second pile was planned for 1,000 kw., which would permit about 1 gram of useful fission products to be manufactured per day as a side-line.

**Neutrons.**—During the fission of uranium, it was known that temporary products, lying in positions near the middle of the periodic table and possessing an unusually high neutron-proton ratio were first produced. They were unstable. They decayed, and some atoms emitted neutrons in the process. All this, however, took time. Those neutrons which were not liberated at the instant of fission, but which were freed later, were termed delayed neutrons.

The presence of four groups of delayed neutrons was apparently known in 1942, but the half lives then determined were only approximate. W. C. Redman and D. Saxon (*Physical Rev.*, 72:570) gave these half lives with much greater accuracy than before, and also gave the results of experiments they carried out on delayed neutrons from plutonium 239 irradiated in the Argonne pile. It turned out that the delayed neutrons from plutonium also occurred in four groups with the same half lives as the corresponding groups from uranium 235. The relative intensities of the four components were, however, different in the uranium and plutonium cases. The number in each component was generally greater for uranium than plutonium, and the total number of delayed neutrons, including the four components, was about twice as great per fission for U 235 as for Pu 239.

From the point of view of the structure of the nucleus these results indicated that upon fission U 235 and Pu 239 broke down in similar fashions, which suggested that the component particles were arranged in the same way in both nuclei. It was also surmised that the four mass units by which Pu 239 excee U 235 represented the stable alpha-particle which Pu 2 emitted in the course of its normal decay, and that the add tion of this alpha-particle to the lighter nucleus did not distu its fundamental structural plan.

After 1940, great emphasis was put on the study of sl neutrons, partly because it was upon these that the action of chain-reacting pile depended, and partly because nuclear tran mutations in general could be achieved more readily with slo than with fast neutrons. Information describing the interacti of neutrons with matter was usually given in terms of cro sections. A neutron cross section of (say) gold represents th effective target area which one atom of gold presents to o coming neutrons. Typical cross sections were found to b between $10^{-21}$ and $10^{-24}$ cm.$^2$ per atom. The values, howeve varied greatly from one kind of atom to another and from o neutron velocity to another.

A great many papers were published in 1947 on the cro sections of atoms for neutrons. The results were reached by variety of methods, including mechanical velocity selector crystal diffraction, and time of flight techniques. When th researches of men in different laboratories were compared was found that reasonable agreement existed as to the order o magnitude of the results, although discrepancies in matters o detail were fairly common.

**Significant Research.**—Other important developments du ing 1947 included the following: The mass of the charged meson the key to nuclear structure, was determined by William B Fretter (*Physical Rev.*, 70: 625) to be unique and to be abou 200 electron masses. Thus earlier speculations and interpreta tions of experimental results on the basis of charged meson with much smaller masses were discarded. At the University o Bristol, England, a group of physicists (*Nature*, 160: 453 studied the tracks of cosmic ray particles recorded in the emul sions of special photographic plates, and offered some evidence not entirely decisive, for the existence of neutral mesons of th same masses as charged mesons.

Experimental flights of captured German V-2 rockets con ducted by the ordnance department of the United States army at its proving grounds, White Sands, N.M., were utilized b scientists to measure the pressure and temperature of the at mosphere far above the maximum level (about 25 km. or 15 mi.) previously accessible to free balloons. Reliable data were obtained up to 120 km. or approximately 75 mi., at which alti tude the measured pressure was less than 0.0001 mm. of mer cury. With these new data it was possible in some respects t improve upon the information given in "Tentative Tables fo the Properties of the Upper Atmosphere," a 1947 publicatio of the National Advisory Committee for Aeronautics. On tw flights the V-2 rockets carried spectrographs with which th solar spectrum was photographed at an altitude of 80 km., giv ing spectrograms representing the distribution of intensity i the sun's radiation more truly than ever before obtained directly

Horace W. Babcock's measurement (*Physical Rev.*, 72: 83) o the polar magnetic field of 78 Virginis provided the thir celestial object whose angular momentum and magnetic dipol moment were known. The other two were the sun and th earth, for which two it had long been known that the dipol moments and angular momenta were directly proportional Babcock's observations on 78 Virginis confirmed the same regu larity for this third body, so that, as P. M. S. Blackett re marked, the principle must be taken seriously as a possible gen eral law of nature for all massive rotating bodies. The effec was so small that it could not be detected using masses an angular velocities attainable in laboratory experiments.

A group of U.S. chemists and physicists established th merical values governing the amount of radioactive carbon $^{14}$) normally present in living organisms. That it actually sted could be the result only of the occurrence of some neu- ns in the flux of cosmic rays. An interesting deduction was ıt in organic matter, once dead, the quantity of radiocarbon uld decrease exponentially, at a known rate. This offered a ssibility of determining the age of items like wheat kernels red in the burial places of past civilizations.

## ysiology.

**Physiology of Discipline.**—The physiological mechanisms of discipline were lucidly discussed 1947 by R. P. MacKay, who pointed out that the conditioned lex is the unit of character in that it is the basis of all learned acquired behaviour. The amount and kind of discipline (or nditioning) that children are subjected to will largely deter- ne their adult character, including their moral stature and eir tendency toward neurotic behaviour. The elements re- ired for the inculcation of good behaviour habits are the same ments that are involved in establishing conditioned reflexes. mong the most important of these elements may be mentioned e objective, which in terms of discipline should be ethical andards such as love of truth and devotion to duty. Another ment is an atmosphere of friendliness, which, for discipline, eans that the child must be loved by the parent. Further fac- rs for successful conditioning are teaching by example, intelli- nt use of reward and punishment and consistency of atti- des.

**Experimental Insomnia.**—Prolonged wakefulness was main- ined in a large group of young men for the purpose of study- g the physiological changes which occurred. With the excep- on of an increase in the electrical activity of the brain, no her significant physiological or biochemical changes were ob- rved during 112 hr. of experimental insomnia. This indicated at the fatigue is confined to the higher centres of the central rvous system.

In tests of short duration, little change occurred in perform- nce as measured by a wide variety of tests of psychomotor ills. When sustained effort was required, however, poorer per- rmance resulted. This effect first became evident after about hr. of sleeplessness. The inability to sustain effort is related the increased difficulty of remaining awake and not to any uscular weakness.

The chief disturbances produced by sleeplessness are psycho- gical. The principal symptoms noted were apathy, bursts of nreasonable laughter, autistic expressions and the tendency to- ard hallucinations. (In the great majority of the subjects these hanges are mild and disappear following sleep.)

**Restricted Caloric Intake and Longevity.**—Several studies ublished in 1947 confirmed the fact that restricted caloric in- ake increases the average length of life of animals. An effect pon fertility and upon the incidence of tumours was also noted. Vhen the diet of mice was limited to two-thirds of the calories onsumed by litter mate controls which were fed large amounts, he protein and vitamin intake of the two groups being the ame, 25% of the mice on restricted intake were alive at an ge when all of their full-fed litter mates had died. The special train of mice used in this study showed an incidence of cancer f the breast of 19% when fed a normal diet. This fell to zero the group whose food intake was restricted. Caloric restric- ion for eight months, with subsequent full-feeding, did not pre- ent a significant incidence of mammary cancer although it aised the average age of onset of cancer above that in com- arable fully fed controls. The caloric restriction employed in hese studies retarded sexual maturation and thereby depressed the fertility of the animals. Remarkably, the calorie underfeeding did not prevent subsequent maturation and normal gestation at an age when full-fed litter mates had become sterile from senility. The mechanism of action of restricted caloric intake in increasing longevity and decreasing tumour incidence remained unknown and offered a fruitful field for research.

**Radioactive Red Cells in Determination of Blood Volume.**—The radioactive isotopes continued to find ever more extensive use as tools for physiological research. An excellent example of the application of this new technique was afforded by the use of "tagged" red blood cells for the purpose of determining the volume of blood in human subjects. Volunteer normal medical students served as donors. They were fed one of the radioactive isotopes of iron (in these studies iron 59 was used) for several weeks so that the radioactive iron became incorporated into their red blood cells. A small portion of the donor's blood was then injected into a recipient with compatible blood type in whom the volume of circulating blood was to be determined. By determining, by means of Geiger-type counters, the radioactivity of the donor's blood cells and the radioactivity of the recipient's blood cells, after enough time had been allowed to permit thorough mixing of the donor's blood with the recipient's, the amount that the donor's cells had been diluted could be determined. From this dilution factor an accurate calculation of the total blood volume of the recipient was made. It was believed that this method of determining blood volume was more accurate than those previously used. When this new method was compared with the widely used dye-dilution method, large discrepancies were observed. The greatest error in the dye method is the removal of a portion of the dye from the circulating blood by the cells which line the smallest blood vessels. Since this adsorption onto the lining cells is variable, correction for it cannot properly be made.

**Toxicity in Animals of Processed White Flour.**—For about 25 years mills had been exposing flour to nitrogen trichloride gas for the purpose of aging flour artificially. Such treatment (called "agenizing") improves the baking quality of flour so that a larger, softer loaf of bread with a silkier, somewhat whiter crumb results. It was shown in 1947 that dogs and several other species of animals are susceptible to a toxic principle produced by the action of nitrogen trichloride on the proteins of flour. Dogs were found more susceptible than any other species so far studied. When fed to dogs as a major portion of their diet, such bread produces a set of symptoms variously termed canine epilepsy, canine hysteria, running fits and fright disease. Manifestations of the condition consist of inco-ordination of movements, weakness and epileptiform convulsions. The convulsive seizures begin with a premonitory howl, followed by falling over, salivation, running or paddling movements and finally jerking movements. Electroencephalograms showed irregular brain waves similar to that seen in human epilepsy. The symptoms in rabbits, cats and ferrets appeared comparable with those in dogs, though considerably larger or more prolonged dosing was required to produce them in cats and ferrets. Monkeys showed no convulsions but in some instances displayed changes in the encephalogram. Chickens, guinea pigs and hamsters gave no evidence of toxic reactions. Twelve human volunteer subjects revealed no symptoms or encephalographic changes after eating agenized flour in amounts and for periods of time which would unfailingly produce hysteria in dogs. The decision as to whether agenized flour has any toxic effect in man awaited the outcome of detailed experiments.

**Pittsburgh.** Recovering from labour disturbances of the previous year, production and trade in Pittsburgh, Pa., rebounded to peaks in 1947. For 11 months industrial production stood at 187% of the 1935–39 average or 24% above the same period of 1946, as compared with the federal reserve board's national index, which was only 9% higher. Steel operations averaged 97% of capacity, or 27% above 1946, and preliminary estimates for bituminous coal production indicated a gain of 17%.

The Bureau of Business Research of the University of Pittsburgh reported employed persons in the Pittsburgh district at 128% of the 1939 average or more than 10% above 1946. The bureau's index for pay rolls for the district stood at 242% of the 1939 level or 24% above 1946.

Retail trade in the 11 months reported 17% higher dollar volume than in the corresponding months of 1946, while department stores reported an increase of 9%.

Substantial progress was made in meeting the housing shortage. Federal Housing administration insured mortgages increased 117% in western Pennsylvania in the first eleven months.

The city council and the board of public education enacted new taxes for 1948 on personal property and on the gross volume of mercantile enterprises. The city also enacted a tax upon amusements admission fees, and the school board adopted a per capita levy. As 1947 ended, several of these new levies were under court attack as unconstitutional.

Long effort to eliminate excessive smoke over Pittsburgh culminated when a city ordinance took effect, requiring the burning of smokeless fuel or the use of equipment which would burn bituminous coal smokelessly. Steps were under way to extend control throughout Allegheny county. The Pittsburgh Consolidation Coal company announced plans to build a $120,000,000 plant to convert coal to gas and other smokeless fuels.

The Pittsburgh Parking authority was organized to erect municipally-owned, multilevel garages in the downtown district. Construction was vigorously advanced on the Penn-Lincoln high-speed parkway to bring the traffic of U.S. routes 22 and 30 from the east into the business district.

Political history was made when, at the November election, the Democratic party made a clean sweep of county offices for the first time.

A sample survey for the U.S. census bureau indicated that the metropolitan district increased in population about 5% or 106,000 to a total of 2,100,000 after the 1940 census. Latest official population figure for Pittsburgh was 671,659 as enumerated in 1940, slightly less than half that of Allegheny county, including 3 other cities, 74 boroughs and 51 townships. City area was approximately 54.3 sq.mi. and county area 747 sq.mi. Taxable real estate was assessed in Allegheny county at $1,925,000,000 of which $970,000,000 was in Pittsburgh. (C. F. Ls.)

**Pius XII** (1876– ), the 262nd successor of St. Peter in the see of Rome, was elected by the cardinals in conclave on his 63rd birthday, March 2, 1939, and was crowned as pope on March 12. (For details of his early life, see *Encyclopædia Britannica.*)

Consolidation of the peace and reconstruction of the world particularly Europe, on humane and Christian lines continued to be the foremost concerns of the pope during 1947. Addressing members of two Italian women's organizations on Jan. 22, he urged them to enkindle in themselves an ardent zeal to collaborate in the redemptive work of Christ by living the greatness of a Christian life in its fullness with persevering constancy. Quoting St. Ignatius of Antioch, the pope said: "In times during which it is the object of the world's hatred, Christianity is not a matter of persuasive words, but of greatness." In similar vein on the feast of St. Benedict, March 21, 1947, he issued an encyclical letter, *Fulgens Radiatur,* urging the peoples of the Christian world to pattern their lives upon the principles of religion else human society will collapse.

During an audience with members of the United States delegation to the International Labour Office conference in Geneva on July 16, the pope re-emphasized the right and duty of the church to teach the moral aspects of economic problems. He called attention to basic principles of sound social order including respect for human dignity and the dignity of labour, the solidarity of all people in the human family, and the demands of the common good over individual gain.

On Oct. 29 in the course of an address to the minister plenipotentiary of the republic of El Salvador to the Holy See, the pope urged all who have the cause of a just peace at heart to make use of the opportunities offered by the United Nations even if it appears that their appeals for peace remain unheeded at present.

While receiving members of the United States subcommittee on immigration and naturalization on Nov. 3, Pius XII pointed out that the question of immigration today "presents a wholly new problem"; that while always the welfare of a country as well as that of the prospective immigrant must be considered and will sometimes dictate restrictive legislation, "circumstances will at times almost cry out for the easing of the application of the law."

The most important papal document of the year was the encyclical on the liturgy, *Mediator Dei,* issued on Nov. 20. It stressed the importance of social worship, at the same time warning against abuses and unauthorized innovations.

On Dec. 18, the pope issued a short encyclical letter, *Optatissima Pax* ("Most Desired Peace"), calling especially for the prayers of children for the peace of the world. In his radio message of Christmas Eve, the pope pointed the way to international peace and reconstruction: "Only through prayer and work through truthfulness and courage, through a genuine and universal spirit of brotherhood, will the year 1948 be for wounded Europe and for the nations torn by discord, a year of rebirth and peace." On Dec. 31, warning that 1948 would be a year of decision and crisis, he rejected the idea it would also be one of the most calamitous in history.

On several occasions Pius XII became the target of soviet press attacks. After telling visiting newspapermen on Jan. 18 that a new totalitarianism had succeeded naziism, the *New Times,* Moscow, condemned him as an international reactionary and said the Vatican conducted an "anti-Soviet, antidemocratic campaign throughout the world." In October, the U.S.S.R *Literary Gazette* attacked him for backing U.S. foreign policy; previously Pius XII had mentioned to visitors that sometimes force is legitimate in enforcing law and order.

During the year the pope addressed several messages to U.S. Catholics. On the first day of Lent, in a radio broadcast, school children were urged to contribute "pennies and dimes" to aid starving youth in Europe. In October Holy Name men, at their ional rally in Boston, Mass., were told laymen have an im- tant task to perform in social and spiritual reconstruction. Oct. 12, in a radio address to the National Conference of tholic Charities convention at New Orleans, La., Pius XII rned of the dangers from "social and racial bias." To the ional meeting of the Catholic Rural Life conference (*q.v.*) he it a telegram commending work for displaced persons and ir resettlement. On Nov. 29 U.S. Catholics were urged to aid hungry of Europe and the Orient.

The Swedish government specially honoured the pope in bruary, conferring upon him a medal for his outstanding serv- s to humanity. (*See* also ROMAN CATHOLIC CHURCH; VATI- N CITY STATE.) (J. LaF.)

## ague, Bubonic and Pneumonic.

Recurrences or new eruptions plague in alarming proportions were not reported during 47, but an outbreak occurred in Turkey along the southern ontiers of Urfa during March and April after several years quiescence or absence of the disease. It was assumed that source of this outbreak developed from sporadic cases nong the nomadic peoples of Syria, among whom recurrences minor degree had not been uncommon. Human cases were ported also from large sections of Africa, eastern and western ia, Oceania, and smaller numbers from South America.

Establishment of the infection among rodents of the field and untryside (sylvatic plague) served as a reservoir of en- micity in some countries. A review of investigations in the ited States which had been conducted consistently for the 1 years prior to 1948 specified 9 genera of rodents, and 9 ecies of the genus *Citellus* in which plague was found; 6 addi- onal genera and 2 species of *Citellus* from which plague-in- cted fleas were collected; and 25 species of fleas which served vectors under controlled experiments in the laboratory. eterminations were made from collections of more than 595,- 0 field animals of 5 orders and 45 genera, which included 26 ecies of the genus *Citellus* and its subgenera; and from more an 1,186,000 fleas among which were one or more species of , genera. These systematic investigations extending over ap- oximately the western half of the United States among the digenous rodents and their fleas indicated the potentialities r tenacious persistence of the enzootic.

Observations in other countries were confirmatory. Canada ported the presence of plague in fleas collected from ground uirrels (*Citellus richardsonii*) in Alberta and Saskatchewan, d the reporters remarked that there was no colonization of mestic rats in Alberta, though there was in the larger cities Saskatchewan. During 1947 evidence was obtained also of enzootic among field animals along the Peruvian-Ecuadorean oundary, which gave rise to 19 human cases among a scattered d sparse agricultural population. The investigator reported ere was a complete absence of domestic rats in the region; d the fleas (*Xenopsylla cheopis, Ceratophyllus londiniensis*) hich are the transmitting vectors elsewhere in the country ere not present. The tissues of a black squirrel and of a pool seven brown ground squirrels were infected with plague, and ve dead native field rats were found. The predominant flea as of the genus *Rhopalopsyllus,* whose ability as a vector was eing subjected to experimental examination.

The explanation of the persistence of plague over years in eas of northern latitudes or seasonal cold temperatures (Can- da, United States, Manchuria, etc.), in which principal rodent osts hibernate for several months, was a subject of speculation ased on the survival of fleas under protected conditions in the boratory, and on suggestive observations in the field. It was emonstrated that infected fleas (*Diamanus montanus*) will survive in a temperature of 40° C. from October to March in nests with hibernating ground squirrels (*Citellus richardsonii, C. townsendii*), and, though most of them become cleared of the bacterium, a few remain infected and an occasional one will produce the disease in other hosts by biting when removed from the nest after the period of hibernation.

It was determined during the same series of experiments that an occasional ground squirrel into whose skin the microorganism of plague (*Pasteurella pestis*) was introduced artificially within a few days after the animal had begun its hibernation continued its sleep without interruption, awoke four months later, and was alert, active and appeared entirely normal through a period of six days after awaking. On the seventh day illness with plague developed, followed by death on the eighth day, with infection at the site of inoculation, an adjacent bubo, and a bacteremia with distribution of the microorganism throughout the organs. Thus it was demonstrated that the infection can be carried four months in fleas under the conditions of hibernation of ground squirrels; and in a latent state in the squirrel which was infected shortly after the beginning of its winter sleep.

It may be noted as a possible contributing factor to the recrudescence of the disease in spring that the fleas began active copulation upon removal from the nest at 40° C. to a temperature of 65° C. Thus the nest in nature would probably have a greatly increased population of potential flea vectors at the time of the increase of the host numbers with the birth of the young.

Pneumonia of plague can be induced in white mice, and in other experimental animals by instillation of a suspension of *P. pestis* into the nares. It was shown that treatment with streptomycin of mice infected by this method will prevent the development of the pneumonia, even though the drug is administered 48 hours after the instillation. It appeared also that mice immunized by the administration of suspensions of the microorganisms which have been killed by chemicals will not develop pneumonia when the instillations are made subsequently.

Preparations for immunizing purposes were made by extracting masses of the dried bacteria with acetone followed by neutral saline solution. Two water soluble reagents (antigens) were obtained which produced antibodies in the serum of the animals to which they were administered.

The destruction of rats on ships by the periodic application of 1080 (sodium fluoracetate) was adopted by U.S. quarantine authorities in lieu of ship fumigation. The poison is dissolved in water contained in small paper cups which afford drinking water for the animals at suitable stations in their runways on the ships.

## Plastics Industry.

During 1947 the plastics industry underwent, for a few months, a rather painful but very salutary recession which resulted in a strengthened industry and in important new applications for plastic products. This slump, first felt in March, was apparent chiefly in the thermoplastic materials which, among other things, find a large market in household applications, and was the direct result of the reduction of inventories and curtailment of orders by retailers.

By the end of July, however, retailers had liquidated their stocks of uneconomic plastics products; the industry was in the course of developing new applications for its materials and was paying more attention to merchandising. As a result, statistics indicated, the industry used about 10% more resins and cellulosics in 1947 than in 1946.

In view of the fact that many moulders had considerable idle machine time during the year, the record of new machine sales, while far below that of 1946, was surprisingly high. Totals for the year were estimated at 420 compression presses, 350 injection presses and 180 extruders, making a new total of machines in the moulding and extrusion industry as follows:

| Type | 1941 | 1945 | 1946 | 1947 |
|---|---|---|---|---|
| Injection* | 1,000 | 1,720 | 3,275 | 3,625 |
| Compression | 8,000 | 12,065 | 12,975 | 13,390 |
| Extrusion | — | 850 | 1,150 | 1,327 |

*The figures do not include "made to order" or "made in the plant" injection presses now operating in the industry.

The new and modernized equipment, coupled with speed-producing accessories such as preheaters for thermosetting materials, resulted in production which was actually much larger than could be indicated by machine statistics; pieces were being moulded in both thermoplastic and thermosetting materials of a size that would have been considered impractical two years previously.

**The Cellulosics.**—Improved industrial design in the direction of heavier moulded cross-sections, made possible by advances in moulding equipment and technique, raised cellulose acetate out of its consumption slump in the fall of 1947. Examples were brush handles, toys and luggage handles. Cellulose acetate sheet material for packaging use held its ground throughout the thermoplastic recession period; new automatic machinery for the manufacture of set-up acetate boxes was a contributing factor.

In places where low-cost, high-impact material was required, such as in toilet seats, football helmets and even in telephone bases cellulose acetate butyrate made decided advances. The speed of injection moulding and the colourability of the materials gave them wider acceptance in new fields.

Ethyl cellulose, famous as the nose of the proximity fuse during World War II, came into wider usage in practically unbreakable toys, in bowling pins, golf club heads, small radio cabinets, hearing aids and refrigerator parts. Its biggest uses continued to be in mixture with amorphous wax as a strip coating for the packaging of machine parts, and in lacquer for the coating of wire insulations.

Cellulose propionate and cellulose acetate propionate, two fairly new moulding compounds, were under continuous test for new applications in many fields.

**Polystyrene.**—Consumption of polystyrene was approximately 92,000,000 lb. in 1947 compared with 67,000,000 lb. in 1946. This 37% increase was far less than was expected at the beginning of the year and was considerably less than the capacity for producing the polymer. The entire styrene production outlook was influenced by the synthetic rubber program, using 75% of butadiene and 25% of styrene monomer.

Ethylene, one of the bases of styrene monomer, with heavy use in antifreeze, detergents and other chemicals, was in short supply in 1947. Benzol, another base material for styrene, and a material with many markets apart from the plastics industry in which it is also a source of phenol, was also in short supply.

Household applications for polystyrene in 1947 were innumerable, including small radio cabinets, refrigerator parts, electrical applications and wall tile. More than 40 moulders went into th production of polystyrene wall tile.

A surface coating for polystyrene mouldings was introduce which was declared to improve the scratch resistance of th pieces, cut down their electrostatic quality and make them mo resistant to hydrocarbons. During 1947 a new high temperatu resistant polystyrene was also introduced which was declared t be boilable for short periods of time. It was being used kitchen utensils, such as tea strainers, and in other objects whe high heat may be encountered. Some progress was made in th use of polystyrene foam as insulating material for freezer plan and cold storage buildings and even for domestic construction.

**Acrylics.**—Because of the limitations of the peacetime ma ket for acrylic sheet in large aircraft construction and becaus of the partial collapse of the immediate postwar market fo fabricated acrylic ornaments and novelties, the acrylic busines in 1947 was limited. Late in the year, however, the industr was given a boost by newly-developed applications of this ma terial to signs and displays of all kinds. In these application acrylic was formed into large shapes, coloured and lighted fro the interior.

Acrylic moulding powder also showed a volume increase lat in the year because of its increased use in the automotive indus try for escutcheons, horn buttons and other decorative element. Here the process for moulding and applying metallics and colou to the interior, making a very beautiful three-dimensional orna ment, became standard as it did in the refrigeration field. I addition to these new uses, there were developments in monome castings for display purposes; watches, silverware and simila fine merchandise were embedded in acrylic castings for stor counter and window displays. A high heat-resistant or boilabl acrylic was being used in 1947 to a greater extent in medica equipment.

**Polyethylene.**—Of all the thermoplastics, polyethylene prob ably made the most spectacular progress in application durin 1947. This material, developed in England during the war, an later produced in large quantities by two U.S. firms, has th lowest specific gravity of any plastic and floats in water.

Polyethylene was used in moulding refrigerator bowls an covers, bottle caps and closures, squeezable bottles for the cos metic industry, electrical parts and chemical equipment includ ing pipe fittings. It was extruded over wire for coaxial cable fo use in the television field. In sheet form it was used in flexibl packaging, as well as for refrigerator bowl covers and severa kinds of low-temperature protection including masts or pylon for television broadcasting. Through a new development calle flame spraying, it was applied experimentally as a surface coat ing or paint with the expectation that it would prevent the col lection of ice. It was also extruded in monofilament form fo use in textile weaving and in very fine tubes for medical appli cations.

**The Vinyls.**—Although the vinyls with a volume of 180,000, 000 lb. in 1947 came second only to phenolics, neither in pro duction nor consumption did they hit the peaks expected. As i was, shortage of plasticizers was serious.

A peculiarity of the vinyls in marketing, because of the wid range of formulation available, is that when one market falls o another can be opened. The use of polyvinyl acetate put up i collapsible tubes for the blowing of balloons by children di verted 400,000 lb. in one month from normal channels. Whe shower curtains became seriously over-produced, the use o vinyl in flooring came to be significant. In 1947, there were fiv manufacturers of vinyl floor tile or roll material for flooring Vinyl butyral as a coating for textiles, spread on with a knife became popular in the manufacture of tablecloths. For upho stery, both supported and unsupported vinyl chloride sheet re used.

The extrusion of vinyl progressed enormously during 1947, e of the main items being garden hose. Extruded vinyl for e and cable covering remained an important application. ore than 1,000,000 lb. of vinyl were used to coat wall covering terials. Vinyl for moulding did not expand, although some of new plastisol or paste compounds showed progress.

An important contribution to vinyl technology during 1947 s the development of the nitrile rubber-type plasticizer which rally bonds or alloys itself with the vinyl and does not mite. A sheet material made from nitrile-plasticize vinyl was t into use in a package for oleomargarine. The colour cape of gelatin was placed inside the package and the housewife rely took the package at room temperature and kneaded it til the colour was well dispersed through the margarine.

**Polyvinylidene Chloride.**—This material, the base resin for ich was produced by only one U.S. maker in 1947, maintained fairly steady market in woven monofilament form for use as ndow screening and automobile slip cover upholstery. It also s given new uses in chemical, paper and textile plants.

**Nylon.**—Production and use of this material for moulding rposes increased during 1947. Improvements in moulding chniques led to its being moulded into gears, grommets and shers. Tap washers of nylon received a thorough market testg and were shown to outlast fibre or rubber washers by many onths. Dip-dyed nylon moulded tumblers and infants' feeding shes which are unbreakable, boilable and permanent were marted with some success although price was a deterring factor. ylon was also used in medical instruments, an important example being a holder-applicator for a radium capsule used in cancer eatment.

**Phenolics.**—Consumption of phenolic materials in 1947 was eyond expectation. Moulding powder use alone increased from 40,000,000 lb. in 1946 to almost 200,000,000 lb. in 1947. Much ster press cycles and larger pieces accounted largely for the crease. Large radio cabinets, vacuum cleaners, office equipent, handles and knobs, caps and closures, communication and ectrical equipment were among the uses.

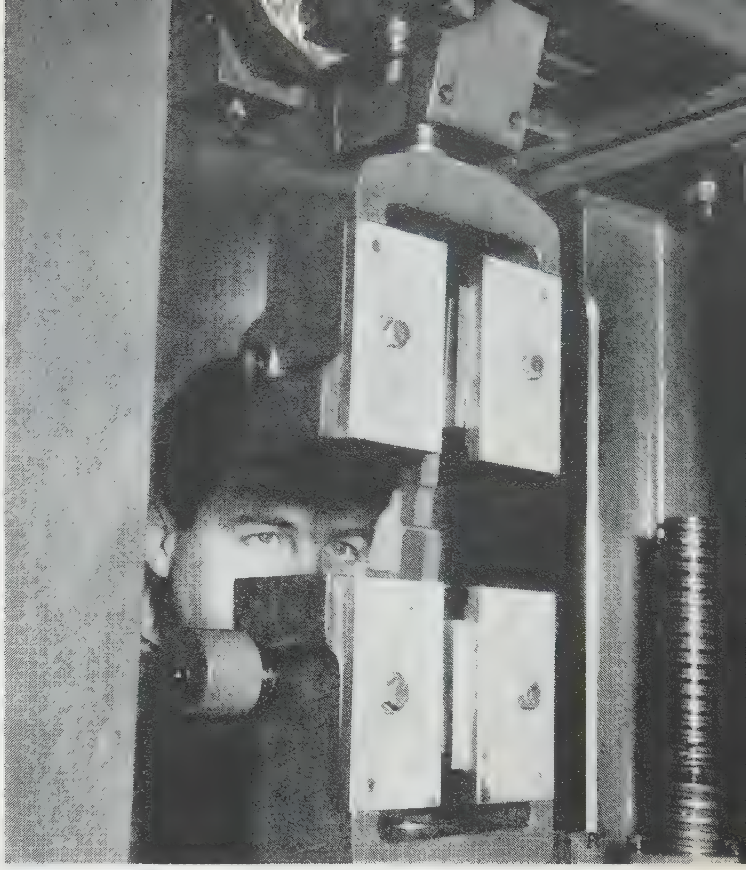
**Urea and Melamine.**—Production of both urea formaldeyde and melamine formaldehyde moulding materials was short f demand in 1947, although the supply of both improved raplly. A new development in moulding of urea and melamine, articularly applied to melamine tableware, was the use of a heet of paper printed in several colours to provide a multiolour effect in a one-colour moulding.

Melamine laminating resins were increasingly used in 1947, articularly in the decorative laminates but also with glass fibre the electrical field. Melamine and urea adhesives for plywood nd furniture manufacture were used in greater quantities than ver before.

**The Polyesters.**—These peculiar war-born materials showed ery little except promise until 1947, chiefly because the resins ere all tailor-made for each job or doctored in the processing lants, and rather antiquated and slow production methods were sed in the moulding. In 1947, however, at least a few large aplications for low-pressure moulded polyesters (with glass mat nd fabric fillers) developed—including large size boats and lugage.

**High-Pressure Laminate.**—About 65,000,000 lb. of highressure laminates were produced in 1947, this figure being quite bit lower than the wartime high level of production but higher han 1946 production. Approximately 15% of the U.S. laminate anufacture was in decorative material with melamine surface. lant capacity increased materially during 1947.

**World Developments.**—Great Britain, while still short of any materials, expanded its plastics industry during 1947 and worked out countless new applications. One peculiarity of the industry was its concentration on the construction field. Wallboard was made of sawdust with resins, acrylics were used in formed pieces for bathroom and kitchen sinks and extensive uses were developed for extrusions in construction.



ALLOY of synthetic rubber with plastic resin being tested at the Bayway refinery, Linden, N.J., in 1947. Evidencing tremendous strength, the plastic alloy broke only after a pressure of 5½ tons per square inch was applied

In Canada lignin, waste material derived from wood in the manufacture of paper, was combined with phenolic resin and surfaced with melamine sheet to make solid sheets of various thicknesses which could be used for either table tops or for wall surfaces.

Australia's plastics industry also expanded in both material production and moulding and fabrication. An all-plastic refrigerator, cylindrical in shape, was produced.

Western Europe and the Scandinavian countries were not back to prewar levels in plastics, although some progress was made. India, Palestine, Egypt, every country in South America, China and the Philippines all had entrepreneurs working toward the opening of plastics industries. (*See* also CHEMISTRY; ELECTRICAL INDUSTRIES; MACHINERY AND MACHINE TOOLS; MUNITIONS OF WAR; PAINTS AND VARNISHES; RAYON AND OTHER SYNTHETIC FIBRES; RUBBER.) (C. A. BN.)

## Platinum Group Metals.

The metals of this group, platinum, palladium, iridium, osmium, rhodium and ruthenium, are so closely associated that world production must be reported as a group.

*Other platinum metals.

In addition to the countries in Table I, there are several minor producers, while the U.S.S.R. has an undisclosed output which has been variously estimated at 100,000–150,000 oz. annually. There was an appreciable output in Canada during the years 1938–44 which had not previously been accounted for, and which is now included in the 1945 figures.

**United States.**—The salient statistics on platinum production and supply in the United States are summarized in Table II.

Shifts in the use of platinum to the various consuming industries are shown in Table III.

Table III.—*Sales of Platinum in the U.S. to Consuming Industries*

(In fine ounces)

## Pneumonia.

Transmission of primary atypical pneumonia was accomplished in 1946 by spraying bacteria-free filtrates of throat washings and sputum from patients sick with this disease into the nose and throat of normal human volunteers. The disease was again reproduced by inoculating similar materials from experimentally infected persons into a second group of volunteers. In both instances some of the inoculated volunteers came down with minor respiratory illnesses without signs of pneumonia. These studies suggested a possible relationship of the group of minor respiratory diseases to the atypical or viral pneumonias.

Further studies were reported in 1947 by the Commission on Acute Respiratory Diseases concerning the transmission of some of these minor respiratory illnesses to healthy human volunteers by means of bacteria-free filtrates of throat washings obtained from persons with such illnesses. Two distinct types of illness were induced. One was an infection like a head cold of brief duration which developed after an interval of 24 to 48 hr.; the prominent features included nasal congestion and profuse watery discharge with a minimum of sore throat. The other was an infection characterized by a longer and more severe illness, prominence of sore throat, minimal nasal symptoms and an incubation period of five to six days. These illnesses were distinguishable. Primary atypical pneumonia did not develop in any of the subjects. The results of these experiments indicated that at least two filtrable agents, presumably viruses, may induce minor respiratory illnesses in man.

Additional experiments were then undertaken to determine whether persons recovering from the experimentally induced minor respiratory illness had become immunized to reinoculations with bacteria-free filtrates from patients acutely ill with these two types of illness or with atypical pneumonia. Persons who had received the filtrates which had induced the illness having the relatively long incubation period (that is, five or six days) were found to be immune to reinoculation with similar material. Those who received filtrates which induced the coryza-like illness after an incubation period of two days or less were still susceptible to infection with the same material. Cross-immunity was not demonstrable with either filtrate. Furthermore, primary atypical pneumonia could be induced in some persons after they recovered from either of these minor illnesses. The results of these reinoculation studies provided additional proof that at least two distinct filtrable agents or viruses may induce minor respiratory illnesses (common cold, pharyngitis and tracheobronchitis) in man and suggested that these agents are probably distinct from the virus or viruses of primary atypical pneumonia.

**Q Fever.**—An influenzalike disease caused by a rickettsial agent, and often associated with a severe form of atypical pneumonia, Q Fever was first described in Australia. The disease had already achieved prominence in 1947 because of a number of epidemics among laboratory workers in the National Institute of Health and in certain army medical laboratories as well as among British and U.S. troops in the Balkan area. Sporadic cases were reported in certain parts of the United States where the rickettsia had been isolated from ticks, and later in Panamá, where the agent had not yet been found in animals or insects.

Two outbreaks of Q fever among stock handlers and slaughter-house workers were also reported in the United States. In one, which occurred in Amarillo, Tex., there were 55 cases and 2 deaths among 136 employees in 3 establishments, an attack rate of 40%. Epidemiological investigations revealed that cattle were probably the source of the infections. Apparently, a single shipment could account for all of the cases, and interestingly enough, there was no detectable illness in these cattle.

The second outbreak took place in one of the large packing houses in Chicago and involved primarily men working on a sheep- and calf-killing and dressing floor. There were 33 cases among 81 men employed on the floor. The spattering of blood and other body fluids was particularly noticeable in such operations as the washing of carcasses and the handling of viscera, and studies made among the 19 men who worked at these jobs revealed 15 cases of the disease, an attack rate of 79%. The average incubation period of the disease in this epidemic was 19–25 days.

The long incubation period of Q fever makes it possible for a person to acquire the infection in one part of the world, remain well for a considerable period and then come down with the symptoms of disease in a remote area where Q fever is not known to occur. This was illustrated by an isolated case reported from Boston. In that case, which was proved to be Q fever by demonstrating the development of specific antibodies in the patient's blood, the disease was acquired near Naples, Italy, an area where the Q fever rickettsia had been shown to be the cause of many severe infections in U.S. troops and in natives. The patient became ill while crossing the Atlantic en route home and had a full-blown pneumonia when he arrived in Boston.

**Treatment by Streptomycin.**—The availability of streptomycin had extended the field of usefulness of antibacterial therapy to include certain infections caused by organisms not affected or only slightly influenced by penicillin or sulfonamides.

umonias caused by certain gram-negative bacilli, notably *bsiella pneumoniae* (Carl Friedländer's bacillus) or *Hemous influenzae* (influenza bacillus of Richard Pfeiffer) are ng these infections, and some reports of treatment of such s appeared. The results were not uniformly favourable, ely because of the nature of the infections. In addition, rapid development of extreme degrees of streptomycin reance by the bacteria during treatment sharply limited the ctiveness of streptomycin in the pneumonias, as in many r types of infection. In Friedländer's pneumonia particu/, the early occurrence of areas of destruction of lung tissue abscess formation militated against the rapid and come destruction of the organisms by the antibiotic. Resistant ins soon appear and render further treatment practically ess. Nevertheless, rapid recoveries were reported with strepycin in severe cases of this disease in which the mortality other forms of therapy is high.

**neumonia and Old Age.**—Bacterial pneumonia remained erious and highly fatal disease to people in the older age ups. The case fatality rate in patients with pneumococcal umonia who were more than 50 years old was still between % and 50% in 1947, even after treatment with penicillin or onamides. Results of attempts to prevent the occurrence of e of these pneumonias by immunization with vaccines coning of the specific sugars contained in the capsules of types nd II and later types I, II and III pneumococci were reted.

he study was carried out among aged persons in some New k institutions over a period of 6 years; 5,750 persons were nunized and 5,133 comparable persons served as controls. ring the total period of observation, there were 99 cases of umonia with 40 deaths among the immunized, and 227 cases h 98 deaths caused by pneumonia among the controls. Among immunized persons, the incidence rate was 17.2 per thousand the mortality rate was 6.2 per thousand as compared with incidence of 44 per thousand and a death rate of 19.0 per usand among those not immunized. The case fatality rate similar in the 2 groups: 40% in the patients with pneunia who had been immunized and 43% in those who had pneumonia and had not received the polysaccharide injections. Similar though less striking results in younger persons had been reported previously by other workers. The results suggested that immunization with a polyvalent pneumococcus polysaccharide antigen might prove useful during epidemics of pneumonia, in persons in institutions, in elderly persons and in those who have a tendency to recurring pneumonia.

**Poland.** A republic in northeastern Europe between the U.S.S.R. in the east and Germany in the west, the Baltic in the north and Czechoslovakia in the south. Area: 119,734 sq.mi. (before Sept. 1, 1939: 149,922 sq.mi.); pop. (Feb. 14, 1946, census): 23,911,172 (Sept. 1, 1947, est.: 24,775,000; est. Sept. 1, 1939: 35,339,000). Area of eastern Poland annexed by the U.S.S.R.: 69,469 sq.mi. with a pop. of *c.* 10,772,000, including about 3,900,000 Poles. Area of the "recovered lands" in the west (former territories of Germany and free city of Danzig): 39,120 sq.mi. with a pop. (1939 est.) of 8,300,000, including *c.* 1,067,000 Poles. Chief cities (pop. Jan. 1, 1947, est.): Warsaw (cap., 550,000); Lodz (596,000); Cracow (305,000); Poznan (268,000); Wroclaw (Breslau) (201,000); Gdansk (Danzig) (170,000). Language: Polish (99.6%). Religion: Roman Catholic (99.3%). President: Boleslaw Bierut;

PLACED PERSONS in Poland shown in transit in their unheated boxcars ing the early months of 1947

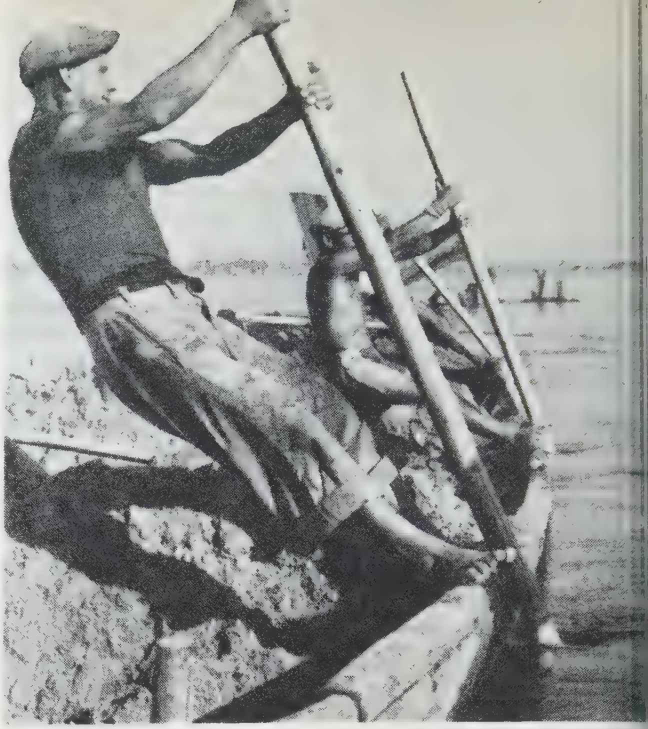
prime minister: Józef Cyrankiewicz.

**History.**—In 1947 communist control in Poland considerably increased and the constitutional opposition practically disappeared. The main political event of the year was the election of Jan. 19; the official figures showed that 11,413,618 voted out of 12,701,056 persons entitled to do so: 9,003,682 (89.8%) voted for the communist-controlled Democratic bloc and 1,154,847 for the Polish Peasant party; the pro-government (so-called Catholic) Work party received 530,979 votes, the dissident Peasant (New Liberation) party 397,751 and other smaller groups the rest. Out of 444 seats in the diet (*Sejm*) the Democratic bloc received 382 seats (118 Communists, 108 communist-controlled Peasants, 118 left-wing Socialists and 38 Democrats), the Polish Peasant party 28, the Work party 17, the New Liberation 13 and the Independents four. That the elections were neither free nor fair was officially stated both in the U.S. and Britain.

The new diet on Feb. 5 elected as president of the republic Boleslaw Bierut, who two days later appointed a new government. Although the premiership was held by a left-wing Socialist, Józef Cyrankiewicz, the Communists controlled all key posts.

On Feb. 19 a provisional constitution was adopted which enabled the government to rule by decree, and provided for only two short sessions of the diet, in spring and autumn, lasting together only three months. The government might not pass decrees affecting certain important matters of state (budget, monetary system, taxation, conscription and ratification of international agreements), and all decrees on other matters were to be submitted to the diet for confirmation. But the constitution created a state council composed of five persons, president of the republic (chairman), the speaker and two deputy speakers of the diet and the president of the state audit chamber, whose powers were great indeed, since it could promulgate as law any measure proposed by the government which the diet refused to pass within three months.

With its decisive majority in the diet and control of the government the Communist party did not show any tolerance toward its political opponents. Shortly before the elections it refused the demand of Zygmunt Zulawski to form an independent Socialist party and it made certain that the so-called Catholic Work party should be subservient by vetoing Karol Popiel as its leader and putting forward in his place a Communist, Feliks Widy-Wirski. It was announced in July that 23 prominent Socialist leaders, critical of Cyrankiewicz's submissiveness to the Communists, were arrested and charged with plotting to overthrow the government and with spying for a foreign intelligence service. In August and September a big trial of 17 leading Poles accused of organizing an underground patriotic body, the W.I.N. (*Wolność i Niepodległość,* or Freedom and Independence), took place in Cracow. Eight of the accused were condemned to death and nine to terms of imprisonment. Among the latter, two well-known leaders of the Polish Peasant party, Stanislaw Mierzwa, its deputy secretary general, and Karol Buczek, editor of the party newspaper in Cracow, were condemned to 10 and 15 years, respectively. The charge of subversive plotting and of espionage was, therefore, brought right to the door of Stanislaw Mikolajczyk, who had tried to carry out the Yalta policy. On Oct. 12 Mikolajczyk was accused of being "an ally of foreign imperialists." It was a danger signal. The leader of the Polish Peasant party and three of his closest political friends decided to escape. Mikolajczyk arrived in London on Nov. 3. Wincenty Bryja, the treasurer of the party, was arrested in Czechoslovakia and handed back to the Polish security police, but two prominent members of the executive committee, Kazimierz Bagiński and Stefan Korboński, managed to join Mikolajczyk in London. On Nov. 25 Mikolajczyk left by plane for the United States.



POLISH bargeworkers on the Vistula are shown dredging the river bott for the fine sand used in reconstruction work on the buildings of Wars during 1947

*Foreign Policy.*—The overriding consideration of the gover ment in all matters of foreign policy was to side with t U.S.S.R. The soviet decision to make the Marshall plan ineffe tive caused the Polish government to start a campaign agai the west in general and "American imperialism" in particul As a result, it was announced in Washington on July 23 th there would be no U.S. post-U.N.R.R.A. credits for Poland a that an already agreed loan of $40,000,000 by the U.S. Expo Import bank was cancelled. The ravaged economy of Pola could, however, profit during 1947 from a credit, granted June 1946, of $50,000,000 for the purchase of U.S. surpl property abroad.

The most vital issue in Polish foreign policy was that of i western frontier. George C. Marshall, U.S. secretary of stat asked on April 9 at the Moscow conference for a final delimit tion of this frontier. He did not question the incorporation Danzig, of the southwestern part of east Prussia and of t former German Upper Silesia with Poland, but proposed t division between Poland and Germany of the remaining ar east of the Oder-Neisse line. Vyacheslav Molotov, in the nam of the soviet government, opposed the U.S. suggestion, pointi out that the Potsdam conference of the Big Three did n restrict itself to establishing the new frontier between Pola and Germany, but also adopted a decision on the immedia transfer of all Germans from Polish territories east of the Ode Neisse line. Accordingly, by April 1947, this transfer of t Germans was practically ended and in their place nearly 5,00 000 Poles were already settled on the former German lan Molotov stated that the Potsdam decision was formally pr visional so long as no peace treaty with Germany was signe essentially, however, it was final and not subject to revisio

There was practically no difference of opinion among Poles Poland or abroad on this issue. The Polish press stated th out of about 8,500,000 Germans who were living before Wor War II on the Polish territory as existing in 1945, only abo 2,100,000 remained there by Feb. 1, 1946. From that date Sept. 1, 1947, 2,002,827 Germans were repatriated. At the sa time 1,486,351 Poles from the former Polish eastern provin and 1,368,544 coming from Germany and other countries western Europe returned to Poland mainly to the "recover ls." Finally, an important migratory movement took place n 1945 onward from the overpopulated central Polish prov- s toward the west. In this situation the cession was bound e regarded as final at least by the Poles.

he British-Polish agreement for settlement of outstanding ncial questions, signed on June 24, 1946, was ratified on e 19, 1947. In order to meet the debts for civilian expendi- by the former Polish government-in-exile, amounting to ,000,000, the Warsaw government undertook to hand over to tain £3,000,000 of the £7,000,000 Polish gold reserves de- ited with the Bank of England, and to pay £10,000,000 in ling in 15 annual instalments, the first payment to be made 952. The debt of £47,500,000 expenditure on the pay of the ish armed forces in the west was left in abeyance, and Britain to make no claims for repayment of £73,000,000 spent on armament and equipment of the Polish forces. Finally, sur- s British military stocks of £6,000,000 were to be made ilable to Poland.

A 20-year treaty of friendship and mutual assistance between and and Czechoslovakia was signed in Warsaw, completing network of bilateral pacts uniting the four Slav republics eastern Europe between themselves and each of them with U.S.S.R.

*oles Abroad.*—By May 1947 there were in Great Britain out 123,000 Polish soldiers of the former Polish armed forces o had fought with the Allies in the west. Of these about 000 enrolled in the Polish Resettlement corps, the adminis- tor of which was Lt. Gen. G. I. Thomas, appointed by the tish government under the Polish Resettlement act of March 1947. It was estimated that by Oct. 1947 of those outside corps 30,000 were repatriated to Poland; 6,000, who had so refused either to join the corps or agree to be repatriated, re contained in "recalcitrant" camps; 8,000 emigrated to ance, Canada, Argentina and other countries. These figures not include the Poles described as displaced persons in Ger- ny and Austria. It was announced on Jan. 1, 1947, that there re still 388,861 Polish citizens (many of them Ukrainians or ws) refusing to return to Poland. Of the Poles remaining in eat Britain, by Dec. 1947 about 55,000 had found employ- ent there.

**Education.**—For the school year 1946–47: primary schools 20,132, teach- 80,440, pupils 3,260,000; secondary schools 758, teachers 9,914, pupils 5,200; vocational schools and courses 1,992, teachers 12,154, pupils 4,505; universities and other establishments of higher education 34, ofessors and teachers 7,094, students 80,841.

**Banking and Finance.**—Budget (est. for 1947): revenue Zl.185,512,- 0,000, expenditure Zl.174,400,509,900. National debt (pre-1939 in- otedness excluded): Zl.29,380,000,000. Bank notes circulation: (Aug. , 1946) Zl.44,217,900,000 (Aug. 31, 1947) Zl.73,086,000,000. Ex- ange rate (official): 1 zloty = 1 U.S. cent; in Nov. 1947, however, was officially announced that the National Bank of Poland was paying 400 for every dollar for certain kinds of transfers from abroad.

**Trade and Communication.**—Foreign trade (official figures for 1946 blished in Warsaw in dollars): imports $139,628,000 (70.4% from U.S.S.R.); exports $132,834,000 (49.4% to the U.S.S.R.). The value Polish foreign trade in 1946 was nearly half the prewar level, but, be- use of the rise in prices, its volume was considerably lower. Merchant pping: clearance of vessels in external trade (monthly averages for ańsk and Gdynia): (1938) 938, (Jan.–Aug. 1947) 332. Railways: ssenger journeys (monthly average in million persons): (1938) 18.8, an.–Aug. 1947) 26.2; freight traffic (monthly average in million short miles): (1938) 1,279, (Jan.–Aug. 1947) 1,428. Civil aviation (Jan.– ne 1947): number of flights 2,416; miles flown 465,874; passengers nsported 26,334; freight carried 258.5 short tons.

**Mineral Production and Manufacturing.**—(In short tons) coal: (1946) 016,800, (Jan.–July 1947) 35,447,500; monthly average (1938) 3,493,- 0, (Jan.–July 1947) 5,065,500. Iron ore: (1946) 466,095, (Jan.–July 47) 308,997; monthly average (1938) 80,300, (Jan.–July 1947) 44,- 3. Zinc and lead ores: (1946) 650,547, (Jan.–July 1947) 495,813; nthly average (1938) 46,200, (Jan.–July 1947) 70,830. Pig iron: 946) 798,310, (Jan.–July 1947) 504,266; monthly average (1938) 400, (Jan.–July 1947) 72,038. Raw steel: (1946) 1,341,371, (Jan.– y 1947) 945,908; monthly average (1938) 132,000, (Jan.–July 1947) 5,129. Crude petroleum: (1946) 128,416, (Jan.–July 1947) 79,903; nthly average (1938) 46,530, (Jan.–July 1947) 11,415. Artificial tilizers: (1946) 382,051, (Jan.–July 1947) 247,755; monthly average 938) 93,436, (Jan.–July 1947) 35,394. Index numbers of industrial duction (1938 = 100): (Jan.–July 1947) 112. Index numbers of em- yment, excluding agriculture (1938 = 100): (Jan.–July 1947) 118.

**Food and Agriculture.**—In short tons 1946: wheat 680,449, rye 3,039,135, barley 741,092, oats 1,118,711, potatoes 20,580,472, sugar beets 3,381,608. Livestock (June 30, 1946); horses 1,729,500, cattle 3,910,500, pigs 2,674,000, sheep 727,100, goats 547,000. By July 1947 it was estimated in Warsaw that about 9,000,000 town dwellers would be compelled to live on 1,800 calories a day (500 calories below normal). U.N.R.R.A. shipments to Poland (from July 1, 1945, to June 30, 1947): $481,260,000 ($20.1 per head of population). Cost-of-living index numbers of a working-class family in Warsaw (1938 = 100): (June 1945) 5,358, (June 1947) 9,450.

(K. Sm.)

## Police.

Although more than two years had elapsed since hostilities ceased in Europe, Africa, Asia and on the seven seas, the closing days of 1947 still found police protection in most parts of the world operating under the influence of World War II. Inside the ring of communist states and their satellites, secret police still held sway. In Japan, Germany and Austria the dual operations of civil and military police served to emphasize divided objectives of domestic tranquillity for the peoples of defeated countries and military security for the occupation forces. In France and Italy the year was marked by political and industrial rioting and political upheavals that shook those democratic states to their foundations and put their police and military forces to severe tests of competence. On the other hand, the police of the United States, which had handled almost 5,000 industrial disputes in 1946, were somewhat relieved of their burden when the number fell by 28% in 1947. Moreover the strikes were of lesser magnitude. Thus, police in the United States were returning to something like normal conditions affecting public order. In the matter of police manpower, which had declined slightly from 1942 to 1945, there was quick recovery in 1946 to levels that topped those of record-high 1942; and a new upthrust in 1947 brought various population groups of cities to still higher ratios of police to population.

**Table I.**—*Numerical Strength of U.S. Municipal Police Forces, 1941–47*

(Number per 1,000 inhabitants)

| Population groups of cities | 1941 | 1942 | 1943 | 1944 | 1945 | 1946 | 1947 |

In England and Wales the return to prewar police strength was much slower in arriving. In fact, the shortage in regular police personnel was still more than 10% in 1947. A part of this was due to natural attrition during the war years and to continuance of many police in military service overseas. Part of it, also, was traceable to lagging police pay-scales in the face of rising costs. Steps were taken to secure the release of police still in military service, and police recruiting missions were dispatched by the home office to encourage new police enlistments in the military theatres of the middle east, far east and India. Meanwhile compensation scales and allowances were increased, but still the strength quotas lagged behind authorized levels.

In the United States active recruiting for replacements and enlargements apparently was more productive in attracting recruits of satisfactory quality, partly no doubt as a result of substantial increases in compensation for many federal, state and city forces. This was reflected in a rise of municipal police expenditures for salaries by about 20% over 1943 levels. Highest salaries for patrolmen in U.S. cities were close to $4,000 per annum, though the average for large cities was still only slightly in excess of $3,000, and for small places around $2,400.

The percentage of U.S. crimes cleared by arrest continued to be slightly lower than the levels attained in the years immediately preceding World War II. The crime problem itself was somewhat less than in prewar years, though substantially higher than the midwar trough. Traffic accidents likewise had risen

Table II.—*Per Cent of Crimes Cleared by Arrest in U.S. Cities, 1941–1946*

| Uniform Crime Classification | 1941 | 1942 | 1943 | 1944 | 1945 | 1946 |
|---|---|---|---|---|---|---|
| Murder and nonnegligent manslaughter | 88.1 | 90.6 | 90.5 | 90.8 | 86.9 | 88.5 |
| Negligent manslaughter | 86.6 | 86.1 | 84.0 | 81.5 | 82.7 | 81.8 |
| Rape | 76.2 | 81.2 | 74.0 | 74.8 | 74.1 | 74.1 |
| Robbery | 40.4 | 43.3 | 38.1 | 38.7 | 36.2 | 37.1 |
| Aggravated assault | 75.0 | 80.5 | 73.7 | 75.7 | 76.2 | 78.7 |
| Burglary; breaking or entering | 32.0 | 31.5 | 30.7 | 31.6 | 31.3 | 29.1 |
| Larceny (except auto theft) | 22.7 | 25.0 | 24.1 | 23.6 | 22.8 | 22.0 |
| Auto theft | 24.4 | 24.6 | 26.5 | 24.4 | 26.4 | 28.8 |

from the low points recorded during the war, though still below the high point reached in 1941. While improvements had been made in many respects, 1947 brought no new factors into the police training situation. The Federal Bureau of Investigation (FBI) through its national academy still trained each year some highly selected and experienced men from state and municipal forces. Some of the latter were themselves leaders in their police training programs and the widespread net of zone schools sponsored by the FBI and state and local authorities brought brief instruction to the members of many smaller police forces. But there were as yet no means by which thorough police preparation and supplementary training could be made available to all members of some thousands of small local forces.

On this score the police outlook in England and Wales was far more favourable. Comprehensive coverage for all police forces was effected through 9 district schools for basic police training covering 13 weeks of resident instruction. A management committee of chief constables in each district operated under the general supervision of a central advisory committee on recruitment and training representing the local authorities.

Moreover, under the terms of the Police act of 1946, it was provided that after April 1, 1947, only two noncounty boroughs (Cambridge and Peterborough) might maintain police forces of their own. Forty-five local police forces, most of them quite small, thereby were absorbed into existing county constabularies.

One of the questions absorbing much official attention in the United States was the matter of police unions. With few exceptions, professional police administrators vigorously opposed the introduction of such media into their respective forces, and police regulations often expressly prohibit membership in them. While the process of unionization was slow, it was not everywhere halted by official opposition. In 77 cities of more than 100,000 population, police unions were in 1947 established in only 10.

The year 1947 was notable not only for the number of decisions in state courts upholding police regulations that prohibit police unions, but the supreme court of the United States on two occasions declined to hear appeals by police officers who had been dismissed from police employment for violating such regulations.

Most important conference was that of the International Association of Chiefs of Police, which held its 54th annual meeting in Duluth, Minn., Sept. 21–25. Though consisting chiefly of U.S. and Canadian representatives, delegates were present from Costa Rica, Mexico and Sweden. Subjects discussed included a proposal that the association set up regional organizations in various parts of the world, thereby facilitating the active participation of its members in many lands. Public relations of police, police communications and radio allocation problems, professional standards, interforce co-operation, police training, model police buildings, traffic safety, control of commercialized vice, and mass picketing and strikes as a police problem also received extended consideration.

The state and provincial forces of the United States and Canada also held special sessions in conjunction with the meeting at Duluth. The subject matters discussed were in many respects related to the topics covered by the general meeting, though with special reference to both urban and rural police problems.

**Political Parties:** *see* COMMUNISM; DEMOCRATIC PAR ELECTIONS; POLITICAL PARTIES, BRITISH; REPUBLICAN PAR SOCIALISM.

## Political Parties, British.

**Labour Party.**—The cl cut program with which Labour party started the year 1947 left little scope for in vation. In home politics the government was committed to nationalization of electricity and transport before the sec session of parliament was over. By the use of the "guilloti and the imposition of a strenuous parliamentary timetable, volving the continued prohibition of private members' bills showed itself determined to remove all obstacles to the ra discharge of its electoral promises. Its immense majority a continued success at by-elections seemed during the first h of the year to put this program beyond the scope of effect opposition, and its main tactical preoccupation was the activ of a body of dissidents in its own ranks.

In May a large body of Socialists voted against the gove ment's National Service bill imposing peacetime conscripti and in deference to this criticism the period of service was duced from 18 months to a year. This rebuff was administe by a combination of highly incongruous elements, compris Welsh Nationalists, conscientious objectors, the representati (always numerous in the ranks of Labour) of traditional Brit radicalism, with its inherited aversion to large armies, an handful of intellectuals who took the occasion to attack Ern Bevin's foreign policy. This last group had already achie some coherence under the banner "Keep Left" and had pu lished a pamphlet condemning the government's dependence the United States, urging it to create a western European bl to preserve strict neutrality between the U.S.S.R. and United States, and to conclude discriminatory trade agreeme with soft currency countries. The official Labour reply to t criticisms of Bevin's policy, contained in a pamphlet publish by Labour party headquarters on May 22 called *Cards on Table,* firmly placed the blame for Anglo-soviet misunderstan ings on Russia's policy of pursuing "the elimination of Brit as a European and middle eastern power," denied the charge dependence on the U.S. and said that if more coal could be p duced the country would be still more independent. At t annual conference of the Labour party at Margate the issue w joined between the government and its critics, and Bevin cured an overwhelming majority. "Keep Left's" demand more stringent action against restrictive practices won little su port from the trade unions, and the conference made it cle that organized Labour insisted on collective bargaining as t proper means of determining wages. At the Trade Union co gress at Southport in September the scene was re-enacted, w the difference that the government's new crisis and Bevi favourable observations on economic co-operation with the co monwealth and western Europe had already anticipated some the main criticisms of the left. The real test of left-wing opp sition came when the government postponed the Iron and St bill for a year, and the dissidents accepted with little protes series of social reforms and a promise to deprive the house lords of half its delaying power as an adequate program 1948. The crisis had brought about a closing in the ranks of t

our party, which ended the year far more united than it
begun it.

**Conservative Party.**—Much of the Conservative party's
rgy during the first half of the year was absorbed in admin-
ative reorganization and a vigorous campaign for recruit-
t. The special attention given to local government was
dsomely rewarded in November by a net gain of 625 seats.
hin the party there was a broad division of opinion between
advocates of *laissez-faire* economics, on which the general
tion had been fought, and those who, reverting to an earlier
y tradition, asserted the need for a measure of central con-
over national economic life. Within both groups there were
umerable shades of emphasis.

s the year advanced Conservatives became increasingly
ptical of the wisdom of an indiscriminate attack on economic
trols. After the coal crisis the burden of most opposition
icism was not that the government had planned too much
that it had foreseen too little. In October the party con-
ence at Brighton supported, with only three dissidents in a
eting estimated to be about 3,000 strong, the Industrial
rter, elaborated by a committee under the chairmanship of
A. Butler and published in May; this statement of policy
ame the accepted basis of party activity. It accused the
ernment of lacking policy at the centre and imposing too
ch control at the circumference. It urged the appointment
a minister of economic affairs to be charged with strategic
nning, and to be assisted in determining the outlines and
ectives of economic policy by a committee of employers and
de-unionists. The detailed application of these plans would
left to industry (*e.g.*, the government would determine the
ioning of raw materials among industries, but would leave
ir distribution in each industry to be settled in consultation
ong members of that industry). The party would not de-
ionalize the Bank of England or the mines but would intro-
ce into all nationalized industries new methods of manage-
nt and administration. These methods, which would gradu-
y be extended to private industry, would assure the worker
tain fundamental rights, reasonable remuneration, oppor-
ity for promotion, protection against unjust dismissal, par-
ipation in the running of industry and a share in profits. At
same time the conference passed by a large majority a
tion reaffirming the party's imperial tradition and protesting
ainst proposed reductions in imperial preference. In spite of
persistence of some individual eccentricities of approach
ese broad principles of policy commanded general assent in
party and provided a coherent basis for attacks on the gov-
ment.

**Liberal Party.**—In spite of its electoral defeat and many
appointments at by-elections, the Liberal party refused asso-
tion with the Tories and continued to expand its activities.
statement of party policy in April reaffirmed its faith in pro-
rtional representation, the reform of the house of lords and
e trade, declared the party to be inexorably opposed to na-
nalization and to favour economic planning by means of fiscal
licy and supported joint control in industry. In some respects
party's program was indistinguishable from that of the
ries, but historical animosities apart, free trade could not be
conciled with imperial preference, and many Liberals also dis-
rned in plans for industrial self-government, when advanced
the Tories, the germs of industrial fascism, a system under
ich workers would be induced to surrender the contractual
sis of their employment in return for subjection to the au-
ority of their employers. The Liberal party in practice as-
med the function of an independent critic of government on
ints where the special principles of liberalism were involved.

**Communist Party.**—The Communist party suffered heavy losses at the local government elections in November. It attacked Bevin's foreign policy as anti-Russian and Sir Stafford Cripps's economic policy as wanting vigour. The fact that the party was not invited to join the Cominform was variously interpreted as a tribute to the strength of socialism and a rebuke to the Communists for insufficient zeal in the execution of their program.

**Fascist Movement.**—A political phenomenon, attracting much attention, some hostility and a little anxiety, appeared in East London. The British League of Ex-Servicemen bore marked resemblances to Sir Oswald Mosley's prewar British Union of Fascists and strongly attacked the Jews. Its proceedings were closely watched by the police, but the government refused to introduce coercive legislation against them. (T. E. U.)

**Polo.** For the second successive year a Mexican team visited the United States. Although they won their way to the final round of the National Open championship, which they had won in 1946, they were defeated in that match by the Old Westbury team of Pedro Silvero, Clarence Combs, Jr., Stewart B. Iglehart and George Oliver. In the Monty Waterbury Memorial cup matches which followed the Open, the Hurricanes were victorious. A special East-West match was also held at the Meadow Brook club, Westbury, Long Island, with the West winning.

Because of the continued shortage of players it was not held feasible by the United States Polo association, governing body of the game, to renew any but the top polo championships. A step toward remedying this shortage in ensuing years was taken when the Polo association inaugurated a school for youngsters at the Blind Brook Turf and Polo club at Port Chester, N.Y. A group of selected boys from all over the country took the six-weeks' course with Stewart B. Iglehart, Cecil Smith and Michael Phipps, the three top rated 10-goal men in the country, and others doing the instructing. Robert E. Strawbridge, Jr., was re-elected chairman of the association with George C. Sherman secretary-treasurer and Devereux Milburn, Jr., vice-chairman.

Indoor polo was played throughout the winter and spring of 1946–47, with championships held at the Squadron A armoury in New York. Indoor polo outdoors was successfully inaugurated at the Orange Bowl in Miami during the Florida season. The beginning of the 1947–48 season saw Chicago re-enter the game for the first time after the beginning of World War II. (R. F. K.)

**Popcorn.** The U.S. popcorn crop of 1947 was poor, only 96,395,000 lb. compared with the 1936–45 average of 151,152,000 lb. and the 253,092,000 lb. harvested in 1946. The small crop was the result of a sharp reduction in acreage and yield caused by wet weather in the spring and early frost in the fall. Acreage was 80,700, compared with 154,600 in 1946 and a 10-year average of 109,994. The average yield was 1,194 lb. per acre compared with 1,637 lb. in 1946. California was the only state that exceeded its 1946 production. In 1947 Ohio had only one-third of a normal crop, Indiana three-fifths and Oklahoma one-half. Improved hybrid varieties were being grown to a large extent. About three-fourths of the Illinois crop of 1947 was of the Yellow Pearl variety.

Popcorn prices ranged around $4.00 per bushel to growers in 1947 compared with $3.50 in 1946, $3.77 in 1944 and an average of $2.25 during 1935–43. The retail price generally rose from 5 cents to 10 cents per bag. (J. C. Ms.)

**Portugal.** A republic of western Europe, forming part of the Iberian peninsula and bounded on the north and east by Spain and on the south and west by the Atlantic ocean. Area (including Azores and Madeira): 35,413 sq.mi.; pop. (est. 1946) 8,223,000. Chief towns: Lisbon (cap., 709,179); Oporto (262,309); Coimbra (35,437). Language: Portuguese; religion: predominantly Roman Catholic. President: General Antonio Oscar de Fragoso Carmona; premier: Dr. Antonio de Oliveira Salazar.

**History.**—At the end of January, sentences were finally passed on the army officers implicated in the revolt of Oct. 1946. In April a new revolt failed: it began with a dock and shipyard strike and the sabotaging of 20 army planes at Sintra airfield; a plot to organize garrison revolts against the regime at Tomar, Tancos and Entroncamento was discovered. For two days a state of alarm was proclaimed.

Four senior officers, two of them Monarchists, were sent to Funchal and the Cape Verde Islands, ostensibly on special missions, and numerous arrests were made.

Celebrations of the 800th anniversary of the capture of Lisbon from the Moors by Afonso Henriques began in May and lasted throughout the summer.

In May, the 20th anniversary of the revolution which brought in the existing regime was celebrated by a military parade in Lisbon.

The first half of the year showed an adverse trade balance of more than £12,000,000, following an excess of imports over exports of £22,000,000 during 1946. Both the wine and the olive harvests of 1947, however, were exceptionally good.

Air development continued, and a new air agreement with Canada, providing a return service from each country, was concluded in May. (E. A. P.

**Education.**—(1945) Primary schools 10,079, scholars 528,109; ondary schools 43, scholars 17,281; universities 3, students 7,813.

**Banking and Finance.**—Revenue (est. 1946) ordinary 3,018,000, escudos; extraordinary 1,363,000,000 escudos; expenditure (est. 19 ordinary 3,017,000,000 escudos; extraordinary 1,363,000,000 escu public debt (Dec. 1944) domestic and foreign 9,389,000,000 escu notes in circulation (1947) 8,199,000,000 escudos; commercial b deposits (1947) 9,000,000,000 escudos; savings bank deposits (19 8,403,000,000 escudos; gold reserve (June 1946) 6,057,000,000 escu Exchange rate (1946) 1 escudo = 4.03 U.S. cents; (1947) 1 escud 4.028 U.S. cents.

**Trade and Communication.**—External trade (1946): imports 6,8 000,000 escudos; exports 4,584,000,000 escudos. Communications transport (1945): roads, first and second class, 9,180 mi.; railways o to traffic 2,191 mi.; passengers carried (1946) 49,200,000; goods car 5,646,600 short tons; vehicles licensed (1944): cars 47,469, motorcy 4,604, cycles 141,872; shipping: (Jan. 1, 1943) 313,534 gross tons.

**Agricultural and Other Production.**—Production (1946) in short to coal 409,900; lead 1,520; tin (exports) 385; cement 392,640; bu 1,520; cheese 1,150; meat 50,400; wheat 435,600; maize (19 243,012; rye (1945) 132,944; oats (1945) 81,344; barley (19 73,224; potatoes (1945) 692,000; wet fish (1945) 4,537. (*See* a Portuguese Colonial Empire.)

**Portuguese Colonial Empire.** Total area (approx 803,835 sq.mi.; to population (1940 census): 10,879,000 excluding metropolit Portugal, the Azores and Madeira. Certain essential facts a figures relating to the colonial possessions of Portugal are giv in the accompanying table.

**History.**—The appointment of Capt. Teófilo Duarte as co nial minister was followed in March 1947 by the announceme of the granting to Mozambique of a loan of 600,000,000 escud (£6,000,000) for industrial developments. Previously, a simil loan of 250,000,000 escudos had been granted to Angola.

At the beginning of the year Portuguese India was granted statute giving it the status of a metropolitan province.

The 17th century Portuguese Jesuit missionary to India, Jo de Brito, was canonized in June; the ceremony was made t occasion for an empire pilgrimage. (E. A. P.)

**rtuguese Possessions in Africa:** *see* PORTUGUESE CO-
IAL EMPIRE.

**st Office.** The audited revenues of the post office department for the fiscal year 1947, as stated he records of the comptroller general of the United States, ounted to $1,299,141,041.43.

here was also reported to the treasury department the items ed in the act of June 9, 1930, indicating the estimated post- that would have been collected if the services had been on egular pay basis, in the case of penalty and franked mail, e-in-county mail, differentials in second-class mail matter and e matter for the blind. These amounted to $92,198,225.

The expenses of the department for the fiscal year as audited ounted to $1,504,798,756.42, of which amount $45,613,793.94 s on account of prior years. There was $103,329,796 unpaid account of the 1947 fiscal year. This left a total expense for fiscal year 1947 of $1,562,514,758, resulting in a gross erating deficit on an accrual basis of $103,329,796. This ount does not include pending retroactive payments to rail- ds and air mail service in Alaska.

The tremendous increase in the volume of mail handled by post office department for other branches of the government d been a matter of concern to congress and the department a number of years. Thousands of tons of forms, pamphlets, culars and supplies were sent by government departments d establishments free of postage under the "penalty privi- e." In order to control and limit the use of the penalty mail vilege, congress passed the "penalty mail law," effective July 1944, which provided that departments and agencies (except war, navy and post office departments) account for all mat- bearing the penalty indicia and pay into the treasury as scellaneous receipts, and not as postal revenue, the cost of ndling such matter. The records disclosed that during the cal year ended June 30, 1947, there were mailed 1,602,267,019 e pieces, weighing 223,122,507 lb., a decrease of 92,727,730 ces and a decrease of 28,817,667 lb. from the 1946 fiscal year.

On June 30, 1947, war savings stamps were on sale at 41,759 ices. Sales from July 1, 1946, to June 30, 1947, amounted to 4,700,908.05.

During the fiscal year ended June 30, 1947, 7,189,836 U.S. vings bonds, having a sale value of $426,714,375 were sold. At e close of 1947, bonds were on sale at 26,774 post offices, in- uding 1,373 branches and stations, a net decrease of 153 over e preceding year. Through the 41,759 post offices and 3,383 ations being conducted under contract agreement as well as 967 stations and branches, there were received, transported d delivered 37,500,000,000 pieces of mail matter during the cal year, having a weight of 4,500,000 tons, representing an in- ease from the previous fiscal year of 1,300,000,000 pieces of ail and 1,000,000 tons.

On June 30, 1947, there were 3,383 stations being conducted der contract agreement. The average cost per contract unit s $798, and the total cost of operation during the fiscal year nounted to $2,699,032, whereas the receipts from the sale of mps at these contract stations amounted to $36,381,031 dur- g the calendar year 1946.

During the fiscal year, city delivery service was established 984 additional cities, thereby increasing to 5,067 the number cities in which this service was operated. Of this number two ere changed from village delivery to city delivery service. llage delivery was in operation at 109 post offices.

**Postmasters.**—During the fiscal year there were 440 presi- ntial appointments of postmasters at offices with salaries $1,800 to $12,400 per annum. Fourth-class postmasters were mmissioned to 2,103 offices during the year as vacancies occurred through various causes.

CREW MEMBERS of a U.S. naval air transport service plane transferring mail and priority cargo to a dog sled for more localized delivery in Alaska during 1947

**Dead Letters.**—During 1947, it was impossible to deliver 18,184,742 letters, a decrease of 2.63% from the previous year. A total of 4,353,906 were returned to the senders, of which 363,180 were found to contain valuable enclosures; 81,443 of them contained money, amounting to $223,445.91. There were also 695,110 unclaimed parcels and articles found loose in the mails. These parcels were sold at public auction and $183,061.51 realized.

**Air Mail.**—On June 30, 1947, there were 102,454 mi. of domestic air mail routes, an increase of 45,077 over June 30, 1946. During 1947 six new domestic air mail routes were established. On October 1, 1946, the domestic air mail rate was reduced to five cents an ounce. This includes not only the United States and its territories and possessions, but wherever the United States postal service is in operation. The new rate also applies to Canada and Mexico.

"Air Letter" service was inaugurated to all foreign countries on April 29, 1947. Designed for the purpose of world-wide mailing for ten cents, the air letter sheet is the postwar sequel to the V-mail. Unlike V-mail, however, air letter sheets are not photographed but are designed to average a minimum of 150 to the pound. No inclosures are permitted in the air letter. Messages are written in the inner side of the sheets, which can be folded into the form of an envelope on which is printed a postage stamp and bears regular air mail markings. Air letter sheets manufactured by private concerns under permit will be accepted for mailing after ten cents in postage has been affixed. The air letter marks another step toward closer linking of communication with the rest of the world.

The first helicopter air mail service was inaugurated by the post office department in the Los Angeles, Calif., area on Oct. 1, 1947. This route gave direct air mail service between the Los Angeles airport and nine outlying communities to the north. Many other towns were served indirectly through these offices. On the same day, a shuttle service began operation between the airport and the terminal annex post office in downtown Los

Angeles. Two other helicopter air mail routes were serving cities to the east of Los Angeles. Savings in transit time of from 4½ to 19 hr. was possible in the Los Angeles area through the operation of the helicopter service. More than 2,000,000 people would benefit from this new air mail service.

In the foreign field air mail rates were reduced Nov. 1, 1946, from a previous high of 70 cents a half ounce to a maximum of 25 cents. To South America the new rate was 10 cents per half ounce; to Europe and North Africa, 15 cents per half ounce; the rest of Africa, near east, Asia and South Pacific, 25 cents per half ounce.

The air mail service performed a total of 68,000,000,000 pound miles of service during the fiscal year 1947.

**Rural Delivery.**—The rural delivery routes in operation on June 30, 1947, required a total daily travel of 1,449,767 by rural carriers in providing service to approximately 29,810,927 patrons. The policy of consolidating rural routes to absorb vacancies was continued. Operation of the rural delivery service resulted in an expenditure of $129,481,821 for the fiscal year as compared with $117,335,322 for the previous year, an increase of $12,146,499. The amounts saved through consolidation of routes were utilized to establish new routes and provide extension of existing routes. Thereby 8,229 more miles were covered by rural carriers at the close of the fiscal year 1947 than in 1946.

**Postal Savings.**—The postal savings system continued to merit a widespread public demand for its services: the depositors numbered 4,196,517 for 1947, an increase of 1.47% above the preceding year. The balance due depositors by outstanding certificates of deposits was $3,392,621,491, an increase of $273,100,681 or 8.75%. In addition there was held in trust for depositors accrued interest of $100,974,847.07 and unclaimed deposits of $151,970, making a total of $3,493,748,308.07.

At the end of the year, postal savings certificates were on sale at 7,225 depositories, including 916 branches and stations, but savings stamps were on sale at all post offices and practically all branches and stations.

**Buildings.**—During the fiscal year ended June 30, 1947, the post office department operated 3,262 government-owned buildings. No new buildings were completed during the fiscal year. Through reassignments of space within these buildings, agencies of the government which were occupying or had intended to occupy commercial quarters were accommodated, with a saving of $405,202.

Expiring leases numbering 617 were renewed in the year 1947. The square foot cost of renewing leases was increased from 92.8 cents in 1946 to 96.4 in 1947. There were 153 new leases made, including 101 for offices previously occupying space on a monthly rental basis, the new contracts providing improved quarters and in many instances complete new equipment. (I. GG.)

**Canada.**—For the fiscal period 1946–47 gross postal revenue exceeded $86,400,000, the highest figure in post office history. In the same period the post office issued $321,728,000 of money orders payable in Canada and $7,829,000 payable abroad. Air mail postage was reduced, through the establishment of the quarter-ounce weight unit in place of the half-ounce weight unit, to countries in Europe, Asia, Africa, Central and South America, Oceania, Australia and New Zealand.

The post office facilitated the sending of gift parcels of food, clothing, and medical supplies to the war-devastated countries. Parcel post rates to the United Kingdom were reduced at the commencement of 1947 and the 20-lb. weight limit for parcels was restored. Money order services on a restricted basis were resumed during 1947 to such countries as Norway and Iceland, and to several countries in the orient and the South Pacific.

During the 1946–47 fiscal year a 4th transcontinental flight in both directions was added to the trans-Canada air mail sy tem. New services linked Montreal, Que., Ottawa, Ont., a Washington, D.C.; Toronto, Ont., and Cleveland, O.; Fo William, Ont., and Duluth, Minn.; Victoria, B.C., and Seatt Wash.; Halifax, N.S., and Boston, Mass. On the prairies, m planes commenced stopping at Saskatoon, Sask.; Swift Curre Sask.; and Medicine Hat, Alta. New air mail services we opened to Flin Flon, Man., and Prince Rupert, B.C.; and a mail stops began at Cranbrook, Castlegar and Penticton, in Br ish Columbia. Air stage services were extended during 1947 Richmond gulf and Port Harrison, Que., on the eastern sho of Hudson bay, and frequency was increased to four trips a nually. Air mail miles flown in Canada in the fiscal year 194 47 totalled 20,104,976 (1945–46: 15,215,816 miles).

During 1947 special delivery service for air mail and surfa mail was adopted. (C. CY.)

**Great Britain.**—Post office transactions during the ye ended March 31, 1947, totalled £3,354,000,000, an increase £196,055,000 on the previous year's figures. Savings bank d posits, which in 1945–46 had amounted to £647,588,000, reache the figure of £753,688,000 in 1946 (including release benefi to service personnel), while the number of deposit accounts March 1947 was 25,000,000, 3,000,000 more than in Marc 1946. The capital value of deposits was £1,980,000,000 at th same date. Savings certificates purchased during the ye amounted to £209,461,000, an increase of £5,250,000 on th previous year.

The number of letters and packets delivered was more tha 7,000,000,000, as compared with 6,230,000,000 in 1946, and tha of parcels handled was 239,000,000. The total for letters an packets was still below the prewar level, and the number o parcels handled dropped from 257,000,000 in 1945–46 and 284 000,000 in 1944–45.

In 1946 air mail services had been made available to mos countries overseas. By the end of the year a daily service wa in operation over the North Atlantic, and air mails reached Ne York and Montreal a day after leaving London. British Sout American airways service carried mails several times weekly t Brazil, Uruguay, the Argentine and Chile and linked up with network of air services in South America. Increased availabilit of services to Australia and South Africa brought both countrie postally within five days of London.

In March 1947 the post office staff numbered 352,000, with yearly wage bill of £95,336,000, compared with £72,300,000 fo the previous year. There were still some 12,000 experience members with the forces or on loan to other government depart ments.

Wilfred Paling succeeded the earl of Listowel as postmaste general in June 1947. (*See* also PHILATELY; PHOTOGRAPHY TELEGRAPHY.) (C. NS.)

## Potash.

Production statistics for all of the major countrie except Poland and U.S.S.R. are presented below.

*World Production of Potash, 1941–46*

(In thousands of short tons of $K_2O$ content)

| | 1941 | 1942 | 1943 | 1944 | 1945 | 194 |
|---|---|---|---|---|---|---|
| France | 742 | 692 | 786 | 552 | 160 | 56 |

**United States.**—Within the past few years the domesti potash industry has become self-sufficient, and with a surplu for export. Production of crude salts rose from 1,588,305 shor tons in 1945 to 1,687,735 tons in 1946, with a potash content o 931,812 tons. Consumption increased from 1,490,719 tons t 1,569,225 tons, with 867,197 tons of potash content. Outpu ot ahead of sales, and in spite of increasing consumption and ports, stocks were being accumulated. (*See* also FERTILIZERS.)

(G. A. Ro.)

## otatoes.

Total production of all types of potatoes grown in the United States was estimated at 384,407,000 . or about 100,000,000 bu. less than the record crop of 484,- 1,000 bu. grown in 1946, and only slightly above the 376,122,- o bu. average of 1936–45. In the 19 late potato states, the 47 crop was 19% less than 1946 and 2% less than the aver- e. The acreage grown in 1947 was 2,111,900, about 15% less an the area of 1946 but more than the average. The yield was t at 182 bu. per acre—less than the 186.3 bu. record of 1946 t 50 bu. more than the average.

In Maine and New York yields were only slightly less than 1946, and the quality of the crop was good. Idaho, the cond largest potato-producing state after Maine, had a low eld because of the short growing season and harvested a total op of less than the average. The early potato states had be- w average crops while the midseason states' crop was near the erage.

Farm prices of potatoes ranged higher in 1947, from an aver- e of $1.29 per bushel in January to $1.69 in July. They then clined, as the harvest advanced, to a level of about $1.50 per shel in the fall, but advanced to $1.72 in December. Gov- nment price support operations were conducted on a large ale to care for the 90,000,000-bu. surplus of potatoes remain- g at the end of 1946. About 25,000,000 bu. were estimated a total loss by decay in storage and in the field. Export ipments in 1947 were not generally successful, large quantities oiling in transit. Early in 1947 the government announced the ice-support program to be 90% of parity, which was about 12% higher than a year earlier. The government purchased only 2,000,000 bu. of the early 1947 crop. By mid-September about 11,000,000 bu. had been purchased.

The world potato crop of 1947–48 was estimated at 7,081,-000,000 bu. in September, slightly below the 7,133,000,000 bu. crop of 1946–47 but only 16% less than the 8,418,000,000 prewar average (1935–39). Total 1947 acreage was put at 51,000,-000, not much below the prewar average of 53,000,000. Smaller crops in Europe resulted from drought and shortage of fertilizer. The world's average yield was estimated at 139 bu. per acre compared with 160 bu. per acre in prewar years. Before World War II the crop of central and western Europe amounted to 71% of the European total, but the five countries—Austria, Germany, Belgium, France and Poland—produced only 56% of the 1947–48 crop. The German crop was estimated at only two-thirds of prewar and Poland's total only one-half the 1935–39 average.

Table II.—*U.S. Sweet Potato Production in Leading States, 1947, 1946 and 10-year Average, 1936–45*

(In thousands of bushels)

| State | 1947 | 1946 | 10-year Average |
|---|---|---|---|

| Arkansas | 1,190 | 1,558 | 1,969 |
| Kentucky | 1,040 | 1,118 | 1,360 |

**Sweet Potatoes.**—The U.S. sweet potato crop was estimated at 57,178,000 bu. in 1947, compared with a crop of 66,424,000 bu. in 1946 and an average (1936–45) of 64,200,000 bu. The acreage dropped 5% below 1946, to a total of 611,400, compared with 676,100 in 1946 and an average of 737,700. The average yield was 93.5 bu. per acre compared with 98.2 in 1946 and a ten-year average of 87.2 bu. The mid-Atlantic states of Virginia and North Carolina had larger crops but the reduction in Louisiana, Mississippi and Texas brought down the total.

Prices of sweet potatoes rose to $2.70 in Aug. 1947, then declined to $2.04 in December. The high August prices were mostly for the stored 1946 crop which was still being shipped. The government announced support prices in August to extend from September to April 1948. Some purchases were made by the government in September when prices began to decline. These quantities were diverted to school-lunch uses. (*See* also FOOD SUPPLY OF THE WORLD; VEGETABLES.) (J. C. Ms.)

## Poultry.

U.S. production of poultry decreased in 1947. On Jan. 1, 1947, the number of chickens on farms was estimated at 475,442,000—10% less than the 530,203,000 counted in 1946 but 3% more than the ten-year average for 1936–45. Because of the smaller number of chickens raised in 1946, the number of pullets was 12% less than a year earlier. The chicken flocks were made up of 60% pullets, 32% hens and 8% other chickens. By July 1 the number of young chickens of 1947 hatching was estimated at 567,400,000, about the same as in 1946 but 1% less than the ten-year average.

Great confusion developed in Oct. 1947, when the government's campaign to save grain for Europe was begun. Consumers were urged to consume no poultry one day a week. The wisdom of this action was challenged by poultrymen, who argued that the reduced consumption of poultry meat would result in delayed marketing and the feeding of more grain to poultry. They urged that the policy be changed to encourage the consumption of fowl, thereby reducing the amount of grain for poultry feeding. The net result of the campaign showed in December that farmers had not greatly reduced their flocks nor limited egg production. The price of chickens to producers in Jan. 1947 was 25.6 cents per pound; it continued steady with a small advance to 27.9 cents in September followed by a decline to 25.2 cents in December.

The total number of broiler chickens raised during 1947 was estimated at 295,300,000. Chicken meat production was put at 3,445,000,000 lb. compared with 3,568,000,000 lb. in 1946. Per capita civilian consumption was 23.7 lb., compared with 25.3 lb. in 1946. Total egg production for 1947 was estimated at 5,016,000,000 doz.

World poultry production declined in 1945, particularly in Europe, to the lowest level in five years. The rebuilding of flocks was retarded by shortage of grain feeds. Eggs were also scarce for hatching because of their use for human food. Production gained slowly in 1947 and the United States, Argentina, Ireland and Cuba were the only countries in which production was less than that of 1946. Canada and Australia, important sources of eggs for Great Britain, continued to produce more in 1947.

**Turkeys.**—On Jan. 1, 1947, the estimated number of turkeys on farms was 6,632,000, 22% less than the record 8,493,000 head of 1946 and 4% less than the ten-year (1936–45) average of 6,915,000. The total number raised was estimated at 34,667,000 compared with 41,109,000 in 1946 and the record production of 44,221,000 in 1944. This reduction in the industry resulted from the sharp decline in prices in late 1946 from about 40 cents per pound in October to 30 cents in Jan. 1947. Large stocks placed in cold storage in late 1946 were not profitable to the storage firms, and in 1947 movement into storage was reduced. Supply for the holidays in 1947 was almost as large as in 1946 because of the reduced into-storage movement. Average civilian consumption of turkey meat was estimated at 4.1 lb. in 1947 compared with about 3 lb. in prewar. Military requirements were reduced to about 15,000,000 lb. in 1947 compared with 100,000,000 lb. in 1944. Prices to producers in 1947 continued at about 30 cents per pound until October, when they advanced to 34 cents; by December they had risen to 39 cents. Improvements in turkey raising continued through expansion of commercial farms, better breeding, feeding and disease control. (*See* also EGGS.) (J. C. MS.)

**Precious Stones:** *see* GEM STONES.

### Presbyterian Church.

The Reformed Churches holding the Presbyterian system, within the United States of America, were 12 in number in 1947 and included 18,370 ministers, 18,582 churches and 4,061,231 communicant members, with approximately 8,000,000 adherents.

The year was marked by gains in all departments of work, and for the Presbyterian Church in the United States of America, it was one of the best in its long history. During the year, 111,952 new communicant members were added to this church, setting an all-time record; there were 50,000 more names on the rolls of the Sunday schools; there were 67,623 infant baptisms, representing an increase of more than 20,000 over the year before. Similarly, the total contributions of the church were $78,567,368, exceeding those of the previous year by $18,884,987 and breaking all records.

Negotiations between the Presbyterian Church in the United States of America and the Presbyterian Church in the United States (Southern) continued and a revised plan of reunion was referred by the two general assemblies to their respective presbyteries for study and comment. After the Joint Drafting committee had studied the comments received, the plan of reunion might be revised in further particulars, and then transmitted t the two supreme judicatories for further action. During th year there was no meeting of the committees studying the proposed articles for a basis of union between the Presbyterian Church in the United States of America and the Protestan Episcopal Church in the United States of America.

The Presbyterian Church in the United States (Southern had a net gain in membership of 15,853, the largest gain in th history of the church. A notable first year's work was done b its newly created special committee on work among Negroes.

The synods of the Evangelical and Reformed Church, and th congregations and associations of the Congregational-Christia Church, were, at the close of the year, voting on a basis of union If the votes in both denominations were favourable—and it wa expected that they would be—the union was expected to b consummated in the fall of 1948.

Church World Service, the organization of the World Council of Churches for overseas relief and reconstruction, was wel supported by the membership of Presbyterian and Reformed Churches, and continued to relieve distressed peoples and devastated areas of the world. The restoration fund of the Presbyterian Church in the United States of America reached th large sum of approximately $25,000,000.

**Europe.**—Under the auspices of the reconstruction department of the World Council of Churches, a conference on evangelism opened in Geneva, Switzerland, in Feb. 1947. Participant from 15 different countries came together to discuss their common task of world evangelism. This theme was uppermost in all the Reformed Churches, which were endeavouring to recreate the work destroyed by World War II. The annual synod o the Reformed Church of France met at Mazamet with 80 delegates from 16 districts. The first meeting of the church assembly of the Evangelical Church in Germany met at Treysa, with 111 delegates, including 45 leading persons in church life from the eastern (soviet) zone. In the Hungarian Reformed Church a great spiritual review of adult church members was in preparation. The synod called upon all adult members to make a personal confession of faith in their churches in face of the congregation. The church in Yugoslavia asked the Hungarian Reformed Church synod to consider the introduction of a church constitution which would contain all the Hungarian Reformed Church communities in the world. (*See* also CHURCH MEMBERSHIP.) (W. B. PU.)

### Presidents, Sovereigns and Rulers.

The following list includes the names of those holding chief positions in their countries as of Jan. 1, 1948.

| Country | Name and Office | Accession |
|---|---|---|
| Afghanistan | Mohammad Zahir Shah | 1933 |
| Albania | Dr. Omer Nishani, President of the Praesidium of the People's Assembly | 1946 |
| | Col. Gen. Enver Hoxha, Prime Minister | 1944 |
| Arabia, Saudi | Abdul-Aziz ibn Abdurrahman al-Faisal Al-Sa'ud, King | 1927 |
| Argentina | Gen. Juan Domingo Perón, President | 1946 |
| Australia | William John McKell, Governor General | 1947 |
| | Joseph B. Chifley, Prime Minister | 1945 |
| Austria | Karl Renner, President | 1945 |
| | Leopold Figl, Chancellor | 1945 |
| Belgium | Leopold III, King (in exile) | 1934 |
| | Prince Charles, Regent | 1944 |
| | Paul-Henri Spaak, Prime Minister | 1947 |
| Bolivia | Enrique Hertzog, President | 1947 |
| Brazil | Gen. Eurico Gaspar Dutra, President | 1946 |
| Bulgaria | Mintcho Neychev, President of the Grand National Assembly | 1947 |
| | Georgi Dimitrov, Premier | 1946 |
| Burma | Sao Shwe Thaik, President of the Constituent Assembly | 1948 |
| | Thakin Nu, Prime Minister | 1946 |
| Canada | Field Marshal Viscount Alexander of Tunis, Governor General | 1946 |
| | W. L. Mackenzie King, Prime Minister | 1935 |
| Ceylon | Sir Henry Monck-Mason Moore, Governor and Commander in Chief | 1944 |
| Chile | Gabriel González Videla, President | 1946 |
| China | Generalissimo Chiang Kai-shek, President of the National Government | 1943 |
| | Gen. Chang Chun, President of the Executive Yuan | 1947 |
| Colombia | Mariano Ospina Pérez, President | 1946 |
| Costa Rica | Teodoro Picado Michalski, President | 1944 |
| Cuba | Dr. Ramón Grau San Martín, President | 1944 |

| Country | Name and Office | Accession |

|  | Sir Vincent Glendary, British Resident | 1946 |

**Price Administration, Office of.** The Office of Price Administration was officially ended May 31, 1947, after about five years of statutory authority to stabilize prices of goods and services as well as residential rentals. At the height of its wartime activity, OPA had set ceiling prices on more than 80% of goods and services in the nation's private economy and controlled residential rentals in areas where more than three-fourths of the U.S. population lived. In addition, the office administered 13 rationing programs under delegation of authority from the president.

Scheduled to end June 30, 1947, with the expiration of the Price Control Extension act of 1946, the earlier liquidation date was made possible by a presidential order which provided for remaining functions to be taken over by other government agencies.

Control over prices of most goods and services had been lifted by Nov. 1946. However, sugar rationing, price control over sugar, certain sugar products and rice and control over residential rentals were continued.

Price control and rationing of sugar were made the responsibility of the secretary of agriculture as of April 1, 1947, under the Sugar Control Extension act signed by the president March 31, 1947. The secretary discontinued sugar rationing, except to industrial users, as of one minute after midnight of June 11, 1947, on the grounds of sufficient supply.

Under the president's executive order, remaining OPA obligations were disposed of as follows: effective May 4, 1947, rent control was transferred to the housing expediter and determination of subsidy claims, except as otherwise specified, to the Reconstruction Finance corporation.

Effective June 1, 1947, the program for premium payments on copper, lead and zinc ores and the auditing of the government industrial alcohol purchase program was transferred to the secretary of commerce, as was the responsibility for the final liquidation of the Office of Temporary Controls, including the Office of Price Administration. The order authorized the shifting of related records, property and personnel along with each function.

Officers to whom functions were transferred under the order were specifically given authority to institute, maintain or defend civil proceedings relating to these matters in any court, including the emergency court of appeals. The attorney general was directed to co-ordinate, conduct, initiate, maintain or defend litigation before the emergency court of appeals for or on behalf of the secretary of agriculture, the secretary of commerce and the Reconstruction Finance corporation, and litigation pending against violators of regulations or orders pertaining to prices of commodities no longer under control. He was also charged with all litigation arising out of directive 41 of the Office of Economic Stabilization relating to the withholding of subsidies because of noncompliance with, or violation of, control orders.

Thus, all pending litigation was taken over by the department of justice.

On Jan. 7, 1947, the issue was raised in congress as to whether or not a general amnesty for violators of the Emergency Price Control act should be issued. Some of the reasons a general amnesty was not granted were the effect it would have on general law enforcement and particularly the enforcement of government regulations which are temporary in nature, and the inequity that would result from collecting fines and penalties from violators whose cases were tried before price decontrol and not proceeding with the cases that had not reached trial prior to termination of price controls.

However, a series of directives issued by OPA, known as enforcement exceptions, made possible the dismissal of all cases where the amount of the overcharge was $200 or less, or where the only violation involved was of a procedural nature (for example, failure to file a report, to petition for an increase or to seek authorization) and where the facts affirmatively showed that had the seller followed the proper procedure, he would have been allowed to charge the prices at which he actually sold.

Enforcement activities of OPA resulted in a total of more than 280,000 enforcement sanctions instituted against violators of price, rent and rationing regulations, and in the collection of more than $73,000,000 for the U.S. government. Approximately 6,000 cases were transferred to the department of justice on June 1, 1947, involving pending government monetary claims under section 205 (e) of the act, amounting to more than $50,000,000. OPA was successful in more than 95% of the court cases completed by it. (*See* also PRICES; RATIONING.)

(W. E. RY.)

**Prices.** During 1947 the subject of prices received more attention than any other topic dealing with the domestic economy of the United States. At the same time, there were more misconceptions and differences of opinion as to why prices were high and rising and what might be done about halting the rise than was warranted by even a rudimentary knowledge of the economics of prices.

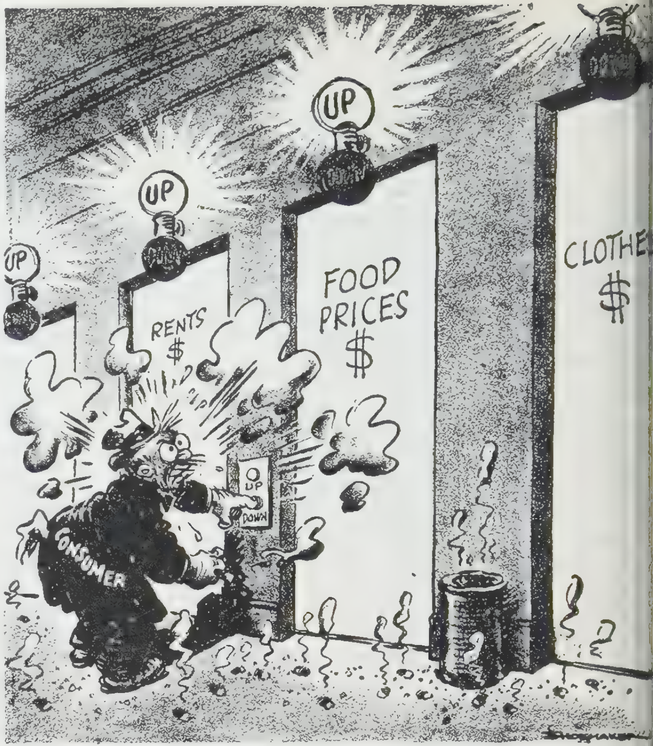
Contrary to popular belief, increases in wholesale prices during 1947 proceeded at a slower pace than during the postwar period as a whole or during the post-price-control period as a whole. As shown in Table I, the average prices of all commodities rose 14% during the year, an average of 1.17% per month. Except for fuel and lighting materials (which increased at the rate of 2% per month) and building materials (which increased at the rate of 1.58% per month) the increases were substantially the same for all classes of commodities. The reasons for the concern about the wholesale price increases in 1947 were three: (1) the percentage changes were based on prices that were already quite high at the beginning of the year; (2) the rate of increase was substantially above that occurring during the World War II period, being more than twice as high (1.17% per month compared with 0.57% per month during the period from Aug. 1939 to Aug. 1945); and (3) the consistent increases provided no indication of a possible plateau being reached shortly, or of a possible downturn in prices.

During the entire period from Aug. 1939 to the end of 1947, average wholesale prices of all commodities increased 115%. Approximately 36% of this increase took place during 72 months of the war (from Aug. 1939 to Aug. 1945) and about 64% occurred in the 28 months after the war ended (from Aug. 1945 to the end of 1947). Consequently, the rate of price increase in the postwar period was nearly five times as high (2.28% per month) as it was during the war period (0.57% per month).



"A LIMIT TO HIS PATIENCE," a cartoon by Shoemaker of the *Chicag Daily News* on the primary grievance of U.S. consumers in 1947

For the entire period under consideration, by far the largest increase in wholesale prices was in the field of farm products which in Dec. 1947 were 217% higher than in Aug. 1939. On explanation of this meteoric rise was that such prices wer relatively low in 1939.

Another way of viewing what had happened in wholesal prices is through an analysis of the price changes by period related not only to the war itself but also to price control measures. As shown in Table II, during the 30 months from Aug 1939 to the effective date of the general maximum price controls, the rise in the average wholesale prices of all commoditie accounted for 26% of the total increase from Aug. 1939 to th end of 1947, averaging 1% per month. Increases in the price of farm products, however, averaged 2.3% per month, an foods averaged 1.43% per month, the same as in textile products. Some of the classes of commodities registered relativel small increases as they were already affected by selective pric controls beginning with March 1941. During the 52 months o general price control, wholesale prices of all commodities increased 16%, averaging 0.31% per month, with farm product prices increasing on an average of 0.69% per month, or mor ble III.—*World War I: Per Cent Change in Wholesale Prices, by Major Commodity Groups, United States, Selected Periods, 1914–22*

Chemicals reached a high in April 1918, dropped and recovered but never again hed the high level of April 1918.

The high month in 1920 was May for farm products, June for foods, February for hides leather products, April for textile products, August for fuel and lighting, August for al and metal products, April for building material, May for chemicals, July for house-ishings, July for miscellaneous, August for all commodities other than farm and foods, for all commodities.

The low month in 1921 was June for farm products, August for textiles, August for all modities other than farm and foods, September for fuel; and in 1922 was January for ls, May for hides, August for metals, March for building materials, July for chemicals, for housefurnishings, August for miscellaneous, January for all commodities.

ource: Computed from wholesale prices published by the bureau of labour statistics, ed States department of labour.

an twice as fast. The increases in prices recorded for the riod of general price control do not include black market erations or possible quality deterioration and to that extent derstate the actual price increases. Finally, 56% of the total ice increases took place in the 18 months from the termina-n of general price control in June 1946 to the end of 1947, eraging 3.11% per month, which was three times as much of increase as occurred before general price control was adopted d ten times as much as the average monthly increase during e control period.

Wholesale prices of all commodities were high in 1947 and ere consistently rising. Whether they were so high as to cause arm and grave national concern could be seen in part from a mparison with price increases that took place in the World ar I period and the level reached at the high point in 1920. ata for such a comparison are presented in Table III, also in e last column of Table II. During the 51 months of the war om July 1914 to Nov. 1918 the prices of all commodities creased 103%, an average of 2.02% per month, while during e postwar period of approximately 20 months from Nov. 18 to the high points reached in 1920 the prices increased nly 23%, an average of 1.15% per month. The total increase r the entire period of 71 months was 148%, an average of 08% per month, compared with a total increase in such prices om the beginning of World War II in Aug. 1939 to the end 1947 of 115%, an average of 1.15% per month.

Part of the explanation for the larger total increase in prices uring World War I may lie in the fact that the increases arted from a lower level in 1914 when the yearly average dex of wholesale prices of all commodities was 68.1, compared ith an index of 77.1 for 1939, the latter being 13.2% higher. nother explanation might be that the U.S. had not reached the eak of prices by Dec. 1947, if history was to repeat itself, and at the peak reached at that time might be even higher, in rt because of the increased demand for U.S. products from road to be supplied under one plan or another.

In fact, the prices of all commodities in Dec. 1947 were 4% elow the peak of 1920. To this there were three notable ex-eptions. Average wholesale prices of foods were 21% above e peak of 1920, prices of farm products were 14% above ch peak, and the prices of building materials were 11% above e 1920 peak. Thus it was not so much a question of over-all holesale prices as it was one of wholesale prices in given areas ith which the public was vitally concerned, namely foods and building materials. It is interesting to note that the average prices of all commodities other than farm products and foods were 18% below the peak of such prices in 1920 and that in certain areas like fuel and lighting materials, textile products and chemicals they were even lower than that. This might mean that in some of these areas (as happened in Dec. 1947 in the substantial increase in the price of gasoline and other petroleum products) further price increases would materialize or that in some areas such as textiles and chemicals there was ample capacity to supply existing demand.

When the break in prices came after World War I, the average prices of all commodities declined 45% from the peak, and in general there was a tendency for the decline to be more severe in those areas in which the rise was the steepest. In no class of products was the entire gain in prices wiped out, and none returned to the prewar price level. For all commodities, the average prices at the low point of the recession in 1922 were still about 36% above those at the beginning of the war in July 1914, and for all commodities other than farm products and foods, they were 48% higher.

Source: Computed from data published by the bureau of labour statistics, United States department of labour.

On the retail level, as reflected by the cost of living indexes published by the bureau of labour statistics, prices in 1947 increased only about one-half as much as they did on the wholesale level. The increase for all items during the year averaged 7%, and in food it was but one point higher. For the entire war and postwar period covered by the data in Table IV, the cost of living increased 66%, 47% of the increase having taken place prior to the end of the war and 53% in the postwar interval. This meant that the Oct. 1947 dollar, in terms of consumer purchasing power, was worth only 60 cents compared with the Aug. 1939 dollar. It follows, therefore, that, by and large, a person who failed to earn in the later period at least 66% more than he earned in 1939 was actually worse off than he was prior to the war.

The rise in the cost of living was by no means the same in all items. Food costs rose 116% during the entire period of some 98 months covered by the data in Table IV. About 23% of this rise took place, as shown in Table V, before general price controls became effective, another 25% during the period of such

"HE'S FORGOTTEN THE REST OF THE ACT," a faithful, if comic analogy to the U.S. price levels of 1947, by Alexander in the *Philadelphia Evening Bulletin*

control (not counting black and gray market operations), and 52% in the 16 months following termination of general price controls. The price of clothing went up 88% during the entire period, of which about 26% took place before general price controls became effective, 33% during the period of such control, and the remaining 41% after termination of controls. The magnitude and the pattern of the price increases occurring in housefurnishings were practically the same as in clothing. Rents, however, remained relatively constant. The total increase was but 10%, of which four points were marked up prior to the General Maximum Price Regulation (G.M.P.R.); practically no increases took place during such general price controls; and only six points were marked up from June 1946 to Oct. 1947 because rents remained under control.

Compared with the rise in the cost of living in the World War I period, as shown in Table VI, when it was doubled by 1920 over July 1914, the rise in the cost of living in World War II, amounting to 66%, was relatively mild. During the previous period, when the high point was reached in 1920, food prices had risen 126%; clothing, 176%; and rent, 51%. As price controls were few, about 60% of the rise took place during the war and 40% afterward, while in World War II only 47% of the rise took place during the war and 53% afterward.

†Held up during the 1921–22 decline.
Source: Computed from data published by the National Industrial Conference board for the period 1914–20 and bureau of labour statistics, United States department of labour for the period 1920–22.

Toward the end of 1947 the cost of living level was 10% above that reached at the peak in 1920. Fuel and power, housefurnishings and food were all above the peak of 1920 by 19%, 11% and 9%, respectively. On the other hand, clothing was 10% below the peak of 1920, and rent was 4% below the 1920 high. When the break came and the bottom was reached in March 1922, the cost of living as a whole declined 20% from the 1920 peak and proportionally larger declines took place in the price of foods (36%), clothing (39%) and housefurnishings (31%).

Rents, however, were 19% higher than in 1920 and remained high for some years afterward.

Of great significance is the comparison in the price changes on the retail and wholesale levels. Except in housefurnishings, wholesale prices increased much more than did retail prices. While the same situation obtained during the World War I period, the discrepancy (except in clothing at retail compared with textile products at wholesale) was much smaller. On the whole, wholesale prices during the first period rose 47% more than retail prices, but during World War II to the end of 1947 wholesale prices had risen about 74% more than retail prices. This might mean that further increases in the cost of living were to be expected.

To cope with the rising cost of living, President Truman recommended to the special session of congress, which convened on Nov. 17, 1947, a ten-point anti-inflation program including provisions for direct rationing and price controls.

This program was largely disregarded, and in its place congress enacted and sent to the White House on Dec. 19 a substitute program, the chief feature of which was permission for industry to allocate scarce materials by voluntary agreement under anti-trust law exemption with approval of the attorney general. Thus, as the year 1947 drew to a close, with an innocuous national program at hand, the problem of inflation and of high prices that continued to rise remained substantially the same as it had been throughout the year. (T. N. B.)

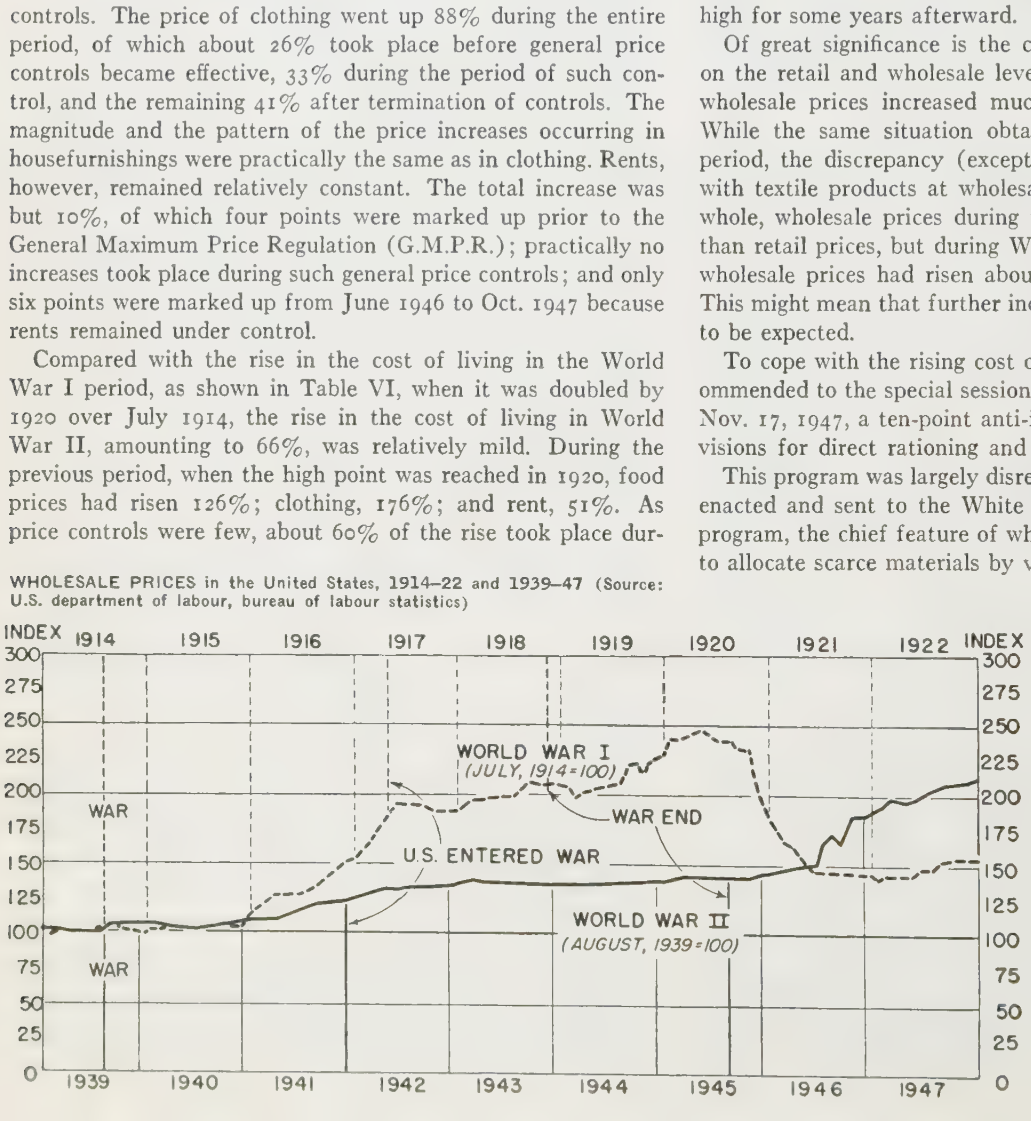
WHOLESALE PRICES in the United States, 1914–22 and 1939–47 (Source: U.S. department of labour, bureau of labour statistics)



**Great Britain.**—*Wholesale Prices.*—The rise in imported food prices, continuous throughout World War II, was accelerated late in 1946 and in 1947, lecting the shortage of world agricultural supplies in relation world demand. The general level of prices of imported food-ffs at the end of 1947 was about two and one-half times the 38 level. Much of the rise was absorbed through large and in-asing subsidies as the commodities passed on toward the con-nption stage. The standard index numbers of wholesale food ces meant little, being mixtures of rising import prices and of ble domestic prices. On the other hand, markets for basic terials were dominated by world or import prices, which on average were about twice the 1938 level by the end of 1945 d nearly three times in the latter part of 1947. All index num-rs of materials' prices at wholesale showed this rise.

There was no adequate measure of rising prices of manufac-ed goods. The index of the board of trade was unrepresenta-e since it omitted many products derived from materials ıch as timber) which had risen most in price. The prices of ınufactures for export rose sharply from the middle of 1946 ward, probably faster than wholesale prices of manufactures general. Even so, the terms of trade tended to become un-vourable, with the increase in price of manufactured exports s than that of imported foods and, particularly, of imported aterials. Considerations of the "hardness" or "softness" of reign currencies became increasingly important. Britain was rced often to buy in relatively dear (but "soft") markets and sell under more competitive conditions.

Conclusions based on wholesale price index numbers, how-er, must be accepted with caution. The price structure in 47 was neither normal nor stable. The direction of domestic d overseas trade was radically different from that before the ar. The composition of such index numbers as that of the ard of trade was inappropriate to conditions of 1946–47, both to items covered and as to the weights used in combining em.

*Retail Prices.*—The old cost of living index was discontinued the ministry of labour in the middle of 1947. The index was ther narrowly based on a limited list of food and other prices d individual price changes were combined on the basis of orking-class purchases before World War I. These facts made possible to keep the computed value of the index stable, by e device of manipulating subsidies on a relatively small num-er of items. This was, in effect, the official policy. The course the index and its components was an illustration of price anipulation rather than an indication of the genuine rise in rices paid by working-class families. Increases in rates, in the rices of clothing and fuel and in the tobacco duty in the spring 1947 were deliberately offset, in the index figure, by increased ubsidies and artificially reduced prices of sugar, eggs and other ems.

‡After June 1947, new interim index of retail prices based on June 17, 1947=100.

The new interim index of retail prices introduced in mid-1947 was a double improvement on the cost-of-living index which it replaced. The new index included a wider selection of items and a number of additional groups not in the old index. Fresh vegetables and fruit were now represented under food, for example, and furniture, entertainment and drink were additions. Further, the new index was based on working-class purchases, not in 1914, but in 1937–38. Being more broadly based, the new index would be less affected than the old by changes in subsidies. On the other hand, it would be more sensitive to changes in indirect taxes; *e.g.*, on drink and tobacco.

The immediate utility of the new index was limited by the fact that it tied prices back only to June 1947 and made no comparison with prewar prices. However, if estimates of individual price changes from 1938 were combined with the weights of the new index, an estimate could be made of the general change in retail prices paid by working-class families after 1938 (*see* London and Cambridge Economic Service, *Bulletin*, Aug. 11, 1947). The increase over 1938 could be put at 50% by the end of 1945 and 60% by mid-1947. These estimates still took account of subsidies; they showed changes in actual prices paid, some of which were kept low by subsidies.

Increased duties on beer, wines and spirits and higher rates of purchase tax on a wide range of items were introduced in the budget of Nov. 1947. A new policy on subsidies was also announced, whereby total expenditure on them was to be kept stable, so that further increases in prices of imported food would show up in retail prices. The index of retail prices therefore rose at the end of the year, and further rises were to be expected.

**Europe.**—In countries less affected than most by the war—Scandinavia, Eire and Switzerland—the course of wholesale and retail prices was not very different from that in Britain. In the middle of 1946, wholesale prices had been nearly stationary for some time at a level about 70%–100% above that of 1938. A slow upward movement then started, a reflection to a greater or less extent of the rise in prices of imported commodities. The cost of living also rose rather slowly, but even at the end of 1947 it was generally little more than 60% above 1938.

In contrast, in such liberated countries as the Netherlands and Czechoslovakia, prices increased very sharply, both at wholesale and retail, in the months after V-E day, reaching levels between two and three times that of 1938. The rise then tapered off, and 1947 was a year of relatively stable prices.

In other countries, inflationary forces were not kept completely under control and the usual records of prices in domestic currencies meant very little. In France, for example, wholesale prices in francs were recorded in 1947 at a level more than 10 times the 1938 figure; the corresponding multiple was 12½ times for retail food prices in Paris. Here, it was more relevant to inquire to what extent consumers had access to and used controlled, free or black markets (*see* also AGRICULTURE; BLACK MARKETS; BUSINESS REVIEW; CONSUMER CREDIT; STOCKS AND BONDS; WAGES AND HOURS; and articles on individual commodities.) (R. G. D. A.)

**Primary Education:** *see* EDUCATION.

## Prince Edward Island.

Smallest province of Canada, crescent-shaped Prince Edward Island lies in the Gulf of St. Lawrence 9 mi. from the mainland. Area: 2,184 sq.mi.; it is 130 mi. long, with an average width of 21 mi. Pop. (1941): 95,047; (1947 est.) 94,000. The largest centre is the provincial capital, Charlottetown, with a population in 1941 of 14,821.

**History.**—Liberal Premier Walter J. Jones went to the country in December and won a 4th straight Liberal victory (1943 election: 20 Liberals, 10 Progressive-Conservatives; 1947 election: 24 Liberals, 6 Progressive Conservatives). The Liberals got 51% of the vote, Progressive-Conservatives 45%, Co-operative Commonwealth federation 4%.

The new federal $5,500,000 ferry, "M. S. Abegweit," to carry passengers and freight between the island and the New Brunswick mainland, went into service in August. It was the most modern icebreaker of its kind, and the heaviest ship ever built in a Canadian shipyard (7,500 tons). The Canadian National railways announced reduced ferry rates for trucks when loaded with farm and fish products. In an election campaign address, Premier Jones promised abolition of road taxes.

The government announced a plan for an $8,000,000 province-wide electrification program under a provincial commission. In 1944 of 16,968,000 kw.hr. generated, only 4,320,000 kw.hr. were from publicly owned plants. Wood-lot conservation was begun by an educational campaign among wood-lot owners to reduce the annual $2,000,000 loss from disease, parasites and indiscriminate cutting.

**Education.**—In the 1944–45 school year, 19,648 pupils were enrolled in all educational institutions. The average daily attendance in provincially controlled schools was 12,984. In 1944–45 there were 665 teachers in provincially controlled schools, toward which the government granted financial support of $318,460.

**Agriculture and Fishing.**—In 1946 there were 474,900 ac. in field crops (the peak was 505,500 ac. in 1940), with crop values at $15,344,000 (1945: $18,975,000). The 1946 potato production amounted to 5,723,000 tons (1945: 4,601,000 tons). The 1947 lobster catch fell off because of heavy rains, cold weather and rough seas. The "tunnel" (controlled hot air) system of drying cod and hake replaced sun drying.

**Production.**—The gross value of 1945 production was $36,431,776. The net value was $20,604,911, which was .34% of Canada's total. Per capita production was $223.97. (C. Cy.)

**Princeton University.** An independent institution, devoted to the liberal arts and sciences, situated in Princeton, N.J. During 1947 Princeton concluded a year-long celebration of the 200th anniversary of its founding. Events included a series of academic conferences in various fields of learning, bringing together, in total, 1,000 scholars and men of affairs from all parts of the world; and two major convocations, the second of which, in June, climaxed the bicentennial celebration and was attended by Pres. Harry S. Truman and other national leaders and delegates from 400 educational institutions and learned societies in the United States and other countries.

The year, otherwise, was notable for the successful conversion, despite overcrowded conditions, to peacetime operation, including re-establishment of many of the characteristics of Princeton's prewar residential life.

In the fall Princeton inaugurated its new plan of study in the liberal arts and sciences. The program, which the class of 1951 was to be the first to pursue, provides wider opportunity for general education in underclass years and increased possibilities for independent study and original work in upperclass years.

Princeton introduced a program in near east studies, permitting undergraduates, for the first time, to choose the languages, culture and social institutions of that area as a field of concentration. It also began a long-range systematic self-study of its own product in an effort to substitute ascertained fact for opinion regarding its educational methods and their results.

By the end of the year, the new Dillon gymnasium was completed sufficiently to afford partial use and work on the Firestone Memorial library was reaching the final stage. (For statistics of endowment, enrolment, faculty, library volumes, etc., *see* UNIVERSITIES AND COLLEGES.) (H. W. Do.)

**Principe:** *see* PORTUGUESE COLONIAL EMPIRE.

**Printing.** Announcement was made during 1947 of a process for making photoengraved and offset-lithographic printing plates without photographic film or chemical developers. A metal plate with a special photoconductive coating, sensitized by spraying with electrons, is placed in the camera in place of film or glass plate. The plate is exposed in the camera in the same general manner as is employed in exposing photographic film or glass plates; photographic speeds are comparable. It is then placed in a tray containing a micronized powder, and after dusting with this powder, the image becomes visible (this step is analogous to developing the film or glass plate). The metal plate is then heated until the powder fuses to form a solid resist image on the surface. At this point, it is ready for etching, or if the metal was originally grained, the plate can be used immediately as a lithographic plate. The principle is as follows: when a metal plate coated with a photoconductive layer is charged with static electricity, as by spraying with electrons, the surface of the coating becomes sensitive to light, so that if an image is projected onto the surface, electrostatic charges will leak away where the light strikes and remain in the shadow parts of the projected image. This image becomes visible after developing the plate by dusting with a special type of micronized powder. This electrophoto process produces a positive to positive reproduction.

An electronic automatic halftone engraving machine combining Howey-G. Washington patents, was put into practical everyday production. The machine makes 65-line halftone engravings on plastic material. A positive photographic print wrapped around a revolving cylinder is scanned by a photoelectric cell. On an accompanying revolving cylinder is wrapped a sheet of celluloid or other plastic. An engraving device containing a pyramid point stylus (heated to 1,200° F.) penetrates the plastic surface "as commanded" by the photoelectric cell which in turn is actuated by the revolving photographic print. In 65-line screen the halftone interstices are 0.007 in.–0.008 in. deep, and shadow areas are approximately 0.004 in. deep. The stylus engraves 380 holes per second, and a useful area of an 8-in. by 10-in. halftone may be completed in 20 min. The resultant halftone may be mounted and printed from direct or may be moulded from for stereotyping.

Development and successful operation of a pilot machine in actual production for setting type photographically was announced. The machine is designed along lines of the standard line-composing machine and produces composed matter in film or positive paper form in any measure up to 42 picas width, from 5 pt. up to and including 36 pt. face. The letter element is contained in a negative film form set within the body of a standard-shaped matrix. After the line has been assembled by the operator, it is justified automatically to the required length, and characters are photographed singly on film or paper. Matrices are distributed in the same manner as in standard slug-casting machines.

A research laboratory announced development of printing ink which dries almost immediately. A new synthetic resin is ground with pigment and dispersed in a solvent. The grinding of the pigment into the resin produces a spongy mass which holds the solvent just as a sponge holds water. When the ink is used in printing, the printing pressure squeezes the solvent out of the resin. Since the resin itself requires no oxidation, it is dry as soon as what little solvent remains evaporates. This takes place so rapidly that drying is almost immediate. Ink, however, does not dry on press rollers or in fountains because the resin behaves like a sponge and does not lose the solvent until it is squeezed under printing impression on the press.

Three companies announced development of other equipment and inks with properties for fast-drying of freshly printed webs to prevent offset and to increase printing speeds in newspaper colour printing. In one of these, the drying of moisture-setting s is based on the principle of precipitation. The ink consts of a pigment dispersed in a vehicle made of synthetic resin solved in a high boiling solvent. When the film of ink is jected to low-pressure steam impinged against the paper b the binder is thrown out of solution, thus "drying" the ink n. Another company announced development of heat-set ink d necessary high-temperature ovens through which newsprint per web passes immediately after being printed on the press set the ink immediately on newspaper colour comic and gazine sections. A third method of fast-drying newspaper our printing consisted of suitable ovens and drying ducts lizing a direct flame heater and heated air mounted in the ess in such a manner that as each colour is printed the web sses immediately through an oven. Heated air is withdrawn rough driers and is recirculated under motor-fan power. The nperature in the driers is 400°–600°. Paper is passed between illing rolls, the temperature of which is from 80° to 100° F. (M. Si.)

## rinting Office, U.S. Government.

The government printing office s created by congressional joint resolution 25, June 23, 1860. executes orders for printing and binding placed by congress d the departments, independent establishments and agencies of e federal government; furnishes, on order, blank paper, inks d similar supplies to all governmental activities; distributes vernment publications as required by law, and maintains necsary catalogues and a library of these publications; prints, for le to the public, such documents as are not of a confidential ture.

The total area occupied by the government printing office oper in 1947 was 1,396,973 sq.ft. or 32.1 ac. During the fiscal ear 1947 it was necessary to place orders with outside conactors for printing in the amount of $12,906,982.98, as the vernment printing office was unable to handle the volume of rinting ordered. The value of the office buildings in 1947 was 11,948,735.50; machinery and equipment $6,013,201.75; makg the total value of the plant $17,961,937.25. During the scal year 1947, there were 7,955 employees on the rolls with a ay roll of approximately $20,302,066.67. The office made harges for 340,808,858 copies of publications of all classes. his total included 6,313,605 copies of the *Congressional Record*, 4,867,982 copies of the *Federal Register*, 3,631,400 copies f specifications of patents, trademarks, designs, etc., and 350,-45 copies of the patent office *Official Gazette* and annual inexes. The number of postal cards printed amounted to 2,865,-85,000 and money orders, 291,091,150. The stores section and arehouses handled 3,393 carloads of paper weighing 173,814,-55 lb. The division of public documents mailed out 149,788,080 ublications and forms; its receipts from the sale of governent publications during the year amounted to $3,038,377. The tal charges made to congress and all other government gencies during the fiscal year were $53,009,753.69. (A. E. Gi.)

## riorities and Allocations.

The year 1947 marked the elimination of all but a estige of U.S. wartime priority and allocation controls.

As of March 31, 1947, congress revoked the general priority nd allocation powers except for a limited number of materials ecified in the First Decontrol act of 1947. At that time riorities assistance for the Veterans Emergency Housing proram was transferred to the Office of the Housing Expediter. ower to route materials and equipment, however, terminated n June 30, 1947, on passage of the Rent Control act of 1947.

Under the Second Decontrol act of 1947, controls other than ose relating to housing were transferred to the department of commerce, as successor to the Civilian Production administration. This act also empowered the department of commerce to issue priorities to obtain materials for export when required to expand or maintain foreign production of materials critically needed in the U.S.; and when the secretary of state certified that the action was essential in carrying out foreign policy. In both instances a finding of no undue adverse effect on the domestic economy was required.

By the end of 1947 controls over all but five commodities had been removed. Those still under control were rubber, tin, antimony, quinidine and cinchona bark and rubber.

Controls over rubber were used during a good part of 1947 to compel use of U.S.-made rubber in quantities deemed necessary for maintaining a synthetic industry in the United States, and to restrict the use of latex which was in short supply. The act was scheduled to expire March 31, 1948.

Complete control remained over tin metal. Import quotas were set by the Combined Tin committee, of which the United States was a member. Certain nonessential uses were prohibited, and all pig tin remained under allocation.

Authority for the control of antimony was also complete, although only the power of allocation was utilized. There were no end-use restrictions and imports were not controlled.

Quinidine, a vital drug in the treatment of certain forms of heart disease, was under complete allocation and its use was restricted to treatment of cardiac disorders. However, only quinidine originating in government stocks was so controlled. Controls over cinchona bark were used to permit the government to enter into toll agreements with processors of quinidine.

With the exception of rubber, controls on all the above materials were scheduled to expire on Feb. 29, 1948, unless extended by congress. A new form of control, the "Voluntary Agreement," appeared late in 1947 when congress authorized the president to make agreements for private allocation and inventory controls of scarce commodities. Any properly authorized participant was exempt from the provisions of the antitrust laws. The primary purpose of the act was to curb inflation. (*See* also Business Review; Price Administration, Office of.) (H. B. My.)

## Prisoners of War.

Although significant steps were taken during 1947 in the repatriation of prisoners of war, approximately 2,500,000 were still detained at the end of the year, approximately two-thirds by the Soviet Union.

Complete liberation of war prisoners was accomplished during 1947 by the United States, Belgium and Luxembourg—43,000 by the United States, 57,000 by Belgium and 4,000 by Luxembourg. Plans were announced for gradual repatriation of German prisoners by Great Britain and France; approximately 200,000 were released by each of those nations during 1947. No reports were available concerning repatriations by the Soviet Union. Yugoslavia released all of its 11,000 Italian prisoners during the year.

At the Conference of Foreign Ministers in Moscow, the Soviet Union reported 890,000 German prisoners held outside the soviet zone of occupation in Germany. The report made no mention of prisoners of other than German nationality, but it was estimated that the Soviet Union held more than 800,000 Japanese.

In an effort to reduce the number of prisoners but at the same time retain the benefits of their labour, the French government offered German prisoners in France the option of remaining in the country as free workers. No reports were available on the number accepting the offer, but approximately 400,000 were retained as prisoners of war at the end of 1947.

PRISONERS OF WAR leaving the guarded area of the former concentration camp at Dachau, Germany, in 1947. This group was the last held by the U.S. army's European command

Estimates and official figures of the number of prisoners still in captivity at the end of 1947 are tabulated below:

| *Country* | *Number and Nationality* |
|---|---|
| U.S.S.R. | 890,000 Germans |
| | 828,000 Japanese |
| France | 400,000 Germans |
| Great Britain | 255,000 Germans |
| Yugoslavia | 80,000 Germans |
| | 10,000 Austrians |
| Poland | 50,000 Germans |
| Czechoslovakia | 7,500 Germans |
| Total | 2,520,500 |

The International Committee of the Red Cross called upon detaining governments to repatriate war prisoners, citing humanitarian considerations and the provisions of the Geneva Prisoners of War convention of 1929. The committee also continued its efforts to revise the Prisoners of War convention. At a meeting called at Geneva, Switzerland, in March representatives of the principal Allied Powers devised tentative revisions for review at the International Red Cross conference scheduled to be held in Stockholm, Sweden, in Aug. 1948. (*See* also FEDERAL BUREAU OF INVESTIGATION; INTERNATIONAL LAW; RED CROSS; REFUGEES.) (P. E. R.)

## Prisons.

During 1947 the U.S. army's most modern disciplinary institution was opened at Camp Cooke, Lompoc, Calif. Patterned after the U.S. penitentiary at Terre Haute, Ind., its housing facilities include dormitories, honour rooms and inside and outside cells. It is unwalled, but is surrounded by guard towers and wire fences.

In California, work was commenced on a new jute mill at San Quentin, agricultural units were constructed at the institution for men at Chino, and pending the erection of three new institutions, portable metal buildings were used to relieve overcrowding at some of the prisons in the state. Florida announced that two new institutions were to be built, one for women, the other for male offenders under 25 years of age. Other states, including Massachusetts and Pennsylvania, also authorized construction programs, and in New Jersey it was announced that the antiquated state prison at Trenton would eventually be abandoned.

In many prisons educational facilities were expanded and provisions made for more expert instruction in both academic and vocational fields.

State operated convict camps for road work were ended by Georgia, but still remaining were about 89 county-operated camps which were subject to inspection by the state. Michigan, following the pattern set by other states and the federal system, inaugurated a course of instruction for new guards. And Missouri placed employees in correctional institutions on a civil service basis.

The American Prison association's *Manual of Suggested Standards for a State Correctional System* was distributed throughout the U.S. and many foreign countries. This manual, compiled by a special committee of the association, was a direct outgrowth of many requests by governors, penal officials and others for information concerning the rehabilitation of offenders and related problems. Among the subjects covered are: personnel, classification, medical services, employment, education, religious activities, recreation, discipline, probation and parole. Also filling a vital need was another publication prepared by the American Prison association: *A Handbook on Classification in Correctional Institutions.*

On May 31 a wartime order which permitted the federal government to buy goods produced in prisons was rescinded. (The law banning the use of convict labour on government contracts was suspended on July 9, 1942, in order to facilitate the manufacture of war materiel.) During World War II, when inmates produced millions of dollars worth of products for the armed forces, their morale improved. In 1947, many men behind the bars were idle—a condition hardly conducive to their rehabilitation. (S. A. L.)

**Great Britain.**—Legislation came before the house of commons in 1947 "to abolish penal servitude, hard labour, prison divisions and the sentence of whipping." The original bill of 1938 had been postponed because of World War II, but the intended reforms had been partly carried out; hard labour, *e.g.*, was finally ended as a condition of sentence when the rule that a prisoner should sleep the first fortnight of his sentence without a mattress was abolished. Prisons became badly overcrowded, because so many had passed out of use, while the number of persons serving prison sentences had grown to 18,200, the highest figure for 40 years. In August a second "minimum security camp" was opened on a farm near Ashford, Kent, where 50 good conduct prisoners from Maidstone jail worked on the land in almost complete freedom. A few escapes were made in 1947 from the first camp of this kind, at Tortworth, Gloucestershire.

The "open" system of detention was also extended in the Borstal organization for dealing with young delinquents. An Elizabethan mansion at East Sutton, Kent, was taken for an periment in rehabilitating 20 young women, who were given e freedom of 85 ac. of lawns and gardens and allowed to take rt in village social activities. Because of lack of suitable ac- mmodation and a long waiting list of young men sent to rstal by the courts, a number of them were placed in a sec- n of Chelmsford prison, but the Borstal institution at Dart- oor prison, an unpopular wartime measure, closed on April 16. here were further tentative efforts to adopt the use of psy- iatry to Borstal institutions, but the number of delinquents tually treated for abnormality was small.

Men and women undergoing preventive detention in British risons numbered 46, and steps were taken to ameliorate the nditions of the confinement of these habitual criminals. (*See* so CRIME.) (P. BN.)

## rotestant Episcopal Church.

The year 1947, following upon the first ll year of peace, witnessed intensified activity by the Epis- opal Church in meeting its world-wide, as well as its domestic, esponsibilities. More than $7,300,000, contributed to its re- onstruction and advance fund, was appropriated for rebuilding he church in China, the Philippine Islands and Japan; and for dvance work in Latin America, Liberia and among the Negroes the United States. In addition, more than $1,000,000 was ised for world relief.

In response to a petition from the Philippine Independent hurch, popularly known as the Aglipayan Church, with about ,000,000 members, the house of bishops authorized and in- tructed the presiding bishop, Dr. Henry Knox Sherrill, to onsecrate 20 native bishops for that church—a significant step in church unity.

The statistics reported in 1947 showed the church to have attained an all-time high in several particulars: church members (all baptized persons) numbered 2,349,631; communicants 1,611,965. Baptisms increased 13.4% over 1946; confirmations 12.2% over 1946. Total contributions for the work of the church in the U.S. and abroad were $59,135,048—an increase of $6,123,655 or 11.5% over 1946.

Theological seminaries were again filled, and most of the new entrants were former veterans. The clergy numbered 6,443; parishes and missions 7,740. The upward trend in church school teachers and pupils, which began in 1944, was continuing: 51,158 teachers, an increase of 5.6% over 1946; 427,985 pupils, an increase of 5.8% over 1946. (*See* also CHURCH MEMBERSHIP.) (W. H. SE.)

## Psychiatry.

Psychiatry in 1947 looked forward to an expanding program in civilian life, with its field of interest embracing social problems. Long-time planning was suggested to inaugurate research, revamp medical education and change much of the current treatment of the mentally ill. A closer working relationship with the general field of medicine was visualized, since psychiatry was still handicapped by the necessity of maintaining specially organized hospitals which tended to keep out of contact with the general medical institutions.

During World War II at least 2,000,000 people, as the result of mental treatment of personality disorders in soldiers, had direct contact or relationship with psychiatry. One of the most important scientific results of the war was the spread of psychiatry into other fields. In general hospitals the neuropsychiatric service became of equal importance with the medical and surgical services. The war also brought out the importance of clinical psychologists and psychiatric social workers to the psychiatrist. In many instances, the psychologist and psychiatric social worker had never before had experience on a clinical team. The final result was the development of a congenial and efficient relationship in all three fields of psychiatric care.

**Education and Psychosomatic Medicine.**—The growing interest in psychosomatic medicine (*q.v.*) led to an evaluation of the teaching of psychology, both normal and abnormal, to medical students and doctors. It was proposed that psychiatry should have as much time allotted to it in the curriculum of a medical school as the departments of anatomy and physiology, although many problems had to be met before such a change could be made. The curriculum, already heavily overloaded, might require a fifth or even a sixth year to give the students an adequate course of psychiatry on these basic principles.

**Therapeutic Narcosis.**—Sodium amytal narcosis, extensively developed during World War II, was the subject of continued research in civilian practice. Sleep-producing drugs had been known from ancient times, although their value for specific purposes other than sleep had not been fully recognized until the 20th century. Bromide sleep was developed in 1900 by Neil Macleod in the treatment of acute mania. Great impetus was given to this form of treatment by Wiliam J. Bleckwenn in 1930, when the use of sodium amytal was suggested. During World War II, R. R. Grinker and J. P. Spiegel, using sodium amytal, introduced the term narcosynthesis. The development of this method was natural in view of the dramatic loosening of inhibitions and the unveiling of painful repression frequently observed in certain stages of etherization, alcoholic intoxication and delirium. Emphasis was placed in 1947 on the development of an artificial state of delirium by the use of sodium amytal administered intravenously. During this stage of toxic drug delirium the patients talked freely and often acted out some of their painful repressions. Most of the benefit followed the delirious abreaction, and less emphasis was placed upon narcoanalysis and narcosynthesis. Psychiatrists thought that the dissolution of the faulty personality behaviour and constructive recasting of the psychiatric problem probably occurred through improved physiological rest and a remobilization of thought processes during an irresponsible impersonal state of psychomotor activity which was temporarily out of volitional control, and was therefore always reintegrated at a more acceptable level.

**Lobotomy.**—Twelve years had elapsed since Egas Moniz carried out his history-making operation on the frontal association pathways of the human brain for the relief of certain intractable mental symptoms. He confined his efforts to operation on patients that were deemed irretrievable by conventional standards and developed the operation which was later called lobotomy. By 1947, thousands of lobotomies had been performed. Psychiatrists, however, were still unable to decide on the best method of operation or the most favourable type of patient. The criteria of selectivity were still only meagre and excessively weighted on the negative side. Operative techniques had not received sufficient critical evaluation in respect to operative topography, and the optimal value of the operation had not been reached in the absence of specific criteria of selection. The patients originally chosen by Moniz, of long-standing and hopeless outlook and refractory to every other method of treatment, were not now considered a most satisfactory type. The success of any procedure in psychiatry should be based on its application comparatively early in the course of the illness, and lobotomy was considered no exception. It was found that patients who were ill less than two years had a significantly more favourable outcome than did the older chronic cases. Mass lobotomy as a final refuge of a baffled psychiatrist was no longer recommended as a logical procedure. Positive criteria of selectivity and a more definite study of results on the basis of precisely what tracks had been severed in the brain, so that psychosurgery might become a valuable adjunct to psychiatric treatment, were the subject of research.

**Writer's Cramp.**—The nature of writer's cramp, often called scrivener's palsy or graphospasm, was studied in psychiatric patients. The importance of this subject lay in the fact that writer's cramp was included in England among the occupational disabilities under the Workmen's Compensation act. In the U.S. and France, where employers were not bound to pay compensation to workers suffering from this disability, its incidence was found to be negligible. Psychiatrists found after studying more than 1,800 patients that the condition occurred quite frequently in persons whose work did not involve much writing and came to the conclusion that instead of being an occupational disease, it was a symptom of a psychoneurosis. The cramp appeared in some patients even before they started to write, when they knew that their duties would involve a long period of such activity. It was found also that the condition was somewhat commoner in nonprofessional writers than in writers. The term writing disturbance rather than writer's cramp was preferred.

About 1 in 11 patients suffering from neuropsychiatric conditions showed some in-co-ordination of the muscles of the hand resulting in writing disturbances. These could be classified as tremulousness, spasticity or ataxia. All three forms occurred in psychoneurotic patients. Those showing the tremulous or wavy form of writing disturbance often suffered from an acute and severe anxiety neurosis based on severe stress, such as military action, unexpected or sudden awareness of marital infidelity, separation from the home and other causes of a similar nature. It was not uncommon to find a spattering of ink or perforation of paper as the nib of the pen caught in the paper.

The patients were treated successfully by continuous narcosis or by heavy sedation for a week or two. In some cases a modified insulin treatment was used. The spastic form (genuine writer's cramp) was characterized by tendency of the writing to become progressively smaller, but with the letters distinctly legible. All of the patients in whom the spastic form occurred were suffering from predominantly hysterical reaction, and they belonged to the shy, diffident type as opposed to the anxious, highstrung type of patient with tremulous disturbances. Most of the cramps were of long duration and treatment was not easy. Heavy sedation with or without insulin treatment sometimes was helpful.

The third group of patients in the psychiatric types showed ataxia or a jerky form of writing. There was irregularity in size and shape of letters as well as inequality of spacing between the lines. Persons in whom this form was seen were also suffering from predominantly hysterical reaction. They derived benefit from active exercise of the flexor muscles, since the condition was apparently caused by excessive contraction of the extensor muscles, the fingers being lifted too high. Organized physical training and games were helpful, but massage and exercises were not carried out in the physical therapy department, because such a procedure tended to fix the patient's attention on his disability. The physiogenic writing disturbances were those associated with structural disease such as chorea, disseminated sclerosis, paralysis agitans, parkinsonism, progressive muscular atrophy and various types of encephalitis.

**Marshall Islanders.**—A study of the way of life of the Marshall Islanders disclosed the absence of functional psychoses among them. Over a period of five years, when the Japanese had a careful system of medical recording, no affective psychoses were found, among the 10,000 natives. During the U.S. occupation, the islanders were neither aggressive nor competitive. They enjoyed the sensual side of life and despite average intelligence had little interest in intellectual pursuits. They took their simple pleasures one at a time and would eat their last handfuls of food without apprehension. This way of life gave rise to no conflicts, and the native found no need to run away from reality. Nudity had almost vanished and the natives had been given a sense of shame by the white man, but in the realm of instinctive behaviour the white man had been less successful. The natives did not recognize private property and land. Inheritance was matrilineal; under this system there was no illegitimacy and chastity was considered unimportant. The child was always welcome and never rejected and he approached adolescence in perfect freedom. Sexual matters were discussed freely and openly. This way of life led to an absence of functional psychoses, and observers were impressed by the lack of conflict and the need of escape from reality as causative factors in this state. ## Psychology.

Perhaps the greatest single contribution of the reorganized American Psychological association during 1947 was its development of official standards for professional competence in psychology. Authorized by action of

A.P.A. in Sept. 1946, the American Board of Examiners in fessional Psychology under the chairmanship of Carlyle obsen was fully constituted and began to process about 1,200 lications from psychologists seeking certification in clinical, ustrial or personnel psychology. Certification by the Ameri- board in still other specialties was under consideration. The .A. division of clinical and abnormal psychology took inde- dent steps toward setting standards for certification in clini- psychology, as did certain states and state psychological or- izations. Uniformity and integration of certification proce- es were needed.

nother accomplishment of the reconstituted A.P.A. was its lishing activity. *The American Psychologist* had become the official "professional journal" of the organization. About other psychological journals and monographs continued to be lished by the A.P.A., of which a total of 25,000 vol. went to mbers and other subscribers in 1946; in 1947, 37,000 vol. re distributed.

eference should also be made to the way in which the new P.A., through its central office in Washington, D.C., aided h the public and the profession as an official bureau of in- mation and as a professional placement service. Because of growing leadership of the A.P.A. in the first of these func- ns, congress, governmental agencies, industries and private izens turned increasingly to the Washington office for advice ncerning a host of matters in the field of psychology. Started ring World War II as the Office of Psychological Personnel, placement service of the A.P.A. was instrumental in provid- assistance to many universities, governmental and military ganizations, industries and private agencies of various kinds in nnection with their personnel needs. Typical of the new positions of authority for psychologists was the chairmanship of the Committee of Human Resources, established by the Research and Development board in its program of co-ordinating research for the U.S. army, navy and air forces.

Many psychologists had emerged from their war work with an acute desire to learn what their colleagues had been thinking and doing for the past four years. Regular meetings of both regional and national societies had been curtailed for the duration of the emergency, with the result that the first postwar meetings were heavily and enthusiastically attended. In addition, symposia of various kinds were organized and conducted under a variety of auspices. Those sponsored by the department of psychology at Indiana university, Bloomington, Ind., and by the department of psychology at the University of Pittsburgh were typical. The latter resulted in a book, *Current Trends in Psychology,* which gave an excellent over-all picture of the directions in which various fields of psychology were moving. Symptomatic of the extent to which psychology had passed into new hands was the fact that all of the contributors to the University of Pittsburgh symposium were much less than 50 years of age.

Considerable professional interest and research in 1947 was centred on clinical psychology and its problems. The need for improved techniques of evaluating and validating the results of psychotherapy was stressed, as was the need for a theory of personality and a rational of therapy founded solidly upon the psychology of learning.

Precise measurement and statistical interpretation of the results of psychotherapy might, ultimately, do much to take the guesswork out of clinical psychology. In 1947, however, few inspirations seemed forthcoming. It was conjectured, tentatively, that at least one source of advance would come from the new tendency to speak of statistical error "of the first order" and "of

E-WAY OBSERVATION DOME in the Child Development clinic headed by . Arnold Gesell (centre) at Yale university. Cameraman outside the dome ft) is shown recording a child's behaviour, in 1947, for later study the second order"; *i.e.*, of the error, or danger, not only of accepting as valid a hypothesis which is factually wrong, but also of rejecting as invalid a hypothesis which is factually right. Psychologists might, in any event, expect to hear more about this distinction in the future.

A number of learning theorists were concentrating upon the two important areas of "secondary reinforcement" and language.

For a long time psychologists interested in problem-solving, or trial-and-error, learning used primary drives, such as thirst, hunger, heat, cold, etc., to the exclusion of other types of problems. And those psychologists interested in associative learning, or conditioning, mistakenly conceived of conditioned responses as including, not only emotional, or physiological, reactions, but any type of overt behaviour which occurred following the presentation of a signal or so-called conditioned stimulus. It now appeared that conditioned responses, strictly speaking, are exclusively emotions—appetites, fears, etc.—and that the overt behaviour instigated by these secondary drives follows the familiar principles of problem-solving.

Thus, it emerged that there are three levels of learning: trial-and-error learning whereby the solutions to primary drives, or problems, are acquired; emotional conditioning, whereby the secondary, or acquired, drives come into existence and trial-and-error learning whereby the organism acquires solutions to these acquired, or emotional, problems. But fundamentally there appeared to be only two basic learning processes: trial-and-error learning (involving both primary and secondary drives) and conditioning.

In 1947 a remarkably large number of studies concerned the selective acquisition of behaviour on the basis of the lessening or elimination of emotional tensions which it affords. This work on the reinforcement, or learning, of specific overt responses through the resulting reduction of secondary drives (hence, the expression "secondary reinforcement") did much to bring scientific learning theory into contact with clinical psychology. It is in the latter area that one is predominantly concerned with the habits which human beings have acquired because they resolve emotional problems, however unrealistically.

No adequate understanding of the functioning and acquisition of language is possible, in terms of learning theory, until secondary reinforcement has been carefully investigated. The number of books and technical articles which had begun to appear on the topic of language suggested that psychologists had mastered at least the rudimentary principles of the problem.

As psychologists' interest in learning advanced and broadened and as psychotherapy became a growing part of their concern, attention was focused with renewed emphasis upon what may be rather loosely referred to as man's moral problems. As long as a psychologist restricted himself to laboratory studies of the sensory processes or of reflexes, he might, with some justice, insist that he was not interested in values, ethics, "shoulds" and "should-nots." But as soon as he begins to listen clinically to psychoneurotics, he is confronted by an imposing array of moral issues which he cannot, without an admission of grave professional incompetence, possibly sidestep. The upshot of this situation was that psychologists began to examine such concepts as responsibility, choice, guilt, blame, freedom and will in a way they had not done since psychology began to split off from philosophy more than half a century before—to be more precise, in a way they had never done, for they were now returning to old problems with many new insights and scientific facts which neither they nor the philosophers formerly possessed.

A notable investigation of 1947 was the work of Alfred S. Kinsey on human male sexual behaviour. Although representing a culmination of the labours of many specialists extending over a number of years, it was in 1947 that this research had its first powerful impact upon the public. Kinsey's *Sexual Behavior* *the Human Male,* based upon data obtained from more th 12,000 personal interviews, was published, with the comment the *New York Times* that "after decades of hush-hush, this bo is sure to cause an explosion." (*The New York Times,* Jan. 1948.) (*See* also PHYSIOLOGY; PSYCHOSOMATIC MEDICINE.)

## Psychosomatic Medicine.

Psychosomatic (*psych* spirit and *soma:* body) w a new term in 1947, but it described an approach to medici as old as the art of healing itself. It is not a specialty b rather a method of diagnosis and treatment which applies to a aspects of medicine and surgery. It does not mean to study t *soma* less; it only means to study the *psyche* more. Its subje matter—which aims to discover more precisely the nature emotional-bodily relationships—is founded on the importa advances in physical medicine as well as on the discoveries psychoanalysis. The latter science bears the same relationsh to mental functioning that the microscope does to the physic structure of the body.

Psychosomatic concepts received a great deal of attention a result of the medical experiences of World War II. The larg number of psychoneurotic individuals discovered in the selectiv service process and the disabilities caused by emotional facto in military training and combat impressed every physicia Indeed, it might well be said that World War I establishe psychiatry on a firm scientific basis and World War II saw i more complete integration into general medicine.

William C. Menninger, director of the neuropsychiatry co sultants division in the surgeon general's office during Wor War II, reported in 1947 on the high incidence of emotion factors among the heart and gastrointestinal cases in milita hospitals. Approaching the problem from another angle—th incidence of physical complaints in psychoneurotic disorders— he quoted Dr. N. Q. Brill, who found 29% psychogenic gastr intestinal reactions; 14% cardiovascular reactions; and 9 rheumatic reactions among 585 unselected cases of psych neurosis seen in army general hospitals. Civilian medicine als found that the gastrointestinal tract shows the highest inciden of bodily reactions to emotional tension. Why this is so b comes apparent when we consider that the infant's first conta with the world is through the mouth, so that the processes feeding and feeling must relate themselves to one anothe Therefore, upon the love and security or anxiety and insecurit which become associated with the nursing process will depen many of the psychosomatic relationships of adult life, calle forth by events which awaken old associations.

Menninger paid special attention to four groups of disorder representing different bodily systems, which reflect the em tional maladjustment of the individual—cardiovascular; gastr intestinal; individuals with various aches and pains, frequent referred to as rheumatic; and the allergies.

Another problem frequently encountered in military medici was low-back pain. It is also a common cause for disability civil practice. B. B. Stimson, working with a group of specialis interested in this problem, showed that in addition to a variet of physical factors that may be responsible, emotional proble are also concerned in this form of disability. A considerab number of patients present no evidence of organic findings the general physical examination and in addition the X-rays a essentially negative. These are the patients who present a ve at problem but with the help of the physician, the psychi- ist and the physical medicine expert, most people can be ped. A large number of the patients with psychoneurosis o had low-back complaints were ex-servicemen.

E. Weiss studied 40 patients with so-called psychogenic rheu- tism encountered in a larger study of 200 patients with ronic fatigue. He observed that this group of patients com- in of aches and pains in the muscles and joints, in addition chronic fatigue, and often have slight elevation of tempera- e. If too much attention is focused on this slight fever, ich is insignificant, and the patient undergoes a great deal of dical investigation, invalidism is exaggerated. Psychosomatic udy showed that these patients had significant emotional con- ts and that marital maladjustment was a frequent underlying oblem. Chronic resentment, of which the patient was usually ally unaware, produced a state of tension which reflected elf in the musculo-skeletal system, causing so-called mus- lar rheumatism.

Impressed by psychologic factors in allergic disorders, J. H. itchell and his associates studied 600 consecutive cases of the mmon allergic disorders seen in private practice and com- ented that those who failed to give skin reactions in being sted allergically are also the ones who present multiple com- aints (in addition to the allergic symptoms), whereas the tients with positive skin reactions to allergic substances or- narily do not have such a variety of complaints and respond ore readily to treatment. Upon analysis the negative skin action and multiple complaint group show definite evidence psychologic maladjustment. (*See* also PUBLIC HEALTH SERV- ES.)

## ublic Health Engineering.

**Water Supply.**—Developments in public health ngineering during 1947 were characterized by a number of ndertakings of unprecedented size. The water filtration plant Chicago completed one year of operation. The plant, with a apacity of 320,000,000 gal. per day, remained the largest plant the world; it served 1,350,000 people.

Philadelphia authorized the construction of an ozonation lant for the purification of 36,000,000 gal. a day. In terms f daily ozone generating capacity (1,250 lb.) this plant would e the largest in the world.

In Egypt about 23,000 cases and 11,000 deaths from the holera epidemic of 1947 were dramatic reminders of the results f failure to provide for masses of population the elements of a afe water supply and of a sound disposal of human excreta. It as one of the heaviest onslaughts of a disease caused by de- ective sanitation that the modern world had seen.

The United States public health service released a compila- on of disease outbreaks caused by impure water in the eight ears from 1938 to 1946, inclusive. More than 114,000 cases nd at least 84 deaths were attributed to water-borne causes. urface pollution of shallow wells retained its primacy as the ause of the greatest number of these outbreaks. On the basis f the total number of cases, however, surface pollution of wells as eclipsed by cross connections and other defects in the distribution system, failures in water purification processes and the use of untreated polluted water.

The application of fluorine to public water supplies was extended during 1947. The addition of this chemical for the prevention of dental caries, particularly in children, was practised in Brantford, Ont.; Evanston, Ill.; Grand Rapids, Mich.; Midland, Mich.; Newburgh, N.Y.; Sheboygan, Wis.; Marshall, Tex., and Ottawa, Kan. All of these operations were in the nature of controlled experimentation. The findings on procedures and their effects upon the exposed populations would not be completely assayed by observers for at least five years.

At Miami, Fla., one of the largest lime-recovery plants was being developed for the salvaging of lime used in the softening of its water supply.

Interest in the corrosion of pipe and other facilities used in the water works industry was renewed because of an investment of more than $5,000,000,000 in this industry. More than $500,000,000 were being collected annually for this service. Since more than 24,000,000 tons of cast iron pipe, valves, hydrants and fittings had been installed by 1940 in the United States alone, this mass of cast iron was being given detailed review. It was estimated that more than $40,000,000 per year might be charged against corrosion of water mains in the United States.

On Nov. 7, the Metropolitan Water board's new reservoir at Staines, Middlesex, England, was inaugurated. This would contain 4,466,000,000 gal., its length being 2,037 yd. and its maximum width 962 yd., the total area being approximately equal to that of Hyde park. Begun in 1937, work had been interrupted by World War II.

New British water supply schemes included that of the Metropolitan Water board for construction of works and purification plant at Ashford common, Middlesex, at a cost of £4,290,000. Cumberland county council planned new water supplies from Calderhead to serve Maryport, Penrith, Wigton and Cockermouth (£1,700,000). Negotiations were instituted by the Orkney county council for the purchase of water installations built by the admiralty, as part of its £1,000,000 scheme to provide water in the islands.

**Sewage.**—The outbreak of poliomyelitis in England focused attention again on the significance of human sewage in relation to this disease. Since this was one of the most intense outbreaks of the disease in England in 25 years, it afforded an opportunity to test a number of virus considerations. The virus was demonstrable and persisted in the stools of half the patients for two to four weeks after the onset.

In the United States, the severe epidemic of poliomyelitis in Wilmington, Del., apparently was not materially curtailed by widespread DDT dusting for the control of flies. The relationship of the epidemic to sewerage and sewage disposal remained indefinite and inconclusive. (*See* INFANTILE PARALYSIS.)

In this period of high demand for fertilizer materials, interest in both garbage and sewage sludge as sources of fertilizer was intensified. Experimental work proceeded with unusual speed in England, in the United States, in Africa and in China. The significance of trace elements in such materials was still to be evaluated on detailed country-wide sampling.

In Scotland, Glasgow corporation put forward a sewerage scheme costing £1,736,000. Other important British projects included: the Birmingham Tame and Rea District Drainage board undertaking to improve the river Tame before it reached Birmingham. It was proposed to concentrate sewage disposal from the "Black" country to a new works at West Bromwich at a cost of £4,000,000. Among others, Nottingham corporation had a sewage disposal scheme at Stoke farm, the estimated cost being £1,170,000.

Modern sewerage installations were gradually making their way into remote areas of the world. The installation in Chungking, China, of a sewerage system was accomplished on the argument that the savings in coffins would pay for this sanitation improvement in 19 years. The lack of sewers was estimated to be responsible for about one-fifth of the deaths in that city, where an annual death rate of 30 per thousand prevailed.

**Food.**—Milk and dairy products continued to receive detailed study. The effects on the nutritive values of such dairy products by engineering techniques were evaluated. No generalization on the all-round stability of the nutrients was possible. Riboflavin, for example, is remarkably stable, except when it is acted on by light and this effect is accelerated by heat. Ordinary processing and handling of the products, however, have virtually no effects on certain of the other nutrients

The control of shellfish and shellfish waters was reviewed in the search for more efficient indicators of pollution and biological purification.

**Air.**—Radioactive substances created challenges in industrial hygiene and atmospheric pollution. The nuclear fission pile had become a radiating source for large amounts of potentially dangerous radiant energy. The preparation, transportation and use of many isotopes, formed as by-products of the pile, gave rise to a new set of control problems in the engineering field. Neither the nature of these effects nor the details of their control were satisfactory.

Studies of the use of glycols in air disinfection demonstrated that this method had far more complexities than was originally supposed. Size of droplets and the humidity of the air in which these were dispersed had important effects.

Unusual problems of atmospheric pollution were exemplified by the finding in Baltimore, Md., of lead poisoning in attendants working in shooting galleries. The spattering of bullets increased the lead content of the air sufficiently to cause lead poisoning in those exposed during working hours. Customers operating for only short intervals of time were not affected.

**Insects and Rodents.**—Field operations continued on the use of Antu and 1080 for rodent destruction. The experience was already sufficient to demonstrate that chemical destruction alone would not solve the problem. Structural building out of rodents and more careful protection of food in storage remained essential prerequisites to lower rodent populations.

A rare skin disease reported in Baltimore was diagnosed as "grain itch." Of 27 broommakers in a 60-year-old factory, 12 had the disease, caused by a mite infesting the straw from which the brooms were manufactured. (*See* also EPIDEMICS; PUBLIC HEALTH SERVICES.) (AB. W.; X.)

## Public Health Services.

**Cancer.**—Great assistance was given to the U.S. cancer control program by increased funds made available by the federal government through the Public Health Service act of July 1944. The act authorized the surgeon general of the U.S. public health service, through the National Cancer institute and in co-operation with the National Advisory Cancer council, to conduct and assist research and investigations relating to the cause, prevention and methods of diagnosis and treatment of cancer, to provide training and instruction in technical matters relating to diagnosis and treatment of the disease, award fellowships in the institute, co-operate with state health agencies and procure, use and lend radium. As the result of this act, cancer research and cancer control were greatly stimulated.

More cancer detection centres and tumour clinics were established in 1947, and undergraduate and postgraduate professional education was strengthened. Provisions were made for increased facilities in hospital diagnosis and treatment of patients. (*See* also CANCER.)

**Tuberculosis.**—Several notable advances were made in the knowledge and techniques necessary for effective control of tuberculosis. Increased case findings by means of the newly developed photofluorograph machine, wherein chests of as many as 1,000 persons a day could be examined through one machine, gave a tremendous impetus to mass radiography.

Mass X-ray examination of large population groups repeated periodically had proved to be a sound public health method of discovering tuberculosis. Under this method, new and hidden cases of tuberculosis were discovered constantly, and the necessary public health control measures were applied.

Drugs in the prevention and treatment of tuberculosis, BCG (Bacillus-Calmette Guérin) vaccine and streptomycin, were studied further during 1947. M. I. Levine stated that in spite of the fact that results with the use of BCG vaccine had been scientifically inconclusive, the consistency of favourable reports seemed to indicate that the vaccine has a certain degree of efficacy and that its use is safe. The continuance of BCG vaccine research, however, was essential before it could be fully accepted as a public health measure.

Streptomycin, an antibiotic isolated from certain species of soil, had become the drug of promise in laboratory and animal trials. Although no extensive control experiments had been performed, preliminary results with streptomycin gave hope of suppressive action even in tuberculosis meningitis and miliary tuberculosis. (*See* also TUBERCULOSIS.)

**Mental Hygiene.**—The concept of mental illness as a public health problem, while not new, had been rather slow in gaining general acceptance, since people had been inclined to think of mental disorders as phenomena peculiar to isolated individuals. However, the prevalence of mental illness and its costliness qualified it as a public health problem, necessitating public responsibility for its prevention and reduction.

Under the National Mental Health act, the U.S. public health service was authorized to make grants-in-aid for research directly to universities, hospitals, laboratories and other public and private institutions and to qualified individuals. The act also authorized establishment of a National Institute of Mental Health in the Washington area, where co-ordinated studies would be conducted in the many sciences which bear upon the problem of mental health.

In 1947, congress appropriated $3,000,000 to be allocated through the states for the appraisal and study of the states' mental health needs and as resources for the establishment and expansion of community clinics and for training programs for physicians, nurses, social workers and educators. (*See* also PSYCHIATRY; PSYCHOSOMATIC MEDICINE.)

**Infectious Diarrhoea of the Newborn.**—The control of infectious diarrhoea among the newborn, as established in the Chicago health department, was accepted as a standard public health measure and used as a pattern by hospitals and health organizations throughout the world. Cases among infants continued to be controlled by the more efficient and wider application of the following public health measures: prevention of overcrowding in nurseries; adequate nursing personnel; proper technique in the care and feeding of babies; individual clothing, linen and utensils for each infant; immediate isolation of infants suspected of having any infectious disease; separate nursing personnel and facilities for such isolated infants.

**Care of Premature Infants.**—New techniques and standards in the care of premature infants had done much to reduce the death rate. Among these techniques were the following: reporting of all premature infants within an hour after birth; provision of especially trained personnel; assignment of specially trained graduate, registered nurses to the cases in every hospital nursery; equipment of every nursery for temporary care; estabhment of breast milk stations; establishment of stations to lminister scientific care; provision of ambulances with spe- ally trained nurses and equipped with incubators and oxygen, ailable 24 hours per day for the immediate transportation of emature babies born either at home or in hospitals.

**Venereal Disease.**—Case-finding techniques were intensified reach the undiscovered thousands who had become infected it were not receiving treatment—an estimated 155,000 persons ith infectious syphilis and 825,000 with gonorrhoea. (*See* also ENEREAL DISEASES.)

**Other Health Programs.**—There were reports during 1947 at the use of influenza A and B vaccine had been of some ophylactic value in studies among controlled population oups.

Reports also indicated a slight increase in the incidence of phtheria, and increased fatality rates in the over-30 age groups. hether this was due to loss of immunity or to introduction of e more virulent strain of diphtheria bacillus, or whether new btypes of the diphtheria bacilli were not covered by the avail- le antitoxin, was difficult to determine. However, renewed and gourous efforts to inoculate children against diphtheria had ecome of extreme importance.

Epidemiological studies were made during 1947 to discover e manner of spread of poliomyelitis. A study by F. B. Gordon, . M. Schabel, Jr., A. E. Casey, W. I. Fishbein, H. N. Bundesen nd Margaret Abendroth showed that poliomyelitis is spread in ontact infection, by means of the poliomyelitis virus present the throat and mouth. (*See* also EPIDEMICS; FEDERAL SE- URITY AGENCY.)

Schabel, Jr., lbert E. Casey and William I. Fishbein, with the co-operation of erman N. Bundesen and the technical assistance of Margaret Abend- oth, "Recovery of Poliomyelitis Virus from the Throat During the ncubation Period," *J.A.M.A.,* 135: 884–888 (Dec. 6, 1947). (H. Bu.)

**Great Britain.**—The latest vital statistics published for Eng- and and Wales in 1947 concerned the previous year. The num- er of births was 820,000 (680,000 in 1945), and the number of eaths, 492,090 (488,108 in 1945). The infant mortality rate as 43.0 per 1,000 related live births, a rate well below that of ny preceding year. The fall in the maternal mortality rate con- inued and reached the low level of 1.43 per 1,000 total births 1.80 in 1945). Deaths from all forms of tuberculosis were 2,847 (23,955 in 1945); the decline in mortality from this dis- ase continued. The number of notified cases of diphtheria was 1,896 and of deaths 472 (18,596 cases with 722 deaths in 945); the death rate under 15 years of age was 4.0 per 100,000 6.7 in 1945 and 28 in 1941): these favourable results were ttributed to mass immunization of children. Scotland, with an stimated population of nearly 5,000,000 (Dec. 1945), also howed signs of improving health. Rates for still births, ma- ernal mortality and infant mortality in 1946 were the lowest ver recorded, and deaths from tuberculosis were fewer than hose of 1945.

The chief epidemic of 1947 was that of acute poliomyelitis. It was widespread throughout Great Britain, and the prevalence eached the highest figure ever recorded there. Bulbar and espiratory paralysis and meningeal reactions preceding paral- ysis were more common than usual. The ministry of health ssued a special memorandum on the subject, arranged for spe- ial pathological investigations and sponsored a short film on arly diagnosis to be shown to doctors; London teaching hos- itals set up special treatment units for patients in the acute tage.

There was little public health legislation in Great Britain dur- ng the year; the Penicillin act and regulations of the ministry of health concerning streptomycin were framed for the proper control and use of these therapeutic agents. Substantial progress was made toward providing the nation for the first time with a comprehensive health service. After the passing of the National Health Service act in Nov. 1946, the ministry of health began to set up the necessary advisory and administrative machinery and make plans for the services required. The service was to begin on July 5, 1948.

**Europe.**—Diphtheria was prevalent on the continent of Europe, but the freedom from severe epidemics generally was remarkable. A discussion at the Royal Society of Medicine in May 1947 gave accurate information concerning the successful methods taken to control epidemic disease, especially typhus, and to provide a medical service in the British zone in Germany. In Greece aircraft were used to spray Athens with DDT as a precaution against the spread of the autumn cholera epidemic from Egypt.

**Egypt.**—An outbreak of cholera in the provinces in autumn became a serious epidemic. The Egyptian government requested the U.S. and British governments for supplies of anticholera serum; the country was declared an infested area, and neighbouring countries took strong measures to prevent spread of the disease. By the end of October the daily death rate was about 400, but by November, in the seventh week of the epidemic, it was waning. (A. S. My.; X.)

## Public Opinion Surveys.

The year 1947 was one in which public opinion survey work broadened to the point at which more than half of the earth's population was brought within the range of some well-established survey organization, and in which surveying was given depth and variety through the efforts of a far larger number of social scientists than had ever before attended to it seriously.

**National Polls.**—In Japan public opinion surveying received acknowledgment as a tool of government. A section on public opinion research was attached to the cabinet and approximately 60 surveying organizations were reported to be active. These groups ranged from one-man enterprises making their first survey to large organizations that had completed more than 25 national samples in a little more than a year of existence. All kinds of political, economic and social questions were covered, providing an unusual picture of a people in transition and under great stresses.

Many of the other national polls were also being used to reveal the structure of habitual social thinking as well as to define opinions on current news events. In Switzerland, where the wide variations in language from valley to valley present a special polling problem that had been laboriously met, opinion surveyors clearly established the political status of women. About 90% of the people thought women should vote for town officials, about 60% thought they should vote for cantonal officials, but only 20% wanted women to vote for federal officials. Twice as many Swiss wanted women to vote as wanted women to hold political office.

Most of the newer national polling agencies throughout the world engaged in market research as well as in opinion surveying and also made special economic and statistical reports from government and private data. While these activities are often forced by the need to offer a sufficient range of service to support a full-time staff, they tend to give a broader vision to the agencies so operating.

**Professional Groups.**—The year was marked by high activity in professional organization. In January representatives of European polling agencies met for three days in Paris and formed an International Commission on Public Opinion. In May, chiefs of the ten national institutes affiliated with the American Institute of Public Opinion (Gallup polls) met for a week at Loxwood Hall, Sussex, England, formed their own international association, and agreed to conduct a number of simultaneous polls on the same international topics. In September at a general international conference on public opinion held at Williamstown, Mass., a World Congress on Public Opinion Research was set up under a provisional constitution. At the same time an American Association for Public Opinion Research was formed to develop standards and to extend the methods and scope of the field.

**Sponsorship.**—The National Opinion Research Center moved from Denver, Colo., to Chicago, Ill., leaving behind it an affiliated centre devoted principally to regional study. The National Center became affiliated with the University of Chicago.

The reliance of public opinion research on journalistic and business corporation sponsorship remained a characteristic of the field. Henry Ford II announced the completion of an employee attitude study conducted by Elmo Roper and reaching results often unflattering to the management. Policy changes were made accordingly. There was, however, a notable increase in the sponsorship offered by governments and universities. Prominent among governmental sponsors were officials in Japan, Czechoslovakia, Hungary, Switzerland and the U.S. military government in Germany. Work at established university centres of public opinion research, such as Harvard, Princeton, Michigan, Chicago and Minnesota was expanded, and co-operative programs were launched in collaboration with the Social Science Research council.

Williams college, Williamstown, Mass., offered an interesting example of the building of public opinion study into the general education program of a small college. There a faculty member versed in the subject was appointed to bring his knowledge and library resources to bear on appropriate problems offered in the teaching of political science, history, economics, anthropology and other divisions of the social sciences. He was not held responsible for a separate public opinion teaching and research program, but rather was called upon to integrate the new methods into the older disciplines.

**Publications.**—Opinion survey organizations became so numerous and so widely scattered around the world that during the course of the year several lists and directories of them were issued or in process of compilation. One list was compiled by the American Marketing association. Another was contained in the mimeographed invitation and attendance lists of the Williamstown conference.

The Institute for Studies in Public Opinion and Attitudes of Mexico City announced a directory containing data on 400 specialists in the field, including accounts of surveys recently completed.

*Opinion News,* published by the National Opinion Research Center, was put on a regular twice monthly schedule and expanded to include current news of the opinion research field and to publish findings of the major surveying agencies. *International Journal of Opinion and Attitude Research* began quarterly publication at Mexico City under the auspices of the Institute for Studies in Public Opinion and Attitudes. It carried articles on surveying problems by authorities drawn from many parts of the world, but written in English. References to survey work and extended discussions of it became during the year an accepted commonplace in magazine articles and books on public affairs. (R. Wd.)

**Public Roads Administration:** *see* Federal Works Agency; Roads and Highways.

## Public Utilities.

During the early months of 1947 public utilities continued to be subject to pressure from commissions and consumers for rate reductions. As increases in wages and materials cut down the margins of net income available for rate reductions, however, the trend of commission activity was toward approval of rate increases, particularly in the telephone and local transport industries.

These readjustments in rates renewed interest in the basis used by state and federal commissions to determine increases or decreases in rates. It should be recalled that the judicial formula dating from the *Smyth* v. *Ames* case of 1898, requiring commissions to make findings of a fair return upon a fair value, was substantially relaxed by the U.S. supreme court in 1942 in the Natural Gas Pipeline Co. case. The complete rejection of the fair value rule in the Hope case of 1944 and in the Panhandle case of 1945 was accompanied by a sanctioning of the use of the net investment rate base by the Federal Power commission. As the law stood during 1947, it was no longer a concern of the courts whether rates were based upon investment or reproduction cost. Administrative agencies had acquired a new freedom to use their discretion, so long as they acted upon "substantial evidence" and the "end result" of their rate-making was not confiscatory.

**Legislation.**—The year was not especially productive of legislation concerning public utilities except in their labour relations. The Gwynne act imposed a federal statute of limitations of two years on back claims for damages against employers arising out of violations of the Fair Labor Standards act, and also outlawed all claims to portal-to-portal pay except under circumstances where such payments were customary or where employers could not show good faith. The Grant act merely extended excise levies on telephone, telegraph and electric-lighting service and on passenger fares, leaving the question of their ultimate disposal to a future congress.

The most controversial legislation, passed over a presidential veto, was the Taft-Hartley act. This act together with state legislation of similar import came in large part as a legislative response to prolonged strikes of the employees of public utilities, notably the telephone strikes and the prolonged walkout of electrical workers at Pittsburgh, Pa.

Although there were variations from state to state, the laws generally were designed to prevent strikes against public utilities. Their rigour varied from a mild statute to prevent violence and sabotage by pickets as in Texas to full-fledged compulsory arbitration as in Missouri. Ten states (Florida, Indiana, Michigan, Missouri, Nebraska, New Jersey, Pennsylvania, Texas, Virginia and Wisconsin) restricted strikes against public utilities. The severest restraints, after a preliminary trial and failure of mediation, provided for seizure and operation of properties by the governor, with prohibition of strikes during state control under penalty of loss of seniority and other employment rights by strikers, and fines assessed against labour unions and their officials. Disputes were to be settled by arbitration findings made by a special board. Lockouts by management were similarly prohibited.

At least 12 states (Arkansas, Arizona, Delaware, Florida, Georgia, Iowa, Nebraska, North Carolina, South Dakota, Tennessee, Texas and Virginia) took the further step of prohibiting both the closed shop and union shop. The Taft-Hartley law, while outlawing closed shops, authorized union shops if voted by a majority of employees. It categorically forbade boycotts, jurisdictional strikes and strikes against the government. Besides forbidding a number of labour practices and other union jectives relating to the employment relation generally, the ft-Hartley act was particularly important to public utility lustries in its prohibition of strikes affecting national health d safety. Strikes on railroads did not come under Taft-Hart-y provisions, but practically all other public utility strikes ght be thus controlled if the president deemed that national erests were imperilled.

**Federal Projects.**—The changed political complexion of con-ress had an effect upon appropriations for the further develop-ent of federal-power projects. In the interests of economy, e requests of the bureau of reclamation, the Bonneville Power ministration, the Southwestern Power administration, the ower division and the Oil and Gas division in the department the interior were cut from $170,729,000 to $98,574,438. A arked objective of the congressional economy was transmis-on lines. The Tennessee Valley authority was cut from $47,-0,000 requested to $18,700,000 appropriated. Rural Electrifi-tion administration funds for lending operations were cut om $250,000,000 to $225,000,000. The army engineers were ven $231,800,825 for flood-control projects which included ower. TVA was required to repay about $350,000,000 of its ower investment within 40 yr.

**General Operations.**—Despite evidences of a slowing up in deral promotion of the publicly owned segment of the electric-ower industry, electricity production and sale was carried to e highest performance records in its history. Generating ca-acity was in excess of 51,600,000 kw. with the relative propor-ons of water-power and fuel-using plants remaining about the me. Energy output increased to more than 255,000,000,000 w.hr. with sales and number of customers showing correspond-g increases.

A significant increase was shown in the expansion of the U.S. lephone plant. Slowed up by the war emergency the growth in lephones in service was from 21,600,000 in Dec. 1944 to 27,-30,000 by Oct. 1947 for the Bell system alone. This repre-nted about 80% of the total for the whole country. Unfilled rders for telephones, however, continued large in number 1,900,000 in Sept. 1947) because of the unavailability of witchboard capacity and outside plant in certain localities. lsewhere, in local transit service and in the expansion of natu-al-gas service, although some of the arrearages caused by World Var II were being made up, much work remained to be done at he close of 1947. Natural-gas transmission lines to the Pacific oast and into the middle western markets were the most im-ediate needs. (*See* also TENNESSEE VALLEY AUTHORITY.)

(M. G. G.)

**Canada.**—For a time during 1947 there was a threatened ationing of consumer gas in southern Ontario. At the end of uly the Prince Edward Island government placed all petroleum sed for heating and fuel in the public utility category because cute shortages were anticipated.

In New Brunswick the provincial government passed special egislation to control striking coal mines which supplied fuel for ower generation. The N.B. Electric Power commission expro-riated the generating and distributing facilities of the N.B. ower Co., including water-power rights on company-controlled ivers. In Quebec, controversy continued over the expropriation f three private companies by the Quebec Hydro commission. A nancial settlement was still uncompleted by the end of the ear.

Construction of additional commission power plants went orward in several parts of the province. In Ontario 7 large ydroelectric commission developments were under construction, nd 900,000 h.p. of new electric energy was in prospect. The lant at Decew Falls in southern Ontario came into operation, roducing 70,000 h.p.

On June 1, 1947, the Saskatchewan government set up a new crown corporation, the Saskatchewan Government Telephones. The former department of telephones retained only its regulatory functions.

The Canadian National railways remained the biggest public utility in Canada. During 1947 its gross revenue was $436,883,000, largest in its history, but increased operating costs left the railways with less net revenue than in 1946. (C. Cy.)

**Great Britain.**—Shortage of coal and the severe winter of 1946–47 affected gas and electricity supplies. Beginning Feb. 10, electricity supplies to industrial consumers in most parts of Great Britain were cut off, and domestic supplies were cut from 9-12 A.M. and from 2-4 P.M.; consumption of electricity was made an offense under Defense regulation 55. Most of these restrictions ended by the first week in March. During the same period coal stocks for the gas industry had fallen to less than two weeks' supply in hand and gas pressure to consumers was sometimes reduced, although supplies were not cut off. On April 24 the minister of fuel and power announced that as from May 5 no heating would be allowed in industrial and commercial premises until the end of October, and no gas or electric heating in homes until the end of September.

Active steps were taken to increase the supply of electricity, and to provide for the construction of 18 new power stations by the winter of 1950. Important projects included the new Bankside power station, London, and the £3,150,000 Glen Shira scheme in Argyllshire, Scot.

Domestic water supplies in many parts of Great Britain were affected by dry weather continuing into the autumn. Towns relying on catchment areas were the most acutely threatened, and engineers stated that at least 20 in. of rain were needed before normal supplies would be available in several parts of the north, reserves at Manchester being particularly low. The possibility of water rationing was seriously considered by the authorities.

**Europe.**—Other countries with new electricity schemes included the River Erne project in Eire, estimated to increase the output of the Electricity Supply board by 50%; Portugal and Switzerland, where important developments of hydroelectric power were made. There, however, as in Norway, shortages were caused by the exceptionally dry summer. In the U.S.S.R., a network of power stations was expected to supply Moscow with twice as much electricity as in 1940. This would be augmented by hydroelectric stations being constructed on the Moscow-Volga canal and elsewhere. At the end of five years the output of the Urals' power station would be five times that of all electrical stations in prerevolutionary Russia. (*See* also DAMS; ELECTRICAL INDUSTRIES; LAW; RAILROADS; RURAL ELECTRIFICATION; TELEGRAPHY; TELEPHONE.) (J. LN.)

**Publishing (Book):** *see* BOOK PUBLISHING.

## Puerto Rico.

A U.S. insular dependency in the West Indies; area 3,435 sq.mi.; pop., 1947 est. 2,113,058 (1940 census: 1,869,255). According to 1947 population estimates, whites comprised 77.1% of the total population, Negroes 22.9%; rural population was 64.1% of the total, urban population, 35.9%. Chief cities (with 1947 urban population estimates): San Juan, the capital (222,839); Ponce (72,402); Mayagüez (59,527); Arecibo (35,187); Caguas (27,352); Río Piedras (25,092). Languages: Spanish and English; religion: predominantly Roman Catholic.

**History.**—The most important development in the history of Puerto Rico during 1947 was brought about by public law 362 of the 80th congress of the U.S. (H.R. 3309), signed by President Truman on Aug. 5, 1947. This law amended the Organic act of Puerto Rico to provide: (1) that the governor of Puerto

Rico shall be elected by qualified voters of Puerto Rico every four years, beginning in Nov. 1948; (2) that the governor shall appoint the heads of the executive departments, with the advice and consent of the senate of Puerto Rico; (3) that there shall be a co-ordinator of federal agencies in Puerto Rico, appointed by the president, by and with the advice and consent of the senate of the U.S. Formerly, the governor, the commissioner of education, the attorney-general, the auditor and the justices of the supreme court had been appointed by the president. Under the above amendments only the auditor and the justices of the supreme court were to be appointed by the president.

**Education.**—A total of 406,588 pupils were enrolled during the 1947 school year in the public and private schools. Private schools had a total enrolment of 19,201 pupils. In the public schools the enrolment, a total of 387,387 pupils, was distributed as follows: 283,570 in public elementary day schools, 83,361 in public secondary day schools, 1,780 in vocational part-time and full-time schools, 14,498 in evening schools, and 4,178 in special groups for veterans. In the public schools the number of teachers, principals, assistant principals and assistant superintendents was 9,217. Private schools employed a total of 813 teachers. A total of $22,832,277 was spent for educational purposes at the elementary and secondary level. Of this total, $13,499,072 was spent from government funds and $1,136,743 by private schools from private sources.

**Communications.**—During the fiscal year 1946–47 a total of 42,367 motor vehicles were registered of which 23,847 were automobiles, excluding government-owned automobiles, 9,395 were heavy trucks, 6,233 were light trucks and 2,892 were other vehicles. The insular department of the interior kept under maintenance 3,227 km. of roads.

During the fiscal year 1946–47 a total of 2,587 vessels with a total gross tonnage of 7,212,277 tons arrived at the several ports of the island.

At the close of the fiscal year 1946–47 there were 27,067 telephones in service and 13 radio broadcasting stations operating in the island.

**Trade.**—The total value of imports into Puerto Rico during the calendar year 1946 was $287,617,592. Of this total, $263,404,605 (91.6%) was imported from the U.S. The total value of exports for the same period was $168,182,150, of which $163,941,239 (97.5%) was exported to the U.S.

**Banking and Finance.**—Bank deposits on June 30, 1947, were $283,865,412; debits were $245,142,395 and bank loans $100,479,449.

Insular government revenues for the fiscal year 1946–47 totalled $184,126,849 of which $88,019,554 was received in the general fund and $96,107,295 in all other funds. The total disbursements for the fiscal year 1946–47 amounted to $194,194,900. Of this total, disbursements from the general fund amounted to $97,271,834 and from all other funds $96,923,066.

**Agriculture.**—During the 1947 crop year an estimate of 298,158 ac. of sugar cane were harvested for a total production of 9,286,282 tons of cane.

The insular tobacco production quota for 1946–47 was set at 250,000 cwt. It was estimated that 30,432 ac. of tobacco would be harvested during the 1947 harvest season. The coffee crop for 1947 was estimated at 295,815 cwt.

**Manufacturing.**—Total sugar production for the 1947 crop year amounted to 1,087,151 short tons of raw sugar 96 degree basis. Sugar refining operations in the island yielded a total of 228,909 short tons of refined sugar, 96 degree basis.

Total production during fiscal year 1946–47 of some other manufactured products was as follows:

| Product | Unit | Production |
|---|---|---|
| Rum . . . . . . . . . . . . | Wine gallon | 3,648,020 |
| Paperboard. . . . . . . . . | Ton | 5,364 |
| Cement. . . . . . . . . . . | Barrel of 376 lb. | 2,201,005 |
| Cigars . . . . . . . . . . . | Thousands | 94,476 |

## Pulitzer Prizes.

The Pulitzer prizes in journalism and letters, established in Columbia university by the will of Joseph Pulitzer, were given their 31st annual award in 1947. The prizes in letters, five in number, amounting to $500 each, were awarded as follows: fiction award to Robert Penn Warren, professor at the University of Minnesota, for *All The King's Men* (Harcourt); history award to James Phinney Baxter, 3rd, president of Williams college, for *Scientists Against Time* (Atlantic Monthly Press); biography award, posthumous, to *The Autobiography of William Allen White* (Macmillan); poetry award to Robert Lowell for *Lord Weary's Castle* (Harcourt). No drama award was made.

Prizes in journalism, $500 each, eight in number, were distributed as follows: American newspaper prize for meritorious public service to the *Baltimore Sun* for a series of articles by Howard M. Norton on the administration of unemployment compensation; for local reporting to Frederick Woltman of the *New York World-Telegram* on Communist infiltration in the U.S.; for telegraphic reporting (national) to Edward T. Folliard of the *Washington Post* for articles on "Columbians, Inc."; for telegraphic reporting (international) to Eddy Gilmore, chief of the Moscow bureau of the Associated Press; for distinguished editorial writing to William E. Grimes, editor of the *Wall Street Journal;* for a distinguished example of a cartoonist's work to Vaughn Shoemaker for "Still Racing His Shadow" in the *Chicago Daily News;* for news photography to Arnold Hardy for his dramatic picture of the Winecoff hotel fire in Atlanta, Ga., distributed by the Associated Press; special citation in 1947, the Pulitzer centennial year, to Columbia university and the graduate school of journalism for their efforts to maintain and advance the high standards governing the Pulitzer prize awards, and to the *St. Louis Post-Dispatch* for its unswerving adherence to the public and professional ideals of its founder.

The Pulitzer prize in music was given to Charles Ives for *Symphony No. 3.* (B. Gm.)

## Purdue University.

A coeducational state institution at Lafayette, Ind., established in 1869 and so named from John Purdue, principal donor of money and land with which to start the university. It embraces schools of civil engineering and engineering mechanics, electrical engineering, chemical and metallurgical engineering, aeronautical engineering, mechanical engineering, agriculture, including a degree in forestry, agricultural engineering, home economics, science and pharmacy. Degrees also are given in trade and industrial education, engineering law and naval science and tactics.

Some significant developments at Purdue during 1947 included: the start of construction of a new synchrotron, to supplement the work done by the cyclotron; the development of a new hay drying and also a new corn drying machine, of potential widespread use in a "soft" corn year such as was experienced in 1947; the discovery of the considerable importance of the use of salt in the rations for hogs, greatly reducing cost of production; the rapid expansion of the work in technical extension, providing training in industrial centres of the state and also offering freshman work to more than 1,200 students in off-campus centres; the discovery of important phenomena by which such materials as germanium, silicon and tellurium, etc., classed as semiconductors, can be made to transmit electricity by either positive or negative carriers, obeying the so-called classical laws as well as the ultramodern concepts of quantum mechanics (this discovery promised to be highly important in radio and radar development); the discovery that corn yields could be increased as much as 10 bu. per ac. by the use of 2,4-D in spraying fields to control weeds and avoid the injury done by cultivation to the roots when the crop is well advanced. (For statistics of endowment, faculty, library volumes, etc., *see* Universities and Colleges.)

## Pyrite.

World production of pyrite increased from about 6,000,000 short tons in 1945 to 7,700,000 tons in 1946, as compared with a prewar high of 11,000,000 tons.

**United States.**—Pyrite output increased from 809,308 short tons in 1945 to 910,977 tons in 1946, while at the same time the sulphur content rose from 41.0% to 41.5%. Imports declined from 208,888 tons to 204,840 tons. (*See* also Sulphur.)

(G. A. Ro.)

**Q Fever:** *see* Pneumonia.
**Quakers:** *see* Friends, Religious Society of.

**uebec.** The province of Quebec, Canada, occupies the lower basin of the St. Lawrence, north of New York and ew England, to Hudson bay and strait. Area, 594,534 sq.mi.; p. (1945 off. est.), 3,580,000. The cities (1941 census) are: ontreal (903,007), the largest city in Canada; Quebec (150,-7), the provincial capital; Trois Rivières (42,007); Sherooke (35,956); Hull (32,947). War growth was estimated have given Verdun a population of 75,000 and Sorel almost ,000. The French language predominates, 80.9% of the peoe being of French origin. The government is affiliated with e Catholic faith, as are 86.9% of the people. Quebec is the ly Canadian province having its own legislative council (sene). The lieutenant governor in 1947 was Sir Eugene Fiset; e premier, Maurice Duplessis.

**History.**—The provincial government continued to be in the nds of the Union Nationale, conservative and favourable to ovincial autonomy, hence non-Liberal in dominion issues and ssatisfied with the English privy council's decision in January 47 that Canada can abolish appeals to the council. It easily on the only provincial by-election in 1947 in Huntingdon. The loc Populaire, founded in 1942 to oppose conscription, fell art in the summer of 1947, and one of its two deputies ined the government party. Adrien Arcand's National Unity rty was reorganized in November, with fascist and separatist ndencies but with little strength. In dominion governmental fairs the province remained staunchly Liberal, the Liberal rty winning by-elections in January at Sorel (Gerard Couroyer) and late in March at Montreal-Cartier (Morris Hartt), beit not without some effort. Support was given against the ommunists and separatists, in the Cartier election; and the urch-advised labour unions and youth groups were active gainst the reputedly communist-inspired dock labourers' and eamen's strikes in August. Premier Duplessis announced offially in the assembly that his government had uncovered a ommunist plot, involving 12,000 men, to seize key points and ominate the province. The assembly asked the dominion to an the Labour-Progressive party in Canada. A Jehovah's Vitness was convicted in court on charges of seditious libel gainst the government.

**Education.**—Laval university, Quebec, undertook the construction of ew premises on a new campus on the outskirts of the city, with a 4,000,000 grant from the province. The number of schools in the rovince in 1946 was 10,078, with 32,580 teachers and 724,397 pupils.

**Commerce, Communications.**—Montreal, Canada's largest seaport, in 946 handled nearly 1,000,000,000 tons of cargo, in 1,600 ocean-going hips and 4,400 river and lake ships. In 1945 the imports of the provnce were $470,362,664 and the exports $1,073,036,228. In 1945 the rovince had 39,649 mi. of highways, of which 22,864 were surfaced. n 1944 the province had 5,186 mi. of railroads, and 397,245 telephones.

**Agriculture.**—The leading farm crop of Quebec is hay, with an annual roduction of $85,488,000 (1944). The total field crops in 1944 were alued at $153,765,000, the yield of oats being valued at $24,241,000, vith potatoes $21,367,000. Dairy production in the same year included utter $28,217,000, and cheese, $12,739,000. Buckwheat (sarrasin), naple syrup and tobacco (wrapper type) are characteristic Quebec farm roducts. The value of all agricultural output in 1944 was $371,275,000. n 1945 livestock was valued at $204,407,000.

**Forests, Newsprint, Fisheries, Furs.**—The production of newsprint, Queec's leading industry, was estimated in 1947 to have increased to about ,200,000 tons (*i.e.*, by about 900,000 tons, as compared with the revious high point attained in 1946). The 1947 price average rose to 88.50 per ton, as compared with $72.25 in 1946; and at the end of he year the price was $90, with an increase to $96 announced by many ompanies for Jan. 1, 1948. The production of other paper products n the province was estimated to have risen to approximately 500,000 ons in 1947. The production of lumber in 1944 was 653,989,310 cu.ft., alued at $114,918,046. Fishery products, cod, herring, mackerel and obster. had a 1945 value of $5,361,872; while furs in 1945 were orth $5,059,995.

**Manufacturing and Other Industries.**—An outstanding development of 947 was the acquisition of the wartime aeroplane plant at Montreal by he Electric Boat Co. of New York and Groton. This large plant was ontinuing in operation to turn out planes for the Trans-Canada Air ines and for the royal Canadian air force. The textile mills of the rovince were notably active in 1947, and at one time the recruiting of emale labour in France was resorted to by a St. Georges factory. The ross value of all Quebec manufactures in 1944 was $2,929,685,183; he number of employees, 424,115; and the wages, $668,156,053; and hese figures were later substantially exceeded. An important new aspect of the tourist industry was the winter tourist trade from the eastern United States for snow sports in the Laurentian mountains north of Montreal, centring at Mt. Tremblant, which was understood to have brought several millions of dollars of revenue in 1947. The summer touring by automobiles in 1947 was more than 30% greater than in the previous record year of 1946.

**Minerals, Hydroelectric Plants.**—In the autumn of 1947 the province announced that tremendous iron ore deposits had been discovered in the Ungava region west of Labrador, where it had in 1946 leased 300,000 sq.mi. to the Hollinger Northshore Exploration Co. The ore body was reported to rival that of the Mesabi range in Minnesota, but its remoteness necessitated a project involving a $75,000,000 railway. In November, also, the Quebec Manganese Mines, Ltd., struck high-grade manganese ore on Grindstone Island in the Magdalen group and claimed reserves of from 40,000 to 140,000 tons. It planned extraction of 160 tons per day. Copper prices, controlled, rose to $16.62 per 100 lb. (carload lots) on Jan. 21, and to $21.50 on June 10. The price of the heavy aluminum production at Arvida is not controlled but was maintained at $14 per 100 lb. ingots throughout 1947. The important gold and asbestos productions were well-maintained during the year. Hydroelectric plants had an installed capacity of some 6,000,000 h.p., and a large share of them were operated by the Quebec Hydro-Electric commission of the provincial government. (W. Ft.)

**Quicksilver:** *see* Mercury.

**Quo Tai-chi** (1888– ), Chinese government official and diplomatist, was born in Kwang-tsi, Hupeh province. He won a scholarship offered by the Chinese imperial government to study in the United States and attended the University of Pennsylvania, Philadelphia, Pa., (1908–11), graduating with a B.S. degree. Returning to China in 1912, he joined Sun Yat-sen's movement, becoming secretary to Dr. Sun. In May 1932, he went to London as Chinese minister to Great Britain. He represented his country at the Disarmament conference and the World Economic and Monetary conference in 1933 and at the assembly of the League of Nations (1932–33). In 1934, he became Chinese representative on the League council and the following year, his status in London was raised to that of ambassador. He left London in 1941 to return to Chungking as foreign minister in Chiang Kai-shek's government. In Feb. 1946, Quo was named China's permanent delegate on the U.N. Security council. During the Iranian dispute, he voted with the majority on the Security council who rejected the soviet request to remove the controversy from the agenda. His appointment to the Atomic Energy commission was disclosed May 3.

In 1947, Quo was appointed to the Security council's Commission for Conventional Armaments and to the general assembly's General committee.

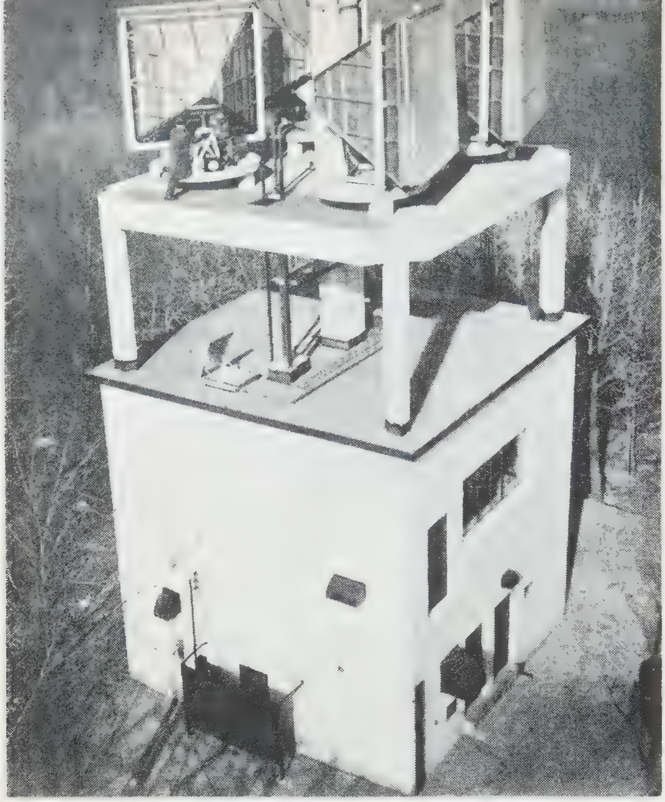
**Racing and Races:** *see* Air Races and Records; Automobile Racing; Dog Racing; Horse Racing; Motor-Boat Racing; Track and Field Sports; Yachting.

**Radar:** *see* Electronics; Munitions of War.

**Radio.** **Growth and Developments.**—It was estimated unofficially that about 5,500 long-, medium- and shortwave broadcasting stations (including relays or boosters) were operating more or less regularly, or were under construction throughout the world, in 1947. This estimate compared with about 4,865 the previous year. Frequency modulation (FM) and television stations were not included in these figures.

*U.S. Stations.*—The boom in station construction in the U.S. continued with only a slight slowing of pace. The number of amplitude modulation (AM) stations on the air or under construction grew from about 1,500 in Dec. 1946 to almost 2,000 a year later. These totals compared with fewer than 1,000 stations when the war ended in 1945. Despite the 100% gain, however, it did not appear that the end of the expansion was in sight. When the year ended, about 650 applications were awaiting action by the Federal Communications commission (FCC), which meanwhile predicted that there would be at least 2,250 AM stations by the end of 1948.

*Listening.*—At least 132,000,000 radio receiving sets were in



RADIO RELAY STATION, forming a link in the first broad-band system connecting New York city and Boston, Mass., which was completed in 1947 for the transmission of television and of many simultaneous telephone conversations

use throughout the world in 1947, compared with about 125,000,000 sets the year before. Approximately 66,000,000 of these, or one-half, were in the U.S., which had 60,000,000 in 1946. A summary prepared by Caldwell-Clements, Inc. and *Tele-Tech* magazine showed 37,000,000 U.S. homes with radios in 1947 compared with 35,000,000 in 1946. The number of automobile radios included in the 66,000,000 total was estimated at 9,000,000: a gain of 3,000,000 over 1946 figures.

The 1947 distribution of radio receivers among continents was shown by Caldwell-Clements, Inc. as follows:

| | |
|---|---|
| North America | 70,500,000 |
| Europe | 46,000,000 |
| Asia | 6,500,000 |
| South America | 5,500,000 |
| Australia | 2,500,000 |
| Africa | 1,000,000 |
| Total | 132,000,000 |

*Frequency Modulation.*—The year brought FM the greatest advances it had yet experienced in listenership and general acceptance as a broadcasting medium. By the end of 1947 more than 350 FM stations were on the air and approximately 700 others were under construction or had been authorized, compared with 100 stations on the air and 600 in the process of construction at the start of the year. After granting about 350 new-station applications during 1947 (compared with a record 500 granted in 1946), the FCC still faced about 125 applications and others continued to come in.

Largely because of delays in securing transmitting equipment, fewer than 100 stations were operating with their fully authorized powers. About 250 others were on the air with regular program schedules, operating on an "interim basis" with reduced power under special FCC authorization designed to build up FM listenership. There were 500,000 to 750,000 FM receivers in use in late 1946; the number grew to about 2,000,000 during the ensuing 12 months.

As more and more FM stations went on the air, it became apparent that the existing channel-allocation plan would result in destructive interference between stations operating in the same general areas. To eliminate this problem, the FCC in July ordered into effect a new allocations scheme based on a minimum separation of four channels (8 mc.) between stations in the same area, instead of the previous 4-mc. separation plan. As a result, the dial assignments of hundreds of stations were changed and many stations already on the air had to move to new frequencies, but the change-over was accomplished with a minimum of disturbance.

*Facsimile.*—A number of technical advances were made in the field of facsimile transmission in 1947, although it remained an "experimental" (noncommercial) operation.

The FCC announced in July 1947 that "cooperative activity by manufacturers, broadcasters, newspaper publishers and others indicates that transmission of printed matter and pictures may soon become a regular broadcast service." The Radio Technical Planning board (R.T.P.B.) had submitted proposed technical standards a few weeks earlier. Because differences of opinion existed as to whether both 8.2-in. and 4.1-in. scanning lines should be provided at the same line rate of 105 lines per inch, however, the FCC decided that further tests and comparisons should precede adoption of standards.

Other facsimile activity, the commission pointed out, included: a news service for aeroplane passengers, in which radioed press dispatches were printed aboard an air liner in four columns at the rate of 500 words a minute; use of facsimile by a New York bank for rapid transmission of reproductions of checks and other records between its downtown and uptown offices and army air force plans for installation of a facsimile system to transmit weather maps over the U.S. for the information of pilots.

*Stratovision.*—The first phase of careful testing of this new system of air-borne relays demonstrated that the plan is feasible, according to the Westinghouse Electric and Manufacturing corporation, which developed it. At the year's end Westinghouse was planning one of the most extensive research projects in electronics history to serve as the second phase of the experiments. Hundreds of thousands of television and FM set owners were slated to serve as volunteer monitors in the exhaustive tests which were being arranged. Stratovision's backers predicted that some 14 transmitter-equipped planes, flying fixed courses, might well be able to relay eight or nine different program services—AM, FM and television—to almost four-fifths of the U.S. population.

**Commercial Broadcasting.**—Radio stations in approximately 40 countries sold time for advertising in 1947, about the same as in other late years.

*U.S. Radio Bill.*—With the growth of FM and television, radio became a $2,000,000,000 business in 1947. Caldwell-Clements, Inc. and their *Tele-Tech* magazine estimated the radio bill of the U.S. in 1947 at $2,115,000,000; as compared with $1,732,000,000 in 1946. The 1947 total was broken down as follows:

| | |
|---|---|
| Sales of time by broadcasters, 1947 | $350,000,000 |
| Talent costs | 60,000,000 |
| Electricity, batteries, etc., to operate 66,000,000 receivers | 220,000,000 |
| 17,000,000 aural receivers, at retail value | 800,000,000 |
| 170,000 television receivers, at retail value | 120,000,000 |
| 66,000,000 replacement tubes | 90,000,000 |
| Radio parts, supplies, etc. | 100,000,000 |
| Phonograph records, 325,000,000 | 300,000,000 |
| Radio set repairs, servicing | 75,000,000 |
| Total | $2,115,000,000 |

*evenues and Expenses.*—An FCC report released in Nov. 7 covering the broadcasting industry's 1946 financial affairs wed that total broadcast revenues (receipts after payment of nmissions to agencies, representatives, brokers, etc.) had tinued to climb, reaching $322,552,771 as compared with previous record of $299,338,133 reached in 1945. But this 5% gain was more than offset by a 14.06% rise in expenses, ch went from $215,753,845 in 1945 to $246,086,525 in 1946. result was that total broadcast income (revenues less exses, before payment of federal income taxes) dropped from ,584,288 to $76,466,246, an 8.52% loss. It was the second secutive slump in broadcast income, which had climbed conently during the years of World War II. In dollar volume decline was comparable with that noted in 1945.

The 1946 report was based on data provided by 8 networks l 1,025 stations, as against 10 networks and 901 stations reting in 1945. The figures relate to AM operations only, not FM and television.

The 8 networks and their 29 owned-and-operated stations in 46 reported broadcast revenues totalling $101,968,989 (a 6% gain over the $100,998,519 reported by 10 networks and owned-and-operated stations in 1945); broadcast expenses gregating $82,624,866 (6.04% above the 1945 figure of $77,-9,904) and broadcast income of $19,344,123 before federal ome taxes (16.18% less than the $23,078,615 income of 45).

*Receipts from the Sale of Time.*—Always the backbone of oadcasting's economy, time sales reached a record $334,078,-4 in 1946, a gain of 7.6% over the 1945 total of $310,484,046. th figures include commissions paid to agencies, etc., which oadcasters regard as an expense of sale, and which in 1946 talled $45,469,650 (compared with $43,923,466 in 1945).

The 1946 time-sale total was composed of $134,781,108 for ne on national and regional networks, $82,917,505 for nontwork time sold to national and regional (spot) advertisers d $116,380,301 for nonnetwork time sold to local advertisers.

The increase in industry revenues was almost exclusively in e field of nonnetwork time sales, which gained 13% while ceipts from network time sales rose less than 1%. Of the two pes of nonnetwork time sales, those to local advertisers ined 17% and those to "spot" advertisers went up 8%.

*Industry Balance Sheet.*—Table I, compiled from FCC recrds, summarizes 1946 revenues, expenses and income of 8 etworks and 1,025 AM stations.

**Table I.**—*Revenues and Expenses of the U.S. Radio Industry, 1946*

| | | |
|---|---|---|
| ne Sales: | | |
| Network | $134,781,108 | |
| Nonnetwork | 199,297,806 | |
| Total | | $334,078,914 |
| duct: Commissions to agencies, etc. | | 45,469,650 |
| et time sales | | $288,609,264 |
| idental Revenues: | | |
| Sale of talent; fees | $ 16,763,049 | |
| Other | 17,180,458 | |
| Total | | $ 33,943,507 |
| tal broadcast revenues | | $322,552,771 |
| tal broadcast expenses | | 246,086,525 |
| oadcast income (before federal income taxes) | | $ 76,466,246 |

*Average Station's Finances.*—Income of the average station ropped from $77,633 in 1945 to $73,404 in 1946, or by 5.5%, cording to FCC figures based on reports from 831 identical ations (*i.e.*, stations operating in both 1945 and 1946 and ithout change in status with respect to class; operating time d network affiliation or nonaffiliation). A comparison of average revenues, expenses and incomes for these 831 AM stations was provided by the FCC in Table II.

**Table II.**—*Average Station's Finances, 1946 and 1945*

| | 1946 | 1945 | % Increase (decrease in parenthesis) |
|---|---|---|---|
| al broadcast revenues | $268,583 | $249,114 | 7.82 |
| al broadcast expenses | 195,179 | 171,481 | 13.82 |
| oadcast income (before federal income taxes) | 73,404 | 77,633 | (5.45) |

A breakdown of this table, to show the averages for national network affiliates and for nonaffiliates, was provided as follows:

**Table III.**—*Per-Station Averages, According to Affiliation or Nonaffiliation with National Networks, 1946 and 1945*

| | 704 Affiliates | | | 127 Nonaffiliates | | |
|---|---|---|---|---|---|---|
| Year | Revenue | Expenses | Income* | Revenue | Expenses | Income* |
| 1946 | $279,002 | $197,971 | $81,031 | $210,829 | $179,704 | $31,125 |
| 1945 | 260,963 | 174,825 | 86,138 | 183,430 | 152,947 | 30,483 |

*Revenue less expenses, before federal income taxes.

*Broadcast Expenses.*—Segregation of specific expenses of broadcast stations in 1946 had not been completed by the FCC at the end of 1947, although early tabulations showed total expenditures of $246,086,525 for 8 networks and 1,025 AM stations, compared with $215,753,845 spent by 10 networks and 901 stations the year before. It appeared likely that the major expense items would rank in their usual order, which, among reporting stations having as much as $25,000 in time sales (and not counting network expenses), was approximately as follows in 1945: Programming, 36%; general and administrative, 33%; technical department, 16% and sales department, 15%.

*Losses.*—Although 1945 was the last year for which detailed information was available with respect to stations suffering financial losses, an indication of recent years' trends was given in the FCC's *An Economic Study of Standard Broadcasting* (see *Economic Analysis*, below). The number of losing stations was expected to be substantially greater in 1946 and 1947 than in the few previous years, because of the large number of new outlets just getting into operation. An FCC survey conducted in April 1947, limited to AM stations authorized after Sept. 1945, showed 154 stations were unprofitable at the time of the survey, while 156 were profitable. Table IV, taken from the commission's economic study, summarizes the extent of unprofitability among all AM stations in seven prior years.

**Table IV.**—*AM Stations Showing Losses, 1939–45*

| Year | Stations reporting loss* | Total number of commercial AM stations | Ratio of losers to total stations | Total losses (in thousands of dollars) |
|---|---|---|---|---|
| 1939 | 227 | 696 | 32.6% | $2,220.5 |
| 1940 | 187 | 756 | 24.7 | 1,551.8 |
| 1941 | 177 | 808 | 21.9 | 1,209.8 |
| 1942 | 194 | 842 | 23.0 | 1,339.4 |
| 1943 | 94 | 841 | 11.2 | 502.7 |
| 1944 | 41 | 875 | 4.7 | 154.3 |
| 1945 | 50 | 901 | 5.5 | 643.0 |

*Reporting broadcast expenses in excess of broadcast revenues.

*Tangible Broadcast Property.*—The FCC failed to compile and release its customary report on the original and depreciated costs of stations and associated broadcasting equipment. The latest available report, for 1945, gave the following totals for 891 AM stations, 4 nation-wide networks and their 10 key stations and 6 regional networks: cost to licensee, $88,101,940; depreciation under present licensee, $46,506,921; depreciated cost, $41,595,019. The increase in the number of stations after 1945 was expected to boost these figures substantially.

*Economic Analysis.*—*An Economic Study of Standard Broadcasting*, issued by the FCC on Oct. 31, 1947, "assumed" there would be 2,250 AM stations in the U.S. in 1948 and predicted that 1,063—almost 50%—would be in economic "problem areas" from the standpoint of competition with other stations and other media. The standard used in defining "problem areas" was the maximum number of stations operating on V-J day in any city of comparable size. Thus, since no community with 25,000 to 50,000 population had more than two stations on V-J day, it was assumed that any city in that population group was or would become a "problem area" whenever it had three or more stations. A total of 287 communities—167 of them having less than 25,000 population—were characterized as problem areas under this definition.

The local part-time stations—usually 250-watt outlets operating only in daytime—were found to be "the most commonly profitable new stations," with full-time locals next. The least commonly profitable class, among the postwar stations, was the full-time regional (500 to 5,000 watts).

Among all the new stations surveyed by the commission, expenses averaged $5,693 per month while revenues averaged $50 less. For profitable stations, average revenues were $6,167 and expenses $4,995, while unprofitable stations averaged $4,961 in revenues and $6,610 in expenses.

The 112-page economic survey, first of its kind, also analyzed radio's revenue potential at length, considering in detail the possible effects of general business activity and competition both from other media and from other stations.

**Programming.**—*Network Commercial Programs.*—The 15 most popular network programs as of Nov. 30, 1947, are shown below as reported by C. E. Hooper, Inc., creator of the Hooperatings-Radio Audience Measurement, along with their rank in corresponding reports for 1945 and 1940:

| *Nov. 30, 1947* | *Hooperating* | *Nov. 30, 1945 position* | *Nov. 30, 1940 position* |
|---|---|---|---|
| 1. Bob Hope | 25.9 | 1 | 4 |
| 2. Jack Benny* | 25.3 | 6 | 1 |
| 3. Fibber McGee & Molly | 25.0 | 2 | 3 |
| 4. Charlie McCarthy | 24.4 | 5 | 2 |
| 5. Amos 'n' Andy | 22.6 | 16 | 31 |

---

*Includes first and second broadcasts.
†Computed Hooperating.

The top ten daytime leaders reported by Hooper as of Nov. 15, 1947, with their respective positions in 1945 and 1940, were:

| *Nov. 15, 1947* | *Hooperating* | *Nov. 15, 1945 position* | *Nov. 15, 1940 position* |
|---|---|---|---|
| 1. Our Gal Sunday | 6.9 | 13 | 6 |
| 2. Aunt Jenny | 6.7 | 20 | 32 |
| 3. Young Widder Brown | 6.5 | 5 | 22 |
| 4. Romance of Helen Trent | 6.5 | 10 | 19 |
| 5. Stella Dallas | 6.4 | 12 | 4 |
| 6. Ma Perkins (CBS) | 6.2 | 14 | not on |
| 7. Backstage Wife | 6.0 | 7 | 13 |
| 8. Pepper Young's Family | 6.0 | 3 | 3 |
| 9. Right to Happiness | 6.0 | 11 | 9 |
| 10. Portia Faces Life | 5.9 | 4 | 60 |

*Programming Trends.*—One of the principal developments in the field of national network programming was the ascendancy of the so-called "disc jockey" program in which prominent entertainers, such as Martin Block, Paul Whiteman and Ted Husing, took over the role of master of ceremonies on musical records shows. There also was a definite trend toward transcribed programs, following Bing Crosby's introduction of the transcribed series (as distinguished from "live" broadcasts) in 1946. The fate of the wholly transcribed musical broadcast, of course, would depend upon whether or not the musicians' union would ultimately relent in its decision to play no more for records and transcriptions (see *Labour Unions* below).

Like the preceding year, 1947 was filled with program shifts, discontinued shows and new programs, so far as national network programming was concerned. Program types, on the other hand, remained relatively stable. Among evening shows, dramatic programs continued to lead all other classifications and gained 3.1% in network sponsored time. Variety programs, in second place, dropped 7%. News and commentaries, popular music, quiz shows and concert music all showed gains. Among daytime sponsored shows on the networks, the serial drama remained well ahead of all other types in point of air time, although it dropped 6% below its 1946 level.

*Special Events.*—Radio took its listeners into virtually all quarters of the world in its presentation of both spot news and features, and, as in preceding years, was used extensively by political leaders to reach constituents and subjects. Probably its most lavish coverage was given to the wedding of Princess Elizabeth of Great Britain and the duke of Edinburgh, in London in November. In the political field, stations and networks used wire recorders more extensively than ever before to cover congressional hearings.

*FM.*—FM programming made advances, although still hampered by the American Federation of Musicians' (A.F.M.) ban on the duplication of AM live musical programs on FM stations. With more and more stations on the air, many of them unaffiliated with AM stations—and thus unable to duplicate AM nonmusical or recorded-music programs—a more diversified program fare was available.

For the most part, independent FM stations offered much the same type of programming as the AM stations, but emphasized musical programs in order to display better the high-fidelity traits of FM. At the year's end, it appeared likely that the A.F.M. ban on AM-FM duplication might soon be lifted, so that FM stations associated with AM network affiliates would be permitted to offer AM network programs to FM set owners.

*Network Programs by Types.*—Table V, prepared by C. E. Hooper, Inc., shows the general composition of commercial evening programs broadcast on the major AM networks during October, November, December of 1946 and 1947.

**Manufacturing.**—*Receiver Production.*—Industry authorities estimated that the 1947 production of radio receiving sets approached 18,500,000 units, a gain of about 23% over the previous record of 15,000,000 turned out in 1946. The estimates were based on a report issued by the Radio Manufacturers' association (R.M.A.), representing more than 90% of the industry, which showed that 1947 receiver output by R.M.A. members totalled 17,695,677 units.

Of the year's output, 1,175,104 units were combination AM-FM receivers, compared with 181,485 in 1946, while 178,571 were television sets as against 6,476 the previous year. Production of automobile and portable receivers doubled the 1946 totals, with 3,029,637 auto sets against 1,153,458 in 1946, and 2,153,095 portables against 1,022,689. Of the home receivers built, 72% were table models, 13% consoles and 15% portables.

*Receiver Tube Production.*—The output of radio receiver tubes dropped slightly in 1947. R.M.A. reported its members turned out 199,533,827 tubes, compared with approximately 205,000,000 tubes produced in 1946.

**Networks: AM, FM.**—Unlike 1946, which saw two networks cease operations, 1947 brought an increase in this field. There were no casualties. The number of major AM networks remained at four—National Broadcasting Co., Columbia Broadcasting system, Mutual Broadcasting system and American Broadcast-able V.—*General Composition of Network Commercial Evening Programs*

October through December, 1947 and 1946

| e of program | 1947 % of time on air | 1946 % of time on air |

| cert music | 3.7 | 3.2 |
| ellaneous | 3.4 | 6.3 |

Co.—but for the first time FM broadcasting achieved net- rk status.

Continental FM network was organized among FM stations ng the North Atlantic seaboard by Everett L. Dillard, owner WASH (FM) in Washington, D.C., and of KOZY (FM) in nsas City, and president of the FM association. Continental nmenced operation in March and had 32 affiliates by the end the year. Elsewhere, regional FM networks were getting der way on smaller scales. Instead of using the conventional re-line relays, many FM network affiliates were linked by ect broadcast and rebroadcast from one station to another.

FM association officials claimed that the growth of FM net- rks generally was being impeded by a lack of high-fidelity re-line relay facilities, and filed a protest with the FCC in ecember charging the American Telephone and Telegraph mpany with discriminating against FM in this respect. In sponse to the petition's request for a hearing, the commission dered a conference with FM association and A. T. & T. offi- ls to be held in January in hopes of reaching a solution.

**Trade Associations.**—The National Association of Broad- sters (N.A.B.), dominant trade organization of the broad- sting industry, undertook a number of major projects under e leadership of Pres. Justin Miller.

One of its principal and most provocative campaigns was for loption of a code of self-regulation for broadcasters. Setting standards for stations to follow in handling various types of rograms, and imposing limits on the extent of commercial essages, the proposed code was the subject of heated debate N.A.B.'s annual convention, held in September in Atlantic ity, N.J. Later it was substantially rewritten to incorporate hanges suggested by the membership. Feb. 1, 1948, had been t tentatively as the effective date of the standards, but the A.B. board postponed the date indefinitely to permit revision.

The Broadcast Measurement bureau, formed by broadcasters, dvertising agencies and advertisers to serve as radio's own udience surveyor, continued to function under the presidency f Hugh M. Feltis, and in midyear a 15-point plan for its per- nanent continuous operation was approved with support of the ational Association of Broadcasters, the Association of Na- onal Advertisers and the American Association of Advertising gencies.

Broadcast Music, Inc. (B.M.I.), operating as an independent nit alongside N.A.B., received its first paid president with the lection of Carl Haverlin, who had been the Mutual Broad- asting system vice-president in charge of station relations. In ne past, the B.M.I. presidency had been one of the duties of ne president of N.A.B. Later in the year, B.M.I. acquired the apital stock of the Associated Music Publishers (A.M.P.), in- olving the publishing and performing rights to the entire .M.P. catalogue as well as the catalogues of 15 foreign music ublishing firms.

The National Association of Radio Station Representatives N.A.R.S.R.) was organized in September and straightway filed complaint with the U.S. attorney-general and the FCC charg- g that the Columbia Broadcasting system (CBS) had illegally ncroached on their business by taking over nonnetwork time les of several CBS affiliates formerly represented by N.A.- S.R. members. Neither the justice department nor the FCC had acted at the year's end.

FRED ALLEN (right) "visiting" Jack Benny's show at the Roxy theatre in N.Y. during May 1947. Both entertainers were among the ten leading favourites in radio according to 1947 ratings by C. E. Hooper, Inc.

**Employment.**—Seven networks and 924 AM stations employed 34,831 persons in the first week of Feb. 1947 and paid them $2,408,246, an average of $69.14 per person, according to the FCC's annual report on employment and compensation in the broadcasting industry.

Substantial revision in the form of the questionnaires used by the commission precluded comparisons with the last previous employment report, which showed a total annual pay roll of $116,267,274 in 1945. But it was generally conceded that the 1947 pay roll would be considerably greater, probably reaching at least $125,000,000 to $130,000,000, even though the February employment figures were about 3,000 below the number of employees reported for Dec. 1945, the peak month of that year.

Aside from executive, supervisory and nonstaff personnel, the FCC reported, the 24,513 broadcast employees in Feb. 1947 were scheduled to receive an average of about $61 a week, as against average compensation (in some cases including overtime payments) of about $58 with the comparable 26,151 employees reported in 1945.

**Labour Unions.**—James C. Petrillo and the A.F.M., which he headed, remained organized labour's dominant influence on the broadcasting industry.

At midnight on Dec. 31, 1947, A.F.M. invoked its ban on further performances for recordings and transcriptions. The 195,000 U.S. musician-members of the union were forbidden, by Petrillo's order, to play for any recording or transcription, including recorded or transcribed radio shows (except those used for repeat broadcasts to overcome time differences in various zones).

Forewarned, the 770 recording and transcription companies affected by the ban had spent the last two months of 1947 furiously cutting new master records. They estimated the backlog thus accumulated would provide enough new music to last from one to two years.

The ban, attributed to A.F.M.'s loss of royalties on records as a result of the new Taft-Hartley labour law, did not affect nonmusical recordings. Petrillo insisted A.F.M. was quitting recording and transcription work for good, but industry observers felt he eventually would relent. Meanwhile an Industry Music committee, representing all segments of the trade, was mapping an extensive strategy program for future dealings with the union.

Elsewhere on the labour front, A.F.M. early in 1947 negotiated one-year contracts calling for 20% wage increases for musicians employed in New York key stations of the four major networks. But at the year's end negotiations toward renewals of the network contracts had been wholly unproductive. The contracts were to expire Feb. 1, 1948.

The American Federation of Radio Artists and the four networks signed a two-year contract in January providing for 20 to 30% salary increases for actors, singers, announcers and sound-effects men. The Radio Writers guild in late October ratified a six and one-half year contract with the major networks covering author's rights, air credits, establishment of a joint adjustment board, minimum fees, etc.

The U.S. supreme court ruled in June that the Lea act's prohibition against featherbedding was constitutional. The decision came in a case in which Petrillo was charged with violation of the act, passed in 1946 to make certain A.F.M. practices unlawful. The supreme court sent the case back to Judge Walter La Buy of the U.S. district court in Chicago, who had declared the law unconstitutional, for trial, which was expected to start in Jan. 1948.

**Legislation.**—Sen. Wallace H. White Jr. (Rep., Me.), author of most of the radio legislation enacted during the last 20 years, introduced a bill offering extensive amendments of the Communications Act of 1934. The bill would greatly expand FCC's authority over broadcasting stations, and was met with almost solid industry opposition when hearings were conducted in June before the radio subcommittee of the Senate Interstate and Foreign Commerce committee.

Sen. White subsequently rewrote the measure and appeared to have won industry support for most of its provisions, except one giving the FCC authority to take a station's programs into consideration when acting upon its application for renewal of licence. Broadcasters claimed such a provision violated constitutional guarantees of free speech. Sen. White, chairman of the committee considering the bill, hoped to have it reported to the senate floor for action early in the session which convened in Jan. 1948.

**World Conferences.**—After sessions which extended from mid-May until the end of September, representatives of 78 nations on Oct. 2, 1947, signed two major, basic agreements in the field of international communications. One was the Treaty of the International Telecommunications convention; the other was an agreement covering technical and operating aspects of international radio communications, called the International Radio Regulations.

The conferences, held at Atlantic City, N.J., created an International Frequency Registration board (I.F.R.B.), to be set up at Geneva, Switz., which would keep a list of frequency assignments throughout the world in accordance with the standards adopted at the international sessions. The groundwork for I.F.R.B. was to be laid by a Provisional Frequency board (P.F.B.) which was scheduled to convene at Geneva in Jan. 1948. This preliminary work, with I.F.R.B. members assisting, was expected to require 18 to 24 months. Capt. Paul D. Miles, then head of FCC's Frequency Service-Allocations division, was designated chairman of the U.S. delegation to I.F.R.B. Ray C. Wakefield, former member of the FCC, was appointed head of the delegation to P.F.B.

On a regional scale, but highly important to broadcasting in the northern hemisphere, preliminary work toward revision of the North American Regional Broadcasting Agreement (N.A.R.B.A.) was undertaken at a conference of engineering representatives of the signatory nations, held at Havana, Cuba, i November. Action at Havana was restricted to nonpolicy eng neering phases of the treaty. Such basic policy subjects as pa ticular nations' bids for priority rights to certain frequenci were left for the treaty conference itself, to be held at Montrea Can., in Nov. 1948. Heated debates were forecast, however, a result of demands of several countries, notably those of Me ico, which would require a reallocation of virtually all of th broadcast band.

The U.S., with its own clear-channel and maximum-powe questions still hanging fire in FCC's two-year-old clear-channe hearing, was unable to offer recommendations with respect t channel and power uses. But the clear-channel case was slate for decision in early 1948 and the U.S. planned then to submi appropriate N.A.R.B.A. proposals to the other nations in lat winter or early spring. N.A.R.B.A. signatories, in addition to th U.S., were Canada, Cuba, Mexico, the Bahamas, the Dominica Republic and Newfoundland.

**U.S. Foreign Broadcasts.**—The state department's muc bruited "Voice of America" program of international short-wave broadcasting faced seemingly brighter prospects as 194 ended, with congressional authorities predicting passage early i 1948 of legislation specifically authorizing continuation of th broadcasts. Earlier, congress had reduced funds for the progra from $31,400,000 to $12,400,000, but it was thought that substantially more would be sought upon the expected passage o pending legislation—the so-called Mundt bill—continuing th "Voice."

To show how its international short-wave activities had declined in the year, the state department pointed out that its output to the world had totalled 1,701 hr. 30 min. in Dec. 1946; 1,796 hr. 45 min. in March 1947 and 969 hr. 30 min. in Dec. 1947. The total weekly output of the U.S. to given areas, compared with broadcasts beamed by other governments to the same areas, is shown in Table VI, compiled by the state department.

Table VI.—*International Broadcasting to Different Regions (Dec. 1947)**
(U.S. Totals Compared With Others)

| | To Europe | To Latin America | To Far East | To N. Africa, Near & Mid-East | To U.S. |
|---|---|---|---|---|---|
| By U.S.. . . . . . . . . | 120¾ hr. | 63 hr. | 45½ hr. | None | ........ |
| By Great Britain . . . . . | 280 hr. | 80½ hr. | 50¾ hr. | 75¼ hr. | 131¼ hr. |
| By U.S.S.R. . . . . . . . . | 207 hr. | 17½ hr. | 59 hr. | 59½ hr. | 17½ hr. |
| By satellites of U.S.S.R. . . | 175 hr. | None | None | 7 hr. | 14 hr. |
| By France. . . . . . . . . | 51⅚ hr. | 10½ hr. | Unavailable | 28 hr. | 17½ hr. |

*Figures comprise only totals of short-wave broadcasts that are beamed from these countries to their respective target areas. They do not account for such programs as are beamed from one country to other countries over long and medium wave transmitters. This is particularly true in the case of Europe and in broadcasts from the U.S.S.R. to regions bordering the Soviet Union.

(R. W. Cr.; S. Tf.)

**Radio Scientific Developments.**—*Military Radio Equipment.*—Government support of radio research and development during 1947 continued at a substantial rate. Funds were allocated for radar, guided missile control, air navigation television, communications and many other projects.

The need for a comprehensive system of air navigation and traffic control was emphasized by several air tragedies which occurred during the year. The development of systems such as Navar, Lanac and Teleran was expedited to meet this need. Teleran was developed to the point where flight tests were started.

The Teleran system employs a ground search radar which surveys the air space in the vicinity of the airport and displays the information thus obtained on a cathode-ray tube. A television camera converts the radar presentation into a television image on which is superimposed a map of the area. This combination picture is broadcast by a television transmitter. A television receiver in the aeroplane reproduces the picture and the t sees his plane as a spot of light moving across the map. er planes in the area appear as different spots of light, each ing according to its actual course.

he Teleran system includes a method of separating the ir echoes according to altitude and transmitting a separate ure for each altitude level. This is accomplished by providing each aircraft with a transponder which consists of a receiver transmitter connected together so that the transmitter emits or more pulses when the receiver picks up a pulse from the und radar. If the transponder emits two pulses separated a time interval which depends on the aeroplane's altitude a riminator circuit at the ground station can be made to sort the responses according to altitude.

horan, the most precise method of air navigation so far available, was further improved in accuracy. Figures published by U.S. army air force indicated consistent accuracies of about ft. at 300 mi. The air force employs Shoran for long-distance ngulation surveying, aerial photography and other purposes.

A further advance in air navigation was indicated by the mpletely automatic 2,400 mi. trans-Atlantic flight of a U.S. force C-54 from Stephensville, Newfoundland, to Brise Nor-, 40 mi. west of London, Eng. The automatic flight was omplished by self-controlled, preset mechanisms. The plane ried an emergency crew of nine, but no human hand touched controls on the entire flight.

*'Printed" Electronic Circuits.*—The development of a miniae radio transmitter and receiver by the national bureau of ndards aroused considerable interest. The extremely small of the units resulted from the use of so-called "printed" cirts. In this technique the circuit wiring and inductors are nted or stencilled with silver paint on a base material such a ceramic plate. The resistors in the form of a carbon and in mixture are sprayed on the plate through masks. Small pacitors are applied directly to the wiring on the plate. The embly is completed by soldering the sub-miniature tubes to proper circuit terminals.

*Facsimile.*—A colour facsimile system called Colorfax was veloped. An experimental equipment reproduced colour prints the rate of one-half inch per minute. The colour pictures are tained by means of cyan, magenta, yellow and black pencil ads applied to any ordinary type of paper. Each line of the iginal picture is scanned four times to produce signals which e suitable to actuate the pencil leads used in the colour printer. ny or all of the pencil leads may be caused to operate in quence to reproduce by overprinting the desired colour comnations for each line in the picture. The speed of reception r a colour picture is one-quarter that of an equivalent black d white image.

Another facsimile development called Ultrafax was announced David Sarnoff, president of the Radio Corporation of Amera. Ultrafax is a facsimile system employing television techques and through the use of a wide band communication annel is capable of handling approximately 1,000,000 words minute. (*See* also ADVERTISING; FEDERAL COMMUNICATIONS OMMISSION.) (G. L. Bs.)

**Great Britain.**—The year 1947 began with the British Broadsting corporation (BBC) in the grip of a fuel crisis, and it ded on a note of jubilation. In the intervening months the BC played its part in events of high national importance and ade certain innovations in policy and programs.

In the middle of February the acute shortage of fuel brought wn the axe on broadcasting. Until well into March an abeviated service was broadcast. Television, the "third proam" and broadcasts to schools stopped altogether. For long riods during the day, home and light programs were merged one wave length, and there were substantial cuts in overseas services. The BBC closed its year in a different atmosphere, with the celebration of its silver jubilee, which was marked by a visit to Broadcasting house by the king and queen and Princess Margaret, and the world-wide broadcasts in honour of the wedding of Princess Elizabeth and the duke of Edinburgh.

Early in the year an important decision on political broadcasts was reached with the government. It was agreed to broadcast a limited number of party political talks of a controversial character, allocated to the various parties in accordance with their polls at the last election. Provision was made for 12 such broadcasts in 1947—Labour 6, Conservative 5, Liberal 1. Subjects and speakers were chosen by the parties and each side was free to use one of its quota for the purpose of replying to a previous broadcast. The BBC reserved its right, after consultation with the party leaders, to invite to the microphone in connection with these broadcasts a member of either the house of lords or the commons, of outstanding national eminence, who might have become detached from any party. The first two talks, on the economic situation, were given by the prime minister, Clement Attlee, and Anthony Eden (for the Conservative party).

Another major development affected broadcasts to schools, when the Central Council for School Broadcasting dissolved itself to make way for a new body, the School Broadcasting Council for the United Kingdom. Similarly, the Scottish council made a new start as the School Broadcasting Council for Scotland, and there was established the School Broadcasting Council for Wales. The formation of these councils was in accordance with the view of the corporation that so influential an organization should have representative bodies to guide it.

During the year the BBC was called upon to describe to listeners events of world-wide importance. The royal tour to South Africa was covered in all its aspects by a team of observers and engineers who accompanied the royal family throughout their journey. Another party of observers and engineers visited India during the period of the handing over of power to the dominions of India and Pakistan. The 80th birthday of Queen Mary inspired a number of commemorative programs, and a peak was reached in the broadcasts of the royal wedding in November, which were heard under excellent conditions throughout the world.

Important productions by the drama department during the year included the whole of Shakespeare's chronicles and a George Bernard Shaw festival. Among individual productions may be mentioned *The Frogs* of Aristophanes, in Gilbert Murray's translation, and Henrik Ibsen's *A Doll's House.* The Music department sponsored the 53rd season of the Henry Wood promenade concerts at the Albert hall, and also presented a series of concerts under distinguished guest conductors in honour of the centenary of Johannes Brahms and Franz Schubert. It was a record year in the broadcasting of opera, both from the studio and from theatres. A number of broadcasts were also made from the Edinburgh Festival of Music and Drama. One of the most important contributions by a single artist was made by Dame Myra Hess, who played all Mozart's piano concertos in a series in the third program.

Apart from the important developments in the broadcasting of political talks noted above, a new series of talks on atomic energy aroused world-wide interest. Not only were they repeated in the corporation's overseas services, but were also distributed on records by the BBC Transcription service. There were also a number of talks and discussions on Britain's economic position which attracted big audiences. Two features stand out prominently in the variety program—the success of Gracie Fields in a series of public broadcasts, and the remarkable popularity of programs of the quiz or parlour-game variety.

Examples of the former were in the long-established "Puzzle Corner" in "Monday Night at Eight," "Have a Go" with Wilfred Pickles, the quiz in "Merry-Go-Round" and "Radio Forfeits" conducted by Michael Miles. "Twenty Questions" was highly popular as a parlour-game program.

The output for Europe and in the overseas services was maintained both by direct transmissions and in the form of transcriptions. The teaching of English by radio was a feature greatly appreciated by listeners in many lands.

The most ambitious single undertaking in the foreign language services was a serial version in Spanish of *Don Quixote* in honour of the fourth centenary of the birth of Cervantes.

Domestically the most important event was the coming into force on Jan. 1 of the new charter, which was to have a life of five years, during which time the government undertook to hold an inquiry into the broadcasting service. Under the terms of the charter, agreement was reached between the corporation and the staff association on arbitration machinery in case of a difference of opinion on terms and conditions of service.

Lord Inman resigned the chairmanship of the board of governors in June and was succeeded by Lord Simon of Wythenshawe. (*See* also TELEVISION.)

## Radium.

No recovery of the radium associated with the uranium and vanadium ores of the western United States was reported after 1942. Imports of radium salts into the U.S. vary widely from year to year, and the drop from the wartime peak was precipitous, as is shown in the following table:

| | Grams | Value | | Grams | Value |
|---|---|---|---|---|---|
| 1937 | 15.29 | $ 377,659 | 1942 | 23.043 | $ 377,326 |
| 1938 | 38.75 | 787,025 | 1943 | 90.755 | 1,366,538 |
| 1939 | 78.631 | 1,953,820 | 1944 | 101.290 | 1,374,933 |
| 1940 | 30.311 | 748,097 | 1945 | 67.342 | 991,979 |
| 1941 | 4.412 | 110,202 | 1946 | 17.229 | 326,450 |

It was possible that the attention being given to radioactive isotopes from atomic fission had detracted some from the normal use of radium. (G. A. Ro.)

## Railroads.

The volume of freight traffic and the gross operating revenues of railroads in the United States in 1947 were higher than in any previous peacetime year and little lower than in the war period, but the net income and the return on investment, while better than in 1946, were lower than in prewar years. The shrinkage in the volume of rail passenger traffic, which began when World War II ended, was continued. The net railway operating income—the amount left to pay rentals, interest on debt, other fixed charges and dividends—in 1947 was approximately $748,000,000. The figure for 1946 was $620,000,000. The return on investment (minus depreciation) in 1947 was 3.32%; in 1946 it was 2.75%.

During the first nine months of 1947 there were 33 railroads of Class I (those having operating revenues of $1,000,000 or more per year) which failed to earn all of their rentals and charges. Those 33 railroads made up 17% of the total mileage of Class I railroads and included such important systems as the Pennsylvania and New York Central. Fortunately the other 95 Class I railroads were able to earn more than their charges, and for the railroads as a whole the net income after charges was $450,000,000, nearly double the amount earned in 1946. The substantial gain over 1946, however, was not enough to put the railroads in healthy financial condition.

| Item | 1947 | 1946 | 1944 | 19 |
|---|---|---|---|---|
| | | (Millions) | | |
| Freight revenue | $6,992 | $5,787 | $6,999 | $4,82 |
| Passenger revenue | 945 | 1,259 | 1,790 | 87 |
| Total operating revenues | 8,582 | 7,628 | 9,437 | 6,28 |
| Operating expenses | 6,755 | 6,357 | 6,282 | 4,50 |
| Taxes | 907 | 498 | 1,846 | 39 |
| Net railway operating income | 748 | 620 | 1,106 | 1,25 |
| Rate of return on investment less depreciation | 3.32% | 2.75% | 4.71% | 5.2 |
| | | (Millions) | | |
| Net income after charges | $450 | $287 | $667 | $89 |
| Revenue ton-miles | 647,359 | 591,982 | 737,246 | 447,32 |
| Revenue passenger-miles | 44,790 | 64,673 | 95,549 | 31,07 |

The income account of Class I railroads in 1947, estimated part by the Bureau of Railway Economics and published *Railway Age,* Jan. 3, 1948, in comparison with 1946, 1944 war year) and 1929 (a prosperous predepression year) is giv above in condensed form. The table shows also the volume ton-miles and passenger-miles.

The figures show that the freight revenue of 1947 was 21 greater than in 1946 and almost exactly the same as in 1944, t wartime year of greatest freight traffic. In passenger servi however, the 1947 revenue was 25% less than in 1946 and on about one-half of that of 1944, when military traffic was at i highest level. In total operating revenues 1947 was 12% mo than in the preceding year but 9% less than in 1944. The da reflecting the volume of traffic show similar comparative r sults, but because of advances in freight and passenger rates 1947 the per cent of increase in freight revenue was greater tha the per cent of increase in ton-miles and the per cent of decrea in passenger revenue was less than the per cent of decrease passenger-miles. In the two most important items—net railwa operating income and per cent return on investment—1947 w better than 1946 but much below 1944. The effect of high operating costs in recent years is seen in the fact that the 19 operating revenues of $6,280,000,000 yielded net income nearly $900,000,000 while the 1947 operating revenues of $8 582,000,000 produced but $450,000,000 in net income. Th rate of return on investment less depreciation was 5.24% 1929 and 3.32% in 1947. The position of railroad spokesmen that anything less than 6% is inadequate.

**Rate Increases.**—The impact of wage advances and th higher costs of fuel and other materials on operating expens resulted in such dangerously low net earnings in 1946 that th railroads appealed to the Interstate Commerce commission fo authority to increase freight rates about 20%. An interim in crease of about 6.5% was permitted on July 1, 1946, and effe tive Jan. 1, 1947, a further advance was authorized, bringing th aggregate increase to about 17.6%. Further wage boosts an other additions to expenses in 1947 led the railroads, early in th year, to go to the commission again and request higher passenge fares as well as an additional increase of about 30% in freigh rates. In Oct. 1947 the commission approved an interim ad vance of nearly 10% in freight rates and in December grante an additional interim increase of nearly 10%. As a result o these advances the average freight rate in Jan. 1948, was abou 40% higher than in Dec. 1946. In addition, the commission al lowed the railroads throughout the year 1947 to boost thei passenger fares. The rates of increase were not uniform through out the country, but typically the coach fare per passenger-mil was advanced from 2.2 cents to 2.5 cents, and the fare in Pul man cars went up from 3.3 cents to 3.5 cents. The rates fo commutation passengers were also advanced on some railroad

The rates paid to the railroads by the post office departmen for the carriage of U.S. mail on trains are set by the Interstat Commerce commission. Inasmuch as there had been no chang in those rates in the preceding 20 years the railroads petitione the commission for an advance of 45% in recognition of th higher costs of operation. In Dec. 1947 the commission autho ized an interim increase of 25% pending final determination total increase to be allowed. The commission also per- tted the Railway Express agency, a railroad-owned subsidiary, advance its rates for the transportation of express matter on ssenger trains.

Advances in rates were not confined to railroads. The higher st of wages and the increase in other elements of total op- ating costs bore as heavily on the operators of trucks, buses d air lines as upon the railroads, and those transportation encies applied for and were given authority to increase their es in degree similar to the advances in railroad rates. The mpetitive situation between the several forms of transporta- on, therefore, was not materially changed in the matter of lative rates.

In its decision of Oct. 7, 1947, approving an interim increase 10% in railroad freight rates, the commission, noting that e railroads like many other industries were vulnerable to in- tionary forces and that sharp increases in operating costs had curred, said that while an increase in rates might stimulate ready existing inflationary forces, that factor, in their judg- ent, was "outweighed by the necessity of keeping the carriers, the face of higher costs of operation, in a reasonably healthy ndition in order that they may maintain their credit, procure dditional equipment which is now urgently needed, and re- bilitate and improve their properties generally to take care of e demand of the public for adequate transportation service."

**Railroad Financial Organization.**—Further progress was ade in 1947 in improving railroad financial organization. The tent to which the railroads had become insolvent was indi- ated by the fact that during the depth of the depression in the arly 1930s more than 77,000 mi., nearly one-third of total rail- oad mileage, were in receivership or trusteeship. The bank- upt mileage had been reduced to 31,149 by the end of 1946, and uring 1947 the consummation of the reorganization of the New aven, Rio Grande, Frisco and Cotton Belt systems and five maller roads brought the total mileage in the hands of the ourts down to 24,200. On Jan. 1, 1948, the Rock Island system f 7,650 mi. emerged from trusteeship, further reducing the ankrupt railroad mileage to 16,650 or about 7% of the total. he only large railroad system in reorganization as of Jan. 1, 948, was the Missouri Pacific.

**Wage Increases.**—Outside of a very few instances of no ore than local importance and of short duration, there were o railroad strikes or serious labour disturbances on railroads n 1947 although at the end of the year there was threat of trike by the enginemen and firemen and a small minority of ard crews. The round of wage increases, additional to those ranted in 1946, was begun in March when the so-called non- perating group, consisting of shopmen, trackmen, station em- loyees, office clerks and others (about three-quarters of total mployees) demanded an increase of 20 cents per hour. Follow- ng direct negotiation and mediation the dispute was settled eacefully by arbitration. The award of the arbitration board, ccepted by both sides, gave the men an increase of 15½ cents er hour from Sept. 1.

The operating brotherhoods, comprising about 350,000 engine- en, firemen, conductors, trainmen and over 90% of the yard- en, on Sept. 30, 1947, presented demands for a wage advance f 30% and the adoption of many rule changes which would ffect wages. The result of subsequent negotiations between a ommittee of railroad executives and union leaders, without tervention of governmental mediation, was an offer by the ailroads to give the operating brotherhoods the increase of 15½ ents per hour granted in September to the nonoperating group nd to change a few of the rules to the advantage of the em- loyees. The offer was accepted by the conductors, trainmen nd yardmen who belonged to the trainmen's union but was rejected by the enginemen, firemen and the small minority of yardmen who belong to the switchmen's union. The dissidents held out for better terms and threatened to strike. At the close of the year the dispute was in process of mediation.

The number of employees in 1947 averaged about 1,356,000, practically the same as in 1946 but approximately one-third more than in 1940. Estimates of the Bureau of Railway Economics placed the annual compensation per employee in 1947 at $3,200. The comparable figure in 1946 was $3,069. In 1940 it was $1,913. The average would have been higher in 1947 if the wage increases effective on Sept. 1 and Nov. 1 had been in effect throughout the year.

**Freight Car Shortage.**—The quality of rail freight service in 1947 was marred by a shortage in freight cars. During World War II it had not been possible to obtain the needed additional cars because the critical materials required in car construction were needed for military purposes. The cars available were used intensively and emerged from the war period in deteriorated and overage condition. Orders for a large number of cars had been placed in 1946, but the car builders could not get sufficient steel. The number of new cars delivered was less than the number of worn out and obsolete cars that had to be retired. The number of cars in service on Oct. 31, 1947 (1,725,357, exclusive of those privately owned), was 47,385 less than the number in service on that date in 1946. The cars on order on Dec. 1, 1947, were 125,395, including those ordered by the private car lines. At the close of the year the situation was more promising, and there was likelihood of attaining the goal of 10,000 new cars per month.

The car shortage brought many complaints about poor service, especially from shippers of grain, and was made the subject of inquiry by a congressional committee. By extraordinary efforts on the part of the railroads, and with shipper co-operation, the turn-around time of cars was reduced, so that with the smaller number of cars the railroads were able, without unreasonable delay, to handle the record-breaking volume of 1947 wheat. The total number of carloads of all commodities moved by the railroads in 1947 was 44,500,000. The comparable figure in 1946 was 41,300,000.

**Locomotives.**—In contrast to the freight car situation there was no shortage of locomotives in 1947 even though there was a reduction in the total number. The capacity of the new locomotives was very much greater per unit than that of the old locomotives which were retired. The shift from steam to diesel continued at an accelerated pace. Of the 2,155 locomotives ordered in 1947, the diesels numbered 2,075. Of the 79 steam locomotives ordered, 68 were for two coal-carrying roads—the Chesapeake and Ohio and the Norfolk and Western.

**Passenger Train Service.**—In passenger service the volume of rail traffic was smaller than in 1946 but higher than in any of the years between the two world wars. The overcrowding of trains, so common during World War II and in 1946, was corrected, and the "On Time" performance was much improved. Partly because of the competition of the bus and the air lines, there was a continuing improvement in rail service, especially in the type of recently acquired passenger train equipment and in higher train speed. The number of named streamline trains was increased to 108, with 223 complete sets of equipment. More trains were equipped with lounge and recreation cars, and in the case of coaches the new equipment had more comfortable seats, better lighting, and practically all cars in important through trains were air-conditioned.

**Operating Efficiency.**—In freight train service and the utilization of equipment, the performance statistics of the first ten months of 1947 showed substantial improvements over 1946 in operating efficiency. The average freight train load in tons of

EXCAVATING a snowbound British passenger train stalled between Manchester and Buxton, England, during the severe blizzard in Feb. 1947 which kept rail lines blocked in that area for 24 hours

freight and the average net ton-miles per train-hour were higher than ever before. In the average car load and the average car-miles and net ton-miles per car-day, the 1947 results were better than in 1946, although somewhat lower than in some of the war years.

**Capital Expenditures.**—The expansion in the railroads' investment account by capital expenditures for additions and betterments was greater in 1947 than in any year after 1923 when the railroads undertook an extensive program to make up the deficiencies from World War I. The 1947 gross capital expenditures were about $900,000,000. During the immediately preceding nine years the annual average was $459,000,000. Nearly three-quarters of these expenditures were for modern equipment, and a little more than one-quarter were for roadway and structures.

**Legislation.**—During the first session of the 80th congress in 1947 no important legislation affecting railroads was enacted, but when adjournment was taken in July, several bills were left pending. None was considered during the special session in the last two months of the year. Those bills, therefore, were on the calendar for the second session which began in Jan. 1948.

One of them, commonly known as the Bulwinkle bill, would give legislative sanction to rate-making conferences and other railroad joint actions when such actions were approved by the Interstate Commerce commission. The bill had the backing of the commission and the shippers' organizations but was opposed by the department of justice which regarded such actions as violations of the antitrust laws.

Another, commonly designated as the Reed bill, would amend section 77 of the National Bankruptcy act to afford greater protection to stockholders in railroad reorganizations. The bill was favourably reported by the respective committees of the senate and the house, but no action was taken by either branch of congress.

The so-called Lea committee, authorized by the house in 1945 to make a comprehensive study of all forms of transportation and recommend new legislation, had not completed its task within the allotted time. Its life was extended, and it was expected to report in 1948.

An attempt was made in the Howell-Hawkes bill to amend the Crosser act of 1946 by changing its provisions for sickness and maternity benefits. The house committee reported the bill favourably, but the senate committee voted to postpone action to 1948.

The St. Lawrence Seaway project was revived in 1947 by the introduction of an amended senate resolution which would approve the 1941 agreement with Canada and make the navigation feature self-liquidating by the imposition of tolls. The resolution was put over for consideration at the 1948 session.

The antitrust suit, initiated by the department of justice against an association of western railroads, the American Railroad association and certain individuals, made little progress in 1947. The second half of the year was taken up in the preparation of briefs. The defendants' reply brief was filed on Dec. 31. The suit was aimed particularly at the conference method of railroad rate making.

The long drawn out litigation over the affairs of Pullman, Inc., ended in 1947 when the stock of Pullman company and all of its cars and other equipment were purchased by a group of railroads and a new company formed to carry on the operation and servicing of Pullman cars under contracts with the individual railroads. Earlier the car building activities of Pullman-Standard had been divorced from the Pullman company which operated the Pullman cars for the railroads. The new Pullman company's board of directors had no railroad officer or other representative of railroads. In so far as the public was concerned, the conduct of Pullman service was the same as it was before the suit was brought, but there was no connection between it and the manufacture and sale of cars. The former connection was held by the courts to be a violation of antitrust laws. (*See* also DISASTERS; INTERSTATE COMMERCE COMMISSION; NATIONAL MEDIATION BOARD; UNITED STATES.)

(W. J. C.)

**Other Countries.**—In strong contrast to the outstanding events of preceding years, the most notable railway changes in 1947 were in the legislative sphere, as opposed to those of construction, reconstruction and technical progress. This postwar nationalization wave eliminated many of the company-owned-and-managed railways and converted them to government-owned-and-managed concerns, although not necessarily operated directly by a government department. Thus by 1948 the United States railways and the Canadian Pacific railway were almost the only outstanding examples of company ownership and operation.

While the nationalization of the four large British railways was the most revolutionary example of the change-over, the cases of company-owned lines in Argentina, together with some in Brazil and the proposed government ownership of the Rho-an railways, provided instances of importance to illustrate world-wide trend.

*reat Britain.*—The bill to nationalize the British railways ame the Transport act, 1947, and carried the date Aug. 6, 7. It provided for the setting up of a British transport com- sion whose duty would be to secure "an efficient, adequate, nomical and properly integrated system of public inland nsport and port facilities within Great Britain for passengers goods with due regard to safety of operation." The com- sion's powers, coinciding with the nationalization by govern- nt acquisition of the railways, operated from Jan. 1, 1948; y were to be exercised through a series of executives to cover pectively railways, London transport, docks and inland water- ys, road transport and, probably, at a later date, hotels. The irman of the commission, Sir Cyril Hurcomb, announced on v. 26 that the railway system (to be known as British rail- ys) would be organized in six regions (the London midland, western, the southern, the eastern, the northeastern and the ottish) replacing the four main-line railway company systems the London Midland and Scottish, the Great Western, the ndon and North Eastern and the Southern. The regions were visional. The rate of interest on the stock to be issued, in ce of railway stock, by the British government was not known 1947. It would undoubtedly result in a reduction of interest rges on capital.

*Europe.*—For the electrification plans that formed the greater t of European railway reconstruction, *see* ELECTRIC TRANS- RTATION.

In France and Belgium reconstruction of war-damaged rail- y facilities was forwarded with unexampled energy; passenger in services approached the pre-1939 level in terms of speed, not yet in frequency, in spite of the necessary use of many nporary bridges, speed restrictions over damaged sections and lower standard of maintenance of locomotives and equip- nt. Excellent work was done in the Netherlands where the lways had suffered disastrously from German destruction and ny large bridges had to be rebuilt; shortage of signalling uipment and rolling stock delayed the return to prewar stand- ds. Italy made rapid progress with the rebuilding of its main- e rail arteries and re-electrification of sections demolished in e war. The Swiss Federal railways celebrated their centenary 1947 and the International Railway Congress association met Lucerne in June in honour of the occasion. Progress contin- d with the doubling of the last remaining single-track sections the Gotthard international route. The Danish state railways so celebrated their centenary in 1947. In Sweden the impor- nt group of company-owned railways, known as the Göteborg- alarne-Gefle traffic group, and including the efficient Bergslagen ilway, were being taken over by the government and consoli- ted with the state railway system, thus leaving only a few es of local importance outside the government-owned-and- erated system. Further sections of line were electrified and periments were being made with oil-burning locomotives and esel traction, but France provided the leading western Euro- an example of the use of oil burners, because, as in other coun- es, of the shortage of coal.

The German railway was still operated in four sections, coin- ding with the four zones of occupation. It was understood that the lines in the Russian zone except three main arteries had en reduced from double to single track. International services ssing through Germany increased: the Paris to Stockholm ute and some of the train-ferry routes across the Baltic from rmany were reopened. Poland provided some coal for the edish, French and other railways. In Yugoslavia some rail- y construction continued, largely by voluntary workers, link- up Sarajevo with the Danube valley. Information of technical interest from Russia or its satellite countries was meagre. A through sleeping car ran between Paris and Istanbul, and, when conditions in Palestine permitted, this through-service could be extended to Cairo, with a transfer by boat across the Bosporus.

*Asia.*—The partitioning of India led to the division of the large northwestern system into two parts, one in Pakistan and the other in India; the exchange of refugees between the two territories was given temporary priority over all other traffic moves. The railway system was almost entirely run by Indians. The Palestine railways suffered grievously from racial difficulties, and the cost of reconstruction and repairs placed a heavy load on the administration. In Burma and Malaya facilities were largely reconstructed and most main-line services were reinaugurated, but little was known concerning the railways in Indo-China, in Japan or in the Netherlands Indies and China, where hostilities continued to disrupt communications almost as fast as they were repaired.

*Africa.*—The South African Railways and Harbours administration was able to record peak traffics and the arrival of much-needed new locomotives and rolling stock, while projects involving large scale capital expenditure were being carried out at Johannesburg and other centres. In Rhodesia the government determined to acquire the Rhodesian railways, which also serve the Portuguese port of Beira and Mashonaland as well as providing a through link with the South African system via Mafeking.

*Australasia.*—The New Zealand government railways continued their policy of linking up branch lines long isolated from the main lines in the North and South Islands. Shortage of coal restricted the services, and labour troubles adversely affected traffic. New Zealand was one of the first railways to introduce the principle of the 40-hour week, and the problems to surmount were not light. The proposal to standardize the gauges in the various states of Australia in accordance with the Clapp report made slow yet steady progress, but the capital cost was very heavy, and the states would require commonwealth assistance. Deficiency and the high cost of coal limited the potential mileage operated in certain of the states, and labour troubles reduced the volume of traffic. Victoria determined to make trials with powdered-fuel locomotives, and, in general, some arrears of maintenance incurred during the war period were overcome. In certain states the financial deficits on the railways assumed alarming proportions.

*South America.*—Terms for the acquisition of the foreign-

"TRAIN OF TOMORROW," an experimental passenger train manufactured by the General Motors Corp., featuring multilevel astra-dome cars, which made a six-month exhibition tour of principal U.S. cities in 1947

owned railways in Argentina were announced in 1947, although the date of transfer was made retroactive to July 1946. The price agreed for the railways and their subsidiaries was £150,000,000, but the sale had not yet been actually consummated; the question was linked with problems of currency and trade balances. The main railways involved were the Buenos Aires Great Southern, the Buenos Aires Western, the Buenos Aires and Pacific, the Central Argentine, the Argentine North Eastern and the Entre Rios railways. A similar policy was being adopted in Brazil, one railway affected being the São Paulo. Progress was made in Bolivia with the Corumbá Santa Cruz de la Sierra railway, and also in Brazil with the link between Baia and the state of Minas Gerais, the line to Monte Azul being completed early in 1947.

*Canada.*—Both the large Canadian railway systems were able to achieve virtually prewar standard of service by 1947, and important progress was made in overcoming the arrears of wartime undermaintenance. The Canadian National railway introduced diesel services on Prince Edward Island and placed a new train-ferry of notable design there; the Canadian Pacific proposed to use diesel-engine services in its operations on Vancouver Island. The financial situation was not healthy in view of steadily rising costs for labour and materials: Canada was virtually the only country with the prewar level of rates, and the railways asked for a 30% rise, but no decision was announced by the dominion government. (C. E. R. S.)

**Ramadier, Paul** (1888– ), French statesman, was born in May 1888 at La Rochelle. He read law at the Universities of Toulouse and Paris and, having taken his degree at the latter, in 1907 opened a lawyer's practice in Paris, specializing in the legal position of the co-operative movement. Elected deputy of the Aveyron *département* in 1928 on a Socialist ticket, he represented his constituency in the chamber of deputies until 1940. He was minister of labour in 1937–38 and minister of food in 1945–46. On Jan. 22, 1947, he was elected prime minister by the national assembly. He twice reconstructed his cabinet: on May 9 and on Oct. 22; he resigned on Nov. 19.

**Rationing.** The removal of food supplies from the wartime rationing system in the United States became complete in 1947 with the termination of sugar rationing.

Elimination of the rationing controls began in the United States on V-J day—Aug. 15, 1945. Rationing of canned fruits, fruit juices and canned vegetables ended on that date. Next to be removed from the controls were condensed and evaporated milk; these items were dropped from the point system on Sept. 12, 1945. Meats, dairy products, canned fish and fats and oils were released on Nov. 24, 1945.

Sugar for civilian consumption was in short supply in 1946, but 1947 brought a change. Higher world production, the result primarily of a great increase in Cuba's output, lifted the available supply to an approximate balance between world production and world consumption. Accordingly, the United States government ended the rationing of sugar to household consumers on

RATIONING DIRECTORY at the headquarters of a British food and registration office in London during 1947 e 12 and to industrial users on July 28, 1947. (*See* Price ministration, Office of.) (C. P. A.)

**Other Countries.**—Differential rationing scales for various groups and different types of workers were general in ope, but in Great Britain this principle was only applied to ectant mothers, children under five and merchant seamen. exception to this was to be found in the British bread ra- ing scheme, under which there were different scales for dren and young people of various groups up to 18, for mal adults, expectant mothers and for manual workers. ority milk was granted to infants, children at school, old ple and the sick; while through the system of works can- ns certain additional allowances of various foods were granted workers.

*Great Britain.*—On Feb. 2, the portion of the meat ration sisting of tinned corned meat was raised from 2*d.* to 4*d.*, total ration remaining at 1*s.* 4*d.* per week; but with effect n June 13, this portion was reduced to 2*d.*, and as from t. 7, the total ration was reduced to 1*s.*, all carcass meat. a result of the fuel crisis the sweet ration was temporarily uced during March and April, these cuts being made good r. Further alterations in the autumn were a cut in the points m 32 to 28 per four weeks from Aug. 17, a reduction of from % to 18% in foods allocated to restaurants, except where ceiling price per meal was 2*s.* 3*d.*, and the reduction from ober of the bacon ration to 1 oz. per week; banquets for re than 100 people were prohibited. On Nov. 8 potato ra- ning came into force for the first time, with a weekly allow- e of 3 lb. per person. Fewer clothes coupons were allowed the period Sept. 1–March 1. The abolition of the basic rol ration in October put an end to all private motoring by v. 30.

*Australia.*—Rationing of meat, butter, sugar, cotton and some er clothing materials continued during 1947 in accordance h a statement by the director of rationing that to discon- ue this system would show an utter disregard for the needs the British people. Sugar rationing was discontinued on y 2.

*Canada.*—Meat rationing was abolished from March 27, but o meatless days remained in restaurants. Butter, honey and n rationing was removed on June 9, and the sugar ration in- eased by 1 lb. per quarter from April 1.

*France.*—The basic bread ration was reduced on April 24 om 300 grams (10½ oz.) to 250 grams (8½ oz.) per day for all cept heavy workers; it was further reduced on Sept. 1 to 200 ams, a lower figure than at any time during World War II. Aug. 29 a decree closed butcher's shops for five days a week d restricted meat dishes in restaurants to two days.

*Netherlands.*—The meat ration was reduced from 200 grams r week to 150 on June 6, children and heavy workers being cepted.

*Italy.*—On April 3, the government announced the termina- n of political bread price and similar subsidies and an im- ediate price increase of 50%, employers being obliged to give v-paid workers an allowance to offset this. There was to be a ferential rationing system for bread, pastries, fat and other ods, with preference for people of small means. Meat was stricted to three days a week, and fresh pastries might only sold in retail shops on Saturdays and Sundays.

*Germany.*—In the Anglo-American zone the bread ration was creased on July 24 from 6,000 to 8,000 grams per month. It s announced that all Ruhr miners whose pits reached a pro- ction peak equalling the best four weeks from the end of the r would receive a U.S. food parcel equal to 40,000 calories d that a proportion of all foreign exchange earned by Ruhr al would be set aside to buy food for the miners. The normal ration scale was 1,550 calories per day. In Austria the scale was the same.

*Eire.*—Bread rationing was introduced on Jan. 18. (*See* also Food Supply of the World.) (J. Ln.)

## Rayon and Other Synthetic Fibres.

Rayon yarn production in the U.S. was about 14% higher in 1947 than in the previous year. Of the total production of 975,000,000 lb., 228,000,000 lb. were viscose and acetate staple. Of the 747,000,000 lb. of filament yarn, 501,500,000 lb. were used in the textile industry, including woven fabrics, and the knitting industry. Tire manufacturers, the new large-scale consumers of synthetic yarn, used 227,500,000 lb. of filament yarn. Exports totalled 16,000,000 lb.

Table I.—*United States Rayon Production in Millions of Pounds*

| | 1942 | 1943 | 1944 | 1945 | 1946 | 1947 |
|---|---|---|---|---|---|---|
| Rayon filament yarn . . . . . . | 479 | 502 | 555 | 624 | 677 | 747 |
| Rayon staple fibre . . . . . . . | 154 | 162 | 168 | 168 | 177 | 228 |

In the production of woven fabrics, the U.S. exceeded its previous high record of 1946 by approximately 10%. Almost 2,000,000,000 yd. of fabric in rayon were provided to textile consumers by U.S. mills in 1947. Two major types were represented, the all-filament fabrics, closest relatives of the old silk fabrics, and the spun rayons, simulating linen, wool and cotton fabrics. The fabric industry consumed about 450,000,000 lb. of filament and spun rayon, 25,000,000 lb. of cotton, 3,000,000 lb. of nylon and 56,000,000 lb. of all other yarn, other than rayon, cotton and nylon.

Table II.—*Production of Rayon Broad Woven Fabrics (Except Tire Fabrics)*

(In millions of linear yards)

| | All-filament | All-spun rayon | Comb. filament and spun rayon | All other rayon mixtures |
|---|---|---|---|---|
| 1945 . . . . . . . . | 1,018.2 | 162.1 | 159.8 | 178.2 |
| 1946 . . . . . . . . | 1,158.4 | 195.8 | 178.2 | 250.8 |
| 1947 . . . . . . . . | 1,210 | 294 | 182 | 170 |

Production of rayon knit fabric (fabric sold to the garment manufacturing industry, not knit underwear or glove fabric) reached about 113,000,000 lb., compared with 147,000,000 lb. in 1946. The decrease was primarily in the circular knit fabric, especially in the dress field, where production dropped sharply. In the warp knit division (fabric knitted flat, most closely resembling woven fabric) the year's production was about 31,300,000 lb., compared with 32,800,000 lb. in 1946. Production of circular knit goods dropped to 77,500,000 lb., compared with 98,800,000 lb. in 1946. Rayon hosiery continued at a low rate of production, resulting from the re-introduction of nylon after 1945. There was sufficient use, however, to consume about 19,000,000 lb. of filament yarn, 2,000,000 by the full-fashioned manufacturers and 17,000,000 by the seamless hosiery mills.

Prices for rayon yarn and fabric advanced in 1947, after remaining comparatively static from 1941. This stability contrasted with the general price movement on all commodities of the U.S., as well as textile products. Wholesale price index numbers (1935–39 = 100) were as follows:

| Monthly Average | All Commodities | All Textile Products | Rayon Yarn and Staple |
|---|---|---|---|
| 1941 . . . . . . . . . . . . . . | 108.4 | 119.3 | 96.5 |
| 1942 . . . . . . . . . . . . . . | 122.6 | 136.2 | 98.4 |
| 1943 . . . . . . . . . . . . . . | 145.9 | 137.1 | 98.4 |
| 1944 . . . . . . . . . . . . . . | 129.1 | 138.5 | 98.4 |
| 1945 . . . . . . . . . . . . . . | 131.4 | 140.8 | 98.1 |
| 1946 . . . . . . . . . . . . . . | 150.0 | 163.9 | 99.1 |
| 1947* . . . . . . . . . . . . . . | 186.0 | 196.6 | 119.0 |

*Based on 10 months.

World production was given impetus during 1947 by the partial recovery of Germany and Japan, which prior to World War II were the two largest producers of rayon. In the first half of 1947, Germany's plants produced almost double the amount of the last half of 1946. In staple fibre, however, the increase was only 10%. In Japan, the American military government announced a goal of 165,000,000 lb. of filament annually, and 135,000,000 lb. of staple. In 1938, Japanese production of filament yarn totalled 640,000,000 lb., and 980,000,000 lb. of staple. Figures published in 1947 stated that annual production was at the rate of 120,000,000 lb. of filament and 240,000,000 lb. of staple. One-third of the capacity was operable.

In the United Kingdom, the average monthly production of rayon yarn in the first half of 1947 was 15,800,000 lb., of which 6,600,000 was staple and 9,200,000 filament. This did not differ much from the 1946 rate of 15,000,000 lb. monthly—5,900,000 of staple and 9,100,000 of filament. Exports took 6,600,000 of the total, of which Australia received 2,300,000 and Canada, 1,700,000.

Total world production figures for 1946 were issued in June 1947, and showed an 18% increase over 1945, but still 41% below 1941, the peak year. The chief gain was in filament yarn, 22%; the staple output rose 10½%. World conditions again gave the U.S. the leading position as rayon producer. Consumption per capita also led in the U.S.—5.9 lb. per person.

The increased world production of rayon filament, 22%, was largely due to expanded facilities in the U.S. and South American countries, but European production, despite declines in Austria, Germany, Rumania and Switzerland, showed a 64% increase over 1945. The new impetus in production came from Belgium, Finland and Sweden. South America, the newest producing area, reached a production of 38,000,000 lb., 3% of the world output.

Canadian rayon production continued at about the same rate in 1947 as in 1946. In the first eight months, filament rayon output was 3,900,000 lb., compared with 3,200,000 in the same period of 1946.

**Nylon and Other Synthetics.**—Nylon, the second most important synthetic fibre, in 1947 entered the first year of its second decade, with demands for ever-increasing supply and an ever-expanding market. While principally known as a hosiery yarn, nylon was listed as being used in 62 different civilian and industrial articles, at a hearing before the U.S. congress on July 7, 1947. Production figures on nylon were not published, but 1946 production was estimated to be about 25,000,000 lb. for domestic use. The E. I. du Pont de Nemours company continued to be the sole producer. Prices of U.S. nylon early in 1947 ranged from $5.50 per pound for 15 denier, to $1.55 per pound for 210 denier.

Nylon industrial fabrics, particularly in laundry bags, pressing cloths and boat sails, were becoming staple articles. Nylon tire cords went into heavy-duty types for transport aeroplanes, bulldozers and other mechanized vehicular equipment; passenger cars did not need the margin of higher strength.

The manufacture of nylon yarn outside the U.S. was licensed by the du Pont company; in 1947, Great Britain and France were the principal licencees. Canada had a partial installation ready. To all other countries, du Pont exported 146,593 lb. in 1946.

Development of other synthetic fibres in 1947 was given new impetus by lifting of wartime controls on the use of resins. Of the synthetic yarns known as thermoplastic fibres, the two best known were Vinylite and Saran. In the fibres made from copolymers of vinyl chloride and vinyl acetate, the best known was Vinyon, mostly produced as a staple fibre. It was used principally in the manufacture of tea bags. Other uses mentioned in 1947 were for shoe materials, screening, industrial filters, bolting cloth and goods of the sheerest types.

Protein fibres (*azlon* was the new generic name proposed for the group) included Aralac in the U.S. and Lanital in Italy. Both were used in combination with stronger fibres, particularly wool, although a new use was for upholstery goods, combined with cotton.

Glass fibre was marketed as continuous filament yarn, staple fibres, mineral-wool and flock fibres. The mineral-wool type used for insulation averaged between 125,000,000 and 150,000,000 lb. in 1944–45. Fiberglas, the textile-type of fibre, including the filament and staple, reached 10,000,000 lb. in 1945, but production was reduced considerably thereafter.

## Reconstruction Finance Corporation.

The Reconstruction Finance corporation was organized and began operations Feb. 2, 1932, following its creation by the U.S. congress Jan. 22, 1932. The succession of the corporation was originally fixed at 10 years, later extended to 15 years and, pursuant to public law 132, 80th congress, approved June 30, 1947, it was extended to June 30, 1948.

The management of the corporation is vested in a bipartisan board of five directors, appointed for a term of two years by the president with the advice and consent of the senate. The board consisted in 1947 of John D. Goodloe, chairman, Henry A. Mulligan, Harvey J. Gunderson, Henry T. Bodman and Harley Hise.

The capital stock of the Reconstruction Finance corporation originally was $500,000,000, all of which was subscribed by the secretary of the treasury, and in 1941 the corporation retired $175,000,000 of the stock at par.

**Lending Activities.**—In the early part of 1947, RFC inaugurated a small loan participation program, the objective of which was to make longer-term credit more readily available to small business concerns through regular banking channels. Under the plan the corporation would consider taking a participation of not more than 75% in business loans up to a maximum of $100,000 when so requested by a bank. From the beginning of the program to June 30, 1947, the corporation had agreed to participate in 1,639 small loans amounting to $40,300,000. Including the small loan participation commitments, loan authorizations for national defense purposes and loans authorized in connection with the veterans' emergency housing program, 10,589 business loans in the approximate aggregate amount of $550,000,000 were authorized by the corporation during the fiscal year 1947. In such loans banks agreed to participate with the corporation to the extent of approximately $114,473,000.

In the more than 13 years that the corporation had been authorized to make loans directly to business enterprises, it had made commitments for 43,400 such loans totalling in excess of $3,819,000,000, including participation by banks aggregating approximately $393,136,000. More than 90% of the number of all business loans authorized by RFC had been to small business.

During the 1947 fiscal year authorizations for loans and purchases of obligations in connection with projects authorized under federal, state or municipal law were made in the amount of $1,115,000. Public law 256, 80th congress, approved July 29, 1947, limits the amount of public agency loans outstanding

125,000,000.

he corporation authorized 83 catastrophe loans amounting 383,000 during the fiscal year 1947.

FC was authorized to furnish a market for veterans' home s made pursuant to the provisions of the Servicemen's Re- stment act of 1944, as amended. The corporation's au- ity to carry on this activity expired June 30, 1947, and as of date it had purchased 11,800 such mortgages amounting 67,680,000 and had commitments outstanding to purchase oo additional mortgages in the aggregate amount of $81,- ooo.

ther authorizations in the 1947 fiscal year comprised loans ailroads aggregating $82,850,000; $347,500 to drainage and ation districts; preferred stock loans to insurance companies unting to $5,000,000; and loans to the government of the ippines in the amount of $70,000,000.

**urchase of Surplus Property for Resale to Small Business.** ecause of a ruling of the comptroller general, the acceptance pplications by RFC for the purchase of surplus property resale to small business was temporarily discontinued in ch 1947, but authority to carry on this activity was rein- ed by public law 132, 80th congress. During the 1947 fiscal approximately 13,200 sales covering surplus property, hav- a value in excess of $40,000,000, were consummated and e than 19,000 small business priority applications were can- ed because of the inavailability of the material desired.

**lonlending Activities.**—RFC was authorized to continue to rate by lease or otherwise the government-owned tin smelter Texas City, Tex., until June 30, 1949, or until such earlier e as congress should otherwise provide. During the period 1, 1946–June 30, 1947, RFC purchased $54,988,000 of tin ores and concentrates; and its sales of tin for the same od amounted to $89,716,000.

s a national defense measure a synthetic rubber program undertaken by the government in 1940 when for all prac- l purposes there was no commercial production of the prod- in the United States. RFC constructed more than 51 plants related facilities for synthetic rubber production, represent- an investment in excess of $666,000,000. These facilities e operated for the account of RFC and by the close of 1945 plants were producing at a rate of more than 1,000,000 tons synthetic rubber annually. In the fiscal year 1947, 1,531,- ,000 lb. of synthetic rubber were produced in 44 of the nts at a cost of approximately $214,000,000, and in the same iod the corporation sold 1,504,000,000 lb. of synthetic rubber a consideration of $279,800,000. RFC was authorized (pub- law 24, 80th congress) to continue the manufacture and sale synthetic rubber until March 31, 1948, and to carry on essen- research in connection with the development of the syn- tic rubber industry.

During 1946 and 1947 the RFC, through its subsidiary U.S. mmercial company, was engaged in selling merchandise made ilable to it in Germany, Japan and Korea by the United tes military authorities. The primary purpose of the pro- m was to provide dollar exchange for use by the United tes military authorities in facilitating administration in those as.

During the fiscal year 1947, sales amounted to approximately 9,400,000.

**Liquidation Activities.**—A substantial number of industrial nts and other war facilities owned by RFC and representing investment of more than $6,000,000,000 had been sold, de- red surplus to War Assets administration or disposed of erwise. During the fiscal year 1947 RFC declared surplus nts and other such facilities in which its aggregate invest- nt amounted to more than $2,000,000,000. The corporation held such plants and other facilities, with a book value of $1,245,000,000 as of the close of the fiscal year, exclusive of the synthetic rubber plants, the Texas City tin smelter, and the fibre plantations in Central America, Panamá and Haiti. The corporation's investment in the fibre plantations amounted to $13,280,000.

Certain assets of the Smaller War Plants corporation, including plants, equipment and outstanding loans receivable, were transferred to RFC pursuant to executive order of Dec. 27, 1945. In the fiscal year 1947, RFC declared surplus to War Assets administration equipment formerly owned by Smaller War Plants corporation, representing an investment of approximately $1,700,000. The investment at the close of the fiscal year in the remaining lands, structures and equipment amounted to $4,349,000.

The purchase and sale of certain strategic materials and supplies which the RFC had bought and sold during World War II were continued during the fiscal year 1947. Purchases amounting to approximately $535,000,000 of such commodities were consummated in the fiscal year, comprising principally natural rubber, alcohol, molasses and copper. Sales for the same period were in the aggregate amount of $884,300,000. From 1940 when RFC began the acquisition of strategic minerals, metals and other critical and strategic supplies to June 30, 1947, it had expended approximately $9,681,000,000 for this purpose. During the same period its sales of such commodities and materials amounted to $9,505,000,000.

The activities in connection with the liquidation of the affairs of RFC's subsidiary War Damage corporation during the fiscal year 1947 comprised primarily the settlement of claims requiring the expenditure of approximately $893,000 and the continuation of the audit of the insurance companies which acted as its fiduciary agents. Through the facilities of 546 fire and 88 casualty and surety insurance companies, acting as fiduciary agents of the corporation, more than 8,700,000 policies or renewal certificates were issued representing a potential liability of approximately $140,000,000,000. The fire insurance companies had a participating interest in the operating profits or losses of the program up to a maximum of $20,000,000, and the casualty and surety insurance companies had a like interest limited to $5,000,000. Gross premiums collected amounted to approximately $250,000,000 and the net profits realized from the operations of the program in the amount of $209,827,810 were paid into the United States treasury.

During the period from Feb. 2, 1932, date of organization of the corporation, through June 30, 1947, loans and other authorizations made by the RFC with respect to its lending activities and loans to its war subsidiaries aggregated $42,390,-301,523, including $4,914,603,216 for allocations and loans to other governmental agencies and for relief by direction of congress. Of the total amount authorized, $5,275,892,607 was withdrawn or cancelled and disbursements totalled $36,023,-428,933. The amount outstanding at June 30, 1947, was $2,-057,454,140 after repayments and other credits amounting to $33,965,974,792. (J. D. G.)

**Reconversion:** *see* BUSINESS REVIEW; LAW; RATIONING.

## Red Cross.

**United States.**—Two events stood out in the history of the American Red Cross during 1947. First was a reorganization under which chapters were given greater voice in determining Red Cross policies. The Central committee was abolished and replaced by a board of 50 governors—30 elected by chapters, 8 appointed by the president of the United States (one designated president of the Red Cross) and 12 members at large elected by the other 38. The reorganization was voted by congress and signed in May, 1946. President Harry S. Truman appointed Basil O'Connor, who had been serving as chairman of the Red Cross since July 1944, president of the organization for a three-year term.

The second event was inauguration of a new national blood program to furnish whole blood, plasma and eventually other derivatives, without charge for the products, to the entire nation. The program would require three to five years to reach full operation, and approximately 3,700,000 pints of whole blood annually would be needed. Preliminary organization was completed by the end of 1947, and the first blood centres were scheduled to open in 1948. Donors in small towns and rural districts were to be reached by "bloodmobiles"; the donations thus collected would be returned to originating communities after processing.

Disaster relief operations, financed by allocations of $11,000,000, were greater in 1947 than in any of the preceding 10 years. Aid was provided to more than 300,000 victims. Principal disasters calling for Red Cross assistance included the tornado at Woodward, Okla., and the nearby towns of Glazier and Higgins, Tex.; the Texas City explosions and fires; the June floods in seven midwestern and eastern states; the Florida-Gulf states hurricane in September and the New England forest fires in October.

Claims Service representatives handled 1,095,832 claims of veterans or their beneficiaries for government benefits. Paid field directors were serving in 116 veterans' administration hospitals at year-end, assisted by 11,000 Red Cross chapter volunteers working on regular schedule to provide programs of recreation and entertainment for the hospitalized. Chapter Home Service workers aided veterans or their families with personal problems in 2,029,000 instances, and similarly helped families of servicemen upon 1,658,000 occasions.

Camp Service field directors aided servicemen upon 1,236,300 occasions in the U.S. and overseas in coping with problems affecting the welfare or morale of the individual or his family. Medical social workers performed similar services for the hospitalized, and recreation workers conducted well-rounded programs for occupation forces. Emergency financial assistance to men and women in uniform totalled $3,778,100. An agreement was reached with the army and navy under which Red Cross overseas club operations would be gradually turned over to the armed services, the change-over to be complete by March 31, 1948. Traditional camp and hospital programs overseas were to be continued.

In addition to the blood program, health activities included instruction in safety, home nursing and nutrition. At the end of 1947, Red Cross instructors in water safety numbered 21,000; in first aid, 29,000; and in accident prevention, 7,000. Persons completing water safety courses numbered 470,390, of whom 91,239 qualified as Red Cross life savers. First aid trainees numbered 346,871, while 31,723 persons received training in accident prevention. The Nutrition Service issued 37,754 certificates to persons completing classes, and home nursing 118,340. Red Cross public health nurses made 351,600 visits to persons needing their assistance.

More than 275,000 trained volunteers served a total of 25,000,000 hours. Production workers made 2,565,200 garments and other articles for use in relief and other activities. Canteen workers served 3,145,000 persons; the Motor Service made 668,600 trips.

Expansion of Red Cross College units continued during 1947, with groups active on the campuses of 239 institutions of higher learning. They served veterans and their families attending college, promoted Red Cross classes in water safety, first aid and other subjects, and worked with Red Cross chapters in their service programs on behalf of hospitalized veterans, servicemen and civilians.

The Junior Red Cross continued its program of educationa rehabilitation by sending school and other supplies valued a $1,832,200 to children in war-devastated countries. With a enrolment of 19,270,800 members, it also furnished Navaj Indian children with cod liver oil, eye glasses, first aid kits, woo cloth, blankets, sports and educational equipment.

(H. BM.)

**World.**—The League of Red Cross societies sponsored tw regional conferences during the year. The first, held at Caracas Venezuela, in February brought together most of the representatives of the 22 societies of the western hemisphere. The delegates worked out plans for greater co-operation among the societies in the relief of disaster victims, discussed new health programs, and called particular attention to the need for continued aid to war victims abroad. The second, in September a Belgrade, Yugoslavia, was concerned principally with problem of postwar relief and health programs.

Two meetings of the board of governors of the league wer held, one in Paris in May, the second in Geneva, Switzerland in September. At the latter meeting the newly organized Red Cross societies of the Philippines and Syria were admitted to league membership, raising the number of member societies to 64 with a combined world-wide membership of more than 100,000,000.

The International committee of the Red Cross—an independent body of Swiss citizens—brought together in Geneva in March representatives of the principal Allied governments to discuss revisions of the Red Cross treaties and the development of a new convention to protect civilian populations in war time The committee continued its efforts to aid war prisoners still held by Allied governments and called for their earliest possible repatriation.

A number of the national societies initiated new blood donor programs or expanded this service during the year, including the United States (*see* above) and Canada. The Netherlands Red Cross further developed its nation-wide blood service, and many other European societies showed increased interest in blood programs. The Danish Red Cross conducted antituberculosis vaccination programs in a number of European countries.

Disaster relief continued to demand Red Cross attention throughout the world. The American Red Cross aided flood sufferers in England and famine victims in Rumania. Floods in Bulgaria, explosions in France and Spain, fires and earthquakes in South America found the various national Red Cross societies taking significant part in relief work.

The division of India was reflected in Red Cross organization there with plans developed for a Pakistan Red Crescent to succeed the Indian Red Cross in the new Moslem country.

The Japanese Red Cross concentrated on a new peacetime program and held its first postwar fund campaign. A new Red Cross in U.S.-occupied Korea was formed. German Red Cross units in the western zones of Germany gave special services to returning war prisoners and developed nursing and other civilian services.

(*See* also PRISONERS OF WAR.) (P. E. R.)

**Re-employment of War Veterans:** *see* SELECTIVE SERVICE.
**Reforestation:** *see* FORESTS.
**Reformed Church:** *see* PRESBYTERIAN CHURCH.

**Refugees.** The departure from Germany of 2,000 Ukrainian Mennonite refugees for Paraguay in Jan. 1947 initiated the movement of refugees in resettlement which gained increasing momentum during the year. In 1945 the substantial

movement from central Europe had been in repatriation to the home countries of eastern and western Europe from which over 8,500,000 slave labourers and concentration camp victims had been drawn during the war. By the end of 1946 this movement, which comprised more than 7,000,000 victims of German labour recruitment policies, had come to an end, leaving behind as the hard core of nonrepatriable displaced persons approximately 1,000,000 Poles, Ukrainians, Balts, Yugoslavs and Jewish refugees who were unwilling to return to their former countries. They preferred the meagre existence of camps and assembly centres and the uncertainties of resettlement in other countries to return to their countries of origin in which such profound political changes had taken place as to make life unattractive.

The Intergovernmental Committee on Refugees, whose efforts to resettle refugees had been handicapped in 1945 and 1946 by the limitations of shipping and the rigid controls of the occupying authorities on the exit of persons from Germany and Austria, concluded agreements with Brazil, Venezuela, Peru, Chile, and other Latin American countries for resettlement of refugees on the land and in industry.

Four ships were chartered from the U.S. army to shuttle refugees across the Atlantic to South America and Canada. During 1947 British and Norwegian ships joined the fleet to expand the movement in resettlement to Australia and the Argentine. Under President Harry S. Truman's directive of Dec. 22, 1945, some 28,000 displaced persons had been given visas of admission to the U.S. by Dec. 1947. Twenty thousand had been recruited for work in Belgium, and 30,000 had been received in England under the movement known as Westward Ho. Canada announced its willingness to receive refugees nominated by relatives already resident in the dominion and to accept for employment an additional 20,000 workers in lumber, textiles, domestic service and industry. Australia initiated its program of selecting 20,000 immigrants from among the refugees in Europe in the fall of the year. The Netherlands announced recruitment plans involving the selection of 8,000 workers. Conservative estimates were that more than 110,000 displaced persons had started life anew in countries of immigration at the end of the year as the forerunners of many more thousands to come in the following two years.

Governments were slow in responding to the appeal of the United Nations to join the International Refugee organization, which was proposed as the international agency to deal with the problem of refugees and displaced persons. The constitution of the I.R.O., adopted by the general assembly of the United Nations at its meeting in New York in Dec. 1946, provided that the organization would come into being when 15 nations had ratified the constitution. Allocated contributions of member nations totalled 75% of the provisional budget of $155,000,000 for the first year's operations. By Dec. 31, 1947, only 11 governments, Australia, Canada, China, Guatemala, Dominican Republic, Iceland, the Netherlands, Norway, New Zealand, Great Britain and the United States had ratified the constitution. Their contributions to the budget totalled 70.14%.

Pending activation of the International Refugee organization, the preparatory commission for the I.R.O., consisting of 20 governments which had either ratified the constitution or signified their intention to do so, assumed operating responsibility for the problem by accepting the functions of U.N.R.R.A. and the Intergovernmental Committee on Refugees, which terminated their activities on behalf of refugees on July 1, 1947. The preparatory commission was handicapped by inadequate funds, a substantial portion of which had to be expended on the care and maintenance of refugees in the camps in Germany, Austria and Italy. The possibility of exploiting all available opportunities for resettlement, particularly in overseas countries, was thus precluded.

The urgency of resettling refugees at the earliest possible time was highlighted by withdrawal of the Allied military forces from Italy in Dec. 1947 and by the difficulties experienced in drafting the Austrian peace treaty. The eastern European governments made persistent demands for repatriation of their dissident nationals and repeated charges that those resisting repatriation were mostly war criminals, quislings or traitors or that they were being misled by political enemies of their home countries. Upon the withdrawal of British and U.S. troops from Italy it was feared that demands for repatriation of the estimated 150,000 refugees in Italy, mostly Yugoslavs, could not be resisted by the Italian government. The latter, however, gave public assurances that it would protect the right of the refugees to choose between repatriation and resettlement in other countries. In Austria negotiations on the peace treaty were delayed in part by the demand of the Soviet government that all refugees and displaced nationals of United Nations countries and *Volksdeutsche* from the Balkan countries alike be removed from Austria. These two groups totalled approximately 450,000, of which 250,000 were *Volksdeutsche* who had fled into Austria after the war, chiefly from Yugoslavia. They constituted a real burden on the Austrian economy and threatened constantly to create serious political tensions among the occupying authorities and within the government.

Jewish refugees in central Europe numbered more than 200,000, the majority of whom had fled from Poland during 1946 and early 1947. Their destination was Palestine by any available route. During the summer of 1947, 20,000 Jewish refugees from Rumania infiltrated into Austria, Germany and Italy in flight from political and economic pressures which severely restricted their opportunities for a livelihood. This movement slowed down in the fall of 1947 as tighter controls were imposed on the Rumanian-Hungarian border. The hopes of Jewish refugees were raised by the action of the United Nations general assembly in voting for the partition of Palestine.

Integration in the German economy of the 6,000,000 members of the German minorities of Poland, Czechoslovakia and Hungary whose transfer to Germany had taken place under the Potsdam agreement proceeded very slowly during 1947. Their presence was resented by the Germans, who were forced to share their limited rations and housing facilities. Because of the overcrowding in Germany, the movement of *Sudetendeutsche* from Czechoslovakia was halted before its completion, leaving approximately 160,000 persons arrested in the process of expulsion. Denmark was forced to maintain within its borders more than 100,000 Germans whose repatriation could not be arranged. Smaller numbers of *Reichsdeutsche* and *Sudetendeutsche* whose ultimate destination was Germany were also held in Austria pending arrangements for their reception.

Immigration legislation to admit 400,000 refugees and displaced persons to the United States in excess of existing quotas was the subject of heated debate in the U.S. congress and was widely discussed in the press. Prospects of favourable action on this legislation raised hopes that a substantial reduction in the displaced persons population of central Europe might be achieved.

In anticipation of meeting the manpower requirements of the "Marshall plan" countries, the preparatory commission for the I.R.O. was assembling data at the turn of the year on the occupations and skills of refugees and displaced persons. The employables were estimated to number more than 500,000. In addition, the preparatory commission listed opportunities for the resettlement of more than 250,000 refugees during 1948 in Latin American countries, England, Canada, Australia and the western European countries. These resettlement agreements 'e in process of renegotiation as the quotas of original agree- ıts approached fulfilment.

n the far east, more than 2,000,000 Koreans had been re- riated to Korea since 1945. Approximately 1,000,000 re- ned from Japan, where some 2,000,000 labourers and their ıilies had been taken during the war for employment in in- try. Included also were some 500,000 from north Korea and roximately 350,000 from Manchuria. More than 800,000 anese were repatriated from Korea to Japan during 1946 and 7, including some from the Soviet zone of occupation.

Repatriation of Japanese from China continued during 1947. the estimated 2,000,000 at the end of the war, 1,500,000 had n repatriated by the close of 1947. The repatriation of over- s Chinese from China to the Philippines, the Netherlands lies, Siam, Burma and Indo-China proceeded more slowly ing to delay in immigration procedures in the receiving ıntries. Because of disturbed internal conditions in China, places of final settlement of the 20,000,000 Chinese displaced ing the war appeared likely. (*See* also Jewish Religious e; Prisoners of War.)

**lief.** The main attention in administration of relief in the United States during 1947 was to raise payments to et the rapidly increasing cost of living. Congress authorized reases in the subsidies when matched by similar increases ide by states. A complicated formula was adopted in the tegories of old-age assistance and aid to dependent children, oviding for about the same potential increase in the two tegories. Congress suggested that the states allow enough to et the budgetary deficit in each family, irrespective of fed- al grant; a few states such as Massachusetts had adopted this ethod from the first days of the Social Security administra- n.

The categorical assistance program—old age, dependent chil- en and blind—was liberalized by the states in some respects easing the requirements of eligibility, such as time of resi- nce in the state; but on the other hand there was a general ovement to enact laws which would place a lien upon the operty of a deceased beneficiary, whereby the state would imburse itself.

The American Public Welfare association estimated in Sept. 47 that 1 out of 3 in the country more than 65 years of age as receiving public assistance; 1,750,000 children and 80,000 ind were receiving assistance under the Social Security law; arly 2,000,000 were receiving unemployment compensation; d 3,000,000 former servicemen, their families or survivors ere receiving benefits through the Veterans' administration.

**Australia.**—At the end of 1946 a constitutional amendment as ratified empowering the dominion government to make tion-wide provisions, in addition to invalid and old-age pen- ons, for maternity allowances, widows' pensions, child endow- ent, relief for the unemployed, sickness benefits including edical care, hospital benefits and drugs, allowances to students d family allowances. The question of abolishing the means st was also under consideration. Some of these services had en in operation in parts of Australia for years, but in 1947 they were consolidated under a national administration and nationally aided finance.

Australia thus adopted the same simplified structure of relief benefits as that of New Zealand, except that in the latter dominion the worker and employer had to pay a large share of the total cost to a plan approximating social insurance. In Australia the whole financial responsibility rested upon the governmental authorities, dominion and provincial. In New Zealand there was no means test.

**Great Britain.**—Progress toward implementing the Beveridge report during 1947 was mainly in the social insurances, in which the pattern first established by New Zealand was followed in the main. Seven distinct governmental authorities concerned with various aspects of social insurance were consolidated into a single department: the ministry of national insurance. Instead of separate and different rates for the different types of protection, premiums for both worker and employer were consolidated into one payment: 4*s* 11*d* a week from the worker and 4*s* 2*d* a week from the employer. Similarly, benefits were placed on a flat basis. While the consolidation was not to be fully effected until July 5, 1948, certain provisions, such as old age, blind and widows' (insurance) pensions, with their insured benefits, were adopted early in 1947. This action had a bearing on relief, as supplementary grants to pensioners were made by the assistance board, on evidence of need. The need for such grants was greatly decreased by the more adequate insurance pensions.

Reorganization of relief remained in the planning stage, but it was contemplated that the whole system of public outdoor relief be nationalized and modernized, leaving with the local authorities only institutional care for the aged and infirm, or special services for the deaf, the blind and physically handicapped.

Reflecting this acceptance of complete public responsibility for the care of foreseeable distress, the London Charity Organization society changed its name to the Family Welfare association, and limited its function to counselling and advice on family matters, including advisory service on available governmental resources.

**Canada.**—By 1947 Canada was spending more than $200,000,000 a year in its grants to families in behalf of their children. Although the plan of giving allowances to families in the lower-income group in partial support of the children was employed only in Great Britain and the English-speaking dominions of the British empire, in Canada it had reached dimensions almost equal to the total per capita expenses for public welfare in the United States.

Parliament increased old-age pensions by $10 per month to offset the rise in cost of living; such payments had to be matched by the provinces. It also suggested that the provinces raise their own grants for old-age assistance and aid to dependent children beyond the sum required for matching the national grant. **Religion.** Only about one-third of the world's population can be credited to the systematically organized religions whose members could in any precise sense be counted, and even with respect to these, exceedingly wide margins of uncertainty

CANADIAN NUNS at a candlelight ceremony during the mammoth Marian congress held at Ottawa in June 1947. Thousands of Catholics attended the five-day international congress honouring the Virgin Mary

exist. In the U.S.S.R., for example, it was highly uncertain in 1947 how many adherents to the Eastern Orthodox Church had survived the long-continued soviet antireligious policy. It was known, however, that some 3,500,000 Uniate Catholics had transferred from the Roman Church to Eastern Orthodoxy as a result of the changed political affiliations of the eastern European states.

The *American Jewish Year Book* for 1946–47 ventured for the first time after World War II to estimate the number of Jews in the world. Its figures had been reduced from 16,600,000 to about 11,000,000, of whom about half lived in the United States and Canada. Fresh postwar compilations of the strength of religious bodies in Europe increased the estimated number of adherents to Roman Catholicism, Eastern Orthodoxy and Protestantism, but do not fit into any estimates for the rest of the world.

Physical and political conflicts based on religion were increasingly frequent and acute during 1947. Within particular nations, relations between church and state became newly sensitive. Decisions of the U.S. supreme court were felt by many to obscure the historic separation of church and state. In Great Britain, discussions raising the question of the disestablishment of the Church of England were coupled with proposals for the continued legal co-operation of church and state. In other parts of the world, policies aiming either at the outright control of the church by the state, or the virtual control of the state by the church, had aggressive expression. Conflicts between enormous masses of people, based on differences of religion and culture, flared into violence, notably between India and Pakistan, and between Jews and Arabs in the near east.

When religious operations had sought to cross national boundaries, as in the case of Christian foreign missions, the receptiveness of one culture to influences from another had steadily diminished. Nationalism had increasingly identified its inherited religions with political identity and safety of the newer states. This tended greatly to limit freedom of religious propaganda, and was in direct conflict with efforts of the United Nations to set up a world charter of religious freedom, including the right of adherents to one faith peaceably to propagandize adherents of another.

In the United States, theological conflict between elements within the Protestant churches reached a new decisiveness. Thus the conservative wing of the Northern Baptist churches set up a counterorganization to the parent body, substantially establishing another denomination. The ultra-conservative American Council of Churches, long in opposition to the Federal Council of Churches, announced a meeting for the purpose of organizing a rival World council, to be held in Amsterdam, Holland, on the week preceding the organizing session of the World council in 1948.

Tensions between Protestants and Roman Catholics in the United States took on a new frankness of expression. High Catholic dignitaries charged Protestants with cultural narrowness and bias, and Protestants alleged un-American political policies on the part of the Catholic Church. The Association of Protestants and Other Americans United for the Separation of Church and State, organized during 1947, disclaimed religious opposition to Catholicism, but based its position on the alleged purpose of Catholicism to secure public tax funds for the support of sectarian schools and institutions, as evidenced in the North College Hill, Ohio, case.

The issue of church and state, as related to the use of released public school time for religious instruction by the churches, seriously divided Protestant sentiment. The most fundamentalistic wing of Protestantism and the most secularistic found themselves curiously lined up together in the filing of briefs before the supreme court opposing released school time. The major body of middle-of-the-road denominations favoured and desired to extend it on the basis of interfaith co-operation.

Considering the world as a whole, Protestantism definitely moved away from the disposition to leave political matters exclusively to the state. It asserted more aggressively the responsibility of the church for leadership in determining the policies of economic and world order. This trend was strongly evidenced in the reorganized and strengthened Lutheran World Federation, established at Copenhagen during the year.

Coincident with numerous conflicts involving religious differences, strong movements were underway during 1947 to com-se differences. There was a consolidation of theological think- g about a common position somewhat to the right of that rmerly held. In the U.S. and Europe the recovery of a Bible- ntred emphasis in Protestantism was marked. The relationships tween theologians of different communions and nationalities they made preparations for the World Council of Churches 1948 convinced them that they had more in common than s supposed, and that their agreements were increasing.

Evidence accumulated that multitudes of people were look- g with new expectation to religion to overcome the perplexities d fears of the disorganized times. A nation-wide survey con- ucted by a columnist in the New York *Herald Tribune* asked hat public leaders were doing the most good for the country. he answers rated religious leaders first, and Congressmen last. his survey showed that rural people and the poorer elements population were currently the most responsive to religion.

The relief and rehabilitation of countries devastated by World ar II and its aftermath were special objects of religious con- ern and responsibility. Thus Protestant and Eastern Orthodox hurches, uniting in the organization called Church World ervice, contributed $14,500,000 in money and goods during 47—an advance of more than $1,000,000 over the previous ear; a goal of $24,000,000 was set for 1948. Reports of the epartment of commerce, however, showed that the highest de- ree of support for religious work of all denominations occurred uring the depression of the early 1930s, and that the nation ad failed to contribute correspondingly in the postwar era of rosperity. The proportion of the national income devoted to eligion and philanthropy in 1947 was the smallest in 30 years.

The 1947 session of the Conference of Science, Philosophy nd Religion in Philadelphia discussed the possibility of a "re- gion for one world," expressed in many forms but having a ommon centre of ultimate loyalty, and proceeding through a o-operative effort to discover truth. In its most believing and spiring moods, religion had always remained convinced of the ossibility of harmonizing the conflicts of humanity, conquering s ills, and integrating the world into an ordered, peaceful and utually helpful whole. For large numbers of Protestants and astern Orthodox churches this hope was newly symbolized by he World Council of Churches—a sort of religious counterpart f the United Nations. The council in 1947 united 127 denom- nations or national churches in 39 countries on all continents. (*See* also CHRISTIAN UNITY; CHURCH MEMBERSHIP; also under eparate denominations.) (H. P. D.)

# Reparations.

**Germany.**—The slow progress in reparations allocations and deliveries in late 1946 and arly 1947 was regarded with concern by members of the nter-Allied Reparations agency. Their pressing rehabilitation eeds made it important that they secure as soon as possible a hare of the more than 1,600 plants set aside for reparation rom the three western zones by the Allied Control council in March 1946 when the first level-of-industry plan was adopted.

Accordingly, the problem of economic unification was high n the agenda at the Moscow meeting of the Council of For- ign Ministers (March 10–April 24, 1947). However, the U.S.S.R. set as the price for unification the payment in repara- ions of $10,000,000,000 (at 1938 prices), payable in capital quipment, external assets, and from current production over a eriod of 20 years.

Both the United States and Great Britain rejected this de- nand. They contended that no reparations from current pro- luction were contemplated by the Potsdam declaration which, hey said, superseded the Yalta agreement, upon a hitherto unpublished clause of which the soviet claim was based. Moreover, payments from current production would delay Germany's return to a self-supporting basis, and thus indirectly increase the Anglo-American occupation burden.

After the meeting military authorities resumed the allocation of factories to I.A.R.A. and dismantling proceeded. However, according to an I.A.R.A. report released on July 17, reparations allocated to it during the 18 months ended June 30, 1947, included only 262 German merchant ships of 750,995 gross tons valued at $48,869,000 and industrial equipment valued at 138,275,378 rm. (1938 value). Reports of the British and U.S. zone commanders issued in August showed that up to the end of July only 79 plants had been dismantled in the U.S. zone and 39 in the U.K. zone.

The U.S. and British governments announced a revised level-of-industry plan for the combined Anglo-American zones on Aug. 29. The effect of the new plan would be to return sufficient industrial capacity in the bizonal area to approximate the level of industry prevailing in 1936. As a result, on Oct. 16 Anglo-American authorities made a downward revision of plants to be dismantled from more than 1,600 to 682, of which 186 were in the U.S. zone. Including 176 plants to come from the French zone, the total value was unofficially estimated at about $1,000,000,000. The list involved about 1% of the total number of plants in western Germany. Of the Anglo-U.S. total of 682, 302 were strictly war plants and 380 were industrial plants.

U.S. authorities said the announcement of the new list "opens the way for the resumption of normal allocations to the U.S.S.R." They added that all plants already allocated to the U.S.S.R. were in the process of dismantling, but said no further dismantlings would take place until further allocations were made by the Allied Control council.

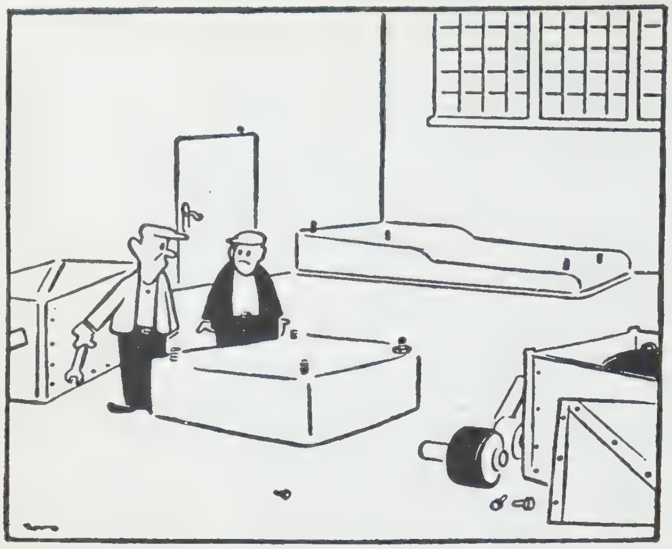
The reparations removal program aroused opposition among the Germans themselves as well as in certain circles in Great Britain and the United States. In the latter part of 1947, several U.S. congressmen demanded the cessation of shipments, particularly to the Soviet Union.

Reparations emerged as a key issue at the London meeting of the Council of Foreign Ministers (Nov. 25–Dec. 15, 1947). Vyacheslav Molotov renewed the soviet reparations demands which had been made at the Moscow meeting. Gen. George C. Marshall and Ernest Bevin categorically rejected these demands, although the French delegation, as at Moscow, indicated it was not opposed to them in principle.

With the failure of the London conference, the United States ceased reparations deliveries to the U.S.S.R. in December, and a similar move was contemplated by Great Britain. Moreover, dismantling in both zones was reported to have come to almost a standstill, despite the urgent need of other European nations for German surplus capital equipment.

Little information was forthcoming in 1947 on reparations activities in the soviet zone, but it was apparent that removals were substantial. Data contained in a U.S. military government report, *Economic Data on Potsdam Germany,* released on Nov. 9, gave rise to estimates that the U.S.S.R. had taken about $1,250,000,000 worth of reparations from current production in its zone since 1945. At the London meeting Bevin said the U.S.S.R. had taken "considerably more than $7,000,000,000" worth of reparations from its zone. Marshall more conservatively estimated the annual rate of removal at more than $500,000,000.

**Austria.**—It was agreed at Potsdam that no reparations would be exacted from Austria, but the U.S.S.R. was to be entitled to all German assets in eastern Austria. Difficulties ensued on the formulation of a definition of German assets. At the Moscow meeting the basic cleavage was on the inclusion



"NOW WE CAN DELIVER REPARATIONS FROM CURRENT PRODUCTION," a caustic barb directed at Allied reparations policies in Germany which appeared in the *Hannoversche Presse* during 1947

(opposed by the United States and Great Britain) of assets taken by the Hitler regime by force or duress from Austrian citizens and U.N. nationals.

After the close of the meeting the matter (along with other disputed clauses of the proposed Austrian treaty) was referred to the four-power Austrian Treaty commission which met in Vienna from May 12 to Oct. 11, 1947. The commission made an extensive examination of the basic types of German assets, but again reached no agreement.

Shortly before the London meeting in November, a French compromise proposal was submitted to the deputies of the foreign ministers. Bypassing a definition of German assets, the plan reportedly would give the U.S.S.R. one-third of the Austrian oil production and most of the Danube shipping plus $100,000,000 in reparations from current production and industrial equipment in lieu of the soviet claims.

The U.S.S.R. not only rejected the proposal at the London meeting but refused to put forward any concrete claims of its own. However, the matter was again referred to the deputies at the close of the conference, and there were indications that some sort of an agreement might be reached. Still unresolved, however, were the Yugoslav claims made at the Moscow meeting for $150,000,000 in reparations from Austria.

According to an Austrian government statement issued on Nov. 27, the total value of industrial equipment removed by the soviet authorities from their zone after 1945 amounted to 700,000,000 schillings.

**Japan.**—The end of the year found the Far Eastern commission (F.E.C.) still trying to determine, on a broad political basis, the shares of reparations which each particular country should receive. However, a policy decision approved on May 8, 1947, provided that in determining the shares, account should be taken of the damage suffered by each country as a result of Japanese aggression and of the contribution made by each country to Japan's defeat, "including the extent and duration of its resistance to Japanese aggression." Approval was given to the exaction of reparation from current production.

One of the stumbling blocks in the determination of shares was the Soviet Union's contention, in claiming reparations from Japan proper, that the industrial facilities which soviet forces had removed in a wholesale fashion from Manchuria should be regarded as war booty, and not be included in reparations discussions.

A policy decision approved by the commission on May 22 stipulated that in selecting plants for removal, S.C.A.P. (supreme commander for the Allied Powers) should give preference to facilities employed in war industries and war-supporting industries, particularly those owned by Zaibatsu concerns and other large combines. Another decision approved on Aug. 14 provided for the destruction of all special-purpose munitions machinery. S.C.A.P. was to make available for claim as reparations "all other industrial machinery and equipment in primary war industries and such other industrial facilities in secondary war industries and war-supporting industries as may be in excess of the peaceful needs of the Japanese economy."

Early in September the entire Japanese reparations program was attacked by Clifford S. Strike, an industrial engineer who had served as chairman of a special committee on Japanese reparations which had been dispatched to Japan in January by the U.S. war department. He claimed that the F.E.C. policy of large reparations removals meant economic disaster for Japan and took issue with reports made in 1946 by U.S. Ambassador Edwin W. Pauley recommending about a 30% reduction in industrial capacity. Pauley's reports had formed the basis of most of the F.E.C. policy decisions. According to Strike's unofficial report, his committee had recommended limited reparations removals, but he said these removals would involve only a small percentage of the 1,100 plants already earmarked by F.E.C. representatives in Japan.

## Republican Party.

The Republican party's principal objective in 1947 was to set a record that would justify the U.S. voters' confidence in giving it control of congress in the 1946 elections, and to gain an advantageous position for the 1948 presidential contest.

The G.O.P. had promised—and tried to achieve—government economy, tax reduction, a curb on labour excesses and elimination of Communists from various federal departments. These had been the issues on which the party had returned to power in 1946. The efforts were only partially successful, however, largely because of White House opposition.

The Republicans fell far short of their promises in cutting federal expenditures, considering house Republicans' pledge to save $6,000,000,000, and their senate colleagues' commitment of a $4,500,000,000 reduction. Senator H. Styles Bridges of New Hampshire, finance committee chairman, estimated the over-all reduction at $7,000,000,000, but this figure included enforced restoration to the treasury of unexpended balances held by various departments and bureaus. It was generally believed that the ultimate reduction amounted to approximately $3,000,000,000. Although smaller than anticipated, it represented the first step in the direction of federal economy in more than a decade.

The G.O.P. made two unsuccessful attempts to reduce taxes, figuring this to be a vote-getting issue. The first measure provided for graduated cuts, effective July 1, 1947. When the house sustained the veto of President Harry S. Truman, who argued that the measure would have an inflationary effect, congress changed the effective date to Jan. 1, 1948. Truman's second veto was overridden in the house, but the senate failed by five votes to repass the bill. As 1947 ended, the G.O.P. leadership was preparing another tax reduction bill for presentation to the regular session in 1948.

The Republicans had better luck in their anti-Communist sade; Russia's postwar recalcitrance contributed to their ccess. President Truman had originally minimized the need legislation or regulations restricting Communist activities, he eventually issued a loyalty order, providing that sus- cted subverters be screened and discharged, if found wanting. December, Attorney General Thomas C. Clark issued a list organizations considered Communistic as a guide for applica- n of the president's loyalty tests.

The Republicans also included an anti-Communist clause in e Taft-Hartley act providing that labour union officials must ake affidavit that they are not Communists, under penalty of ing all privileges under the National Labor Relations act. e house committee on un-American activities forced the in- tment of several Hollywood writers and actors for refusing answer the question: "Are you a Communist?"

The G.O.P. did not store up the expected political capital om the red issue, however. For one thing, Truman's reversal his position stole their thunder. Secondly, Moscow's hostility ward the United States made it a national rather than a rtisan question.

In passing the Taft-Hartley act over President Truman's veto, e Republicans did fulfill their pledge to try to end the post- ar industrial disputes that had threatened peacetime recovery. though its sponsors maintained that the law was designed to ee rather than penalize labour, union spokesmen denounced it a slave labour bill and threatened to work for the defeat of ery member of congress who had voted for it, regardless of rty.

The G.O.P. abandoned many traces of "isolationism" in 1947. supported President Truman's request for $400,000,000 to rengthen Greece and Turkey against Communist attack, ex- rnally and internally. With some modifications as to the nount of money and the kind of supervision, it backed the lministration's proposal for $597,000,000 stopgap aid to rance, Austria and Italy, and the long-range Marshall plan r rehabilitation of western Europe. As nearly as possible un- er the American system of politics and government, the man- gement of foreign affairs became a nonpartisan enterprise in 947.

As the year closed, however, the Republicans were engaged in sharp controversy with President Truman over his ten-point, nti-inflation program. They opposed it on the ground that his equest for selective controls over prices and wages, as well as e power to allocate basic materials, would lead to the creation f a police state. Republican senate leader Robert A. Taft eaded the fight for adoption of more conventional efforts to eck the upward trend of prices, which had already begun to rust itself forward as possibly the most explosive issue of the 948 presidential campaign.

Taft's immediate radio rejoinder to the Truman proposals, as ell as his general tendency to issue statements without making ear whether he was speaking for himself or the party, brought ild criticism from some of his associates; they thought him too recipitate, too unyielding and too conservative. They denied, owever, that their complaints constituted a rebellion against is leadership. Among his critics were Senators Ralph E. landers and George D. Aiken of Vermont, H. Styles Bridges nd Charles W. Tobey of New Hampshire, Raymond E. Baldwin f Connecticut and Wayne L. Morse of Oregon.

Three prominent Republicans announced their candidacies for e 1948 presidential nomination—ex-Governor Harold E. Stas- en of Minnesota, Senator Taft and Governor Earl Warren of alifornia. Governor Thomas E. Dewey of New York was re- arded as an active, though not an avowed candidate. Despite eir failure to announce their plans, Generals Dwight Eisenhower and Douglas A. MacArthur were frequently mentioned as possibilities.

Stassen caused continual flurry in the political dovecotes by his activities. He visited the Soviet Union and interviewed Joseph Stalin. He crisscrossed the nation for months in an admitted campaign for delegates. Although he did not mention them by name, he condemned Governor Dewey as "evasive" because of his failure to discuss national issues, and he referred to Senator Taft's program of limited aid to Europe as "miserly." He had promised to wage an unorthodox fight for the nomination, and it was generally agreed that he was living up to his promise.

There were no changes in the Republican leadership in congress during 1947. Senator Arthur H. Vandenberg of Michigan acted as president pro tem of the Senate, Wallace H. White, Jr. of Maine as majority leader, Kenneth S. Wherry of Nebraska as whip, and Senator Taft as policy committee chairman. Speaker Joseph W. Martin, Jr. of Massachusetts presided over the house, with Charles A. Halleck of Indiana as majority leader and Leslie C. Arends of Illinois as whip. (*See* also ELECTIONS; UNITED STATES.) (R. TU.)

## Rhode Island.

A north Atlantic state of the United States, in New England; one of the 13 original states; popularly known as "Little Rhody." Area, 1,214 sq.mi. (smallest of the United States), including 156 sq.mi. of water; pop. (1940) 713,346. The urban population was 653,383 (91.6%). On July 1, 1944, the bureau of the census estimated the civilian population of the state at 778,972. Capital, Providence (253,504). Other cities include Pawtucket (75,797); Woonsocket (49,303); Cranston (47,085); Newport (30,532); Warwick (28,757); Central Falls (25,248).

**History.**—At the regular 1947 session of the legislature, leading measures passed included the following: an act making appropriations for the support of the state for the fiscal year ending June 30, 1948, reaching total net state appropriations of $34,946,192.18, which was more than $10,000,000 increase over the previous year, of which increase $5,340,000 was to aid cities and towns and allow an increase of $600 salary to each teacher; an act to provide additional revenues for the state and its municipalities and creating as new taxes or amended taxes: business corporation tax, sales and use tax, tax upon tobacco products, tax upon gasoline and other fuels, unincorporated business tax, taxation of public service corporations, tax upon intoxicating beverages, and tax upon pari-mutuel betting; an act to encourage development of housing facilities by authorizing life insurance companies to own and operate housing projects and other real estate; an act to provide for the development of hospital facilities adequate to serve all people of the state; an act providing for the incorporation of co-operative associations; an act to provide for the establishment and operation of nonprofit school lunch programs in schools in the state; an act extending the benefits under the workmen's compensation law; a series of acts granting an additional tax exemption in the amount of $1,000 value of property of disabled veterans, exempting veterans who have suffered amputation of any limbs or are paralyzed from payment of fee for annual registration and licence to operate any motor vehicle, providing for recording of certificates of honourable discharge by veterans without payment of any fee, exempting from parking meter charges persons who by reason of amputation of limbs drive a specially constructed motor vehicle, and providing for tax exemptions on property owned by veterans' organizations; an act creating a direct primary system for the nomination of party candidates for elective office; an act proposing an amendment to the state constitution providing absentee voting (passage of second legislature).

The chief executive officers of the state elected in Nov. 1946 for 1947–48 were John O. Pastore, governor; John S. McKiernan, lieutenant governor; Armand H. Cote, secretary of state; John H. Nolan, attorney general; Russell H. Handy, general treasurer. Edmund W. Flynn was chief justice of the supreme court.

**Education.**—During 1946–47 there were in the public elementary schools 57,020 pupils and 2,003 teachers; in junior high schools 17,156 pupils and 867 teachers; in senior high schools (3 years) 15,261 pupils and 734 teachers; in senior high schools (4 years and vocational) 4,974 pupils and 234 teachers. Pupils attending private schools were: elementary 24,378; junior high 4,827; senior high (3 years) 840; senior high (4 years) 6,500. Total number of teachers in private day schools was 1,396. The director of education in 1947 was Michael F. Walsh.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—The total number of persons receiving public assistance in all categories (excluding incapacitated fathers) in Nov. 1947 was 25,261 or about 3.5% of the state's 1940 population. The total amounts paid out during the year Dec. 1, 1946–Nov. 30, 1947, were as follows: general public assistance $1,610,624; soldiers' welfare $177,296 (Nov. 1946–Oct. 1947); old-age assistance $3,999,574; aid to dependent children $2,157,642; aid to the blind $65,977. In unemployment compensation, the net amount of benefit payments during 1947 was $9,801,427.81 to 51,527 different individuals. The amount paid into the fund during 1947 including interest was $13,790,972.05. There were 846 inmates in correctional institutions on Nov. 30, 1947, and 4,847 patients in charitable institutions and institutions for defectives, the number in the latter being 3,798.

**Communications.**—The total mileage of highways on Dec. 31, 1946 (excluding city streets) was 2,671.65, of which the constructed state highway system comprised 826.3 mi. At the close of the year 1946 railroads were operating 186 mi. of road. On Dec. 31, 1947, electric railways operating had 18.71 mi. of road, motor buses 201.12 mi. of road, and trackless trolleys 66.41 mi. of road. Water-borne commerce of the state for 1946 was 6,513,790 tons, of which 473,860 tons were foreign commerce (imports 439,432 tons; exports 34,428 tons) and 6,039,930 tons were coastwise (receipts 5,690,010 tons; shipments 349,920 tons). On Dec. 31, 1947, there were two public owned (state) airports, both class 3, and five private owned airports or landing fields, all class 1. In Dec. 1947 there were 210,397 telephones in service.

**Banking and Finance.**—There were 31 banking institutions in 1947. Resources of 22 banks under state supervision totalled $861,390,416.32, and of 9 banks under federal supervision $242,730,918.99. Savings deposits (exclusive of club accounts) in savings banks and trust companies (the 22 state banks) amounted to $545,366,680.41 on June 30, 1947. In addition, 6 loan and investment companies had resources of $3,747,566.04; 8 building and loan associations $73,276,472.81; 24 credit unions $12,062,696.50.

At the close of the fiscal year, June 30, 1947; total state receipts were $27,179,933.83; expenditures and encumbrances $27,161,147.35; surplus from operation $18,786.48. The state gross debt was $43,847,000.00, net debt $39,700,646.50.

**Agriculture.**—The total estimated value of agricultural production was $24,120,000 in 1947 and actual value was $21,077,000 in 1946. Total acreage of principal crops harvested was 51,000 in 1947. Cash estimated income from crops in 1947 was $6,630,000 and actual income was $5,743,000 in 1946; from livestock and livestock products $15,490,000 in 1947 and $13,227,000 in 1946; from government payments $600,000 in 1947 and $807,000 in 1946; total cash income $22,720,000 in 1947 and $19,777,000 in 1946. Products consumed on farms had an estimated value of $1,400,000 in 1947 and $1,300,000 in 1946.

Table I.—*Leading Agricultural Products of Rhode Island, 1947 and 1946*

| Crop | 1947 | 1946 |
|---|---|---|
| Corn, grain and silage and forage (grain equivalent) bu. | 352,000 | 312,000 |
| Hay (tame), tons | 57,000 | 53,000 |
| Alfalfa, tons | 2,000 | 2,000 |
| Potatoes, bu. | 1,512,000 | 1,742,000 |
| Oats, bu. | 33,000 | 32,000 |
| Apples (commercial), bu. | 187,000 | 162,000 |
| Peaches, bu. | 13,000 | 15,000 |
| Pears, bu. | 6,000 | 6,000 |
| Grapes, tons | 100 | 200 |

Table II.—*Livestock and Livestock Products of Rhode Island, 1947 and 1946*

| Item | 1947 | 1946 |
|---|---|---|
| Cows and heifers, 2 years and over | 22,000 | 22,000 |
| All cattle and calves | 28,000 | 29,000 |
| Hens, 3 months and over | 563,000 | 578,000 |
| Sheep and lambs | 2,000 | 2,000 |
| Hogs | 10,000 | 8,000 |
| Milk produced, lb. | 129,000,000 | 122,000,000 |
| Eggs produced, doz. | 7,083,000 | 6,300,000 |
| Chickens raised, no. | 816,000 | 830,000 |
| Turkeys raised, no. | 32,000 | 31,000 |

**Manufacturing.**—The total estimated value of manufactures was $516,390,541 for 1939 and $517,196,193 for 1937. (No census report afte that for 1939.) The number of establishments was 1,460. Employmen in Dec. 1947 totalled 135,237 wage earners and 19,318 nonproductio workers (salaried personnel) and weekly payroll of $6,446,725 for al manufacturing industries in Rhode Island according to report of stat department of labour. Wage-earners were distributed among manufa turing industries in order: textile products 61,690; jewellery-silverware 16,439; machinery 13,414; iron-steel products 8,979; rubber products 7,500; electrical machinery 5,675; nonferrous metal 3,160; miscellaneou 18,380.

**Mineral Production.**—The value of mineral production in Rhode Islan is small, exceeding only that of Delaware and the District of Columbia Value in 1945 was $508,000, in 1944 $612,000 and in 1943 $808,00 The principal products are stone ($219,263 in 1945, $213,351 in 194 and $410,478 in 1943) and sand and gravel ($221,530 in 1945, $287,11 in 1944 and $327,750 in 1943). Production of stone reached 11,28 tons in 1945, 19,790 tons in 1944 and 171,230 tons in 1943; sand an gravel 317,300 tons in 1945; 352,905 tons in 1944, and 356,043 tons i 1943. (Figures for 1946 and 1947 were not available.) (M. C. Ml.)

## Rhodesia, Northern.

A British protectorate in central Africa, bounded on the north by Tanganyika and the Belgian Congo, on the east by Nyasaland and Portuguese East Africa, on the south by Southern Rhodesia and South-West Africa, and on the west by Portuguese West Africa. Area: 290,320 sq.mi.; pop. (1946 est.): 1,678,132, mainly African but including about 21,000 Europeans. Capital: Lusaka; other important towns: Livingstone, Fort Jameson and Broken Hill. The protectorate is administered by a governor (appointed by the British crown) assisted by an executive council (containing an unofficial element) and a legislative council with an unofficial majority. Governor: Sir Gilbert Rennie (appointed 1947).

**History.**—An important development occurred in the internal political affairs of Northern Rhodesia when an African representative council was set up in 1946. The council, which consists of the secretary for native affairs as president with 29 members (mostly elected) from the various districts of the protectorate, held its first meeting in Nov. 1946. It held further meetings in 1947. On the economic side, a cost of living commission started work in the protectorate in June 1947. A grant of £196,075 was sanctioned during the year, under the Colonial Development and Welfare act, for the development of broadcasting in Northern Rhodesia. Smaller grants included £5,690 for sociological research in the protectorate and £2,100 in support of the Rhodes-Livingstone institute.

**Finance and Trade.**—The currency of Northern Rhodesia is that of the self-governing colony of Southern Rhodesia. Revenue (1946) £3,317,000; expenditure £3,057,000. Imports (1946) £7,400,000; exports £12,600,000. The main wealth of the protectorate is derived from the so-called "copperbelt," where four large copper mines are under active exploitation. There are also deposits of zinc and cobalt. Apart from mineral exports (of which copper forms much the largest item), there is an export trade in grain, tobacco and timber. (*See* also RHODESIA, SOUTHERN.)

(J. E. SH.)

## Rhodesia, Southern.

A self-governing colony in Africa of the British commonwealth, with imperial government supervision over native rights. Area: 150,333 sq.mi.; pop. (est. 1947) 1,777,980 (European 83,450, Asiatic and coloured 7,530, the rest African). Chief towns: Salisbury (69,049); Bulawayo (51,698); Umtali (9,786); Gwelo (9,807). Languages: English, Afrikaans, and native tribal languages. Governor: Major General Sir John Noble Kennedy (appointed Sept. 15, 1946); prime minister: Sir Godfrey Huggins.

**History.**—During his visit to the colony in April 1947 George VI opened the Rhodesian parliament, the first time a reigning monarch had done so. A project for the manufacture of steel in the two Rhodesias, including the construction of the Sinoia-Kafue railway, planned by leading British industrial and financial interests and involving an expenditure of about £25,000,000, received promises of support from the governments of Great Britain, Northern and Southern Rhodesia. Rhodesia railways were nationalized by purchase of the shares for £3,250,000 and deıtures for £20,347,500. A 2½% loan, 1965–70, was issued at ), and underwritten in London for 1%, the first postwar gov-ıment loan to be so underwritten. The agricultural season was driest recorded, causing a deficiency in maize of 1,750,000 ;s; a drought relief organization transported hay to stricken ·as and removed cattle by rail on a large scale to better graz-. Defense measures, in addition to the empire air training ıeme, included the retention of the Rhodesian African Rifles ative troops) and the royal Rhodesia regiment on a voluntary sis.

European immigration amounted to 9,145 persons in 1946 and further 6,908 in the first half of 1947, causing difficulties in using. The cost of living index rose from 130.7 in 1945 to ı in July 1947.

**Education.**—Schools for European children, 90 (14,450 pupils); for atic and coloured children, 23 (2,114 pupils); for native children, 15 (151,476 pupils).

**inance.**—Estimated 1947–48: revenue £11,148,000 (plus £1,785,000 plus); expenditure £12,660,000. Revenue 1945–46: customs £1,706,- ; income tax £6,013,802; native tax £464,810; mining £268,406. blic debt stood at £24,501,579 on March 31, 1946. Gold output was 4,596 oz. (£4,697,922).

**rade and Communications.**—1946: Imports £20,746,000; exports £21,-6,000. Roads (motor services) 1,685 mi.; rail 1,361 mi. (*See* also IODESIA, NORTHERN.) (G. R. MN.)

## ice.

Another record U.S. rice crop was grown in 1947, exceeding the previous record crop of 1946 by 8% and ing to nearly 50% above the 10-year (1936–45) average. ıe 1947 crop was estimated at 79,345,000 bu. compared with ,216,000 bu. in 1946 and an average of 58,220,000 bu., 1936–. The increase was caused chiefly by the expansion of acreage 1,677,000 ac., compared with the 10-year average of 1,239,-o ac. Average yield for the crop was 47.3 bu. per acre, exactly e 10-year average, slightly more than the 45.9 bu. yield of 46. Yields were less than average in Arkansas and Louisiana cause of winds and rains and damage by salt water on some eas near the Gulf.

The rice market began the year 1947 at the high level of .17 per bu. to growers for rough rice, about the level at-ined in the fall of 1946. Prices advanced steadily to a high of .71 per bu. in August and then held fairly steady through the ll, advancing to $2.82 in December. Stocks at the beginning the year were down to 48,000,000 lb., the lowest after 1943 ıd less than half the average, but the large crop provided a ıpply of record proportions. Exports rose to more than 1,100,-o0,000 lb., leaving for civilian use nearly 5 lb. per capita—ightly less than the prewar average of 5.6 lb.

*U.S. Rice Production by States, 1947 and 1946 and 10-Year Average*

(In thousands of bushels)

| State | 1947 | 1946 | Average 1936–45 |
|---|---|---|---|
| xas . . . . . . . . . . . . . . . . | 23,700 | 17,716 | 14,877 |
| uisiana . . . . . . . . . . . . . . . | 21,455 | 22,676 | 21,243 |
| alifornia . . . . . . . . . . . . . . | 17,860 | 17,584 | 10,982 |
| kansas . . . . . . . . . . . . . . . | 16,330 | 14,240 | 11,118 |

World rice production in the 1947–48 crop year was estimated be about 6,950,000,000 bu., slightly higher than the 6,900,-o0,000 bu. produced in 1946–47 but 7% less than prewar out-ut. The increase was mostly in China, Japan, the Philippines ıd Burma, with largest gains in the latter country. A slight in-rease was reported for Europe and South America. The prewar xporting countries did not have sufficient surpluses to supply ıe needs of the large rice-consuming countries where popula-on had been increasing. Only about one-third of the 7,000,000-,000,000 tons usually reported was available for the winter of 947–48. (*See* also FOOD SUPPLY OF THE WORLD.) (J. C. Ms.)

**Rio Muni:** *see* SPANISH COLONIAL EMPIRE.

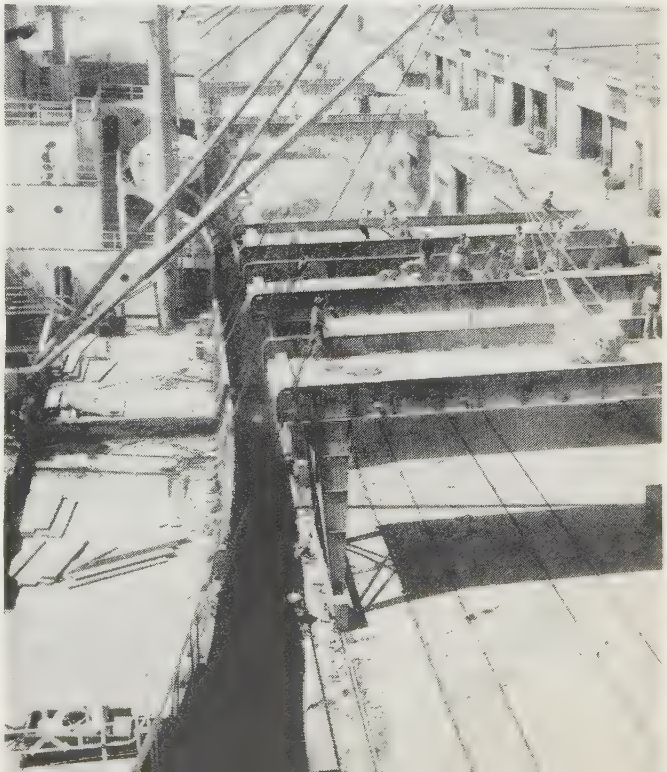
## Rivers and Harbours.

Improvement operations were executed on 91 regular river and harbour projects by the U.S. army corps of engineers in 1947. Of this number, four were completed. Maintenance was performed on a total of 291 projects, including the extensive intercoastal waterways and Mississippi river system, the connecting channels on the Great Lakes and the many coastal and inland harbours. The corps also continued operation and maintenance of the channels and canals of the Ohio river system, the Upper Mississippi river, the Illinois waterway and the hydroelectric generating plants on the Missouri river at Fort Peck, Mont., and the Columbia river at Bonneville, Ore. During the fiscal year ending June 30, 1947, $89,169,789.29 of federal funds was expended for new work and maintenance of river and navigation projects and inland and coastal harbours.

The Rivers and Harbors act approved July 31, 1947, provided $116,718,700 for maintenance and improvement of the nation's rivers and harbours. Of this total, $37,176,700 was designated for new construction work on 58 projects in 27 states. The important river and harbour projects allocated $1,000,000 or more for construction were: McNary dam, Columbia river, Ore. and Wash., $4,500,000; Missouri river, Kansas City, Mo., to Sioux City, Ia., $4,500,000; Mississippi river, between Ohio and Missouri rivers, $4,500,000; Missouri river, mouth to Kansas City, $2,250,000; Gulf Intracoastal waterway between Apalachee bay, Fla., and the Mexican border, $3,987,000; Neches and Angelina rivers, Tex., $1,300,000; New Haven harbour, Conn., $1,200,000; Sabine-Neches waterway, Tex., $1,000,000; Black Rock channel and Tonawanda harbour, N.Y., $1,000,000; San Diego river and Mission bay, Calif., $1,000,000.

Authorized projects previously scheduled under the Rivers and Harbors act and for which funds had been provided by congress in the 1947 fiscal year budget were curtailed by a presidential economy order in September. Subsequent revisions of the order, however, permitted resumption of work on prac-

CARGO of raw rubber from the Netherlands Indies being unloaded at the International Free Zone in the port of New Orleans, La. The free zone was inaugurated on May 1, 1947, to allow for the manipulation or processing of foreign goods without payment of customs duties



tically all projects where contracts were in force. The principal projects on which new work was performed during the year, other than canals and inland waterways, included the completion of dredging and removal of rocks, wrecks and other obstacles in the New York and New Jersey channels in Arthur kill from above the Baltimore and Ohio railroad bridge to Elizabethport, N.J., to a depth of 37 ft., and continued dredging and rock removal in the southern half of the channel in Kill Van Kull from Bergen point to Bayonne bridge to a depth of 37 ft.; dredging of the westerly strip of Ambrose channel and the centre of Anchorage channel in New York city harbour to a depth of 45 ft. Deepening of the Lake Worth inlet, Florida harbour, was started in the 300-ft. outer channel and in the inner channel to and including the turning basin. At Los Angeles and Long Beach harbours, Calif., construction was continued on the 13,350-ft. breakwater, and at Moss Landing harbour, Calif., dredging of the entrance of the inner channels and construction of north and south timber jetties were completed. Construction was initiated on Dam B on the Neches river, Tex., for navigation purposes.

Maintenance operations of previously completed river and harbour projects were continued on the Atlantic, Gulf and Pacific coasts, in the interior, on the Great Lakes and in Alaska, Hawaii, Puerto Rico and the Virgin Islands. In addition, the corps of engineers continued work on 15 projects required by the department of the navy and other government agencies with funds furnished by those agencies.

At Bonneville dam and reservoir, Ore. and Wash., the ten electric-power generating units were operated at capacity throughout the year. In the first 6 months of the year, the units produced 3,711,155,000 kw.hr. At Fort Peck dam, on the Missouri river in Montana, the reservoir was operated throughout the year for the maintenance of navigation on the Missouri river and the secondary purposes of flood control and hydroelectric production. Operation of the completed 35,000-kw. generating unit was continued during the major portion of the year; total power production during the first 6 months amounted to 204,347,000 kw.hr. Installation of the second generating unit of 15,000-kw. capacity was continued, with congress appropriating $657,500 for construction and $150,000 for miscellaneous work between July 31, 1947, and June 30, 1948. (G. Hb.)

**Canada.**—The 1947 session of parliament voted $1,022,150 for dredging the St. Lawrence river channel and Montreal harbour, as the first part of a 5-year program to widen the harbour and deepen the sea channel to 35 ft. While the project did not bring larger ships to Montreal, it aided navigation during low-water periods.

When 1947 navigation closed at port Churchill, Man., it had shipped through the Hudson bay route a little more than the 4,290,000 bu. of grain shipped at the 1936 peak. Churchill thus became second to Montreal as Canada's largest wheat-exporting port.

During the summer of 1947, Saint John, N.B., operated at an unprecedented rate. Later in the year the Canadian National railways offered reduction of freight rates on certain commodities at Portland, Me., which was immediately protested by the ports of Halifax, N.S., and Saint John in a joint brief to the federal transport minister. (C. Cy.)

**Great Britain.**—During 1947 much work was done in Britain to repair war damage. The £1,000,000 scheme of the Mersey Docks and Harbour board for the construction of the West Waterloo dock (entrance and lock 450 ft. by 65 ft., sill 17 ft. 6 in., at low water, ordinary spring tides) was continued, with the numerous other works of the board, including repairs to locks and improvements in handling equipment. For the Port of London authority, 50 three-ton electric cranes were scheduled for operation in April 1947. Nationalization of ports under the Transport act, 1947, would call for far-reaching legislation.

Radar was employed successfully in the operation of the Liverpool-Wallasey ferry service across the river Mersey, in thick fog, and experiments were under way for the control of inward-bound vessels to ocean ports. (The radar installation at Halifax harbour, Canada, had a range of 25 mi. and a radial accuracy of 150 ft.)

**Other Countries.**—In South Africa the new graving dock at East London, with a ship capacity of 17,000 tons, was opened in March 1947 by Princess Elizabeth.

Of political significance was the evacuation by the British navy of Alexandria, Egypt, which had been the chief naval base of the Mediterranean fleet for 64 years, and the bastion of the Suez canal defenses. Of similar interest was the transfer of the Dodecanese Islands, providing only for ships of small draught from Italy to Greece. During the summer of 1947, reparations from Germany included the transfer of a large floating dock to Piræus harbour, Athens. A decision had not yet been reached by the Allies whether or not to destroy the water wharves at Kiel and Eckernforde. It was found, however, that it was impossible to draw a clear line between war and peace potential. In contrast, it was said that the German Baltic ports were to be improved to an increased depth of 23 ft.

The need for ship repairs during World War II projected the dry dock into a more prominent position than hitherto. If the modern docks at Hamburg and Wilhelmshaven, Germany, were omitted because of their unusual design of great width and shallow depth, it was found that the length : entrance ratio fell to 8:1 and the length : sill depth ratio remained at 26:1. The tendency toward greater dimensions would be determined largely by other controlling factors, principally the economic depths of navigable channel, largely affected by dredging costs. (*See also* Aqueducts; Canals and Inland Waterways; Dams; Floods and Flood Control.) (D. G. Ds.)

## Roads and Highways.

**United States.**—The large highway program planned as a postwar activity and previously delayed by high prices and shortages of equipment and materials gained considerable momentum in 1947. The pattern for improvement had been set by the federal-aid legislation of 1944 which provided $500,000,000 for each of the first three postwar fiscal years for construction of express highways through cities, improvement of main rural roads and construction of secondary or farm-to-market roads. A notable event of the year was the designation of a national system of interstate highways that was limited in extent to 40,000 mi.

Work of all types was done. Near the end of the year it was estimated that federal-aid construction and other work supervised by state highway departments and completed during the year would approach $900,000,000. This exceeded the dollar value for any previous year, but since prices ranged from 81% to 93% more than the 1940 level it was not a record for work performed. Near the end of 1947 federal-aid projects programmed and in various stages short of completion included 37,458 mi. at a total cost of $1,797,000,000.

During the year motor vehicle registrations rose to more than 37,000,000, and highway traffic exceeded all previous records. Congestion on main routes in and near cities accentuated the need for major improvements. A beginning was made in the construction of express highways in or near Boston, New York city, Pittsburgh, Jacksonville (Fla.), Cleveland, Detroit, Chicago, Dallas, Fort Worth, Los Angeles and other cities.

In the fiscal year ending June 30, 1947, 7,929 mi. of highway were completed with federal-aid funds, consisting of 2,991 mi. on the federal-aid system, 4,609 mi. of secondary or farmnarket roads and 329 mi. of miscellaneous construction. The l cost was $212,800,000, of which $122,384,000 was federal

**Canada.**—Highway improvement was general through the led portion of Canada, and new routes were extended into lderness areas. Quebec province had under way a $25,000,000 gram and other provinces had programs of large size. Ex- ss highways of the most modern type were being con- ered by Montreal, Que., and Winnipeg, Man., and other es were considering major improvements to solve traffic gestion. In the fall of 1947 the pioneer road from Grim- w, Alta., to Great Bear lake, N.W. Terr., was nearing com- tion. Much progress was made on the $6,000,000 highway m Prince George, B.C., to connect with the Alaska highway Dawson Creek, B.C. Completion was expected in 1948. This struction, an extension of the Cariboo road from Vancouver, ., was to give a more direct approach from Seattle, Wash., tland, Ore., and other west coast points to the Alaska high- y.

**he Alaska Highway.**—The highway was kept in good con- ion and was used to supply airports along the route, for siness travel and transport and by hunting parties. Permits re necessary to travel the Canadian section and these were issued to tourists. Buses operated on schedule over the ire route winter and summer. Through traffic amounted to out 700 vehicles per month in winter and rose to 1,700 in y. An important development during the summer was the ginning of freight movement from the port at Haines, Alaska, the Alaska highway and thence over the highway northwest Fairbanks, Alaska, and east to White Horse, Yukon Terr., n.

**Inter-American and Pan-American Highways.**—Progress s made by Mexico in closing the gap approaching its southern rder and some work was done in Central American countries, t lack of funds prevented any great amount of progress. Ex- nsive improvements were made on long stretches of the Inter- nerican highway, but there were unimproved gaps in southern exico, northern Guatemala, Costa Rica and Panamá over ich motor vehicles could not be driven. There were no table improvements in the Pan-American highway of South nerica, although various countries bettered the condition of ort sections.

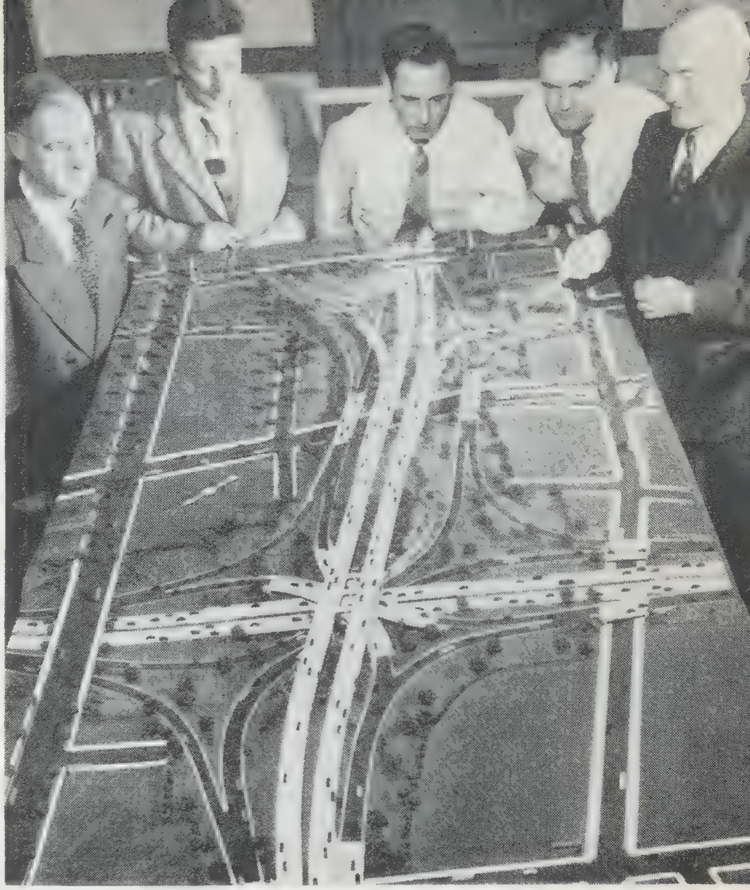
**Central and South America.**—Mexico made rapid progress the route paralleling practically the entire length of its rder with the United States and announced that it was near- g completion. In April 1947, Brazil placed in service a new -mi. concrete highway from the coffee port of Santos up a eep escarpment to São Paulo. An old road had been used to ansport about 50,000 tons per month in each direction. The w road doubled the capacity of highway transport and was signed to accommodate 3,500 vehicles per hour.

Brazil continued its preparations for the construction of a ,000-mi. highway system. Each state, with the exception of mazonas, had a highway department.

About 1,000 mi. of new roads were built from the coast to e interior of Venezuela by a number of oil companies. The o-mi. Guarico road from the Caribbean port Puerta de la ruz to the interior was completed at a cost of $6,000,000, ared by 11 oil companies.

Highway transport underwent rapid development in Uruguay a result of increases in railroad freight rates. Steady progress as made in road construction.

**United Kingdom.**—Highways throughout the United King- om were in excellent condition. War damage and deterioration d been repaired. Economic conditions and the urgent need r other facilities such as housing, however, prevented a major effort toward modernization of the highway system. Legislation was enacted for nationalization of bus transportation and truck transportation for distances of more than 25 mi. In June work was begun on the first of three tunnels under the Tyne river to accommodate vehicles, bicycles and pedestrians.



HIGHWAY ENGINEERS studying plans for improving traffic conditions in Los Angeles, Calif., during 1947. The model shown featured express highways and expanded parking facilities in midtown areas

**Continental Europe.**—Most of the countries of Europe made considerable progress during 1947 in restoring highway surfaces to their prewar condition and in improvising crossings at destroyed bridges, although there was practically no construction of new highways of modern design. The bad condition of railroads and water shipping coupled with heavy demands for transport of food and fuel, and for housing and rehabilitation of industry created large demands for highway transport.

In Italy the capacity of freight vehicles was 50% more than the prewar level and road surfaces approached their prewar condition. The same road condition was reported for much of Austria.

Germany, with the most urgent need for transport, suffered greatly from lack of roads and vehicles. There were about 3,000 mi. of autobahnen, in good condition except as to bridges, but this system was by no means adequate to give the service required by the dense population.

Norway reported stagnation of its highway program. Before World War II from 300 mi. to 425 mi. of road were built annually; after the war the rate was at about 125 mi. per year.

Little was known concerning Russian road improvement. The government reported that it was building a concrete road from Moscow to the southern shore of the Crimea.

**Turkey.**—The government had become strongly interested in highway transport to supplement its rail system and planned to build 12,000 mi. of first-class highways. The inadequate road and rail transport system was blamed for holding back the nation's full development. Late in 1947 a group of engineers was sent by the United States to assist the Turkish government, and some machinery was supplied.

**India.**—During the first six months of 1947 active steps were taken toward construction of national highways. A central standards and design office was set up under 30 consulting engineers. Technical co-ordination of the work of various branches of government and the independent states was being established. Political turmoil during the summer, however, delayed progress.

**China.**—This was the only country that made a large addition to its main highways during World War II; 2,820 mi. were added. A well-organized highway department worked to accomplish a 10-year plan to build 33,000 mi. of national highways and 124,000 mi. of secondary roads. Bus operation between cities was extended during the year.

**Africa and Australia.**—Road improvement continued, but there were no notable projects. The central government of Australia authorized funds for access roads to remote and sparsely settled areas.

**Philippine Islands.**—Activity in restoring war-damaged highways increased rapidly during the year. The United States provided a group of engineers and nearly $10,000,000 to assist the Philippine bureau of public works in rehabilitating highways. Numerous improvements were started, including reconstruction of major routes entering Manila. (*See* also MOTOR TRANSPORTATION.) (T. H. MACD.)

## Robinson, Sir Robert

(1886– ), British chemist who was awarded the Nobel prize for chemistry on Nov. 13, 1947, was born Sept. 13, and was educated at the University of Manchester. Starting his academic career in 1912 as professor of organic chemistry (pure and applied) at the University of Sydney, he later held similar posts at a number of British universities and was Waynflete professor of chemistry at Oxford university from 1930. In 1945, he was elected president of the British Royal society.

An outstanding organic chemist, Sir Robert worked principally in exploration of the intricate compounds found in living vegetable substances. He is noted for his successful synthesis of the chief colour pigments of fruits and flowers and played an important role in the collaboration on the chemistry of penicillin. In 1947, he was collaborating with his wife, Gertrude Maud Robinson, on production of synthetic penicillin.

Sir Robert received the Nobel prize for his research on plant products, particularly alkaloids.

## Roman Catholic Church.

The pope is recognized as supreme ruler and pastor of the Roman Catholic Church. It is he who creates cardinals and appoints archbishops, bishops, vicars and prefects apostolic who exercise ecclesiastical jurisdiction throughout the world.

During 1947 the sacred college of cardinals was reduced to 61, through the deaths of Rodrigue Cardinal Villeneuve, archbishop of Quebec, Carlo Cardinal Salotti, prefect of the Congregation of Rites, and Pierre Petit Cardinal de Julleville, archbishop of Rouen, France. No new cardinals were created.

A number of canonizations took place in 1947. In May, Nicholas de Flüe was solemnly enrolled in the ranks of the saints at a ceremony attended by a large Swiss delegation. In June the canonization of three new saints was solemnized. They were John de Britto, Giuseppe Cafasso and Bernardino Realino. In July four more were declared saints, Catherine Labouré, Louis Grignon de Montfort, Michael Garicoits, and Jeanne Elizabeth Bichier des Ages.

The pope issued several encyclical letters during the yea The anniversary of St. Benedict was the occasion of on (*Fulgens radiatur*), issued on March 21. It recalled the powe ful influence of the saint upon the culture of the west, and urge imitation of his example in devotion to prayer and work. O Dec. 18, the pope released a very short encyclical (*Optatissim pax*), which stressed the need for joint effort, concord and peace ful work in rebuilding the world. These should replace strife an class hatred. Most significant encyclical of the year was that o the liturgy (*Mediator Dei*), dated Nov. 20. The first of its fou parts treated of the nature, origin and development of th liturgy. Part two was concerned exclusively with the Hol Eucharist, explaining the nature of the sacrifice, urging mor participation of the faithful, and reviewing the development o the practice of adoring the Holy Eucharist. The third par treated of the office and the ecclesiastical calendar. The fina section was a pastoral exhortation, correcting some exaggerate tendencies in ascetical practice and insisting on due regard fo liturgical laws. The 15,000-word document was one of the long est encyclicals ever issued. Its exhaustive discussion of soci worship was considered especially significant.

Institutes of lay persons seeking a life of perfection wer the subject of an apostolic constitution (*Provida Mater Ec clesia*), issued in March. The document recognized the fact tha such groups were springing up in answer to needs of the times It laid down norms for their organization and exempted the from the canons governing strictly religious communities. Co siderable room was left for experimentation and adaptation t particular situations.

Wartime exemptions from the usual laws of fast and ab stinence continued in force at the discretion of the bishops These dispensations, granted in view of world food conditions were confirmed for the postwar period in Jan. 1946. They wer not revoked during 1947.

Continuing the trend noted in 1946, two additional congre gations elected Americans superiors general. In July, at Paris the Very Rev. William Slattery, C.M., became head of the Vin centians. In Rome the Most Rev. John H. Boccela, T.O.R., wa selected as general of the Third Order Regular of St. Francis.

Church-state relations continued crucial in several countries During January, in an effort to neutralize Catholic political op position, the Polish government promised constitutional pledge of the rights of the church. Subsequently the church was at tacked for interfering in politics and its publications were re stricted. During the year Bernard Cardinal Griffin, archbisho of London, Eng., visited Poland and reported on his findings At the year's end Adam Cardinal Sapieha, archbishop of Cra cow, Poland, visited Rome, but no agreement on Polish rela tions with the Vatican had yet been reached.

In Germany, especially the soviet zone, the need of priest was acute. From former East Prussia and the German territor taken over by Poland came many Catholics, most of them set tling in the Russian zone of occupation. A survey reveale 3,308,668 Catholics in the soviet zone, where previously only fraction of that number had lived. Catholics in Hungary rallie around Josef Cardinal Mindszenty, the primate, in an effort t vindicate the rights of religion. The communist-inspired driv against religious education continued; the Catholic press wa severely restricted; institutions were seized as occasion offered

The situation in Yugoslavia continued bad, and several at tacks were made on Catholic priests. Efforts to get U.S. Catho lic press representatives accredited to Yugoslavia were com pletely unsuccessful. No agreement could be reached by th Vatican with the new government of Rumania; the nunciatur was not filled and a regent, Bishop Gerald P. O'Hara of Savan nah-Atlanta, Ga., was sent to Bucharest instead. In Belgrade

Yugoslavia, Bishop Joseph P. Hurley of Saint Augustine, Fla., remained as regent of the nunciature.

**Missions.**—Catholic missions in communist-held China suffered during 1947. Previously they had not been interfered with to any great extent, but gradually the attitude of the Red army changed. At the year's end Chinese Communists displaced 72 Trappist monks from their monastery and forced them to join a "death march," which resulted in the death of 14. Various missions suffered also, and few new appointments were being made to the Communist areas.

Elsewhere mission needs were great. Postwar Japan seemed well disposed toward Christianity and during the year several score missionaries were dispatched to Japan by U.S. Catholics. In the Philippines, still suffering from war damage, a serious shortage of priests continued. North American missionaries were again sent during 1947 to various Latin American countries in need of additional clergy.

**United States.**—The number of Catholics in the U.S., Hawaii and Alaska was estimated at 25,268,173 in 1947, representing an increase of 866,049 over the previous year. There were 22 archdioceses, 100 dioceses, and 1 vicariate-apostolic (Alaska). Cardinals numbered 4, archbishops 22, bishops 145, and priests in excess of 40,470. There were 140,563 sisters and 6,938 brothers.

Catholic colleges and universities numbered 216, high schools 2,431, and elementary schools 8,165.

During 1947 a new diocese was created in Austin, Tex., while that of Leavenworth, Kan., was renamed Kansas City in Kansas. Mgr. Louis J. Reicher was consecrated first bishop of Austin, Tex. The archiepiscopal sees of Baltimore, Md. and Washington, D.C., were separated after the death of Archbishop Michael J. Curley in May, 1947. Mgr. Patrick A. O'Boyle was named archbishop of Washington, while Bishop Francis P. Keough of Providence, R.I., was transferred to the Baltimore see. During October, Archbishop John J. Cantwell of Los Angeles, Calif., died, as did Archbishop James H. Ryan of Omaha, Neb., during mid-November. Bishop Thomas A. Boland was named bishop of Paterson, N.J., to fill the vacancy left at the death of Bishop Thomas H. McLaughlin, who died in March. Mgr. Albert R. Zuroweste was consecrated bishop of Belleville, Ill., and Mgr. Mark K. Carroll was designated bishop of Wichita, Kans.

Seventeen bishops were appointed as coadjutors or auxiliaries in as many dioceses.

The U.S. hierarchy, at their November meeting, issued a joint statement condemning secularism and blaming the separation of religion from daily life for many of the social evils of the times. At the same meeting they authorized establishment of a National Catholic Resettlement council, to be made up of representatives of national organizations and various dioceses, to promote the work of resettling Europe's displaced persons in the U.S. In December the council was formed under the leadership of War Relief Services—National Catholic Welfare conference. On Labour day the social action department of N.C.W.C. issued a forward-looking statement urging democratic co-operation of management and labour in solving labour disputes, greater production as a means to economic stabilization, and the maintenance of full employment.

Awards given U.S. Catholics during 1947 included the designation of William G. Bruce, veteran publisher, to receive the Laetare medal. The Hoey awards went to Julian J. Reiss of New York and Clarence T. Hunter of St. Louis, Mo., for their distinguished work in interracial relations. Bishop William D. O'Brien, auxiliary of Chicago, Ill., was honoured for his long work with the Extension society and named assistant at the papal throne. Joseph Matt, a layman, celebrated his golden jubilee as editor of the *Wanderer,* Catholic weekly of St. Paul, Minn.

At the Eucharistic congress marking the centenary of the diocese of Buffalo, N.Y., 70 archbishops and bishops were in attendance. The event was one of the most significant of the year and drew a crowd estimated at 100,000.

**Other Events.**—A special mission to study conditions of Europe's displaced persons and prospects of resettlement in Latin America was carried out by Mgr. John O'Grady, secretary of the National Conference of Catholic Charities. The pope received his report in person. In Rome the Vatican Emigration office was established, with Rev. Edward J. Killion, C.SS.R., designated as its director. During the year Catholics in the western countries continued to assist displaced persons. United States Catholics shipped goods and food abroad totalling more than $10,000,000.

The National Catholic School of Social Service and the social service department of Catholic University of America, Washington, D.C., were merged and a larger, co-ordinated institution was organized to promote Catholic study of social work.

Notable deaths of the year included those of Mgr. Peter K. Guilday, veteran professor of history at Catholic university, and Dr. Herbert Corey, author and distinguished convert from Marxism. In August the body of Archbishop Edward J. Hanna, formerly of San Francisco, Calif., was removed from Rome, where he had died during World War II, and was laid to rest in San Francisco.

During June the Marian congress held at Ottawa, Canada, drew 200,000 faithful. Nine cardinals and several hundred archbishops and bishops attended during the five days dedicated to Our Lady's intercession for world peace. (*See* also CATHOLIC ORGANIZATIONS FOR YOUTH; CATHOLIC RURAL LIFE CONFERENCE, NATIONAL; CATHOLIC WELFARE CONFERENCE, NATIONAL; CHURCH MEMBERSHIP; SOCIETIES AND ASSOCIATIONS; VATICAN CITY STATE.) (J. LaF.)

## Roosevelt, Anna Eleanor

(1884– ), U.S. government official, newspaper columnist and widow of Franklin D. Roosevelt, 32nd president of the United States, was born Oct. 11, 1884, in New York city, the daughter of Elliott and Anna Hall Roosevelt. She married Franklin Roosevelt, a distant cousin, March 17, 1905. Mrs. Roosevelt took an active interest in furthering her husband's political career. Following his election to the presidency in 1932, she embarked on a career as a speaker and writer. Her newspaper column, "My Day," became widely syndicated. Mrs. Roosevelt was named (Dec. 19, 1945) by President Harry S. Truman as a member of the U.S. delegation to the United Nations general assembly, and on April 29, 1946, she was elected chairman of the Commission on Human Rights of the United Nations Economic and Social council.

In her frequent clashes with the Russian delegates over aims and ideals, Mrs. Roosevelt complained that while the Russians verbalized on democratic procedure, they had no concept of what the phrase meant. Appointed as delegate to the general assembly's Sept. 1947 session, Mrs. Roosevelt answered Andrei Vishinsky's warmongering charges on Oct. 6, declaring that her sympathy with the soviet proposal to reduce warmongering influences to a minimum did not extend to the soviet position that this was the task of the press.

Subsequently she urged the Soviet Union to acknowledge basic east-west differences and to seek instead some means of co-operation.

## Rowing.

A healthy growth in competitive rowing was maintained in 1947. More regattas were held in the U.S. and abroad with greater numbers of competitors and a higher standard of oarsmanship.

In England, Cambridge turned the tables on Oxford, winner in 1946 in the oldest rowing classic.

In the United States, three great college regattas were held besides many dual, triangular and quadrangular contests. The Eastern Intercollegiate sprint championships at Princeton, N.J., had 28 entries in freshman, junior varsity and varsity events. At Poughkeepsie, N.Y., the long-distance classic was revived after a lapse of five years, at three miles instead of four. There 31 college crews raced. The second annual Pacific Coast sprint championships at Lake Washington, Seattle, attracted 12 varsity crews. Harvard was victor at both Princeton and Seattle and the U.S. Naval academy won the varsity event at Poughkeepsie.

In the Eastern Intercollegiates, the freshman final went to Princeton in 6 min. 18.2 sec.; Navy was second and Yale third. Other entries, eliminated in the trials, were Harvard, the University of Pennsylvania, Massachusetts Institute of Technology, Rutgers and Columbia.

Harvard also took the junior varsity final from Penn in 6 min. 14 sec. to 6 min. 14.2 sec. with Princeton third. Crews in this event, eliminated in the heats, were Navy, Yale, M.I.T., Syracuse, Columbia, Rutgers and Cornell.

Harvard's varsity, one of the smoothest and most powerful crews in many years, came through to the finals which they won in 6 min. 5 sec. at 2,000 m. in dead water, 1 sec. over the Olympic record. Navy was second and Cornell third. These three seeded crews had previously defeated Princeton, Yale, M.I.T., Penn, Rutgers, Columbia and Syracuse in the heats.

On the same day at Cambridge, Harvard also won the lightweight crown with the Wright trophy from Princeton, Yale, Penn, Cornell, M.I.T. and Columbia in that order. The winner's time was 6 min. 54.2 sec. for the Henley distance.

The Poughkeepsie renewal was a great rowing spectacle. Eleven varsity crews, the best in the country barring the absent Yale and Harvard eights, gave thousands of spectators a great thrill. The same number rowed the junior varsity race at the same distance and seven freshman crews faced the starter at two miles.

Navy won the varsity contest, followed by Cornell, Washington, California, Princeton, Syracuse, Wisconsin, M.I.T., Penn, Rutgers and Columbia. Time, 13 min. 59.2 sec.

California took the junior varsity in 14 min. 30.3 sec. with Navy and Cornell second and third. Washington, Syracuse, Penn, Wisconsin, M.I.T., Rutgers and Columbia followed.

The freshman race went to Washington in 9 min. 40.3 sec. with Syracuse a length back, trailed by Navy, Princeton, Cornell, Penn and Columbia. Smooth water prevailed. This regatta recorded the largest number of entries ever seen at Poughkeepsie.

At New London, Conn., the Harvard-Yale classic was renewed at four miles. Harvard won the varsity by one and one-half lengths and the junior varsity race as well. Yale's freshman crew defeated the Crimson.

In the second annual Pacific Coast sprint championships on Lake Washington, Seattle, Harvard defeated the largest field of college eights ever assembled in one race. Weather conditions were excellent. The time for the 2,000-m. distance was 5 min. 49 sec., which bettered the world's record for still water. Yale and Washington in second and third places were serious threats, both being clocked under the record; Syracuse, Cornell, California, Wisconsin, followed closely; M.I.T. and Princeton were tied for eighth place, and Penn, Columbia and U.C.L.A. trailed. The final positions were determined by motion-picture camera.

The Dad Vail Rowing association regatta was revived on the Charles river. Boston university captured the new Vail trophy from the Dartmouth Rowing club, trailed by Marietta college of Ohio, Rollins college of Florida and American International college of Springfield, Mass.

Rutgers university, former Dad Vail champion, no longer competing in the varsity event, took the junior varsity race with Boston university second. No freshman race was held. Harvard and Navy deserve top ranking for the 1947 season, and eastern rowing was superior to that of the west.

Schoolboy activity in the U.S. and Canada increased. The Scholastic rowing championships at Wyandotte, Mich., were witnessed by thousands. La Salle high school, Philadelphia, won the eight-oared shell championship, and Joseph McIntyre of Philadelphia the singles championship. In Canada, Joe Kelly of Belleville high school won the high school singles, and Roosevelt high school, of Wyandotte, Mich., regained the Cleland cup and the high school eight championship.

The National Association of Amateur Oarsmen held its 73rd annual regatta at Detroit in July. Ecorse Boat club won the team trophy without gaining a single first place. The Buffalo West Sides captured the eights and Jack Kelly was dethroned as American champion after capsizing while in the lead. Theodore Dubois of Winnipeg, Canada, former American champion in 1939, became the new American champion, with Joe Angyal, New York, lightweight medalist, second.

The largest regatta on the North American continent was the 65th running of the Royal Canadian Henley at St. Catharines, Ont. Forty-nine events were held with nearly 600 entries in the four-day regatta.

The Buffalo West Sides took the Club Point trophy and with it the senior eights and the Hanlan cup. The Wyandottes of Michigan were second.

John B. Kelly, Jr., successfully defended his title in the Senior Singles championships, with Dubois of Canada second.

Joe Angyal won both lightweight crowns.

The Rowing committee of the U.S. Olympic federation voted to hold the Olympic rowing trials on the Schuylkill river, Philadelphia, between June 30 and July 10, 1948, in preparation for the 12th Olympiad at London in Aug. 1948.

John B. Kelly, Jr., unsuccessful finalist for the Diamond Sculls in 1946, returned to win the coveted trophy from a large field of foreign scullers at the Royal English Henley early in July. Jesus college, Cambridge, won the Grand Challenge cup and Kent school won the Thames cup. (C. L. Bt.)

## Roxas y Acuna, Manuel

(1892– ), Philippine statesman and president of the Republic of the Philippines, was born Jan. 1, in Capiz, Panay Island, the Philippines. He was educated in English-language public schools and was graduated from the University of the Philippines college of law, Manila, in 1913 with an LL.B. degree. Elected to the house of representatives in 1921 Roxas later became speaker of the house.

Shortly after the Japanese attack on the Philippines, Roxas was assigned, Dec. 16, 1941, as liaison officer and aide to Gen. Douglas MacArthur. When the latter went to Australia Roxas remained for a while on Corregidor and later turned up as a cabinet minister in the pro-Japanese Laurel government. After the war when he was charged with collaboration, Roxas claimed that he used his high position to carry out espionage for the Allies; and he was subsequently cleared of collaborationist charges.

Roxas was elected president of the republic in April 1946 and s inaugurated the following month on May 28. In the spring 1947 an attempt to assassinate him failed.

Roxas signed two treaties with the U.S. in 1947. The first, arch 14, guaranteed U.S. leaseholds on military and naval ses in the islands for 99 years; the second was a U.S.-Filipino e-year military assistance pact.

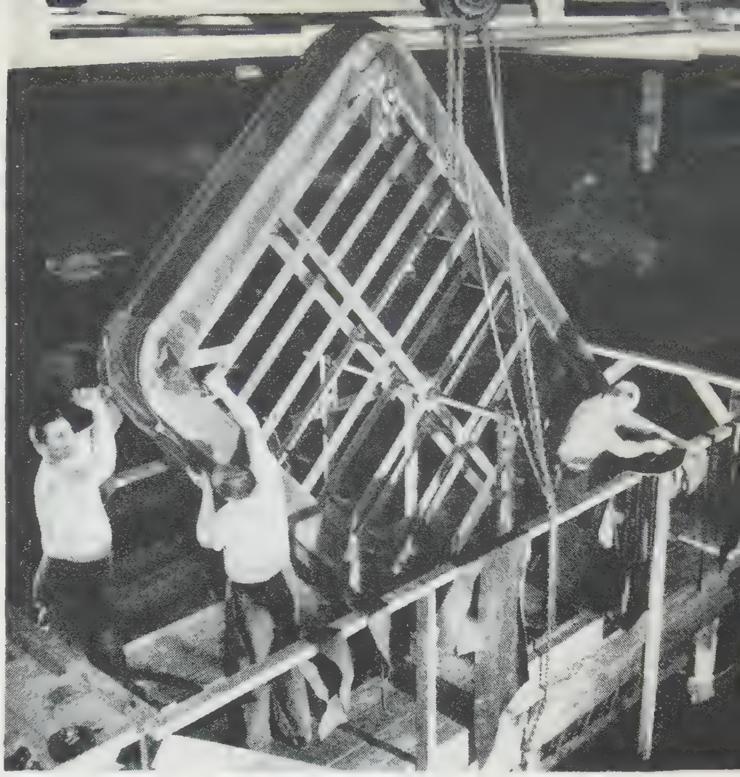
**oyall, Kenneth Claiborne** (1894– ), U.S. government official and lawyer, s born on July 24 in Goldsboro, N.C. He studied at the Uni- rsity of North Carolina and later at Harvard where he took s law degree in 1917. He served in the artillery in World ar I and later practised law in Goldsboro, becoming one of e state's most successful lawyers. In World War II he was ade chief of the army service forces legal section with the nk of colonel. Later, he became deputy fiscal director of the rvice forces (he was made a brigadier general in late 1943) d in Oct. 1945, Pres. Harry S. Truman appointed Royall to e post of undersecretary of war.

Upon the resignation of Robert P. Patterson as secretary of ar, President Truman named Royall his successor on July 18, 947. A month later he was made secretary for the army in e new national military organization headed by Secy. of De- nse James Forrestal. Royall was a foremost advocate of "pre- aredness," and his views on army policy were set forth in a eech made in the summer of 1947 before graduating officers the Command and General Staff school, when he extolled military strength as the best guarantee of peace." In a state- ent made on Dec. 2, 1947, before the president's air policy ommission, he urged the U.S. not to weaken its sea and ground stablishments by granting the lion's share of arms appropria- ons to the air force.

**uanda and Urundi:** *see* BELGIAN COLONIAL EMPIRE; TRUS- EE TERRITORIES.

**ubber.** The rubber industry maintained a high level of output during 1947, particularly in the United tates, where it was estimated that the year's tire production ould exceed by more than 10% the high of 87,000,000 pro- uced in 1946. The total value of manufactured product and he consumption of rubber (1,207,000 short tons) were also ated higher than in any previous year. This unusually high ate of activity prevailed in the first two quarters and in the ourth, with a mild slowing down in the summer months.

Congress extended government controls over the use and pro- uction of rubber until March 31, 1948, authorized the purchase f crude rubber by private agencies after May 1, 1947, and de- erred until later a permanent policy respecting the sale of overnment-owned plants, except for designated "fringe" plants ot deemed essential to U.S. national defense. Subsequently, he Civilian Production administration defined effective controls under rubber order R-1) to continue such functions as alloca- ion, consumption, inventories of rubber and specifications for ubber products. With the resumption of free trading within the nited States, the price of rubber in the far east dropped from high of 22 cents to about 15 cents by June. On Sept. 9 the ffice of Materials Distribution, U.S. department of commerce, nnounced the elimination of controls over the use of natural ubber in about 30,000 nontransportation items in line with the asier supply position of the agricultural product. This action lso concentrated the use of synthetic rubber, principally in ires and tubes, with continued consumption of GR-S estimated t the rate of one-third of the total GR-S (butadiene-styrene o-polymer) and crude rubber processed and a consequent firming in the price of rubber to a high of 22 cents in November and of 20.4 cents at the year-end.



RECORD-SIZE flexible rubber joint, designed to convey steam from turbine to condenser under conditions of extreme temperature change, is shown nearing completion at the Passaic works of the U.S. Rubber Co. in 1947

Viewpoints differed concerning the method of ultimate withdrawal of the government from ownership and operation of plants for U.S.-made rubber. Private operation of these plants under sale or lease arrangements and with removal of government controls was a widely supported proposal. The early discontinuance of the public pooling of patents was urged in order to provide the incentive for industry to make most rapid improvements in the products and processes involved. One large unit of industry recommended government stock piling and production only for purposes of military security. Another advocated the use of a minimum of 112,000 short tons a year of synthetic rubber produced in government-owned plants, a substantial stock pile of crude rubber and the development of additional rubber-growing areas in the western hemisphere with a minimum annual yield of 112,000 tons. The house subcommittee of ten members, headed by Paul Shafer of Michigan, conducted hearings in the last quarter at Port Neches and Velasco, Tex.; Louisville, Ky.; Akron, O., and final hearings in December at Washington, D.C., with the purpose of drafting a law to assure adequate rubber supplies in the interests of public security. Testimony was heard from officials of the Reconstruction Finance corporation (Office of Rubber Reserve), National Security Resources board and other federal agencies, the Rubber Manufacturers association and executives of several rubber companies. Shafer intimated at the end of the hearings that permanent legislation might require considerable time, but that his committee favoured continuation of existing R-1 controls and elimination or modification of existing pooling of research in the synthetic rubber field.

Widespread disappointment was expressed in many quarters at the seeming failure of the private purchase of crude rubber in the U.S.A. to prevent the decline in market prices. Malayan growers attributed this unsatisfactory response in prices to the continued allocation of rubber within the United States, thus preventing its unrestricted use. From London at mid-year gloomy reports emanated that the Americans were retaining control of the price situation with the prospect of a further decline. Sir John Hay, chairman, United Sua Betong Rubber Estates, was reported as criticizing the discrimination favourable to the U.S. synthetic to the detriment of marketing the natural product. The Rubber Study group, which met in Paris in July, was urged by representatives of the rubber-growing countries to implement the free play of the consumer demand for rubber as an aid to their economic recovery. Governments of the member countries were to be apprised of the need for their active participation in effecting this objective.

In Malaya plans to modernize and revive the rubber-growing industry were actively studied. These plans included loans, possibly out of government funds, for the gradual replacement of low-yielding trees by better strains. While estate owners generally seemed to favour government participation in this replacement operation, concern was felt that a too rapid rate of production would adversely affect prices. Also, their competition from the small farmer (native estate owner), especially if aided as was proposed by access to bud wood and government loans, and from the U.S. synthetic production, had to be considered carefully. The main source of competition confronting the Malayan plantations, however, would be the rubber production of the Netherlands Indies, which had been slow in recovering from World War II. Despite plans to improve the yields of rubber in Malaya, and proposals such as the one to make Ceylon a rubber manufacturing centre for all items except tires, rubber producers the world over were awaiting the ultimate disposal of the units for making the U.S. rubber GR-S before committing themselves to large-scale new operations.

**Raw Materials.**—In the first three quarters of 1947 the consumption of rubber in the United States was 928,480 short tons, with 443,440 short tons crude and the balance synthetic rubber, mainly GR-S. Estimates for the year indicated that the consumption of crude and synthetic rubbers would be nearly equal compared with 27% crude in 1946 and 13% crude in 1945; 604,800 short tons of crude rubber and 448,440 short tons of synthetic rubber comprised the United States new supply of these commodities during the first three quarters. Last-quarter estimates for the total rubber consumption in 1947 by the United States were 1,207,000 short tons and for the world 1,802,000 short tons.

The price of U.S. GR-S remained 18.5 cents a pound throughout the year, whereas on June 1 the corresponding product of Canadian manufacture was reduced from 18.5 cents to 16.5 cents. Canadian Reconstruction Minister Clarence Howe announced at the end of 1947 the production figures for GR-S and Butyl at the Polymer corporation's plant:

| | (In thousands of pounds) | |
|---|---|---|
| | GR-S | Butyl |
| 1944 | 57,057 | 1,233 |
| 1945 | 82,228 | 18,941 |
| 1946 | 80,279 | 25,148 |
| 1947 | 79,000 | 16,000 |

The response of Nigerian exports of crude rubber to the stimulus of emergency buying presented an interesting case:

| | Short Tons Crude Rubber |
|---|---|
| 1941 | 2,302 |
| 1942 | 7,467* |
| 1943 | 8,250 |
| 1944 | 10,543 |
| 1945 | 11,787 |
| 1946 | 12,821 |

*Of which 2,136 short tons were wild rubbers.

E. G. Holt, rubber adviser to the department of commerce, reported rubber consumption in the United Kingdom of 35,609 short tons in the first quarter and 43,397 short tons in the second quarter. He reported that in Germany the Schkopau plant in the Russian zone was producing rubber early in the year at the capacity rate 3,500 metric tons (3,850 short tons) monthly. The Hüls plant in the British zone was producing 2,016 metric tons (2,218 short tons) the first quarter and 2,507 metric tons (2,758 short tons) the second quarter.

The U.S. tire fabric and cord output in 1946 of 522,000,000 lb. was a record high; 236,000,000 lb. of cotton tire fabric, 74,000,000 lb. of cotton tire cord and 212,000,000 lb. of rayon-nylon tire fabric and cord made up this total. Estimates for their consumption in 1947 were somewhat in excess of this figure. Nylon was used only in nominal amounts. This quantity of rayon-nylon tire fabric and cord was in the order of 24 times the 1939 production.

During World War II carbon-black plants erected to supply the demand were predominantly of the type to produce furnace blacks, whereas the tire industry had previously consumed almost wholly blacks of the channel type. It was of interest that the fine furnace types of black had reinforcement properties about equal to channel black, resulting in good wear of tire treads in abrasive service. Furnace blacks also worked particularly well with synthetic rubbers. Thus, the excess emergency facilities provided for furnace blacks appeared justified by the continued demand for their products in peacetime. In 1946 the rubber industry consumed 1,200,000,000 lb. of carbon black, more than double the annual consumption in prewar years.

**Finished Goods.**—The rubber industry maintained a high level of output throughout 1947. Shipment of civilian replacement tires in 1946 were 54,584,000 passenger tires and 10,776,000 truck-bus tires, compared with 26,999,000 and 3,868,000, respectively, in 1936. Civilian retread and recap units for 1946 passenger car tires were 16,000,000 compared with 3,000,000 for 1936, and for truck-bus tires 2,500,000 against 1,000,000 in 1936. The peak production rate attained by the rubber goods industry during the first half of 1947 was retarded somewhat at midyear, but had shown recovery by the fourth quarter. Mechanical rubber goods reported its highest production rate in history for the 12 months ending June 30. Heavy bookings for future orders in industrial products, footwear and soles and heels were reported in October. U.S. exports of rubber goods totalled $54,790,000 for the first quarter, $58,241,000 for the second quarter. The decline in volume of exports later in 1947 was attributed to the resumption of manufacture by the countries originating the orders, although dollar balances were doubtless also implicated.

The consumption of rubber by all other countries for 1947 was about half that of the United States. France in April produced 7,560 short tons of rubber articles other than tires, compared with 8,050 short tons of these commodities in April 1938. Increased exports of rubber goods from England were projected by Sir Stafford Cripps after a survey of the known capacity (1947) of the factories at a rate for 1948 attaining more than $4,000,000 a month, 425% of that in 1938. In Italy 137 firms employing 42,000 persons consumed 13,400 short tons of crude and synthetic rubbers in 1946. The Union of South Africa reported 4,330 persons employed in about 70 rubber factories in 1947. In the peak year, 1943, the union had exported 23,000,000 lb. of tires and tubes, mainly to Egypt, Kenya and Iraq. In Germany the production of rubber goods was hampered by shortages of coal, power and buna in the western section, and in the eastern section where buna was plentiful by the scarcities of coal, gasoline and chemicals. Almost 90% of the German rubber-fabricating industry was located in the British and U.S. zones, where the limited production of buna at Hüls had to be supplemented by outside supplies of buna from Schkopau and by importation of natural rubber. These plants in western Germany had a combined capacity of 119,000 car and truck tires and 432,000 cycle tires monthly.

A major reduction in the prices of tires and tubes in the ited States, averaging about 12%, was made effective in the ond quarter. In the last quarter these prices were adjusted ward to a level close to that prevailing at the beginning of year. In early autumn the department of justice brought t against eight tire companies, ten company officials and the ıbber Manufacturers Association, Inc., on charges of violating Sherman act by agreeing to establish the sales prices of tain rubber articles. The defendants pleaded not guilty.

**Rubber Study Group.**—The Rubber Study group met in ris, France, on July 1–8, 1947, for its fourth session to review world rubber situation in the light of changes since it met The Hague, the Netherlands, in Nov. 1946 and to consider organization of an enlarged study group. Delegates from 19 untries and observers from 9 other countries and from the ited Nations and the Food and Agricultural organization were esent. In a resolution released at the conclusion of the meet- it was recommended: (1) that membership be open to all untries substantially interested in the production, consump- on of or trade in rubber; (2) that the group consider measures signed to expand world consumption of rubber; (3) that the oup consider how best to deal with any special difficulties ich might exist or might be expected to arise, and submit commendations on the subject to the participating govern- ents and (4) that the group maintain a secretariat for the oper conduct of its work and arrange for the collection and ssemination of statistics.

In order to implement the fourth recommendation, an initial anagement committee of the following nation members was so recommended—France, the Netherlands, the United King- om and the United States. It was agreed that the permanent te of the secretariat should be in London. (*See* also CARBON LACK; PETROLEUM; RAYON AND OTHER SYNTHETIC FIBRES.)

**umania.** A republic of southeastern Europe, bounded on the north and northeast by the U.S.S.R., on the ast by the Black sea, on the south by Bulgaria and on the west y Yugoslavia and Hungary. Area (Sept. 15, 1947): 91,671 q.mi.; pop. (July 1, 1946, est.): 16,472,000. Chief towns (pop. uly 1, 1945, est.): Bucharest (cap., 984,619); Cluj (110,956); assy or Iasi (108,987); Timisoara (108,296); Ploesti (105,- 14); Braila (97,293); Galatz (93,229). Language (1946 est.): umanian 84%; Magyar 8.5%; German 4.5%; others 3%. Re- gion (1946 est.): Greek Orthodox 81%; Greek Catholic 9%; oman Catholic 7%; others 3%. Provisional council of state: Iihai Sadoveanu, Constantin Parhon, Ion Nicure, Roman Stere nd Stefan Voitec; prime minister: Petru Groza.

**History.**—The food shortage resulting from the 1946 drought reated at the beginning of 1947 a famine situation in Moldavia nd great hardship in most provinces. Appeals for help brought ome gifts of food and medical material from western Europe nd the U.S., but the bulk of Rumania's needs had to be cov- red by using its limited export resources to pay for imports of ood. This meant that imports of much-needed industrial raw aterials and equipment had to be sacrificed, with great loss to e country's economic recovery. Grain was received from the .S.S.R. as a loan to be repaid later, though the communists epresented this as aid freely given.

This serious setback, coming on top of the general economic xhaustion of the preceding two years, whose largest single ause was the burden of soviet military occupation and repara- ons, led to a rapid fall of the currency. The inflation increased during the summer. On Aug. 14 and 15, 1947, the new leu was stabilized at the rate of 1 new to 20,000 old. The new exchange rate was to be 605.4 lei to the pound and 150 to the dollar. Only a small proportion of the old currency surrendered was exchanged for cash, the rest being frozen with the assurance that it would be exchanged "at a later date."

During the year the opposition National Peasant party continued to suffer interference and persecution from the police. In June a group of its leaders, including the former party chairman, Ion Mihalache, attempted to leave Rumania by air, but were arrested on the airfield. The affair was denounced as treason and led to the arrest of all prominent party figures and of their leader, Iuliu Maniu. The party was formally suppressed, and the trial of the leaders for conspiracy took place at the end of October. They were accused of plotting with representatives of Britain and the U.S. in Bucharest the overthrow by violence of the Rumanian government, of espionage in the interest of the western powers and of a "reactionary" and "antiworking class" policy before World War II. On Nov. 11 Maniu and Mihalache were sentenced to solitary confinement for life.

Changes took place during the year in two of the parties belonging to the government coalition (National Democratic front). The Socialist party had split in 1945, when a section led by Constantin Petrescu went into opposition but the majority decided to collaborate with the Communists. In October the foundation of the Cominform in Belgrade, Yugoslavia, brought new demands from the Communists for fusion of the two workers' parties. A congress of the Socialist party, which was denounced as packed by the opposition Socialists, met and decided for fusion.

The other governmental group which still showed signs of an independent attitude were the Liberals of the former premier, George Tatarescu. This right-wing politician had long tried to play with the Russians and with the Rumanian Communists. In May his patience began to wear thin, and he wrote a memorandum to his cabinet colleagues in which he criticized police repression and official industrial policy, especially a law which reorganized existing factories into a number of industrial groups, controlled by the government. This measure, with the formality of nationalization, brought most of Rumanian industry under close state control. Since a Tatarescu follower had been minister of finance, it was easy to blame the Liberals for the inflation. Communist attacks continued during the summer, and on Nov. 6 Tatarescu and his party colleagues resigned following a vote of no confidence.

Mme. Ana Pauker, a Communist leader, succeeded Tatarescu as minister of foreign affairs.

On Dec. 30 the Rumanian government announced the abdication of King Michael (*q.v.*) and the establishment of a "people's republic." A council of state of five members was appointed to govern until a constituent assembly and a president were elected. The former king left Rumania on Jan. 3, 1948. (*See* also PEACE TREATIES.) (H. S.-W.)

**Education.**—(1943) Kindergarten schools 1,094, scholars 57,512; elementary schools 11,041, scholars 1,607,879; universities (1945): 4, students 27,082.

**Finance.**—Commercial bank deposits (1947) 750,700,000,000 lei; savings bank deposits (1947) 80,000,000,000 lei; gold reserves (1946) U.S. $269,000,000; public debt (1945) 98,930,752,000 lei. Currency: leu; exchange rate (Aug. 15, 1947): $1 = 150 lei.

**Trade and Communication.**—Trade with Great Britain (1947, first 8 months): exports £122,662; imports £47,077. Roads (1945): 43,163 mi.; railways (1945) 5,962 mi.

**Agriculture.**—Wheat (1946) 1,773,118 short tons. Acreage planted (1947): (in thousand acres): wheat 4,151; rye 222; barley 1,022; oats 1,284; maize 10,789; buckwheat 899. Livestock pop. (1947): horses 768,461; cattle 3,047,964; sheep 7,084,633; pigs 1,405,726; goats 225,363; poultry 11,894,038.

**Mineral Production.**—Crude petroleum (1946) 4,606,000 short tons.

**Running:** *see* TRACK AND FIELD SPORTS.

**Rural Electrification.** The electrification of rural areas in the United States continued at a rapid pace during 1947. As of June 30, 1947, the Rural Electrification administration estimated that 3,574,641 farms, or 61% of all U.S. farms, were served with central station electricity. This represented an increase of 394,338 electrified farms over the previous year. REA estimated that 2,284,528 farms and about as many nonfarm dwelling units and other rural establishments still lacked electric service.

During the calendar year 1947, the REA program passed two significant milestones: cumulative loan approvals passed $1,000,000,000, and connected consumers went to more than 2,000,000. REA borrowers connected more new consumers than in any previous year, bringing service to an estimated 346,000 farms and other rural units. They added an estimated 87,000 mi. of distribution lines to their rural systems. The borrowers included 947 rural electric co-operatives, 41 public power districts, 20 other public bodies and 21 commercial power companies. At the end of 1947, they were serving 2,030,000 rural consumers and operating 594,000 mi. of distribution lines. During the calendar year, REA approved loans for its borrowers amounting to $232,518,256. This increased the total of all approved loans to $1,190,527,346. Loan funds advanced to borrowers during 1947 to pay for completed construction totalled $225,412,000, or about $81,000,000 more than was advanced in any previous year of the program. This indicated an improved supply of materials. In addition to the new miles of lines placed in operation, the construction program of the borrowers included the "heavying-up" of many miles of lines and other facilities to handle increased loads. It also included construction of additional generating and transmission facilities.

In 1947 REA borrowers started construction of power lines into hundreds of unelectrified rural areas, including many sparsely settled sections of the great plains. Thirty-five new systems were energized during the year, and extensive new construction work stemmed from the 869 systems already in operation.

The co-operatives also prepared plans for the extension of service into many other areas. Demand of rural people for service continued strong. At the close of the year, REA had on hand, or in process of preparation, a backlog of loan applications totalling $265,000,000.

Borrowers in nearly every state reported in 1947 that larger supplies of electrical energy were needed to meet increased power consumption on electrified farms. The increased demand reflected the needs of newly electrified farms and more intensive use of power on farms already served. Electricity had become a production tool on the farm, as well as an instrument for better living; farmers now used it to operate water systems, milking machines and milk coolers, pig and chick brooders, feed grinders, hay hoists, hay driers, grain blowers, corn shellers, farm shop tools and a variety of other production devices. Rural consumers served by REA-financed lines used 3,332,000,000 kw.hr. of electricity during the fiscal year that ended June 30, 1947, as compared with 2,477,000,000 kw.hr. in 1946 and 1,925,000,000 kw.hr. in 1945.

This greatly increased use of power by rural people helped REA borrowers to continue in 1947 the impressive financial record that had marked previous years. As of Sept. 30, a total of $143,372,000 of principal and interest had been paid on REA loans. Of this amount, $20,000,000 represented repayment of principal in advance of due dates. (C. Hn.)

**Canada.**—Expansion of rural electrification was undertaken in several parts of Canada in 1947. Nova Scotia reported 1947 completion of only a few miles of rural lines, bringing the total to 2,000 mi. of new rural lines, with 70,000 persons provided with power facilities. Prince Edward Island planned to take over all private electric generating companies at a cost of $8,000,000, and hook up existing power lines in two grids, which would simplify rural electrification. Power shortages in New Brunswick forced many industries to curtail operation and prevented widespread extension of lines into rural areas. Agitation began for increased electrical energy output based on coal or tidal power, rather than hydro power, to speed rural electrification. In Quebec, new rural substations, first of their kind in Canada, could be adapted for capacities ranging from 1,000 volts to 15,000 volts.

In Ontario 23,700 mi. of rural lines were constructed or were under construction at the end of 1946. They served 178,000 consumers. Late in 1946 the commission began a five-year plan of rural expansion, aimed at installing 7,300 mi. of new lines at a cost of $22,400,000, to bring power to 58,000 new rural consumers, including 32,000 farmers. During 1947 about 1,200 mi. were installed, and 16,800 of these new customers added.

In 1947 Saskatchewan passed legislation to reorganize the 18-year-old Saskatchewan Power commission into a crown corporation. With the objective of welding the power system of the province into a single system, the government had purchased two large private companies in 1945; in 1947 a third was added. While the commission concentrated on serving small urban areas, some new rural lines were added. In the Alberta government's throne speech of 1947, an extension of rural electrification was promised, but shortages continued to slow up plans.

By April 1947, 16.1% of Canada's farms were served by electricity. Of this number, 35% were in Ontario and .21% in Saskatchewan. At that time Ontario was using 79.75% of all the power that went into rural electric lines. (C. Cy.)

**Great Britain.**—Shortage of supplies and of generating plant at the power stations, together with the position created by the passing of the Electricity act, 1947, retarded progress with new rural-distribution schemes in Great Britain. The success already achieved in some parts of the country, however, was illustrated by figures given late in 1947 for the Dumfriesshire, Scotland, supply area, which showed that 12,000 rural consumers out of a total of 15,000 were connected to the supply, the estimated total of units sold during the year being more than 32,000,000, at an average price of 1.30*d.*, and the maximum demand nearly 10,300 kw.

Constructional work on several of the North of Scotland Hydro-Electric board's generation and distribution schemes gathered momentum, and in May work began on the Mullardoch-Fasnakyle-Affric project to produce about 250,000,000 kw.hr. per annum. By the early 1950s the total generating capacity provided by the board was expected to reach 820,000 kw. to generate 2,300,000,000 kw.hr. a year. Research and development work in agricultural electrification was being carried out upon grain drying and hop drying and upon hay finishing by blowing cold or slightly warmed air through the grass.

**Other European Countries.**—Work was started on the rural-electrification scheme of the Eire Electricity Supply board. It was decided to develop in each county 25 sq.mi. unit areas having a network to supply every farm within the area. In the U.S.S.R., isolated rural communities were being supplied with electricity from small hydroelectric stations, and some Danish villages were being electrified from wind-driven generators of about 35 kw. capacity. A 5-h.p. or 7½-h.p. tractor, electrically operated through a 170-yd. length of trailing cable, was developed in Norway, particularly for use on small farms. A 5-h.p. unit ploughing on the rope-haulage system was being manufactured in France, and in the U.S.S.R. a 54-h.p. electric tractor, supplied through a 750-m. cable, was developed and a number of experimental models successfully passed extensive field trials.

machines could do 2 ac.–2$\frac{1}{2}$ ac. an hour with a consumption
acre of 18.6 kw.hr. Steps were being taken to promote in-
ased electrification of agriculture in the Netherlands also,
re interest was being shown in its application to ploughing.
France electricity was applied on the farm to grain drying
he barn by blowing cold air through the grain. (E. W. G.)

## ssian Literature.

The standard of soviet literature reached its lowest point during 1947,
en none of the most highly acclaimed soviet writers produced
rk of vital interest to readers outside the Soviet Union, while
se writers with the makings of a universal appeal, such as
onid Leonov, were barren. The immediate cause of this fail-
must be sought in the ideological purge inaugurated in 1946
Andrey Alexandrovich Zhdanov. Official pronouncements
ring 1947 soon demonstrated that more lay behind the purge
n met the eye. Initially the main charge was that certain
ters and editors were not pulling their weight in the recon-
uction of their war-ravaged fatherland; but it was soon evi-
nt that the main preoccupation of the Communist party was
harnessing of soviet literary talent to the task of convincing
people of the U.S.S.R. of their own invincible moral
ength, of their essential goodness, of the superiority of "soviet
n" to any other kind of man, and of the ability of mankind,
viet mankind, to master his fate, fashion the universe to his
l, and stride onward and upward in an uninterrupted progres-
n. This thesis, applied to the arts in general and literature in
rticular, could only be expressed in the method known as
cialist realism, an unrelievedly optimistic approach which was
ntrasted with the pessimistic decadence of western formalism.
cialist realism was defined afresh by Alexander Fadeyev, the
w secretary of the Soviet Writers' union, on the occasion of
e annual congress of the union. It was nothing less than the
lebration of "the new human being of our age." More par-
ularly, it was "the outcome of the appearance of a new type
hero enjoying opportunities for unlimited moral progress—
e merging of reality and the ideal in the living image of man."
his had in fact for long been the official ideal of soviet writers;
it hitherto they were able to dilute the heroic qualities of the
ew man with observations and qualifications from real life.
he year 1947 saw the temporary end of such qualifications.
ny writer who still showed an interest in the workings of the
uman soul and allowed himself to speculate, however obliquely,
to the real meaning of life upon this planet was labelled as a
ecadent formalist. The most impressive casualty was Boris
asternak, the *doyen* of soviet poets, who was comprehensively
tacked in the Communist party's cultural weekly, *Kultura i
hizn* (*Culture and Life*), in April. Later in the year the cam-
ign was broadened as part of the general line stressing the
periority of Russian to western culture, and the complete in-
pendence of Russia from western influences. The climax of
is movement was the public rebuking of Gheorghi Alexandrov,
e minister for agitation and propaganda, who had himself until
en been in charge of the ideological crusade. The rebuke was
lministered by Zhdanov. Alexandrov's fault was his too
mpathetic treatment of the philosophers of the west in his own
onumental work *A History of Western Philosophy*, which
therto had represented the party's view. It would evidently
some time before the more able soviet writers perfected a
w technique for producing readable novels in which all the
aracters would be either socialist heroes or members of a
lower species of mankind. (W. E. Cw.)

**Russian S.F.S.R.:** *see* Union of Soviet Socialist Republics.

## Rye.

The 1947 crop of rye in the U.S. increased remarkably over the short crop of 1946, which was the smallest in more than 70 years except for that of 1934. The 1947 crop was estimated at 25,977,000 bu. compared with 18,879,000 bu. in 1946, a gain of 38% but still much below the ten-year (1936–45) average of 37,934,000 bu. The acreage of rye harvested in 1947 was estimated at 2,022,000 or 22% above the 1,607,000 ac. harvested in 1946. Average yield was 12.8 bu. per acre, however—above the 11.7 bu. average of 1946 and 11.9 bu. for 1936–45. Rye stocks were very low on June 1, 1947, following the small 1946 crop and the strong demand for all grains for feed. Less than 5% of the 1946 crop remained on farms on June 1, 1947. The average farm price of rye was $2.18 per bushel in Jan. 1947, $2.36 in July and $2.45 in December.

*U.S. Rye Production in Leading States,
1947, 1946 and 10-Year Average, 1936–45*

(In thousands of bushels)

| State | 1947 | 1946 | 10-yr. Average 1936–45 | State | 1947 | 1946 | 10-yr. Average 1936–45 |
|---|---|---|---|---|---|---|---|
| South Dakota | 4,858 | 2,530 | 6,589 | Kansas | 627 | 556 | 917 |
| North Dakota | 4,360 | 2,156 | 6,750 | Kentucky | 518 | 518 | 253 |
| Nebraska | 2,592 | 3,070 | 4,155 | Ohio | 510 | 289 | 916 |
| Minnesota | 2,460 | 1,534 | 4,384 | Montana | 507 | 330 | 413 |
| Michigan | 1,120 | 672 | 1,104 | Oklahoma | 480 | 432 | 760 |
| Wisconsin | 1,000 | 874 | 2,181 | Colorado | 470 | 646 | 704 |
| Indiana | 8,400 | 621 | 1,479 | Virginia | 392 | 392 | 511 |
| Illinois | 7,980 | 475 | 912 | Missouri | 338 | 368 | 512 |

The world's rye crop increased to about 1,515,000,000 bu. in 1947 compared with 1,455,000,000 bu. in 1946 and a prewar (1935–39) average of 1,730,000,000 bu. The increases were in the Soviet Union, Hungary, Canada and the U.S. The Soviet Union crop amounted to about 60% of the world's total. The European harvest was estimated at 520,000,000 bu.—less than the 1946 crop but above the prewar average. (J. C. Ms.)

## Saar.

Following the separation of the Saar from the rest of Germany in Oct. 1946, gradual preparation was made for economic union with France, to which Britain and the U.S., but not the U.S.S.R., agreed in principle during the Moscow conference of March and April 1947. In Dec. 1946, its territory had been extended northward and westward so as to include the whole of the German valley of the Saar and give it a common frontier with Luxembourg. This brought the frontier to the gates of Trier and increased its area from 743 sq.mi. to 1,106 sq.mi., and its population from approximately 788,000 to 880,000. This step aroused protests from France's allies and in February they were informed that it was provisional. Georges Bidault reaffirmed this in Moscow in April. The frontier was revised in June 1947, the area immediately adjacent to Trier being restored to Germany, but a narrow common frontier with Luxembourg being retained. The area within this frontier was 981 sq.mi. and the population 852,000. At the same time a Saar mark was introduced in the place of the reichsmark.

In May a commission of Saarlanders, proportionate to party strength in the municipal elections, was appointed to draft a constitution: it consisted of ten members of the Christian People's party, five Social Democrats, two Communists, two Democrats and one jurist as consultant. Elections for the Landtag took place on Oct. 5. It met for the first time on Oct. 14. The election results were as follows: Christian People's party 230,063 votes and 28 seats; Social Democrats 147,261 votes and 17 seats; Communist party 37,929 votes and 2 seats; Democrats 34,253 votes and 3 seats.

The constitution which the Landtag had to examine provided

PLACARD advocating union of the Saar with France being posted on a building in the Saar basin early in 1947. Popular sentiment, voiced indirectly through the elections of Oct. 5, was overwhelmingly in favour of economic fusion with France

for a parliamentary government under a French high commissioner. The French took steps to provide the Saar with a university of its own at Homburg, where a medical faculty was opened in 1947. The mines were under direct French management and reached 80% of prewar production in Sept. 1947. Seventy thousand tons of steel were produced in the same month. The Saar was occupied by the French gendarmerie and not by the army. Gilbert Granval was governor. (D. R. Gi.)

## St. Louis.

Eighth largest city of the United States, St. Louis, Mo., had a population of 816,048 by the federal census of 1940, with an additional 541,567 persons living within its greater metropolitan area. A census bureau report, at mid-year, 1947, indicated a 13% increase (177,000) in the metropolitan area after 1940. Mayor in 1947: Aloys P. Kauffmann.

The municipal government was beset with financial troubles in 1947, growing out of rising costs. In 12 months ending April 1947, an operating surplus shrank from $3,145,275.29 to $42,270.08. A deficit of around $2,000,000 was anticipated for the close of the 1947–48 fiscal year on April 12, 1948.

To meet the soaring cost of government, the city curtailed some services, dropped 700 employees (at a saving of $1,500,000 in a half year) and sought new sources of revenue. Five tax measures, expected to yield $1,700,000 annually, were passed. They increased the cigarette tax from 2 cents to 3 cents, levied 5% taxes on other tobacco products, placed a 5% admission tax on theatres and sports events. Because defectively drawn, the tobacco tax was vetoed for redrafting.

Meanwhile, an ordinance was passed raising the salaries of city employees by $2,136,000 annually.

Missouri supreme court decisions affected city finances. A city income tax was ruled invalid, eliminating $2,500,000 yearly revenue and requiring refund of $2,000,000 already collected. But the city's imposition of vehicular tolls on the formerly free MacArthur bridge spanning the Mississippi river was upheld. That saved $900,000 per year revenue.

The Republicans and Democrats split 14 aldermanic seats at stake in an election, April 1, 1947. The G.O.P. won the board of aldermen presidency, and retained its dominance gained in 194 after eight years of Democratic supremacy.

A two weeks' bus and streetcar strike in June 1947 crippled the city and cost the community an estimated $25,000,000, of which $13,200,000 represented lost retail store sales.

The tax rate (city, school and state) for the 1947–48 fiscal year was $2.74 on $100 valuation. Other fiscal figures were: assessed valuation of real and personal property $1,555,147,990; bonded debt $43,933,000; receipts (for municipal operation only) during the 1946–47 fiscal year $27,195,548; expenditures during the same period $30,640,545. The budget for the 1947–48 fiscal year was $32,777,749, with receipts expected to be about $2,000,000 less than that. (E. L. R.)

## Salt.

The production of salt is so widely scattered that it is impossible to collect complete world data, but the known output in 1937 was around 33,000,000 short tons. Food uses are world-wide, but it is in the industrial uses that the larger portion of the output is consumed. The United States, Germany, Great Britain and France have accounted for almost two-thirds of the world production and consumption.

**United States.**—The salient data on the production and consumption of salt in the United States are as follows, in thousands of short tons:

| | 1946 | 1945 | 1944 | 1943 | 1942 |
|---|---|---|---|---|---|
| Production | 15,132 | 15,394 | 15,717 | 15,214 | 13,69 |
| Evaporated | 3,250 | 3,183 | 3,943 | 3,994 | 3,51 |
| In brine | 8,471 | 8,706 | 8,326 | 7,961 | 7,37 |
| Rock salt | 3,412 | 3,506 | 3,448 | 3,259 | 2,80 |
| Consumption | | | | | |
| Soda ash | 6,958 | 7,087 | 7,340 | 7,158 | 6,67 |
| Other chemicals | 3,097 | 3,249 | 3,568 | 3,351 | 2,68 |
| Food production* | 824 | 790 | 830 | 921 | 90 |
| Food preservation† | 1,610 | 1,656 | 1,638 | 1,624 | 1,46 |
| Table and household | 708 | 682 | 603 | 666 | 68 |
| Health, comfort, safety‡ | 746 | 694 | 578 | 671 | 58 |
| Other uses | 1,191 | 1,237 | 1,162 | 824 | 70 |

*Agriculture and livestock feeding. †Meat packing, fish curing, butter, cheese, canning preserving and other food processing, and refrigeration. ‡Water softening and purifica tion, sprinkling highways and railroad right of ways, dust and ice control.

While salt production declined slightly from the war peak the 1946 total was greater than in any year preceding 1944.

**Canada.**—Salt production dropped from 673,076 short tons in 1945 to 537,985 tons in 1946, but picked up to 731,500 tons in 1947. (G. A. Ro.)

## Salvador, El.

A republic on the west coast of Central America, the only one without a Caribbean littoral. It is the smallest but the most densely populated Central American state. Area: 13,176 sq.mi.; pop. (off. est. June 30, 1946) 1,997,169. The capital is San Salvador (1944 pop. est., 110,435). Other cities are Ahuachapán (13,765), Cojutepeque (15,317), Nueva San Salvador, formerly Santa Tecla (24,239), San Miguel (18,676), San Vicente (13,637), Santa Ana (47,631) and Sonsonate (17,540). Language: Spanish; religion, Roman Catholic. President in 1947: Gen. Salvador Castañeda Castro.

**History.**—The political situation continued tense in 1947. ots designed to overthrow the government were discovered d crushed in March and June, and constitutional liberties uspended in Sept. 1946) were not fully restored during the ar. Few strikes occurred, and the government maintained a nds-off policy in industrial disputes while working toward mpletion of a new labour code.

Agriculture experienced a profitable year, but industry (es- cially textile manufacturing) was seriously hampered by an ectrical power shortage arising from a failing water supply. oout 74% of the country's electrical power was dependent oon hydroelectric plants. A continued favourable balance of ade provided the country with a surplus of foreign-exchange edits. In spite of shortages of construction materials, electri- l equipment and machinery, the capital city experienced a rec- d building boom. During the first six months, a total of 812 ilding permits (valued at 7,000,000 colones) were issued as mpared with a total of 449 permits for all of 1946.

On the international scene, El Salvador refused to accord cognition to the new government in Nicaragua, but continued maintain cordial relations with the Franco regime in Spain. he drafting of a constitutional basis for a new union of the entral American republics continued at San Salvador during ie year.

**Education.**—Primary schools in 1945 numbered 1,519, with approxi- ately 100,000 students and 3,700 teachers. In 1947 the first free public gh schools in the country were opened, in the national and six pro- ncial capitals. Intermediate schools numbered about 50 in 1944, with 207 students. In 1946 the national university had 935 students and 8 professors. The federal appropriations for education in 1947 amounted 2,903,040 colones. The country had 35 motion-picture theatres with total seating capacity of 32,700 as of Jan. 1, 1947.

**Finance.**—The monetary unit is the colón, valued at 40 cents U.S. on ept. 15, 1947. The 1947 budget, providing expenditures of 46,524,- 52.51 colones (approx. 41,500,000 colones in 1946), was increased in eptember by an additional 6,500,000 colones. The foreign debt at the eginning of 1946 amounted to $18,300,000, including unpaid interest. 1 1947 El Salvador continued to enjoy large gold and foreign-exchange alances in contrast to dollar shortages in the other Latin American ountries. As of June 30, bank holdings in foreign exchange amounted 52,542,259.90 colones ($21,016,903.97).

**Trade and Resources.**—Exports in 1946 totalled $26,200,000 ($21,331,- 31 in 1945) and imports were valued at $21,100,000 ($13,534,230 in 945). During the first four months of 1947, exports were up to $25,- 00,000 and imports to $12,100,000. Coffee (805,190 bags of 132 lb. ach in 1946) was the chief export commodity. The exportable produc- on from the 1947–48 crop was estimated at 1,035,000 bags (960,000 ags for 1946–47). Sugar production provided an exportable surplus es- imated at 20,286,000 lb. for 1947. The 1946–47 cotton crop (nearly ouble the 1945–46 yield) was 9,517,354 lb. Early estimates placed the ice yield for 1947–48 at 1,180,000 bu. (799,000 bu. in 1945–46). In 945 there were approximately 706,200 cattle, 25,000 sheep and 32,000 oats in the country.

**Communications.**—Two railroads were in operation with an estimated 85 mi. of track. All-weather highways totalled 1,436 mi. (150 mi. aved) and unimproved roads 2,300 mi. The country was served by ne national and two foreign air services. There were 4,411 telephones nd about 11,000 radio sets.

## Salvation Army.

The Salvation Army is a religious and charitable organization operating in 1947 n 97 countries and territories throughout the world, preaching he Gospel of Christ in 102 languages and dialects. Its 17,915 orps (local organizations) included 27,811 officers and 104,324 ocal officers (laymen), in addition to its many "soldiers" and dherents.

The social service work, including children's homes and hos- itals, maternity homes and hospitals, family welfare bureaus, ndustrial institutions, boys' clubs, summer camps for needy nothers and children, missing persons bureaus, and many other ctivities, is the Salvation Army's practical manifestation of Christianity in Action."

The International Salvation Army was commanded in 1947 y General Albert Orsborn, the sixth general, elected on June 1, 1946, with headquarters in London. In the United States, Commissioner Ernest I. Pugmire was the national commander with headquarters in New York city.

During World War II, the activities of the International Salvation Army extended around the world. From every corner of the globe came Salvationists to serve the armed forces. Operating on 26 fighting fronts, these services included 3,000 Red Shield canteens and huts and 1,000 mobile canteens, many of which landed with the invasion troops.

Close behind the invasion forces, Salvation Army relief teams moved into the devasted countries, providing aid to thousands of war victims in Europe. Centres for the distribution of food and clothing were organized; hospitals, clinics and children's convalescent homes were established. Many of these were still being continued in 1947.

In the United States, the Salvation Army mobilized its forces to help returned veterans adjust themselves to civilian life, giving spiritual and material aid in solving family difficulties and in the rehabilitation of the mentally ill.

In 1947, the Salvation Army began a world-wide intensified spiritual offensive titled, "The Fighting Faith Crusade," which was to be continued through 1948. One of the most vital features of the Salvation Army's program is the intensified work among youth, which includes the opening of new playgrounds, youth centres, summer camps and varied character-building activities.

Recognized as a semiofficial adjunct of United States penal system, the Salvation Army operates an extensive program for the rehabilitation of prisoners. Untiring effort is devoted to understanding each individual, regardless of race, creed or previous record. Religious meetings, song services and visitation are part of the Salvation Army's program in practically every federal prison, state penal and correctional institution in the United States. Under the guidance of Salvation Army officers, Brighter-Day leagues are formed behind the gray walls.

Salvation Army missionary work is financed by an annual Self-Denial fund. During Self-Denial week Salvationists do without something usually regarded as a necessity and contribute such amounts to the missionary funds which help to support the organization's work in India, China or Africa. (*See* also CHURCH MEMBERSHIP.) (E. I. P.)

## Samoa, American.

The Samoan Islands extend from 13° 26′ to 14° 22′ S. lat. and from 168° 10′ to 172° 48′ W. long., and are about 2,700 mi. east of Australia and 2,200 mi. south of the Hawaiian Islands. American Samoa consists of the inhabited islands of Tutuila, Tau, Olosega, Ofu and Aunuu, and the uninhabited coral atoll, Rose Island. Swains Island, an inhabited coral atoll, 210 mi. northwest of Tutuila, was made a part of American Samoa in 1925. Total population of American Samoa as of July 1, 1946, was 17,077; total area is 73.1 sq.mi.

A tripartite treaty signed by the U.S., Great Britain and Germany in 1899 divided the Samoan Islands into two possessions with the U.S. receiving what is now American Samoa and Germany the rest. American Samoa is governed by a naval officer appointed by the president. A legislature, the *Fono*, represents all districts and advises the governor. The judiciary consists of a high court, district courts and village courts. Each of the three administrative districts has a native governor who appoints county chiefs who appoint village chiefs. Pago Pago, on the island of Tutuila, is the capital and Samoa's best harbour.

In 1946 there were 46 public schools and 7 private schools in American Samoa with 4,068 students and 130 teachers. About 94% of the population was literate, according to the 1940 census.

American Samoa has few natural resources of economic importance. The main products are copra and mats woven from local grasses. About 1,000 tons of copra are exported annually. About 50 tons of taro, 65 tons of bananas, 25,000 coconuts, 25,000 oranges and 15,000 papayas are produced annually. During the fiscal year 1947–48, about $225,000 was appropriated for the island government. The possession's annual pure income is estimated at $635,000.

Bibliography.—U.S. Navy, *American Samoa* (June 1947); *Annual Reports* of the Governor of Samoa to the Secretary of the Navy. (S. Nr.)

## Sand and Gravel.

The production of sand and gravel in the United States, subdivided into the major types of use, is presented in the following table, in thousands of short tons.

| | 1946 | 1945 | 1944 | 1943 | 1942 |
|---|---|---|---|---|---|
| Sand | 96,440 | 71,726 | 68,978 | 82,053 | 107,371 |
| Building | 49,132 | 31,508 | 27,213 | 34,098 | 49,518 |
| Raving | 28,932 | 22,313 | 21,479 | 28,024 | 38,396 |
| Moulding | 6,974 | 7,191 | 8,983 | 8,295 | 8,256 |
| Glass | 4,849 | 4,682 | 4,443 | 3,972 | 3,622 |
| Ballast, engine | 3,512 | 3,855 | 4,065 | 4,182 | 4,529 |
| Abrasive | 907 | 643 | 898 | 838 | 807 |
| Other uses | 1,955 | 1,535 | 1,898 | 2,015 | 2,243 |
| Gravel | 157,691 | 123,798 | 125,805 | 152,011 | 196,975 |
| Building | 43,177 | 30,055 | 28,609 | 35,227 | 54,412 |
| Paving | 100,535 | 71,351 | 73,083 | 94,769 | 115,680 |
| Ballast | 12,010 | 20,668 | 21,267 | 19,407 | 23,110 |
| Other uses | 1,970 | 1,734 | 2,846 | 2,607 | 3,773 |
| Total | 254,131 | 195,524 | 194,783 | 234,064 | 304,346 |

The effects of the postwar building boom are clearly shown in these figures.

**Canada.**—The combined output of sand and gravel in Canada rose from 29,750,703 short tons in 1945 to 39,949,994 tons in 1946 and 48,262,300 tons in 1947. (G. A. Ro.)

**Sandstone:** *see* Stone.

## Sandstroem, Alfred Emil Frederick

(1886– ), Swedish jurist, was born in Nyköping, Sweden. Obtaining his law degree in 1908, he rose to positions of eminence in Sweden's judicial system, serving as chief justice of the supreme court from 1931 to 1933 and from 1935 to 1943. He was also a member of several important international tribunals and was chairman of the International Red Cross and Swedish Red Cross Relief mission to Greece, 1943–46.

In the spring of 1947, Sandstroem loomed as a figure of international importance; his name had been submitted by the United States to the United Nations as candidate for Trieste governor; but Andrei Gromyko, the soviet delegate, rejected the nomination without explanation. Then on June 2, he was named head of the U.N. Special Committee on Palestine (U.N.S.C.O.P.); the Swedish jurist was considered an excellent choice for this delicate task; in addition to the important fact that he came from a neutral country was his widely-known reputation as an objective jurist.

After going to Palestine for an on-the-spot investigation of the dispute, Sandstroem's committee on Aug. 31 issued a comprehensive report recommending a free Palestine. The committee's majority favoured separate Arab and Jewish states while the minority urged establishment of a federal Palestine under a central government.

## San Francisco.

Mayor Elmer E. Robinson took office Jan. 8, 1948. The resident population of San Francisco, Calif., on Jan. 1, 1948, was estimated at 807,700. The U.S. census reported 827,400, Aug. 1, 1945. Preliminary reports for 1947 revealed 19,541 births in San Francisco and 9,557 deaths.

San Francisco general business activity during 1947 was expected to exceed that of the preceding year. Some specific factors showing upward trends during the first 11 months of 1947 as compared with the same period of 1946 were: general business activity was up 5.9%; financial transactions (bank debits for individual accounts) 9.1%; retail department store sales 1.7%; independent store sales (for first 10 months) 7%; building permits 3.1% in number and 1.1% in value; electrical energy sales 6.0%; industrial and commercial gas sales 5.2%; and airport plane traffic 24.9% and passenger traffic 10.4%. The number of ship arrivals during the 11 months was almost one-third greater than a year before, exports one-half greater, and imports four-fifths greater. Activities receding from the exceptional levels of 1946 included real estate, stock exchange transactions, freight car movements and placement of workers. The number of taxable retail sales outlets in San Francisco on June 30, 1947, totalled 24,042 or an increase of 1,199 more than the preceding year. Independent outlets accounted for 21,141 and chains 2,901 compared with 20,147 and 2,696, respectively, in 1946. Announcements of new industries and expansions for San Francisco during 1947 totalled about 200 with outlays of $17,650,000 compared with 284 with outlays of $15,000,000 in 1946. Living costs at the end of the third quarter in San Francisco were 14.9% above the same period of 1946.

San Francisco's funded debt outstanding on June 30, 1947, was $116,244,443. Estimated revenue receivable during the fiscal year 1947–48 amounted to $121,090,553. The total assessed valuation for the 1947–48 fiscal year was $1,281,812,029. The tax rate for 1947–48 fiscal year was $5.62 per $100 assessed valuation.

Progress bonds for $87,050,000 were approved by the people of San Francisco at the Nov. 1947 election to provide for basic public improvements including $22,200,000 for rehabilitation of the municipal railway system; $22,850,000 for street improvements, including special provision for several major through streets and street extensions; $5,000,000 to provide off-street parking facilities to relieve congestion and expedite traffic; $12,000,000 to pay the cost of improving and enlarging public playgrounds and recreation centres for the city and county of San Francisco and $25,000,000 to pay the cost of construction of a second pipe line across the San Joaquin valley to augment the existing water supply. A $55,000,000 San Francisco world trade centre was authorized by the California state legislature. (R. B. Kr.)

## San Marino.

An independent republic in northern Italy, 14 mi. southwest of Rimini by road. Area: 38 sq.mi.; pop. (Sept. 1939) 14,547. Chief town: San Marino. Executive power is exercised by regents, two of whom are appointed every six months from the popularly elected grand council of 60 members. Wine, cattle and building stone from the Mount Titano quarries are the chief exports.

**History.**—In Jan. 1947 the U.S. Claims commission investigated San Marino's claims against the Allies for bomb damage. By agreement with Italy (April 26), San Marino's claims were forwarded by Italy to Washington and London—they were estimated unofficially to be in the neighbourhood of £2,500,000, which included damage arising from the occupation by the 8th army from Sept. 21 to Oct. 20, 1944, as well as the air raid of June 26, 1944. ## Saskatchewan.

Central of the three prairie provinces of Canada, Saskatchewan was created by parliament in 1905. Area: 251,700 sq.mi., of which 13,725 are lakes; pop. (1941) 895,922; (1947 est.) 842,000. Of the 1941 population, 600,846 were rural dwellers, and 477,563 were male. Chief cities: Regina, provincial capital (58,245); Saskatoon

027); Moose Jaw (20,753); Prince Albert (12,508).

istory.—The Co-operative Commonwealth Federation (So- st) government passed 118 laws at the 1947 sitting of the slature. Included were a 44-hr. work-week bill for urban s; provincial price control, particularly rentals; permission municipalities to operate bakeries, dairies, service stations similar facilities. A bill of rights erased racial, religious, and ur discrimination. Saskatchewan civil servants were per- ed to take part in the political affairs (in 1947 there were o more civil servants than in 1944, when the C.C.F. took e). The 1947 budget of $45,591,100 was $6,000,000 above 1946 budget. The supreme court of Canada declared *ultra s* the Saskatchewan Farm Security act, providing for re- ed interest in farmer's debts during poor crop years. The katchewan Court of King's Bench declared five labour acts *a vires* where they affected employees of railways. The 18 ally-owned projects made a net profit of $329,500 for the 6 ths ending Sept. 30, 1946 ($228,000 net profit for the year ing March 31, 1946). The provincial compulsory hospitaliza- scheme cost about $1,000,000 more than estimated, al- igh 96% of taxpayers made their 1947 contributions.

**lucation.**—Enrolment in educational institutions for the 1944–45 ol year was 203,166. To facilitate education, the government pro- d mantel-type radios and sold them to schools at cost.

**ansportation.**—Highway expenditures in 1947 totalled $4,316,751, a rd figure; 239 mi. were hard-surface, another record figure. Sched- flights to all settlements of importance in the north were started by crown-owned Saskatchewan Air Service.

**griculture.**—The wheat crop in 1947 was estimated at 173,000,000 (1946: 208,000,000 bu.); oats 80,000,000 bu. (1946: 117,000,000 ; barley 45,000,000 bu. (1946: 46,000,000 bu.); rye 6,780,000 bu. 46: 3,400,000 bu.); flax 3,500,000 bu. Total number of livestock rses, cattle, sheep, swine) in 1946 was 3,847,000 (1944: 4,835,000). h farm income from grain and field crops, produce, livestock and stock products was $127,931,000 for first 6 months of 1947 ($123,- ,000 in same 1946 period). Farmers received $14,000,000 under the irie Farm Assistance act during 1947. Combine crews working in the in the 1947 harvest season earned $3,000,000. During 1947 Sas- chewan farmers retired $99,367,000 of mortgage obligations.

**roduction.**—The gross value of 1945 production was $575,140,633. The value was $364,706,923, which was 5.99% of Canada's total. The capita production was $431.61.

**inerals.**—With 67 oil wells in production, 10 months' flow produced ,071 bbl., compared with 136,874 bbl. for all of 1946. Mineral out- for 1947 was estimated at $25,540,000 (1946: $20,783,813; 1945: ,164,036). Discovery of potash, near Unity, first Canadian source, considered Canada's most important mineral find in 20 years.

### chuman, Robert

(1886– ), French statesman, was born on June 29 at Luxembourg, of rraine stock. Admitted to the bar in Metz before World War he was elected deputy of the recovered *département* of selle in 1919, and was afterward continuously re-elected. In chamber of deputies he was a member of the mildly con- rvative Republican Democratic union, but in 1932 he joined (Catholic) Democratic Popular party. On March 21, 1940, was appointed undersecretary of state in Paul Reynaud's inet with the task of looking after the refugees from Alsace- rraine, a post which he kept after the armistice. When the rmans re-annexed the three recovered *départements* and in t. 1940 started the expulsion of Lorrainers from the Moselle, human was arrested by the gestapo and sent to the reich in ril 1941 for protesting, but he escaped in Aug. 1942 and nt into hiding in France. Again elected deputy of the Moselle Oct. 1945, and later re-elected, he joined the M.R.P. *ouvement Républicain Populaire*). He was minister of finance the cabinets formed by Georges Bidault (June–Nov. 1946) d Paul Ramadier (Jan.–Nov. 1947). On Nov. 22, 1947, he s elected by the national assembly by 412 votes to 184 to m a new government.

### Schwellenbach, Lewis Baxter

(1894– ), U.S. jurist and cabinet member, was born Sept. 20 in Superior, Wis. He was graduated from the University of Washington, Seattle, Wash., in 1917 with an LL.B. degree and served with the U.S. army as a private during World War I. He was admitted to the bar in 1919, became active in Democratic state politics, and in 1934 was elected to the U.S. senate. During his tenure, Sen. Schwellenbach supported the administration in both its domestic and foreign policies. He resigned from the senate in Dec. 1940 to become federal judge of Washington state, eastern district. President Harry S. Truman named him secretary of labour, May 23, 1945, and his appointment was approved by both the A.F. of L. and the C.I.O.

In 1946, Schwellenbach, who was credited with originating the fact-finding procedure for settling labour disputes, was opposed to the Case Strike Control bill. The following year, he was one of the leading advocates of the proposal to outlaw the Communist party, declaring Oct. 14, 1947, that the party merited extinction because it took orders from a foreign government. However, many union leaders felt that he was over-emphasizing the importance of the Communist issue to the detriment of labour in general. Schwellenbach also objected to the ruling of Robert N. Denham, general counsel of the National Labor Relations board, that top union officials must file financial data with the secretary of labour. On Nov. 13, he was named by Pres. Truman to the National Security Resources board.

### Sculpture.

In spite of rising costs and continued shortage of materials, much sculptural work was accomplished in 1947. Two significant developments were increased activity and renewed consideration of the proper role of sculpture in the modern world. Much discussion centred on the question of "living" as opposed to aesthetic memorial projects, and artists and architects met to consider the relationship of sculpture to modern building. A closer collaboration was advocated. New work, meanwhile, was widespread.

**United States.**—Public sculptures completed during 1947 were more numerous than in any year since World War II. A bronze statue of Senator William E. Borah by Bryant Baker was placed in the rotunda of the capitol in Washington, and a granite bust of Franklin D. Roosevelt by Gleb Derujinsky was unveiled in the Roosevelt library at Hyde Park, New York. A bronze bust of Bernard M. Baruch by Rudulph Evans was presented to the National War college in Washington, D.C., along with a bust of Fleet Admiral William F. Halsey by Wheeler Williams to the Naval academy at Annapolis.

Perhaps the outstanding U.S. work of 1947 was the Mormon memorial by Mahonri Young, unveiled at Salt Lake City during the summer in honour of the pioneers of 1847.

New York gave several good sculpture exhibitions, including an exhibition of Ivan Mestrović's work (*see* below). Jo Davidson had a 43-years' retrospective show of portrait busts at the American Academy and National Institute of Arts and Letters; works by William Zorach and Gaston Lachaise were exhibited in one-man shows, and the Metropolitan museum surveyed U.S. sculpture from the 19th century with the collaboration of the Whitney Museum of American Art, thus bringing together two important collections. Frederick D. R. Roth, noted animalier, had a memorial show given by the National academy in February. Younger sculptors who continued their rise in exhibitions were Maria Martins of Brazil and Herbert Ferber.

IVAN MESTROVIC, Yugoslavian sculptor, at work on the "Pieta," a 5½-ton group executed in Carrara marble which was included in a one-man exhibition of his work at the Metropolitan Museum of Art, New York city, during April–May 1947

The principal occasion for constructive discussion of sculpture in relation to modern architecture was a forum held by the Architectural League of New York, in connection with which modern works by Henry Moore, Jacques Lipchitz, Isamu Noguchi, José De Creeft and others were exhibited. The result was a wider recognition of the need for good and appropriate sculpture on buildings or memorials, replete with a sound organic understanding of the scale relationship of sculpture to architecture.

**Great Britain.**—On Oct. 22 King George VI unveiled the statue of his father, King George V, a work in Portland stone by Sir William Reid-Dick, who also completed the model for a memorial statue in London to Franklin D. Roosevelt. Jacob Epstein exhibited at the Leicester galleries earlier in the year, showing portraits of Winston Churchill and Jawaharlal Nehru and some lively small bronzes. J. Estcourt Clack was awarded "The Best Work of the Year" medal by the Royal Society of British Sculptors for "Daphne," a figure in yew. Other well known English sculptors were at work on large civic commissions—Charles Wheeler, McMillan and A. Hardiman.

**Continental Europe.**—Iva Mestrović, one of the greate European sculptors, held h first one-man exhibition sin World War II at the Metropo tan museum, New York. Aft escaping from imprisonment Zagreb during the war, worked in Switzerland, then 1946–47 in Rome. Interestin work was done in Italy by Ma ino Mazzacurati, Pericle Fa zini and Leoncillo Leonardi. Norway, younger sculptors i cluding Gustav Janson and J seph Grimeland came to th fore, while Anna Grimald was commissioned for work the new Oslo town hall. Th standard of sculpture in Swede was high, and among Danis sculptors Mogens Boggild, do ing work for the new Rad House, and Jorgen Gudmund sen-Holmgreen, who designed bronze group for the Jutlan town of Horsens were active i 1947. The Netherlands, follow ing the Sculptors' congress i 1946, made its most importan progress since the war.

Of all countries in Europ France still offered the greate encouragement to sculptors the state regularly commi sioned works, and architec were conscious of the value sculpture in their plannin Work in progress or newl completed included a statue Vincent d'Indy by Marcel G mond, a monument by George Salendre to those who died during the liberation in 1944, figure by Henri Laurens commissioned by the state, and "Hom Sapiens" by Ossip Zadkine. An exhibition of French sculptur was held in Prague, ranging from Rodin and Maillol to contem porary sculptors. (*See* also ART EXHIBITIONS.) (C. BU.)

**Secondary Metals.** In connection with the data on secondary recoveries in Table I on pag 663, it should be pointed out that in most cases considerabl proportions of the total recovered comes from fabrication scra accumulated in the course of manufacture of finished products it is only metal brought back into use from old scrap that add to the useful supply of new metal.

Receipts of nonferrous scrap reported by dealers rose fro 1,034,873 short tons in 1945 to 1,053,785 tons in 1946. Ship ments by dealers to consumers increased in about the same pro portion, from 1,015,378 tons to 1,066,995 tons. Dealers' stock were 174,677 tons at the beginning of 1946, were at a low 158,855 tons in March and a high of 185,622 tons in May, en

The scrap supply had been getting shorter from 1942, and in 946 reached about an irreducible minimum for the maintenance f normal production of steel. (G. A. Ro.)

## Secret Service, U.S.

The security work of the secret service, in respect to its protection f the president of the United States and members of his famly, was intensified with the opening of the White House to the ublic on Nov. 14, 1946. Through Oct. 31, 1947, 450,000 visiors were shown through the executive mansion. Considerable lanning was necessary incident to the president's trips to Mexco, South America and Canada. In one case secret service gents in Washington arrested a man who called at the White House and was discovered to be a fugitive from a New Jersey ospital for the insane. He was returned to the institution but scaped on Feb. 24, 1947, and was finally discovered, captured nd recommitted.

The uniformed force of the secret service protected a total of 197,910,704,023.53 in currency and coin, stamps, bonds and ther government securities in transit. Special details safeuarded production of Allied military certificates and of Siamse currency at Boston, Mass., and production of about 15,000,00 armed forces terminal-leave bonds.

Agents captured 13 counterfeit note plants during the fiscal year 1947. Counterfeiting of paper money was pushed toward prewar proportions by an influx of counterfeit U.S. money from Europe. In September U.S. secret service agents and French police captured 11 counterfeiters near Eguilles, France, and seized fake United States money representing $2,145,000, together with the plant where it was made. Of a total of $246,176 in counterfeit bills seized in the United States during the fiscal year, $59,580 represented bills made abroad. Counterfeit coins seized during the year totalled $9,214.79. There were 92 arrests and 69 convictions for violation of the counterfeiting laws, an increase of 84% over 1946.

Forgeries of cheques and savings bonds continued to grow. There were 1,920 persons arrested for cheque forgeries during the fiscal year, with 1,824 convictions. The secret service investigated 28,460 forged treasury cheques representing $2,049,852.98, of which 60.9% were solved cases.

The neglect of owners of savings bonds to safeguard their securities properly was primarily responsible for the increase in bond thefts and forgeries. Agents completed investigations of 15,709 forged bonds with a total maturity value of $1,834,623.19, of which 72% were solved cases. There were 306 arrests and 273 convictions for bond forgery.

Fines in criminal cases aggregated $59,084.71, and jail sentences totalled about 2,558 years. Additional sentences of 2,786 years were suspended or probated. The secret service completed 47,803 criminal cases. Noncriminal cases investigated totalled 2,399, making a total of 50,202 investigations completed for the fiscal year. (J. J. My.)

**Securities:** *see* Business Review; Stocks and Bonds.

## Securities and Exchange Commission.

This bipartisan, quasi-judicial agency of the U.S. government was composed of the following members on Oct. 1, 1947: James J. Caffrey, chairman, and Robert K. McConnaughey, Richard B. McEntire, Edmond M. Hanrahan and Harry A. McDonald, commissioners. With headquarters in Washington, D.C., the commission maintains regional offices in Atlanta, Baltimore, Boston, Chicago, Cleveland, Denver, Fort Worth, New York, San Francisco and Seattle.

**Securities Act of 1933.**—Securities registered with the commission under this act during the 1947 fiscal year aggregated $6,700,000,000, bringing the total of securities registered to $42,400,000,000.

The objective of securities registration (to which requirement there are certain limited exceptions) is to provide accurate and adequate disclosure of significant financial and other information concerning the issuing company and the securities it offers for public sale, so that, in determining whether to purchase the securities, investors may be guided by the factual disclosures thus provided. Assuming proper disclosure, the commission has no power to withhold from public sale securities which may be lacking in merit. Obviously, therefore, registration is not to be construed as an indication that the securities are a riskless medium of investment or speculation. Nor can the accuracy of reported facts be guaranteed; but the penalties which attach to the filing of false information, together with the investors' right to recover losses if falsity is established, are conducive to correct factual disclosures.

The prospectus or selling circular must contain a summary of the pertinent information contained in the registration statement filed with the commission, and must be delivered to purchasers or persons receiving offers through the mails. In SEC-industry conferences commenced during the year, suggested

Securities act amendments were being considered which, among other things, were planned to afford investors a better opportunity to consider the prospectus before being committed to the purchase of registered securities.

The commission's enforcement activities against securities violations are discussed below.

**Securities Exchange Act of 1934.**—Similar factual disclosures, though not so comprehensive, are provided under this act in respect of 2,215 issuing companies having 3,560 security issues listed and registered at the year-end upon the 19 national securities exchanges. Exchange trading during the year aggregated $14,800,000,000, most of which involved the 3,560 issues. The law also provides for disclosure of pertinent facts in respect of matters of corporate affair upon which proxies are solicited from holders of listed securities. In addition, there are requirements for reporting the stockholdings and transactions of "insiders," and provisions permitting recovery by the corporation of their short-term trading profits, which tend to curb misuse of inside information.

Provisions of the act and regulations of the commission thereunder prescribe certain minimum standards of business conduct in the securities markets, both exchange and over-the-counter, which operate to establish just and equitable principles of trade and to curb manipulation, misrepresentation and other abusive practices. These regulations, designed to protect the investing public against such practices, are implemented by the commission's surveillance of securities trading practices, its investigation of complaints and other evidences of malpractices, and its enforcement of statutory penalties against fraudulent operators. The law requires as an incident to the commission's powers of surveillance that over-the-counter brokers and dealers be registered. They numbered 4,085 at the year-end. Denial or revocation of complaints and other evidences of malpractices, and its membership in an exchange or the registered association of over-the-counter brokers and dealers, which operates as a bar to the conduct of a securities business in interstate commerce, may be ordered by the commission if, after hearing, the securities laws are found to have been violated. Any such order is subject to review by U.S. circuit courts of appeal. Persons or firms against whom such action had been taken numbered 312 as of June 30, 1947. Other sanctions include civil injunction actions and criminal prosecutions, discussed below.

**Public Utility Holding Company Act of 1935.**—This regulatory measure, applicable to holding company systems of electric and gas utility companies, requires various readjustments by system companies to correct the incongruous results of past malpractices and abuses which were declared by congress to be inimical to the interests of investors, consumers and the public, and which gave rise to enactment of the law. The act specifies that holding company systems shall be confined in their operations to economically integrated and co-ordinated utility properties (including under certain conditions incidental systems and businesses); that over-capitalized and complex systems and corporate structures be simplified; and that voting power among security holders be redistributed on a fair and equitable basis. It also provides for the regulation of the financial and related practices of system companies in order to avoid the recurrence of past abuses.

Approval during the fiscal year of nine additional plans for compliance with the integration and simplification requirements of the act evidenced steady and continued progress in carrying out those objectives. Numerous other cases of a similar nature were carried to advanced stages. At the year-end, in excess of $8,000,000,000 of properties whose control by particular holding companies was proscribed by the act had been eliminated from their systems, and an additional $2,500,000,000 was the subject of orders requiring divestment. Comparable achievements were reflected in the field of corporate simplification and equitable redistribution of voting power among security holders. The issuance and sale of securities in the aggregate amount of $10,800,000,000 had been passed upon by the commission as meeting the standards prescribed in the act by congress.

**Other Acts.**—During the fiscal year, indentures covering $2,600,000,000 of debt securities were qualified as meeting the prescribed standards of the Trust Indenture Act of 1939, bringing the total to $11,800,000,000. At the year-end, 352 investment companies with assets approximating $3,500,000,000 were registered under the Investment Company Act of 1940, which prescribes standards for the conduct of their businesses. Under the Investment Advisers Act of 1940, there were registered 952 firms and persons engaged in the business of advising others with respect to their securities transactions. The commission had participated as adviser to federal courts in 269 cases involving the reorganization under chapter X of the Bankruptcy act of 327 debtor corporations.

**Enforcement Activities.**—The commission has the duty to investigate complaints or other evidences of securities violations, and may subpoena witnesses, books and records to develop facts bearing thereon. If apparent violations are thus established, the commission may seek federal court orders of injunction to stop the activities complained of, or may refer the facts to the attorney general for prosecution if fraudulent or willful misconduct is apparent. Persons or firms enjoined to the end of the fiscal year numbered 1,166, while convictions numbered 1,222. (*See* also STOCKS AND BONDS.) (O. L. Ds.)

## Seeing Eye, The.

The Seeing Eye, Inc., was founded as a national philanthropy in 1929. It derives its support from contributions of members, who in 1947 numbered almost 25,000. In 1947, 144 blind men and women left the school with their dog guides after having spent one month learning to use them. Ninety-six of them received their first dogs and 48 their second or third dog. The school continued to supply eligible World War II veterans, blinded in service, with guide dogs without cost to them or to the government. A total of more than 1,400 dogs had been trained for blind people who had learned how to use them at the school. Seeing Eye graduates were in all 48 states, the District of Columbia, Canada, Puerto Rico and Hawaii. They were engaged in more than 100 different occupations. Modern kennels, to which the dogs were moved in 1946, proved efficient and labour-saving, allowing apprentices and instructors more time for training the dogs. The Seeing Eye is located in Morristown, N.J., and has no branches. Henry A. Colgate is president and chairman of the board of trustees. (H. A. CE.)

## Seismology.

Earthquake activity in 1947 was generally of a normal character. Seismological research in the United States received considerable impetus through a co-operative program sponsored by the Research and Development board in Washington, D.C.

The greatest earthquake casualties of the year were reported from the Khurasan province of eastern Iran on Sept. 23, when 5 villages were destroyed and 400 lives were lost. On Nov. 1, 233 persons died in a widespread shock in the San Ramón area of central Peru. Twelve villages were reported levelled in the Isca Sabino and Santa Dello area of southern Italy on May 11 and 12. Shocks of damaging intensity occurred in El Salvador on Jan. 24, Gisborne, New Zealand, on March 26, and central Alaska on Oct. 15. In the U.S. the strongest shocks centred in sparsely settled areas in southern California and southwestern Montana. Many adjoining states felt a slightly damaging shock

inating in southern Michigan, while disturbances of more
l character shook the San Francisco, Milwaukee and St.
is areas.

he Finne Ronne Antarctic expedition established a tem-
ary seismograph station in Palmerland to conduct seismo-
cal and meteorological investigations. Because of continu-
success the navy's project for tracking hurricanes in the
st Indies from seismographic data was extended to the west-
Pacific area. In the U.S. modern instruments were installed
he City college of New York and at the bureau of reclama-
's dam project at Hungry Horse in northwestern Montana.
University of Washington, Seattle, Wash., made plans to
blish three seismological stations in the Puget Sound area
re two strong shocks occurred in 1946.

eismological methods were employed to explore the sub-
anic structure of a portion of the sunken mid-Atlantic ridge.
ilarly the nature of subcontinental structure was further re-
led by the controlled detonation of large quantities of ex-
sives in the Snake River valley of Idaho and in the Helgo-
d blast of April 18.

he application of electronic principles in building visible re-
ding seismographs of high magnification was advanced con-
erably, but such equipment generally required servicing by
electronics expert. (*See* also Coast and Geodetic Survey,
.; Disasters.) (F. Nn.)

## lective Service.

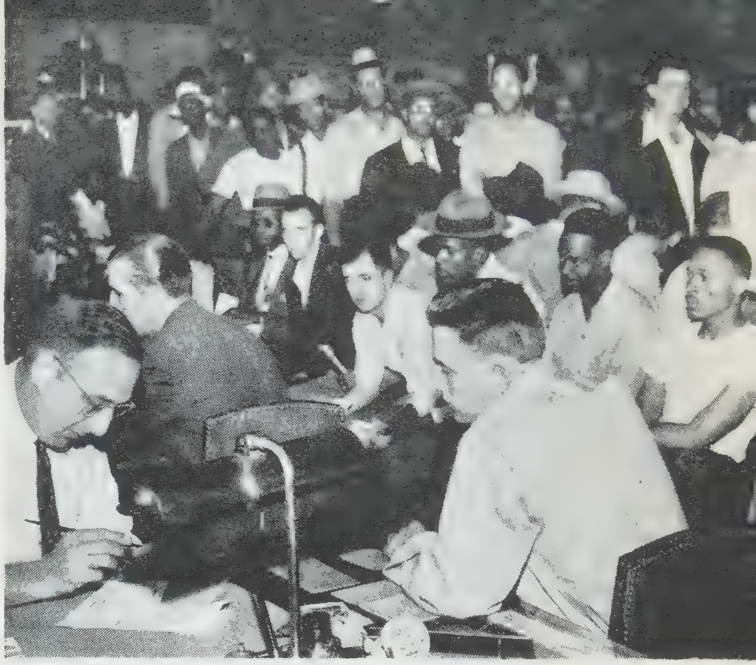
The U.S. Selective Training and Service act of 1940, responsible for the
uction of about 16,000,000 men into the armed forces,
ired at midnight, March 31, 1947, after congress failed to
e action extending the measure. Congress, in permitting the
iration, was following the recommendation of President
rry S. Truman, who declared in his congressional message
March 3 that re-enactment would be requested if sufficient
unteers could not be obtained to meet the needs of national
ense.

On the same day that the act expired, congress enacted and
president signed legislation creating the Office of Selective
rvice Records and providing for the transfer of all property,
ords, as well as personnel, to the new agency. Maj. Gen.
wis B. Hershey was appointed director by the president and
mediately confirmed by congress. Gen. Hershey had long
en identified with Selective Service planning and administra-
n.

Liquidation of the Selective Service system started April 1
d plans were ready to reduce compensated civilian personnel,
ich reached a peak of approximately 25,000 during wartime
d which numbered 7,500 on March 31, to approximately 1,200
Nov. 1, 1947, when liquidation was virtually complete, al-
ough the act set March 31, 1948, as the deadline for the
uidation.

The act provided for federal record depots, and one was es-
blished in each state and territory, New York city and the
strict of Columbia, making a total of 54, to preserve, main-
n and service the Selective Service records. These records
ntained data concerning 44,000,000 men, which, in the words
the senate committee which recommended passage of the act,
re of much value to the several governmental and State
encies who have a legal right to the information."

The veterans personnel division of the Selective Service sys-
n was created by the original act of 1940 to protect the job
hts of registrants inducted for military training and service
d was continued throughout all amendments of the act until
ose functions were delegated to the U.S. department of labour
the 1947 law.



U.S. VETERANS waiting to cash terminal leave bonds at a New York city bank, Sept. 2, 1947, the day on which the bonds became convertible

Two other important sections of the act creating the Office of Selective Service Records provided for: (1) the continuation of the confidential nature of Selective Service records with a provision for penalties for violation of those confidences; (2) authorizing the director to prescribe the necessary rules and regulations to carry out the provisions of the act.

With certain specified exceptions, all information in a registrant's file was ruled to be confidential by regulations issued by the director. The exceptions included: (1) The registrant or any person having written authority from the registrant. (2) The legal representative of a deceased registrant upon presentation of letters testamentary. (3) All personnel of the Office of Selective Service Records while engaged in the administration of the Selective Service Records law. (4) United States attorneys and their duly authorized representatives, including agents of the Federal Bureau of Investigation. (5) Personnel of the counter intelligence corps, United States army, but only when proper identification and credentials are presented. (6) Such other agency, official or employee, or class or group of officials or employees, of the United States or any state or subdivision thereof, but only when and to the extent authorized in writing by the director, or when listed by the director in a list of federal officials authorized to obtain information.

The training division of the Office of Selective Service Records is charged with the execution of that part of the law which requires the preservation of the knowledge and methods of Selective Service.

The degree of success achieved by Selective Service in World War II is related closely to the planning and training accomplished in the years between World Wars I and II. Where the planning and training were good, the operation was good. In fields where problems were not foreseen, difficulties arose, with serious effects upon operations, because benefit of planning was absent.

The objective of the training division is to train members of Selective Service sections of state national guard staffs, reserve officers of the several components of the armed forces, and others who may participate, in the principles and methods of use of manpower in national emergencies. (L. B. H.)

**Great Britain.**—Final demobilization of the vast British armies of World War II took place in 1947. By the end of 1946 approximately 4,300,000 men and women had already been released. The process was continued in 1947, and by Jan. 1948 virtually all who served in the war and had not volunteered for further service had returned to civil life.

In the king's speech at the opening of the parliamentary session on Nov. 12, 1946, it was announced that national service would be formally introduced for the postwar armed forces, instead of being as before a legacy of the wartime regulations and organization. A territorial army on a new pattern came into being on Jan. 1, 1947. It was to be composed in part of volunteers, for whom recruiting would begin in 1947, and in part of conscripts, denominated "national service men," who would pass into its ranks from the regular forces after serving in them for a period of 18 months. The same regulations were to apply to the reserve services of the royal navy and royal air force. Thus the whole of the country's manhood would serve with the regular forces for 18 months and then be liable to 5½ years' compulsory part-time service in the reserves. The normal calling-up age was to be 18 years, but provision was made in certain circumstances for calling up to take place at the age of 17½; for young men taking up professions such as those of doctor and dentist, it could be deferred until the age of 25. Underground miners were not subject to the call up for service, and no woman would be compulsorily enrolled in the women's services, although these were to be maintained on a small scale. The peacetime service of 18 months was to come into operation in 1949, but as the first of the national service men would not have passed through it until 1950, no conscript element would reach the territorial army and the equivalent naval and air force services until that year.

When, however, the National Service bill came up for its second reading in March, it was strongly opposed by a section of the government's supporters. Recorded against it were 87 votes. Before the adjournment of the house of commons for Easter, a government amendment was put down to reduce the period of 18 months' compulsory service to one year. This was carried in May, but the incident was a blow to the government's prestige, especially to that of the new minister of defense, A. V. Alexander, who, having argued at length that 18 months was necessary, had now to show that one year would suffice.

None of the changes outlined above exercised any effect upon the strength of the armed forces in 1947. Changes were, however, introduced in another way. It had been laid down in the demobilization scheme that the total strength of the armed forces would be reduced to 1,087,000 by March 1948. On Aug. 6, 1947, in reviewing measures to meet the economic crisis, the prime minister announced that demobilization was being accelerated so as to reduce this number to 1,007,000. Finally, on Oct. 21 he stated that 150,000 more were to be hastened out of the services, bringing the figure down to 937,000. This rush out of the services brought in its train dangerous results which caused widespread anxiety, especially with regard to the navy. The home fleet was reduced to a very low ebb late in the year in order to supply crews for ships on distant stations. It was explained, however, that this dislocation would be but temporary.

The handicaps to efficiency produced by the legislation and decisions of the year did not seem to affect the strength of the armed forces, which continued high. The difficulty lay in the fact that one year's service was insufficient to train men for the more skilled trades, certainly to get any value from them in those trades. This deficiency would have to be met by voluntary recruitment for longer periods, and so far voluntary recruitment, while substantial, had not been big enough to fill the gap.

(C. B. F.)

## Selenium.

Production of selenium in the United States declined from 542,099 lb. in 1945 to 291,103 lb. in 1946, because of curtailed operations in the copper refineries which recover it as a byproduct. In Canada output increased from 397,187 lb. in 1945 to 521,867 lb. in 1946, dropping back to 375,000 lb. in 1947. (G. A. Ro.)

## Seventh-day Adventists.

The year 1947 was one of reorganization and rehabilitation for this religious body so far as its overseas activities were concerned. Before World War II ended several million dollars had been raised by the North American members for restoration of physical properties abroad. This money was heavily drawn upon in 1947 for rebuilding hospitals, schools and other institutions in Europe, in the far east and in other war stricken areas. The program was not confined to restoration; new institutions have been either erected or provided for.

In the United States an expansion program was developing. Buildings either under construction or in the blueprint stage totalled in excess of $20,000,000. These were largely schools and medical institutions.

The budget voted for 1948 to all divisions of the world field was $14,497,506. This was about $500,000 more than for 1947, the highest in the history of the church. This sum did not include the funds used to pay salaries of ministers or other denominational employees in the United States and Canada or to maintain church properties in these two countries.

The annual autumn council, held in Grand Rapids, Mich., Nov. 11–20, voted among other matters, the following: to reallocate and to consolidate certain publications, with a view to efficiency and economy of production and circulation; to create an international temperance association; to launch a temperance journal for the United States and Canada; to present to a select list of public and institutional libraries certain books dealing with the history and beliefs of the church; to raise the mission offering goal for each member in America from 60 to 70 cents per week per member; to launch a much enlarged evangelistic program, particularly in the major cities of America.

The "Voice of Prophecy" radio network program conducted by the church made large growth overseas. To the two stations operating in China, five more were added. Beginning in 1948 there were to be European broadcasts in French, Italian, Danish and German.

In September a Youth's congress was held in San Francisco, Calif., to which several thousand youths from all parts of the United States, Canada and near-by islands came.

On Sept. 30, 1947, membership in the U.S. and Canada was 226,285; overseas, 379,847; grand total, 606,132. Church receipts in U.S. and Canada for 1947 were in excess of $29,000,000, or a per capita gift of $126.91. This total was apart from famine relief offerings. Enrolment in denominational schools in U.S. and Canada, as of Sept. 30, 1947, was in excess of 40,000. (*See* also CHURCH MEMBERSHIP.)

## Sheep.

During 1947 the U.S. sheep industry continued the decline it had experienced since 1942, at about the same rate. The estimated number was 38,571,000 head on farms Jan. 1, 1947, compared with 42,436,000 a year earlier and an average of 51,909,000 head during the decade 1936–45. The number of stock sheep in Jan. 1947, 26,100,000 head, was the smallest since the beginning of record in 1867. There had been a significant decrease in the number of farms keeping sheep, about 22% or 128,000 farms, between 1940 and 1945.

As a whole the industry was down to the level of 1923, when numbers had decreased following World War I. The decline was greatest in the north Atlantic states, Ohio and West Virginia; increases were reported in Missouri, Kentucky and Texas, while smaller increases were reported for the mountain states and California. The competition of cattle for pasturage forced sheep off the ranges; sheep raising had competed best when prices were relatively low for both cattle and sheep. The loss of competent herders during World War II started the liquidation.

The 1947 lamb crop of 22,400,000 head was the smallest in 22 years and 2,300,000 less than the 1946 crop. Heavy marketing of ewes of breeding age presaged further declines in the number of lambs.

The number of sheep and lambs in feed lots during the winter of 1946–47 was estimated at 6,029,000 head, compared with [illegible],837,000 head a year earlier. Because of the smaller feeding operations and the smaller lamb crop, the slaughter of lambs throughout 1947 ranged below 1946 and the ten-year average.

Prices to producers in Jan. 1947, averaged $7.63 per cwt. for sheep and $19 per cwt. for lambs. By June sheep prices had advanced to $8.40 and lambs to $21.10, a level that continued to December. These prices were about three times the prewar average of 1935–39.

The price of wool (*q.v.*) was steady at about 40 cents per pound through 1947. Large stocks accumulated during World War II were being sold slowly.

World sheep and wool production was beginning to decline in 1947 in several countries other than the U.S. Sheep numbers in the United Kingdom dropped 17% below 1946. Canada also reported fewer head. Australia and New Zealand, however, were holding to the high record numbers. Raising in South Africa suffered from droughts but was expected to recover rapidly. Sheep numbers in Argentina and other South American countries also declined. (*See* also LIVESTOCK; MEAT; WOOL.)

(J. C. Ms.)

## Shinwell, Emanuel

(1884– ), British politician, was born in London on Oct. 18. From 1922–24 and again from 1928–31 he represented Linlithgow in the house of commons, and was financial secretary to the war office in 1929–30. From 1935 he represented the Seaham division of Durham, winning his seat from Ramsay MacDonald by one of the largest Labour majorities of the election held that year.

When the Labour party came into power in 1945 he was appointed minister of fuel and power with a seat in the cabinet; earlier in his career, in 1924 and 1930–31, he had been parliamentary secretary to the department of mines. During his appointment the nationalization of coal mines, of which he was an ardent advocate, was carried through. In Oct. 1947 he became secretary of state for war; his place as minister of fuel and power was taken by Hugh Gaitskell. At the Labour party conference held in Margate in May, he was elected chairman of the party in succession to Philip Noel-Baker (*q.v.*).

## Shipbuilding.

The world tonnage of merchant ships of 1,000 gross tons or more, as of June 30, 1947, was distributed as follows:

| | Number of vessels | Gross tonnage | | Number of vessels | Gross tonnage |
|---|---|---|---|---|---|
| United States . . | 4,202 | 30,901,400 | Italy . . . . . . | 237 | 1,401,400 |
| United Kingdom . | 2,464 | 15,176,000 | Russia . . . . . | 417 | 1,306,300 |
| Norway . . . . | 699 | 3,435,300 | Greece . . . . . | 232 | 1,236,800 |
| Netherlands . . . | 393 | 2,224,400 | Other countries . . | 2,557 | 9,251,700 |
| France . . . . . | 352 | 1,963,500 | | | |
| Panamá . . . . | 337 | 1,954,900 | Total . . . . . | 12,370 | 70,420,800 |
| Sweden . . . . . | 480 | 1,569,100 | | | |

The total of 70,420,800 gross tons of vessels in the world fleet on June 30, 1947, may be compared with 58,270,374 gross tons on Sept. 1, 1939.

For the quarter ended Sept. 30, 1947, Lloyd's Register of Shipping reported 1,202 merchant vessels of 3,968,893 gross tons under construction in the world, of which only 55 of 177,669 gross tons were under construction in the United States. On Jan. 1, 1947, there were 63 seagoing merchant vessels of 395,000 gross tons under construction in the United States of which 30 vessels were for foreign account. During the calendar year 1947, 12 vessels and dredges were contracted for totalling 53,700 gross tons. By Dec. 31, 1947, the total number under contract had been reduced to 28 totalling 158,300 gross tons. These figures were in addition to miscellaneous small craft consisting of car floats, barges, tugs and fishing vessels which did not contribute greatly to the shipbuilding industry as a whole.

Ship repair yards were reasonably active during the calendar year 1947, largely because of numerous reconversion contracts applicable to wartime ships. This work was expected to decline during the first half of 1948 and virtually to be completed by the middle of 1948.

The number of vessels in the reserve fleets of the maritime commission declined during the middle of 1947, partly because of the withdrawal of tankers for service and the sale of ships, but it again increased during the latter part of the year as a result of the decline in the volume of relief cargoes as well as in the rates appertaining thereto. Many of the emergency types of ships which had been under charter were returned to the maritime commission for this reason.

A substantial number of damaged vessels was still being sold for scrapping, thus eliminating such vessels from further consideration.

The industry passed through a disastrous strike which affected the majority of the yards from June to September. Employment in private shipyards declined from approximately 152,900 in Jan. 1947 to 98,300 in Oct. 1947. The average hourly earnings increased from $1.273 for Jan. 1946 to $1.462 for Sept. 1947.

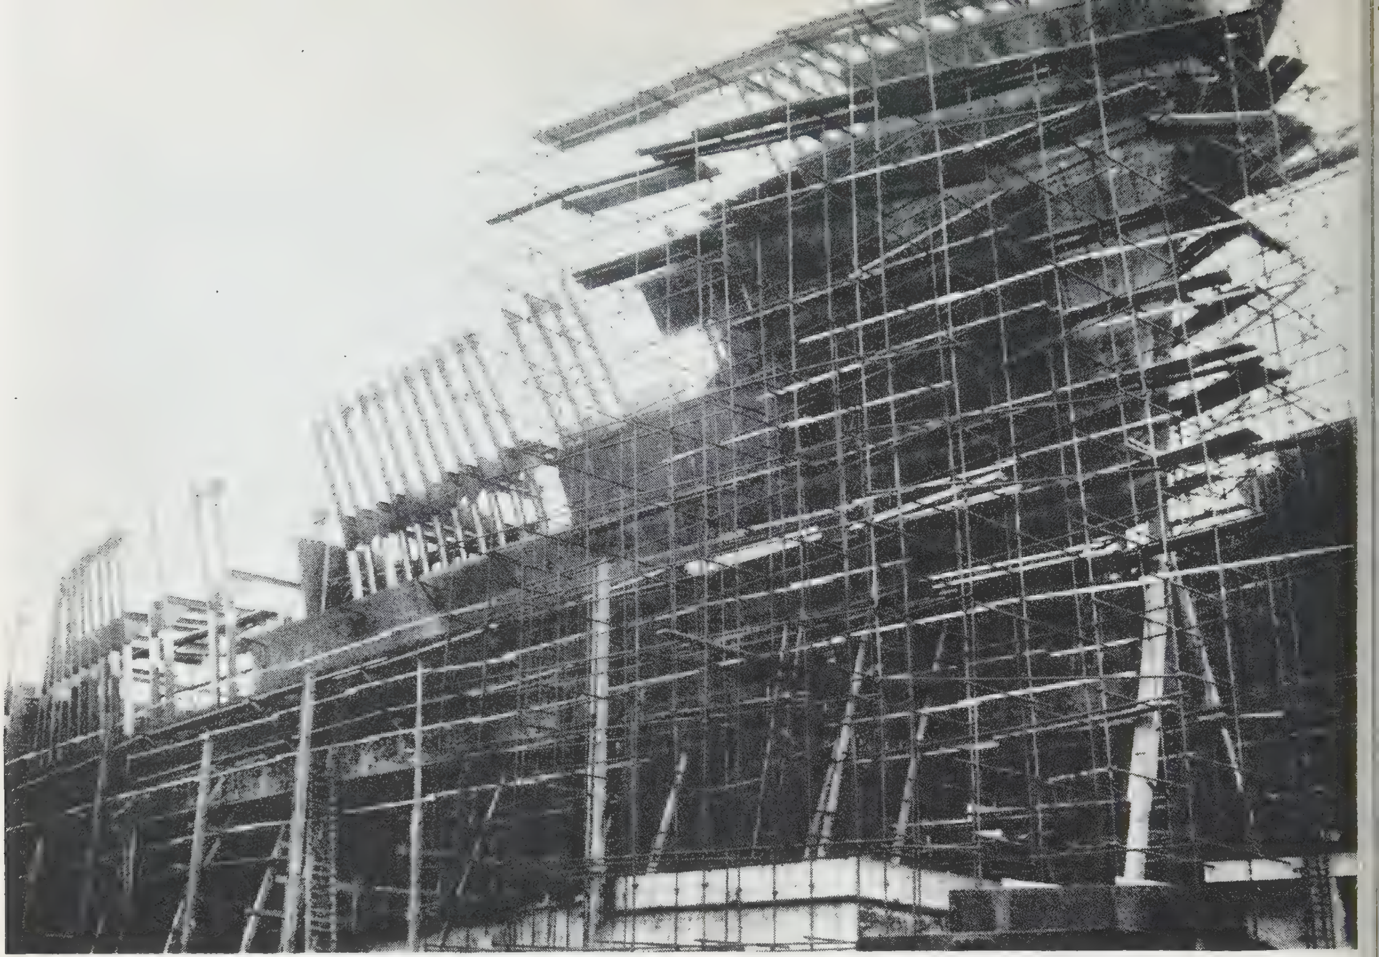
The outlook for the industry, as of Jan. 1, 1948, was not bright. Although the president's committee on the merchant marine, appointed in March 1947, had made its report and recommendations to the president, endorsing the construction of a group of passenger-carrying vessels as well as other tonnage, no definite action had been taken to carry out any of these recommendations. (*See* also SHIPPING, MERCHANT MARINE.)

(H. G. S.)

**Other Countries.**—In practically every European country the year 1947 saw the shipbuilding industry employed to the limit of its ability, although in many cases that was greatly reduced by World War II. Every effort was made to restore the facilities but the task was a heavy one and the result varied.

In Great Britain and Northern Ireland the damage done was not to be compared with that in some other belligerent countries and at the beginning of the year the yards had 454 ships of 1,937,062 gross tons under construction, 121 of these, of 478,124 gross tons, being on foreign account. The great majority of the ships building for British owners were liners or other special types; few tramps had been ordered for fear of the effects of the sale of the British and U.S. government fleets and the uncertain prospects of the tramping business. Because of delayed deliveries, the official returns of ships under construction tended to increase while the number laid down declined.

As in the countries of continental Europe, opportunity was taken of delayed maintenance and war-damage repairs to modernize the layout and improve the equipment of many British yards; frequently, a reduction in the number of building slips resulted in greater efficiency and a higher potential speed of working; and facilities were provided for changing methods, especially to increase fabrication and welding.



SCAFFOLDING on a 10,000-ton turbine ship being built in 1947 at the government-owned Tosi yards in Taranto, a shipbuilding centre on the southern coast of Italy

As was inevitable after a war, the industry's principal difficulties in most countries were with labour. As labour accounted for about 75% of the whole cost of a British-built ship, the effect of general unrest and the disorganization in changing over from war to peace was serious. The withdrawal of the Essential Works order made less difference than had been expected and comparatively little directed male labour left the industry, although many women, who had done excellent work in wartime, took the first opportunity of returning to their homes. Some of them returned, particularly for welding work, in the summer.

A great difficulty was the reduction of the week's work from 47 hr. to 44 hr. Assurances were given that it would not affect output and many men loyally co-operated, although there was friction over the demand that it should be worked in five days instead of five-and-a-half. Finally unions and employers agreed that five-and-a-half days should be worked from November to February and five during the remaining months, but it was not always easy to get the agreement honoured.

Changes in shipbuilding methods increased difficulties, causing friction as to which union should cover the new work to which the old rules for the demarcation of labour did not apply. This led to a number of sectional strikes against the advice of the unions.

In most countries it was hard to obtain material; in Britain the trouble increased with the coal shortage, which impeded production. Plastics were increasingly used in place of steel and wood. Subcontractors also found it impossible to make deliveries in the scheduled time—in one case a ship costing £400,000 was held up for some months for 3 essential electric motors whose total cost was less than £100. The result was that numerous ships were launched and then remained for weeks or months in the fitting-out berth; the builders were naturally unable to guarantee a time of delivery, and this caused more than one contract to be cancelled.

The price of new ships rose steadily during the year. It was double the prewar standard for the simplest specifications; for special designs it was much more and British prices per ton were higher than those of any of their European competitors except Belgium. That was considered to be serious, in view of the number of foreign contracts in British yards, for it was fully realized that the business was principally the result of unusual circumstances and that price would be the ruling factor as soon as continental European yards were able to undertake the work and frozen credits in sterling were exhausted. For repair work, which principally affected British owners, the cost was reckoned at about three times the 1938 level and delays were even worse. The government's 1947 target for the completion of 1,250,000 tons, less than the normal capacity of the yards, was not attained.

In most other countries the industry had similar difficulties. Sweden, with modernized yards, was able to quote low prices for excellent ships until most of the firms had three years' work in hand and were suffering from shortage of material. The Norwegian government took steps to develop the shipbuilding industry and made a number of loans for modernization and expansion. The U.S.S.R. vigorously restored the facilities destroyed by the Germans and established new ones, but no details were released.

The Dutch, French and Belgian industries, assisted by their governments, made excellent progress in repairing the damage done, against great obstacles. All new French construction was on government account but in the Netherlands the companies were, as far as possible, allowed to make their own arrangements. The Spanish government's large program made slow progress but the Italian recovery was remarkable, orders being secured from the Argentine, Norway, Sweden, Egypt, Denmark, Turkey, the Netherlands and Rumania. The United States granted Italy credit for a large sum to buy machinery and equipment, but the handicap of restricted steel supplies remained and, s the year progressed, both price and time under construction creased and many contracts had to be modified.

In the British commonwealth conditions during the year aried. In India the establishment of a big shipbuilding industry n both the east and west coasts was part of the new Indian govnment's scheme for shipping expansion; to begin with, a great eal of the machinery would come from Britain. Canadian shipards secured a large number of orders from foreign countries, rincipally for classes of sister ships, but efforts to keep the ustralian industry alive, after it had done good war work, were andicapped by costs which were reckoned to be the highest in e world. (*See* also Business Review.) (F. C. Bo.)

## hipping, Merchant Marine.

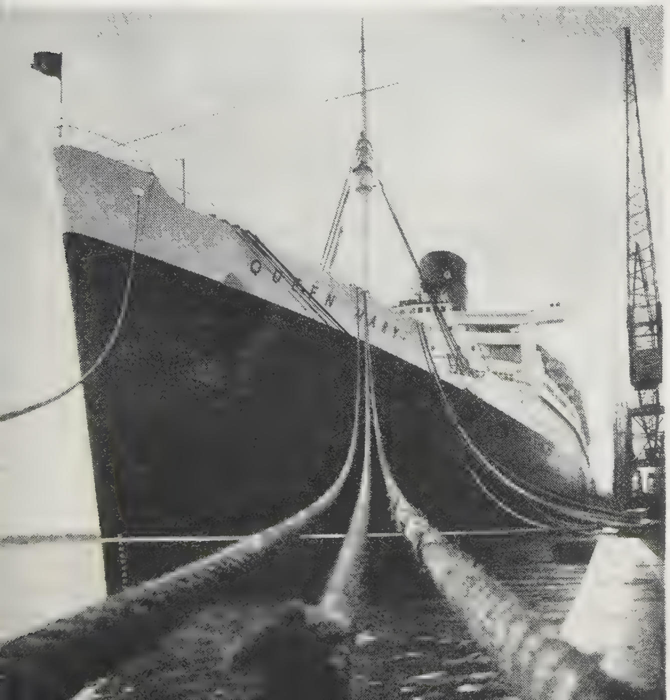
U.S. merchant ships in foreign trade were active uring 1947. Heavy demands for coal and grain and other elief cargoes kept the fleet at a high operating level. Most of his trade was carried on under private operation, for the reease of shipping from wartime government control proceeded apidly. Of the 900 ships under requisition by the government n V-J day, almost all had been returned to their owners by he end of 1947. Of 4,000 ships available for sale under the erchant Ship Sales act of 1946, 1,555 had been sold by Sept. 0, 1947, 481 to 123 operators of the United States and 1,074 o governments and citizens of 30 other nations. The return rom these sales was more than $1,400,000,000. All available overnment-owned tankers had been sold by December in nswer to an unprecedented demand for oil transport.

Ships which had not been sold or which were old, damaged r otherwise undesirable for operation were laid up in reserve eets. On Sept. 30 the number of vessels in these fleets numered 1,237.

In addition to vessels sold, the government chartered many f its ships to United States operators. The number under harter varied from month to month, reaching a peak of 1,510 n June 1947, and declining to 1,082 on Nov. 15, 1947. The overnment itself operated a few vessels under general agency greements to meet essential domestic needs, to provide emerency transportation for displaced persons and to provide aditional tanker service.

A number of factors darkened the shipping outlook toward the end of the year. The percentage of United States cargoes carried in U.S. flag ships had steadily declined from more than 60% early in the year to 50% in the fall. Costs were rising and freight rates were falling. Although the continuing need for European relief promised heavy exports for several years, competition from foreign flag ships was growing; and the need to conserve dollars was leading other nations to increase their efforts to provide their own shipping services.

THE "QUEEN MARY," reconditioned for commercial duty after serving as a roopship in World War II, is shown at an English dock just before her first ostwar voyage as a passenger liner in the summer of 1947



Domestic shipping was in a much less favourable position than overseas shipping during the year. This fleet, important to national defense because of its availability in home waters, was unable to return readily to peacetime service because freight rates, held down by low rates of competing land carriers, could not offset the sharp rise in costs. For a time the government operated ships in domestic trade at a loss in order to provide essential service and relieve the overburdened land carriers. On June 30, 1947, the government withdrew from the last of these services.

Charter rates were lowered for ships in domestic service, and a few operators ventured to return to these trades. At the end of the year the fundamental question of the rail-water rate structure, which had been referred to the Interstate Commerce commission for review, was still unsettled.

Shipbuilding too was at a low level. On Nov. 1, 1947, there were only 32 new oceangoing merchant vessels under construction in U.S. shipyards, and contracts on hand at the end of the year would all be completed within six months. Repair and reconversion work was also rapidly being cleaned up. Shipyards were facing the dispersal of their skilled working forces. Plans for filling in gaps in the fleet and for replacing vessels as they became obsolete were worked out by the maritime commission, the president's advisory committee on the merchant marine and other groups, but lack of materials and appropriations had prevented carrying out these plans up to the year's end.

Operating-differential subsidies, which had been suspended during World War II, were reinstated on Jan. 1, 1947. Studies were being made of shipping and shipbuilding costs in other maritime nations to determine the fair basis for parity payments to U.S. shipbuilders and operators to enable them to meet lower cost competition on shipping routes essential to the U.S. trade and defense. (W. W. Sh.)

**Other Countries.**—Throughout 1947 a shortage of tonnage felt by every country was made worse by the number of ships still in state service, the long delays in delivering new ships and carring out repairs, the time wasted in nearly all ports and by strikes. The turnover from war to peace was exceptionally difficult after World War II and there was little prospect of improvement in the immediate future. In all countries that had been belligerent the state maintained some measure of control.

In this shortage a number of owners, particularly the regular lines, bought or time-chartered Allied war-built ships and those surrendered by the axis that were offered for sale. Most were of types unsuitable for competitive liner work and the prices were generally high, but these ships were necessary to maintain the services. Norway, France and the Netherlands, in particular, had to acquire large tramps for reconstruction though their policy aimed at regular berth work. The Norwegians reestablished several carrying services to earn foreign currency. There was a ready market for secondhand tonnage but national regulations prevented practically all but old ships changing their flags.

By new construction, salvage and purchases from the U.S.A., most European countries and also China considerably increased their fleets, the recovery of Italy being spectacular.

The shortage of passenger tonnage was serious, in view of the desire to revive the European tourist trade and even more because of the immense demand for emigration to various parts of the British commonwealth and to South America. Emigration to the commonwealth was largely carried out under austerity conditions in ships not yet reconditioned after trooping service, and to South America in ships of the Argentine government fleet. Australia, New Zealand, Canada and South Africa in particular wished to receive large numbers of selected settlers when transport would permit it.

On the cargo side numerous difficulties involved heavy expenses and ballast voyages. One of the more serious was the continued stoppage of British coal exports, not only involving a much longer haul to consuming countries but causing a serious shortage of bunkers. Many coal-burners were converted to oil during the year, but in the autumn currency difficulties and a shortage of tankers caused a shortage of oil as well. Restrictions of imports by many countries, often at short notice, also hampered two-way transport.

A number of international conferences were held on various maritime matters but most awaited ratification. Partly as a result of the 28th maritime session (the Seamen's conference) of the International Labour office at Seattle, Wash., in June 1946, Britain, France and other countries made or were making arrangements to "decasualize" the seaman's work; but these arrangements were not all well received by the men whom they were intended to benefit.

China, India and Pakistan had great shipping ambitions which were being carried into effect by strong nationalist policies. In each case the great handicaps were the lack of officers and the age of many of the ships. (F. C. Bo.)

## Shoe Industry.

Consumer resistance to higher prices of shoes, which began to make itself felt at the end of 1946, gained momentum throughout the year 1947, for it was predicated on the vicious cycle of rise in costs from the hide to the finished shoe. Every item of manufacture and store expense from wages to wrapping paper rose to an all-time high.

The inevitable result of the continued rise in prices in the United States was a definite decline in the production and consumption of shoes. Shoe production for the year 1947 was estimated at 461,000,000 pairs—a far cry from the all-time high of 525,000,000 pairs in 1946. This decline in production was accounted for, in part, by curtailed manufacture of lower grade footwear and a shift in demand to the medium and higher grades, as consumers insisted on better quality for their shoe dollars.

Estimated consumption of shoes in 1947 was considerably less than in 1946; approximately 420,000,000 pairs of shoes moved into selling channels compared with a total of 510,800,000 pairs during 1946. Consumption of women's shoes was consistent and favourable, while that of children's and infants' shoes was exceptionally good.

Footwear styles remained somewhat static, in spite of the furore caused by the much publicized "new look." Here was an opportunity to change shoe styles and create a demand for additional and supplementary shoe wardrobes; but the best that was achieved was an imperceptible shift from the comfortable flats, with their open toes or heels (or both) to the higher less stable heels and the closed look.

Leather accounts for approximately 50% of the manufacturers' price of shoes. Throughout the year 1947 the supply of calf leather, particularly in the weights suitable for women's shoes, fell short of the demand. This situation was further aggravated by the fact that imports of calfskins in 1947 were negligible as compared with former years when calfskin supplies in the United States were augmented by imports from central Europe and New Zealand. Conditions of world markets and the short supply of raw materials kept prices at relatively high levels. Argentina proved to be a competitive element, for shipments of hides from that country served to check advancing prices in the United States. For a time, Argentina placed such high prices on its hides that, despite the fact that demand in the United States was in excess of domestic supplies of raw stock, there was little purchase of Argentine hides. It was not until Argentina eased its prices in October that it became profitable for United States tanners to do business with that country.

Hides bought early in November from Argentina had begun to arrive in late December, and the hide market situation in the United States was considerably easier.

There was keen interest in the results of the Reciprocal Trade Agreement conference held in Geneva, Switzerland. Twenty-three nations participated and an agreement, concluded Oct. 30, 1947, set down rules of international trade conduct with regard to tariffs and duties that it was hoped would make for freer access to world markets. General provisions of the

*Preliminary

agreement put forth, for the first time, a generally accepted code of fair treatment in commerce relations. Substantial concessions on certain classifications of footwear and leather were made by United States negotiators, who, in turn, won many concessions that were expected to prove beneficial in the long run. Other countries had been working feverishly to build up their shoe production and were rehabilitating their factories just as quickly as feasible. England was trying desperately to bolster its industry by increasing exports, and expected shipments to the United States to play a major part. Difficulties that were facing the industry were shortage of good quality upper leather and of machinery, but some of these worries were expected to be eased by priorities to producers who participated in the export program. British men's shoes had always had a favourable acceptance in the U.S. and England was anxiously angling for a small fraction of the U.S. men's shoe market. (*See* also LEATHER.) (E. G. AN.)

## Shows, Animal.

**Horses.**—The horse show as a combined sporting and social event showed signs in 1947 of recovering its prewar prominence. Both the large exhibitions in metropolitan centres and the smaller shows in suburban communities reported increased participation and attendance.

The Fourth Annual Chicago Horse show made a record in prizes, with more than 400 horses entered in 119 classes. The New York National broke all previous records for attendance, and entries were above all previous shows. Other outstanding events were the shows at Los Angeles, Calif., San Francisco, Calif., Kansas City, Mo., Wichita, Kan., Houston, Tex., Columbus, O., and the large state fairs.

A notable feature was the growth of specialized shows of relatively new types of horses. The Shelbyville, Tenn., Walking Horse show in September brought together the largest number of this type ever assembled. The Palomino was also recognized as a distinct class of increasing importance. At Springfield, Mo., the National All Golden Horse show drew 223 entries from 18 states and Canada.

Recovery of the hunt clubs from the wartime recess was reported from Virginia, Kentucky and other eastern states. At Shelbyville, Ky., the August show attracted a large entry list of both hunters and gaited animals. The Royal Winter fair at Toronto, Can., was also an important horse show. (J. C. MS.)

**Livestock.**—Livestock shows and fairs recorded one of the most successful years in their history during 1947, when all of the expositions and all but several of the state fairs were again back on prewar schedules and attracted record entries and attendance.

Beginning its fourth decade, the annual National Western Live Stock show was held in Denver, Colo., during January, the first of the great sectional exhibitions on the country's show calendar. One of the few livestock shows of the country that continued throughout World War II, it had become one of the country's largest shows of purebred Hereford cattle. It was also distinguished for its large exhibits of Quarter horses.

Closely following upon the Denver show were two large Texas shows, the Houston Fat Stock show, Jan. 31 to Feb. 9, and the Southwestern Exposition and Fat Stock show at Ft. Worth.

The Ft. Worth show, oldest in the U.S., was one of the nation's strongest exhibitions of purebred Hereford cattle. As at Denver, spectacular rodeos were the chief entertainment feature.

A series of fall shows of national prominence included the American Royal in Kansas City, also one of the country's largest livestock shows. Its exhibitions of purebred Hereford, Aberdeen-Angus and Shorthorn cattle and its horse shows rank among the country's best.

The Pacific International at Portland, Ore., attracted large entries of both beef and dairy breeds.

The Aksarben exposition, a fat stock show, took place in Omaha, Neb., Sept. 27 to Oct. 5; and a new show was introduced in the east in Nov. 1947—the Eastern National Live Stock show at Timmonium, Md.

Two great California shows of the fall season were the Grand National Live Stock exposition in the new Cow palace at San Francisco, and the Great Western Live Stock show, held in Los Angeles.

The largest state fair livestock shows of the country included the Illinois, Iowa, Ohio, Missouri, Wisconsin and Minnesota state fairs in August; and the Indiana, Nebraska, Michigan, Kentucky, Kansas and Oklahoma state fairs in September.

The Wisconsin state fair was distinguished as one of the country's largest dairy cattle shows. A National Hereford show was held in 1947 in connection with the Nebraska state fair, and the National Percheron Horse show was a feature of the Ohio state fair in 1947. A National Barrow show, for all breeds of swine, was held in Austin, Minn., Sept. 18 to 20.

Two major September fairs on opposite coasts were the California state fair at Sacramento and the Eastern States exposition at Springfield, Mass. It was the first revival of the Springfield event since the war.

The continent's largest livestock show in terms of beef cattle breeds, draught and light horses, and fat swine and sheep,—the International Live Stock Exposition and Horse show in Chicago—was held in 1947 from Nov. 29 to Dec. 6. Auction sales of meat animals at the 48th annual International, for the first time exceeded $2,000,000; and the value of all livestock exhibits was estimated at between $15,000,000 and $20,000,000—the highest aggregate worth of farm animals ever assembled. Its eight-day attendance passed the 400,000 mark. Visitors attended from nearly every state and from every province of Canada as well as from several other countries.

The Calgary Exhibition and Stampede, a July fixture in Canada ranking with the dominion's major shows and entertainment events, was held July 7 to 12, 1947, and was followed by livestock exhibitions at Edmonton, Alta., Saskatoon, Sask., and Regina, Sask., the same month.

Restored after a wartime lapse was the great Canadian National exhibition at Toronto, Aug. 22 to Sept. 6, and the Royal Winter fair, also at Toronto, Nov. 18 to 26.

Only one U.S. dairy show of national calibre remained—the National Dairy Cattle congress and National Belgian Horse show, held Sept. 29 to Oct. 5, 1947, at Waterloo, Ia. Top dairy herds from many sections of the country were exhibited. It was also the year's largest showing of Belgian draught horses.

The Perth show and sale in Scotland in February continued as the largest in Britain since the cessation of the century-old Royal Show of England and the Highland of Scotland in 1939. Perth had become distinguished for its exhibitions of purebred Aberdeen-Angus and Shorthorn cattle.

South America's foremost livestock show, the long-established and widely famed Palermo in Buenos Aires, Arg., was held in Aug. 1947. It was reputed to be the world's largest show of Shorthorn cattle and featured to a lesser extent Hereford and Aberdeen-Angus cattle as well as two breeds of dairy cattle—Holstein-Friesians and Guernseys. (W. E. O.)

**Dogs.**—All activities centring around dogs prospered in 1947, especially the showing of purebred animals, of which 112 distinct breeds were now recognized officially.

Bench shows based on type conformation numbered 484 championship or point events; there were also 532 informal or match shows. Obedience trials granting training degrees numbered 197 with 19 additional tracking tests. All these figures were new records, established under the rules supervision of the American Kennel club, New York city.

The Welsh terrier female Champion Twin Ponds Belle led in wins of best-in-show all breeds. Again the largest show was New York city's Westminster Kennel club's, with 2,121 dogs present, won by the boxer, Champion Warlord of Mazelaine. Largest outdoor show, and second largest of all types, was the Morris and Essex, with 2,010 dogs. Third, and largest all-time Pacific coast show, was at Long Beach, Calif., with 1,854 entries.

Approximately 1,500 field trials for various breeds were held during 1947. National springer spaniel field champion was the liver and white Russett of Middlefield; in retrievers (all breeds), the black Labrador, Bracken's Sweep. Major bird dog win was the National Bird Dog championship, at Grand Junction, Tenn., by the pointer Saturn. Approximately 170 beagle championship field trials were held, but no national winner was selected. (W. Ju.)

## Siam (Thailand).

A kingdom of southern Asia between Burma and French Indo-China, extending southward into the Malay peninsula. Area: 198,247 sq.mi.; pop. (census 1937): 14,464,489, (est. March 1940) 15,718,000. Chief towns (pop. 1937): Bangkok (cap. 681,214); Chiengmai (544,001); Khonkaen (473,475); Chiengrai (443,476). Language: Siamese; religion: Buddhism. Ruler: King Phumiphon Aduldet; prime minister: Luang Pibul Songgram.

**History.**—On Jan. 6, 1947, an agreement was signed establishing a commission of six to adjudicate British commonwealth war damage claims against Siam. The commission consisted of one delegate each from Britain, Australia and India, and three from Siam. On May 9 it was announced that Great Britain and Siam had exchanged notes confirming and completing the peace agreement of 1946. These notes dealt with questions of enemy and Allied property and stated that Siam was to hold all Japanese and other enemy property in its territory at the disposal of the Allies, and that it would restore property, rights and interests of those countries with which it had been at war. Agreement was reached in October on the sum of £1,250,000 to be paid as compensation for losses to British commonwealth tin-mining interests during World War II.

The foreign minister Nai Direk Chainam resigned on Feb. 5, and in face of persistent criticism and charges of incompetence from the opposition, the cabinet resigned on May 28. The prime minister, Thawan Thamrong Nawasawat, formed a new cabinet which took office on June 2, and on June 6 the government received a vote of confidence. On Nov. 9 Siamese army units under Marshal Luang Pibul Songgram seized government control, ousting the Popular party. Pibul Songgram, who had been in power during the Japanese occupation, represented the "Might is Right" party; his most important change in the constitution was the setting up of an advisory council, invested with virtually all royal powers in place of a regency, to guide the 19-year-old king.

Considerable effort was made during the year to increase rice production, exports of which were estimated at about 500,000 short tons. The government inaugurated price control at the beginning of the year and, as merchants were not turning over the stocks to the government purchasing bureau, on Aug. 10 the government ordered the compulsory sale of rice stocks at the controlled price, threatening that after Aug. 18 merchants would be forced to sell at a discount of 20%. By midsummer rice was rationed in 22 of the provinces and there were local shortages.

The development of Malayan nationalist sentiment in the four southern provinces caused some concern in Bangkok. The British and United States legations in Bangkok were elevated to the status of embassies and the Siamese legations in London and Washington were similarly elevated. Diplomatic relations with the U.S.S.R. were resumed on Jan. 5. Siam joined the sterling group on Sept. 17. (J. Ra.)

**Education.**—In 1938–39: government schools 429, scholars 61,297; local public and municipal schools 11,072; scholars 1,484,483; universities 2, students (1937) 11,525.

**Banking and Finance.**—(1942) revenue $77,650,000; expenditure $95,800,000; expenditure, capital (est. 1941) $20,700,000; public debt (March 31, 1940) $25,500,000; notes in circulation (July 31, 1941) $96,000,000; reserves (July 31, 1941), gold $35,850,000; foreign assets (July 31, 1941) $56,100,000; exchange rate (average 1940) 1 baht = 35.15 U.S. cents; (Sept. 1941) 1 baht = 36.97 U.S. cents.

**Trade and Communication.**—Trade with Great Britain (8 months 1947): imports £946,091; exports, £237,935. Foreign trade 1940–41 (merchandise): imports $60,200,000; exports $95,000,000. Communications: roads, state highways completed (1938) 1,815 mi.; railways open to traffic (1940) 1,925 mi.; airways, length of route opened (1940) 536 mi.; motor vehicles licensed (1937–38) 11,439; wireless receiving set licences (1938) 29,834.

**Agriculture and Mineral Production.**—Production (in short tons): rice (1946) 4,045,000; rubber (1946–47) 45,950; tin ore, metal content (export 1940) 19,470; tobacco (1938–39) 9,240; cotton ginned (1940–41) 2,640; maize (1938–39) 6,160.

**Sierra Leone:** *see* British West Africa.

## Silk.

The problem of whether silk would return as one of the substantial textile fibres of the world was undecided in 1947.

The Supreme Commander for the Allied Powers (S.C.A.P.) announced on Dec. 15 that effective Jan. 1, 1948, the U.S. Commercial company, the government agency previously handling the sale of raw silk from the world's largest source, Japan, would be liquidated and the sale handled directly by a New York selling office of S.C.A.P. Concurrently, an announcement was made of raw silk prices effective for the entire year of 1948, representing a decrease of 40% from those prevailing during 1947.

Japanese output of raw silk in 1947 was given as 110,376 bales, or 14,700,000 lb., of which 17,273 bales, or 2,300,000 lb., were exported. The consuming markets were:

| | Bales | Thousands of pounds |
|---|---|---|
| United States | 4,094 | 544.5 |
| Great Britain | 7,260 | 965.6 |
| Australia | 2,654 | 353.0 |
| India | 3,000 | 399.0 |
| Egypt | 50 | 7.0 |
| New Zealand | 215 | 28.6 |

In 1940, the last full prewar year, the U.S. used 35,800,000 lb. of raw silk, or approximately 270,000 bales.

To counteract the relatively poor demand for raw silk, the U.S. military authorities in 1947 started a move toward weaving the silk in Japan and exporting the fabric. During the year, a large quantity of habutai, a native type of thin silk fabric popularly termed "China silk" before World War II, was shipped to the U.S. for use primarily in printed scarfs. So great was the demand that at the close of the year, orders for 7,000,000 yd. had been taken for shipment in the spring of 1948. In addition to the habutai, the agency also offered silk crepes and taffetas, and showed samples of silk brocades, both plain and interspersed with silver and gold threads. A special exhibit in New York, shown by the chief of textile consumer goods in the Economic Scientific section of S.C.A.P. in Tokyo, offered the brocades, embroidered habutai and crepes, as well as hand-printed dress fabrics, at prices ranging between $1.25 and $4.00 a yard, f.o.b. Japan.

In China, once the second largest supplier of raw silk, continued effort was made to encourage the silk industry, but with relatively little effect on world markets. In fact, it was announced at the close of the year that the Chinese government was drafting measures to barter Chinese raw silk for foreign rayon, the latter to be manufactured into finished products for re-export.

Italy's silk industry during 1947 was not expected to exceed one-third of prewar figures. Total exports of raw silk from Italy were estimated to be 700,000 kilos for the year (approximately 7,000 bales). In the first nine months, the total sales of raw silk were 511,500 kilos, of which 454,000 kilos were exported. As in Japan, efforts were being directed toward using the raw silk on domestic looms and selling the fabric, both domestically and abroad.

Production of silk fabrics in the U.S., Great Britain and France continued at a slow pace. In the U.S., the total 1947 production was estimated to be not more than 10,000,000 linear yards, including all silk and silk mixtures. In 1946, the total had been 9,300,000 linear yards. In 1939, the total production had been 68,700,000 linear yards, and in 1937, it had been 142,-00,000 sq.yd.

In Frànce, traditional home of the fine silk fabric, a demand existed, but manufacturers in Lyons contended that it was impossible to observe government restrictions on the use of raw silk bought with U.S. dollars and meet buyers' price limits. For every dollar's worth of raw silk purchased, the French government was said to insist that two dollars' worth of fabric be exported to offset the dollar expenditures, with the result that foreign buyers would not pay the prices asked for the fabric. Hope was expressed, at the close of 1947, that the coming year would see some lifting of these restrictions, as well as a lower price on Japanese raw silk, in order to permit development of the home market on the continent for silk fabrics. This market was thought to be more receptive to relatively high-priced fabrics than the U.S., where production of moderately priced synthetic fabrics dictated the price level. While the amounts of fabric consumed in Europe would be relatively low, compared with consumption in the U.S., the scarcity of raw materials, including rayon, would give silk a better chance there than in the more plentifully supplied American market. (*See* also Rayon and Other Synthetic Fibres; Textile Industry.)

(I. L. Bl.)

## Silver.

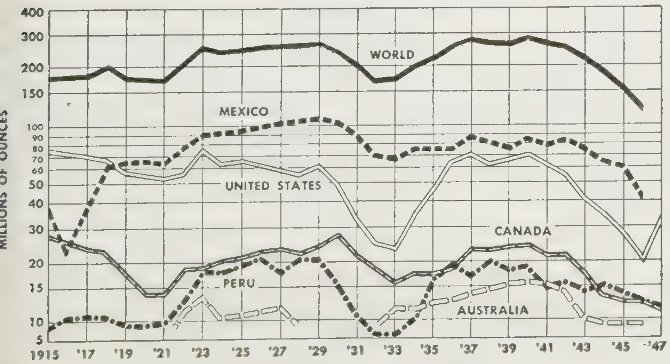
The silver output of the leading producing countries and the estimated world totals are shown in Table I.

The output of the U.S.S.R. was the only really important one that was not known, but that country, along with the large number of minor producers, accounts for about 15% of the total.

**United States.**—The salient features of the silver industry in the United States are shown in Table II.

Mine output dropped from 29,024,197 oz. in 1945 to 22,914,604 oz. in 1946, 70% less than the 1940 high. The 1946 drop was largely the result of strikes in base metal smelters which were large producers of silver.

The production rate improved in 1947 to 27,781,594 oz. through October, which was equivalent to a rate of 33,400,000 oz., and approached the 1944 level. All of the monthly production totals were more than the 1945 average rate, and three of them exceeded the 1944 rate.



SILVER PRODUCTION of the major producing countries and of the world, as compiled by *The Mineral Industry*

Table I.—*World Silver Production, 1941-46*

(In millions of fine ounces)

| Net consumption . . . . . . . | 101,399 | 118,000 | 120,100 | 126,300 | 87,000 |

**Canada.**—Primary production declined from 12,942,906 oz. in 1945 to 12,544,100 oz. in 1946, only 3% less than in 1945, but 47% less than the 1940 high. The decline continued in 1947, the output of the first three-quarters being 8,594,371 oz., 13% less than the same period of 1946. (*See* also Mineral and Metal Production and Prices.) (G. A. Ro.)

**Singapore:** *see* Malayan Union and Singapore.

## Sinkiang

(Chinese Turkestan). Largest and farthest inland province of China, bounded north by the Mongolian republic; east by China; south by Tibet and India; west by Afghanistan and by the Tajik, Kirghiz and Kazakh republics of the U.S.S.R. Area (1939): 705,952 sq.mi.; pop. (est.): 3,870,954. Capital: Urumchi (Tihwa) (est. pop. 50,000). The two largest towns, Kashgar and Yarkand, with estimated populations of 80,000 and 75,000, are in the south; 84% of the total population is on the western side of the province, adjacent to the U.S.S.R. and separated from China by the major desert expanses. Chinese estimates are that 90% of the population is Turkish-speaking, the settled majority being Uighurs and the nomadic minorities Kazakhs and Kirghiz; the Chinese comprise about 5%, divided between Moslems and non-Moslems, and the remaining 5% include Mongols, Manchus, Tajiks and still smaller minorities. The prevailing religion is Islam; with Lama Buddhism among the Mongols and nominal Confucianism and Taoism among the non-Moslem Chinese. Governor (appointed June 1947): Masud Sabri.

**History.**—Events in Sinkiang in 1947 were marked by contending Chinese and Russian influences and by rivalry between conservative and radical nationalist factions among the non-Chinese subject peoples. The chief issue was between those who were prepared to be content with non-Chinese officials appointed and supervised by the higher Chinese authorities, and those who still demanded that the Chinese accept officials nominated by various self-constituted and pro-Russian bodies among the subject peoples.

In Feb. 1947 there were demonstrations in Tihwa (Urumchi), capital of the province, demanding unity (between the subdivisions of the province), peace (an end to civil war) and equality (between the subject peoples and the Chinese). Martial law was declared and the province became divided between the southern oases dominated by Chinese garrisons and the three northwestern districts of Ining (Ili), T'ach'eng (Chuguchak) and Aherht'ai (Altai), all dominated by insurgents but reflecting different degrees of pro-Russian sentiment and organization, and some degree of friction between settled communities and pastoral nomads.

In May a meeting of people's representatives was scheduled, under Chinese auspices, to implement agreements made in 1946 outlining a compromise structure of government granting increased but not decisive representation to the subject peoples. The more radical and pro-Russian groups, finding themselves in a minority, withdrew. A leader of the nomad Kazakhs, named Usman, then split off from the other insurgent leaders and began marauding operations along the Altai frontier between Sinkiang and Outer Mongolia (Mongolian People's republic), which led to clashes in the summer months between Chinese and Mongol troops at a point called Peitashan (Baitik Bogda).

In June the Chinese appointed as chairman (governor) of the province an Uighur, representative of the largest population group, named Masud Sabri (Masaowute), with Gen. Chang Chih-chung as resident representative of the Chinese higher authority. In July and August there were risings at Turfan and Kashgar, the two largest oases, which were put down. The situation then remained relatively unchanged, but uneasy, until the end of the year, with the insurgents, under a number of Russian-educated leaders, in command of the Ining region, under a regime which intermittently called itself the Eastern Turkestan republic. (O. Le.)

**Skating:** *see* Ice Skating.

**Skiing.** Competitors from Norway, Switzerland and Canada generally dominated United States ski championships in 1947.

Norwegians placed one-two in the national jumping event at Ishpeming, Mich. Arnholdt Kongsgaard won the jumping title with leaps of 239 ft. and 240 ft. His countryman, Ragnar Baklid, was second. Karl Molitor, of Switzerland, scored a triple in the national downhill, slalom and combined at Ogden, Utah.

In other men's national competition, Wendell Broomhall, 27-year-old Rumford, Me., milkman, won the cross-country title and Ralph Townsend, a student at the University of New Hampshire (Durham), captured the national classic combined cross-country and jump.

Rhoda Wurtele, Montreal, Ont., won the national women's downhill and combined championships but gave way to Olivia Ausoni of Switzerland in the national slalom. Eddy Rominger, also of Switzerland, captured the national men's slalom.

As for distance and cross-country skiing, Sweden dominated. Nils Karlsson of Sweden won the European 31-mi. marathon and 11-mi. cross-country events. Sweden's Sven Israelsson won the combined jump and cross-country in the Holmenkollen, Norway, meet. Laurie Huuke, 42-year-old Finn, from Sudsbury, Ont., won the Canadian cross-country.

In sectional jumping events, Arthur Devlin of Lake Placid, N.Y., dominated by annexing the Torger Tokle memorial and the Norge jumps. He set a record leap of 203 ft. at the 41st Norge event—at Fox River Grove, Ill. Erik Lindstrom, four-time Swedish jumping champion, won the Beloit, Wis., meet, while Vincent Kasky of Greenfield, Mass., gained the Roosevelt title.

Lindstrom also won the central U.S. title at St. Paul, Minn.

Led by the Wurtele twins, Canada overshadowed the United States in women's team competition. Rhona Wurtele won the eastern amateur downhill and combined, while her sister Rhoda captured the slalom. Georgette Thiolliere won the European women's title and went on to dominate the Harriman cup trials at Sun Valley, Ida.

As a climax of national ski competition, the U.S. Olympic team was named. Members were: Ralph and Walter Bietila, Sverre Fredheim, Joe Perrault, Arthur Devlin and Gordon Wren. (M. P. W.)

**Skin Diseases:** *see* Dermatology.

**Slate.** Sales of the various forms of slate in the United States were as follows, in thousands of short tons:

| | 1946 | 1945 | 1944 | 1943 | 1942 |
|---|---|---|---|---|---|
| Roofing | 56.2 | 38.2 | 32.8 | 35.4 | 71.4 |
| Millstock | 12.2 | 11.5 | 12.4 | 16.0 | 18.7 |
| Flagstones | 27.9 | 20.0 | 15.8 | 22.0 | 16.9 |
| Total | 96.3 | 69.7 | 61.0 | 73.3 | 107.0 |
| Granules | 513.8 | 374.8 | 309.2 | 292.3 | 356.5 |
| Flour | 149.7 | 107.4 | 107.7 | 103.2 | 127.2 |
| Total | 663.5 | 482.2 | 416.9 | 395.5 | 483.7 |
| Grand total | 759.8 | 551.9 | 477.9 | 468.8 | 590.7 |

The postwar building boom enabled the slate industry to make a new record high in 1946, for the first time after 1924. (G. A. Ro.)

**Slovakia:** *see* Czechoslovakia.

**Smith, Walter Bedell** (1895– ), U.S. Army officer, was born on Oct. 5 in Indianapolis, Ind. After the U.S. entered World War I, he joined the army. He served overseas in 1918 and later returned to Washington for duty in military intelligence. Smith was with the war department general staff (1939–42), was promoted to the rank of brigadier general in 1942 and was made U.S. secretary of the combined chiefs of staff.

During the African invasion, Smith became chief of staff to Gen. Dwight D. Eisenhower and remained with him throughout World War II. In Oct. 1945, he was made a major general (permanent).

On Feb. 14, 1946, Pres. Harry S. Truman named him ambassador to the Soviet Union. In an effort to improve soviet-U.S. relations, Smith urged Foreign Minister Vyacheslav Molotov to give consideration to nine U.S. proposals for cultural exchanges with Russia; the Russians rejected one proposal but failed to answer the eight others.

Smith formally protested against a soviet article criticizing Pres. Truman, declaring Sept. 23, 1947, that the article was a "personal insult" to Truman. Molotov, however, denied that his government had any responsibility for articles appearing in the Russian press, thus rejecting the protest.

**Smith College.** At Smith college for women in Northampton, Mass., a new curriculum, instituting a unified education with stress upon general culture, went into effect in 1947 with the class of 1951. Interdepartmental courses in the social and natural sciences were established and one in the humanities is to follow in 1948.

During 1947 the college had four groups of students studying in other countries: one in France with 34 students, one in Geneva, Switz., with 37 students, one in Mexico with 14 students and one in Italy with 12 students. The exchange of students with the University of Toronto continued. The intensive method of instruction is carried on generally in the language departments.

The graduate school had an enrolment of 147 students. The Smith college school for social work held its ten-week summer session on the campus with an enrolment of 148 students. The Smith college genetics experiment station, under the direction of Dr. Albert Francis Blakeslee, continued in its sixth year. (For statistics of endowment, enrolment, faculty, library volumes, etc., *see* Universities and Colleges.) (E. Low.)

## Smithsonian Institution.

This institution was founded in Washington, D.C., in 1846 through the bequest of James Smithson, an English scientist, "for the increase and diffusion of knowledge among men." The governing body is the board of regents, comprising the vice-president of the United States, the chief justice, three senators, three representatives and six eminent private citizens. The executive officer is the secretary. Dr. Alexander Wetmore was the secretary in 1947. The institution administers ten government bureaus—the National museum, the National Collection of Fine Arts, the Bureau of American Ethnology, the International Exchange service, the National Zoological park, the Astrophysical observatory, the Freer Gallery of Art, the National Gallery of Art (with separate board of trustees), the National Air museum and the Canal Zone biological area. The purposes of the institution are carried out by research, exploration and publication.

With the beginning of the institution's second century came a gradual resumption of its normal activities in research and exploration that during World War II had been largely suspended. The year saw the newly created National Air museum still in the formative stages. Visitors to the Smithsonian group of buildings totalled 2,353,377 for the fiscal year 1947.

The National museum accessioned approximately 757,000 new specimens during 1947—about twice as many as during the previous year—many of these resulting from Smithsonian field expeditions. Anthropological field parties worked in the West Indies, in Guatemala and in the Missouri basin; biological expeditions visited India, Bikini, St. Vincent in the British West Indies, Colombia, Guatemala and Panamá; geological field work was entirely in the United States—in Arkansas, Oklahoma, Texas, New Mexico, Nevada, Utah, Wyoming, Virginia and Tennessee.

The Bureau of American Ethnology conducted an archaeological survey, in co-operation with the National Geographic society, of the Pacific coast of the state of Chiapas, Mexico, locating one site that might prove to contain the earliest remains yet known from southern Mexico and Central America. Another bureau project was a survey of the prehistoric settlement patterns of the Virú valley in northern Peru, as a part of a co-operative study of this area. The Institute of Social Anthropology continued its co-operative work in teaching and field work in Colombia, Mexico and Peru. The river basin surveys, organized as a unit of the bureau in 1945 to locate the archaeological sites that would be flooded by construction of dams by the bureau of reclamation and the army engineers, conducted field work in the Missouri basin, Georgia, Virginia-North Carolina, Texas, California and the Columbia-Snake basin.

The International Exchange service handled during 1947 a total of 703,798 packages of scientific, governmental and literary publications, weighing 773,975 lb. A large proportion of the war accumulation was shipped out during the year, and current consignments were forwarded again to all countries except Rumania.

The Astrophysical observatory continued its intensive study of the solar radiation, establishing a new observing station in Miami, Fla. Measurements of sun and sky radiation at Camp Lee, Va., were continued in connection with war department studies of fabric deterioration. The observatory's division of radiation and organisms concentrated its research activities on studies of photosynthesis and of plant growth and development as influenced by light.

The Smithsonian library accessioned 9,644 volumes, bringing its total holdings to 933,997. The institution issued during the fiscal year 1947 a total of 69 publications in its various series; worthy of special mention are H. Helen and Frances L. Clayton's *World Weather Records, 1931–1940,* Robert Ridgway and Herbert Friedmann's *Birds of North and Middle America* (part 10), Elmer D. Merrill and E. H. Walker's *A Botanical Bibliography of the Islands of the Pacific* and a scholarly *Descriptive and Illustrative Catalog of Chinese Bronzes,* compiled by the staff of the Freer Gallery of Art. (A. Wt.)

## Snyder, John Wesley

(1896– ), U.S. government official, was born June 21 at Jonesboro, Ark. He attended Vanderbilt university, Nashville, Tenn., 1914–15, and in 1917 he joined the army and was promoted to artillery captain. While in France, he met Capt. Harry S. Truman and after the war the two became friends. Following the armistice, Snyder entered the banking profession. Snyder, who held several important posts in government agencies from 1930 to 1943, left the government in early 1943 to return to private banking, but was called back by Pres. Truman in April 1945 to become federal loan administrator. Three months later, he was named director of the Office of War Mobilization and Reconversion and in June 1946, he was appointed secretary of the treasury.

In 1947, Snyder opposed the Knutson tax-reduction proposals, asserting that federal spending could not be lowered enough to permit a "proper" payment on the public debt. His views on the tax question were clarified Oct. 29 when he declared that the administration should not contemplate a tax-reduction program until congress decided how much it would spend under the Marshall plan for European recovery. Although there were earlier reports that Snyder was not in agreement with the Marshall plan, he hastened to deny this publicly June 25.

On Nov. 13, Snyder was appointed by Truman to the National Security Resources board.

## Soap, Perfumery and Cosmetics.

The best estimates within the industry were that total sales of cosmetics and perfumes in the United States during 1947 would run 8%–10% less than the sales during 1946 of approximately $700,000,000. Any such figure would still be far more than the pre-World War II level. However, the producers of men's toiletries, which enjoyed a spectacular increase in volume during the war years, found their business, which had levelled off in 1946, declining in 1947. On the other hand, certain new specialties enjoyed phenomenal growth in 1947. Notable among these were such hair preparations as those for home permanent waving, which it was estimated would total $50,000,000–$60,000,000 for the year, or at least double 1946. Hence, while the over-all decline might prove to be only 8%–10%, the decline in standard, established lines would be greater.

It is especially noteworthy that in a year of generally rising and inflationary prices, producers' prices of such standard items as face powder, lipstick, creams and manicure preparations were in 1947 at the same level that they were 15 years before. No better testimony to the intensely competitive character of these industries could be given; especially since during the same era costs had not stood still. The situation had, in short, nearly arrived at the economists' undesirable and incommensurable goal, where the only profit left was the wages of labour. Despite the fact that sales in 1947 nearly doubled those of 1938, conditions within the industries during 1947 were far from healthy or happy.

Despite continuing shortages and high prices of fats and oils there were no consumer shortages of soaps during 1947, as conditions at the close of 1946 had indicated there might be. Deliveries of soaps other than liquids were reported for the first nine months at more than 2,000,000,000 lb., a figure somewhat higher than for the corresponding period in 1946, although still less than for any other comparable period back to 1938. The fact that other detergents continued to make progress in consumer markets probably had a restraining influence on the price structure.

In France the perfumery industry made little progress. Hopes of invading the American market did not materialize to any serious extent. All materials, domestic as well as imported, continued scarce and at staggeringly high price levels. Natural musk, for example, sold at 11 times the prewar price. By April 1947, 600 of the 2,400 French perfume manufacturers had gone out of business and it was expected that another 600 would shut down by the end of the year.

In Great Britain the mid-year financial crisis combined with already excessive production costs to constrict still further the drive for export trade which had been steadily dwindling despite the fact that the government made an extra inducement for export sales in the form of proportionate additional domestic (*i.e.*, profitable) sales quotas. (H. T.)

**Soapstone:** *see* TALC.

## Soccer.

The Ponta Delgada team of Fall River, Mass., returned soccer supremacy to the east with a double as National Open and Amateur Cup champions. In league competition, the Swedish-Americans of Chicago topped the National circuit in the major division, while Philadelphia won the American league title. The Pittsburgh, Pa., Indians won the North American professional league crown.

The National Junior cup was annexed by the Heidelberg, Pa., Soccer club. Magyars A. C. won in the Los Angeles city league; the Vikings captured the San Francisco cup, and the American A. C. Teutonia of San Francisco won the California state championship.

The English cup went to the Charlton Athletics, while the Liverpool Football club won the English league. The Glasgow Rangers captured the Scottish cup, and the French title went to Lille. (M. P. W.)

## Socialism.

Socialists throughout the world in 1947 continued their work for democratic socialism, as an alternative to capitalism, on the one hand, and to soviet communism, on the other.

The most significant advances toward democratic socialism during the year were made in Great Britain. On Jan. 1, 1947, the coal mines of Britain were transferred to the National Coal board, a public corporation. During the year the government nationalized cable and wireless services and passed acts for the public ownership of the railroads and other forms of inland transportation, and for the public management of the entire electrical power system and of atomic energy activities. It extended controls over the planning of cities, towns, and residential, industrial and agricultural areas, and over the direction of labour to essential industries. It enacted comprehensive social insurance and health service acts, expanded the British educational system and created a ministry of economic affairs, headed by Sir Stafford Cripps, with a view to long-term economy planning.

In Australia during the year, the federal parliament, controlled by labour, passed legislation for the taking over of private trading banks.

In Norway, the socialistic Labour government, as a result of legislation passed in 1946, greatly expanded public operations in the iron, steel, power and aluminum industries, began the construction of whole towns in the devastated Finnmark area, and co-operated with other Scandinavian countries in the formation of a Scandinavian air service.

In Denmark, the Social Democratic party in the Oct. 18 election increased its representation in the lower chamber from 48 to 57 (out of 149), while the Communists lost half of their 18 seats. Folowing the elections, Hans Hedtoft, Social Democrat, was appointed premier, and a Social Democratic cabinet was formed, which for the first time after 1934 included a woman member.

In Sweden, in Feb. 1947 a commission of the Social Democratic government recommended the nationalization of the wholesale trade in petroleum and gasoline through a public corporation in which the state would contribute at least 51% of the shares, the consumers subscribing to the balance.

Among the other European democracies, the socialist movement in France occupied during the year a most strategic position. On Jan. 16, 1947, Vincent Auriol, Socialist, was elected president of France and several days later Paul Ramadier, Socialist, was confirmed as premier, succeeding Léon Blum. Ramadier constituted a coalition cabinet of Socialists, Communists and members of other republican parties, but on May 7 dropped from the cabinet the Communist ministers who disagreed with the government's wage-price policy and were active in fomenting strikes among the workers. In the ensuing Socialist congress in August, the party's executive veered to the left. It urged, among other things, that the Ramadier government adopt a system of state control of distribution and compulsory production of essential commodities as a means of stopping inflation.

Ramadier resigned after the municipal elections of Oct. 19 and 26, and Léon Blum was called upon to form a new government. Both Communists and De Gaullists voted against his proposed cabinet, however, and the motion to confirm was defeated by a vote of 300 to 277. The next day Robert Schuman, Popular Republican leader, was elected premier and formed a cabinet containing Socialists, Popular Republicans and other democratic groups.

During the latter part of the year, Socialists within the government sought to prevent Communist-directed strikes from causing the collapse of the French economy and sowing the seeds of civil war. Within the General Confederation of Labour, Socialists likewise strove to wrest the leadership of the trade unions away from the Communists. The Socialist forces in the confederation in late December finally split from this organization, and under the leadership of Léon Jouhaux, secretary-general of the C.G.T. for more than a generation, formed a non-Communist federation.

In Belgium, during late 1946 and early 1947, Camille Huysmans, Socialist, presided over a coalition cabinet composed of Liberals, Socialists and Communists, a coalition of the so-called "left" parties. In March, the Communists brought about the fall of the Huysmans' government and Paul-Henri Spaak, leading Socialist, succeeded in forming a government of Socialists and Catholics, the first such coalition after the Poullet-Vandervelde government of 1925–26. The new government, which excluded Communists from its membership and which commanded more than three-fourths of the seats of both houses, envisaged placing under state control the *Banque Nationale* and the *Societé Nationale des Crédits à l'Industrie*. It likewise favoured an advanced social policy, including workers' participation in industrial organization.

The coalition government of Catholics, Labourites and nonparty members continued in the adjoining country of the Netherlands during the year.

The fight between Communists and democratic Socialists played a large role throughout the year in the political life of Italy, which the Russian Communists hoped might become a European outpost of communist-dominated countries.

On Jan. 11, 1947, Giuseppe Saragat, Socialist president of the constituent assembly, split away from the Socialist party on the ground that it had become a mere adjunct of the Communist party. Following the split, Saragat and 52 of the 116 Socialist deputies, among others, formed the Italian Socialist Workers party. The division in Socialist ranks precipitated the resignation of the Socialist foreign minister, Pietro Nenni, followed by the reorganization (Feb. 2) of another coalition government.

Criticism of Nenni's leadership continued throughout the year within the party. On Oct. 19, a group of left-wing Socialists, led by Ivan Matteo Lombardo, former general-secretary, maintained that the "Unity of Action Pact" between Communists and Socialists had become a "surreptitious fusion," with the result that even the internal life of the Socialist party had become sterile. Nenni (Nov. 21) was defeated in the central committee in his attempt to get Socialists and Communists to unite in a people's bloc for the next general election, but the final decision as to whether the Socialists should campaign alone was left to the party congress in Jan. 1948.

Communists were excluded from the cabinet by Premier Alcide de Gasperi, Christian Democrat, in his cabinet reorganization of June 1. On Dec. 15, in his fifth cabinet, De Gasperi appointed Saragat and two other right-wing Socialist cabinet members, while continuing to exclude the followers of Nenni and of Palmiro Togliatti, Communist leader.

In Germany, the socialist movement during the year was greatly influenced by the type of control of the occupying forces. In the Russian zone, Socialists continued to be subjected to great pressure to join with the Communists in the Socialist Unity party, and were forbidden to form a Social Democratic party.

In the three other zones, the Social Democratic party, led by Kurt Schumacher and claiming a membership of 850,000 played a significant part in the Germany economy. Outside of the Russian zone, the Social Democrats consistently refused to merge their forces with the Communists and vigorously denounced the Communist suppression of civil rights in the soviet zone.

In Austria, the Social Democratic party continued as the second largest party (with 76 deputies as against 84 for the People's party and 5 for the Communists). Dr. Karl Renner, Socialist, continued as president, while several Socialists served as cabinet members. Both Socialist and People's party refused to give the Communists a larger representation in the government, and opposed many policies of the Russian occupying forces.

In Czechoslovakia, one wing of the Social Democrats during the year objected strongly to the action of the president of the party, former Premier Zdeněk Fierlinger, in concluding a Socialist-Communist unity pact. Their protest led on Nov. 16 at the party congress to the defeat of Fierlinger as party president, and to the election of Bohumil Lauschman, minister of industry, by a vote of 280 to 182.

In other countries of eastern Europe, the Socialists had, under Russian pressure, largely lost their independence of movement; in some countries they had been utterly suppressed. In Poland, they were forced into a bloc of "left-wing parties," which, in January, gained an "overwhelming victory" in an election which western countries declared was far from "free and unfettered." The general secretary of the Socialist party, Joseph Cyrankiewicz, became premier during the year in a government dominated by Communists. The party at its December congress, however, refused the Communist request to merge with them. A considerable number of Socialists belonged to a party to which the government refused legal standing. Many of its members and some of the legal party were arrested for "purge" trials. In Rumania, the Communist government in late November began trial against Titel Petrescu and other leaders of the Social Democratic party on the charge of subversive activity—that of distributing party leaflets without having them censored by the government.

In Asia, during the year, Socialists were most active in Japan and India. In Japan, in the April 25 elections for members of the lower chamber of the diet, the Social Democrats emerged as the largest single party, electing 143 out of 466 members and securing 26.2% of the popular vote. Petsu Katayama, Socialist leader, was appointed premier. During the year Katayama's coalition government presented bills, among others, for the state control of the coal mines and for the breaking up of large Japanese industrial and business concerns.

In India, Prime Minister Jawaharlal Nehru, in mid-December, declared that in the future in the Indian union there would be a large measure of socialism in certain basic and key industries. Private enterprise, he maintained, would be continued and perhaps encouraged, but the main tendency would be toward state ownership and control.

On the American continent the Socialist movement, while exerting a considerable educational force, remained, in most countries, politically weak. Socialist party representatives continued during the year their conversations regarding unity with representatives of the Social Democratic federation. On Oct. 15, the S.D.F., however, rejected the Socialist party request for immediate unity though declaring that it believed that ultimate unity between the Social Democratic federation and the Socialist party was desirable. It recommended the continuance of joint relations and joint undertakings "on a nonelectoral nature for the spreading of the philosophy of social democracy," and, outside of New York, it declared, joint senatorial and congressional campaigns should be undertaken where practicable, "where the voters have no true choice between liberal and reactionary labour and antilabour candidates." In New York state the S.D.F. believed, however, that it should continue to work through the Liberal party. The Socialist party during the year, while continuing to work for a new democratic political alignment, believed that it would best serve democracy and socialism by presenting, with such allies as it might win, its own presidential ticket. At the end of the year it rejected support of the third party of Henry A. Wallace because it believed that movement so dominated by Communists as to jeopardize the rise of a new democratic mass party and a desirable political realignment. It supported the Marshall plan provided that the program should not impose U.S. capitalism or imperialism on Europe.

The Co-operative Commonwealth federation (C.C.F.) of Canada, with its control of Saskatchewan and its 28 representatives in the Canadian parliament, continued vigorous activity during the year, and was the host at Toronto in September at a conference of British Commonwealth Labour parties. In South America, little in the way of an organized Socialist movement was in evidence, although the advocates of socialism were prominent in the governments of Peru and Venezuela.

In the international field, several meetings of Socialists were held in Europe with a view to exploring the possibilities of international co-operation. The final meeting of the year was held in Antwerp, Belgium, in late November and early December. It was attended by about 100 delegates and observers from about a score of countries. Leading French and British Socialists were too occupied at home to attend, and the conference was disappointing to Socialist hopes in its discussions and results.

As many delegates came from eastern European countries in which Socialists were under pressure to collaborate with Communist groups, many of the resolutions passed were of a general nature. The conference, however, approved resolutions appealing for Socialist unity, denouncing Franco Spain, international blocs and foreign intervention in Greece, and mildly approving the Marshall plan and other plans for reconstruction. It admitted representatives of the German Social Democracy as delegates, denied admission to Saragat's party, and classified those sent by the U.S. Socialist party and the Social Democratic federation as observers. Finally, it created a committee for the International Socialist conference, dubbed "Comisco," to distribute information and to call a new conference in the spring of 1948 in Vienna or Rome. **Socialist Soviet Republics:** *see* UNION OF SOVIET SOCIALIST REPUBLICS.

## Social Security.

The task of rebuilding social-security programs went forward during 1947 in the war-torn countries, while other countries in both hemispheres strengthened or extended existing programs or adopted new measures for protecting wage earners and their families against loss of income through the economic hazards of sickness, physical disability, unemployment, old age or death of the breadwinner. At its fourth session, held early in 1947, the Economic and Social Council of the United Nations initiated specific plans for carrying out its responsibilities.

**United States.**—No comprehensive changes were made in the Social Security act during 1947, though several amendments were enacted. One extended through June 1950 the temporary increases in federal grants to states for the three public-assistance programs, originally authorized for the period Oct. 1946 through Dec. 1947. Another continued the contribution rates under old-age and survivors insurance at 1% each for employers and employees during 1948 and 1949, and provided for their increase to $1\frac{1}{2}$% in 1950 and to 2% in 1952.

On Jan. 1, survivor benefits based on combined earnings from both railroad employment and employment covered under the Social Security act became payable. This co-ordination of survivor benefits, authorized by an amendment to the Railroad Retirement act in 1946, substantially increased the protection afforded under both acts to survivors of insured workers. Benefits were also paid throughout 1947, under the 1946 amendments to the Social Security act, to survivors of veterans of World War II dying within three years of their discharge from military service. The first payments under the temporary federal program for reconversion unemployment benefits to seamen whose wartime maritime employment was considered federal employment became payable on July 8 for unemployment occurring on or after that date.

In September the senate finance committee appointed an advisory council of 17 members, representing employers, employees and the general public, to assist the committee in a comprehensive study of the Social Security act and of various proposals for its expansion.

Of the major risks to family security, only unemployment was greatly and immediately affected by the economic situation. In 1947 both production and employment were at unprecedented peacetime levels, and unemployment remained close to the "irreducible" minimum. Yet the volume of claims for unemployment benefits was heavier than would have been anticipated for an economy operating at such levels. There was probably less than the usual volume of normal unemployment caused by seasonal changes, inventory taking and the like. One of the other types of unemployment leading to relatively heavy volume of claims was the unemployment of veterans in the process of adjusting to civilian occupations and a peacetime way of life. There was also a certain amount of unemployment of persons displaced from their jobs by veterans or by younger, more efficient workers. Lastly, considerable unemployment stemmed from sporadic layoffs as one industry after another went through the process of stabilizing its production to a peacetime level and as labour disputes interrupted production and caused shortages of materials and parts that affected other industries.

By compensating part of the wage loss from involuntary unemployment, unemployment insurance tided workers and their families over the periods between jobs and helped maintain the stability of the nation's purchasing power. For other millions of persons who for one reason or another could not avail themselves of job opportunities and whose other income could not maintain them, retirement or survivor benefits, financed by the contributions of wage earners and their employers, provided small but steady monthly payments. For other groups of the population who could not qualify for insurance benefits or whose benefits were too meagre to support them and who were unable to work, public assistance was the main or supplementary source of income. The continued rise in prices during the year, moreover, forced many formerly self-supporting persons to turn to public assistance for supplementation of income.

In addition to the insurance and assistance programs for income maintenance, community health and welfare services also played a vital role in fostering economic as well as social security.

**Social Insurance and Related Programs.**—Most of the U.S. unemployment occurring during 1947 was covered by the state unemployment insurance systems, the federal system for railroad workers or the federal program of readjustment allowances for unemployed veterans. At the end of November 1,225,100 persons insured under these programs were unemployed. Of the $73,330,000 paid in benefits during November, 40% went to unemployed veterans. In Nov. 1946, 56% of the $132,136,000 expended went to veterans.

Monthly benefits under the federal old-age and survivors insurance program of the Social Security act were paid in Nov. 1947 to 1,952,000 beneficiaries, at a monthly rate of $37,712,000. Two-thirds went to retired workers and their aged wives and dependent children; the rest went to the widows, children and parents of deceased insured wage earners.

Monthly retirement, disability and survivor benefits were also paid in November to beneficiaries under the railroad retirement program (280,000) and veterans' programs (3,265,000). The number of railroad beneficiaries was about 48% greater than in Nov. 1946, largely because monthly survivor benefits became payable on Jan. 1. Retirement or disability pensions went to about 120,000 former federal employees under programs administered by the civil service commission and to about 195,000 persons protected by state and local government plans; in addition, survivors of about 35,000 persons were receiving monthly payments under the latter plans.

Aside from the disability payments mentioned, the only other government programs compensating for wage loss from disability were workmen's compensation, in effect in all states but Mississippi, and temporary disability programs in Rhode Island and California for workers covered by the state unemployment insurance law and unemployed because of sickness.

**Assistance and Welfare.**—Despite the record national income in 1947, the average worker could buy less with his earnings because of price increases. One result was a lessening of ability to contribute to the support of needy relatives. This factor, combined with less favourable employment opportunities for workers with only marginal skills, caused a significant increase in the number of applications for old-age assistance, aid to the blind and aid to dependent children, the three public-assistance programs financed jointly by the federal government and the states and localities, under the Social Security act. Additional federal funds made available in 1946 enabled states to increase individual payments and bring them more in line with the rise in living costs, and some states were able to assist needy ersons who previously could not be aided because of limited state and local funds.

In Nov. 1947, about 2,324,000 needy persons aged 65 or more were receiving old-age assistance, at an average payment of $36.91 a month. More than 1,000,000 children in almost 411,000 families were receiving aid to dependent children; the average payment was $62.64 per family and $24.60 per child. The assistance payment to the 63,500 recipients of aid to the blind in the 47 states administering programs under the Social Security act averaged $39.74. These averages, applicable to the country as a whole, masked wide differences in the amounts paid in the various states—differences which reflected both the ability of the state and counties to finance assistance and the standards prevailing in the state. Another factor in state variations was the coverage limitations on federal old-age and survivors insurance. Since coverage of the insurance program was restricted to workers in industry and commerce, the predominantly agricultural states had more assistance recipients in relation to total state population and to insurance beneficiaries than did the industrialized states.

Other needy persons who could not qualify under one of these special assistance programs were cared for by general assistance, financed without federal participation. In November general assistance payments went to 340,000 cases, at an average payment of $41.21 per case.

The aggregate amount expended in the month for assistance in all four programs from all sources—federal, state and local—was $128,700,000.

The rise in costs of goods and services also affected the adequacy of health and welfare services in the country. Among these services were the maternal and child health and child welfare services, financed by federal grants of $22,000,000 under the Social Security act. Of this amount, certain portions of which must be matched by states, $11,000,000 was authorized for maternal and child health services, $7,500,000 for services for crippled children and $3,500,000 for child welfare services. (*See* also LAW; RELIEF.) (A. J. A.)

**Canada.**—The Old Age Pensions act was amended effective May 1, to increase the amount of the pension payable both to aged and to civilian blind persons, to reduce the pensionable age for the blind from 40 years to 21 years and to increase the amount of allowable income a pensioner might have without reducing his pension. The amended act obligated the federal government to pay 75% of the net cost of pensions up to a maximum of $30 per month per pensioner in place of the previous $25 per month and left the provinces free to pay additional amounts over the rate as they saw fit. An unmarried old-age pensioner could have an over-all income, including pension, of $600 per year instead of the former maximum of $425. A married pensioner was allowed $1,080 a year, including pension.

Maximum income for an unmarried blind pensioner was increased from $500 to $720 per year, including pension. Maximum income for a married blind pensioner was increased to $1,200.

On Sept. 30, 1947, pensions were being paid to 215,889 aged persons and 7,476 blind persons.

The Family Allowances act continued without change during 1947, although alterations in the income tax laws resulted in approximately 56,000 additional children being enrolled for family allowances early in the year. Total payments for the calendar year to 1,633,675 families were $261,772,929, with the allowance per child averaging slightly less than $6.

By order-in-council on Dec. 3, to take effect on Jan. 1, 1948, unemployment insurance coverage was extended to include employees paid by the month and earning less than $3,120 per year (the previous figure had been $2,400). The change put monthly paid employees on the same basis as weekly paid employees. Alberta began free medical and hospital care for recipients of old-age, mothers' and blind pensions.

Ontario increased relief to unemployables (estimated total 16,000) throughout the province, bringing them up practically to the same scale as old-age pensioners. Municipalities were authorized a 10% increase in food allowances to such unemployables and their dependents, the province contributing half; and an allowance of $1 a month for "incidentals" (to include tobacco) was also permitted. (C. CY.)

**Great Britain.**—The most important development during 1947 was the introduction of the National Assistance bill in November, which broadly completed the social-security system based on the Beveridge plan. The new scheme of assistance was in two main divisions; financial assistance for all who would be in need, which became the responsibility of the Assistance board (renamed the National Assistance board) applying scales of need under new regulations to be approved by parliament after the bill became law; and greatly improved and extended welfare services which would become the responsibility of the larger local authorities. This scheme finally eliminated what remained of the old poor law, which was replaced by comprehensive assistance services of modern conception.

Any person whose needs were not fully met by national insurance benefits or pension, or who was outside the insurance scheme, would receive monetary assistance from the National Assistance board. Complementary welfare services would be provided by the local authorities, but the National Assistance board would have the responsibility for the social rehabilitation of vagrants.

An important feature of the bill was the provision for aged persons requiring other than monetary assistance. The old system of workhouses or public assistance institutions would disappear and be replaced by small homes established by the welfare authorities. The homes would be for 25 persons to 30 persons, and would provide cooking, laundry and similar services while allowing the maximum of individual privacy. The local authorities would charge for this accommodation with a minimum which old-age pensioners would be able to meet from their pensions, and have a balance of five shillings per week for incidental personal expenses. Those not on full pensions or with no pension would be put in a position to meet the minimum charges by the National Assistance board. Great importance was attached to this departure from the artificial economy of institutional relief, which had long been held to be one of the worst features of the poor law. For the future the aged who needed special care would themselves pay for this and would live as normal members of the community.

It was intended that the new assistance scheme should become operative concurrently with the national insurance scheme in July 1948. Consequently, 1947 was largely a period of preparation, altogether a formidable task; the number of those embraced by the old insurance schemes rose from 21,000,000 in 1939 to 24,000,000 in 1947, and the number of beneficiaries under the contributory pensions scheme from 3,500,000 to about 4,500,000.

Following the arrangements made in 1946 for increased rates of old-age pensions to pensioners retiring from work, the section of the main insurance act, which permitted individual extension of the statutory period of unemployment benefit, was also brought into operation. This arrangement was made to meet circumstances in certain areas where unemployment had been prolonged by the dislocation of industry in the changeover from war to peacetime conditions.

Another important phase in the evolution of social security was a commonwealth conference held in London to consider reciprocal national insurance arrangements between the commonwealth countries. Similar discussions were held in Paris with the French government. (J. McAt.)

**Social Service:** *see* CHILD WELFARE; RELIEF; SOCIAL SECURITY.

## Societies and Associations.

The following is a selected list of U.S. societies and associations, with date of founding, membership, officers and chief activities during 1947. (*See* also the separate articles on AMERICAN LEGION; BOY SCOUTS; RED CROSS; YOUNG MEN'S CHRISTIAN ASSOCIATION; etc.)

**American Academy of Arts and Letters.**—An organization founded in 1904 by the National Institute of Arts and Letters for the furtherance of literature and fine arts in the United States. Membership is limited to 50 persons chosen only from the institute. At a special academy meeting on May 22, 1947, medals were awarded, 15 arts and letters grants of $1,000 each were given to artists, writers and musicians; and new members of both the academy and the institute were inducted. Election of three new members—John Dos Passos, Mahonri M. Young and John Taylor Arms—was announced on Nov. 25. Officers elected for 1948 were: Walter Damrosch, president; James Truslow Adams, chancellor and treasurer; Van Wyck Brooks, secretary. Publications include the *Yearbook* and an art exhibition catalogue. Headquarters: 633 W. 155th St., New York 32, N.Y.

**American Academy of Political and Social Science.**—The academy was founded in 1889 to provide a public forum for discussion of national and world questions through the agency of meetings and publications. Membership in 1947 totalled about 13,000. The organization's 51st annual meeting was addressed by Lord Inverchapel, Britain's ambassador to the U.S. The *Annals* is the academy's bimonthly publication. Officers (1947): Ernest Minor Patterson, president; J. P. Lichtenberger, secretary, and Charles J. Rhoads, treasurer. Headquarters: 3457 Walnut St., Philadelphia 4, Pa.

**American Association for the Advancement of Science.**—A scientific association whose membership in 1947 totalled 32,000. It publishes *Science*, a weekly scientific journal for specialists; *The Scientific Monthly*, a nontechnical, illustrated scientific journal, and (1947) technical symposium volumes on *Dental Caries and Fluorine* and *Approaches to Tumor Chemotherapy*. Officers (1947): president, Harlow Shapley; administrative secretary, Forest Ray Moulton; treasurer, William E. Wrather, and chairman of the executive committee, James B. Conant. Headquarters: 1515 Massachusetts Ave., N.W., Washington 5, D.C.

**American Association of Law Libraries.**—The association, founded in 1906 and incorporated in 1935, has for its objective the fostering of "the development of law libraries in the United States and Canada, through establishing and maintaining standards for libraries and librarians; to publish in its official organs material of professional interest and value." The association in 1947 had 307 regular members, 14 life members and 42 associated members. Publications: *Law Library Journal*, a quarterly, and *Index to Legal Periodicals*, which is issued 11 times yearly with quarterly, annual and triennial cumulations. Officers (1947): president, Laurie H. Riggs; secretary-treasurer, Helen M. S. Helmle of 393 Seventh Ave., Room 1506E, New York city.

**American Bankers Association.**—This national bankers organization, founded in 1875, had a membership in 1947 of more than 15,800 banks, representing more than 96.6% of U.S. banks in number and more than 99% of the entire banking resources of the nation. Its primary objective is "to promote the general welfare and usefulness of banks and financial institutions." Educational activities of the association include the American Institute of Banking for bank personnel and the Graduate School of Banking for bank officers. During the year 80,000 persons held memberships in the A.I.B. and more than 41,000 banking people had enrolled in courses given in many cities. Publication: *Banking*, a magazine. President (1947): Joseph M. Dodge of the Detroit bank, Detroit, Mich. National headquarters: 12 E. 36th St., New York city.

**American Bar Association.**—Founded in 1878 to advance the science of jurisprudence and promote the administration of justice, the society's membership (as of June 30, 1947) was 40,223. The Ross prize of $3,000 went to William Tucker Dean for his essay, "How Can International Legislation Best Be Improved?" The annual medal for conspicuous service to the cause of U.S. jurisprudence was awarded to William L. Ransom. Publications: *The American Bar Association Journal*, a monthly; an annual volume of reports and proceedings and various pamphlets. Officers (1947): Tappan Gregory, president; Joseph D. Stecher, secretary, and Walter M. Bastian, treasurer. Headquarters: 1140 N. Dearborn St., Chicago, Ill.

**American Bible Society.**—Founded in 1816 for the purpose of encouraging a "wider circulation of the Holy Scriptures without note or comment," the society in 1947 had a membership of about 100,000. The society was active in aiding translators of the Bible, and in publishing, distributing and encouraging its use, with special emphasis on supplying Bibles to Germany, Japan, Korea and the Philippines. Publication: *The Bible Society Record*, issued ten times a year. President (1947): Daniel Burke. Headquarters: 450 Park Avenue, New York 22, N.Y.

**American Chemical Society.**—Organized in 1876, the society's objectives are to encourage the advancement of chemistry, to promote research in chemical science and industry and to improve the qualifications and usefulness of chemists. Membership (as of Oct. 1, 1947) was 54,849. Outstanding activities during 1947 were the two annual meetings. The society also participated in several international chemical congresses and contributed $25,000 to the United Nations Educational, Scientific and Cultural organization to assist foreign students of chemistry studying in the U.S. Publications: *Chemical and Engineering News, The Journal of the American Chemical Society, Chemical Abstracts, Industrial and Engineering Chemistry, Analytical Chemistry, The Journal of Physical and Colloid Chemistry, Chemical Reviews, The Journal of Chemical Education, Rubber Chemistry and Technology.* Officers (1947): president, W. Albert Noyes, Jr.; executive secretary, Alden H. Emery; treasurer, Robert T. Baldwin. Headquarters: 1155 16th St., N.W., Washington 6, D.C.

**American College of Dentists.**—The college was founded in 1920 to promote the ideals of the dental profession, advance the standards and efficiency of dentistry, stimulate graduate study and efforts by dentists and improve public understanding and appreciation of oral health service. Membership in 1947 included 1,328 active fellows and 22 honorary fellows. A convocation was held in Boston, Mass., on Aug. 3. *The Journal of the American College of Dentists* is issued quarterly. Officers (1947) were: Dr. L. R. Main, president; Dr. O. W. Brandhorst, secretary; Dr. Harold S. Smith, treasurer. Office of the secretary was at 4952 Maryland Ave., St. Louis, Mo.

**American College of Life Underwriters.**—Incorporated in 1927, the college grew out of the needs for efficient life underwriting. To obtain the C.L.U. designation, candidates must pass five examinations and satisfactorily complete three years of business experience. In 1947 there were 2,999 holders of the C.L.U. designation; another 4,496 held partial credit. Publications: *Annual Announcement; C.L.U. Study Supplements.* Officers (1947): president, S. S. Huebner; chairman of the board, Julian S. Myrick; dean, David McCahan. Headquarters: northeast corner 36th and Walnut streets, Philadelphia 4, Pa.

**American College of Surgeons.**—Founded in 1913, the college has as its objectives the establishment and maintenance of an association of surgeons for the advancement of surgery and the ethical and competent practice of surgical arts. Membership in 1947 totalled 15,600. Publications include *Surgery, Gynecology and Obstetrics* and a quarterly bulletin. Officers for 1947 included: Dr. Arthur W. Allen, president; Dr. Dallas B. Phemister, treasurer; Dr. Paul B. Magnuson, secretary. Headquarters: 40 E. Erie St., Chicago 11, Ill.

**American Economic Association.**—This professional association of economists was founded in 1885 to encourage economic research, publications on economic questions and freedom of economic discussion. It consisted in 1947 of 5,300 members and 2,200 library, corporate and individual subscribers. The program of the annual meeting, held at Chicago, Ill., Dec. 28–31, 1947, was integrated around two problems: competition and monopoly; and the economic and monetary theories of J. M. Keynes. The Francis A. Walker medal was awarded to Wesley C. Mitchell and the J. B. Clark medal to Paul A. Samuelson. Publications: *American Economic Review* (quarterly); *Papers and Proceedings.* Officers (1947): Paul H. Douglas, president; James W. Bell, secretary-treasurer. Headquarters: Northwestern university, Evanston, Ill.

**American Geographical Society of New York.**—This society was founded in 1852 to promote geographical research and exploration and the dissemination of geographical knowledge. In 1947 drafting was completed of the two North American sheets of the *Map of the Americas*, of which the three Latin-American sheets were published in 1942; progress was made on the revision of the 107-sheet *Map of Hispanic America;* a completely revised edition of *Aids to Geographical Research*, by John K. Wright, was published; and the Ronne Antarctic Research expedition was sponsored. Membership in 1947 was 4,476. Publications: *The Geographical Review* (quarterly); *Current Geographical Publications* (monthly); *Monograph Series.* Officers (1947): president, Richard Upjohn Light; director, John K. Wright. Headquarters: Broadway at 156th St., New York city.

**American Historical Association.**—This association was founded in 1884 for the purpose of promoting historical studies, collecting and preserving historical manuscripts and for other activities in the interests of U.S. history and history in the U.S. It was incorporated by act of congress in 1889. The association publishes *The American Historical Review*, a quarterly; an annual report and selected historical monographs. The annual meeting was held in Cleveland, O., Dec. 27–29, 1947. Officers (1947) included: Thomas J. Wertenbaker, Princeton university, president; Guy Stanton Ford, executive secretary; Solon J. Buck, treasurer. Headquarters: Library of Congress Annex, Washington, D.C.

**American Institute for Property and Liability Underwriters, Inc.**—This institution was incorporated in 1942 for the purpose of establishing educational standards for qualified property and casualty underwriters with the view toward their recognition as professional Chartered Property Casualty Underwriters. To attain the C.P.C.U. designation, candidates must pass five examinations and satisfactorily complete three years of business experience. During 1947, 455 candidates took 861 examinations in 38 states; 145 persons held the C.P.C.U. designation. The *Annual Announcement* covered the objectives and activities of the organization. Officers (1947): chairman of the board, S. S. Huebner; president, H. P. Stellwagen; dean, Harry J. Loman. Headquarters: Hamilton court, 39th and Chestnut streets, Philadelphia 4, Pa.

**American Institute of Accountants.**—A national society of certified public accountants, the A.I.A. was founded in 1887 to maintain high standards of education and practice for the profession and to develop the techniques of accounting and auditing to serve the public interest. Its membership in Sept. 1947 was 10,963. During the year, the A.I.A.'s committees continued its work toward improvement in the federal income-tax system. The society also prepared the official examinations for 44 states, the District of Columbia, the four territories and the treasury department. Publications: *The Journal of Accountancy*, a monthly magazine, and *The Certified Public Accountant*, a monthly news bulletin. Officers (1947): president, George D. Bailey of Detroit, Mich.; treasurer, Charles H. Towns of New York city, and secretary, John L. Carey of New York city. Headquarters: 13 E. 41st St., New York city.

**American Institute of Chemical Engineers.**—This organization was founded in 1908 for the advancement of chemical engineering in theory and practice and the maintenance of a high professional standard among its members. Members in 1947 totalled 7,570. Publication: a monthly, *Chemical Engineering Progress.* Officers (1947) included: Charles M. A. Stine, sident; C. R. DeLong, treasurer; Stephen L. Tyler, secretary and execu- e secretary. Headquarters: 50 E. 41st St., New York city.

**American Institute of Electrical Engineers.**—The society, founded in 1884 the advancement of the theory and practice of electrical engineering d allied arts and sciences, totalled 27,490 members as of Aug. 1, 1947. tivities during the year included four national and two district meet- gs and co-operation with other engineering societies in many activities. e institute's sections in 1947 numbered 80 and it had 127 student anches. Publications: *Electrical Engineering*, a monthly, *Transactions* d *Year Book*, both issued annually. Officers (1947): president, B. D. ill of Dallas, Tex., and H. H. Henline, secretary. Headquarters: 33 W. th St., New York 18, N.Y.

**American Institute of Mining and Metallurgical Engineers.**—An organiza- n founded in 1871 to promote the arts and sciences connected with the onomic and scientific search for, production of and use of minerals, in- ding metals, coal, petroleum and other nonmetallic minerals. Mem- rship in 1947 was 17,500. The institute celebrated its 75th anniversary New York city at a three-day meeting. Publications include *Mining d Metallurgy*, a monthly; five volumes of *Transactions* published in 47 and various periodicals. Officers: Clyde Williams, president, and B. Parsons, secretary. Headquarters: 29 W. 39th St., New York 18, Y.

**American Iron and Steel Institute.**—This organization was incorporated 1908 to provide for the mutual exchange of information and experi- ce, to encourage and co-ordinate industry research, compile statistics d promote the use of iron and steel. Membership in 1947 included 109 mpany members, 500 associate members, 1,516 active members, 42 eritus members and 9 honorary members. Outstanding research devel- ments included use of high-pressure blast in blast-furnace operation and e of oxygen in the steel open hearth. Publications: *Steelways*, bi- onthly; *Steel Facts*, bimonthly; *Yearbook* and numerous other works. ficers (1947): president, Walter S. Tower; treasurer, Harold L. Hughes, d secretary, George S. Rose. Headquarters: 350 Fifth Ave., New York y.

**American Law Institute.**—Founded in 1923 to promote clarification and mplification of the law and its better adaptation to social needs, to se- re the better administration of justice and to encourage and carry on holarly and scientific legal work. During 1947 the institute co-operated th the National Conference of Commissioners on Uniform State Laws in e drafting of a uniform commercial code. The institute agreed at its nual meeting to revise some sections of its work, *Restatement of the w.* Membership in 1947 comprised 832 elected members (of which 52 re also ex-officio members) and 249 ex-officio members. Officers (1947): arrison Tweed, president; William Dean Embree, treasurer, and Herbert Goodrich, director. Headquarters: 3400 Chestnut St., Philadelphia 4, Pa.

**American Mathematical Society.**—This society was founded in 1888 for e purpose of encouraging and maintaining an active interest in mathe- atical science. Membership in 1947 was 3,400. Publications: *Bulletin the American Mathematical Society, Transactions of the American athematical Society, Mathematical Reviews, Colloquium Publications* d *Mathematical Surveys.* Officers (1947): president, Einar Hille of ale university; secretary, J. R. Kline, University of Pennsylvania. Head- arters: 531 W. 116th St., New York city.

**American Society of Civil Engineers.**—The society was founded in 1852 r the purpose of advancing the sciences of engineering and architecture. embership, as of Nov. 1947, was 22,060. Professional activities of the ciety were directed through its headquarters, its professional commit- es, technical divisions and student chapters in 125 engineering colleges. blications include *Proceedings* (monthly), *Transactions* (yearly), *Civil gineering* (monthly) and a *Yearbook.* Officers (1947): E. M. Hast- gs, president; William N. Carey, executive secretary. Headquarters: 33 . 39th St., New York 18, N.Y.

**American Society of Mechanical Engineers.**—A national organization whose embership of 23,500 in 1947 was grouped into 20 professional divisions vering all phases of mechanical engineering. The society's work was rried on by its 71 sections in the U.S. and Canada. Student branches ere also maintained in 122 engineering schools. The society held five eetings and completed organization of its Nuclear Energy Application mmittee. Publications: *Mechanical Engineering*, monthly; *Journal of pplied Mechanics*, quarterly; *Transactions*, eight times yearly; *A.S.M.E. echanical Catalog and Directory*, annually. Officers (1947): Eugene W. 'Brien, president; Clarence E. Davies, secretary. Headquarters: 29 W. 9th St., New York city.

**American Society of Tool Engineers.**—An educational body, the society as founded in 1932 to disseminate information regarding and pertinent tool engineering. In 1947 membership was 18,072. Publications during e year were *The Tool Engineer, Tool Engineer's Handbook, Data Sheets* nd various textbooks on tool engineering. Officers (1947): president, . B. Peirce; executive secretary, Harry E. Conard; treasurer, V. H. ricson, and secretary, W. A. Dawson. Headquarters: 1666 Penobscot uilding, Detroit 26, Mich.

**Anti-Saloon League of America.**—Organized in 1895, interdenominational nd nonpartisan in character, this national federation of state temperance rganizations intensified its temperance activities in 1947, with principal mphasis on its youth education program. Other activities consisted of pport of extension of no-licence areas through local option and where cal option was not permitted, the league sought to obtain the right to ch a vote. It supported a program to conserve food through curtailing roduction of alcohol as a means of meeting the world food shortage. It so supported a bill before congress designed to prohibit advertising of coholic beverages. Officers (1947): Bishop Ralph S. Cushman, presi- ent; Laura Lindley, research secretary. Headquarters: 131 B St., S.E., ashington, D.C.

**Brookings Institution.**—A nonprofit organization devoted to research and aining in the field of economics and government, it was founded in 916. The institution is supported by grants from foundations, its own ndowment and income from the sale of publications. Its 1947 publica- ons included: *The Guarantee of Annual Wages* by A. D. H. Kaplan; *The luminum Cartel* by Louis Marlio; *A National Labor Policy* by Harold . Metz and Meyer Jacobstein and a study guide, *Major Problems of nited States Foreign Policy*, prepared by the staff of the International Studies group of the institution. Officers (1947): Harold G. Moulton, president; Henry P. Seidemann, treasurer; Elizabeth H. Wilson, secretary, and Darrell Hevenor Smith, executive manager. Headquarters: 722 Jackson Place, N.W., Washington 6, D.C.

**Buhl Foundation, The.**—Established in 1927, the foundation has granted to existing (or especially established) agencies a total of $5,155,000 for the promotion of nationally significant programs in the Pittsburgh district —in regional economic, historical and social research, in higher education and in research in the natural sciences. The foundation's $1,700,000 Chatham Village, a pioneering demonstration of large-scale planned residential community building for long-term investment, has received international recognition. Foundation assets in 1947 were $12,900,000. Director: Charles F. Lewis. Headquarters: Farmers Bank building, Pittsburgh 22, Pa.

**Carnegie Trusts.**—*Carnegie Corporation of New York*, established in 1911, with an endowment of $135,000,000, makes grants to institutions and agencies whose activities aim at the advancement and diffusion of knowledge among peoples in the U.S. and the British empire. During 1946–47, grants totalling $4,468,047 were appropriated for other Carnegie agencies, colleges and universities and various agencies. The other five separately administered Carnegie organizations in the U.S., founded before the corporation for specific purposes, are:

*Carnegie Institute of Pittsburgh* (1896), comprising a museum of fine arts, a music hall, a museum of natural history and a public library.

*Carnegie Institution of Washington* (1902), devoted to scientific research; by 1947 it had expended about $50,000,000 in its program.

*Carnegie Hero Fund Commission* (1904), established to recognize heroic acts performed throughout the U.S., Canada and Newfoundland; from 1904 it had awarded 3,473 medals and a total of about $7,000,000 in pecuniary awards.

*Carnegie Foundation for the Advancement of Teaching* (1905), established to provide retiring pensions for teachers and to advance higher education, paid $1,899,867 in such allowances in 1947, raising the cumulative expended total to $51,977,286.

*Carnegie Endowment for International Peace* (1910), established to serve the purpose indicated by its name, continued in 1947 to promote international understanding and further the general cause of peace.

**Catholic Community Service, National.**—An agency founded in 1940 to promote the spiritual, educational, recreational and welfare needs of men and women in the armed forces and war production workers and their families. Activities in 1947 were adjusted to meet the country's changeover from a war to peace economy and society. Publications include: *NCCS*, a monthly magazine, *NCCS Newsletter*, a house organ, and various pamphlets. James S. Mitchell was executive director in 1947. Headquarters: 1312 Massachusetts Ave., N.W., Washington 5, D.C.

**Catholic Library Association.**—An international organization of librarians, educators and others interested in promoting Catholic literature and Catholic library work. Membership in 1947 totalled 1,434. Publications include: *Catholic Library World*, the official publication; *Catholic Periodical Index; Catholic Supplement to Standard Catalog for High School Libraries* and *Catholic Booklist.* Officers (1947): president, Brother A. Thomas, librarian, Manhattan college, New York city; secretary-treasurer, Laurence A. Leavey, Manhattan college, New York city. Headquarters: Manhattan college, New York city, *pro tem.*

**Commonwealth Fund, The.**—An endowment, established in 1918 by Mrs. Stephen V. Harkness "to do something for the welfare of mankind." Appropriations for the year ending Sept. 30, 1947 were $1,614,442.58. Activities tending to promote or maintain physical or mental health accounted for more than 75% of this sum. The fund in 1947 sought to put more emphasis on problems of personality and emotion adjustment in relation to medicine and gave fellowships for training physicians in psychiatry and psychotherapy. Malcolm P. Aldrich was president of the board of directors in 1947; the general director was Donal Sheehan. Headquarters: 41 E. 57th St., New York city.

**Daughters of the American Revolution, National Society of.**—A historical, educational and patriotic society founded in 1890, whose activities are conducted by 22 national committees and whose membership in 1947 totalled about 158,000, in 2,600 chapters. The D.A.R. owns and operates 2 schools and gives support to 12 approved schools. It has an extensive education program intended to advance U.S. music, give educational and practical assistance to American Indians and enable deserving students to continue their higher education through administration of a student loan fund. A large genealogical library of more than 38,000 volumes is maintained in Washington, D.C. Publications include: *National Defense News*, appearing five times yearly; *Daughters of the American Revolution Magazine*, a monthly. Officers (1947): Mrs. Roscoe C. O'Byrne, president general. Headquarters: 1720 D St., N.W., Washington 6, D.C.

**Elks, Benevolent and Protective Order of.**—A fraternal order organized in 1868 "to practise charity, justice, brotherly love and fidelity; to promote the welfare and enhance the happiness of its members; to quicken the spirit of American patriotism." In 1947 the Elks had 1,500 lodges with 900,000 members, spent more than $5,000,000 on charity and increased the fund of the Elks National foundation, which is expended on scholarships, care of tuberculars, crippled children and like philanthropies, to nearly $2,000,000. Publications: the *Elks Magazine*, a monthly. Officers (1947): grand exalted ruler, L. A. Lewis of Los Angeles, Calif.; Grand Secretary, J. E. Masters of Chicago, Ill. Headquarters: Elks National Memorial Headquarters Bldg., 2750 Lake View Ave., Chicago 14, Ill.

**Falk Foundation, The Maurice and Laura,** of Pittsburgh, Pa., was founded in 1929 for the purpose of bettering the lot of mankind. In 1947 the foundation gave grants of $110,500 to economic research organizations and $120,000 for distribution of reports of studies made by economic research organizations and for production and distribution of moving pictures in the field of economic education. Publications (financed by the Falk foundation) in 1947 were: by National Bureau of Economic Research, *Output and Productivity in the Electric and Gas Utilities, 1899–1942* and *Trends in Output and Employment;* by Committee on Public Debt Policy, *Our National Debt after Great Wars, Our National Debt and the Banks, Our National Debt and Interest Rates* and *Our National Debt and the Budget;* by the Brookings institution, *A National Labor Policy* and *The Guarantee of Annual Wages;* by Committee on Postwar Tax Policy, *A Tax Program for a Solvent America—1947*. Officers (1947): Leon Falk, Jr., chairman; I. A. Simon, secretary; Arthur E. Braun, treasurer, and J. Steele Gow, executive director. Headquarters: 1911 Farmers Bank building, Pittsburgh 22, Pa.

**Freemasonry** (Masonic Fraternity).—The chief problem of freemasonry in 1947 was the re-establishment of the fraternity in countries where it had been suppressed prior to and during World War II. In practically all European countries which were under axis control during the war, and in the far east, especially in the Philippines, grand lodges and many constituent lodges had been re-formed and were functioning. In other European countries, as well as in the U.S., Canada, Central and South America, Australia and New Zealand, progress was normal. The record of freemasonry in 1947 was one of substantial support to continued belief in the universal human desire for brotherhood and an indestructible determination to perpetuate its survival.

**Guggenheim Memorial Foundation.**—The John Simon Guggenheim Memorial foundation was established in 1925 for the advancement of research in all fields of knowledge and for creative work in the arts. The foundation in 1947 had an endowment of $23,142,755.78. During the year, it awarded 122 fellowships with grants of $310,000 and also granted 29 Latin-American fellowships with stipends totalling $80,000. Officers (1947) were: Mrs. Simon Guggenheim, president; Otto L. Myers, treasurer, and Henry Allen Moe, secretary. Headquarters: 551 Fifth Ave., New York city.

**International College of Surgeons.**—Founded in 1935 in Geneva, Switzerland, this organization has for its objective creation of a common bond among surgeons of all nations and promotion of high surgical standards throughout the world without regard for race, creed or colour. Membership in 1947 was about 3,500 in 29 countries. Publication: *The Journal of the International College of Surgeons*. Officers (1947): president, Dr. Albert A. Berg of New York city; international secretary general, Dr. Max Thorek of Chicago, Ill. Headquarters: 1516 Lake Shore drive, Chicago, Ill.

**Kiwanis International.**—Founded in 1915, Kiwanis International consists of representative business and professional men who strive, through the agency of weekly meetings, to give leadership for improvement of their communities and for other worth-while services. Membership, as of Nov. 15, 1947, totalled 180,000 distributed in 2,710 clubs. Kiwanis activities in 1947 included distribution of free lunches for needy children and other forms of child welfare help, giving vocational guidance to students, assisting veterans with housing problems and participating in "Get Out the Vote" campaigns. Publications: *The Kiwanis Magazine, Monthly Club Bulletin* and others. Officers (1947): Dr. Charles W. Armstrong, president; J. Belmont Mosser, treasurer, and O. E. Peterson, secretary. Headquarters: 520 N. Michigan Ave., Chicago 11, Ill.

**Knights of Columbus.**—A fraternal order organized in 1882, dedicated to preservation and championship of Catholic and U.S. principles. Membership as of June 30, 1947, was 681,480. The organization, which held its 65th annual convention in Boston, Mass. (Aug. 19–21), continued its campaign for a trust fund for Catholic college training for children of members left fatherless as a result of World War II. Its series of six 15-min. recordings on communism were broadcast over 311 radio stations in North and Central America. Publications: *Columbia*, a monthly, and *News*, a weekly. John E. Swift was supreme knight in 1947. National headquarters: 45 Wall St., New Haven 7, Conn.

**League of Women Voters of the United States.**—The league was founded in 1920 to promote political responsibility through informed and active participation of citizens in government without supporting or opposing any particular party or candidate. Membership in 1947 totalled 72,000. During the year local and state groups worked to improve their local and state governments through campaigns for better government machinery. Publications in 1947 included: *How the Wheels Go 'Round; Displaced Persons and U.S. Immigration Policy; Uncle Sam's Finances; The Public Interest in Atomic Energy; Current Housing Legislation*. Officers (1947): Anna Lord Strauss, president; Mrs. James G. Scarborough, secretary, and Mrs. Leonard Haas, treasurer. Headquarters: 726 Jackson Place, N.W., Washington 6, D.C.

**Lions Clubs, International Association of.**—This organization was founded in 1917 as a nonpolitical, nonsectarian association of service clubs whose purpose was to recognize and meet the needs of the community. During 1947 it completed 85,067 activities which may be classified under 8 classifications: boys and girls; citizenship and patriotism; civic improvements; community betterment; education; health and welfare; safety; sight conservation and blind. Membership in 1947 totalled 350,000 in 6,500 clubs in 19 countries. Publications: *The Lion; El Léon* (Spanish); *Lions International Monthly Letter*. Officers (1947): president, Fred W. Smith, Ventura, Calif.; secretary general, Melvin Jones, Chicago, Ill. Headquarters: 332 S. Michigan Ave., Chicago 4, Ill.

**Music Library Association.**—This organization was founded in 1931 to promote the establishment, growth and use of music libraries and collections in the U.S. and Canada. Membership in 1947 was about 750. It publishes *Notes*, the quarterly journal, and *Music and Libraries*, a collection of essays. One of its projects in 1947 was an index to music periodicals which at that time consisted of 400,000 cards based upon 99 music periodicals. H. Dorothy Tilly, Detroit Public library, was president in 1947; the secretary-treasurer was Mary R. Rogers, Library of Congress, Music Division, Washington 25, D.C.

**National Academy of Sciences.**—A scientific body incorporated by an act of congress in 1863 for the purpose of investigating and reporting upon scientific subjects as called for by any department of the U.S. government. Total membership (as of Aug. 22, 1947) was 407. During the year, the academy issued a number of grants and medals. Officers (1947) included: president, Alfred N. Richards; treasurer, J. C. Hunsaker, and executive secretary, Raymund L. Zwemer. Headquarters: 2101 Constitution Ave., N.W., Washington 25, D.C.

**National Association of Manufacturers.**—Founded in 1895, the N.A.M. is the spokesman of industry before the national government and its congressional and administrative agencies. Membership in 1947 totalled 16,500 manufacturers producing 80% of all U.S. goods and employing 75% of industry's workers. Publications include the *NAM News*, a weekly, a supplement analyzing and digesting labour rulings and a wide variety of booklets on economic and national affairs. Officers (1947): Earl Bunting, president; Robert R. Wason, chairman of the board, and Noel Sargent, secretary. Headquarters: 14 W. 49th St., New York city.

**National Association of State Libraries.**—Founded in 1889, the association has as its objective the providing of the benefits of interstate co-operation in administration of state libraries. Membership in 1947 included 44 state libraries. Publications include: *Check Lists of Session Laws, Statutes, Legislative Journals and Collected Documents* and *Proceedings of Annual Meetings*. Officers (1947) included: president, Dennis A. Dooley of Massachusetts; secretary-treasurer, Alfred Decker Keator of Pennsylvania.

**National Lawyers Guild.**—Founded in 1937, the guild is an association of lawyers who believe that human rights are more sacred than property rights, that civil liberties of all the people must be defended from invasion from any source and that the law should be made a living and flexible instrument of progress and equal justice. Membership in 1947 was approximately 4,000. Publications include: *National Lawyers Guild Review* (bimonthly), *National Guild Lawyer* (quarterly). Officers (1947): Robert W. Kenny, president; Robert J. Silberstein, executive secretary, and Abraham Pomerantz, treasurer. Headquarters (1947): 902 20th St., N.W., Washington 6, D.C.

**Performing Right Societies.**—A world-wide confederation of composers, authors and publishers of musical works whose chief purpose is the licensing to commercial interests of the right to perform publicly the copyrighted work of their members. The largest and most influential member of the confederation is the American Society of Composers, Authors and Publishers (A.S.C.A.P.), which was founded on Feb. 13, 1914, and whose membership in 1947 included about 1,890 composers and authors and 300 publishers. The income of this nonprofit voluntary association is derived from issuing licences to commercial establishments for the public performance for profit of copyrighted musical works of its members. Officers included (1947): Deems Taylor, president; George W. Meyer, secretary. A.S.C.A.P. headquarters: 30 Rockefeller Plaza, New York 20, N.Y.

**Research Libraries, The Association of.**—Founded in 1931, the association includes 45 of the largest research libraries in the United States and Canada. It seeks by co-operative effort to develop and increase the resources and usefulness of research collections in U.S. libraries. Its publications include *Doctoral Dissertations Accepted by American Universities* (periodical); *A Catalog of Books Represented by Library of Congress Printed Cards*. A *Reprint of the British Museum Catalogue* was in the process of publication. Officers in 1947 included: Charles W. David, the executive secretary, and an advisory committee of five members. Headquarters: University of Pennsylvania, Philadelphia, Pa.

**Rockefeller Foundation.**—The foundation was chartered in 1913 and is concerned with problems in the medical, natural and social sciences, the humanities and public health. Except to a limited extent in public health, the foundation is not an operating organization. Its activities are confined to support of other agencies and to the training, through postdoctoral fellowships, of competent personnel in the various fields of knowledge. Publications: *The President's Review* and *The Annual Report*. Officers (1947): Raymond B. Fosdick, president; Thomas B. Appleget, vice-president, and Norma S. Thompson, secretary. Headquarters: 49 W. 49th St., New York city.

**Rosenwald Fund, The Julius.**—The fund was founded in 1917 for the purpose of improving the conditions of disadvantaged groups in the U.S. population, especially Negroes, with the view toward their full participation in U.S. life. It was expected that by June 30, 1948, the fund would have completed its work, having expended about $23,000,000 for education, health and other philanthropies. Officers (1947) were: Edwin R. Embree, president; Will W. Alexander, vice-president, and Dorothy A. Elvidge, secretary and comptroller. Headquarters: 4901 Ellis Ave., Chicago, Ill.

**Rotary International.**—A world-wide organization of Rotary clubs made up of groups of representative men for the purpose of furthering co-operation and good will in business and community life. Membership in Rotary, first organized in 1905, was as follows, on Nov. 3, 1947: 305,000 distributed in 6,301 clubs in 80 countries and geographical regions. Activities in 1947 centred principally on child welfare and student assistance, with special attention given to advancement of international good will and understanding. Publication: *The Rotarian*. Officers (1947–48): S. Kendrick Guernsey, U.S., president; secretary, Philip Lovejoy, U.S.; treasurer, Richard E. Vernor, U.S. Headquarters: 35 E. Wacker drive, Chicago, Ill.

**Russell Sage Foundation.**—This foundation was established in 1907 "to promote the improvement of social and living conditions in the United States." Of the income from the endowment of $15,000,000, disbursements in the fiscal year ending Sept. 30, 1947, amounted to $527,000, of which $150,000 was in the form of grants to organizations in the fields of social work, social research, health, housing and city planning. The foundation maintains a research staff, the results of whose studies are made available through publications, conferences and consultation service. Publications during 1947 included: *The Miners' Case* by Edward A. Wieck; *Social Work Year Book, 1947* (ninth edition), edited by Russell H. Kurtz; *Your Community* by Joanna C. Colcord, revised edition by Donald S. Howard. Officers (1947): president, Morris Hadley; acting general director, Ralph G. Hurlin. Headquarters: 130 E. 22nd St., New York 10, N.Y.

**Spelman Fund of New York.**—The Spelman Fund of New York was incorporated in 1928. The charter provides that the fund "is formed for exclusively charitable, scientific and educational purposes, including the advancement and diffusion of knowledge concerning child life, the improvement of interracial relations and cooperation with public agencies." From 1930 the fund's program had been directed toward co-operation with public agencies for the advancement of public administration. Its interest in this field is expressed through support of activities of public and quasi-public agencies engaged in making significant results of current administrative experience generally available to public officials; in developing improved methods and putting them to practical use and in experimenting with new devices and procedures under actual operating conditions. Charles E. Merriam was chairman in 1947. Headquarters: 783 Fifth Ave., New York, N.Y.

**Theatre Library Association.**—This association, an affiliate of the Ameri-an Library association, was founded in 1937 for the purpose of preserving and making accessible to the public the records of the drama and indred fields of entertainment. Membership in 1947 was 190. The official publication is *Broadside,* issued quarterly; a sponsored publication is *Theatre Annual.* Officers (1947): president, George Freedley, New York Public library; secretary, and editor of *Broadside,* Mrs. Sarah Chokla Gross; treasurer, Mrs. Elizabeth P. Barrett, New York Public library. Headquarters: Theatre Collection, New York Public library, New York 8, N.Y.

**Twentieth Century Fund.**—Organized in 1919 by Edward A. Filene, the oundation serves a threefold purpose: research, policy formation and ublic education on current economic operations. During 1947 the fund continued its efforts to bring about greater public understanding of trouble reas in industrial relations and a more constructive approach in dealing with them. A special research staff and committee produced a survey, *Rebuilding the World Economy,* which detailed the role of the United States in foreign trade and investment. *America's Needs and Resources* was also published during 1947. Officers: John H. Fahey, president; Morris E. Leeds, treasurer; Evans Clark, executive director. Headquarters: 330 W. 42nd St., New York 18, N.Y.

**Woman's Christian Temperance Union, National.**—The union was founded in 1874 to unite the Christian women of the Untied States to rally public opinion to the standard of total abstinence from all alcoholic liquors. Activities during 1947 included two summer schools on alcoholic education, publication and distribution of thousands of pamphlets, circulars and posters and extensive work among young people. Publications include *Union Signal* (weekly) and *Young Crusader,* a monthly for children. Officers (1947): Mrs. D. Leigh Colvin, president; Lily Grace Matheson, corresponding secretary; Violet T. Black, treasurer. Headquarters: 1730 Chicago Ave., Evanston, Ill.

**Women's Clubs, General Federation of.**—Founded in 1890 for the purpose of uniting women's clubs throughout the world for the promotion of education, philanthropy, public welfare, moral values, civics and fine arts. The federation in 1947 was composed of 3,000,000 members in 17,000 clubs. Activities during the year centred on services for children and young people, organization of health institutes, programs to strengthen the U.N., raising of scholarship funds and contributions for foreign relief. Publication: *General Federation Clubwoman,* a magazine. Officers (as of June 1947): president, Mrs. J. L. Blair Buck; recording secretary, Mrs. Earl Shoesmith; treasurer, Mrs. Charles Fuller. Headquarters: 1734 N St., N.W., Washington, D.C.

**Zionist Organization of America.**—This organization was founded in 1897 to further the upbuilding of Palestine as a Jewish commonwealth and to promote the interests of the Jewish renaissance. Among the constituent bureaus of the organization are: membership; Palestine bureau; American Zionist fund; education; radio; films; Hebrew university scholarship; veterans; Unity committee. The organization's president testified before the United Nations hearings in 1947 as a representative of the Jewish people. Membership in 1947 was 232,864. Publications include: *The New Palestine; Dos Yiddishe Folk; Palestine Yearbook.* Dr. Emanuel Neumann was president in 1947. Headquarters: 41 E. 42nd St., New York 17, N.Y. (*See* also PALESTINE.)

## Sociology.

Among the currents in sociology, it was possible to trace the following in 1947: (1) the continuing coalescence of social psychology, social and cultural anthropology and sociology into a more inclusive science of social relations; (2) some evidence of sentimental archaism in the attempted revivals of thinkers recently regarded in some quarters as of historical relevance only; (3) interest in philosophy of history, theory of history, or historical sociology stimulated by Somervell's summary of Arnold J. Toynbee's *A Study of History;* (4) a wide array of books and articles of somewhat *ad hoc* character; and (5) studies in the methods and techniques of the social sciences in general and of sociology in particular. Taking these in order, the outstanding literature included the following:

**Fusion.**—What had been called "the anthropological approach" within the framework of a comprehensive science of social relations was evidenced in a monograph by Leighton and Kluckhohn, *Children of the People,* a follow-up of their earlier work, *The Navaho.* Field observation and a series of tests provided the data, but the integrated theoretical scheme lacked adequate empirical support at several points. A not altogether dissimilar approach, presented under a different name, was represented in the four special symposium issues of the journal *Sociometry,* although the testing apparatus was more elaborate and was focused on a number of additional points.

Single articles of general "social relations" type were very few; the only one of importance was that by Homans, "A Conceptual Scheme for the Study of Social Organization" in the *American Sociological Review;* it derived primarily from Henderson's interpretation of Pareto, and drew heavily on the work of other Henderson-influenced researchers of Harvard. Textbooks in this field were published by Cuber, Hiller and Sorokin. The first two offered little that was essentially new, and Sorokin's textbook was really a treatise systematizing the theoretical framework that pervaded his other writings. Whatever its shortcomings, the volume reached a high level of abstraction, was carefully integrated, and made readily available a number of novel insights and formulations. Overshadowing Sorokin's contribution, however, was the monumental work of Max Weber, *The Theory of Economic and Social Organization,* published in translation by Henderson and Parsons. Here a real foundation for a science of social relations was presented.

**Revivals.**—Revivals of thinkers judged to be of sociological significance were best exemplified by Max Horkheimer's *Eclipse of Reason,* in which Hegelianism was persuasively recommended. Horkheimer's political leanings toward the German Social Democratic tradition, with its reverence for Hegel as interpreted by Marx, accounted in large measure for his special emphasis. In the pages of the Stalinist journal, *Science and Society,* numerous articles of similar type appeared—with, of course, a Communist rather than a Social Democratic orientation. A slashing attack on this general line of analysis which also enjoyed some vogue in Britain although not popular among intellectuals on the continent, was delivered by Lundberg in his "Sociology versus Dialectical Immaterialism" (*American Journal of Sociology*). Lundberg was undoubtedly nettled by Marxist attacks on his positivism, but altogether apart from the intruding personal note, the article was an acute appraisal and rejoinder.

**History and Sociology.**—Historical sociology enjoyed much public interest because of the 1947 Toynbee fad. Dating from 1934–36, his six-volume treatise came to attention in 1947 because of an adroitly advertised one-volume abridgement. The work was hailed as a crushing refutation of Marx, but Marx had been crushingly refuted many times before. Toynbee's real significance lay in his masterly descriptions and analyses of various ethnic and cultural groups such as the Spartiates, the Jews, or the Turks, rather than in his comprehensive but highly speculative theodicy. In the midst of a welter of enthusiastic reviews and commentaries, those by Hicks (*Harper's,* Feb. 1947) and Barnes (*Am. Sociol. R.*) preserved balanced judgment, although Barnes was perhaps too harshly adverse.

**Subjects of Immediate Interest.**—Among publications dealing with contemporary problems having some sociological relevance, probably the most attention-compelling were those having to do with housing. "The American Family and Its Housing" was the title of an entire issue of the *Am. Sociol. R.,* and a similar emphasis was reflected in the programs of several sociological conventions. Juvenile delinquency and family instability brought forth the usual large crop of texts, monographs and articles, among the most interesting of which were Hills's "The American Family: Problem or Solution," (*Am. J. Sociol.*) and Bossard's "The Role of the Guest: A Study in Child Development" (*Am. Sociol. R.*). The one major attempt to integrate theory and research published during the year, Zimmerman's *Family and Civilization,* was severely criticized as nostalgic and theoretically inadequate.

During 1947 ethnic conflicts ("race problems") caused much uneasiness, and the Social Science Research council financed a bulletin entitled *The Reduction of Intergroup Tensions.* A new series of books on "Peoples of America," aimed in a similar direction, was inaugurated by Arnold Mulder's *Americans from Holland.* The traditional melting-pot theme was used to integrate the facts. Frazier's article, "Sociological Theory and Race Relations," was one of the few good guides for analysis. Among the more definitely factual studies, McCormick and Hornseth's "The Negro in Madison, Wisconsin" offered several interesting conclusions. Industrial unrest and related matters, crystallized for the public in the Taft-Hartley act, were scientifically discussed in Warner and Low's *The Social System of the Modern Factory.*

Somewhat belatedly following the wave of general interest, there appeared a study entitled *Public Reactions to the Atomic Bomb and World Affairs.* Almost $25,000 was spent on this by the S.S.R.C.; it consisted essentially of a public opinion poll of 600 individuals interviewed before and after the Bikini bomb tests. There was some attempt at explanation of the answers elicited. Cantril, Herring, Likert, and Cottrell, the last as chairman, formed the research committee. Ogburn, likewise concentrating on matters of current interest, brought out *The Social Effects of Aviation.* Because of security regulations, it was apparently impossible to devote attention to aviation in relation to possible future warfare. The book was well-financed, and was a convenient summary of masses of empirical evidence, although analytically it had little to offer. Some light was thrown on the nature of large-scale research of the kinds just mentioned in Bendix's article "Bureaucracy: The Problem and Its Setting" (*Am. Sociol. R.*).

An article evidencing much individual initiative was Davis's "Some Sources of American Hostility to Russia" (*Am. J. Sociol.*). Abounding in analytic leads, it could readily have been turned into a large-scale research project which might have avoided bureaucratic handicaps.

A study of large-scale type which was markedly successful was the presidential committee report on civil liberties in the United States, *To Secure These Rights.* Prepared by a citizens' committee backed up by a group of social scientists who assembled the data, it had more copies distributed than any other government report in the preceding decade—not excepting Smythe's work on the atomic bomb.

Evidence of widespread uneasiness at the postwar turmoil could be inferentially gleaned from the large number of books and articles extolling the small community, with its presumable neighbourhood cohesion, as a cure-all for a wide variety of symptoms of social disorganization. Although not a professional sociologist, Hicks presented a book along these lines which was widely read and which, with a few reservations, can be strongly recommended. The drawbacks of the small community when it is extremely isolated were interestingly pointed up in an outstanding article by Peter Munch, "Cultural Contacts in an Isolated Community—Tristan da Cunha" (*Am. J. Sociol.*). Studies of other communities in which isolation was in some sense disrupted were to be found in a report covering South Seas natives under U.S. rule, *Economic and Human Resources of Micronesia,* United States Commercial company. Six of the 26 volumes of this microfilmed report were by social scientists; it was made available in its entirety by the Library of Congress. As a mine of empirical evidence and suggestions for further analysis, it had high likelihood of future use. Much the same, *mutatis mutandis,* could be said of the 10 volumes of the *War Relocation Authority Monographs.*

**Methods and Techniques.**—Timasheff's "Definitions in the Social Sciences" (*Am. J. Sociol.*) was a much-needed corrective of the loose practices widely evident, and Adler's "Operational Definitions in Sociology" (*Am. J. Sociol.*) was an amusing and trenchant attack on the basic absurdity of operationism. Winch's "Heuristic and Empirical Typologies" (*Am. Sociol. R.*) was an interesting effort to show that factor analysis might be of value in type construction and use. Showing much more penetration and knowledge of basic literature was Goode's "A Note on the Ideal Type" (*Am. Sociol. R.*). In fact, Goode's discussion had most of the merits called for in Ogburn's "On Scientific Writing" (*Am. J. Sociol.*)—an article, incidentally, which betrayed a marked lack of interest in precise analysis at the level of verbal symbolism. In the several articles by Hart and associates on verifiability ratings in the social sciences (*Am. Sociol. R.* and *Am. J. Sociol.*) only the visual symbolism of mathematics, especially in the ordinary statistical formulas, received adequate attention.

Valuable mathematical innovations, focusing on a highly relevant problem, were presented in Guttman and Suchman's "Intensity and a Zero Point for Attitude Analysis" (*Am. Sociol. R.*). These writers, sociologists as well as statisticians, were keenly aware of the pitfalls as well as the possibilities of polling techniques. Another worthwhile mathematical contribution was Hornseth's constructive criticism (*Am. Sociol. R.*) of Jahn, Schmid, and Schrag's "The Measurement of Ecological Segregation" (*Am. Sociol. R.*).

In Latin America, sociological teaching and research were vigorously prosecuted. The quarterly journal in English edited by Laszlo Radvanyi, *The Social Sciences in Mexico and South and Central America,* made its first appearance in May. The *American Sociological Review* also had a good article on sociology in Peru. Barnes and Becker's *Social Thought from Lore to Science,* containing chapters on sociology in the Iberian peninsula and Latin America, appeared in Spanish translation.

Sociology in France was furthered by the establishment of the Centre d'Études Sociologiques at Paris. The *Cahiers Sociologiques* continued to appear under the editorship of Gurvitch. German sociology made progress through resumption of publication of the *Cologne Quarterly* under Wiese's editorship, and the establishment of a series of sociological sourcebooks and monographs—the *Civitas Gentium* series—edited by Solms of Marburg.

In Britain the year was signalized by the publication of Ginsberg's *Reason and Unreason in Society,* Marshall's *Sociology at the Crossroads,* and the first issue of a new journal, *Human Relations,* published jointly by the Tavistock Institute of Human Relations, London, and the Research Center for Group Dynamics, Massachusetts Institute of Technology. A useful brief survey of the social sciences in the Soviet Union was presented by Barrington Moore, Jr., in the *American Sociological Review.* In Japan, a notable event for sociology was the first postwar number of *Social Research.* In June the sociologists, together with five other social science societies, held their first postwar convention in Tokyo. (H. Bec.)

## Sodality of Our Lady.

The year 1947 brought to the 14,438 sodalities of the United States two new monthly periodicals: *Action Now,* issued for adult sodalists, and the *Junior Sodalist,* for elementary school aged sodalists. *The Queen's Work* was changed in format and its content geared to the "Queen's Teens."

A new department for men's sodalities was set up at the central office (3115 So. Grand Blvd., St. Louis 18, Mo.) under the direction of former chaplain Rev. F. L. Zimmerman, S.J., and a new visual educational department was established under the guidance of Rev. Robert E. Southard, S.J.

International collaboration continued: Revs. J. Roger Lyons, S.J., and Aloysius J. Heeg, S.J., of the central office in St. Louis took part in the international sodality convention in Barcelona, Spain, as the two official delegates from the United States. Dorothy Willmann participated in the first postwar congress of the Section de Jeunesse, Union International des Ligues Feminines Catholiques in Rome, Italy, and was re-elected to the executive council of the organization.

Seven summer schools of Catholic Action were held in St. Louis, Boston, Montreal, St. Paul, San Antonio, New York and Chicago. These drew a record total attendance of 14,257. The Garvey collection, only Catholic collection of interracial and Negro progress, begun in 1914 by Rev. A. J. Garvey, S.J., was onated to the sodality central office. It numbers 26,000 books, rochures and magazines. Renewed activity was concentrated n weekend conventions and institutes throughout the U.S., irected by Rev. Daniel A. Lord, S.J., national organizer, and ther members of the staff.

Along with emphasis on the spiritual aspect of the Sodality f Our Lady (established in 1563) of honouring the Blessed Mother of God and of intensifying the spiritual life of individual members, the central office encouraged a stronger and more militant apostolate along wider spheres of social and economic studies and projects. The theme for World Sodality Day, observed throughout the world on the second Sunday of May, exemplified this through its 1947 slogan: "To Christ through Mary by an intelligent, militant apostolate."

(D. J. W.)

**Sodium Carbonate.** The United States more than doubled its output of natural sodium carbonate in the decade ending with 1946, reaching 215,625 short tons during that year, against 194,045 tons in 1945. There is a minor production of the natural salt in Canada, which dropped from 286 tons in 1945 to none in 1946 and 136 tons in 1947.

(G. A. Ro.)

**Sodium Sulphate.** The production of natural sodium sulphate in the United States rose from 178,196 short tons in 1945 to 198,781 short tons in 1946. In Canada the natural sulphate output increased from 93,068 short tons in 1945 to 105,919 short tons in 1946 and 136,150 short tons in 1947. (G. A. Ro.)

**Softball.** Both the Fort Wayne, Ind., Zollners in the men's and the Jax Maids of New Orleans, La., in the women's division repeated as victors in the finals of the 1947 national amateur softball championship at Cleveland, O. The Jax Maids, however, turned professional immediately after the tournament and the title was awarded to the Phoenix, Ariz., team. In the All-American Girls' Baseball league, the Grand Rapids, Mich., Chicks won the playoff, defeating Muskegon, Mich., in the final. The Parichy Bloomer Girls of Forest Park, Ill., captured both the league and playoff divisions of the National Girls' Baseball league. (M. P. W.)

**Soil Erosion and Soil Conservation.** In 1947 various countries reported a serious lack of trained soil conservation scientists and technicians for adequate staffing of land conservation programs. Especially was this true where programs were well organized and funds available for supplying landholders with technical assistance in planning farms for permanent conservation agriculture. Scientists and officials in many parts of the world therefore were taking steps to interest colleges and universities in setting up basic training courses in soil science and ecology in connection with agricultural engineering.

Governments of many countries continued to send selected agricultural scientists to the United States to be trained to act as leaders in various phases of land conservation. In all, about 400-500 foreign agricultural specialists and executives visited the United States in the period 1943–47 for training in soil conservation.

**United States.**—During 1947 the work of applying all soil and water conservation practices needed for permanent conservation farming and range management was completed on an additional 21,000,000 ac. About 500,000 farmers were carrying out active conservation plans on more than 132,000,000 ac. at the end of the year. Soil conservation surveys, made by the soil conservation service to provide data and information for use in farm planning, had been completed on more than 250,000,000 ac.

As of Dec. 1, farmers and ranchers had organized 1,956 soil conservation districts including 1,041,960,685 ac. and 4,570,655 farms, or more than three-fourths of the agricultural units in the country and its territories.

Strong emphasis was placed by the soil conservation service on perfecting wind-erosion control methods that could be relied on by farmers to prevent serious soil blowing in case of drought. Specialists in wind erosion had concluded, after nearly two decades of study, that soil blowing could be prevented only if precautionary measures were used at all times—in years of adequate rainfall as well as dry years—as an integral part of the farming system. Extensive research over wide acreages had proved that crop-residue management, usually called stubble-mulch farming, was extremely important in controlling soil blowing. By the end of 1947, farmers were using this method on nearly 20,000,000 ac. in soil conservation districts in the great plains grain belt, in the Pacific northwest and elsewhere in the country.

The value of legumes in stubble-mulch farming was demonstrated by experiments carried out in the great plains over a period of years and reported in 1947. Where the soil was provided with nitrogen through growing legumes and subtilling the residue, yields of crops were better than yields from plowing. Corn grown by subtilling sweet clover residue produced five bushels per acre more than corn grown by plowing. On the other hand, on land farmed without legumes, corn yield did not improve by subtilling, a practice especially designed as a precautionary measure against soil blowing. This showed an important connection between legumes in the cropping system in regions where wind erosion was a serious hazard to agriculture.

Studies in South Carolina showed new promise for successful use of crop residues to protect the soils in the southeast. The experiments demonstrated that residues from preceding crops could be maintained on the surface of the soil during growth of corn and oats without depressing the yield of these crops. During a three-year period, average yield of corn per acre following vetch and rye where the surface mulch method was used was 55 bu. Where the residue was plowed under, the average corn yield was 52 bu. per acre. With no cover crop, the yield was 46 bu. per acre. The average per cents of runoff during the corn-growing season were: 3% where vetch and rye residue was retained as a mulch on the surface; 10.7% where it was plowed under and 30.8% where no cover crop preceded the corn. The corresponding soil losses through erosion in pounds per acre were 320; 1,540 and 5,690.

Studies in the corn belt emphasized the importance of maintaining crop rotations, fitted to the land, in corn production. In Iowa land that had been cropped continuously for 15 years yielded only 27 bu. to the acre, while adjoining land which had been farmed during the same period in a rotation of corn-oats-meadow yielded 86 bu. per acre. A part of the low-yielding, nonrotation land was rehabilitated, and the corn yield was raised to 70.6 bu. per acre by one complete three-year rotation. Thus, a single rotation increased corn production threefold on land that had been excessively used for corn production.

In Wisconsin bluegrass pastures renovated with a field cultivator and seeded to alfalfa-brome grass gave a 60% increase in yield. This plowless method of pasture renovation can be carried out with practically no soil loss, although regulated grazing must be practised to prolong the pasture's productive life. Conservation-needs surveys revealed that more than 50,000,000 ac. of pastureland in the northeastern quarter of the United States should be similarly treated to prevent land damage and improve yields.

The soil conservation service carried on flood-control operations on 11 watersheds during 1947. Construction work in cooperation with landowners consisted of gully control, stabilizing waterways and building small dams and other measures designed to prevent flooding of the upper reaches of streams and to protect upland farmland. The drainage basins on which work was in progress comprised nearly 16,000,000 ac. in New York, Pennsylvania, Maryland, Virginia, West Virginia, Tennessee, Mississippi, Texas, Georgia, Iowa, Oklahoma and California.

During 1947 the facilities of the soil conservation service nurseries were used largely for maintaining foundation seed stocks and for quantity production of about two dozen conservation crop plants developed by plant observational studies in the period 1933–46. The total seed production was 422,000 lb., distributed to soil conservation districts for seed increase. In the southeast 730 five-acre seed blocks of one selected grass were established in soil conservation districts in nine states.

Approximately 83 species and strains of erosion-control plants were advanced to the field-trial and seed-increase stage. By 1947, 18 heretofore undomesticated native grasses had been brought into use in the west, with seed available for soil-conservation purposes. They included such important grazing species as blue grama, buffalo grass, western wheat grass, sand love grass and the bluestems.

**Canada.**—A survey to determine the most serious soil conservation problems of both eastern and western Canada was made during 1946 and reported in 1947 by the national committee on soil conservation. Low fertility, poor drainage and soil erosion were revealed as responsible in large measure for the extremely low crop yields of eastern Canada. Soil loss is heavy on rolling land devoted to grain and intertilled crops, and sheet erosion is common in eastern agricultural areas. Wind erosion in eastern Canada is confined to restricted areas used for production of intertilled crops on sandy soils. At the Ontario Agricultural college (Guelph) a soil-conservation farm-planning program was initiated early in 1947. Other soil-conservation activities in eastern Canada included the making of detailed soil surveys, pasture-improvement programs, soil-erosion experiments to determine actual soil losses under different conditions, field demonstrations on private farms and reforestation of eroded lands by provincial governments and paper companies.

In western Canada, soil conservation work under the Prairie Farm Rehabilitation act consisted of soil-drifting control, regrassing, tree planting, water storage and introduction of conservation tillage methods and crop rotations especially designed to prevent both soil blowing and erosion by excessive runoff. Eighty-nine large irrigation projects and 993 small irrigation projects were in progress, to develop or restore irrigation on about 200,000 ac. Forty-nine community pastures having a total of 1,337,320 ac. had been developed and were in use. At the same time, 18,655 dugouts and 4,178 stockwatering dams had been constructed for water storage in dry areas. Nearly 17,000,000 trees had been planted in the prairie provinces in addition to 713 mi. of field-crop shelterbelts.

**Mexico.**—Benefits from soil and water conservation were reported in 7 of Mexico's 12 soil-conservation districts. In the Arroyozarco district, 919 dams had been constructed to control 90 torrents, and soils of certain valleys flooded seasonally were being stabilized by planting grasses and legumes, and by use of crop rotations especially designed to improve fertility conditions and increase food-crop yields. Alfalfa was being used on approximately 247 ac. for the first time in the area. About 120,000 fast-growing trees had been planted in large gullies.

In the Malintzin district, covering 285,779 ac. of the state of Tlaxcala, 2,200 water-control structures were built in the latter half of 1946 and in 1947 to control and divert floor waters descending from high plateau lands to agricultural valleys. Seed production work had begun on 120 parcels of land to develop and increase seed stocks of trees, grasses and legumes for planting in the volcanic soils of the region. At the same time, in an attempt to reforest the severely eroded slopes of La Malintzin volcano, the soil conservation service of Mexico initiated an extensive tree-planting program. Dune control work was begun in 1947 for fixation of a moving dune approximately 30 mi. in length at Puerto de Vera Cruz in La Carbonera-Acultzingo soil-conservation district.

Throughout central Mexico, terracing, strip cropping and contouring were widely adopted by growers of cultivated crops. Badly eroded land in the region of San José de la Cumbre, treated with terraces for water control and planted to beans, clover, wheat and pasture crops in 1945–46 produced at an increase in yields amounting to $400 per acre in 1947.

**Chile.**—An erosion survey revealed that the coastal cordillera of Chile was severely eroded, the province of Concepción being most affected. In the province of Malleco, 60% of the soil had been seriously damaged by erosion after 70 years of cultivation. In the southern regions with semiarid climate, wind erosion was common and had already transformed the mountainous parts into deserts. Much of this land was bared by fire when rich forests were burned to increase production of sheep; hurricane winds starting in the mountains carried the sands and deposited them on the bare slopes surrounding the lakes of the region. In the Chilean Patagonia the excessive overgrazing of sheep and plowing of grasslands had resulted in wind erosion so serious that all topsoil had disappeared, leaving the white subsoil uncovered.

The ministry of agriculture of Chile, through its soil-conservation agency organized in 1946, launched a program of reforestation and regrassing in an attempt to control erosion in the mountainous and semiarid regions.

**Brazil.**—Soil-conservation methods of improving and protecting cultivated lands were greatly extended in the state of São Paulo during 1947. Excellent contour terracing was done over large areas, with gradient, spacing and waterway systems fitted to various types of slopes and crops. Strip cropping, contouring and gully control, both by structures and planting, were adopted by many farmers. Several million acres of cropland were reported to be under complete soil conservation and, in addition, coffee growers had adopted practices such as contour embankments and cover plantings to control erosion on coffee plantations.

**Australia.**—Co-ordination of soil conservation, water control and forestry agencies of Australia was announced in Oct. 1947. Approximately £30,000,000 to be used over a period of years had been allocated for the work, £100,000 being spent during 1947. Works already undertaken included building of roads, catchment dams and diversion weirs with necessary channels to store and divert needed water to farmlands, and complete soil-conservation plans for individual farms and ranches in river valleys being treated with water control and supply structures.

Both wind and water erosion were found to be more serious in South Australia than in any other Australian state. Contour furrowing had been adopted by many farmers in water-eroded areas and was particularly effective on the Calca Soil Conservation station, where large areas were reclaimed in 1946 and 1947. Wind erosion, an even greater problem, was being controlled on demonstration farms by planting cereal crops and grasses for permanent pasture.

A law authorizing farmers to include costs of applying soil-conservation practices in income-tax deductions, passed by the Australian congress in 1946, proved an important impetus to the national soil-conservation program throughout 1947.

**Africa.**—A soil-conservation division was established in the department of agriculture of Belgian Congo in 1947. A program to control erosion by gullying was launched among native farmers, and agriculture students were being trained to act as conservation farm planners in the new agency.

In Southern Rhodesia, an extensive grassland improvement program, embracing the whole province of Mashonaland (more than 50,000,000 ac. in the eastern half of the colony) was started in 1947. Research studies were begun to determine run-off and soil losses with different types of vegetal cover and treatment. Rainfall percolation and soil-moisture studies also were initiated.

**Europe.**—During 1947 agricultural officials from ten European countries visited the United States for soil conservation training and observation of methods adaptable to European cropland. They represented the following countries: Italy, Switzerland, Spain, Sweden, Yugoslavia, Belgium, France, Portugal, Greece and Cyprus. A survey of farming conditions in marginal land areas of Greece, made by specialists of the U.S. soil conservation service at the request of the Greek government, revealed that advanced soil erosion was responsible in large measure for low yields of food crops throughout much of the country. ## Sophoulis, Themistocles

(1860– ), Greek statesman, was born on Nov. 25 at Vathy, island of Samos (then belonging to the Ottoman empire). An archaeologist and man of letters by profession, he took a prominent part in local politics, heading the patriotic opposition to the Greek governor appointed by the Porte. After the union of Samos with Greece in 1913, he was elected to the Greek parliament where from that time he continuously represented his native island. In the same year he was appointed minister of the interior. A staunch supporter of the Liberal leader, Eleutherios Venizelos, Sophoulis followed him at the time of the Salonika revolution of 1916, returning to Athens after King Constantine had been removed from the throne. He was elected president of the chamber in 1917, a post which he held till the defeat of the Liberal party at the elections of Nov. 1, 1920. In 1924 after Venizelos' withdrawal from politics and the proclamation of the republic, Sophoulis was for a few months prime minister. During the period from 1924 to 1936 he was repeatedly re-elected president of the chamber. After Venizelos' second withdrawal from politics in 1935, Sophoulis succeeded him as leader of the Liberal party. During the period of the Metaxas dictatorship (1936–40) Sophoulis abstained from politics. In 1944 he was arrested by the Germans on suspicion of being in correspondence with the Greek government-in-exile and was detained in the Haidari concentration camp near Athens. After the liberation, he took office as prime minister of a republican cabinet on Nov. 22, 1945. He resigned after the elections held on March 31, 1946, had given the victory to the Populist (Conservative) party. On Sept. 7, 1947, he again assumed the premiership in a coalition government composed of Liberals and Populists.

## Sorghum.

U.S. production of all sorghum for grain was estimated at 95,609,000 bu., against a total of 106,941,000 bu. in 1946 and the 92,124,000 bu. average for 1936–45. It was the smallest crop after 1940. Most of the decline was in Texas, which ordinarily had amounted to two-thirds of the nation's total; the Texan crop was only 68,313,000 bu. compared with 73,742,000 bu. in 1946.

The total acreage was 5,606,000 in 1947, more than 20% below the 6,773,000 ac. grown in 1946. The yield was 17.1 bu. per acre compared with the average of 15.2 bu., the smaller crop resulting primarily from the smaller acreage. The Arizona crop, while small (2,132,000 bu.), is important because it is mostly used as certified seed. Prices of sorghum grain for feed were around $2 per bushel in January and advanced steadily to $3.29 in August. Exports of sorghum grains amounted to a record of about 25,000,000 bu. in 1946–47. The amount used for alcohol and other nonfeed purposes was small in 1947. (*See* also SYRUP, SORGO, AND CANE.) (J. C. MS.)

**South Africa, British:** *see* BRITISH SOUTH AFRICAN PROTECTORATES.

## South Africa, The Union of.

A self-governing dominion of the British commonwealth of nations. The four provinces of which it consists, the Cape of Good Hope, Natal, the Transvaal and the Orange Free State, extend from the southernmost point of the African continent to the Limpopo in the north. The former German colony of South-West Africa (area 317,725 sq.mi., pop. est. 1941: European 33,600; Bantu and coloured [mixed] 287,700) is administered under mandate as an integral part of the union, but this territory had not been incorporated as a province; the United Nations twice invited South Africa to prepare a trusteeship agreement in respect to it. (*See* TRUSTEE TERRITORIES.) Area: 472,550 sq.mi. (incl. Walvis bay, 574 sq.mi.); pop. (1947 census): 11,391,949 (Europeans 2,372,690; Bantu 7,805,515; mixed 928,484; Asiatic 285,260). Chief towns (pop. census 1946): Capetown (seat of legislature, 454,052); Pretoria (seat of government, 236,367); Johannesburg (727,743); Durban (357,304); Port Elizabeth (146,231). Official languages: English, Afrikaans. Religion: European population: Christian 95.5% (Dutch Reformed Church 55%; Anglican 19%; Methodist 6%; Presbyterian 5%; Roman Catholic 5%, etc.); non-European population: 51% Christian, the remainder Hindu, Mohammedan and Buddhist. Governor General: Maj. Gideon Brand van Zyl; premier: Field Marshal Jan C. Smuts.

**History.**—The outstanding domestic event of 1947 was the visit to South Africa of King George VI, Queen Elizabeth and the Princesses Elizabeth and Margaret. During the early part of the year, the preparations and the tour itself eclipsed all else. The visit was received with tremendous enthusiasm throughout the country, and crowds flocked to see the royal family in every part of the land.

The development of the new gold fields in the Orange Free State, combined with the prosperity of the country, the growth of new industries and the shortage of manpower, intensified immigration, which became sponsored by the government. The South African Immigration council was established early in the year with a target of 1,500 immigrants a month, and special ships were chartered to carry them. Others travelled from Europe under their own arrangements, some making the journey overland. During the year the government announced its intention of deporting from the Union and South-West Africa 236 Germans, whose removal had been recommended by a judicial commission, because of their alleged nazi sympathies.

In common with many other countries, South Africa had its labour troubles; but in spite of strikes, particularly among the gold miners and building artisans, industry forged ahead. The National Housing commission reported 2,200 houses built each month throughout the country. The South African Industries

KING GEORGE VI and an African queen mother exchanging handshakes at Goedegun, Swaziland, during the royal tour of South Africa in Feb.–April 1947. Behind the king, left to right, are: Princess Margaret Rose, Queen Elizabeth and Princess Elizabeth

fair held in Durban in September was the first of its kind restricted to articles made in South Africa and proved that local industries had made great strides in the past few years.

Social security schemes were developed, including the implementation of the Unemployment Insurance act, passed in 1946, though this act still provoked strong criticism. The National War Memorial Health foundation was established as a memorial to South Africa's armed forces during World War II, and a number of health and housing schemes were launched, mainly to benefit non-Europeans.

Non-European problems received much publicity and attention during the year. The increasing industrialization of the towns called for more labour, which in turn increased the influx of natives from the country districts and from neighbouring territories to the north. Lack of housing facilities led to overcrowding, crime and ill feeling between races. The prime minister, Field Marshal Jan Smuts, announced a number of measures designed to increase the responsibility of the Natives Representative council and other native bodies, and further developments were expected to follow the report of the Fagan Native commission, to be made early in 1948.

In the field of arts and culture, a national theatre was founded, and the Afrikaans language theatre reached new heights with its first presentations of Shakespeare and Ibsen in Afrikaans. Discoveries were made of important fossil remains in the limestone caves of the western Transvaal, and of rock-paintings in South-West Africa and various parts of the union.

*Foreign Affairs.*—The status of South Africa's Indians was again brought before the general assembly of the United Nations in 1947. Following the passing of the Asiatic Land Tenure and Representation act, which restricted to certain areas the purchase of land by Indians but at the same time granted them representation in the union parliament and Natal provincial council, India withdrew its high commissioner and imposed economic sanctions against the union. Field Marshal Smuts asked Pandit Jawaharlal Nehru to allow the high commissioner to return for consultation, but was refused. Members of the South African Indian congress demanded immediate equality with Europeans.

The future of South-West Africa was discussed again by the general assembly. Early in the year Field Marshal Smuts announced that, in deference to the United Nations, the Union would not incorporate this territory, but would respect the inhabitants' wishes as far as possible by continuing to administer it under the League of Nations mandate, making an annual report to the United Nations. When the general assembly met, India attacked South Africa for failing to submit a trusteeship agreement for South-West Africa, as requested by the general assembly in 1946.

In October it was announced that South Africa had agreed to lend Britain gold to the approximate value of £80,000,000 to help it to weather the serious postwar economic crisis.

An air service was inaugurated between the Union and the United States and better services were provided to Europe; shipping services between South Africa and most parts of the world improved considerably during the year. (J. Md.)

**Education.**—In 1941: state and state-aided primary and secondary European schools 33,662, scholars 388,925; non-European schools 5,229, scholars 678,161; universities, average number of students 11,801.

**Banking and Finance.**—Revenue (1946–47) £SA133,935,000; expenditure (1945–46) £SA131,358,216; public debt (March 31, 1946) £SA582,855,931; notes in circulation (March 31, 1946) £SA66,000,000; gold reserve (March 31, 1946) £SA123,000,000; exchange rate (1946) £SA1 = £1 sterling = 403 U.S. cents.

**Trade and Communication.**—External trade (1946): exports (including government stores, specie, gold bullion, wool, exported bunker coal and ships' stores) £SA95,482,129; re-exports £SA3,071,142 plus £SA1,263,947 (to South-West Africa and Northern Rhodesia); imports £SA214,437,667. Communication and transport: roads fit for motor traffic (1947) c.100,000 mi.; railways, including South-West Africa (March 31, 1945), 13,483 mi.; airways, including South-West Africa (Dec. 1945–May 1946): passengers carried 7,936; mileage flown 285,559; shipping (March 31, 1945): tonnage cargo landed 3,162,632, shipped 4,213,575, transshipped 207,667. Motor vehicles licensed (Dec. 31, 1940): cars and taxis 317,958; vans and trucks 51,215; tractors 1,044; cycles 21,725; wireless receiving sets, effective licences (end of 1945) 373,411; telephones, instruments in use (1940) 202,753.

**Agriculture, Manufacture and Mineral Production.**—In 1944–45: maize 17,870,000 bags of 200 lb. each; wheat 3,373,430 bags of 200 lb.; potatoes 2,500,000 bags of 150 lb.; oats (purchased) 96,236 bags of 150 lb.; barley (purchased) 448,913 bags of 150 lb.; groundnuts 120,000 bags; deciduous fruit 67,634 short tons; dried fruit (1945) 19,000 short tons; tobacco (1944) 23,500,000 lb. Virginian, 533,000 lb. Turkish; cane sugar refined (1945–46) 553,174 bags of 200 lb.; sheep (1943) 37,888,043; cattle (1943) 13,068,414; wool (1945–46 est.) 650,000 bales. Total agricultural production (1944–45) £SA100,319,000. Industry and labour (1942–43): establishments 9,965; employees (May 1947): European 96,123; native 161,612; employment index (average, 1929 = 100): May 1947 = 151.8; industrial production £SA177,000,000. Mineral production (Jan.–May 1947, monthly average): gold 855,896 oz.; coal 2,207,000 short tons; silver 91,550 oz.; platinum 4,977 oz.; osmiridium 514 oz.; copper 2,678 short tons; tin concentrates 53 short tons.

## South Carolina.

A south Atlantic state of the United States, 8th of the original 13 to ratify the constitution in 1788; known as the "Palmetto state." Area: 31,055 sq.mi.; 461 being inland water; pop. (1940) 1,899,804; white 1,084,308; Negro 814,164; others 1,332; 75.5% rural; 0.3% foreign-born. Capital, Columbia (62,396). Other cities: Charleston (71,275); Greenville (34,734); Spartanburg (32,249). The estimated population of the state on July 1, 1947, was 1,918,000.

**History.**—Gov. J. Strom Thurmond was inaugurated in Jan. 1947, for a four-year term. His proposals for extensive reorganization of the state government passed the house and at the close of the year were before the senate. On July 12, 1947, the U.S. district court in Charleston annulled the rule of the Democratic party denying Negroes the right to vote in its primaries; this was confirmed on Dec. 31 by the U.S. circuit court of appeals, although all laws regulating primaries had been repealed n 1944. The federal district court denied the petition of a Negro to be admitted to the University of South Carolina law chool, but ruled that he must be admitted if by the beginning of the next school year the state had not provided legal educa-ion at its state Negro college, a ruling still awaiting decision on ppeal at the end of the year. The state meanwhile provided aw education at its Negro college, and also paid tuition at medical colleges outside the state for South Carolina Negroes. The appointment of Col. Wyndham M. Manning as superin-endent of the penitentiary led to greatly improved administra-ion, including emphasis on rehabilitation. Concurrently, the overnor stopped the "leaves of absence" for convicts. In May, 28 cab drivers accused of lynching a Negro who had robbed and killed a cab driver were acquitted, despite several written confessions and the earnest efforts of the prosecuting attorney.

**Education.**—Nine months' support annually for public schools was guaranteed by the state (many districts continuing to levy additional axes). Jesse T. Anderson was state superintendent of education. For he year ending June 30, 1947, enrolment in white elementary schools was 178,686 (increase of 815); in Negro elementary schools 179,454 (in-crease of 3,428); in white high schools 71,211 (increase of 1,858); in Negro high schools 27,604 (increase of 2,610); white and Negro teach-ers, respectively, numbered 9,655 and 6,304; expenditures for white schools $22,278,658; for Negro schools $7,349,749, representing in-creases since the school year 1930–31 of 88.75% and 339.88% re-spectively. The salary scale, based on preparation and experience, was he same for all schools.

**Social Insurance and Assistance, Public Welfare and Related Problems.**—In the year ending June 30, 1947, federal allocation for needy persons totalled $4,834,394, to which the state added $3,195,627 (plus $546,608 for the physically and mentally handicapped). A total of $6,199,957 went to 30,176 aged; $1,517,720 to 15,742 dependent children; and $305,343 to 1,199 blind. Total relief disbursements were $8,023,021. Some counties maintain sparsely inhabited alms houses. The state un-employment trust fund, contributed wholly by employers, totalled $46,-472,513. Payments to 16,552 unemployed during the year ending June 30, 1947, totalled $2,113,064. Patients in the state hospital (for the mentally diseased) June 30, 1947, were 4,928; in the school for the feeble-minded 971; prisoners in the state penitentiary and on state farms 1,188; reformatory for Negro boys 197; white girls' reformatory 88; reforma-tory for white boys (June 30, 1947) 191; legal executions during the year ending June 30, 1947, 11.

**Communications.**—Paved highways on June 30, 1947, totalled 8,427 mi.; mileage under the highway department 15,113; funded highway debt $44,815,763 (being steadily reduced); railroads 3,563 mi. Eastern, Delta, National and Southeastern air lines cross the state.

**Banking and Finance.**—On June 30, 1947, there were 23 national banks (plus 17 branches), 96 state banks (plus 5 branches), including 1 private bank, and 90 cash depositories with capital account, deposits and resources, respectively, as follows: national $17,773,000, $389,973,000 and $409,162,000; state banks and depositories $14,412,368, $236,179,526 and $250,811,223. Resources of federal building and loan associations were $54,946,787; of state building and loan associations $20,337,324. The state debt on June 30, 1947, was $48,213,097; total collections in the year ending that date $136,602,434; the estimated surplus on the same date was $4,728,000.

Federal income taxes for the year ending June 30, 1947, totalled $158,-743,937; other federal internal revenues $19,441,563. Exports amounted to $25,652,402; imports $6,270,253; and duties on imports $311,543 for the year ending June 30, 1947.

Farm real estate mortgage debt Jan. 1, 1946, totalled $39,636,000 as compared with $45,948,000 on Jan. 1, 1940.

**Agriculture.**—The 33 principal field and truck crops for the year 1947 were valued at $334,170,000, about $28,000,000 less than for the banner year 1946. Acreage (4,433,000) and 166,000 less than in 1946, and 355,000 less than for the ten-year average of 1936–45.

The value of commercial truck crops was $9,088,000, a sharp reduction from 1946.

**Manufacturing.**—The value of manufactures for the year ending June 30, 1947, was $1,557,240,138 as against $1,111,493,397 for the previous year. Employees numbered 168,091 as against 156,560 the year before.

**Mineral Production.**—Minerals produced (chiefly stone and clays, especially kaolin) during the year ending June 30, 1947, were valued at $2,-931,437 as against $4,570,778 in the previous year. (D. D. W.)

Table I.—*Leading Agricultural Products of South Carolina, 1947 and 1946*

| | 1947 | 1946 |
|---|---|---|
| Corn, bu. | 28,080,000 | 27,493,000 |
| Wheat, bu. | 4,356.000 | 2,706,000 |
| Oats, bu. | 19,630,000 | 20,097,000 |
| Barley, bu. | 624 000 | 546,000 |

| Fertilizers | 27,819,036 | 21,005,869 |

## South Dakota.

A north-central state of the United States, admitted as the 40th state on Nov. 2, 1889, popularly known as the "Coyote state." Area, 77,047 sq.mi., of which 511 sq.mi. are water; population (1940), 642,961, with 158,087 listed as urban and 484,874 as rural; Indian population, 23,347. The federal census bureau estimated the population on July 1, 1947, at 564,000. The state census taken during 1945 revealed a population of 589,802. Capital, Pierre (4,322 in 1940). Principal cities: Sioux Falls (40,832), Aberdeen (17,-015), Rapid City (13,844), Huron (10,843) and Mitchell (10,633).

**History.**—Important legislation enacted during the 60-day legislation session, ending March 8, 1947, raised the governor's salary from $3,000 to $8,500, and provided salary increases for other constitutional officers; prohibited the governor from serving more than two consecutive terms; permitted women to serve on juries; authorized submission of a constitutional amendment which would permit a $30,000,000 bond issue for a veterans' bonus; and placed restrictions on labour unions by outlawing the use of threats in the solicitation of union membership, by permitting unions to sue or be sued for damages and by limiting picketing activities.

State officials in 1947 included: George T. Mickelson, governor; Sioux K. Grigsby, lieutenant governor; Sigurd Anderson, attorney general; Miss Annamae Riff, secretary of state; Clarence Buehler, treasurer; and J. F. Hines, superintendent of public instruction.

**Education.**—The school census, ages 6–21, was 154,928 in 1945–46 as compared with 155,420 in 1944–45. The enrolment was 84,826 in elementary schools and 29,005 in high schools. Total expenditures were $15,926,980.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—During the calendar year 1946 the state department of social security distributed $4,267,280 among 12,685 persons in old-age assistance; $846,134 to 1,696 families as aid to 4,173 dependent children; and $64,290 for the needs of 213 blind persons. Eight penal and charitable institutions were in operation on a legislative appropriation of $1,709,745 for the fiscal year 1947–48.

Unemployment benefit payments were allotted during 1946 to 2,092 claimants for a total of $185,730 at an average weekly rate of $13.13. About 11,000 unemployed veterans received a total of $2,103,000 for readjustment allowance as provided by the Servicemen's Readjustment act.

**Communications.**—The state maintained a highway system of 5,942 mi. which in 1946 included 2,853 mi. of pavement and 2,804 mi. of gravel surface at a cost of $3,146,247. There were 3,966 mi. of railroad in operation in 1946. Telephones reached a total of 108,688 of which 35,716 were classified as rural.

**Banking and Finance.**—There were 35 national banks in operation on Dec. 31, 1946, with total assets of $245,793,000 and total deposits of $234,503,000. The 135 state banks and trust companies on June 30, 1947, had resources of $242,794,187 and deposits of $231,343,970. Nine building and loan associations on June 30, 1947, reported total resources of $4,124,900.

Total receipts for the state treasury for the fiscal year ending June 30, 1947, were $43,699,742; disbursements were $40,753,748. The bonded indebtedness was $20,314,000. Federal internal revenue collections for the same period totalled $51,795,756, of which amount $45,753,067 was derived from the income tax.

**Agriculture.**—Despite unfavourable weather conditions during July and August which resulted in a sharply reduced corn crop, the cash income from farm crops and livestock remained at a high level during 1947.

*Principal Agricultural Products of South Dakota, 1947 and 1946*

| Crop | 1947 (est.) | 1946 | Crop | 1947 (est.) | 1946 |
|---|---|---|---|---|---|
| Corn, bu. | 77,840,000 | 120,300,000 | Flaxseed, bu. | 5,640,000 | 3,440,000 |
| Wheat, bu. | 55,827,000 | 53,197,000 | Potatoes, bu. | 1,610,000 | 2,842,000 |
| Oats, bu. | 96,752,000 | 100,398,000 | Hay (tame and wild), short tons | 3,162,000 | 2,776,000 |
| Barley, bu. | 31,027,000 | 30,294,000 | | | |

**Mining.**—The total value of mineral substances produced in 1946 was $17,968,270. The state ranked second in gold production valued at $10,928,645; second in bentonite valued at $1,143,858; second in mica valued at $72,124; and third in feldspar valued at $583,557.

(H. S. S.)

**Southern California, University of.** This metropolitan university which is operated under a private foundation and which was founded in Los Angeles, Calif. (where it is still located), comprised in 1947 a total of 26 schools and colleges.

The 1947 enrolment exceeded all previous records. The housing situation continued to be acute despite special efforts to meet the problem. The alumni numbered 52,000 with about 7,500 being members of the general alumni association.

The new president of the university, Fred D. Fagg, Jr., previously vice-president of Northwestern university, Evanston, Ill., assumed the administrative and other functions of his office on Sept. 1. Capt. Burnett K. Culver became commanding officer of the Naval Reserve Officers Training corps. Prof. Sheldon D. Elliott of the school of law succeeded William G. Hale as dean of that school. Dr. Lewis F. Stieg became director of the graduate school of library science. The college of dentistry celebrated its 50th anniversary. New departments were organized, namely, biochemistry and nutrition, aeronautical engineering and Slavic studies.

A graduate department was organized in the school of medicine and a similar development was initiated in the school of dentistry. The number of graduate students enrolled in the university exceeded 3,100, with 1,469 being registered in the graduate school and the remainder being distributed among the various professional schools, university college and civic centre divisions. Twenty-nine departments and divisions give the Ph.D. degree and 51 departments and divisions the various masters' degrees. New masters' degrees were authorized in aeronautics, aeronautics and guided missiles, industrial chemistry, industrial design and medicine; new Ph.D. degrees were authorized in mathematics and physical education. Numerous research projects received special financial aid from foundations and government sources. These included projects in the college of engineering, departments of chemistry, biochemistry, philosophy, physics and public administration. Extensive additions were made to the university and departmental libraries. (For statistics of endowment, enrolment, faculty, library volumes, etc., *see* UNIVERSITIES AND COLLEGES.) (E. S. Bs.)

**Soviet Republics:** *see* UNION OF SOVIET SOCIALIST REPUBLICS.

**Soviet Union:** *see* UNION OF SOVIET SOCIALIST REPUBLICS.

**Soybeans.** The U.S. crop of soybeans in 1947 was the smallest since 1941, although about 50% above the ten-year (1936–45) average. The 1947 crop was estimated at 181,362,000 bu., 10% below the record crop of 201,275,000 bu. harvested in 1946. The acreage was increased 11% in 1947 to 11,125,000 ac. but the yield declined to 16.3 bu. per acre compared with 20.5 bu. in 1946 and the ten-year average of 18.2 bu. per acre. Lower yields in Illinois and Iowa, two of the three leading soybean states, reduced their crops sharply. Indiana, second to Illinois in 1947, had yields about equal to those of 1946. The Minnesota crop was better, but that of Missouri declined.

Prices of soybeans ranged higher through the year, advancing from an average of $2.93 per bushel in January to $3.67 in March and then levelled off at $3.00, later advancing again to $3.67 per bushel in December. These prices compared with an average of 95 cents per bushel for the prewar period of 1935–39.

*U.S. Soybean Production by Leading States, 1947, 1946 and 10-Year Average, 1936–45*

(In thousands of bushels)

| State | 1947 | 1946 | 10-yr. Average | State | 1947 | 1946 | 10-yr. Average |
|---|---|---|---|---|---|---|---|
| Illinois | 65,196 | 78,020 | 50,239 | Arkansas | 3,396 | 5,458 | 1,787 |
| Indiana | 28,176 | 26,106 | 16,294 | Kentucky | 1,908 | 1,566 | 583 |
| Iowa | 26,310 | 35,604 | 20,115 | Kansas | 1,887 | 2,178 | 1,070 |
| Ohio | 17,575 | 16,254 | 13,423 | Virginia | 1,425 | 1,106 | 832 |
| Minnesota | 13,800 | 10,675 | 2,025 | Mississippi | 1,330 | 1,050 | 806 |
| Missouri | 9,900 | 14,360 | 4,194 | Michigan | 1,292 | 1,200 | 1,248 |
| N. Carolina | 3,915 | 2,862 | 2,219 | Tennessee | 930 | 810 | 378 |

The government-support price, at 90% of parity, was $2.06 per bushel in October compared with the market price of $3.11 per bushel. No surplus of soybeans or soybean oil was in prospect because of the small world supply of oil seed. The Manchuria crop, which amounted to about 85,000,000 bu. for export in prewar years, furnished less than 2,000,000 bu. surplus during the first nine months of 1947.

The goal for 1948 was set at about the same acreage as was harvested in 1947 and more than 260% of the prewar acreage. (*See* also CHEMURGY.) (J. C. Ms.)

**Spaak, Paul-Henri** (1899– ), Belgian statesman, was born on Jan. 25, in Brussels. A law graduate, he practised in Brussels and was elected to the chamber of deputies on the Socialist ticket. In 1936, when Spaak was foreign minister in the Van Zeeland government, he conducted negotiations to secure Belgium's release from the Locarno pact and the Anglo-French-Belgian agreements; he then believed that Belgium could remain neutral in the event of war.

He fled to England after the German invasion in 1940, joining the government-in-exile as foreign minister and minister of labour. Retained as foreign minister in the Van Acker government established on Belgian soil in Feb. 1945, he headed the Belgian delegation to the United Nations conference in San Francisco and on Jan. 10, 1946, he was elected president of the general assembly.

After the fall of the Huysmans government, Spaak formed a new government March 19, 1947, retaining in addition to the premiership the foreign affairs portfolio. In the summer of that year, he represented Belgium at the 16-nation Paris Economic conference. The following autumn, he attended the United Nations general assembly in New York and joined the western bloc in its demands that a U.N. border-watch committee be set up in the Balkans. Toward the end of 1947, the issue of King Leopold's return to the throne was resurrected in the Belgian parliament; Spaak, however, opposed the king's return and won a vote of confidence on his stand, Dec. 10.

**Spaatz, Carl A.** (1891– ), U.S. army air officer, was born June 28 in Boyertown, Pa. He was graduated from West Point in 1914. During World War I he commanded a pursuit squadron in the St. Mihiel offensive. He was chief of staff to Gen. Henry H. Arnold in 1941, and in July 1942 he was named U.S. air commander in Europe. Early in 1943 he was shifted to the Mediterranean theatre as commander of the 12th U.S. air force and of the Allies' Northwest Africa air forces. On Dec. 24, 1943, Pres. Franklin D. Roosevelt announced the appointment of Gen. Spaatz as commander of "the entire American strategic bombing force operating against Germany" from all directions. During 1944 and 1945, under his command, U.S. air forces brought all points in Europe within range of Allied bombers.

Spaatz was named for promotion to the temporary rank of full general, March 13, 1945. He represented the U.S. at the German surrender ceremonies in Berlin, May 8. The war department announced his appointment July 5 to commander of the newly created U.S. strategic air force in the Pacific to direct uperfortress blows against Japan.

Gen. Spaatz succeeded Gen. Arnold as commander of all army ir forces (Jan. 24, 1946), and after the air force was given entity as a separate branch of the armed services, he was named y Pres. Truman on Sept. 25, 1947, as air force chief of staff. An advocate of a "stronger America," Spaatz was concerned ver the postwar decline of U.S. air strength, and told the President's Air Policy commission, Nov. 18, that the U.S.S.R. had 4,000 military aircraft.

**Spain.** A country of western Europe, bounded on the north by the Bay of Biscay and France, on the west by Portugal and the Atlantic, and on the south and east by the Mediterranean. Area: (including Balearic and Canary Islands) 94,945 sq.mi.; pop. (est. 1946) 27,246,000. Chief towns (pop. st. 1944): Madrid (cap. 1,140,621); Barcelona (1,108,961); Valencia (508,072); Seville (347,997), Zaragoza (Saragossa) (206,488); Málaga (258,598); Bilbao (208,347). Religion: mainly Roman Catholic. Caudillo, or chief of state: General Francisco Franco.

**History.**—At the end of 1947 General Franco was to all appearances entrenched in power more firmly than ever. The United Nations resolution, passed in Dec. 1946, recommending he withdrawal of ambassadors from Spain, caused a strong nationalist reaction there, and the masses, well prepared by months of intensive propaganda, were easily brought to patriotic fervour by the lavish use of such slogans as "Hands off Spain." The demonstrations of Dec. 9–10, 1946, held all over the country, were reinforced by the tumultuous welcome given in Jan. 1947 to Pedro Radio, the newly appointed ambassador from Argentina, a country which did not carry out the U.N. recommendations, to Eva Perón, wife of the Argentine president, who made an official visit to Spain in June, and to the crew of an Argentine training ship, which paid an official visit to Spain in August and conveyed back to Argentina the bodies of the parents of the liberator, José de San Martín. There was possible political significance, too, in the ceremonial transference from Madrid to Jerez de la Frontera of the remains of Gen. Primo de Rivera, dictator of Spain from 1923 to 1930.

Negotiations between General Franco and the Monarchists finally broke down; and, as the "Republican government in exile," reconstructed in February under Rodolfo Llopis, also broke down in August (to be reconstructed again on Aug. 23 under Alvaro del Albornoz) upon the resignation of its Communist member, the chief hope of the emergence of a new regime seemed to lie in the conversations between monarchists and right-wing Socialists led by Indalecio Prieto, which went on at intervals throughout the year. General Franco made the next move, however, by publishing on April 1, the eighth anniversary of his victory over the Republicans, the text of a "Law of Succession" which subsequently was unanimously approved by the cortes, and, in July, by a referendum of the people, 14,145,163 of whom (82.34% of the total electorate) voted in its favour and only 722,650 against it. The document described Spain as a kingdom, with General Franco as chief of state. He was to be "assisted" by a "Council of the Kingdom"; in case of his death or incapacity, he would be succeeded by a "person of royal blood" jointly proposed by the council and the government, who must be accepted by at least two-thirds of the cortes. Failing such a person, Spain would be governed by a council of regency pending the election of a regent. The chief of state might at any time name his successor, who must also have the assent of two-thirds of the cortes.

A week after the publication of the law, the pretender to the throne, Don Juan de Borbón, attacked it, in a manifesto addressed to the Spanish people, as "completely opposed to the system by virtue of which the succession to the Spanish crown has been governed throughout history" and an attempt "to turn the dictatorship of an individual into rule for life." He was ready, when the moment came, to agree to an "unconditional transfer of authority," but regarded the law as "valueless and void by its very origin." It was probably symptomatic of General Franco's feeling of security that he should have allowed this manifesto to be printed by every newspaper in Spain together

SPANISH PAGEANT staged at Madrid to honour Señora Perón, wife of the president of Argentina, during her visit to the Spanish capital in June 1947

with a government-inspired leading article attacking it. In September he announced that he proposed to assume the traditional prerogative of the head of the Spanish state to confer "grandeeships" (*grandezas de España*) and other titles of nobility, and it was believed that the object of this move was to divide the Monarchists by creating a new aristocracy favourable to a Carlist royal house.

Serious strikes, organized by the Basque resistance movement, which took place in northern Spain in May, were admitted by the foreign ministry to have affected 40% of the workers in the Bilbao area—a proportion increased officially to 75% over a much wider region. The strikes began with the observance of May day, despite a government ban, by about 50,000 workers, and were extended by the refusal of the civil governor of the province to agree to their readmittance, except on their special application and with loss of privileges. Eventually the deadlock was solved by the sympathy of many of the employers with the men and within a fortnight all was normal.

Economically there was little change. An exceptionally good olive harvest greatly eased the position with regard to olive oil, but the third-class bread ration (the largest, except that allowed to heavy manual workers) was cut in June, together with the tobacco ration. In August the prices of each class were raised, together with the prices of newspapers throughout the country, and in October it was announced that the daily bread allowances of the three regular classes would have to be reduced from 250g., 150g. and 100g., respectively, to 150g., 120g. and 75g. Gasoline restrictions were imposed in October, in the form of a decree forbidding private cars to be on the road for at least two days a week. In August, probably because of the phenomenal heat, a catastrophe occurred at Cadiz, when about 150 people were killed and 5,000 injured, in a series of explosions in the shipyards and in a submarine defense depot. Early in September a disaster of less magnitude, difficult to explain except as deliberate terrorism, occurred in the explosion of an underground powder magazine at Alcalá de Henares.

On March 28 a new monetary agreement was signed between Spain and Great Britain, each country to hold the other's currency up to £2,000,000 and Spain to hold an additional sum to cover the probable balance of payments in its favour. In July this was supplemented by a further agreement in which Spain undertook not to restrict the acceptance of sterling in the Spanish monetary area as settlement of payments for current transactions by residents outside that area.

In May the International Civil Aviation organization, during its first assembly at Montreal, Que., resolved to expel Spain from membership, subject to ratification of the resolution by two-thirds of the member states, on the ground of Spain's exclusion from the United Nations.

In the year 1947 fell the 400th anniversary of the birth of Miguel de Cervantes Saavedra, and during the year there were celebrations and commemorations throughout Spain. An international Cervantine congress (*Asamblea Cervantine de la Lengua*), attended by many foreign delegates, held its first series of sessions in October. (*See* also FASCISM.) (E. A. P.)

**Education.**—(1945): primary schools 45,148, scholars 2,530,728; secondary, scholars 185,644; commercial, scholars 53,214; technical, scholars 6,334; fine arts, scholars 9,379; trades, scholars 25,745; universities 12, students 43,498.

**Finance.**—Revenue (est. 1947) 12,963,523,857 pesetas; expenditure (est. 1947) 11,358,827,402 pesetas; gold reserve (1947) U.S. $111,000,000; national debt (1946) 43,977,876,800 pesetas. Rate of exchange: 1 peseta = 9.132 U.S. cents.

**Trade and Communication.**—Imports (1945) 869,048,000 pesetas; exports (1945) 880,656,000 pesetas. Communications: railways (1945), length of line 10,878 mi., including 768 mi. electrified; roads open to traffic (1946) 79,672 mi., mileage of regular road transport services 46,857 mi.; airways (1946) planes arrived 8,186, left 8,181, totals arrived, left and in transit: passengers 226,791; mails and newspapers 495 short tons; freight 4,008 short tons. Shipping: total Spanish tonnage (1945) 1,037,938. Number of telephones in service (1946) 451,819; exchanges 3,423.

**Mineral and Agricultural Production.**—Production (1946) in short tons: coal 11,649,200; pig iron and ferroalloys 539,690; steel ingots and castings 659,650; copper 72,610 (nine months); lead 22,778 (nine months); wheat 3,925,460; rice 220,400; beet sugar (1945) 150,540; cane sugar (1945) 10,470; oranges (1945) 928,200; olive oil (1945) 189,300; potatoes (1945) 2,936,000; wine (1944) 56,572,200 U.S. gal.

## Spanish-American Literature.

Latin American books published in 1947 showed that while Mexican and Argentinean novelists were developing powerful new trends, the rest of Latin American writers still did not manage to free themselves from regionalism. Mexico had several talented newcomers. Jesús Goytortúa followed his prize-winning *Pensativa* with another successful novel, *Lluvia Roja,* and received for it the Premio Ciudad de México. Agustín Yañez made a valuable contribution to the history of modern Mexico with his novel *Al filo del Agua* dealing with provincial life at the beginning of the century. Mention should be made of three other novels: Diego Cañedo's *La noche anuncia el día,* Francisco Rojas González' *Lola Casanova* and Manuel Andujar's *Llanura.*

Argentina's A. Arias, winner of several prizes, published a second novel, *La vara del fuego.* Alejandro Magrassi received an award for his *La Caá Yarí,* a representative work of northern Argentina. Editorial Losada introduced two new novelists: Estela Canto, author of *El retrato y la imagen,* and Angel F. Rojas, from Ecuador, author of *El éxodo de Yangana.* The short story was represented by J. Balach's *Motivos sureros,* about country life in Buenos Aires province, and Max Henríquez Ureña's *Cuentos insulares.*

Chile offered a clear example of stagnation. Marta Brunet continued to describe southern landscapes in *Humo hacia el Sur;* Luis Roberto Beza indulged in colourless provincialism in *La Puebla;* Mariano Latorre ventured into juvenile literature with *El Choroy de Oro.* Hernán del Solar was more fortunate in directing and writing for the newly founded Editorial Rapa Nui, publishers of books for children. Del Solar had written several short stories and *Chiu, el Campesino* was one of his best. A collection of miscellaneous prose by the first Chilean *costumbrista,* Alberto Blest Gana, came out under the title of *Costumbres y Viajes.* Ricardo Puelma's *Arenas del Mapocho,* although interesting in content, showed poor form. Two collections of short stories, *El Enigma* by Lucía Richard and *Melodía de Antaño* by Victoria Orjikh, further proved that Chilean fiction needed a quick change before it reached exhaustion. There was an odd item in Chile's output for 1947: a detective novel, *Los minutos acusan,* by Guillermo Blanco.

Central America offered a collection of short stories, *Champaña y Guaro,* by Hugo Lindo; a distinguished first novel, *Manglar,* by Joaquín Gutiérrez from Costa Rica and an anthology of *Cuentos Cubanos Contemporáneos* edited by José Antonio Portuondo.

As usual there was a good amount of miscellaneous and poetic prose published in Latin America. Chile's Benedicto Chuaqui displayed novelty of expression in *La eternidad contigo.* In his *Episodios Históricos,* Lucio Funes gave an interesting picture of colonial Mendoza. Ricardo Saenz Hayes' *Reminiscencias,* undoubtedly one of the outstanding books published in Argentina, is a record of travels, readings and conversations presented with great intelligence. The biographical articles written by Guillermo Sosa Loyola in *Pringles, Retazos de vida y tiempo* showed sound judgment and solid documentation. Mario Lopez Osornio edited *Oro Nativo,* an anthology of legends and popular poetry of the pampas. In *La Chimba,* Carlos Lavin told the story of that famous red-light district in 19th century Santiago which Dictator Diego Portales frequently visited.

Samuel A. Lillo was awarded Chile's national prize of literature (100,000 pesos). In 1947 he published *Espejo del Pasado,* hich summed up his entire career as poet, critic and journalist. illo was undoubtedly a second rate poet, but as a personality e had become an institution, with direct participation in the terary activities of more than three generations.

In Mexico, Isidro Fabela published his *Cartas al Presidente árdenas* which he wrote while Mexican delegate to the League f Nations. Adrián Recinos prepared an edition of the monuental *Popol Vuh, las antiguas historias del Quiché* for *Colecón Tierra Firme.*

Among the books of essays which appeared in Latin America uring 1947, the following deserved special attention: Gabriel errer's *Justo Sierra, el Maestro de América;* Carlos Miró Queada's *Rumbo literario del Perú,* including studies on Garcilaso e la Vega, Ricardo Palma, José S. Chocano and José de la Riva guero; Ulises René Girardi's *El hombre y el Cosmos;* Nicolás lonimsky's *La Música de América Latina,* a vast enterprise overing the history of Mexican, Central and South American usic plus a dictionary of composers, instruments, compositions, songs and dances; Rufino Cuervo's *El Castellano en mérica,* the unpublished articles and essays of a great grammarian; C. R. Centurión's *Historia de las letras paraguayas;* onzalo Picón Febres' *La literatura venezolana en el siglo XIX;* eón Dujovne's *Tomas Mann, las ideas y los seres en su obra;* osé Luis Romero's *Las ideas políticas en Argentina;* Daniel arcárcel's *La rebelión de Tupac Amaru;* Silvio Zavala's *La losofía política en la conquista de América;* and Ramón larés' *Psicogénesis del Arte,* published posthumously.

Latin American poets produced abundantly. A few of their ooks deserve mention: Esmeralda Radaelli, from Argentina, xpressed deep and passionate emotion in *Isla de Soledad;* M. Maples Arce gave importance to death and thoughts of social ignificance in *Memorial de la Sangre;* also from Mexico came uis Alvarez' *Humo,* Eugenio Florit's *Poema Mío* and M. González Flores' *Motivos humanos. Por un caminito así* by Rafael Arévalo Martínez represented the best that Central American oets had to offer. Nicolás Guillén, the great Afro-Cuban poet, gathered his entire poetical production in one volume, *El Son Entero,* published in Buenos Aires. Pablo Neruda's complete works were being published in Santiago by Cruz del Sur with introduction and critical notes by Juvencio Valle. Editorial Losada quickly sold out the first edition of Neruda's *Tercera Residencia.* (F. Aa.)

## Spanish Colonial Empire.

Total area: *c.* 134,763 sq.mi.; population (excluding Spain; est. 1946): 1,392,000.

The accompanying table lists the colonies, protectorates, etc. of Spain (*q.v.*) with certain essential statistics appropriate to each of them.

*Spanish Colonial Empire*

| Country and Area sq. mi. (approx.) | Population Estimated July 31, 1944 (000's omitted) | Capital Status, etc. | Principal Products (in short tons) | Imports and Exports (in pesetas) | Road, Rail and Shipping | Revenue and Expenditure (in pesetas) |
|---|---|---|---|---|---|---|
| Ceuta, Melilla, Alhucemas, Chafarines and Peñon de Velez, 82 | 145 | Madrid, administered as part of Spain | exports (1942)<br>raw materials 610,900<br>manufactures 7,370 | (1942)<br>imp. 169,769,990<br>exp. 54,764,500 | | |

Juan Varela | (1944)<br>wheat 40,434<br>barley 150,998<br>maize 6,507<br>sorghum 39,365<br>iron ore 742,556<br>antimony ore 359 | (1945)<br>imp. 494,301,977<br>exp. 143,388,959 | rds. c. 500 mi.<br>rly. 80 mi.<br>shipping (1943)<br>entered 307,379 tons,<br>cleared 307,299 tons | (1938)<br>rev. and exp.<br>111,312,200 pes.<br>1938: 1 peseta= 11.05 U.S. cents |
| Spanish Guinea, including Fernando Po, Rio Muni and four small islands, 10,900 | 171 | Santa Isabel, colony | exports (1943)<br>coffee 4,305<br>cocoa 14,133<br>timber 83,696 | (1943)<br>exp. 99,014,240<br>(imp., in short tons, 23,870) | | (est. 1943)<br>rev. 22,266,400 pes.<br>exp. 23,631,100 pes.<br>(in 1943 1 peseta= approx. 9 U.S. cents) |
| Western Sahara, including Ifni, Rio de Oro and Spanish Sahara, 106,150 | 72* | Villa Cisneros, colonies | fish and dates | | | |

*Ifni =35, Rio de Oro, etc. =37

## Spanish Literature.

Spain's biggest literary event of 1947 was the 400th anniversary of the birth of Miguel de Cervantes Saavedra. García Soriano and García Morales prepared a new edition of *El ingenioso hidalgo don Quijote de la Mancha,* embellished with engravings and lithographs from the more famous earlier editions. Soler Torner in *Algo más sobre el "Quijote"* returned to the classical interpretation of the novel. Cotarelo Valledor's lecture *La Dulcinea de Cervantes* appeared printed in booklet form. García Martí included in *Don Quijote y su mejor camino* a series of essays which treated such topics as Don Quixote and Faust, the innkeeper's daughter, etc. Fuentes Alonso's *Romances cervantinos* drew upon the novel for inspiration.

Substantial additions were made to the collections of Spanish classical and modern writers; in most cases their total literary production was published, but in others only their selected works. Authors represented were: Tirso de Molina, López de Zárate, Jorge Montemayor, García Gutiérrez, Leopoldo Alas, the brothers Joaquín and Serafín Alvarez Quintero, the brothers Antonio and Manuel Machado and Pío Baroja.

The theatre was extremely active with Jacinto Benavente's *La infanzona* attracting wide attention and bringing acclaim to the playwright on the occasion of its one-hundredth performance. Eduardo Marquina, who died in 1946, still figured in the theatre with a homage performance of *La ermita, la fuente y el río* and the publication of *El galeón y el milagro,* a romantic play appealing to Spanish patriotism. José María Pemán (director of the Royal Spanish academy) in *Todo a medio hacer* satirized modern society with its deceit and emphasis on speed and quantity. *Diario intimo de la tía Angélica* unfolded the poetic story of an elderly spinster who kept a romantic diary. Pemán's *Vendimia,* a comedy in verse, was staged by the company directed by the Argentine actress Lola Membrives. His humorous comedy *La verdad* was produced at the Lara theatre. *El pulso era normal,* a comedy by Luca de Tena, related the complications arising when a man suffers from amnesia for a period of several months. Under the title of *Tres comedias optimistas,* Ruiz Iriarte published *Un día en la gloria, El puente de los suicidas* and *Academia de amor.* Calvo Sotelo with his comedy *La cárcel infinita* won the Espinosa Cortina prize. The Lara prize of 10,000 pesetas was bestowed upon Doña Amira de la Rosa, a Colombian living in Spain, in recognition of the merit of her comedy *Piltrafa;* at the suggestion of the judges, the Lara management awarded another prize of a like amount to Claudio de la Torre for his comedy *Clementina.*

Concha Espina in her novel *El más fuerte* developed the thesis that the strongest is frequently routed in life by the weakest. José María Gironella received the Eugenio Nadal prize for his novel *Un hombre,* a work rich in characters and incidents. Eulalia Galvarriato was a finalist for the same prize with *Cinco sombras,* a story concerned with the colourless existence of five girls and their romantic friend Diego. Bartolomé Soler in *La llanura muerta* made manifest the restlessness of his spirit, penetrating into the hidden recesses of the soul. The action of *Romance de estrella y el mar* by Carmen Nonell takes place in the Basque country. Juan Antonio de Zunzunegui's *La quiebra* was a novel inspired in the world of finance, with the collapse in business, politics and faith following World War I. *Cuando los ángeles duermen* by Benítez de Castro was a story with the Barcelona of 1907 to 1942 as its setting. Hernández Navarro wrote a war novel in *Ida y vuelta. El golpe de estado de Guadalupe Limón* by Torrente Ballester was a vigorous novel with a South-American background.

*Memorias inmemoriales,* a collection of essays by Azorín, gave expression to spiritual reflections, incorporating many personal experiences and ideas. *El artista y el estilo* contained some of his other essays, collected and arranged by Cruz Rueda, who in the prologue included a biography and study of Azorín's works. Jesús de Lucas' *Pedazos de una vida* brought out how events had influenced his mind. *Smouldering Freedom* by Isabel de Palencia recorded the experiences of Spaniards living in exile. Pío Baroja's fourth volume of *Memorias,* entitled *Galería de tipos de la época,* conveyed his impressions of many acquaintances.

The Adonais Poetry prize for 1947 was awarded to José Hierro for his book *Alegría;* more than 100 works were submitted in the contest. The Juan Valera prize, given for the best ten sonnets on characters from Valera's works, was won by Molina Tenor. Ginés de Albareda's book of poetry *Seis sonetos de Mallorca y un poema de amor* was selected by the Royal Spanish academy for the Fastenrath prize.

Salvador de Madariaga's *The Rise of the Spanish American Empire* was rich in factual information about Spanish America. In *El declinar de la monarquia española,* José Deleito y Piñuela studied the process of decadence during the reign of Philip IV. Fernando Díaz-Plaja gathered interesting information about 18th century customs in *La vida española en el siglo XVIII.* José Llampayas stressed the monarch's human qualities and misfortunes in *Alfonso X* (*El hombre, el sabio*). José M. Doussinague in *Fernando el Católico y el cisma de Pisa* included 155 documents in a study of the years 1511–13. Gregorio Marañón y Posadillo objectively laid bare the character of Philip II's secretary in his *Biografía de Antonio Pérez.* Ramón Serrano Suñer, who played an important rôle in world affairs (1940–42), brought out much that transpired during World War II in his book *Entre Hendaya y Gibraltar.* (H. L. Jn.)

**Spanish Possessions in Africa:** *see* Spanish Colonial Empire.

**Spelman Fund of New York:** *see* Societies and Associations.

**Spices.** During 1947 the world's two largest storehouses of spices, Indonesia and India, were torn by civil strife. Bitter fighting prevailed. Occasionally a port in Java or Sumatra was opened, when good quantities of pepper, nutmegs and mace were sent, preferably to the U.S. for useful dollars. The price of black pepper fluctuated erratically. From 55 cents per pound landed at New York in January, the market declined gradually to 23 cents, moving unevenly as supplies arrived or famine impended, again touching 53 cents during October. The pepper harvest in the Malabar region of India was bountiful. Distribution was by export licences granted by the new Indian government, solely to native sellers. English firms previously had merchandised these famous Tellicherry and Alleppey black peppers. India was intensively cultivating its pepper plantations for a maximum crop in Jan.–March 1948. Prices during 1947 were two or three times those received in prewar years.

Chinese liquidation of accumulated stocks of cassia (cinnamon) continued from Hong Kong, almost all of the tonnage being shipped to the U.S. Prices fell to but 20% of the V-J day level for the standard varieties, and another harvest was almost ready.

Hungarian paprika was again offered in the world's big city markets, after a lapse of seven years. Spain again produced the largest crop. Paprika was cultivated by Morocco and Chile, finding markets readily against government monopoly prices of Europe.

Most of the war-substitute spices disappeared from international trade. The herbs, thyme and marjoram from France, again appeared. Costs were high because of manipulation of the franc.

In New York the American Spice Trade association established a research committee of scientists to raise the quality of spices as prepared and packed for consumers. Purity is so well maintained under better selection and processing of raw materials and under the food laws of most countries, that improvement must be sought by expert study of the constituents of each spice, to increase the content of natural strength and flavouring elements.

Mustard maintained leadership as mankind's most popular condiment. The seeds were cultivated in China, India, Europe and North and South America. North American 1947 production was curtailed by hail storms when the growth, heavy with ripened pods, was about to be harvested. An official (U.S. department of agriculture) estimate of the loss was 16,000,000 lb. During the year the U.S. produced 38,000,000 lb. of mustard seed, insufficient to satisfy that country's record-breaking demand. Imports offset the shortage.

Until such time as trading with Indonesia could be resumed, Grenada, one of the British West Indies, continued to hold a nutmeg monopoly. Instead of 10 cents per pound, as in 1939, the 1947 crop brought nearly 50 cents per pound.

Ginger was plentiful, more of the buying than usual being done in Sierra Leone, Africa. There the crop was heavy and the quality remarkably better than ever. Jamaica and the Indian gingers were neglected, being substantially more expensive.

Sage, genuine *Salvia officinalis,* again became obtainable from Yugoslavia. The U.S. requires about 500 tons annually, principally for seasoning pork sausage.

Large-scale production of caraway and poppy seeds in the Netherlands was welcomed by bakers who require them for certain kinds of bread and rolls.

Red peppers were plentiful throughout 1947 from Africa. In the U.S., California harvested good crops of the milder varieties, including the Pasilla or "Mexican" chilies indispensable for chili con carne.

The Levant exported more aromatic food seeds than usual. Its large crops of anise and cumin brought good prices.

(C. A. T.)

**Spirits:** *see* Liquors, Alcoholic.

**Sports and Games:** *see* Angling; Archery; Badminton; Baseball; Basketball; Billiards; Bowling; Boxing; Chess; Cricket; Curling; Cycling; Fencing; Football; Gliding; Golf; Gymnastics; Hand-ball; Horse Racing; Ice Hockey; Ice Skating; Lacrosse; Motor-boat Racing; Polo; Rowing; Skiing; Soccer; Softball; Squash Racquets; Swimming; Table Tennis; Tennis; Track and Field Sports; Trap-shooting; Wrestling; Yachting.

**Squash Racquets.** Charles W. Brinton of Philadelphia, Pa., again dominated the squash racquets scene in 1947, topping his rule with the national championship in an all-Philadelphia final with Stanley Pearson, Jr. Brinton won, 15–12, 15–9, 9–15, 18–16. Pearson and David McMullen, also of Philadelphia, won the national doubles, while Mrs. Charles Homer, Jr., of Merion, Pa., captured the U.S. women's singles.

In international team competition, Canada won the Lapham International trophy and the U.S. retaliated by winning the Grant trophy for doubles play. Ed Reid of Hartford, Conn., won the professional division.

J. Richard Leonard of Cedarhurst, N.Y, defeated Richard A. Holt of England in the national amateur racquets final. Holt, however, won the Pell cup over Leonard.

Squash tennis honours were generally cornered by F. Barry Ryan, Jr., of New York, who won both the national and veterans' championships. (M. P. W.)

**Stalin, Joseph Vissarionovich** (1879– ), soviet statesman, was born on Dec. 21 in Georgia in Transcaucasia and succeeded Lenin as virtual dictator of the Soviet Union in 1924 (see *Encyclopædia Britannica*). On May 6, 1941, shortly before the German invasion, Stalin assumed the premiership of the U.S.S.R.

During World War II, the necessity for defeating their common enemy forced the Big Three's leaders to synchronize their politico-military actions and Stalin, in his meetings with Winston Churchill and Franklin D. Roosevelt at Tehran and Yalta, and later with Clement R. Attlee and Harry S. Truman at Potsdam, was able to reach agreement with the Allies on many issues. After the war, however, the grand alliance disintegrated and latent antagonisms between the wartime partners soon came to the surface. East-west disputes in the major international conferences engendered fears of a new world war. Stalin asserted several times, however, that neither the nations nor the peoples of the world wanted war, but declared that the most serious threats to peace were the "incendiaries of a new war," naming Churchill as the foremost "incendiary."

His views on U.S.-soviet relations were expressed in his interview with Harold Stassen on April 9, 1947, when he told Stassen that despite their differing economic systems, the U.S. and the Soviet Union could exist together in harmony if there was a will to co-operate, adding that the U.S.S.R. "wants to co-operate."

To Secretary of State George C. Marshall (who visited the soviet prime minister during the Moscow conference of the Big Four foreign ministers) Stalin was quoted as saying he thought compromises were possible on all the major issues before the council but that "it was necessary to have patience and not become pessimistic."

In Feb. 1947, Stalin was unanimously elected as deputy to the supreme soviet of the Russian Soviet Federative Socialist Republic. The following month, he resigned as minister of the armed forces and handed the job to Gen. Nikolai A. Bulganin. He also was elected to the Moscow city soviet on Dec. 21, his 68th birthday. (*See* also UNION OF SOVIET SOCIALIST REPUBLICS.)

**Stamp Collecting:** *see* PHILATELY.

**Standards, National Bureau of.** Deriving authority from act of U.S. congress March 3, 1901, this bureau is the principal agency of the federal government for fundamental research in physics, mathematics, chemistry and engineering. During 1947 it consisted of 13 scientific and technical divisions, 1 concerned with commodity standards, and 4 concerned with administrative and plant matters. The scientific divisions were electronics, applied mathematics, atomic physics, radio propagation, mechanics and sound, electricity and optics, metrology, chemistry, organic and fibrous materials, mineral products, heat and power, building technology and metallurgy.

The present structure represents a reorganization that became effective July 1, 1947, and involved a regrouping of established sections to form the atomic physics and building technology divisions, the expansion of the work in mathematics into a division of four sections, and a consolidation of the old simplified practice and commercial standards divisions into a single commodity standards division to which are assigned co-ordinating functions of the bureau's work in federal specifications.

Coinciding with the range of the physical sciences, the activities of the bureau during 1947 were extremely diversified and extensive. Three broad types of activities were pursued in these fields: research and development; test, calibration and standard samples; and advisory and co-operative functions. In general, each of the divisions and sections of the bureau was engaged in all of these activities.

Normal investigations were continued in atomic physics. An important advance in this field was the development of an electronic method of focusing electrons emitted by radioactive atoms, called tracer micrography. This new method permits higher resolution in observing tracer atoms—radioactive isotopes introduced into substances to observe the behaviour of individual atoms. Beta-ray standards were developed and calibrated; microgram gamma-ray standards were prepared; disintegration schemes and nuclear energy levels were investigated; atomic energy levels were compiled; radiation hazards of low-energy radiations were studied; an extensive program to determine the absorption and scattering characteristics of concrete barriers for broad X-ray beams up to 1,500,000 volts was under way; and a co-operative program with the Carnegie institution on the fundamental action of penetrating radiation on biological matter was in progress.

The creation of a division of applied mathematics, the National Applied Mathematics laboratories, represented a major co-operative effort of the bureau, the office of naval research and other federal agencies. Four sections were activated: the Institute of Numerical Analysis, located at the University of California, Los Angeles; the Computation laboratory, incorporating the long-established Mathematical Tables project of the bureau in New York city; the Statistical Engineering laboratory; and the Machine Development laboratory. Instrumental in supporting the program and in recognizing the need for a centralized national computational facility equipped with high-speed automatic machinery, the office of naval research provided funds for the first two units. The office of naval research and the bureau of the census contracted for high-speed electronic automatic computers. The machine development group completed the design phase of this work, in close co-operation with the electronic component group of the bureau, and construction was to begin in 1948. Highly specialized mathematical tables were prepared during the year, including tables of spherical scattering functions for complex arguments, of spherical Bessel functions, of the exponential integral for both complex and real values of the parameter, and tables of intensity functions for complex indices of refraction.

Two major problems confronted the bureau in its basic research. First, the demands of contemporary science and technology for greater precision and additional data on scientific standards, the properties of materials, and physical constants required intensified activity in the established branches of the physical sciences. For example, new standards of direct capacitance for units below 5 micromicrofarads were developed and investigations of plain ring gauges cylindrically accurate to 0.000005 inch were in progress. Second, new fields of science demand new standards. Thus radar extended the radio frequency spectrum a hundredfold during World War II, and this extension required much basic research of the nature of propagation, in the development of instruments and methods of measurement, and in the preparation of standards. As a result of the year's work, the bureau could certify the accuracy of practically all radio measuring instruments and components of frequencies up to 30 megacycles; attenuators and voltmeters of conventional design and range could be standardized up to 100 megacycles; and frequency meters or cavity resonators up to 20,000 megacycles.

Representative projects included the following: thermionic and secondary emission, electron microscopy, ultra-small electronic circuits, electronic components for digital computing machines, printed electronic circuits, basic radio propagation predictions, microwave and frequency utilization research, research in cosmic and atmospheric noise, oscillation of quartz plates, liquid oxygen for aircraft use, sound insulation, turbulent boundary layer research, flood waves, electrical surge measurements, underground corrosion, batteries and dry cells, transmissometer for control of approach lights, telescopic pointing, end standards, high-temperature specific heats, hydrocarbon research, gas turbine pyrometers, conventional heating devices, warm air panel heating, new secondary standards of mass, precision angle gauge blocks, surface strains in plastic dentures, benzoic acid thermometric standard, electrodeposition, high polymer research, properties of synthetic and natural rubbers, water repellent fabrics, permanence of plastics, concretes containing admixtures, new optical glasses, and various studies in ferrous and nonferrous metallurgy.

Nearly 150,000 tests and calibrations were made for other government agencies and the public. The activity embraced the furnishing of 20,000 standard samples, the testing of about 2,500 light bulbs (a sampling of nearly 3,000,000 purchased by the government), the sample testing of 3,000,000 bbl. of cement, the testing of more than 22,000 clinical thermometers, measurement and calibration of all the radium sold in the United States, and tests and calibrations of thousands of materials, devices and instruments.

The results of research and development at the bureau, typified in the preceding representative projects, are made available to the nation through official publications. Three periodicals, the *Technical News Bulletin*, the *Journal of Research* and *Basic Radio Propagation Predictions* are issued monthly in addition to nonperiodicals like the Applied Mathematics Series, the Building Materials and Structures Series, circulars, handbooks and miscellaneous pamphlets and books. All of these publications are available from the superintendent of documents, U.S. government printing office, Washington, D.C. (H. OD.)

**Stanford University** (THE LELAND STANFORD JUNIOR UNIVERSITY), an independent institution of higher education near Palo Alto, Calif.

The enrolment in the autumn of 1947 was approximately double the prewar peak. Although classroom, library and laboratory facilities were strained, a new schedule distributing both classes and laboratory work throughout the day made it possible to accommodate the increased load. Stanford Village, a reconverted army hospital located two miles from the campus, housed more than 2,000 students.

A school of mineral sciences bringing together the departments of geology and mining was organized under the direction of Dean A. I. Levorsen. With the appointment of ten scholars made possible by a grant from the Rockefeller foundation, the Hoover institute inaugurated a program in Slavic studies. Work in creative writing was given a special impetus by a pledge of $75,000 from Dr. Edward H. Jones to guarantee for five years six annual $2,000 fellowships and prizes for excellence in writing the short story, the novel, the drama and poetry. With the aid of the National Theater conference, five junior artists-in-residence were appointed in the speech and drama department.

In the physics department Professor William Hansen designed and constructed an electron linear accelerator which was less elaborate and expensive than the cyclotron and offered dramatic possibilities for greatly increased energy through a simple extension of its length. And in bacteriology under the direction of Professor Hubert Loring significant advances were made on the identification and cultivation of strains of poliomyelitis virus.

Professor George Polya's election as a foreign member of the mathematics section of the French Academy of Sciences made him one of three living Americans so honoured. An unusual honour came likewise to Professor Stephen P. Timoshenko when he was designated the second American to be awarded the James Watt international medal by the Council of the Institute of Mechanical Engineers of Great Britain.

Gifts for the year totalled $1,696,000. From the estate of Mrs. Lucie Stern, funds were made available for the construction of an undergraduate men's dormitory. Near the end of the year construction was started on Crothers hall, a dormitory for graduate students in law. (For statistics of endowment, enrolment, faculty, library volumes, etc., *see* UNIVERSITIES AND COLLEGES.) (A. C. EU.)

**Stassen, Harold Edward** (1907– ), U.S. politician and naval officer, was born April 13 in West St. Paul, Minn. He studied at Minnesota university and law school, Minneapolis, Minn., 1923–29, and was admitted to the Minnesota bar in 1929. He first ran for political office in 1930 when he was elected county attorney, a post he held for eight years. He was elected governor of Minnesota on the Republican party ticket in 1938 and was inaugurated in Jan. 1939, one of the youngest governors in the U.S. He was re-elected governor for the 1941–43 term. Stassen was temporary chairman and keynoter of the Republican national convention in 1940 and was national chairman of the Governors' conference and of the Council of State Governments, 1940–41. He resigned as governor in 1943 to join the U.S. navy. A commander and flag officer to Adm. William F. Halsey, Jr., Stassen saw action in four battles. On Feb. 20, 1945, he accepted Pres. Franklin D. Roosevelt's appointment as delegate to the San Francisco conference of the United Nations. Stassen, who was promoted to the rank of captain in October, was released from the navy on Nov. 15, 1945, and he returned to the political arena. On Dec. 17, 1946, Stassen became the first of the G.O.P. aspirants to announce his candidacy for the 1948 presidential nomination. A former Wendell L. Willkie backer, Stassen and his "liberal" platform was looked upon with misgivings by the conservative wing of the party. Toward the close of 1947, Stassen led the assault on commodities speculators, and his charge, Dec. 10, that administration "insiders" profiteered in food led to a senatorial probe of grain speculators.

HAREHOLDER of the U.S. Steel Corp. addressing the 46th annual meeting stockholders and directors which was held at Hoboken, N.J., on May 5, 1947

## tocks and Bonds.

The U.S. stock market in 1947 was exceptionally inactive in volume of ading, remarkably steady in price level and slightly bearish as ompared with the closing price level of 1946.

With the exception of railroad stocks, the three alternate bull nd bear movements of 1947 were comparatively minor in xtent. The drastic bear market of 1946 apparently had spent s force, and the 1947 price level seemed to indicate primarily backing and filling procedure.

During 1947, corporate earnings were regarded as more or ss uncertain because of the large wage increases granted toard the end of 1946 and in the first months of 1947, although orporations within most groups of shares, with the exception f rails, managed to make a fairly satisfactory adjustment. In his they were aided by price increases in either products or ervices. Unfortunately the rate of adjustment was spotty in ifferent fields and much slower than had been anticipated. oreover, the entire year was marked by a psychology of inflaion and a rapid rise in most basic commodities. Markets also eemed to reflect the view that neither a high postwar boom nor serious business depression was likely.

Toward the close of 1947 observers emphasized the followng problems as causing most of the stock market's unsettleent: (1) extremely high and sensitive commodity markets, 2) rising inventories of retailers with increasing sales resistance nd declining sales, (3) absence of needed skilled labour, (4) radual stiffening in long-term oney rates, reflected by many ew lows among preferred tocks as well as bond issues, 5) inflation at a high point, nd (6) adverse developments n the foreign situation.

On Dec. 1, 1947, the market alue of all listed shares on the ew York Stock exchange tood at $67,026,000,000, with n average market price per hare of $47.13. On Nov. 1, 1946, this market value stood at $66,115,000,000, with an average price of $51.63. A depreciation in value of approximately 8.7% was thus shown for the year.

According to the New York Stock exchange's compilation, the total stocks listed on that exchange on Dec. 1, 1947, stood at 1,896,000,000 shares, with a total market value of $67,026,000,000. This value compared with $66,115,000,000 on Nov. 1, 1946, $69,560,000,000 on Nov. 1, 1945, and $53,087,000,000 on Nov. 1, 1944. Of the 1947 total (as of Dec. 1), U.S. stocks aggregated 1,843,000,000 shares valued at $65,970,000,000, and stocks of other countries 53,427,000 shares valued at $1,056,000,000. The total of shares was distributed over 1,354 separate U.S. issues and 19 issues of other countries, representing a total of 992 issuing corporations.

Total shares traded on the New York Stock exchange during 1947 amounted to only 253,623,894 shares, as compared with 363,709,000 shares during 1946, 377,564,000 shares during 1945, 263,074,000 shares during 1944, 278,742,000 shares during 1943, 125,678,000 shares during 1942, 170,534,000 shares during 1941 and 1,124,991,000 shares during 1929, the largest yearly total on record. The New York curb market had sales during 1947 of only 72,380,000 shares, as compared with 137,220,000 shares during 1946, 143,337,000 shares during 1945, 71,062,000 during 1944, 71,382,000 during 1943 and 22,328,000 during 1942.

**Bonds.**—According to the New York Stock exchange's record, stock, bond and note flotations of U.S. corporations during the first nine months of 1947 totalled $2,681,000,000; but exclusive of refunding issues, investment trusts and holding companies,

TRADING IN STOCKS on the New York Stock exchange: yearly range of prices and number of shares sold, exclusive of odd-lot and stopped sales

the total flotation amounted to only $1,414,000,000. These figures compared with similar totals during the corresponding ten months of 1946 of $3,331,000,000 and $1,080,000,000, respectively.

The total par value of bonds listed on the exchange at the beginning of Nov. 1947, stood at $136,711,000,000, with a market value of $136,336,000,000. This value compared with $136,880,000,000 and $124,802,000,000 for the corresponding years of 1946 and 1945. The increase in value during 1945 and 1946, as was the case also for a number of previous years, was largely attributable to the issue of large amounts of U.S. government securities, while during 1947 this important factor ceased to be a continuing one. Of the 1947 total, U.S. corporation bonds (at the beginning of November) amounted to $14,636,000,000, with a market value of $13,367,000,000; company bonds of other countries with a par value of $603,783,000 and a market value of $541,107,000; U.S. government bonds (inclusive of corporations and subdivisions) with a par value of $119,710,000,000 and a market value of $123,200,000,000; and other governments (inclusive of subdivisions) with a par value of $1,511,000,000 and a market value of $979,721,000. The total listed bonds of U.S. corporations were distributed over 584 issues with 316 issuers; of U.S. government bonds with 79 issues and 3 issuers; and other governments with 188 issues and 44 issuers. The total bonds traded on the New York Stock exchange during 1947 amounted to $1,075,541,000 as compared with $1,364,000,000 during 1946.

**Stock Exchange Rules.**—Alterations in the rules, practices and recommendations of the New York Stock exchange during 1947 included:

*Permissive Incorporation.*—On Jan. 16, 1947, the board of governors again disapproved amendments to the constitution which would permit corporations to hold memberships, and refused to have the amendments submitted to the membership for a vote. Following this action the proposed amendment was again submitted, on Nov. 7, to a vote on a petition bearing 340 names. By a vote of 835 to 344 the membership disapproved the proposed amendment. The proposition this time was submitted for balloting to the membership without the governing board's approval or disapproval.

| Nov. | 113.7 | 112.9 |
| Dec. | 113.1 | 111.7 |

*Margin Requirements.*—In January the federal reserve board ruled that, effective Feb. 1, 25% credit could be extended on transactions in registered securities listed on national securities exchanges. The board had prohibited such extension of credit since Jan. 21, 1946. On Sept. 26, 1947, the margin rules of the exchange were amended by the board of governors to provide that effective Oct. 1, securities selling above 5 could be purchased on the same credit terms as previously applied only to securities selling above 10.

The president of the New York Stock exchange declared that ill-advised use by the federal reserve board of its credit authority had contributed to unsatisfactory conditions in the securities markets and that an appropriate credit basis would be 50%.

*Commission Increases.*—On Oct. 17 the board of governors approved an amendment to the constitution of the exchange providing for the calculation of commissions on a money-involved basis and an estimated over-all increase in gross commission income by approximately 20%.

The amendment was approved by the membership on Oct. 31 and the new rates became effective Nov. 3. It was vigorously opposed by many, and a record 1,131 votes were cast in the balloting, with 756 approving the new measure and 373 in opposition.

*Exchange Procedures.*—The board of governors approved an amendment to the constitution of the exchange "which would enable members of the exchange, by petition with 175 signatures, to present Constitutional amendments to the Board which

Bases are 100 as at the following periods: fixed interest, 1928; industrial ordinary, July 1, 1935; govt. securities and gold mines, ct. 15, 1926.

The indexes shown in the above table are those calculated each day by the *Financial Times*, and are reproduced by permission of the *inancial Times.*

would be referred to the membership for vote whether or not approved by the Board." The amendment was approved by the membership on March 20 by a vote of 739 to 122.

An increase in the capital requirements for firms carrying commodity accounts was placed into effect on April 18.

*Informative Reports.*—A survey of the geographical origin of all orders in stocks executed on the floor of the exchange during the period of March 24 through March 29 disclosed that 75.18% of total share trading originated in the east; 16.30% from the central time zone: .82% from the Rocky mountain zone; and 7.70% from the Pacific coast zone.

A specific detailed breakdown of the regular monthly short position report in listed stocks as of June 17 disclosed that, of the total short interest, "of 1,539,638 shares, 88.9% or 1,369,186 shares reflected positions of nonmembers, compared with 170,452 shares or 11.1% for members. Of 11,165 short accounts, nonmembers accounted for 10,731 or 96.1%, compared with 434 member accounts or 3.9%."

The Securities and Exchange commission reported that during the violent bear market of 1946 on the exchange, it did not appear that "the over-all market action resulted from planned or concerted action by any group; nor do the activities of any group seem to have amounted to more than the free play of different opinions as to when to buy and when to sell"; and that it "found no evidence that market prices depended at any moment on manipulative activities." (*See* also BUSINESS REVIEW.)

(S. S. H.)

**Great Britain.**—The year 1947 was critical for the London market in stocks and bonds. The long bull market in industrial ordinary shares which had begun in 1940 was stemmed by the fuel crisis in February, which brought large sectors of British industry to a temporary standstill, and finally broke when the running out of the U.S. loan and suspension of sterling convertibility underlined the gravity of Britain's economic position.

At the same time, the growing dangers of fostering an already inflationary situation by the policy of cheap money appeared to have impressed themselves upon the government advisers, and the market for British funds was allowed to find its own level. Yield on long-term government securities rose from about 2½% to 3%, and the newly-issued 2½% treasury stock ("Daltons"), redeemable in 1975 or after at government option, at one time fell to 20% discount. Yields on other securities were adjusted accordingly.

A major influence in bringing down gilt-edged prices was the substantial discount on "take-over" prices at which home rails were standing for most of the year. These securities, to be replaced by a £1,000,000,000 government guaranteed British transport stock on Jan. 1, 1948, provided a means of buying a gilt-edged stock at prices cheaper than gilt-edged themselves, and exchanges into home rails tended to depress gilt-edged prices. The basis for issuing transport stock depended on the level of gilt-edged at the date of issue, and it was probably the desire of the government to issue the stock as cheaply as possible that impelled Hugh Dalton, before he resigned the chancellorship, to speak hopefully of the market's prospects in the autumn, with the sequel that a good recovery ensued, which was partly lost when Sir Stafford Cripps became chancellor.

There was no doubt that the hope of a U.S. plan of aid for Europe helped stave off a more drastic break in market prices. Other developments tending to aid markets included the agreement to sell the British-owned railways in Argentina for £150,000,000, conclusion of financial agreements with a number of countries, the high prices of commodities, and the swing of political opinion to the right in local elections.

The full impact of the export policy had yet to be seen, and public activity in markets declined as the year wore on.

**Stomach Disorders:** *see* ALIMENTARY SYSTEM, DISORDERS OF.

**Stone.** The table lists the production of the various types of stone in the United States in 1945 and 1946.

The outputs of the types of stone used in building construction show clearly the effects of the postwar building revival. In addition to the dimension stone listed below, 69,660 tons of slate were sold in 1945, and 96,250 tons in 1946, while crushed stone was increased by 482,200 tons of slate granules and flour in 1945 and 663,500 tons in 1946. These figures also do not

cover outputs of stones for special uses, which in 1946 included 43,887,000 tons of limestone used in making cement and 11,985,000 tons used in making lime. Including these additional items with the totals for dimension and crushed stone gives a grand total of stone output of 235,374,100 tons in 1946, as compared with 193,129,400 tons in 1945.

**Canada.**—Stone production in Canada increased from 6,205,555 short tons in 1945 to 8,056,260 tons in 1946 and 8,758,364 tons in 1947. (G. A. Ro.)

## Strategic Mineral Supplies.

Definite progress was made in 1947 toward the building up of a national stock pile in the United States of those materials declared to be strategic or critical. Stockpiling activity was of two types: (1) The taking over of those stocks of raw surplus war materials which had been declared to be strategic or critical by the Munitions board, and storing them for use in the event of future emergency demand. (2) The purchase and stocking of new materials designated as strategic or critical.

The Munitions board set up a list of more than 100 commodities divided into three major groups. Group A included materials for which stockpiling was considered the only satisfactory means of assuring an adequate supply for a future emergency. Group B included materials practicable for stockpiling, but recommended for acquisition only to the extent available as war surplus. Group C included materials not at the time recommended for stockpiling.

Previous to the passage of the Stock Piling act on July 23, 1946, and its implementation with an appropriation on Aug. 8, stockpiling activities were confined to materials in Group B. With funds available from the appropriation, a purchase program was initiated for a limited number of materials in Group A.

At the end of Dec. 1946 funds had been encumbered only to the extent of about $35,000,000, out of an appropriation of $100,000,000, but the act had been in force for less than five months, much of which time had been expended in building up an operating force, and the results were not considered unfavourable.

During the remaining six months of the fiscal year, to June 30, 1947, the rate of placing contracts was increased somewhat, but not by enough to use up the available funds. Commitments during these six months amounted to about $45,000,000, leaving at the end of the fiscal year an unencumbered balance of about $19,000,000.

The volume of stockpiling to the end of 1947 involved the use of 55 different military reservations, about 6,000,000 sq.ft. of outside storage area, and 700,000 sq.ft. of warehouse storage. To supplement existing covered storage there was erected a number of surplus steel fuel tanks, as a substitute for shed or bin storage.

For the fiscal year ending June 30, 1948, congress authorized an appropriation of $100,000,000 plus $75,000,000 in contract authority, for stockpiling purposes.

The other phase of the stockpiling operations is that of taking over from other government agencies the stocks of surplus strategic and critical materials that were on hand at the close of World War II, less any amounts that must be turned into industrial channels to make up current shortages in civilian supply. It was estimated that the value of the total surplus that would eventually be turned over to the stockpile would be of the order of $275,000,000.

The amount and character of the information that can be made public concerning stockpiling operations must be greatly limited, for security reasons. Data on what specific materials are being purchased, how much is being contracted for, how much is being sought, and where and in what amounts it is being stored are all considered confidential information. The information in the above review was abstracted from nonconfidential extracts from reports made to congress by the secretary of war and the secretary of the navy.

## Strikes and Lock-outs.

The United States, Canada and Great Britain published, for many years, current statistics of strikes and lock-outs, their causes and results, together with detailed reports on the more important strikes of each year. After 1942 the statistics on strikes gathered by these countries were less complete because of the wartime conditions.

During 1946 (Table I) there were 4,985 strikes in the United States; 235 more than in 1945, but involving the loss of 116,000,000 man days, more than three times the number lost in 1945 or in 1937, the previous peak years in time lost. In 1947, on the other hand, strike activity was at a much lower level; approximately 3,000 strikes during the first nine months caused the loss of fewer than 30,000,000 working days. While official figures for the last three months of 1947 were not available when the table was compiled, news releases indicated that strikes in the last quarter were at an equally low level, lower than during the first nine months of the year.

**Table I.**—*United States: Number of Strikes, Workers Involved and Man-days Lost: 1941–1947 (9 months)**

| Year | Number of strikes | Number workers involved | Man-days idle during year |
|---|---|---|---|
| 1941 | 4,288 | 2,362,620 | 23,047,556 |
| 1942 | 2,968 | 839,961 | 4,182,557 |
| 1943 | 3,752 | 1,981,279 | 13,500,529 |
| 1944 | 4,956 | 2,115,637 | 8,721,079 |

**STRIKING MEMBERS** of the Conference of Studio Unions in Hollywood, Calif., assembled at one of the morale meetings held weekly during the mass picket trials of 1947

involved in a stoppage. Figures for 1947 were preliminary and subject to revision.

Table II compares the number and severity of work stoppages in Great Britain during the first nine months of 1947 and 1946. Strike idleness in 1947 through September was not quite as bad as during the corresponding months of 1946; the principal difference was in the smaller strike idleness in coal mining and transport industries. Shipbuilding and transport were the only major industries more seriously affected by strikes in 1947.

During the first nine months of 1947 there were 1,277 strikes in Great Britain, which compared with 1,707 in the corresponding months of 1946. There were 493,300 workers idle in the strikes of 1947, compared with 411,500 in the nine-month period of 1946, the increase being in the numbers of men who struck in the shipbuilding and transport industries. In man-days lost the 1947 strikes were more serious: 1,963,000 com-

**Table III.**—*Relative Frequency and Size of Labour Disputes in Great Britain in 1947 (nine months) and 1946*

Compiled from *Canadian Labour Gazette*. All 1947 figures are preliminary.
*These figures relate only to the actual number of strikes and lock-outs in existence and the workers involved during the year, not being a summation in each case of the monthly figures.

pared with 1,684,000 in 1946.

In Great Britain wage questions accounted for 43.5% of the total number of stoppages in 1947 and 42.0% of the total number of workpeople directly involved.

The few disputes which arose on questions of hours of labour accounted for only 2.9% of the total number of workpeople directly involved. Disputes in connection with the employment of particular classes of persons, working rules and discipline made up more than half of the total number of stoppages (Table IV).

The number of strikes in Canada, and particularly in the numbers of workpeople involved and man-days lost (Table V) decreased to an extent comparable with the decline in strikes in the United States.

(D. D. L.)

## Strontium Minerals.

Celestite production in the United States declined from 2,784 short tons in 1945 to 243 tons in 1946, and supply was maintained by increasing imports from 3,691 tons to 4,507 tons. (G. A. Ro.)

## Sugar.

The U.S. sugar supply for 1946–47 was the largest in several years. Production in areas supplying the United States increased to about 10,500,000 tons, compared with 9,500,000 tons average prior to World War II. Price guarantees to domestic sugar producers and higher prices for Cuban sugar under terms of the Cuban Purchase agreement improved the supply. A record Cuban crop more than offset a loss in Philippine production.

Total sugar production in the United States proper was estimated for 1947 at 2,056,000 tons of beet and cane, compared with 1,820,000 tons in 1946 and an average of 1,818,000 tons during 1936–45. The 1947 crop included 1,705,000 tons of beet and 351,000 tons of cane sugar. The sugar beet crop set a new record in 1947, amounting to 12,248,000 tons compared with 10,562,000 tons in 1946 and an average of 9,617,000 tons during 1936–45. Acreage planted was 11% above that of 1946—887,000 compared with 802,000; the average for 1936–45 was 781,000. The yield was also high—13.8 tons per acre compared with an average of 12.3 tons. Approximately 1,824,000 tons of raw sugar were manufactured from the crop—19% above the output of 1946.

Sugar cane for sugar and seed in 1947 was reported at 5,353,000 tons compared with 5,967,000 tons in 1946 and an average of 6,049,000 tons during 1936–45. The acreage was higher but the yield was only 16.6 tons per acre compared with 19.5 tons in 1946 and a 10-year average of 20.6 tons. A hurricane destroyed much of the crop in Louisiana and Florida in Sept. 1947.

| Louisiana . . . . . . . . . . . . . | 3,870 | 4,488 | 4,812 |
| Florida . . . . . . . . . . . . . . | 1,030 | 1,037 | 784 |

TRADING CIRCLE at the New York sugar exchange as it reopened on July 1, 1947, following the removal of price controls on sugar futures. Trading was discontinued in 1942 with the imposition of price controls

Maple sugar production was estimated at 305,000 lb. in 1947 compared with 372,000 lb. in 1946. Honey production was put at 210,039,000 lb. compared with 213,814,000 lb. in 1946. The Cuban sugar cane crop was about 6,400,000 tons in 1947—almost 2,000,000 tons above the previous year's production. The Puerto Rican crop was above the prewar level and about the same as in 1941.

The total supply of sugar for the United States in 1947 provided about 94.9 lb. per capita, almost 25% more than in 1946, and only 2 lb. less than the prewar average. The supply was allocated by the International Emergency Food council (I.E.F.C.), which gave an allotment of 7,150,000 tons to the United States. Following the end of rationing July 12, 1947, distribution of sugar rose. On Aug. 30 all controls were removed and consumption increased. Price controls ended Oct. 30 but no general advance in prices resulted since consumers had apparently been getting ample supplies. Annual consumption was estimated at about 95 lb. per capita in 1947, 75 lb. in 1946, and about 96.5 lb. in the prewar years. Supplies were low in some areas early in 1947, and rations were held to 25 lb. per person for domestic use; industrial use was also controlled at 60% of the 1941 base.

The Sugar Control Extension act passed in March 1947 transferred the control of sugar to the U.S. department of agriculture. It also extended rationing and price control to Oct. 31, 1947, and inventory control to March 1948, but these controls were discontinued in June and August as the supply increased. Steady improvement in the Cuban crop led the I.E.F.C. to in-rease the U.S. allotment in June by 350,000 tons.

The Sugar act of 1948 which replaced the act of 1947 on Dec. 1, 1947, authorized the secretary of agriculture to determine he amount of sugar needed to meet requirements for the enuing year, and to fix quotas for domestic and imported sugar. The 1948 act also authorized the secretary of agriculture to make payments to growers on a basis of 80 cents per 100 lb. of aw sugar.

Payments to beet growers in 1946 amounted to $28,200,000, o cane growers $6,600,000; Hawaii $6,574,000; Puerto Rico 15,200,000 and Virgin Islands $75,000, total $55,038,000. The verage price to growers in 1946 for beets was $13.70 per ton, ane $7.92 per ton. Retail prices ranged from $5.71 per 100 lb. n 1941 to about $10 per 100 lb. in 1947.

On Nov. 28, 1947, the president issued a proclamation reestablishing quotas which had been suspended since April 1942; he new quotas were scheduled to become effective in 1948 after ublic hearings.

The sugar quota law became a subject of vigorous controversy in the International Trade organization meetings because f the charge that it conflicted with the general policy of the United States to ask for the reduction of trade barriers of ll types.

World sugar production in the 1946–47 crop year was estimated at 31,231,000 tons, 19% above the 26,283,000 tons of 1946 but below the prewar (1935–39) average of 34,783,000 ons. The increases were in Cuba, with a crop more than twice he prewar level, Puerto Rico, Brazil and the United States. France's crop was one-fourth below the prewar level, Germany's about one-half and India's almost normal. Both Formosa and the Philippines were down to less than 10% of prewar production. Recovery was expected to continue rapidly, however, and Europe had 40% more sugar production in 1947 than a year earlier; South America had 17% more.

The goals for sugar beets and cane for 1948 were the same as for 1946—beets 966,000 ac. and cane 320,000 ac. A guarantee of $14.50 per ton for beets was offered in 1946 but there was no support price for 1947 sugar cane. (*See* also BEEKEEPING; MAPLE PRODUCTS; PRICE ADMINISTRATION, OFFICE OF; SYRUP, SORGO AND CANE.) (J. C. Ms.)

**Suicide Statistics.** The death rate from suicide in the United States during 1947 was practically at the level of that for 1946, according to provisional estimates by the Metropolitan Life Insurance company. Final figures for the number of deaths from suicide in the United States during 1946 were not yet available at the end of 1947; the latest estimate was 15,174, a rate of 10.8 per 100,000 population. In Canada, the number of deaths from suicide during 1946 was 985, the rate being 8.0 per 100,000 population. During the same year, England and Wales recorded 4,493 deaths from suicide and a rate of 10.5 per 100,000 population.

It had been observed that death rates from suicide were high in those areas of the United States where the death rates from homicide were low. Thus, in 1945, the death rates from suicide in the south Atlantic, the east south central, and the west south central states were at the relatively low levels of 8.7, 6.5, and 7.5 per 100,000. The homicide death rates in the same areas were quite high, namely 10.0, 11.3 and 8.9, respectively. This situation reflected, in large degree, the low mortality from suicide and the high mortality from homicide among the Negro population of these areas. On the other hand, in the northern tier of the country, with a small proportion of Negro population, the death rates from suicide averaged a little over 12 per 100,000, while the homicide rate was, in most states, well under 4 per 100,000.

Mortality from suicide in 1945 was highest in the Pacific coast states, where the rate was 16.0 per 100,000 population; for the mountain states, the rate was 11.5.

A survey of the methods of suicide among white industrial policyholders of the Metropolitan Life Insurance company showed in some instances striking changes over the period from 1921 to 1946 (*Statistical Bulletin*, May 1947). Among white males, firearms were the leading means of suicide, being used in about one-third of the cases throughout this period. Hanging, however, increased in importance as a means of suicide among white males, from 17% of the total in 1921–25 to 27½% in 1946. There was relatively little change in the proportion using either asphyxiation or drowning; the former accounted for 17½% of the total in 1921–25 and 15½% in 1946, while the latter was used in a little under 6% of the cases for the period as a whole. The use of poisons decreased from 14½% of all means in 1921–25 to 7% in 1946, and the use of cutting or piercing instruments from 7⅓% to 4½%. On the other hand, jumping from high places and crushing increased in importance as a means of suicide. On the whole, the trend in the means of suicide among white females followed that among white males, although the importance of the various means differed between the two sexes.

**Sullivan, John Lawrence** (1899– ), U.S. government official and lawyer, was born on June 16 in Manchester, N.H., and attended Dartmouth college and Harvard university. Admitted to the New Hampshire bar in 1923, he began practising law the following year. He soon became senior partner in law firms both in his native city and in Washington, D.C. Sullivan was assistant secretary of the treasury (1940–44), assistant secretary of the navy for air, 1945–46, and undersecretary of the navy, 1946–47. His appointment as secretary of the navy was announced Aug. 21, 1947, although, like the secretaries of the army and air under the new national defense organization, he was not given cabinet rank.

Sullivan appeared before the president's Air Policy commission on Nov. 30 and denied that air power was the prime need of U.S. security, citing as evidence the performances of the naval branch of the service in World War II. He did, however, recommend a program to strengthen the navy's air arm.

**Sulphur.** The United States normally produced about 80% of the world output of sulphur, Italy 12% and various minor countries the remaining 8%. War conditions seriously curtailed the Italian output, increased that of the United States, and brought in Mexico and Argentina as new producers.

**United States.**—The salient data of the sulphur industry of the United States are shown in the table below, in thousands of short tons.

| | 1942 | 1943 | 1944 | 1945 | 1946 |
|---|---|---|---|---|---|
| Production | 3,876.0 | 2,843.5 | 3,604.4 | 4,203.6 | 4,322.8 |
| Shipments | 3,504.0 | 3,308.3 | 3,941.4 | 4,293.3 | 4,623.6 |
| Imports | 25.6 | 18.7 | ... | ... | ? |
| Exports | 655.5 | 764.4 | 756.2 | 1,055.8 | ? |
| Available supply | 2,877.2 | 2,562.6 | 3,185.2 | 3,237.5 | ? |
| Consumption | 2,768 | 2,836 | 3,270 | 3,316 | ? |
| Stocks (Producers') | 4,800 | 4,997 | 4,600 | 4,484 | 4,221 |

Production in the first three-quarters of 1947 was 3,596,749 short tons, 14% over the same period of 1946, while shipments advanced 24%, to 4,046,728 tons. The increased activity was to be attributed mainly to the expanding exports. (G. A. Ro.)

## Sunday Schools.

The most conspicuous world event of 1947 relating to the Sunday school was the meeting of the World Council of the World's Sunday School association in Birmingham, Eng., on Aug. 18–22. About 100 persons from more than 40 countries attended this business meeting of the governing body of the association.

Sunday-school attendance in some countries of Europe had returned to prewar figures by 1947. Shortage of teachers, however, was still a serious problem; it resulted in part from the fact that many teachers discontinued teaching during World War II and had not returned to all their former activities, and in part to the fact that young people who grew up during the disturbed war years did not develop the practice and habit of working in the Sunday school.

Significant forward-looking actions were taken in the Birmingham meeting, among which were the following: (1) To change the name of the World's Sunday School association to World Council of Christian Education; (2) To establish a department of audio-visual aids and a department of children's work; (3) To co-operate with the World Council of Churches in youth work and (4) To hold the 1950 World's convention in North America.

A Joint Commission on Christian Education representing the International Missionary council, the World Council of Christian Education and the World Council of Churches was established, the World Council of Christian Education to carry major administrative responsibility.

Several national Sunday school conventions were held, among which were these: The first postwar convention of the Finnish Sunday School association; the first postwar convention of the Sunday School Association of Czechoslovakia; and the International (U.S. and Canada) Sunday School convention of the International Council of Religious Education in Des Moines, Ia.

The International Council of Religious Education published a significant report of a special committee of which Prof. Paul H. Vieth was chairman, entitled "The Church and Christian Education." (*See* also CHURCH MEMBERSHIP.) (F. L. KP.)

## Superphosphates.

The more important features of the superphosphate industry in the United States are shown in the following table, in thousands of short tons.

| | 1943 | 1944 | 1945 | 1946 |
|---|---|---|---|---|
| Production | 6,293.0 | 6,692.4 | 7,372.1 | 7,847.6 |
| Shipments | 3,935.3 | 3,951.4 | 4,333.0 | 4,421.7 |
| Stocks | 791.4 | 794.8 | 808.0 | 646.3 |
| Exports | 268.6 | 205.9 | 207.2 | 270.3 |
| Imports | 2.8 | 1.3 | 2.0 | 2.8 |
| Phosphate rock used | 4,067.6 | 4,123.0 | 4,419.8 | 5,157.0 |

About two-thirds of the phosphate rock output goes into the production of superphosphates. (G. A. RO.)

## Supreme Court of the United States.

Frederick M. Vinson of Kentucky, appointed by President Truman to be the 13th chief justice of the United States, presided over a session of the court for the first time Oct. 7, 1946, the day on which the court convened for its 1946–47 term, known as the October term, 1946. The term continued through June 23, 1947, the latest date on which the court had adjourned its annual term during the 20th century.

Associate Justice Robert H. Jackson returned to the court after a year's absence during which time he was engaged as chief prosecutor for the United States at the trial of the major nazi war criminals before the International Military tribunal in Nuernberg, Ger.

The court disposed of 1,366 cases, the greatest number at any one term in its history. Largely responsible for the size of the court's docket was the fact that an unprecedented number of petitions, 528, were filed by indigent persons, mostly prisoners. Of these 60% came from inmates of prisons in the state of Illinois. Of the 142 cases disposed of by written opinion as distinguished from disposition by mere denial of petitions for review and by memorandum opinion, the federal government was a party in 84, and of these approximately 72% were decided in its favour. As had been the case during the past several terms, controversies concerning federal regulation of business including those affecting labour relations predominated.

Dissenting votes were cast in 84 of the cases decided by written opinion.

**Members of the Court.**—The United States supreme court was composed in 1947 of the following members (dates indicate year appointment was confirmed by the senate): chief justice, Frederick M. Vinson (1946); associate justices, Hugo L. Black (1937), Stanley F. Reed (1938), Felix Frankfurter (1939), William O. Douglas (1939), Frank Murphy (1940), Robert H. Jackson (1941), Wiley B. Rutledge (1943) and Harold H. Burton (1945). (*See* also LAW.) (H. B. WY.)

## Surgery.

In the surgical treatment of cancer of the oesophagus Richard H. Sweet showed that of the patients surviving the operation 77% were alive at the end of 6 months, 50% alive at the end of 12 months, and 37.5% at the end of 24 months. Alton Ochsner, Michael E. DeBakey and J. Leonard Dixon demonstrated that the surgical treatment of cancer of the lung which previously gave extremely poor results now offered a much better outlook, even though these cases were seen relatively late because diagnosis had usually not been made early. Slightly more than half of the patients surviving the operation for cancer of the lung lived for six months; 40% for one year, and 23% for five years or longer. In addition to the curative treatment of cancer either by surgical removal or by destruction *in situ* by X-ray or radium, much was accomplished in 1947 by the palliative use of substances which tend to retard the growth of tumours. (*See* CANCER.)

In order to prepare a patient with a large hernia of the abdominal wall for operation, particularly an extremely fat individual, Goni Moreno of Buenos Aires advocated introduction of air into the abdominal cavity as a preliminary procedure. In this way, the patient gradually becomes accustomed to increasing pressures within the abdomen, making it possible for him to tolerate these pressures when the hernia is repaired. The method has been found to be particularly valuable in older people who are obese and who have other conditions, such as heart disease and diabetes.

Francis D. Moore, Waltman Walters and associates, K. S. Grimson and F. H. Lahey critically analyzed their results following treatment of ulcer of the duodenum with vagotomy—cutting the vagus nerve—and became much more conservative in their indications for advising this procedure. They emphasized the large number of undesirable symptoms which persist after the operation.

Cirrhosis of the liver associated with varicose veins of the oesophagus and stomach frequently causes severe haemorrhage from the stomach and may even result fatally. As previously reported, an attempt to relieve this condition consisted of anastomosing the vascular system of the liver with the systemic vascular system in order to short-circuit around the obstructive cirrhosis in the liver. Dallas B. Phemister and Eleanor M. Humphreys removed those portions of the oesophagus and stomach in which these varicose veins are located in order to prevent recurrences of haemorrhage. Another extremely undesirable complication of cirrhosis of the liver is an accumulation of fluid within the abdomen, which formerly had required repeated aspirations in order to empty the abdominal cavity. Roy C. Crosby and Edward A. Cooney successfully used a glass button inserted into the abdominal wall, permitting the escape of fluid within the peritoneal cavity into the subcutaneous tissues, where it can be absorbed. In this way repeated aspirations of the fluid was obviated.

Considerable work was done in 1947 on the use of drugs to produce dilatation of the vessels and thus increase the blood supply to the extremities. R. H. Lyons and associates, D. Chess and F. F. Yonkmann, and K. S. Grimson emphasized the value of the systemic administration of these drugs in order to produce dilatation. Although apparently of value in the treatment of severe arterial disease, as shown by M. E. DeBakey, George Burch, Thorpe Ray and Alton Ochsner, such administration may actually do harm in the treatment of a patient with disease of the vessels of the extremity, because by producing a generalized dilatation of the vessels the pressure within the entire vascular system becomes decreased. In this way that portion of the body in which blood vessels are diseased and in which there is the greatest demand for blood will receive less blood than if local dilatation of the diseased vessels is accomplished and contraction of the other vessels is maintained. Normally, in order to produce dilatation of the vessels in a particular area, a lending-borrowing mechanism is set up whereby the blood is shunted from the rest of the body into that area in which it is most needed. George E. Burch and associates demonstrated that the systemic use of vasodilator drugs in the treatment of diseases of the arteries of the extremity is not rational and should not be used. It had been generally agreed that in the younger persons with diseased blood vessels of the extremities in which the spasm of the artery is largely responsible for the decrease in the blood supply, the removal of the sympathetic nerves is of value. This procedure, however, was not used a great deal in older persons with hardening of the arteries. Gaza deTakats and M. H. Evoy showed that even in the older persons with arteriosclerosis sympathectomy is of value in relieving symptoms caused by diminished blood flow. Not only were the patients able to walk better, but pain was relieved in a large majority of cases. The results obviously were not as good as could be obtained in younger persons.

Not infrequently it is necessary to use tubes and plates in the body in order to conduct fluid or to fill defects. Whereas previously rubber and other types of material had been used, F. D. Ingraham and associates suggested a plastic substance which can be easily handled and produces practically no reaction in the body. It had the great advantage over some of the metals, such as vitallium, in that it could be moulded and cut.

In order to cure relatively simple congenital cysts and sinuses difficult to treat, P. Jacobson suggested the destruction of such cysts by means of electrocoagulation. Because the persistence of the sinuses in these conditions is caused by the persistence of the secreting membrane, Jacobson believed that the best and simplest result could be obtained by destruction of the secreting cells by the electric cautery.

L. A. Grossman and associates, G. J. Strean and associates and E. E. Muirhead and associates advocated and used irrigation of the peritoneal cavity with various fluids to remove waste products resulting from kidney shutdown associated with certain surgical procedures. ## Surinam

(DUTCH GUIANA). A Netherlands colony in northeastern South America, bounded on the east, south, west and north, respectively, by French Guiana, Brazil, British Guiana, and the Atlantic ocean. Area, 54,291 sq.mi.; pop. (Jan. 1, 1942, official figure), 183,730 (1945 est., 178,000). The capital is Paramaribo (pop., 60,723). The governor in 1947 was Dr. J. C. Brons.

**History.**—A widely publicized colonization scheme was advanced by the Freeland league, an organization for resettlement of Jewish *emigrés,* providing for settlement of from 50,000 to 100,000 Jewish displaced persons in Surinam within two years. A committee representing the league went to Surinam in mid-April to discuss the plan with Gov. Brons and other officials, and the colonial legislature voted on July 7 to admit up to 30,000 Jewish displaced persons.

Six soldiers and police were seized at Paramaribo on Nov. 15 in an alleged revolutionary plot. The colonial legislature during the year approved the immediate undertaking of an aerial photographic survey of the rugged and largely unexplored interior by Royal Dutch Airlines (K.L.M.) planes.

**Education and Religion.**—Approximately 122 schools (4 ranking as colleges) had an enrolment of more than 22,000 in 1947. About 75 of the schools were operated by missionary societies. Religious adherents in Surinam were classified as follows: Protestants, 42,027; Catholics, 29,124; Jews, 1,069; Mohammedans, 41,300; Hindus, 32,000; Confucians, 13,000; animists, fetishists, etc., 22,000.

**Finance.**—The monetary unit is the guilder (or florin) of 100 cents, exchanging at 53.33 cents U.S. currency. Preliminary budget estimates of income for 1947 were 12,533,398 guilders; expenditures, 12,515,932 guilders. Inflation continued to be a serious problem during the year, and shortage of dollar exchange complicated the economic picture. The Netherlands government announced plans during 1947 for a five-year program of economic development for Surinam to cost 40,000,000 guilders.

**Trade.**—Exports for the first six months of 1947 were valued at 10,914,546 guilders as against 4,401,206 guilders for the same period in 1946. Imports for the first half of 1947 totalled 13,999,245 guilders as against 6,714,049 guilders in the same period of 1946. Exports of bauxite, by far the most important export product, were almost as large in the first half of 1947 as for the entire year 1946. Total exports for 1946 were valued at 11,513,612 guilders and imports at 15,710,868 guilders. The chief export items in 1946, with value in guilders, were bauxite, 8,489,320; lumber, 831,902; balata, 703,365; rice, 513,736; coffee, 434,854; fruits, 127,002. Principal imports in that year were mineral oils and derivatives, 1,661,788; cotton goods, 1,369,965; grain meal, 957,781; butter, 412,572; cut tobacco, 379,112; piece goods, 375.799; machines and electrotechnical articles, 356,693; miscellaneous machines and machine tools, 349,665; motor and other vehicles, 306,906.

**Agriculture.**—Sugar production in 1946 was 5,456 short tons. Production of citrus fruits in 1946 was 30,000,000 units as against 15,500,000 in 1945. Paddy rice production in 1946 was 114,639,200 lb. as against 77,601,920 lb. in 1945. Sugar workers had to be imported temporarily from Barbados, St. Lucia, and other West Indian islands. Coffee production also increased in 1946.

## Surplus Property Disposal.

Original estimates of the maximum amount of government property expected to be declared surplus to the War Assets administration and other U.S. domestic disposal agencies were revised downward in 1947 with the receipt of new information from owning agencies. At one time it was expected that this total would be in the neighbourhood of $34,000,000,000. Later estimates indicated that the amount to be acquired was approximately $29,500,000,000. Amounts in addition to existing inventory expected to be declared surplus totalled only $1,300,000,000.

This revision of estimates brought closer to finality the job of disposing of surplus left over from World War II. By the end of Sept. 1947 the total in inventory amounted to $7,600,000,000. The disposal of personal property was expected to be completed by June 30, 1948. After that date, the principal disposal problem would be that of real property, which would comprise approximately three-fourths of total inventory by June 1948.

Real property was expected to be a program of long duration in view of national security considerations, legislative restrictions and the difficulties of marketing hard-to-sell property.

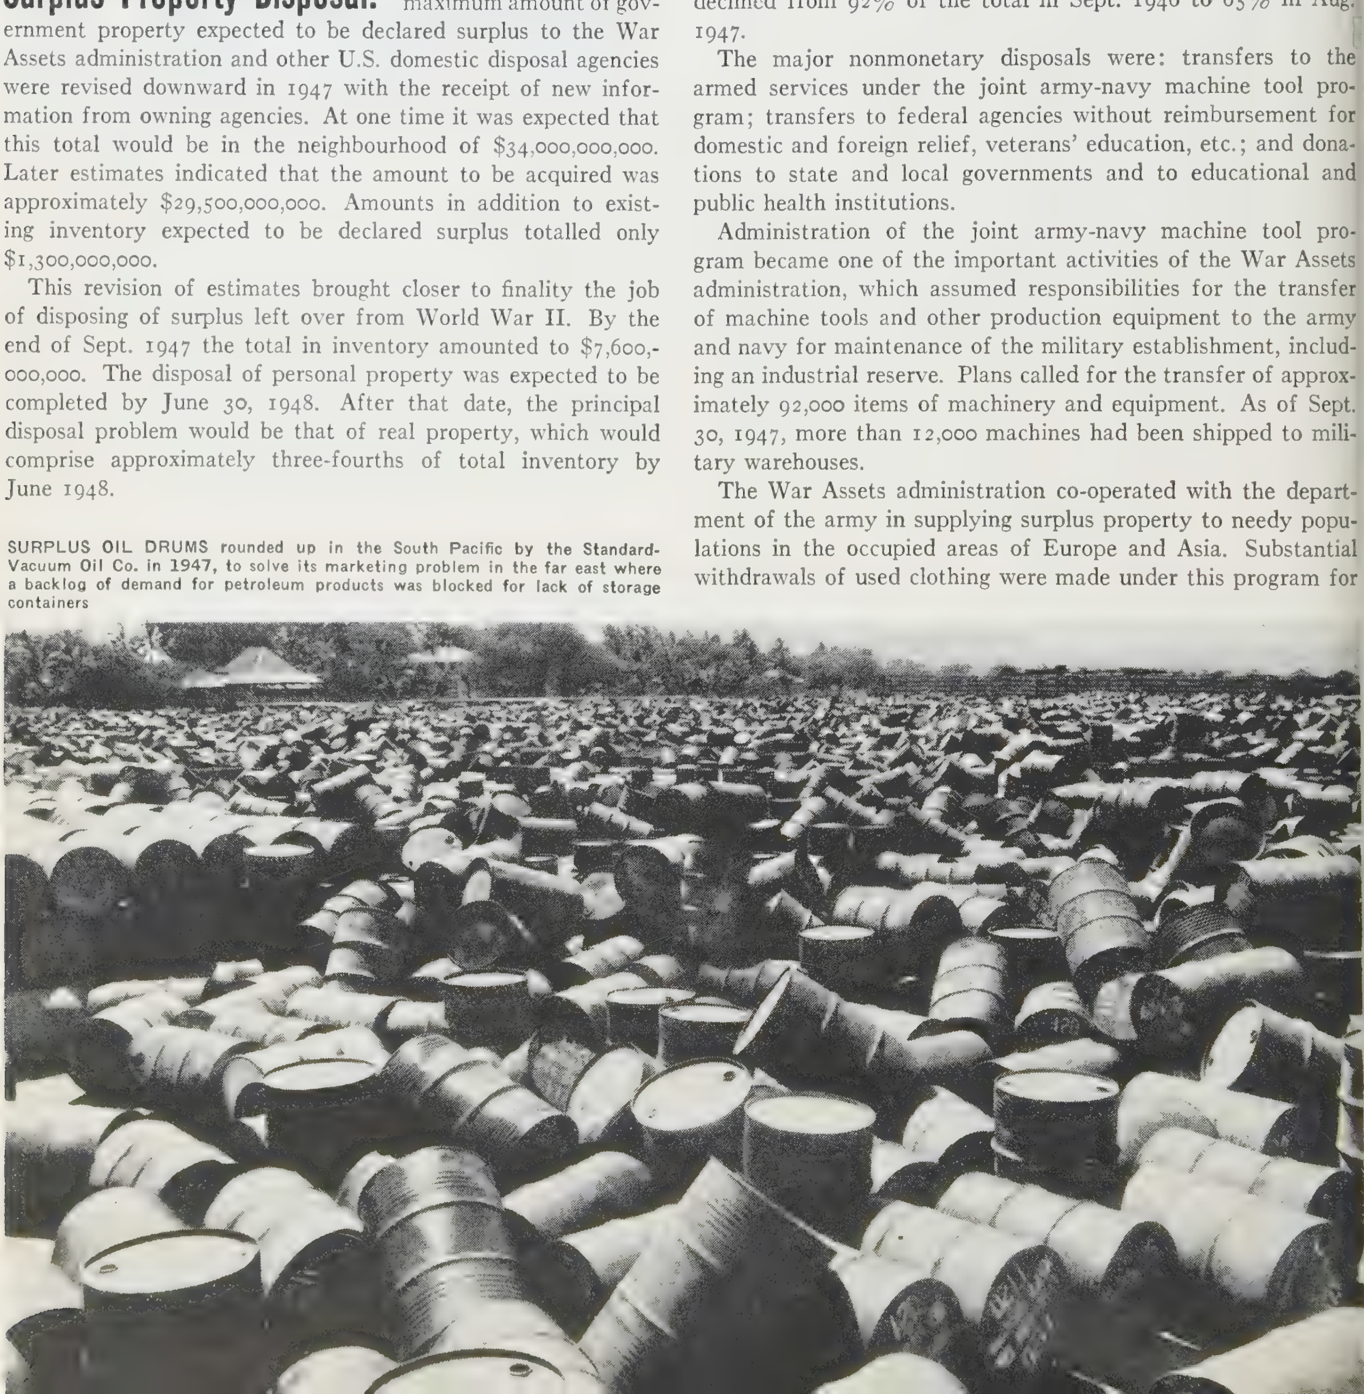
The inventory of surplus property available for disposal by the designated selling agencies had been declining since June 1946, because of decreasing acquisitions, the large excess of disposals over acquisitions, and the diminishing marketability of the types of property left in inventory. Increasingly larger portions of available inventory consisted of consumer and producer goods of poor quality, special purpose machinery and "hard-to-sell" properties. The effect of these factors was shown by decreased sales, increased nonreimbursable transfers and other miscellaneous disposals, increased disposals of scrap and residual materials and decreased rate of return on sales.

Nonmonetary disposals accounted for an increasing proportion of the total by the War Assets administration in the field of consumer and producer goods. These disposals increased from about $23,000,000 in Sept. 1946 to a peak of $82,000,000 in Aug. 1947. The share of total disposals represented by sales declined from 92% of the total in Sept. 1946 to 65% in Aug. 1947.

The major nonmonetary disposals were: transfers to the armed services under the joint army-navy machine tool program; transfers to federal agencies without reimbursement for domestic and foreign relief, veterans' education, etc.; and donations to state and local governments and to educational and public health institutions.

Administration of the joint army-navy machine tool program became one of the important activities of the War Assets administration, which assumed responsibilities for the transfer of machine tools and other production equipment to the army and navy for maintenance of the military establishment, including an industrial reserve. Plans called for the transfer of approximately 92,000 items of machinery and equipment. As of Sept. 30, 1947, more than 12,000 machines had been shipped to military warehouses.

The War Assets administration co-operated with the department of the army in supplying surplus property to needy populations in the occupied areas of Europe and Asia. Substantial withdrawals of used clothing were made under this program for



SURPLUS OIL DRUMS rounded up in the South Pacific by the Standard-Vacuum Oil Co. in 1947, to solve its marketing problem in the far east where a backlog of demand for petroleum products was blocked for lack of storage containers distribution through army channels. Provision also was made for release of surplus property to other war-torn countries.

The use of surplus property to alleviate distress from flood and other catastrophes was authorized by congress and a "mercy" priority was established overriding all other priorities under the Surplus Property act. The new procedures were used by the War Assets administration in making surplus property available for the alleviation of damage wrought in Florida, Mississippi and Louisiana by hurricanes and by fires in Maine.

Important transfers of property were made to the Federal Works agency for the use of educational institutions providing courses for veterans. Machine tools and other classes of property were donated in large amounts to educational institutions, state and local governments and health and welfare agencies, for the costs of handling and transportation.

Procedures for the sale of surplus property to veterans were further simplified. Under new procedures it no longer was necessary for veterans to apply for preference certificates in order to purchase surplus property, with the exception of aircraft, commercial laundry equipment and railroad transportation equipment. The only requirements were that the veteran present evidence of his honourable discharge and, for other than "set-aside" items, to make a statement that the property was being purchased for his own small business, professional or agricultural enterprise. This change in procedure made it easier for the veteran to exercise his priority and greatly increased the number of potential buyers. It also eliminated certain War Assets administration expenses by reducing the size of the certification staff.

*Disposals of Surplus Property*

(All disposal agencies, cumulative through Sept. 30, 1947, in thousands of dollars)

| | |
|---|---|
| Total | $20,557,018 |
| Real property | 4,806,431 |
| Consumer and producer goods | 7,609,723 |
| Aircraft | 6,250,637 |
| Aircraft components | 601,395 |
| Electronics | 443,552 |
| Food and agricultural products | 106,411 |
| Marine property | 110,545 |
| Farm land | 74,177 |
| Housing properties | 89,876 |
| Community facilities | 99,826 |
| Land (continental and territories) | 44,496 |
| Patrol vessels | 106,950 |
| Domestic activity by Office of Foreign Liquidation commissioner | 44,540 |
| Property in territories and possessions (WAA) | 168,459 |

Under an expansion of the program for disposal of surplus at nominal prices to nonprofit schools and public health institutions, more than 200 items were added in Sept. 1947 to the list of property available at a discount of 95% from fair value. Approximately 80% of all surplus consumer and producer goods became subject to this discount when disposed of for health or educational purposes. All other types of personal property were available at a discount of 40%. (J. S. Cs.)

## Sweden.

A democratic monarchy of northern Europe. Area, 173,390 sq.mi.; pop. (Dec. 31, 1946) 6,763,685. Capital, Stockholm (pop., Dec. 31, 1946), 690,108. Other principal cities (Dec. 31, 1946), were Göteborg (Gothenburg) (325,563), Malmö (176,659), Norrköping (80,228), Hälsingborg (69,051), Örebro (61,492). Religion, Lutheran Christian. Ruler in 1947: King Gustavus V. Prime minister: Tage Erlander.

**History.**—During 1947 Sweden's main difficulty centred around the problems of international finance. The country's gold reserves dwindled rapidly as the people bought from abroad goods long desired but unobtainable during World War II. In the spring Minister Ernst Wigforss asked for authorization to pay Swedes in Swedish crowns for their holdings abroad in "hard-money" countries; in the fall the measure was applied and Swedish reserves were strengthened temporarily. In November the government announced its determination to reduce imports by 420,000,000 kr. in 1948.

Supplies of food were short, although far from desperate, and a disastrously dry summer added to the complications. Only the potato crop was really sufficient for food needs. Fodder crops were dangerously low, and also grains. Sweden reduced the bread ration to 5.04 oz. per person per day, claimed to be the lowest in the world. Butter was set at 1.26 oz. and sugar 1.81 oz.

The 1946 trade agreement with the U.S.S.R. was increasingly attacked, but it could not be held responsible for any of Sweden's shortages. Actually Sweden's imports from the Soviet Union were several times its exports to the Soviet Union, both in normal trading, and in the slight beginnings of trade under the five-year agreement. It was repeatedly emphasized in Sweden that the much-castigated billion kronor credit was not a guarantee to sell the Soviet Union that value of goods; it was an agreement by the Swedish government to advance up to that amount to Swedish industry for its sales to the U.S.S.R. Some 200,000,000 kr. of such purchases had been contracted for, but in many cases delivery was not due for three or four years. The soviets were buying rather slowly because of a hesitancy to pay the high prices demanded.

Sweden had extended large loans or credits to many European countries; it was not selling enough goods to potential cash customers like the United States. Instead it was buying from the United States, and thus its gold reserves of 1,600,000,000 kr. on Jan. 1 had sunk to 375,000,000 kr. by the end of October.

Almost no time was lost by industrial strife in 1946 or 1947: labour disturbances of all kinds caused only 26,425 working days to be lost in 1946. War neglected highways were being rebuilt. Ship construction was at a high level: in December 284,000 gross tons of shipping were under construction, more than half of it on Norwegian order. A great power plant was being built at Hårspranget falls on Lule river, with three generators of 105,000 kw. capacity each.

**Education.**—In 1943–44 there were 533,890 pupils in the regular elementary schools, and 99,253 in continuation schools. In 1946 in the middle schools there were 8,035, and in secondary schools, 63,826. In 1946, 4,154 took the "studentexamen," and 9,132 were registered in the 5 institutions of university grade. The number of pupils in Stockholm schools had doubled in the past ten years, with the offering of free meals, books, medical and dental examination. Space became a serious problem. The state provided also a large number of special industrial and continuation schools.

**Defense.**—Plans were made for scrapping 28 naval vessels of a total of 17,000 tons, several of them very old, but called into coastal patrol service during World War II.

**Finance.**—The monetary unit is the krona (worth 27.85 U.S. cents in 1947).

The government financial picture must be given in two separate accounts.

Table I.—*Data of Finance in Sweden*

*(In millions of kronor)*

| | | 1944–45 | 1945–46 | 1947–48 estimate |
|---|---|---|---|---|
| Ordinary account: | revenue | 2,875 | 3,173 | 3,862 |
| | expenditures | 3,632 | 2,764 | 2,998 |
| Capital account: | revenue | 3,250 | 3,528 | 4,174 |
| | expenditures | 4,103 | 3,328 | 3,406 |
| Public debt | | 10,953 | 11,383 (Dec. 31, '46) | |

| | 1945 | End of Aug. 1946 |
|---|---|---|
| Notes in circulation | 2,782 | 2,534 |
| Gold reserve | 1,062 | 1,046 |
| Commercial bank deposits | 6,847 | 7,199 |
| Savings bank deposits | 5,468 | — |

**Trade.**—General trade statistics, mentioning only the chief countries concerned are shown in Table II. During Jan. to June of 1947 Great Britain held first place as Sweden's customer, buying 180,000,000 kr. worth of goods; the U.S. was second with 134,500,000 kr.; then came Norway (96,000,000 kr.), Belgium (82,500,000 kr.), France (75,500,000 kr.), and Argentina (71,000,000 kr.). Sweden's imports before World War II came in large part from Germany, but in the first part of 1947 the U.S. led as supplier to Sweden with 702,000,000 kr. worth of goods; next came Great Britain (201,000,000 kr.), Belgium (115,500,000 kr.), Switzerland

Table II.—*Imports and Exports, Sweden*
(*In 1,000 kronor*)

| | 1939 | 1944 | 1945 |
|---|---|---|---|
| Imports (total) | 2,498,700 | 1,677,382 | 1,084,341 |
| From Germany | 619,800 | 798,466 | 88,342 |
| Switzerland | 45,800 | 138,606 | 123,705 |
| Argentina | 48,100 | 120,928 | 107,707 |
| United States | 414,300 | 44,500 | 175,523 |
| Exports (total) | 1,888,600 | 853,396 | 1,758,073 |
| To Germany | 369,000 | 345,350 | 61 |
| Switzerland | 17,800 | 87,511 | 53,315 |
| Argentina | 34,100 | 72,211 | 90,573 |
| United States | 178,600 | 2,100 | 232,993 |
| United Kingdom | 417,500 | 5,600 | 277,874 |
| Norway | 137,500 | 30,500 | 331,400 |
| Finland | 93,900 | 71,000 | 149,745 |

(113,500,000 kr.), Italy (105,000,000 kr.), and Argentina (100,000,000 kr.). Iron ore exports were well up: from 2,600,000 in the first seven months of 1946 to 4,200,000 tons in the same period of 1947.

**Communications.**—Railroads in 1945 measured 16,711 km. There were 1,168,100 telephones, an average of 177 per 1,000 inhabitants. There were 95,967 automobiles. Air lines flew 2,926,797 mi., carrying 81,000 passengers; length of established air routes was about 16,500 mi.

The merchant fleet in 1946 numbered 2,065 ships with a gross tonnage of 1,708,171.

**Agriculture.**—Agricultural area and crop yields for 1945 are shown in Table III. The floods of 1946 and the drought of 1947 considerably reduced these figures.

The livestock census for 1946 included 593,000 horses, 2,869,000 cattle, 482,000 sheep, 1,165,000 swine, 7,609,000 chickens and 28,000 goats.

**Forestry.**—In the period 1940–44 more than 6,000,000,000 cu.ft. of timber was cut for fuel, against a normal cut of about 3,000,000,000 cu.ft. Much of the excess cut was useful thinning, but the labour burden was heavy. Export of wood products was down in 1944 to 324,635,000 kr., but climbed in 1945.

**Manufactures.**—Industrial establishments in 1943 numbered 20,907 and workers 598,165. Values of chief manufactured products (figures for 1941 and 1943) are shown in Table IV.

**Mineral Production.**—Production of the leading minerals in 1945 (in long tons) was as follows: iron ore 3,929,662 (a drop from 10,819,997 in 1943); pig iron 761,357; coal 615,366; copper ore 50,846; gold ore 107,302; silver ore 26,718.

Table III.—*Agricultural Production in Sweden, 1945*

| | Hectares | Yield in metric tons |
|---|---|---|
| Area of meadows | 942,139 | |
| Total cultivated area | 3,717,179 | |
| Wheat (winter) | 203,891 | 454,452 |
| Wheat (summer) | 87,105 | 133,811 |
| Rye (winter) | 162,824 | 270,326 |
| Rye (summer) | 5,358 | 5,946 |
| Corn | 93,286 | 168,750 |

## Swimming.

Of chief interest in swimming during 1947 were the first championships of Europe held since 1940; the striking feats of 18-year-old Alex Jany, of France, which stamped him the greatest speed swimmer to date; and the affiliation of the Soviet Union with the Fédération Internationale de Natation Amateur, governing body in world aquatics.

The European title gala, staged in a 50-m. pool at Monte Carlo, was brilliantly successful. Sixteen nations took part, the competition was keen and surprisingly fine performances attested to the progress made in most of the war-torn countries.

Hungary outscored favoured France for the European cup awarded to the nation gaining most points in the men's events, and the Danish women swimmers lifted the Bedius cup. Italy provided an upset in capturing the water polo title.

Individual laurels went to Jany and Karen Harup, of Denmark, the only double winners. The young Frenchman took his heat of the 100-m. free-style sprint in 56.2 sec., the final in 56.9 sec., and won at 400 m. in 4 min. 35.2 sec., smashing the world's record of 4 min. 38.5 sec. Miss Harup swam the 400-m. free style in 5 min. 18.2 sec. and 100-m. back stroke in 1 min. 15.9 sec. Jany, in possession of the 200-m. standard since 1946, later shaded the marks for 100 m. from 55.9 to 55.8 sec. and 300 m. from 3 min. 21.6 sec. to 3 min. 21 sec., raising his ecord holdings to 4.

Admission of the U.S.S.R. to membership in the F.I.N.A. was voted by the executive bureau at a meeting in Monte Carlo. The soviet swimmers, credited with many exploits, now became eligible for the 1948 Olympic events in London.

Nel van Vliet, of the Netherlands, holder of all breast-stroke ecords for women, maintained her leadership and broke 3 listed marks, clipping the figures for 100 yd. from 1 min. 11.1 sec. to min. 9.2 sec., 100 m. from 1 min. 19.8 sec. to 1 min. 18.2 sec. and 200 m. from 2 min. 51.9 sec. to 2 min. 49.2 sec. She also helped Mrs. Van Feggelen Koster and Hannie Termeulen to ower the medley relay standards for 300 yd. from 3 min. 25.6 ec. to 3 min. 19.6 sec. and 300 m. from 3 min. 46.3 sec. to 3 min. 42.4 sec.

In the United States, Joseph Verdeur cut the breast-stroke records for 200 yd. from 2 min. 19.5 sec. to 2 min. 16.4 sec., 200 m. from 2 min. 35.6 sec. to 2 min. 35 sec., and Donald De Forrest that for 100 yd. from 1 min. 0.6 sec. to 1 min. 0.5 sec. Harry Holiday lowered the time for 400-m. back stroke from 5 min. 10.9 sec. to 5 min. 9.6 sec., besides teaming with Robert Sohl and Richard Weinberg to drop the marks for the 300-yd. medley relay from 2 min. 55.5 sec. to 2 min. 50.5 sec. Ann Curtis sliced the record for 440-yd. free style from 5 min. 11.5 sec. to 5 min. 7.9 sec. and equalled that of 59.4 sec. for 100 yd.

(L. de B. H.)

## Switzerland.

A country of central Europe bounded on the west by France, on the north and northeast by Germany, Austria and Liechtenstein, and on the south by Italy. Area: 15,940 sq.mi.; pop. (est. 1946) 4,450,000; chief towns (pop. est. 1946) Berne (cap. 136,700); Zürich (360,500); Basle (170,300); Geneva (137,600); Lausanne (99,300). Languages: German, French, Italian and Romansh; religion: Christian (in 1941, 57.6% Protestant; 41.1% Roman Catholic; 0.5% Jewish; and 0.8% other denominations). President (1947) Dr. Philip Etter.

**History.**—On March 20, 1947, Dr. Max Petitpierre, head of the Swiss political (foreign) department, defined the Swiss attitude to the United Nations in a speech stating that Switzerland was ready to become a member if at the same time its traditions of complete neutrality could be maintained. The government made the same reservations in accepting on July 10 the invitation to the Paris conference on the Marshall plan of aid to Europe, insisting on its right to enter into economic agreements with the countries not attending the conference.

Elections for the Swiss national council were held on Oct. 27 and resulted in a majority for the Radical Democrats with 52 members in a house of 194. The Social Democrats, who had been in the majority from 1943, lost seven seats and retired once more to second place with 48 members. The Party of Labour (Communist) increased its seats from one to seven, but on the whole the results showed a slight strengthening of the traditionally antilabour parties.

The economic situation reached hitherto unknown levels: exports in 1946 had been to the value of 2,675,000,000 Swiss francs, twice as high as in 1938. On April 26 the federal council appealed for a check to be made on the rise in prices and wages, pointing out the danger of inflation. The sale of gold coins, which had led to the accumulation of great quantities of them by private persons, and in some cases to smuggling activities for speculation abroad, was suspended as from Sept. 9. An Argentine-Swiss trade agreement, to serve as a model treaty for all future trade agreements, was signed on Jan. 20; trade agree-

OLYMPIC BOBSLED RUN at St. Moritz, Switz. Ski enthusiasts of many nations continued to flock to the fashionable winter resort in the Swiss Alps during 1947 despite currency regulations ments were also concluded with France, Denmark, Norway, the Netherlands and Spain.

On July 6 a law was passed to introduce an old age insurance system. The rationing of tea, coffee, cereals and gasoline was abolished in March, that of meat and fats in October; the daily bread ration was cut on April 17 from 250 to 225 grams, in order to help meet the greater needs of other European countries.

On Dec. 11, Dr. Enrico Celio, federal councillor (minister) for posts and railways, was elected president of the Swiss confederation for 1948. (T. Hr.)

**Education.**—(1945–46) Primary: teachers 13,529, scholars 431,132; secondary: teachers 2,045, scholars 50,413; advanced schools: teachers 2,181, scholars 37,602; professional schools 248, teachers 1,661, scholars 32,022; universities (1946–47) 7, students 12,760; technical high schools 1, students 4,046; commercial universities 1, students 373.

**Finance.**—Revenue (est. 1947) 1,612,600,000 Swiss francs; expenditure (est. 1947) 1,709,200,000 Swiss francs; public debt (1946) 14,678,458,000 Swiss francs; note circulation (July 1947) 3,867,000,000 Swiss francs; gold reserve (1947) 5,119,000,000 Swiss francs; exchange rate: (1947) 1 Swiss franc = 23.36 U.S. cents.

**Trade and Communication.**—Foreign trade: imports (1946) 422,534,000 Swiss francs; exports (1946) 2,675,506,000 Swiss francs. Communications: roads (1945) 9,244 mi.; railways (1945) route mileage, normal gauge 2,262 mi.; narrow gauge 977 mi.; funiculars 102 mi.; streetcar lines 252 mi.; airways (1946) passengers carried 61,366; mails, baggage and freight 2,243 short tons; motor vehicles licensed (1946): cars 62,972; buses 1,304; trucks 27,029; motorcycles 28,815; radio receiving sets (1946) 769,352.

**Agriculture.**—(1946) production in short tons: wheat 224,250; spelt 36,900; rye 31,730; mixed corn 26,780; barley 70,300; oats 98,500; maize 11,000; potatoes 1,189,900; sugar beets 188,200; tobacco 3,195; milk 2,380,320; meat 115,350; wine 19,304,970 U.S. gal.

**Symington, William Stuart** (1901– ), U.S. government official, was born on June 26 in Amherst, Mass. He joined the army during World War I and attended Yale university from 1919 to 1923. He worked with the Symington company, a railroad equipment plant owned by his family, and later entered the radio manufacturing field, becoming in 1938 president of Emerson Electric Manufacturing company in St. Louis, Mo.

On June 7, 1945, President Harry S. Truman named Symington chairman of the Surplus War Property board. After the senate approved Truman's proposal to place surplus property disposal under supervision of a single man, Symington was appointed surplus property administrator. On Jan. 18, 1946, the president named him assistant secretary of war for air. (During World War II, Symington built what the army called the world's largest aeroplane armament plant as part of his Emerson company.) In this post, he became one of the numerous advocates of co-equality of the air force with the other armed services.

When a separate department of the air forces was created under the new national defense system, Symington became the first secretary of the air forces on Aug. 21, 1947. After his appointment he told the President's Air Policy commission that the U.S. must have no less than 630 heavy bombers in widespread bases to safeguard national security.

**Syphilis:** *see* Venereal Diseases.

**Syria and Lebanon.** Independent republics, formerly administered under French mandate, bordering on the eastern Mediterranean. *Syria.*—Area 72,560 sq.mi.; pop. (est. 1943) 2,860,411; capital, Damascus (225,000). Language: mainly Arabic; religion (in Syria and the Lebanon): approximately 66% Moslem, mainly in Syria; 33% Christian. President: Shukri el Quwatli. *The Lebanon.*—Area 3,470 sq.mi.; pop. (est. 1947) 1,200,000; capital, Beirut (233,970). Languages: Arabic, French, Hebrew, Armenian and Greek. President: Sheikh Bishara al-Khuri.

**History.**—At the end of Feb. 1947 it became known that the Syrian and Lebanese governments had offered to mediate in the deadlock which had arisen between Great Britain and Egypt over revision of the Anglo-Egyptian treaty of 1936. The prime ministers of Syria and the Lebanon, Jamil Mardam Bey and Riyad bey al-Sulh, stated on March 15 that they were willing to continue mediation if the Egyptian government desired. Four days previously Mahmoud Fahmy el-Nokrashy Pasha, the Egyptian premier, had announced his intention to place the dispute before the United Nations.

The Lebanese chamber of deputies, elected in Aug. 1943, was dissolved on April 8, and the first general elections were held on May 25. The elections were carried out under military supervision; less than half of the electorate voted and there were few disorders. The manner in which the elections had been conducted was severely criticized in the press, and the editors of the leading daily papers, with the exception of the semiofficial *Le Jour,* wrote to the president of the republic, appealing for an immediate dissolution and declaring their intention of boycotting the sittings of the assembly. The first results gave the government 49 out of 55 seats, with 5 undecided.

The Lebanese foreign minister, Hamid Frangié, in presenting the Arab league case to the United Nations Special Committee on Palestine in Beirut in July, stated that the only possible settlement was the formation of an independent state with every Jew who lawfully obtained Palestine citizenship equal to every Arab.

The political committee of the Arab league met at Sofar, in the Lebanon, Sept. 16–19, to discuss the report of the United Nations Special Committee on Palestine, and the Arab League council met at Aley, near Beirut, Oct. 8–15. After the meeting of the political committee a statement was issued, declaring that Arab questions generally and particularly those of Palestine had been discussed. The meeting pronounced the United Nations report to be flagrantly prejudicial to Arab rights and violated all promises given to the Arabs.

At the United Nations general assembly the representatives of Syria and the Lebanon continuously supported the Arab states in opposing the plan for partition. After the final vote had been taken, the leader of the Syrian delegation declared that it was "an illegal and unjust decision," and that the Arab delegates reserved their freedom of action.

On Oct. 8, the Mufti of Jerusalem, Haj Amin el-Husseini, arrived at Beirut, where he was received by the president and the prime minister. On the following day it was announced that the British legation in Beirut had protested at his presence in the Lebanon, in view of an undertaking previously given that he would not engage in political activities.

The Syrian prime minister signed an agreement on Sept. 1 with the Trans-Arabian Pipeline company for the construction of a new 1,100-mi. pipe line from Saudi Arabia to the Mediterranean coast. The income from the pipe line was to be shared between the governments of the Lebanon and Syria by an agreement signed on April 1. (*See* Palestine.)

**Education.**—In Syria, 1947—government schools: primary 821, scholars 114,549; secondary schools 30, scholars 10,021; arts and crafts schools and teachers' training college 10, students 1,210; colleges 9, students 1,722. Private schools: Moslem primary 62, scholars 13,731; secondary 17, scholars 1,922; Christian schools primary 226, scholars 28,690; secondary 22, scholars 1,350; Israelite schools primary 6, scholars 1,406; other schools primary 7, scholars 892; secondary, scholars 142.

In the Lebanon, 1944–45—state schools 308, scholars 30,112; private schools 963, scholars 71,526; foreign schools 326, scholars 45,065.

**Trade and Communication.**—Foreign trade: imports (1946) £S266,400,000; exports (1946) £S85,200,000. Roads (1939) *c.* 1,900 mi. (Lebanon only, 1945, surfaced roads 1,371 mi.) Railways (1939) 690 mi. Motor vehicles in the Lebanon, 1944: cars 5,401; buses 210; trucks 1,867. Shipping (Lebanon tonnage only, 1945) entered 522,515; cleared 146,181 with cargo.

**Finance.**—Syria: estimated revenue and expenditure for 1947 balanced at £S125,820,000 (the Syrian budget does not include the general independent administrations nor the expenses of customs administrations); notes in circulation (Oct. 1947) £S189,000,000; gold reserves £S2,471,085.

The Lebanon: estimated revenue and expenditure for 1947 balanced at £S58,900,000; notes in circulation (1946) £S157,000,000.

The unit of currency in both countries is the Syrian or Lebanese pound (£S), divided into 100 piastres; rate of exchange (Dec. 1947) £S1=45.35 U.S. cents.

**Agriculture.**—Production (1945) in short tons: wheat 429,100; barley 272,700; maize 20,500; sorghum 83,600; grapes 186,000; olives 175,000; melons and watermelons 603,000; cotton 4,700; silk (Lebanon only) boxes prepared for incubation 21,000; number of fresh cocoons 600,000.

In Syria only (1946, in short tons): wheat 62,567; barley 310,612; corn 8,411; beans 14,985; lentils 21,437; white maize 64,869; yellow maize 30,421; potatoes 16,594; carrots 3,715; onions 442,860; garlic 9,700; cotton 15,578; linen 176; hemp 2,962; olives 46,170; vines 188,040; apricots 23,512; apples 6,246; pears 1,638; cherries 2,197; pistachionuts 1,297; almonds 2,338; walnuts 6,409; raw wool 8,193.

**Syrup, Sorgo and Cane.** U.S. production of sorgo syrup in 1947 was estimated at 9,885,000 gal. compared with 11,934,000 gal. in 1946 and an average of 11,537,000 gal. during 1936–45. The acreage was up 4.5% in 1947 but the yield declined. Heavy spring rains and high, late summer temperatures hampered production.

Table I.—*U.S. Cane Syrup Production 1947, 1946 and 10-yr. Average 1936–45*

(In thousands of gallons)

| State | 1947 | 1946 | 10-yr. Average | State | 1947 | 1946 | 10-yr. Average |
|---|---|---|---|---|---|---|---|
| Louisiana . . . | 8,460 | 11,825 | 7,671 | Alabama . . . | 2,160 | 2,430 | 2,777 |
| Georgia . . . | 4,070 | 4,025 | 4,200 | South Carolina | 300 | 420 | 424 |
| Mississippi . . . | 2,600 | 3,500 | 3,209 | Texas . . . . | 280 | 270 | 611 |
| Florida . . . . | 2,400 | 1,980 | 1,850 | | | | |

Table II.—*U.S. Sorgo Syrup Production 1947, 1946 and 10-yr. Average 1936–45*

(In thousands of gallons)

| State | 1947 | 1946 | 10-yr. Average | State | 1947 | 1946 | 10-yr. Average |
|---|---|---|---|---|---|---|---|
| Mississippi . . . | 1,875 | 1,400 | 1,750 | Georgia . . . | 944 | 689 | 1,097 |
| Alabama . . . | 1,680 | 1,827 | 1,911 | Tennessee. . . | 930 | 1,520 | 1,115 |
| Kentucky . . . | 962 | 1,360 | 829 | Arkansas . . . | 672 | 1,200 | 924 |
| North Carolina . | 949 | 1,245 | 774 | South Carolina. | 441 | 580 | 536 |

Cane syrup production declined in 1947 to 20,270,000 gal., compared with 24,450,000 gal. in 1946 and an average of 20,835,000 during 1936–45. The yield per acre, 181 gal., was below the 204-gal. yield of 1946. (*See* also BEEKEEPING; MAPLE PRODUCTS.) (J. C. Ms.)

**Table Tennis.** After an eight-year hiatus because of World War II the International Table Tennis federation in 1947 resumed the world championship matches inaugurated in 1926. The matches, played in Paris, resulted in these winners: men's singles, Bohumil Vana (Czechoslovakia), the 1938 champion; women's singles, Gizi Farkas (Hungary), a new star; men's doubles, Vana and Adolf Slar (Czechoslovakia); women's doubles, Miss Farkas and Trude Pritzi (Austria); mixed doubles, Ferenc Soos (Hungary) and Miss Farkas; men's singles consolation, H. Anderson (Sweden); Swaythling cup for men's teams, Czechoslovakia (Vana, Slar, Tokar, Tereba); Corbillon cup for women's teams, England (Elizabeth Blackbourn, Vera Dace). The 14th I.T.T.F. congress, composed of 23 nations, initiated a reorganization; divided the world into five zones, each under a vice-president; adopted the no-spin palm service used in the U.S.A. and scheduled the 1948 championships in Wembley stadium, London, Feb. 4–11. (C. Z.)

**Taft, Robert Alphonso** (1889– ), U.S. senator and son of William Howard Taft (27th president of the United States), was born on Sept. 8 in Cincinnati, O. He was graduated from Yale in 1910 and received his law degree at Harvard in 1913. During World War I, he was rejected for military service because of poor vision and served as an assistant counsel on the U.S. Food administration.

Ohio Republicans elected him to the senate in 1938; he was re-elected in 1944.

Taft had strong support for the presidential nomination in both the 1940 and 1944 national conventions, but lost out first to Wendell Willkie and later to Thomas E. Dewey.

In the 80th congress, Taft became undisputed G.O.P. leader of the upper house. He was the principal architect of the Taft-Hartley Labour act, which was passed by congress over the presidential veto in the summer of 1947. In defending the bill, he disclaimed antilabour prejudice, insisting it was designed principally to reduce union "abuses."

In June 1947, he had a sharp debate with President Harry S. Truman over inflation. Delivering the first broadside, Truman declared on June 5 that Taft was an advocate of a "boom and bust" philosophy; the senator rejoined vigorously the following day that the administration itself was to blame for high prices.

On international issues Taft took the stand that the administration's foreign policy was a failure, asserting (Sept. 25) that it had "brought the world to a state of economic collapse."

In September, Taft toured seven western states to test sentiment regarding his candidacy for president in 1948. The tour was marked by his forthright statements on controversial issues.

On Oct. 24, it was disclosed that Taft had announced his candidacy in a letter to the chairman of the G.O.P. state committee of Ohio.

**Taft-Hartley Act:** *see* LABOUR UNIONS; LAW; NATIONAL LABOR RELATIONS BOARD; UNITED STATES.

**Tahiti:** *see* PACIFIC ISLANDS, FRENCH.

**Taiwan:** *see* FORMOSA.

**Talc.** The sales of minerals of the talc group (talc, pyrophyllite and ground soapstone) are grouped together because of similarity of characteristics and a considerable degree of interchangeability of uses. The basic data of the industry in the United States are as follows, in thousands of short tons:

| | 1937 | 1939 | 1941 | 1943 | 1945 | 1946 |
|---|---|---|---|---|---|---|
| Mine production . . . . . . | ? | ? | 414.5 | 436.2 | 414.5 | 460.6 |
| Sales . . . . . . . . . . . . | 230.0 | 254.0 | 416.4 | 412.9 | 398.4 | 457.1 |
| Crude. . . . . . . . . . | 11.1 | 15.7 | 43.8 | 30.2 | 36.0 | 37.0 |
| Sawed . . . . . . . . . | 1.1 | 1.9 | 4.2 | 1.7 | 0.7 | 0.8 |
| Ground . . . . . . . . . | 217.8 | 236.4 | 368.4 | 381.0 | 361.7 | 419.3 |
| Imports . . . . . . . . . . | 26.9 | 26.2 | 18.6 | 6.6 | 6.7 | 18.4 |
| Used in | | | | | | |
| Paint . . . . . . . . . . | 59.7 | 67.9 | 120.3 | 129.2 | 103.6 | 103.8 |
| Paper. . . . . . . . . . | 32.1 | 30.2 | 37.9 | 34.4 | 28.1 | 32.3 |
| Ceramics . . . . . . . . | 29.8 | 38.4 | 79.0 | 47.9 | 37.9 | 62.4 |
| Rubber . . . . . . . . . | 26.9 | 31.1 | 58.1 | 49.0 | 63.8 | 66.0 |
| Roofing . . . . . . . . . | 23.6 | 30.5 | 40.6 | 47.5 | 46.8 | 54.6 |
| Toilet preparations . . . . | 4.3 | 9.7 | 21.1 | 17.7 | 21.5 | 17.1 |
| Insecticides . . . . . . . | ? | ? | 10.3 | 24.5 | 37.0 | 65.0 |

Both mine output and sales made new record highs in 1946.

**Canada.**—Productions of 14,439 short tons of talc and 14,914 tons of soapstone in 1945 decreased to 13,500 tons of talc and 11,421 tons of soapstone in 1947. (G. A. Ro.)

**Tanganyika:** *see* BRITISH EAST AFRICA; TRUSTEE TERRITORIES.

**Tangerines:** *see* FRUIT.

**Tangier.** An international and demilitarized territory on the southern shore of the Straits of Gibraltar. Area: 232 sq.mi.; pop. (1941 est.) 100,000 (including 36,500 Moslems, 16,509 Europeans). Languages: French, Spanish, Arabic. Legislative power was vested in an international assembly following the Convention of Paris of Dec. 18, 1923. The regime is autonomous, under the nominal sovereignty of the sultan of Morocco. Administrator: Vice Admiral Luis Magalhaes Correia.

**History.**—On April 9, 1947, the sultan of Morocco paid the first visit to Tangier made by a sultan since 1889; he was received by his representative, the Mendub Haj Mohamed Tazi, and thousands of Moors came in from the Spanish zone to welcome him. While there he made a speech on April 11 containing a friendly reference to the Arab league and a claim for Moroccan independence. He left on April 14. A demonstration was held on April 15 in memory of the Moors killed in the Casablanca riots.

**Finance.**—Revenue and expenditure (1947) estimated to balance at Fr. 430,000,000. The monetary unit in the territory is the Moroccan franc equal to the French franc.

**Trade and Communications.**—Foreign trade (1944): imports Fr. 181,357,400; exports Fr. 14,630,000. Motor vehicles licensed: about 8,000.

## Tariffs.

Nontariff controls over international trade continued to be more important throughout 1947 than were tariffs in the commercial policies of the world's leading trading nations. In fact, because of the halting recovery in many countries following World War II, together with the acute worldwide shortage of industrial equipment and essential supplies and the accompanying dollar crisis, the latter half of 1946 and most of 1947 were characterized by an intensification of nontariff controls over imports throughout many parts of the world.

Insofar as tariffs and related instruments of commercial policy were concerned, the most noteworthy events and trends during the year were: (1) the United Nations Conference on Trade and Employment at Geneva, Switzerland (and later at Havana, Cuba), where many reciprocal trade agreements were negotiated and a charter for the proposed International Trade organization was formulated; (2) the further deterioration in the balance-of-payments position of many countries and the increasing shortage of free exchange throughout the world (*see* Exchange Control and Exchange Rates.)

Dominating everything else in world tariff policies during 1947 was the negotiation of the Geneva trade pacts. For more than six months beginning in April 1947, nearly 1,000 delegates from 23 countries were occupied in negotiating reciprocal trade agreements for the reduction of tariffs and the removal of other barriers to world trade. Never before had multilateral negotiations been attempted on so large a scale to obtain so broad a degree of international economic co-operation.

Ultimately, trade negotiations were carried on by 106 individual pairs of nations, bargaining simultaneously for reciprocal reductions in duty. Thus, at Geneva there emerged agreements granting tariff concessions affecting more than 45,000 individual items in world trade. The signatory countries generally accounted for three-fourths of the value of world trade, and the items on which concessions were granted had ordinarily accounted for two-thirds of the total trade of the participating countries themselves. The many concessions were safeguarded by additional provisions to prevent restrictive trade practices and various types of discrimination. Moreover, the signatory countries agreed to extend most-favoured-nation treatment to one another.

Thus, an important stride had been taken toward re-establishment of the multilateral trading system. The concessions, ultimately requiring approval by the respective governments, were combined in a composite trade agreement—a multilateral instrument—signed by each government represented at Geneva. The composite agreement comprised 20 individual schedules setting forth the concessions which signatory countries extended to one another. It was planned (subject to ultimate decisions at Havana) that for a transition period, at least, all of these concessions would be generalized to nonsignatory countries on a most-favoured-nation basis. Ultimately, however, after a date to be established, other nations presumably would benefit from the Geneva concessions only after they adhered to the I.T.O. charter and granted more or less equivalent concessions to other signatories.

However restrictive nontariff import controls may have been during 1947, the motive for their adoption or increased utilization was less that of economic nationalism and protectionism than that of conserving foreign exchange and husbanding available supplies of free currency, especially dollars. By the close of 1946, there was a marked trend toward the adoption or more intensified use of import licensing systems, exchange controls, and bilateral compensation-clearing arrangements. Import restrictions, including licensing systems, quota arrangements, and the like, were often employed in conjunction with official exchange-control operations. Such restrictions were usually designed to curtail or prohibit the importation of nonessential commodities or to assure that the available foreign exchange would be directed into the most useful channels.

Newly adopted quantitative restrictions of imports were probably most far-reaching in Canada, Brazil, Colombia and the United Kingdom. Controls were also employed with increasing intensity in many other countries, most notably perhaps in Argentina, Chile, Ecuador, Mexico, Nicaragua, Peru, Uruguay, Norway, Sweden, China, India, Australia, New Zealand and Southern Rhodesia. Bilateral barter-type agreements, which had increased markedly during 1946, were equally if not more apparent during 1947. Most of these agreements appeared chiefly to have been stop-gap arrangements to tide nations over during the shortages of free exchange. By means of bilateral clearing arrangements and the mutual facilitation of balanced trade in specified commodities, numerous countries attempted to maintain markets for their export industries and sought to assure a continued supply of essential raw materials and industrial supplies. Bilateral clearing arrangements were most prominent in Europe, where during the year they were used most frequently by countries more or less in the following order: Czechoslovakia, Poland, Bulgaria, France, Netherlands, Norway, Switzerland, Austria, Yugoslavia, U.S.S.R., Finland, Belgium and Denmark.

Except for the reciprocal trade pacts negotiated at Geneva, few countries made extensive revisions in their tariff schedules and even these changes related chiefly to tariff classifications and nomenclature and hence did not make extensive alterations in the prevailing rates of duty. Piecemeal modifications affecting individual import commodities or tariff items were also made in various countries. More or less general revisions in tariff schedules were made in Belgium, Netherlands, France, Czechoslovakia, the Dominican Republic, Mexico and Peru. Probably the most important of the new schedules originated in the agreement to establish the Belgium-Netherlands-Luxembourg customs union (Benelux). This agreement, signed in March 1947 and effective in Jan. 1948, added one more schedule to the broadening list of tariff systems employing the classification and nomenclature recommended by the League of Nations. An attempt was made to fix the rates of duty in the new schedule at a point midway between the former Belgium and Netherlands duties. It would thus appear that the new tariff provided slightly more protection to domestic industries than did the Netherlands tariff and perhaps slightly less than did the Belgian-Luxembourg duties. Rates of duty were predominantly of the ad valorem type. In Aug. 1947, Bulgaria and Yugoslavia announced that a customs union between those two countries was contemplated.

During the latter part of 1947, France also modernized its tariff schedule by making its nomenclature conform more closely to the model prescribed by the League of Nations. At the same time ad valorem duties were substituted in most instances for the specific rates which generally had applied. Although it was announced that the new duties were designed to have approximately the same ad valorem equivalent as the old, it appeared that their effective burden was somewhat higher. A revised tariff in Czechoslovakia, effective in July 1947, provided for a horizontal increase in most specific duties; it was indicated that this action was undertaken largely to compensate for the decreased foreign purchasing power of the national currency. At the same time, various Czechoslovakian rates involving double duties, surtaxes, and the like were substantially simplified. Apparently, the general level of tariffs was not raised; in fact, the duties on many important noncompetitive products were reduced. The new customs tariff of the Dominican Republic, adopted in July 1947 and effective in Jan. 1948, was designed principally to favour importation of agricultural supplies and equipment and other materials essential to domestic industries. In Nov. 1947, Mexico raised most of the duties in its import schedule, except, of course, those bound by conventions with other countries. Where the latter was true, relief under the "escape clause" was sought in a substantial number of instances. At the same time, Mexico altered most of its specific duties to compound rates (specific and ad valorem) and simplified a number of tariff classifications. Government spokesmen indicated that the new tariff was necessary to stabilize revenue, assure protection to domestic industries, and correct the country's adverse balance of payments. The new tariff schedule in Peru, instituted in June 1947, was officially described as designed to introduce improved nomenclature, provide a substantial increase in revenue, and afford more protection to domestic enterprises.

Although piecemeal tariff changes affecting individual import items or groups of items were less frequent in 1947 than in many preceding years, measures providing for lower duties apparently were more frequent than those establishing higher tariff rates. The most extensive increases in duty; *i.e.*, those affecting the widest range of commodities, seem to have been made in Chile, Mexico, Martinique, Spain, the United Kingdom, Turkey, the Netherlands Indies and Tunisia. The increased duties in the United Kingdom were limited chiefly to imports of tobacco and motion picture films. The action in Turkey and Tunisia seemed motivated principally by the desire to compensate for depreciation in the currency and involved chiefly duties levied on a specific basis.

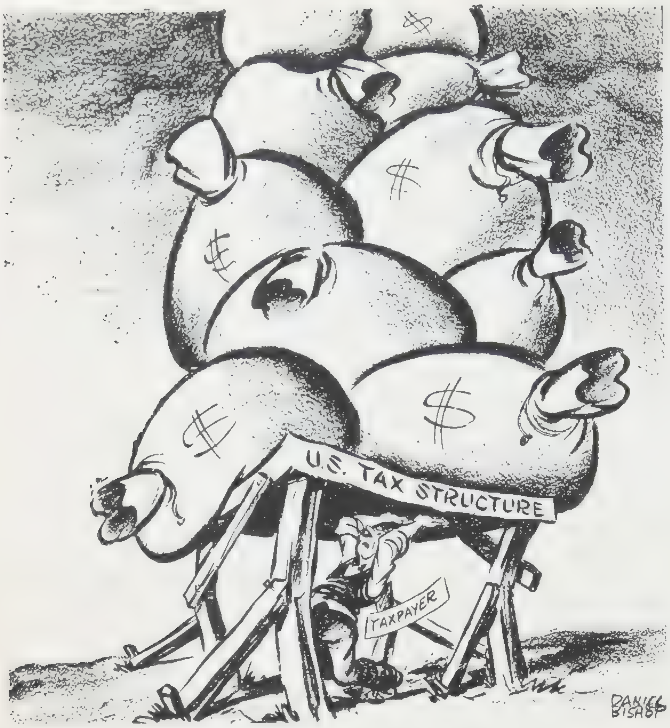
Probably the most comprehensive reductions in 1947 were those made in Paraguay and South Africa, but even here the changes were moderate. By and large, unilateral reductions in duty on individual items were granted most frequently to alleviate particular supply situations or to facilitate the importation of materials and equipment essential to domestic industrialization programs. Many such reductions were either temporary in character or applicable only to specified quantities of imports. (*See* also INTERNATIONAL TRADE.) (D. LH.)

## Taxation.

The year 1947, like 1946, ended without important U.S. federal tax legislation in the literal sense. Some stop-gap measures and certain minor amendments went through, but that was all. In a real sense, however, an important increase in tax burden resulted from advancing inflation. As the dollar lost buying power, not only did the value of exemptions shrink but income tax brackets stated in terms of dollars became narrower and narrower in terms of economic value, and the progression of tax rate effectively steepened. Despite this, and despite the large budgetary surplus for the fiscal year ended June 1947, the Republicans could not exert firm enough legislative control to redeem their pre-election promise of large and quick reduction in personal income tax. Twice congress passed tax-reduction bills, twice Pres. Harry S. Truman interposed vetoes, and twice the vetoes were upheld. In Dec. 1947 the congressional majority was returning to the charge with revised plans for tax cutting. Also, throughout 1947, sweeping and detailed proposals for ultimate tax revision were being offered. Their general trend was toward lightening and more comfortably adjusting the tax burden. Yet the administration seemingly maintained determination to go slow on tax relief, both to restrain inflation and to lower the national debt and meet currently the costs of effective aid to Europe and other suffering regions. So at the opening of 1948 a sharp struggle between White House and Capitol Hill was in prospect.

**Tax Revision Plans.**—Some of the plans for federal tax revision originated, as in previous years, outside the government itself. In mid-November the Committee for Economic Development (*q.v.*) proposed a long-range "program for prosperity" involving a number of immediate changes. The program aroused wide comment, much of it favourable. Representatives of the section of taxation of the influential American Bar association in June presented extensive recommendations to the house committee on ways and means. The association discussed tax problems at its annual meeting in September, thereafter conferring with and conveying recommendations to appropriate public officials. The ways and means committee continued its examination of need for revision of internal revenue laws, in particular appointing a special tax study committee of skilled persons under the chairmanship of Roswell Magill. From this committee came in early November a majority report and a largely dissenting minority report by Matthew Woll, one of the ten committee members. In the closing months of the year the ways and means committee conducted hearings as to various aspects of tax revision. The technical staff of the joint committee on internal revenue taxation worked continually on matters germane to revision. The treasury department, engaged in reexamination of the whole tax system, issued in June and later months at least ten important studies of leading revenue problems. The commerce department's advisory committee on small business in October recommended modification of federal tax policies "in the interests of business." Topics mentioned by the following paragraphs are among those most vigorously stirred in the reports and inquiries just indicated.

*Taxation of Married Couples.*—When 1947 opened, nine southern and western states and also Hawaii had community property systems which gave married couples the great advantage of splitting income between husband and wife for federal tax purposes. These jurisdictions had successfully resisted efforts by noncommunity (that is, common law) states for nationwide equalization of personal income tax burden. Up to 1942 they had also successfully resisted such efforts with respect to estate and gift taxes. In 1942, however, congress more than equalized the estate and gift situation; it made these two taxes more burdensome to community property spouses than to spouses in common law jurisdictions. Those seeking income tax equality used the 1942 disparity as a bargaining point in 1947. A working agreement resulted under which the interested parties with practical unanimity pressed a single adjustment proposal to level out the effect of all three taxes—income, estate and gift—by giving husbands and wives throughout the U.S. the same tax advantages enjoyed prior to 1942 only by spouses in community property jurisdictions. Widening adoption of community property plans, obviously for tax-saving, increased the likelihood that congress would effectuate this adjustment proposal. During 1947 Michigan, Nebraska and Oregon made themselves community property states; Pennsylvania tried to, but the state supreme court held the statute invalid. As of the beginning of 1947 the treasury estimated that general interspousal income splitting would have the substantial effect of benefiting 4,900,000 married couples at an annual revenue cost of $744,000,000.



"ANOTHER VETERAN IN NEED OF NEW HOUSING," a cartoon by Bishop which appeared in the *St. Louis Star-Times* on May 20, 1947, when the U.S. house of representatives sustained Pres. Truman's veto of a $4,000,000,000 income tax reduction bill

*Taxation of Corporate Dividends.*—Another intense discussion centred upon federal taxation of corporations. Here the key issue had to do with dividends. An ordinary business corporation may, in computing its taxable income, deduct interest paid on corporate bonds, notes, etc. It may not likewise deduct the amount of dividends paid to its stockholders, and the stockholders must include their dividends for individual tax, just as bond or note owners must include their interest. Hence, the complaint that dividends are double-taxed, equity financing discouraged, fixed indebtedness unwisely extended and healthy expansion of business cramped. Most suggested methods of relief inured to the benefit of stockholders as distinguished from bondholders. This of course gave room to argue that an undeserved windfall was being sought for persons who bought stock at prices depressed by former federal tax methods. The whole matter was so highly debatable and ran into so many ramifications, all of great fiscal importance, as to prevent confident prediction of congressional action.

*Taxation of Small Businesses.*—Strong representations were made as to the advisability of adjusting federal taxes to encourage small businesses, incorporated or unincorporated. Suggestions included changes in tax rates, special exemptions, liberalized loss offsets, acceleration of depreciation allowances and equalization of taxes as between incorporated and unincorporated small firms. The underlying facts and considerations were carefully presented in a treasury study released at the end of Oct. 1947.

*Taxation of Co-operatives.*—The internal revenue code exempts from corporate tax, under specified conditions, co-operative farmers', fruit-growers' and other like associations for marketing products and purchasing supplies and equipment; financing corporations organized as auxiliaries of such co-operatives may also qualify for exemption. There is no statutory exemption for consumers' co-operatives. Marketing and purchasing by the co-operative method had grown to extraordinary dimensions in the U.S., and there was sharp adverse criticism of the foregoing exemptions, notably by representatives of small business which was in a competitive position. Much logical, economic and political power was ranged on each side of this controversy, similar problems had proved difficult of solution in both Great Britain and Canada and the outcome of the discussion was unpredictable.

*Estate, Gift and Income Taxes.*—It had always been deemed necessary to guard federal estate tax against avoidance through transfers of an essentially testamentary nature but made during life. This was attempted in part by including many such transfers under the estate tax and in part by levying a separate gift tax. The first expedient was difficult to apply and ineffective in numerous respects. There was considerable overlapping and inconsistency between estate and gift taxes. For at least ten years the treasury had explored the possibility of eradicating these defects by combining or integrating the two types of tax. Just concern had also arisen because of inconsistencies, sometimes annoyingly whimsical, between these taxes and the income tax. In 1944 the treasury appointed to explore the problem an advisory committee of eminent tax practitioners, whose report was published in 1947. It includes a penetrating analysis of the matter and a specific recommendation of code revision for integrating estate and gift taxes into a single transfer tax, and for harmonizing or correlating this tax with the income tax.

*Powers of Appointment.*—In connection with federal estate and gift taxes, one highly technical matter of broad practical importance is proper treatment of powers of appointment. Such powers, typically created by a testator or the creator of a trust, enable other specified persons or perhaps the creator himself to exercise control over the transmission of beneficial interests. The code was elaborately amended in this respect in 1942. These amendments had some aspects arousing strong disapproval. After long negotiations, the treasury and interested groups during 1947 worked out satisfactory plans of revision, and appropriate legislation was introduced. Congress postponed action because of time limitations and complexity of the problem.

*War Losses.*—As in the matter of powers of appointment, discussion had been in progress for years about tax provisions respecting war losses and recoveries. Here, too, general agreement was reached during 1947 between the treasury and representatives of interested taxpayers but there was inadequate time to deal definitively with appropriate legislation.

**International Tax Conventions.**—Turning from pending proposals to action taken in 1947, first mention may be given to continuance of the policy of negotiating international tax conventions for avoidance of double taxation, exchange of relevant information and reciprocal assistance in enforcement of tax claims. Conventions with France and the Union of South Africa were before the senate foreign relations committee. Negotiations were held with Denmark, New Zealand and Mexico. Conventions earlier consummated were implemented by regulations and rulings and in one or two instances interpreted by court decisions.

**Excess Profits Tax.**—Although no longer operative after 1945, the wartime excess profits tax left behind it a tremendous grist of claims under the special relief provisions. The Excess Profits Tax council, appointed in 1946 to deal with this situation, completed its organization by the end of that year. During its first year, it spent much time laying down principles of operation and reviewing and revising the bureau bulletin issued earlier to guide application of the relief sections. The council began working on specific cases about the beginning of 1947, and by June 30 had disposed of approximately 1,000 cases. This number included 51 which had gone to the tax court before the council was created; of these 34 were settled by agreement and 15 more were otherwise closed, so that only 2 remained for court disposition. Such figures indicate the council's earnest effort to adjust acceptably to taxpayers, without judicial trials, the smaller and simpler cases, thus freeing both its time and the courts' time for the massive disputes which, whether disposed of on the administrative or the judicial level, must move comparatively slowly. In this field, a "small" case involves less than $100,000. About 57% of the 8,400 cases pending Oct. 1, 1947, were in that sense small. At the other extreme of the scale were about 250 pending cases each involving more than $3,000,000 and together representing about 60% of the total amount involved.

**Tax Enforcement.**—For the fiscal year 1947–48 congress cut by about $20,000,000 (more than 9%) the salary and expense appropriation requested for the bureau of internal revenue. Complaints arose that the consequent lay-off of employees seriously curtailed bureau tax enforcement activities, which had in the fiscal year 1945–46 produced nearly $800,000,000 in additional income, profits, estate and gift tax assessments. Countercharges from congressional sources suggested spite work in retaliation for the appropriation cut. An investigation of the bureau followed. The controversy had not at the end of 1947 been fully resolved.

**Social Security.**—The rate of old-age insurance social security tax on employees and employers was legislatively set at 1% of wages received or paid through 1949, then at 1½% through 1951 and thereafter at 2%. In December the treasury suggested that 11,000,000 self-employed persons should be brought under this social security coverage by paying social security taxes just as income taxes are paid. (*See* also SOCIAL SECURITY.)

**Judicial Developments.**—Few judicial decisions of great importance with respect to federal taxation were rendered in 1947. The U.S. supreme court and other federal tribunals continued to discourage efforts to avoid, minimize or delay taxes by utilizing technical provisions of the internal revenue code. Status of the Dobson case, by which the supreme court in 1943 accorded unusually great finality to tax court decisions, was affected in two ways. The sixth circuit court of appeals asserted that the tax court as an administrative tribunal fell within the scope of the Administrative Procedure act of 1946 and had no greater adjudicative power than this act allowed. Also legislation offered in congress would make the tax court a judicial, rather than an administrative, court of record. If the sixth circuit's view should stand, or if the foregoing legislation should pass, the Dobson case would apparently become obsolete.

**State and Local Taxes.**—While too multifarious for review in detail, tax legislation during 1947 in 44 state legislatures and the District of Columbia emphatically manifested urgent need of larger revenues than were easily forthcoming. The broad tendency was to impose new taxes, or prolong or increase old ones. Fully 30 states so legislated with respect to alcoholic beverages (including beer) or tobacco (especially cigarettes) or both; 15 states and the District of Columbia legislated with respect to motor fuel or fuel oil; 4 states enacted sales and use taxes, significant as the first new legislation of this type in a decade; legislation increased or prolonged income tax burdens in 9 states. Only Oklahoma substantially reduced income tax, although a few states continued reductions initiated in earlier years. Failure on referendum of a proposed sales and use tax in Oregon prevented higher personal exemptions under the state income tax.

*State and Local Fiscal Relations.*—Cities, towns and other subordinate fiscal units were acutely distressed by the rising cost of their services. Diversification of revenue sources in these municipal corporations, while not wholly impossible, is difficult to achieve and main reliance must be placed upon the inelastic property tax. States, through diversification, increased tax yields between 1926 and 1942 about 13 times as rapidly as local governments. Hence, the latter urgently appealed for state aid, which could be given by (1) withdrawing the state from the property tax field, (2) granting localities power to diversify by taxing subjects other than property or (3) making more or less systematic contributions to local expense from state tax collections. All three of these aid methods were embodied in 1947 legislation and administrative practice. At least 16 states appointed commissions or committees to study the whole problem, probably the most important report emanating in 1946 from the Moore commission (New York). This report, recognizing the natural dependence of localities upon property, particularly real estate, for tax revenues, proposed an elaborate, systematic and costly plan for state assistance to local government. The plan set up separate budgets for state purposes and local assistance purposes, the latter budget to absorb about 55% of the total state revenue. Legislation put this plan into operation in 1946, but in 1947 the fiscal needs of localities continued so acute that legislation was passed to permit counties and cities to levy many excise and licence taxes. Soundness and uniformity in such taxation were to be furthered by the state tax commission.

*State and Federal Fiscal Relations.*—Complementary to the matter just considered were proposals respecting state-federal tax relationship. The American Bar association issued in 1947 an elaborate committee report on this question. The treasury also released a substantial study. In Sept. 1947, a conference of 15 state governors and 13 U.S. senators and congressmen recommended that federal excise taxes be reduced as soon as practicable, that federal estate tax be amended to provide more equitable division of death tax revenue with the states, that federal tax on employers to cover administrative expenses of state employment security programs be relinquished to the states and that states avoid encroachment on tax fields peculiarly adaptable to federal uses. (*See* also BUDGET, NATIONAL; BUSINESS REVIEW; DEBT, NATIONAL; LAW.) (J. M. MAG.)

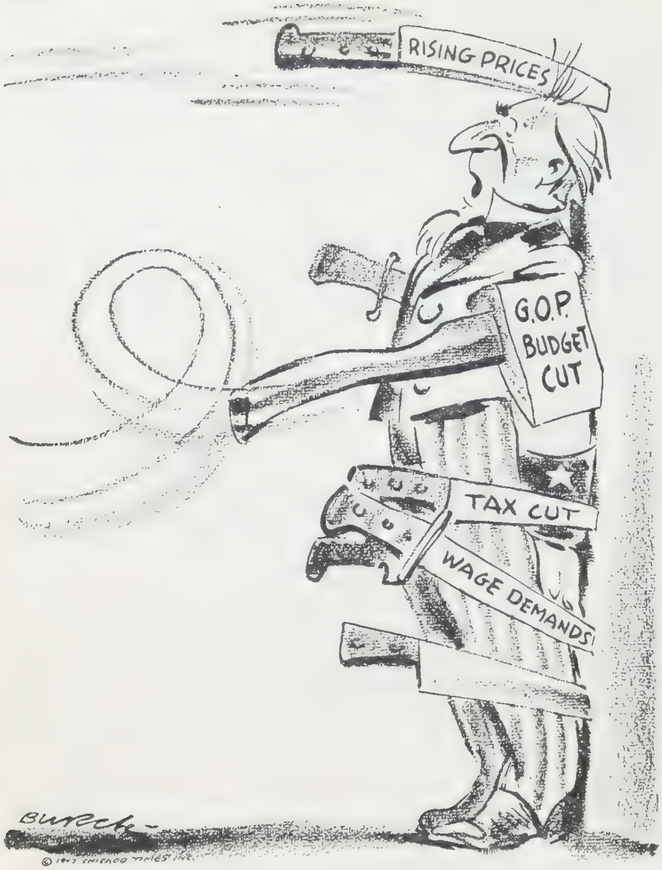
**Other Countries.**—During 1947 expenditure on defense and other expenditure arising from World War II decreased in Europe and the world at large more slowly than was expected, and these decreases were offset by increases as governments assumed new functions and responsibilities. Taxation, levied on incomes recovering much too slowly, increased rather than decreased, and in most countries was at record levels for peacetime, in more than one case implying serious repercussions on the economy as a whole.

*Great Britain.*—Tax liabilities (central, local and social security contributions) remained in 1946 at 32% of total private income, having fallen only slightly from their wartime peak of 33%. In spite of this high proportion, the fiscal year ending March 31, 1947, closed with a deficit of £570,000,000, though that was less than budgeted for. Revenue receipts exceeded estimates by £180,000,000. For 1947–48 a total revenue of £3,451,000,000 was budgeted for, £110,000,000 more than in the previous year. The chancellor budgeted for a surplus of £270,000,000 on ordinary account, and this surplus was in fact almost achieved in the first half of the fiscal year, revenue receipts being more than fully up to the estimates.

Miscellaneous receipts, an estimated £270,000,000, included a large item, about one-half of the total, consisting of repayments to the exchequer of certain issues during the war not actually spent by the armed forces. Another £95,000,000 was expected from the sale of surplus war stores.

On the basis of the previous year's taxation not much change was expected in total receipts: a fall in excess profits tax receipts (abolished from Jan. 1, 1947) being compensated by indirect taxes on increased imports, especially of tobacco.

Further income tax relief was given. The earned income



"CAREFUL!" a warning by Burck in the *Chicago Times* implying that the federal tax reductions being considered by congress in May 1947 might add fuel to the inflationary tendencies present in rising wage and price levels

allowance was increased to one-sixth, subject to a maximum of £250. The child's allowance was increased to £60 (from £50) and the conditions attached to the dependent relative's allowance were eased. This would cost altogether £87,000,000 in a full year. From Jan. 1, 1947, the profits tax was made discriminatory by being raised to 12½% on dividends; at the same time individuals and partnerships were exempted. This would yield an extra £36,000,000 in a full year but £16,000,000 of this would be lost to income tax. The rates of legacy and succession duties were doubled, except on charities. But new exemptions were given to smaller estates and small bequests. The increase would hit particularly legatees other than near relatives, the new rate for this class being 20% (in addition to estate duty). An additional £9,000,000 in a full year was expected from this source. Stamp duties were doubled with the exception of duties on the transfer of small property other than securities. This was expected to bring in £20,000,000. A new stamp duty was introduced at the rate of 10% on the "bonus element" in an issue of shares to existing shareholders which was expected to bring in £5,000,000 in a full year.

Heavy fuel oil and gas oil were exempted from import duty, the excise duty on home-produced artificial silk was repealed with corresponding reductions in customs duties, all these concessions costing £6,500,000. The tobacco duty was raised to record heights by approximately another £1 per pound and was £2 15*s.* on manufactured tobacco. The purpose was to reduce consumption (much above prewar) by one-third, while still making it yield £77,000,000 more than before. The effect of the duty was about as had been expected. There were £525,000,000 tobacco duty receipts budgeted for 1947–48.

The purchase tax was increased on domestic electric and gas apparatus of most kinds to 66⅔% in order to save fuel. But the tax was reduced from 33⅓% to 16⅔% on linoleum and some sports goods, and there were also other reductions. On balance an increase of £15,500,000 in a full year was expected.

A supplementary budget was introduced in November with the aim of absorbing purchasing power released by import cuts and the diversion of goods from home to export markets. From Jan. 1948 a tax of 10% would be imposed on organized betting other than on horse racing. The rate of the profits tax had been doubled retrospectively from Jan. 1947 to 25% on distributed and 10% on undistributed profits. Purchase tax rates went up, with some exceptions (including motor cars), from 16⅔% to 33⅓%, from 33⅓% to 50%, from 66⅔% to 75% and from 100% to 125%; but the list of exemptions was not changed. Duty on beer increased by 1*d.* per pint, and on spirits by 33*s.* 4*d.* per proof gallon, and on wines by 8*d.* to 1*s.* 8*d.* per bottle. There would be no further rise in food subsidies and some other subsidies were abolished. Tax arrears would be subject to interest. A novel measure was proposed (but later dropped) allowing only one-half of advertising expenditure as deduction for income tax purposes. In a full year £57,000,000 additional direct taxes and £151,000,000 indirect taxes would be raised, a total of £208,000,000.

*Canada.*—The surplus for the fiscal year ending March 31, 1947, was Can. $352,000,000 and another surplus of Can. $350,000,000 was budgeted for the next year, a record national income being expected. The revenue expected during 1947–48 was Can. $2,450,000,000 out of a national income of Can. $12,000,000,000. Income tax reductions, averaging 29%, and the abolition of the excess profits tax were announced. The reductions in personal income tax started on July 1. Exemptions remained unchanged but tax liabilities were reduced by 6%–7% in the upper ranges of income and by as much as 54% in the lowest ranges. Nine out of ten taxpayers would be affected. The excess profits tax ceased on Dec. 31, 1947. The corporation tax continued unchanged and in addition a 5% withholding tax was imposed on dividends payable by subsidiary companies in Canada to the parent company. This was expected to yield Can. $3,000,000–$4,000,000.

*Australia.*—At the end of 1946 the duty on gasoline was reduced, sales tax on clothing was removed and reduced on other goods. The concessions on sales tax cost £A16,000,000, other reductions £A4,000,000. For the fiscal year beginning July 1, 1947, the social service contribution was made slightly lighter in the lower middle range of income. There was also a general reduction in income tax, making rates of taxation lower and rebates higher. The rebatable allowance for wives was increased from £A100 to £A150, for dependent children from £A30 (£A75 for the first) to £A50 (£A100 for the first). The rate on income from personal exertion ran from 2*s.* 1*d.* (previously 3*s.*) in the £A1 to 13*s.* 6*d.* (14*s.* 6*d.*) on the excess of more than £A5,000. An agreement for the avoidance of double taxation was made with the United Kingdom. The budget proposed the abolition of the wartime (company) tax.

*New Zealand.*—Total taxation in 1946–47 was £NZ113,100,000 and estimated at £NZ113,400,000 for 1947–48, little less than its record high level. The only tax relief in the 1947 budget provided for exemption from the 33⅓% supertax on taxable unearned income up to £NZ200. Taxation as a proportion of aggregate private income was slightly less than 30%. In 1947–48 direct taxes were estimated at £NZ60,000,000 and indirect taxes at £NZ52,000,000.

*South Africa.*—The budget for 1947–48 reduced taxation by £SA15,800,000. This was made possible because of reduced defense expenditure although other expenditure rose. The basic formula applying to the taxation of gold mining companies was to be revised, reducing taxation in typical cases by about 10%. This, together with other concessions to gold mining, would cost

£SA2,225,000. The special levy on the diamond industry was reduced to one-third, which would cost £SA400,000, and the profits tax on fixed property abolished at a cost of £SA700,000. The excess profits duty and the special levy on trade profits were also abolished at a cost of £SA8,500,000.

*Eire.*—The autumn budget introduced further food subsidies and corresponding increases in taxation. Rates of surtax on incomes of more than £1,500 were raised to range from 9*d.* to 8*s.* 6*d.* in the pound. Excise duty on spirits was increased to £6 17*s.* 0*d.* per proof gallon, on wine doubled, on beer raised to £10 11*s.* 0*d.* per standard barrel and on tobacco to 30*s.* 6*d.* per pound. The duty on furs and cosmetics was doubled, entertainment taxes were raised and the road tax on motorcars raised by 50%. The stamp duty on the transfer of estates was raised. Income tax from April 1948 would be at the standard rate of 7*s.* in the pound instead of 6*s.* 6*d.*

*India.*—The budget for 1947–48 was the first to be introduced by an Indian finance minister. A new fiscal policy, designed to reduce economic inequality and to attain social objectives, was forecast. On the basis of existing taxation Rs.279 crores were expected, as against Rs.336 crores in 1946–47. Among changes in taxation was first the abolition of the salt tax, which meant a loss of Rs.9¼ crores. Although quantitatively unimportant, the salt tax had long been regarded as obnoxious and had been the centre of political agitation. This left an excess of expenditure over revenue of Rs.57 crores, and the greater part of the gap, Rs.44 crores, was filled by direct taxation. Income tax was made more progressive by raising the exemption limit from Rs.2,000 to Rs.2,500. A special income-tax of 25% was proposed (eventually reduced to 16%) on business profits (including the professions), in excess of one lakh of rupees. The yield was estimated at Rs.30 crores. A capital gains tax was also introduced, on the U.S. model, and was expected to yield Rs.3½ crores. At the same time a commission was set up to investigate the accumulation of war wealth. The rate of corporation tax was raised from $\frac{1}{16}$ to $\frac{1}{8}$, which would yield Rs.4 crores. Rates of income tax were not changed but the steepness of supertax was increased to reach the maximum rate of $\frac{21}{32}$ at Rs.1.2 lakhs for unearned income (instead of Rs.3½ lakhs), Rs.1.5 lakhs for earned income (previously Rs.5 lakhs). This would yield Rs.2½ crores. Dividend taxation was made more penal without expecting additional yield. Of indirect taxes the export duty on tea, which was of temporary nature, was raised from 2 annas per pound to 4 annas. These taxation measures would still leave a deficit. India and Pakistan would later present separate budgets.

*France.*—The main problem of French public finance, for a long time, was not that public expenditure was too large, in comparison with other countries, but that tax receipts were too low. Total taxation, including social insurance contributions, came to about 12%–13% of the total of private incomes in 1946. In the latter half of 1946 and throughout 1947 rising prices, caused to a large extent by the continuance of the budget deficit, made taxation, especially on profit income, lighter because of time lags between income accruals and tax payments. But the most important factor remained the evasion of taxation which was made so much easier by the complicated tax system. Rates of taxation were high but were enforced on fixed incomes only, while particular classes, especially farmers and shopkeepers, escaped lightly. In Nov. 1947, following the inventory of the financial system published a year earlier, Robert Schuman, newly elected prime minister, outlined a simplification of the income-tax system within the existing framework. Hitherto different subsidies applied to different types of incomes; henceforth, salaries (and wages) and other incomes only would be distinguished. Unification was expected to make tax collection more effective and bring in higher receipts; it was promised that the much needed general reform would come later. For salaries the exemption limit was raised to Fr.80,000, for other incomes to Fr.40,000. The tax on earnings was to be 15% (but 21% on professional incomes because of greater ease of evasion), and on nonagricultural profits 36%. An attempt would be made to tax farmers on actual profits and not on an out-of-date nominal figure, though they continued to receive special exemptions. Discounts would be given on prompt payment and interest charged on delays.

*Netherlands.*—The ordinary budget for 1947 showed revenue amounting to Fl.2,401,000,000 giving a surplus of Fl.91,000,000. The deficit, however, together with the extraordinary budget, was at Fl.1,967,000,000, an improvement on 1946. Two special levies were introduced, the property increment tax and the capital levy. The primary aim of these measures was to restore monetary equilibrium but they also helped in re-establishing the state's financial position. The property increment tax applied to the increase in property values between May 1, 1940, and Jan. 1, 1946. Corporations paid 50%, persons paid 50%–70% with certain exemptions. The capital levy was based on capital as of Jan. 1, 1946, and it was at the rate of 10% on part of the taxable amount up to Fl.100,000, rising to 25% for Fl.1,000,000 and more. Foreigners subject to the ordinary capital tax also paid the capital levy. Generally, they paid on physical assets in the Netherlands but not on paper titles.

*Switzerland.*—Ordinary revenue in 1946 came to Fr.535,000,000 leaving a deficit of Fr.135,000,000 which was more than made good by the surplus of Fr.216,000,000 on the extraordinary budget. Of the revenue Fr.230,000,000 represented customs duties, Fr.67,000,000 stamp duties, Fr.83,000,000 duties on tobacco and beer, Fr.39,000,000 post office and alcohol monopoly profits and Fr.27,000,000 taxes on property. Extraordinary taxes included national defense contribution (Fr.407,000,000), sales tax (Fr.347,000,000), national defense duty (Fr.156,000,000) and other taxes, together Fr.1,134,000,000. In the first half of 1947 customs receipts were about 50% higher than in the previous year, and stamp duty receipts moved similarly.

*Sweden.*—Revenue for 1947–48 was budgeted at 4,175,000,000 kr., yielding a surplus of 112,000,000 kr. over ordinary expenditure. Tax revenue exceeded that for 1946–47 by more than 400,000,000 kr. in spite of the abolition of the turnover tax since Jan. 1, 1947. The turnover tax yielded 400,000,000 kr. in 1946. The higher tax yield was partly the result of the introduction of the pay-as-you-earn method in Jan. 1947. Taxation was based on current income, whereas taxation in 1946–47 was based on income in 1944. After that date there was a substantial rise in money incomes of the order of one-third. The new income tax involved some relief for married couples without children and for single persons, but for persons in the higher income brackets taxes would be more severe. The method of child's relief was altered. A special tax on capital exceeding 30,000 kr. was introduced, but it was stipulated that central and local government taxes together must not exceed 80% of income. Tax on corporation income was raised from 32% to 40%. An additional inheritance tax was levied on estates of more than 30,000 kr. On balance persons were granted a relief of 361,000,000 kr. but corporations paid an additional 119,000,000 kr. and capital 77,000,000 kr.

*Spain.*—For 1947 taxes were increased. Taxes on incomes and on real estate were increased by 20%, and also taxes on various consumers' goods and capital issues. Postage rates went up sharply. Even so the budget showed a deficit.

*Italy.*—The autumn budget took measures to raise taxes to cover, among other things, public works. New taxes were introduced on sales, gasoline, sugar and foreign cigarettes. These taxes would yield a revenue of lire 160,000,000,000 in a full year. New sales taxes would bring in lire 60,000,000,000–65,000,000,000; the tobacco monopoly expected to make a profit of lire 10,000,000,000 on the sale of foreign cigarettes, and gasoline was increased from 60 to 100 lire per litre.

*Greece.*—In Nov. 1947 the government announced 14 new measures of taxation to be included in the economic program, with the advice of the United States mission. An additional 600,000,000,000 drachmae were required to cover increasing expenditure, making the burden of taxation exceptionally heavy.

*Argentina.*—In the first half of 1947 revenue amounted to $1,385,000,000 as against $844,000,000 in the first half of 1946. The draft budget for 1948 expected a revenue of $3,092,000,000 covering ordinary expenditure which, however, excluded defense expenditure. Profits on exchange were reckoned to bring in about $650,000,000, lottery $43,000,000, postal services $86,000,000. The estimate for customs receipts, $620,000,000, presupposed vastly expanded imports. Income tax would yield $449,000,000, excess profits tax $126,000,000, estate duties $60,000,000 and capital gains tax $125,000,000. Excise, sales and stamp duties were taken at $700,000,000. (T. BAR.)

## Tea.

Imports of tea into the United States in the year ending July 1, 1947, were approximately 94,000,000 lb.—about 10,000,000 lb. over 1946 imports and 6,000,000 lb. over the prewar average. Most of this tea came from India and Ceylon; the Netherlands Indies, which usually shipped about 20,000,000 lb., were still in an unsettled political condition. Average consumption of tea in the U.S. was estimated at .5 lb. per capita in 1947 compared with the war-time high of .59 lb. in 1945 and a prewar average of .67 lb., 1935–37.

In Java great damage had been done to the tea plantations both by the Japanese and revolutionists; about 30% of the tea processing plants were reported as destroyed. The Dutch forces reoccupied about 90% of the tea area in 1947 but did not expect to restore normal production until 1952. (J. C. Ms.)

**Technicolor:** *see* MOTION PICTURES.

## Telegraphy.

U.S. telegraphy made steady progress during 1947 in its nation-wide mechanization program. Important new telegraph apparatus and methods were placed in operation to improve service in all parts of the country. Large push-button switching centres and a number of carrier systems were installed. The radio beam system linking New York, Washington, D.C., and Pittsburgh was fast nearing completion.

**Push-Button Switching Systems.**—New streamlined push-button switching systems were placed in service at Philadelphia and Cincinnati. High-speed switching systems also were in operation at Richmond, Va., Atlanta, Ga., St. Louis, Mo., Dallas, Tex., and Oakland, Calif. The postwar mechanization program provided for similar systems in 11 other centres, each serving large surrounding areas, to complete the national network.

Through the push-button switching system, telegrams flash to all parts of the country with vastly greater speed and efficiency. This system speeds telegrams to their destinations by the mere pushing of a button, where under the old method each message had to be retransmitted manually at central offices. With the new system each message is typed only once, at the point of origin.

**Radio Beam Telegraph.**—Progress was made in the construction of a New York-Pittsburgh-Washington triangular radio beam network which followed successful experimental operation of the first such system between New York and Philadelphia. Radio towers spaced 30 to 50 mi. apart were erected and associated equipment was installed in the triangular network before the end of the year.

Sites for relay stations for further extension of the radio beam network were obtained as far west as Kansas City, and south to Atlanta. The beam system makes possible a vast increase in the number of channels available for the handling of telegraph traffic and provides amply for the telegraph growth of the future and for other communications needs.

The beam system affords the ultimate in service capacity and continuity. Since atmospheric static is not felt in the microwave region, radio beam transmission is unaffected by electrical disturbances and the hazards of ice, high wind and falling trees are eliminated. Radio beam systems would replace many of the familiar pole lines.

Telegraphy proceeded during 1947 with plans to meet television program demands through the use of its radio beam network. Equipment for the purpose was being manufactured. Frequencies in the 6000 megacycle common carrier band were to be used. Newly developed tubes delivering about 2 watts of radio frequency power and not requiring demodulation at the relay points were being employed.

**Carrier Telegraph Systems.**—Expansion of wire carrier telegraph systems, which make it possible to send many messages at one time over two wires by using a number of tones or frequencies, was intensified during 1947. New installations in the first 9 months added a capacity of 275,000 channel miles to the 200,000 channel miles in operation at the beginning of the year. At midyear about 30% of all trunk telegraph circuits were operated by carrier.

During 1947, a 150-kilocycle carrier system was developed specifically for use on the radio beam telegraph system. The 150 kc. band is subdivided into voice-frequency bands which accommodate telegraph, telephone or facsimile transmission. Each of these 150 kc. systems provide as many as 576 teleprinter channels operating in 2 directions.

**Facsimile.**—There were two new developments in the field of facsimile telegraphy. One was the teletape, a simplified facsimile machine which was developed for sending and receiving messages on Western Union teledeltos tape. A message is written on the tape and a button is pressed to start transmission. In a matter of seconds the message is reproduced in facsimile by the distant teletape machine.

The other development was the Desk-Fax, a small facsimile machine through which a businessman can send and receive telegrams from his desk. The Desk-Fax, weighing about 7 lb. and 8 x 8 x 5 in. in size, was designed to provide direct pickup and delivery of telegrams in the offices of telegraph users.

Additional telefax apparatus for automatic transmission of train orders was placed in service on railroad lines. Facsimile equipment to accommodate reservation and other communications requirements was installed by air lines. (J. L. E.)

**Great Britain.**—On Jan. 1, 1947 (consequent upon the Cable and Wireless act, 1946), a new court of directors was appointed for Cable and Wireless, Ltd., which operated the "via imperial" oversea telegraph services. The court, consisting of Colonel Sir Stanley Angwin as chairman, John Innes (managing director), Major General Leslie B. Nicholls, (full-time director) and A. C. Black and G. N. Gallie (part-time directors), assumed control of 155,000 nautical miles of cable routes, 7 cable repair ships, nearly 150 wireless circuits, 190 stations and more than 11,000 staff.

During 1947, arrangements proceeded for completing transfer of the control and operation by the dominions of the cable and wireless services within their territories. Developments were directed principally toward restoring facilities suspended during

World War II, introducing new services to meet postwar requirements, repairing war-damaged cables and introducing improvements unavoidably postponed during the war period. With these aims in view the network was being systematically surveyed by the new management. Major General Nicholls visited many stations in the middle and far east to discuss telecommunication developments. During the latter part of the year the managing director, accompanied by the traffic manager, undertook an extensive tour of Latin America with similar objectives.

Commercial services reintroduced during the year included facilities for sending urgent telegrams over most of the company's routes. Special-occasion services, such as through-working between Bradford and Australia, New Zealand and Argentina during the wool sales, were reintroduced as needed. Special facilities for passengers at London airport were also introduced and plans were being developed for providing similar services at other airports in Great Britain and throughout the world.

During 1947 direct cable working between the United Kingdom, and Spain and Singapore was resumed; and direct wireless communication was opened between London and Kabul.

Interisland and external radiotelephone services were expanded in the West Indies, and the company's stations provided circuits for external radiotelephone services from Athens, Malta and Hong Kong. Plans were in hand to provide radiotelephone circuits from the middle east and west Africa. Further progress was made with the restoration of cables in the far east. The company planned to restore the United Kingdom-Newfoundland transatlantic cable. Repair work was to be undertaken on the west coast of America and upon cables elsewhere. A new cable repair ship was on the stocks at Newcastle-on-Tyne and two more ships, acquired from the admiralty, were being refitted for service.

New power plant was being installed at the Brentwood, Middlesex, and Somerton, Somertshire, wireless receiving stations in the United Kingdom; a new wireless receiving station was being erected at Singapore and plans were in hand to build a relay station at Nairobi; the wireless relay stations at Colombo and Barbados were being extended. Loutsa (Athens) wireless receiving station was to be re-established. Extensive repair and extension work was also being carried out at Buenos Aires, Dorchester (Dorset, England), Kuwait, Lisbon, Rodrigues, Suez and Vigo. (A. S. A.)

## Telephone.

Significant telephone history was made in 1947, particularly in the United States where this type of communication had reached the highest stage of development in the world.

Beginning the year with 57.9% of the world's total, the United States added further to its leadership with a gain of more than 3,000,000 telephones and made new strides in the extension and improvement of telephone service.

The business of providing telephone service in the United States had become an $8,000,000,000 industry in terms of investment in plant and equipment. And yet, with more than two years of record-breaking expansion behind them, the telephone companies approached the year 1948 with a large program of new construction still to be accomplished.

While substantial progress was made during 1947 in reducing the cumulative total of unfilled applications, the continued heavy demand for telephones was such that there were nearly 2,000,000 people waiting for service at year end. The existence of any backlog was extraordinary in the light of the fact that more than 7,000,000 telephones had been added in the U.S. after V-J day.

Like the year before it, 1947 witnessed the manufacture and installation of huge quantities of switchboards, cable, wire and other telephone facilities, along with the construction of new buildings and additions to others. The additions to plant and equipment were put to work serving new customers as fast as the installations were completed.

The industry's tremendous growth in the United States was reflected by its (1) 1947 expenditure of more than $1,250,000,000 for new construction, (2) raising of record sums of new capital to finance the expansion program and (3) reaching of an all-time high in the number of stockholders and employees.

**Plant and Equipment.**—The enormity of the expansion job is indicated by Western Electric company figures on shipments to the Bell system operating companies during the first three quarters of 1947. These shipments included 26,000,000,000 conductor ft. of local exchange cable and enough dial equipment and local manual switchboard positions to serve 2,500,000 telephones. There were likewise large-scale additions and extensions to the Bell system's long-distance network. The addition of about 4,400 toll circuits during the first nine months of the year brought the system total to more than 70,000.

To make room for the large quantities of new equipment needed to serve more customers required an extensive building program. In the Bell system alone there were approximately 1,500 building construction projects completed or underway in 1947, bringing the postwar total to more than 3,000. These ranged in size from small repeater stations and community dial offices to a multimillion dollar long distance and office building in Boston, Mass.

**Telephones.**—A net gain of more than 3,000,000 telephones in 1947 brought the U.S. total near 35,000,000, of which 28,500,000 were served by the Bell companies and the remainder by the 5,900 independently owned companies whose lines connect with those of the Bell system. Had it not been for the nationwide telephone strike in the spring, which lasted six weeks, the 1947 telephone gain in the United States would probably have approached or equalled the record 1946 increase of 3,700,000 telephones.

At the end of 1947 the Bell system's postwar gain in telephones had reached 6,750,000—an increase amounting to more telephones than the entire number served by the Bell system after its first 40 years of business.

Estimates on world telephone development, dated Jan. 1, 1947, put the world total at 54,600,000, of which 57.9% were in the United States. On that date the United States had about 1 telephone for every 4 persons, as compared with the world average of 1 for every 43 inhabitants.

**Traffic.**—With millions of new customers using telephones, the amount of telephone service provided in the U.S. continued to increase. In the year ended Sept. 30, 1947, the industry handled, on the average, 136,621,000 completed local and toll conversations a day. This represented an increase of more than 8,500,000 conversations over the daily average for 1946. Completed toll conversations were up from 5,635,000 to 5,900,000 per day.

There was substantial improvement in the quality of the service. Speed of service on long distance calls was considerably greater, and a higher percentage of toll calls was completed while the calling party stayed on the line. Local manual service reflected faster answers by operators. Less turnover in the operating force, resulting in greater force experience, was an important factor in the service improvement.

**Personnel.**—The total personnel of the telephone operating companies in the U.S. passed the 600,000 mark in 1947. This new high in the number of employees was the result of the combination of more customers, more calls and the huge construction program. The Bell system, including the Western Electric company and Bell Telephone laboratories, embraced an army of more than 650,000 men and women.

The American Telephone and Telegraph company, most widely owned of any U.S. business, reached a new high of 712,300 stockholders in Aug. 1947, and by year end the total surpassed 720,000.

**Developments.**—The growing use of radio to supplement wire lines was among the more significant trends in 1947. The New York-Boston radio relay system of the Bell system opened in the fall for experimental use. It provides long distance circuits which may be used for hundreds of simultaneous telephone conversations, for transmitting television programs and for other communication services. This system employs hilltop relay stations for sending and receiving beamed microwaves. The Bell system had begun work on a similar project between New York and Chicago.

The program for operator dialing of long distance calls on a nation-wide basis was further advanced when installation of equipment was begun on an extensive toll dialing network centring at New York city. Plans were well under way for similar installations at other major toll centres.

Substantial progress also was made on the program of converting from local manual service to dial operation and on the extension and improvement of rural telephone service. The southern transcontinental coaxial cable was completed from Florida to California, and many more miles were added on other segments of the nation-wide coaxial network. Mobile telephone service was introduced in scores of additional cities and towns and along several major highways. Overseas telephone service continued to expand. (W. S. G.)

**Teleran:** *see* Munitions of War; Radio.

## Telescopes.

The most important development of the year 1947 was the completion of the optical figuring of the 200-in. mirror for the Mount Palomar observatory in southern California. Because of its great size and focal length, tests of its figure had to be made with the mirror in a vertical position. Both visual and photographic methods were used, employing a Hartman diaphragm, and the final figure was found to be good. After shipment to Mount Palomar the mirror was aluminized and placed in the completed telescope mounting, where adjustments of the support system to correspond to a horizontal position of the mirror were begun. These adjustments were determined by observations of stars near the zenith with a knife edge (Foucault test) at the primary focus in the centre of the telescope tube.

Optical figuring of the 48-in. correcting plate to be used in combination with a 72-in. concave mirror in the Schmidt telescope of the Palomar observatory was also completed. This powerful instrument, with a focal length of only 10 ft., was nearly ready for adjustment at the close of 1947.

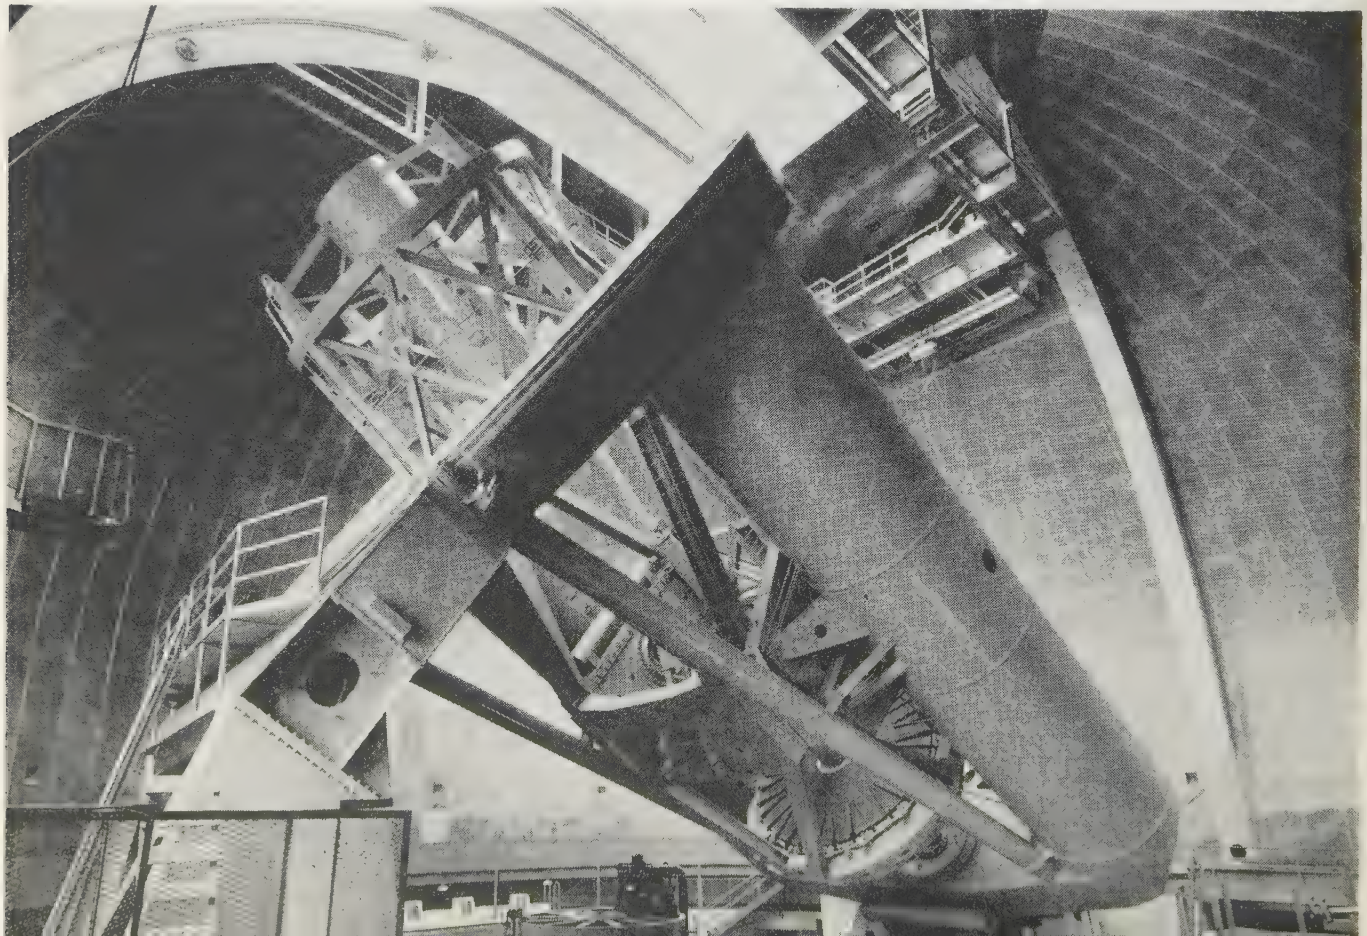
The 74-in. mirror for the Radcliffe observatory in South Africa was finished, and after aluminization was to be forwarded from England. The mounting was ready for use.

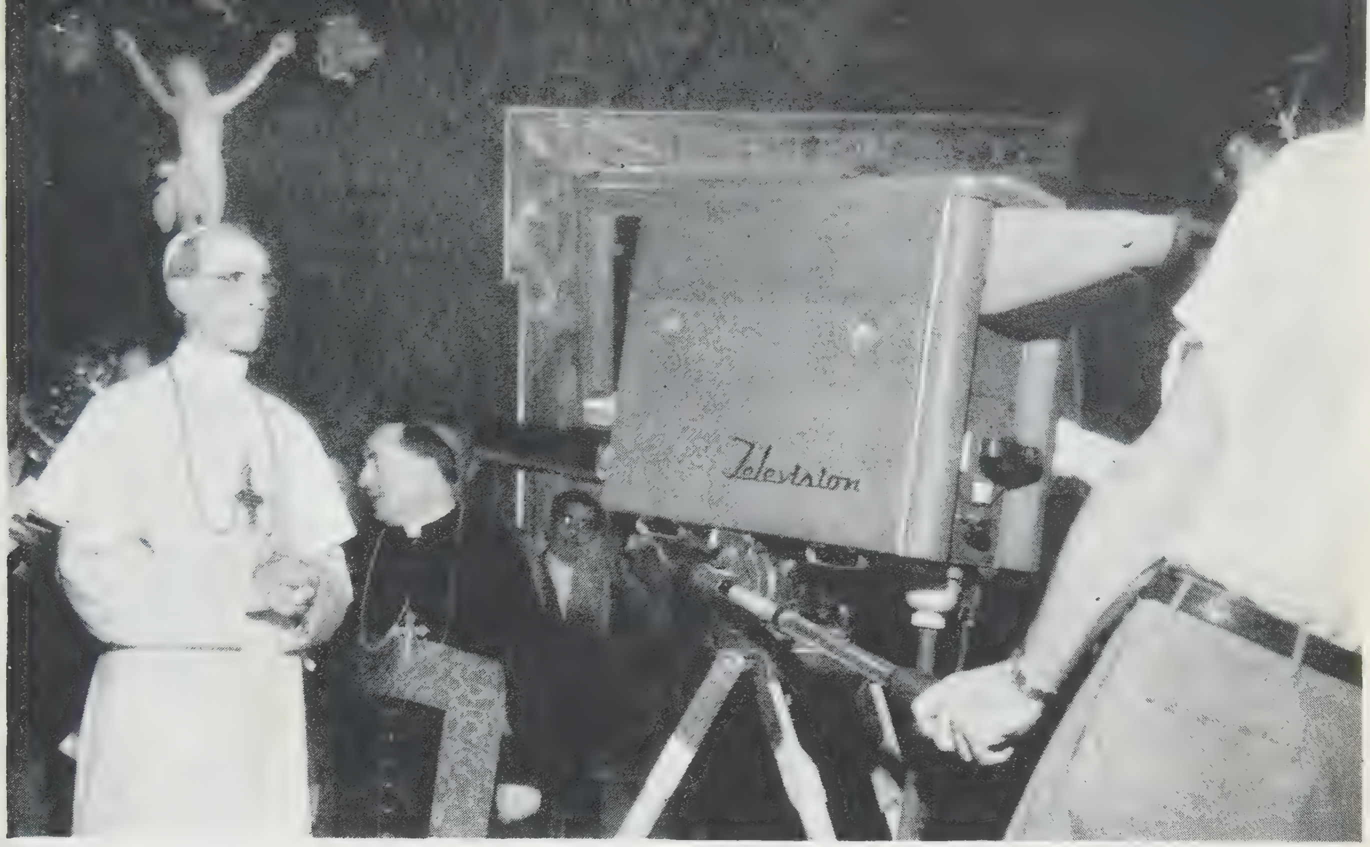
The design of the 120-in. telescope of the Lick observatory, Mt. Hamilton, Calif., was essentially complete. Preparations had been begun for the casting of the pyrex mirrors for this instrument, for several other large telescopes and for a Schmidt telescope approximately one metre in diameter, for the Stockholm observatory. Several representatives of European countries visited the U.S. during 1947 to investigate the possibility of replacing instruments destroyed during World War II. (W. S. Ad.)

## Television.

The status of television in the United States during 1947 changed from that of a demonstrated technical reality to a firmly established broadcasting service.

THE 200-IN. REFLECTOR TELESCOPE installed on Mt. Palomar, Calif., in 1947. Astronomers planned to use it more as a giant camera than a telescope in investigating the expanding universe theory, the source of stellar energy, the origin of chemical elements, etc.





POPE PIUS XII being televised at the Vatican on July 9, 1947. The telecast was picked up by receiving sets elsewhere in the Apostolic palace, where it was seen by diplomats and church dignitaries

One of the major factors contributing to this change was the manufacture of approximately 170,000 television receivers, mostly by only 2 or 3 leading manufacturers during a substantial part of 1947. Toward the end of the year, however, a large number of radio manufacturers was entering the television receiver field.

The majority of the receivers marketed in 1947 were table models employing 10-in. directly-viewed picture tubes. Other receivers utilized directly-viewed tubes ranging in diameter from 7 in. to 20 in. The most complete television receiver models included facilities for the reception of AM, FM and short-wave stations and also a phonograph.

Two receivers of the projection type, employing reflective optics and special viewing screens were introduced during 1947. Although the screen employed in one of the receivers was of the reflection type while the other was of the translucent variety, both provided directivity patterns which resulted in a substantial brightness gain. Directional viewing screens had the additional advantage of reducing the detrimental effects of room lighting on picture contrast. These receivers were capable of producing 15 by 20 in. pictures having highlight brightnesses in the range between 30 and 100-ft. lamberts.

The Federal Communications commission hearing with respect to adoption of colour television standards for commercial operation in the frequency band from 480 to 920 megacycles continued into the early part of 1947 and the decision was announced in the spring. The commission stated that there was serious question regarding the desirability of the standards proposed for this type of operation and that insufficient field testing had been done to prove that a satisfactory colour television service could be rendered to the public.

Deliveries of television transmitters during 1947 made it possible for ten new stations to institute program service. At the end of the year 18 stations were operating on a commercial basis, and the Federal Communications commission had either licensed or authorized more than 70 stations.

An important contribution to solution of the television network problem was the completion of the American Telephone and Telegraph company's radio relay system between New York city and Boston, Mass. This system, utilizing frequencies in the vicinity of 4,000 megacycles, employed 7 repeater stations to cover a distance of approximately 220 mi. Highly directional antennas were used at each repeater station. During the formal demonstration of the system in November, television images were transmitted in both directions between Boston and Washington, D.C. Coaxial cable was used for the New York to Washington portion of the circuit.

Considerable effort was expended by U.S. television broadcasters in the development of new program techniques. The possibilities of quiz programs, particularly of the audience participation type, were investigated. Several excellent dramatic presentations were broadcast. The American Federation of Musicians' ban on its members performing for television programs continued in effect, and instrumental music was obtained from recordings.

Sporting events constituted one of the major sources of television programs; substantially every type of amateur or professional sports contest was televised at some time during the year. The availability of television cameras equipped with the highly sensitive image orthicon substantially eliminated the lighting problem in the televising of sports events.

The political potentialities of television received attention. The president and other government officials were televised on several occasions. Availability of television broadcasting facilities along the eastern seaboard was one of the major factors in the selection of Philadelphia, Pa., as the site for both the Republican and Democratic national conventions of 1948.

As the size of the television audience expanded with the installation of large numbers of new receivers, an increased interest developed on the part of advertising agencies. At the end of the year large numbers of programs were sponsored by commercial organizations; several stations were operating on a commercial basis and had established rates for their broadcasts.

Development work on colour systems continued in the laboratory. On April 30 a demonstration of the RCA all-electronic colour television system was given at the Franklin institute in

Philadelphia. A 7.5 by 10-ft. colour picture was projected by three kinescopes producing separate red, green and blue images superimposed on the screen to form a single image in natural colour. (*See* also ADVERTISING; MOTION PICTURES.)

(G. L. Bs.)

**Great Britain.**—The first postwar radio exhibition, held in Oct. 1947, gave manufacturers an opportunity to show advances made in design and construction of television receivers after 1945. Although nothing revolutionary was apparent, there were a number of detailed improvements, such as the fitting of interference suppression in nearly all the better sets, flat-ended cathode ray tubes and the use of miniature tubes.

Prices advanced over prewar, and the lowest figure was £50, against £30 in 1938. A few combination television-radio-phonograph receivers were on view at prices from £200 to £250, tax included.

At the beginning of the year the licence fee to use a radio receiver was increased to £2 where a television receiver was also installed. By the end of August, 23,150 television licences had been issued.

Two important developments were a new camera that gave excellent results under indifferent lighting conditions, and a system of filming the image on the screen, that marked a step toward recorded television programs. This system was first used for the cenotaph broadcast on Remembrance day, and again for the royal wedding, at which event the new camera made its debut.

It was expected that the television service would be extended to the midlands within a year or two, with the transmitting centre at Birmingham. Experimental demonstrations of relaying the program by radio beam had already been made.

Outstanding broadcasts of the year included the departure of the royal family for South Africa, taken on the platform at Waterloo station, their return to London and the eight-day tennis finals at Wimbledon.

It was announced on Dec. 1 that Maurice Gorham had resigned from his post as head of the B.B.C. television service and would be succeeded by Norman Collins, former head of the light program.

(G. P.)

**Tellurium.** Production of tellurium in the United States dropped from 80,750 lb. in 1945 to 3,765 lb. in 1946, because of curtailed operations in the copper refineries that recover it as a by-product. Production in Canada was only 484 lb. in 1945, but rose to 15,848 lb. in 1946 and 38,000 lb. in 1947.

(G. A. Ro.)

**Temporary Controls, Office of:** *see* PRICE ADMINISTRATION, OFFICE OF.

**Tennessee.** A south central state, 16th to enter the union, called the "Volunteer state." Land area 41,961 sq.mi., water area 285 sq.mi. Population (1940) 2,915,841; rural 1,888,635; urban 1,027,206; rural farm 1,271,944; native white 2,395,586; Negro 508,736; foreign born 11,320; other races 199. The bureau of the census estimated the civilian population on July 1, 1945, at 2,832,480. Capital, Nashville (167,402). Other cities include Memphis (292,942); Chattanooga (128,163); Knoxville (111,580).

**History.**—The governor of Tennessee in 1947 was James Nance McCord; secretary of state, Joe C. Carr; state treasurer, C. C. Wallace; comptroller of the treasury, J. J. Maddux; adjutant general, G. H. Butler; attorney general, Roy H. Beeler. Commissioners were as follows: agriculture, O. E. Van Cleave; conservation, Howell Buntin; education, Burgin Dossett (superintendent of schools, appointed by governor); finance and taxation, Sam K. Carson; highways and public works, C. W. Phillips; institutions, Dr. W. O. Baird; welfare, William A. Shoaf; insurance and banking, James M. McCormack; labour, W. E. Jacobs, Sr.; public health, Dr. R. H. Hutcheson; railroad and public utilities, Andrew T. Taylor, Leon Jourolman, Jr., John Hammer; safety, Lynn Bomar; employment security, W. O. Hake.

The general assembly of 1947 enacted a 2% retail sales and use tax, making possible additional $11,800,000 appropriations to public schools each year and additional sums for state universities and social security. A retirement system for state employees was established. Bridge tolls were suspended. A ban was placed on the "closed shop." Compulsory school attendance was raised to 16 years. An enabling act made it possible for Tennessee to participate in the federal hospital construction program.

**Education.**—In 1946, of 4,917 elementary schools only 2,318 were one-teacher schools compared with 3,555 in 1927. Enrolment in elementary schools in 1946 was 498,904, number of teachers 16,116. There were 548 high schools, enrolment 118,601, number of teachers 5,503.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—In Sept. 1947 the total amount of assistance was $1,683,978; 48,532 old-age recipients received $999,331; aid to dependent children 37,375 (13,933 families), totalled $630,957; aid to the blind, 1,745, amounted to $53,690. In 1946–47 there were 7 correctional institutions; expenditures $1,508,048. Separate schools were maintained for the blind and the deaf; three state hospitals for the insane; a home for the feeble minded and an industrial school.

**Communications.**—Of the 67,388 mi. of public road, 7,563 mi. were state highways; state expenditures were $22,614,393 for the year ending June 30, 1947. There were 3,494 mi. of railroads at the end of 1946. As of Nov. 1947 there were 1,047 mi. of designated civil airways and 68 airports, of which 21 were substandard, 9 class I, 23 class II, 7 class III, 5 class IV and 3 class V (accommodating the largest planes). There were 444,300 telephones in the state, 311,300 residential and 133,000 business. Water-borne commerce on the Tennessee river in 1945 amounted to 2,163,404 net tons (1946 est. 2,399,250); Cumberland river 813,833; Mississippi river 12,097,766 net tons from Ohio river to Baton Rouge, La., and 2,593,967 at Memphis.

**Banking and Finance.**—In June 1947 there were 70 national banks and 224 state banks; assets $1,270,680,000 for national banks and $608,658,747 for state banks; deposits $1,194,146,000 for national banks and $568,819,833 for state banks. Savings and loan associations, Sept. 30, numbered 39 with assets of almost $91,000,000. Federal associations constituted 35 of these with assets of more than $90,000,000.

Total state revenue for the fiscal year 1946–47 was $79,401,150; revenue shared with counties and cities $10,121,024; revenue for state purposes $69,280,126. Direct bonded debt for the state was $68,056,500; highway reimbursement debt $4,793,014; gross debt $72,849,514; unencumbered surplus in the sinking fund $2,669,296; net debt $70,180,218.

**Agriculture.**—There were 234,431 farms in 1945; 17,849,455 ac. in farms and 5,845,145 ac. in harvested crops.

Gross value of agricultural production in 1946 was $535,518,000; cash farm income $413,752,000 (including government payments); cash farm income from crops was $217,466,000; from livestock $182,113,000; government payments $14,173,000. The forest area was 12,641,000 ac.

Table I.—*Leading Agricultural Products of Tennessee, 1947 and 1946*

| Crop | 1947* | 1946 |
|---|---|---|
| Corn, bu. | 62,386,000 | 65,670,000 |
| Tame hay, tons | 2,248,000 | 2,417,000 |
| Cotton, bales | 505,000 | 520,000 |
| Wheat, bu. | 5,400,000 | 3,878,000 |
| Oats, bu. | 6,500,000 | 6,492,000 |
| Tobacco, lb. | 147,230,000 | 170,975,000 |
| Potatoes, bu. | 2,821,000 | 3,404,000 |
| Sweet potatoes, bu. | 2,241,000 | 3.150,000 |

*Estimated.

**Manufacturing.**—In 1947 it was estimated that approximately 3,150 manufacturing plants yielded products valued at $1,500,000,000 of which $650,000,000 was added by manufacture. Wages paid approximated $515,000,000 for 245,000 wage earners.

**Mineral Production.**—The value of coal mined in Tennessee during 1946 was $23,554,500 compared with $23,034,000 produced in 1945; of zinc $6,005,816 compared with $2,969,801; of copper $4,163,400 compared with $1,658,819; of barite $272,169 compared with $256,756.

(C. E. A.)

Table II.—*Principal Mineral Products of Tennessee, 1945 and 1944*

| Mineral | Value 1945 | Value 1944 |
|---|---|---|
| Coal | $23,034,000 | $23,088,000 |
| Stone | 6,318,915 | 7,776,775 |
| Cement | 4,669,330 | 6,080,921 |
| Zinc | 2,969,801 | 9,309,468 |
| Sand and gravel | 2,578,379 | 2,314,478 |
| Lime | 1,373,268 | 1,246,802 |
| Clays | 1,196,498 | 1,500,000 |
| Barite | 256,756 | 279,567 |

## Tennessee Valley Authority.

For the second consecutive year, the TVA's integrated multiple-purpose system of dams and reservoirs controlled a major flood. In Jan. 1947, the reservoirs reduced by 2.7 ft. the crest of a flood which, uncontrolled, would have been the 6th largest in the history of Chattanooga, exceeded only by those of 1867, 1873, 1886, 1917 and 1946. Lacking control, the 1947 flood would have reached a stage of 44.5 ft. and would have caused estimated damage of $7,500,000.

Power production was nearly 15,000,000,000 kw.hr. in the fiscal year ended June 30, 1947, or about 10 times as much as was produced in the same region in 1933, when TVA was established. TVA power revenues were $44,144,000, and net income before interest was $21,839,000, representing a return of 5.5% on the average net investment in power facilities. The 5th and final generating unit at Kentucky dam was placed in operation in December, bringing system-installed capacity to 2,570,900 kw. About 370,000 kw. of generating capacity was being added to meet growing power loads.

Distribution of TVA power by 139 municipal and co-operative systems to 743,600 consumers during the fiscal year 1947 brought combined revenues of $51,000,000 and net income of $9,983,000. More than 4,000,000,000 kw.hr. was sold by the local agencies. By the end of 1947, the number of consumers served by 140 local systems approached 800,000.

About 75,000 consumers were added during the fiscal year, chiefly through construction of 6,000 mi. of rural lines, bringing the total to about 38,000 mi. of line serving 250,000 rural consumers, including 150,000 farms. Work was proceeding on an additional 25,000 mi. of line to serve 125,000 farms.

Residential use of electricity in the fiscal year was 2,197 kw.hr. per customer at an average cost of 1.66 cents per kilowatt hour, as compared with national averages of 1,385 kw.hr. and 3.14 cents. Rate reductions totalling $157,000 annually were made by some of the distributors, and in 1947, 27 of the distributing systems were applying resale rate schedules below those established in 1933 and then regarded as markedly low.

About 276,636,000 ton mi. of freight were carried on the Tennessee improved waterway in the first 10 months of 1947, nearly 10% more than in all of 1945, the previous record year. Two new-type articulated, or jointed, barges designed to carry 600 automobiles at speeds up to 17 mi. per hour, delivered several thousand cars to Guntersville, Ala., for distribution to 162 points in the southeast. About 7,000 pleasure craft, worth $2,750,000, were in operation on the lakes, and 100 privately operated boat docks had been established.

At the end of the fiscal year, about 40,300 test-demonstration farmers in 26 states were using TVA concentrated plant nutrients, and reports of state agricultural extension services revealed continued success of the test demonstrations in terms of shifts to soil- and water-holding cover crops, more livestock development, increased production and spread of soil conserving practices. There were 34 large forest-management demonstrations on industrial and institutional lands and 559 woodland management demonstrations on farms. Organized fire protection had been extended to 6,000,000 ac. through co-operative efforts of states, local agencies and TVA.

During the fiscal year, TVA chemical plants at Muscle Shoals, Ala., and Godwin, Tenn., produced about 160,000 tons of phosphate plant nutrients of several concentrations, and more than 154,000 tons of ammonium nitrate fertilizer for test demonstrations and to help meet fertilizer and food shortages. About 400 technical men, mainly from industry, visited the TVA plants to study and obtain information about processes and materials.

Construction went forward on Watauga and South Holston dams, the 17th and 18th to be constructed by TVA. Both were designed as earth and rock-fill structures—Watauga 320 ft. high and 900 ft. long; South Holston 290 ft. high and 1,500 ft. long. They would add about 1,287,000 ac.ft. of storage to the system.

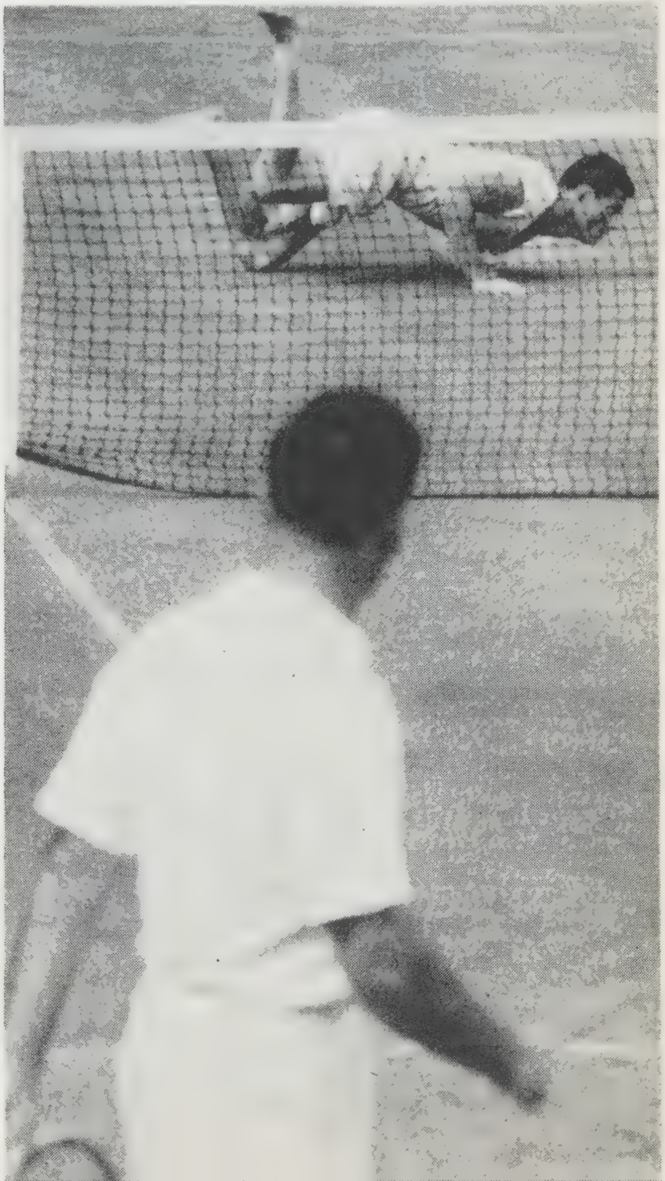
Total appropriations to June 30, 1948, were $736,223,270. In Dec. 1946 TVA paid about $10,300,000 into the general fund of the U.S. treasury making a total of about $23,000,000 so paid under section 26 of the TVA act. The Government Corporations Appropriation act, 1948, provided that TVA should repay over a period of 40 years about $348,239,000 representing U.S. treasury funds invested in the power system.

The TVA board of directors consisted of Gordon R. Clapp, chairman, Dr. Harcourt A. Morgan and James P. Pope. TVA employees numbered about 14,500. (*See* also DAMS; ELECTRICAL INDUSTRIES; PUBLIC UTILITIES.) (K. R. K.)

## Tennis.

A review of lawn tennis in 1947 could be summarized in one word—Kramer. Not since 1938, when Don Budge made the only "grand slam" of tennis by winning the four major championships (Australia, England, France and the United States) had an amateur tennis player ruled so supremely as did John Albert Kramer of Los Angeles, Calif., during 1947. In addition to winning the championships in singles and doubles of the United States (indoor and outdoor) and of England,

TED SCHROEDER, playing barefooted, is shown taking a spill during a set with Dinny Pails of Australia, in the deciding match of the Davis cup series at Forest Hills, N.Y., which brought victory to the U.S. team, Sept. 1, 1947



Kramer and his U.S. doubles partner, Frederick R. (Ted) Schroeder, Jr., successfully defended the Davis cup against the challenge of Australia.

Kramer's only serious challenger in championship play was Frank A. Parker, U.S. champion in 1944 and 1945. Twice Parker had the champion down two sets to love (in the final of the southern California championship in May and in the U.S. final at Forest Hills, L.I., N.Y., in September) but Kramer on each occasion won the next three sets. Only twice were the champion's colours lowered, both times in early-season nonchampionship best-of-three sets matches, to William F. Talbert and to Francisco "Pancho" Segura.

Twenty-two nations challenged the United States for the Davis cup. Australia qualified for the challenge round by beating Canada in the only American zone tie and then defeating Czechoslovakia, European zone winner, in the Interzone final, both ties being played at Montreal, Que. The United States defeated Australia 4–1 in the challenge round at Forest Hills stadium. Kramer and Schroeder played in both singles and doubles for the U.S. and John Bromwich, Dinny Pails and Colin Long represented Australia, which scored its lone point when Bromwich and Long defeated Kramer and Schroeder in the doubles.

Five nations, Austria, Hungary, Italy, Finland and Rumania, were readmitted as members of the International Lawn Tennis federation.

Eighteen nations were represented at Wimbledon in the English championships, and players from 16 countries competed for U.S. titles at Forest Hills and Longwood, Chestnut Hill, Mass. The championship of Australia was won by Pails. Joseph Asboth of Hungary won the French title. Other international winners were Jaroslav Drobny of Czechoslovakia, who captured the Pan-American crown, and Frank A. Parker, who won the Argentine singles and doubles (with Drobny).

U.S. women players led in their division of international competition. The women's international team match between England and the U.S. for the Wightman cup was played in the United States for the first time since before World War II. The U.S. team scored its 15th victory since the series began at Forest Hills in 1923. Three California women captured four important championships: Margaret Osborne (duPont)—English, Mrs. Patricia C. Todd—French and Argentine, and Louise Brough—United States. Mrs. Nancye Wynne Bolton won the Australian and Pan-American titles.

Margaret Osborne (duPont) and Louise Brough won their sixth consecutive U.S. doubles title. They lost their Wimbledon crowns to Doris Hart and Mrs. Todd, but beat them in the French championship.

The year saw several of the world's foremost amateur players "turn pro"—Kramer (U.S.), Segura (Ecuador), Pails (Australia), Elwood Cooke (U.S.), Mrs. Sarah Palfrey Cooke (U.S.) and Pauline Betz (U.S.). (E. S. Br.)

**Texas.** A west south central state of the United States, admitted to the union as the 28th state on Dec. 29, 1845. Soubriquet, "Lone Star State," from the single star in the flag of the Texas republic, 1836–45. Area, 263,644 sq.mi. of land and 3,695 sq.mi. of inland water. Population (1940) 6,414,824. Estimated (1947) 6,850,000. Population characteristics (1940): Urban, 2,911,389; rural, 3,503,435; white, 5,487,545; Negro, 924,391; other, 2,888; native, 6,179,296; foreign-born, 235,528. Capital, Austin with 87,930 pop. in 1940 (112,000 est. in 1947). Other principal cities: Houston, 384,514 (478,000); Dallas, 294,734 (370,000); San Antonio, 253,854 (350,000); Fort Worth, 177,662 (247,000); El Paso, 96,810 (110,000); Galveston, 60,862 (75,000); Beaumont, 59,061 (77,000); Corpus Christi, 57,301 (112,000); Waco, 55,982 (75,000).

**History.**—The 50th biennial legislature (Jan.–March, 1947) enacted laws regulating strikes under some conditions, strengthening the common school system, establishing Texas State University for Negroes at Houston, revising game conservation statutes, providing state aid for rural road improvement and amending the medical practice act. It also submitted a constitutional amendment, which was adopted by the people on Aug. 23, 1947, providing a $60,000,000 expansion program for state universities and colleges. The explosion of a nitrate-laden ship at the Texas City docks, April 16, 1947, killed 550 persons and did damage estimated at $35,000,000. The principal state officials for the biennium, Jan. 1, 1947, to Jan. 1, 1949, were: governor, Beauford H. Jester; lieutenant-governor, Allan Shivers; attorney-general, Price Daniel; comptroller of public accounts, George H. Sheppard; treasurer, Jesse James; superintendent of public instruction, L. A. Woods; and commissioner of general land office, Bascom Giles. Members of the railroad commission of Texas, which administers transportation laws and those involving oil and gas industries, were: chairman, Ernest O. Thompson; Olin Culberson and William J. Murray. There were no state elections in 1947.

**Education.**—The state's apportionment for public school support was raised from $35 per scholastic in 1945–46 to $41 in 1946–47, according to the state department of education. Action of the legislature early in 1947 assured $55 for 1947–48. The average classroom teacher's salary was raised from $1,500 in 1945–46 to $1,845 in 1946–47, and was estimated by the state department of education at $2,500 for 1947–48. The scholastic population for 1946–47, ages 6–17, was 1,498,547. Total enrolment was 1,059,623. There were 44,156 classroom teachers, of whom 30,040 were elementary school teachers. Expenditures for public schools totalled $147,000,000, of which $27,000,000 was for debt service and capital outlay. There were 4,357 common school and 983 independent school districts. However, only 2,704 common and 973 independent districts operated schools. This large number of inactive districts arose from rapid consolidation of school activities by transfer of students, in many instances without abolishment of districts. The principal state higher educational institutions were the University of Texas at Austin; the Agricultural and Mechanical college of Texas at College Station; Texas Technological college at Lubbock; Texas State College for Women at Denton. There were 31 senior colleges of which 16 were publicly supported and 15 financed from church and private funds. There were 50 state-locally supported junior colleges.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—Old-age pension recipients numbered 200,941 on Jan. 1, 1948. The average payment per person during Dec. 1947 was $30.17, which was approximately the average for the year. There were 5,507 drawing pensions for the blind with payments in December averaging $33.62, also the approximate average for the year. Families with needy, dependent children numbered 16,664 (with approximately 40,000 children) with a $38.29 average payment per family in December, about $2 less than the average for 1947. Total public welfare payments for the year approximated $85,000,000. These figures from the Texas department of public welfare included both federal and state funds. Unemployment insurance payments for 1947, through November, totalled $6,700,000 as compared with $14,670,000 for the entire year 1946. Payments declined monthly during 1947 as the number employed mounted to an all-time high of 2,178,000, according to the Texas Employment commission. The state prison system consisted of a central plant at Huntsville and 11 subsidiary plants and farms located in the southeastern part of the state. Homes for delinquent minors were located at Gainesville, Gatesville and Brady. The state expenditure for correctional institutions and law enforcement by state officers approximated $2,200,000 in 1947. The number of prisoners during 1947 averaged 3,300. An extensive prison reform program was initiated late in 1947.

**Communications.**—Designated highway mileage in 1947 was 26.300, of which 22,780 were hard-surfaced. Total public road mileage, designated and rural, on Jan. 1, 1947, was 197,048. The farm-to-market construction program was expanded during 1947 as a result of legislative action. Total main-line railroad mileage was 15,591. Water-borne commerce through Texas ports (1945) amounted to 15,496,784 tons of foreign exports and 395,888 tons of foreign imports; 33,465,343 tons of coastwise outbound shipments and 4,322,911 of receipts. Petroleum and petroleum products, sulphur, forest products and agricultural products included most of the commodities of commerce. Ten national and international air lines traverse Texas. There were, in 1947, 470 airports of which 3 were class VIII, none class VII and 10 class VI, the remainder being of lower classifications. There were 6,804 civilian aircraft with CAA certificates and 20,700 licensed civilian air pilots. There were 1,041 telephone exchanges and 1,157.990 telephones in Texas Jan. 1, 1947. Of these, 247 exchanges and 928,256 telephones were in the Bell system.

**Banking and Finance.**—There were 437 national and 431 state banks as of Oct. 6, 1947, with $5,015,784,000 and $1,101,992,000 of resources, respectively; total, $6,117,776,000. Demand deposits of corporations, partnerships and individuals, $3,222,802,000 and $861,657,000 respectively; total, $4,084,459,000. There were, on Jan. 1, 1947, 86 federal savings and loan associations with $103,560,806 of assets and 51 state building and loan associations with $96,034,921 of assets. Receipts to the state government for the fiscal year ended Aug. 31, 1947, approximated $350.000,000, considerably in excess of expenditures. The state's bonded debt was only $4,100,000, entirely owned by the state's educational endowment funds. A constitutional amendment is necessary for issuance of state bonds in Texas.

**Agriculture.**—The value of all agricultural crop production, 1947, was $1,446,219,000, the highest value on record. Total harvested acreage, 28,696,000, according to the U.S. department of agriculture. Cash income from crops, $851,000,000; from livestock, $825,000,000 (estimates). Crop conditions in 1947 generally were good. Wheat production of 124,270,000 bu. broke all previous records. There was commercial production from approximately 60 crops. Data for leading crops, 1947, according to the U.S. dept. of agriculture, are shown in Table I.

Table I.—*Leading Agricultural Products of Texas, 1947*

| Crop | Acreage | Production | Value |
|---|---|---|---|
| Cotton lint (bales) | 8,273,000 | 3,360,000 | $ 514,080,000 |
| Wheat (bu.) | 7,310,000 | 124,270,000 | 279,608,000 |
| Corn (bu.) | 2,945,000 | 48,592,000 | 102,043,000 |
| Sorghum for grain (bu.) | 3,801,000 | 68,313,000 | 116,815,000 |
| Cottonseed (tons) | ... | 1,373,000 | 116,705,000 |
| Rice (bu.) | 474,000 | 23,700,000 | 67,545,000 |
| Oats (bu.) | 1,488,000 | 31,248,000 | 28,123,000 |
| Grapefruit (boxes) | ... | 24,000,000 | 14,400,000 |
| All other crops harvested | 4,405,000 | ... | 206,900,000 |
| Total | 28,696,000 | ... | $1,446,219,000 |

Table II.—*Number and Value of Livestock in Texas, Jan. 1, 1947*

| Kind | Number | Value |
|---|---|---|
| All cattle | 8,754,000 | $609,278,000 |
| Milk cows only | 1,453,000 | 136,582,000 |
| Hogs | 1,716,000 | 43,930,000 |
| Sheep | 8,523,000 | 76,514,000 |
| Goats | 3,112,000 | 16,805,000 |
| Horses | 458,000 | 22,900,000 |
| Mules | 230,000 | 16,100,000 |
| Chickens | 29,178,000 | 35,597,000 |
| Turkeys | 786,000 | 3,851,000 |
| Total | ... | $824,975,000 |

**Manufacturing.**—The estimated total value of manufactured products, 1947, was $4,800,000,000; estimated number of wage earners, 238,000; total wages paid, $345,000,000. The principal industry of the state was petroleum refining, which accounted for about 30% of the total value of products, but only about 8% of the wage earners. Other leading industries were lumbering, meat packing, cottonseed crushing, flour and grist milling, oil field machinery and supplies and publishing. The greatest industrial expansion in the state's history occurred between 1940 and 1947. Part of this was for purely military purposes, including ordnance, aeroplane construction and shipbuilding which declined after World War II. Most of the large chemical plants continued production. After a sharp slump in 1945–46, there was an upturn in industrial activity in 1947.

**Minerals.**—The total value of mineral production in 1947 was $1,744,581,000. Petroleum production of 815,000,000 bbl. contributed $1,100,000,000. Natural gas production was 2,893,553,714,000 cu.ft., valued at $410,000,000 at the wholesale consumption price, according to the Mid-Continent Oil and Gas association, Jan. 1, 1948. Table III shows the production of other leading minerals for the latest available year, as reported by the Mid-Continent Oil and Gas association for gas, and by the U.S. bureau of mines for other minerals. (S. Mc. G.)

Table III.—*Leading Mineral Products of Texas*

| Mineral | Production | Value |
|---|---|---|
| Oil, bbl. (1947) | 815,000,000 | $1,100,000,000 |
| Gas M. cu.ft. (1947) | 2,893,553,714 | 410,000,000 |
| Natural gasoline, gal. (1945) | 1,439,069,000 | 66,590,000 |
| Sulphur, long tons (1946) | 3,188,086 | 51,009,000 |
| Portland Cement, bbl. (1946) | 10,712,538 | 18,600,000 |
| Carbon black, lb. (1946) | 754,300,515 | 33,200,000 |
| Liquefied petroleum gas, gal. (1945) | 719,931,000 | 20,740,000 |
| Salt, tons (1946) | 1,098,589 | 3,356,000 |
| Sand and gravel, tons (1946) | 11,188,849 | 8,086,000 |
| Other minerals (1946) | ... | 33,000,000 |
| Total (consolidated 1947, 1946 and 1945) as estimated of production in 1947 | | $1,744,581,000 |

## Texas, University of.

A coeducational institution of higher education at Austin, Tex., with seven schools and colleges on the main campus. The 65th annual session opened Sept. 15, 1947. Emphasis was given to natural sciences, engineering, business, law, social science and graduate work in all fields in which interest was shown by veterans. The university became a member of the Oak Ridge Institute of Nuclear Studies in 1947. Creation of a school of architecture, effective in 1948, was authorized, and appointment of a director of a graduate school of library science, to be inaugurated in 1948, was made. The university's Institute of Latin American Studies enlarged its work in Mexican geography and sociology with assistance of a grant from the Carnegie corporation. The medical school is located in Galveston, Tex.; the dental school and the M. D. Anderson Hospital for Cancer Research are both in Houston, Tex.; the college of mines and metallurgy is in El Paso, Tex., and the J. W. McDonald observatory is near Fort Davis, Tex. All are branches or agencies of the University of Texas. (For statistics of endowment, enrolment, faculty, library volumes, etc., *see* UNIVERSITIES AND COLLEGES.) (T. S. P.)

## Textile Industry.

The textile industry in the United States experienced another year of record production and prosperity in 1947. Nevertheless, the industry recognized its vulnerability as durable consumer goods came on the market in 1947 in quantity for the first time since before World War II. These goods offered the beginnings of real competition to the soft consumer goods which had been in much greater relative supply during the war.

An important means of meeting this type of competition was the strengthening of the program of research during 1947. The merged organization of the Textile-Research institute, the Textile foundation and Princeton university was able to operate in its own laboratories in Princeton and to concentrate on improvement of goods for civilian use rather than on military projects.

Textile men, according to observers in the industry, were among the first to receive benefit from developments in atomic research when they adopted radioactive bars to control static electricity which interfered with the processing of the fibres. It was further noted that textile-research men were using "tagged atoms" to measure infinitesimal quantities of finish on yarns and that a whole new field of research had been opened.

Among specific developments resulting from applied research during 1947 were such concrete steps as: (1) extension of the work on nonshrinkable woollens from military channels to civilian uses; (2) development of continuous preparatory and dyeing ranges, claimed to save time and labour and obtain greater uniformity of product; (3) erection of virtually a hermetically sealed plant for full-fashioned hosiery manufacture, constructed for minimum loss of heat and for complete uniformity of temperature and humidity; and (4) increased emphasis on production of "tailor-made" fibres to meet specific demands in the use of yarns or fabrics.

The statistical effect of the latter trend was shown in the fact that the production of synthetic yarns in the U.S. passed the 1,000,000,000-lb. mark in 1947. In the years following World War I, the then-called "artificial silk" (later rayon) production had its first real impetus, but many students expected a collapse when the United States output reached the 100,000,000-lb. mark in 1928. Instead, the advance has continued unabated, until the domestic production in 1947 was ten times the 1928 figure. (D. G. Wo.)

**Great Britain.**—In 1947 European countries and Japan were once again contributing to the textile needs of the world. There was an abundance of raw materials, but a famine in finished goods. Progress was retarded by labour difficulties, inadequate fuel supplies, re-equipment and replacement of machinery, and the means of international payment. In Great Britain widespread stoppages caused by coal shortage, followed later by the dollar crisis, were the two most disturbing factors which compelled attention to the problems facing industry. Labour still remained the biggest problem in textiles. The wool industry, in general, worked with 75% of its prewar labour force, the cotton industry with 65%, and the silk and rayon, linen, jute and other sections were similarly handicapped. Expense was not spared in efforts to recruit labour, and although most mills were already air-conditioned, development took place in problems connected with dust removal, lighting, interior decoration, noise abatement, welfare and canteen facilities. Efficient training schemes and also questions of redeployment of labour to ensure maximum efficiency—together with respacing of machinery—received attention.

Machinery development progressed rapidly considering that production of new types had been adversely affected by inadequate labour and shortage of steel. Practical mill research was concerned with operative aids and mechanical handling of materials to increase production by eliminating "bottle-necks" and minimizing operative fatigue.

New features were more efficient methods and machines for the preparatory opening and cleaning in cotton, wool and flax fibre processes. Individual motor drives and variable speed drives for ring spinning frames received attention, also the various efficient high-draft systems for short-cut processing. A remarkable automatic pirn winder and a cone winder were both being built in Britain. High-speed beaming machines with large supply magazine creels found increasing favour, as did a series of new model looms with many improved features.

In the wool industry, carding was a subject of considerable research, and improved tape condensers appeared.

Staple rayon continued to make progress in every section of the textile industry. (*See* also COTTON; RAYON AND OTHER SYNTHETIC FIBRES; WOOL.) (A. DR.)

**Thailand:** *see* SIAM (THAILAND).

## Theatre.

**U.S.**—Mounting general interest in the U.S. theatre was manifested in several directions in 1947. The number of rural summer theatres, for example, reached an all-time high of 124, only 5 of which ended their seasons before schedule. Some of the others were so successful that they extended their operations two weeks beyond the customary closing time, and many of the rest also played frequently to standees and garnered profits unequalled in previous summers. The organization known as the American National Theatre and Academy, founded for the purpose of encouraging and supporting deserving theatrical enterprise, began after an uncertain start to get its plan into some order and, among other activities, helped to operate the so-called Experimental Theatre, Inc., which offered a series of performances of works by playwrights to whom the Broadway producers had turned a deaf ear. And throughout the country universities and colleges amplified their theatrical interests with the increasing presentation of new play scripts and old. Under the auspices of the National Theatre Conference, for example, a company of drama students from seven middle western schools was assembled to tour the college and community playhouses in Illinois, Indiana, Ohio, Michigan and Kentucky.

Towns like Dallas, Tex., set about collecting funds for the building of municipal theatres. Schools on a nonprofit basis for the training and development of actors were set into motion; and the Equity Library theatre assisted in the development of potential legitimate audiences. Prize contests for new playwrights tripled in number. The little Barter theatre in Virginia sent trucks of 60 players and technicians in three separate repertory groups to cover the country in plays by Shakespeare, Wilde and others. And still more significant of the rebirth of interest in the drama was the pursuit, by former stage actors engaged in motion pictures, of the so-called Actors' Lab theatre in Los Angeles, along with the institution in La Jolla, Calif., of a stock company which would permit such actors to express themselves in their former medium.

The clouded side of the professional theatre picture was the enormously increased expense of production, twice as high as 5 years before and, in all, from 4 to 5 times higher than 15 and 20 years before. Demands of the various unions—stagehands, musicians, etc., the cost of scene painting and construction, wages in the business departments, salaries of subsidiary actors, railroad transportation and other such imposed increases took on a threatening aspect which, if not in some way controlled, boded ill for the future.

Among the phenomena of the year were the Pulitzer prize committee's refusal to bestow its annual award on a play, with the implication that nothing meriting the prize had seen production; the decision of the New York Drama Critics Circle to give its accolade to Arthur Miller's inferior *All My Sons* when, in the opinion of many critics, Eugene O'Neill's *The Iceman Cometh* clearly deserved it; the end of the metropolitan run of *Life With Father* establishing an all-time record of 3,213 consecutive performances; and the continuing prosperity of the seemingly inexhaustible musical show, *Oklahoma!*

Though the public interest in the theatre continued apace and though various exhibits achieved large commercial success, the general quality of the new plays offered was far from notable. The plays that enjoyed any approach to critically reputable drama were to be counted on less than the fingers of one hand. The tendency seemed to be toward the kind of plays that promised ready money at the box-office and subsequent motion picture sales. Those which indicated that their producers had something a little loftier in mind were inconspicuous. Among them were such as Robinson Jeffers' fresh, free rendering of Euripides' *Medea,* Theodore Ward's drama dealing with the Negro in reconstruction days, *Our Lan',* and John van Druten's study of a hidebound college professor in conflict with youth, *The Druid Circle.*

There was again reliance upon revivals to fill the gap. John Gielgud exported from England an excellent reproduction of Oscar Wilde's *The Importance of Being Earnest* and followed it with a less excellent but in the main satisfactory bawdy classic of William Congreve, *Love For Love.* Donald Wolfit brought a repertoire of Shakespeare plays and Ben Jonson's *Volpone,* but missed any degree of success save in the instance of the last named. Maurice Evans, now a U.S. citizen, prospered with Bernard Shaw's *Man and Superman.* George Kelly's *Craig's Wife,* though fairly well done, had only a modest run; and the revival of Sidney Howard's and Paul de Kruif's *Yellow Jack* was an instant failure. Katharine Cornell tried her fortune with *Antony and Cleopatra,* hitherto consistently doomed to box-office failure. A duplication of *Alice In Wonderland* by the ailing American Repertory company in association with outside interests, though praised by most critics, could not make enough money to keep going; and a revival of *Rip Van Winkle,* which served Joseph Jefferson for almost half a century and which was purveyed by a young group naming itself the New York Repertory company, closed after a single week's engagement.

If the situation in respect to new plays was gloomy there was some sunshine in the case of new musicals. *Finian's Rainbow* by E. Y. Harburg, Fred Saidy and Burton Lane proved to be a delightfully witty and attractive show which scored a deserved success. *Brigadoon,* by Alan J. Lerner and Frederick Loewe, another success, was a deftly integrated sentimental song and dance festival whose plot so closely paralleled that of the old German classic, *Germelshausen,* that audiences were somewhat surprised that due acknowledgement was not made in the program. An attempt at U.S. folk opera, *Street Scene,* fashioned from the Elmer Rice play of the same name with a score by Kurt Weill, was in general a creditable effort. *The Medium,* a short dramatic opera by Gian-Carlo Menotti treating of a bogus clairvoyant, began as a failure but presently drew audiences and gained a considerable run.

DANCE ENSEMBLE from *Brigadoon,* a fantasy by Alan Jay Lerner and Frederick Loewe, which was selected in April 1947 by the New York Drama Critics Circle as the best musical comedy of the season

The disappointment of the year was the Richard Rodgers' and Oscar Hammerstein's *Allegro.* In view of its authors' previous *Oklahoma!* and *Carousel,* much was expected of it, but what it turned out to be was a pretentious and heavily oversentimentalized book dealing with a young doctor's career and set to music below Rodgers' standard.

The more conspicuous U.S. playwrights were largely *in absentia.* Eugene O'Neill decided to hold over his projected *A Moon for the Misbegotten* until a later date, and Robert Sherwood, S. N. Behrman, Maxwell Anderson, Lillian Hellman and the others preferred to remain in abeyance. The newer playwrights provided little of worth, though W. W. Haines' *Command Decision* had its effective points and contrived what was at least in part a driving melodrama about an air force general in World War II who followed until dismissal his conviction that lives must be fearlessly squandered if future lives were to be spared. The earlier noted *All My Sons,* by Arthur Miller, indicated a measure of dramaturgical competence and managed commercial success on Broadway with its story of a crooked manufacturer of aircraft parts, but in any sound appraisal did not merit the extravagant esteem shown for it in various critical quarters. Donald Ogden Stewart's *How I Wonder* was a juvenile excursion into cosmic philosophy. Tennessee Williams' *A Streetcar Named Desire,* also highly praised, defaulted in various particulars but profited from an all-around excellent production and achieved a large commercial success.

Among the year's notable acting performances were those of Judith Anderson in *Medea,* Donald Wolfit in *Volpone,* Jessica Tandy in *A Streetcar Named Desire,* and the Gielgud company in the two revivals mentioned.

The influx of Hollywood players continued. Of the many who ventured to expose their talents the only ones who presented themselves with any success were the following: June Lockhart in *For Love or Money,* Anne Jeffreys in *Street Scene,* Kim Hunter in *A Streetcar Named Desire,* Stephen Bekassy in *The Whole World Over,* Paul Kelly in *Command Decision,* Roberta Jonay in *Allegro,* and Anthony Quinn in *The Gentleman from Athens.* The others, including such film favourites as James Mason, Claire Trevor, John Loder, Philip Dorn, Helmut Dantine, and K. T. Stevens, got nowhere. (G. J. N.)

*Statistics of the Theatre in New York City, 1947 and 1946*

| | 1947 | 1946 |
|---|---|---|
| Productions | 92 | 110 |
| Musical comedies | 22 | 28 |
| Plays | 70 | 82 |
| Premières | 61 | 68 |
| Successful productions | 19 | 19 |
| Performers employed | 1,707 | 2,026 |
| Tickets sold | 8,200,000 | 8,600,000 |
| Approximate cost of production | $4,500,000 | $5,000,000 |
| Number of shows booked for other cities | 81 | 87 |

**Canada.**—After a hiatus of nine years, the Dominion Drama Festival was resumed, during the week of May 5 at London, Ontario. For the first time the festival (begun in 1933) had a Canadian adjudicator, Prof. Emrys M. Jones, head of the drama department, University of Saskatchewan.

The little theatre movement in Canada continued behind the Dominion Drama Festival. Local drama leagues or organizations controlled the 11 regional competitions. For the first time, 1947 saw each region choosing its own best play. Formerly, it was customary for the Dominion Drama Festival association to send a representative to the regional competitions to pick the entries for the finals.

At the Drama Festival, the Bessborough trophy for the best presentation was awarded to Les Compagnons, Montreal, for its production of the first and second acts of Molière's *Le Médecin Malgré Lui.* The Sir Barry Jackson trophy for best presentation of a play by a Canadian author was won by Le Caveau, Ottawa, for its production of *Maria Chapdelaine.*

The Toronto Children Players, and the Regina Children's theatre, presenting plays not only for children but also in some cases by the children themselves, had an active year. Early in 1947 Jacques Gréber, famed Parisian city planner heading the National Capital Planning commission to remodel Ottawa, announced that plans included a National theatre building. (C. Cy.)

**Great Britain.**—Continued, even increased, austerity in the material conditions of life naturally assisted those who were providing British people in 1947 with agreeable ways of escape. The large-scale musical show was more in demand than the small and realistic play with an immediate, domestic subject. Londoners flocked to enjoy the vitality, as well as the "far-awayness," of two big U.S. productions, long triumphant on Broadway, *Oklahoma!* and *Annie Get Your Gun. Finian's Rainbow,* a somewhat similar importation, was less liked, but the success of the other two intimated plainly that the U.S.A. had, in musical showmanship, a new and a winning deal. The old Ruritanian style of waltz-time romances, their Danubian settings re-equipped with English tenors, sopranos, and drolls, faded away completely before the vigorous attack of the new U.S. model.

One intimate play did, indeed, hold its own amid the favour shown to "escapist" entertainment. That was *The Linden Tree* by J. B. Priestley, a study of a professor's decline and fall in a provincial university town. What took the public sympathy was the portrait of a family group true to the English middle-class in transition; here were the young seeking their own differ-

SCENE from *All My Sons,* by Arthur Miller, a 1947 opening. It was the first choice of the New York Drama Critics Circle for the best play of the season

ent types of refuge in black markets, "Red" politics, Roman Catholicism, or the arts.

Since Sir Laurence Olivier and Sir Ralph Richardson were both engaged in the studios, the "Old Vic" had to find new stars. The choices were Alec Guinness, a master of comedy as well as of pathos, Trevor Howard and Bernard Miles. With them in *Richard II* and *The Taming of the Shrew* the "Old Vic" worthily took its place in London as well as in the Edinburgh festival which, more musical in content than dramatic, was held, in glorious weather and with great *réclame,* in August. It was expected that this attempt of the Scottish capital to become the Salzburg of Britain would be renewed.

There was no Malvern festival in 1947, but one was promised to open on the 92nd birthday of George Bernard Shaw (July 26, 1948) with new plays by Shaw and James Bridie. For Bridie 1947 was a busy year; his piece in the macabre vein, *Dr. Angelus,* had a big London success, with Alistair Sim brilliant as the murderous medico; *A Sleeping Clergyman* was revived with Robert Donat, and a third Bridie play, *John Knox,* aroused considerable controversy when produced at the Citizen's theatre, Glasgow. With Edinburgh and James Bridie thus to the fore, it was a great year for Scotland. (I. Br.)

## Tibet.

A country of central Asia, lying north and northeast of the Himalayas, mainly a high tableland. Nominally a Chinese dependency, it is in practice independent. Area: *c.* 470,000 sq.mi. Estimates of the population vary between 2,000,000 and 3,750,000. The religion is Lamaism, a late form of Buddhism modified by animism and primitive magic, and education is in the control of the many monasteries. The ruler is the 14th dalai lama (born 1933) enthroned in 1940 as Lingerh Lamutanchu.

**History.**—In April 1947 the ex-regent Jechong was arrested by the regent of the dalai lama on the charge of plotting against the dalai lama. Jechong was blinded and subsequently died in prison. Two other leaders of the revolt were sentenced to 250 strokes and imprisonment for life; it was also ordered that they should be fettered and have their eyes put out. A revolt also broke out in a monastery near Lhasa, the monks declaring themselves for the former regent Jechong, but after a siege lasting nearly two weeks the monastery surrendered to government troops. (J. Ra.)

## Tildy, Zoltan

(1889– ), Hungarian statesman, was born in 1889 at Losoncz and educated at the Protestant college at Pápa where he graduated as Master of Divinity in 1912. He received part of his training at Belfast university and at the beginning of his career as a parson of the Reformed Evangelical (Calvinist) Church, was in contact with west European Protestant student and social movements. A military chaplain in World War I, in 1919 he became managing director of a Budapest publishing firm for Protestant religious literature and editor of the review *Magyar Föld,* an organ of the Smallholders party. In 1930 he was a founder of the Independent Smallholders party, which soon became the principal democratic-liberal opposition force against the autocratic government of General Julius Gömbös. When Tibor Eckhardt, leader of the party, left Hungary in 1941 in order to side openly with the Allied cause, Tildy was elected chairman and leader of the parliamentary group of the Independent Smallholders. Opposing pro-German tendencies, he went underground in March 1944 after the German armed forces had deposed the government of Nicholas Kállay. The elections of Nov. 4, 1945, gave an absolute majority to the Independent Smallholders and Tildy became prime minister and formed a government to succeed General Béla Miklós' provisional government. On Feb. 1, 1946, when the national assembly proclaimed the end of the monarchy, he was elected first president of the Hungarian republic. In June 1947 he denied foreign press rumours of his impending resignation and possible arrest in connection with the conspiracy of General Lajos Veress. (*See* Hungary.) (B. Me.)

## Tin.

Production data from many of the major producing countries were lacking during the years of World War II. While the following compilation of the International Tin Research and Development council is more complete than anything else available after 1939, it still includes a number of gaps and estimates.

As can be seen from the data in Table I, the output of the

Table I.—*World Production of Tin, 1941–46*

| Secondary recovery | 42.0 | 38.0 | 37.9 | 32.6 | 39.3 | 31.0 |
| Consumption, total | 150.9 | 96.0 | 90.0 | 100.8 | 93.6 | 90.6 |
| Primary | 115.5 | 63.0 | 51.8 | 66.3 | 62.3 | 61.2 |
| Secondary | 35.4 | 32.9 | 38.2 | 34.5 | 31.3 | 29.5 |
| Stocks, total | 147.5 | 149.6 | 130.9 | 111.8 | 93.5 | 80.3 |
| In ore | 26.0 | 41.1 | 45.1 | 46.0 | 36.4 | 27.6 |
| Metal | 121.5 | 108.5 | 85.8 | 65.6 | 59.0 | 52.7 |

years 1942–46 averaged only a little more than 110,000 tons, or much less than half of the peak output of 270,000 tons in 1941. The production facilities destroyed during World War II were being replaced only slowly, but a survey estimated that production capacity could be restored to 138,000 tons in 1947, 191,500 tons in 1948 and 236,000 tons in 1949. The output reported in the first seven months of 1947 topped 75,000 tons, which would seem to make the realization of the 1947 estimate a possibility.

**United States.**—The salient features of the tin industry in the United States are summarized in Table II.

In 1947 smelter production declined to 37,287 tons, against 48,720 tons in 1946, and secondary recovery also dropped, but imports improved, both as ore and as metal. The net balance showed a drop of 14% in stocks at the end of the third quarter, after the stock figure at the end of 1946 had dropped to below the year's consumption.

Following the removal of price control, the price of tin rose from 52 cents to 70 cents, and in April 1947 to 80 cents, with agitation for another increase as the year drew to a close. (*See* also Mineral and Metal Production and Prices.)

(G. A. Ro.)

## Titanium.

Because of the development of domestic production during World War II, the United States was able during 1947 to supply about half of its consumption of titanium, but consumption had grown at such a rate that imports were still about as large as before the war when domestic output contributed only 5% of the supply. The development of the supply-consumption picture for both rutile and ilmenite is shown in the accompanying table, in short tons.

| Ilmenite | 1941 | 1942 | 1943 | 1944 | 1945 | 1946 |
|---|---|---|---|---|---|---|
| Production | 23,297 | 77,208 | 203,551 | 278,610 | 308,516 | 282,447 |
| Shipments | 21,526 | 93,397 | 211,715 | 280,791 | 308,518 | 282,708 |
| Imports | 170,689 | 10,407 | 78,093 | 108,948 | 210,066 | 242,340 |
| Supply | 192,215 | 103,804 | 289,808 | 389,739 | 518,584 | 525,048 |
| Consumption | 275,106 | 257,535 | 302,822 | 360,941 | 381,178 | 404,283 |
| Stocks | 352,060 | 172,611 | 129,824 | 167,686 | 272,598 | 381,226 |
| Rutile | | | | | | |
| Production | 3,130 | 2,648 | 3,987 | 6,922 | 7,179 | 7,453 |
| Shipments | 3,431 | 2,649 | 3,941 | 6,770 | 6,837 | 7,514 |
| Imports | 6,291 | 10,525 | 14,338 | 10,019 | 10,602 | 5,864 |
| Supply | 9,722 | 13,174 | 18,279 | 16,789 | 17,439 | 13,378 |
| Consumption | 6,361 | 10,616 | 17,634 | 14,813 | 9,791 | 7,134 |
| Stocks | 3,637 | 5,932 | 6,173 | 6,536 | 10,130 | 14,808 |

Ilmenite is used mainly in pigments, and rutile in welding rod coatings; both are used to a limited extent for alloys and carbide. Most of the imported ilmenite comes from India, and the rutile from Australia.

**Canada.**—Production of titanium ores had almost ceased, dropping from 69,437 short tons in 1943 to 14,147 tons in 1945, 1,406 tons in 1946 and 1,250 tons in 1947. (G. A. Ro.)

**Tito:** *see* Brozovich or Broz, Josip (Tito).

## Tobacco.

The U.S. crop of tobacco in 1947 was estimated at 2,167,702,000 lb., about 5% less than the record crop of 2,319,409,000 lb. in 1946. It exceeded all other yearly crops, however, and was much more than the average of 1,548,389,000 lb. for the ten-year period 1936–45. Acreage grown in 1947 was 1,875,300, compared with 1,962,200 in 1946 and an average of 1,592,000 during 1936–45. The average yield also dropped to 1,156 lb. per acre from 1,182 lb. in 1946 but exceeded the ten-year average of 971 lb. Production of flue-cured types approached a new record, but burley and dark air-cured types declined.

The Class 1 flue-cured types grown in Virginia, North and South Carolina and southward to Florida were estimated at 1,345,000,000 lb., almost equal to the high record of 1,352,000,000 lb. in 1946. The stocks of this type on July 1, 1947, were 1,287,000,000 lb., which with the new crop provided a large supply. In view of reduced exports late in 1947, this supply required a reduction in the goal for 1948 and in November the United States department of agriculture recommended that acreage of all types of tobacco be reduced about 19% from the 1947 level, 35% for fire-cured and 25% for air-cured.

The 1947 crop of Class 2 fire-cured types was 97,035,000 lb. compared with 109,355,000 lb. in 1946 and an average of 83,722,000 lb. during 1936–45. The Virginia fire-cured crop was 14% less and Tennessee 11% less than in 1946. The yield of all fire-cured types was 1,020 lb. per acre, compared with 1,157 lb. in 1946 and a ten-year average of 895 lb. Stocks were more than in each of the preceding three years and high compared to domestic consumption and exports. Much of this type is used in snuff, smoking and chewing tobacco, all of which were less than prewar levels. Reduction of exports late in the year seriously affected the markets for these tobaccos.

The burley type crop, estimated at 525,206,000 lb., was 14% less than the record of 1946, chiefly because of reduced acreage; the yield was only 3% off. Maryland's crop was only 34,360,000 lb. compared with 40,560,000 lb. grown in 1946. Kentucky, the leading state in burley production, had a crop of 357,200,000 lb. compared with 427,525,000 lb. in 1946. The carry-over of burley (nearly 1,000,000,000 lb.) combined with the 1947 crop established a new record of supply. Consumption of this type during 1946–47 was greater than in any previous year because of high cigarette consumption and large exports. The surplus of burley was accompanied by a higher support price. Since burley exports comprised only 7%–8% of the total production, the uncertainties of foreign markets had less effect than on the fire-cured types.

The average price ranged around 40 cents per pound, about the same as in 1946. The 1946 price of Maryland tobacco was 44.7 cents per pound compared with 57 cents for the small 1945 crop; in the late fall of 1947 the price was about the same as 1946.

Dark air-cured types were estimated at 42,260,000 lb. or about 6,000,000 lb. less than in 1946, but more than the average. Stocks were large and demand was 20% less than in 1946.

Cigar types of tobacco amounted to 146,850,000 lb., slightly less than was harvested in 1946. Mississippi, Georgia and Florida had larger crops, but Connecticut lost heavily at harvest time because of bad weather. Stocks carried over were lower and consumption of domestic cigars higher than in 1946. Prices were slightly lower for most of the crop, but Connecticut type of cigar binders were near the 1946 average of 72 cents per pound, compared with 58 cents in 1945 and about four times the average of 1934–38. The Louisiana perique crop increased in 1947 to 249,000 lb. compared with 150,000 lb. in 1946 and the 174,000 lb. average for 1936–45.

During the 1946–47 crop year, U.S. exports of tobacco were near the record attained in 1929, but declined sharply during the last quarter of the year. Foreign buyers, short of dollars, curtailed purchases sharply. Great Britain, largest buyer of United States tobacco, stopped buying in November and caused a near panic among United States growers. China, second largest importer in prewar years, suddenly found its dollar exchange low and reduced buying.

When the British ceased buying, the Commodity Credit corporation began support of the market at 90% of parity. A proposal for the United States to underwrite British purchases was rejected in London.

*U. S. Tobacco Production, 1947 and 1946 and 10-year Average, 1936–45*

(In thousands of pounds)

| State | 1947 | 1946 | 10-year Average | State | 1947 | 1946 | 10-year Average |
|---|---|---|---|---|---|---|---|
| North Carolina | 915,460 | 927,425 | 607,802 | Ohio | 22,210 | 21,060 | 24,934 |
| Kentucky | 416,167 | 505,885 | 337,468 | Indiana | 12,950 | 13,610 | 10,155 |
| Virginia | 161,112 | 178,821 | 115,744 | Massachusetts | 11,240 | 10,314 | 8,040 |
| South Carolina | 153,000 | 171,825 | 102,534 | Missouri | 5,040 | 7,425 | 5,746 |
| Tennessee | 146,610 | 171,705 | 107,937 | New York | 1,080 | 1,085 | 1,187 |
| Georgia | 130,132 | 110,537 | 80,436 | West Virginia | 3,625 | 3,424 | 2,624 |
| Pennsylvania | 61,100 | 59,124 | 44,826 | Minnesota | 720 | 875 | 638 |
| Maryland | 38,400 | 47,000 | 28,499 | Kansas | 285 | 345 | 288 |
| Wisconsin | 35,930 | 41,735 | 30,158 | Alabama | 340 | 288 | 300 |
| Florida | 27,036 | 22,251 | 16,780 | Louisiana | 249 | 150 | 174 |
| Connecticut | 24,516 | 24,530 | 21,488 | | | | |

World tobacco production for the year ending June 30, 1947, was estimated at 7,122,000,000 lb., compared with 6,654,000,000 lb. in 1946 and an average of 6,560,000,000 lb. during 1935–39. The large U.S. crop accounted for most of the increase. China was second with 1,363,000,000 lb., followed by India 1,050,000,000 lb., Brazil 180,000,000 lb., Turkey 215,000,000 lb. and Burma 100,000,000 lb.

With the high price of U.S. tobacco every country was striving to increase its supply to meet domestic needs, but food shortages restricted expansion of tobacco acreage.

(J. C. Ms.)

**Tobago:** *see* TRINIDAD.

**Togoland:** *see* BRITISH WEST AFRICA; FRENCH OVERSEAS TERRITORIES; TRUSTEE TERRITORIES.

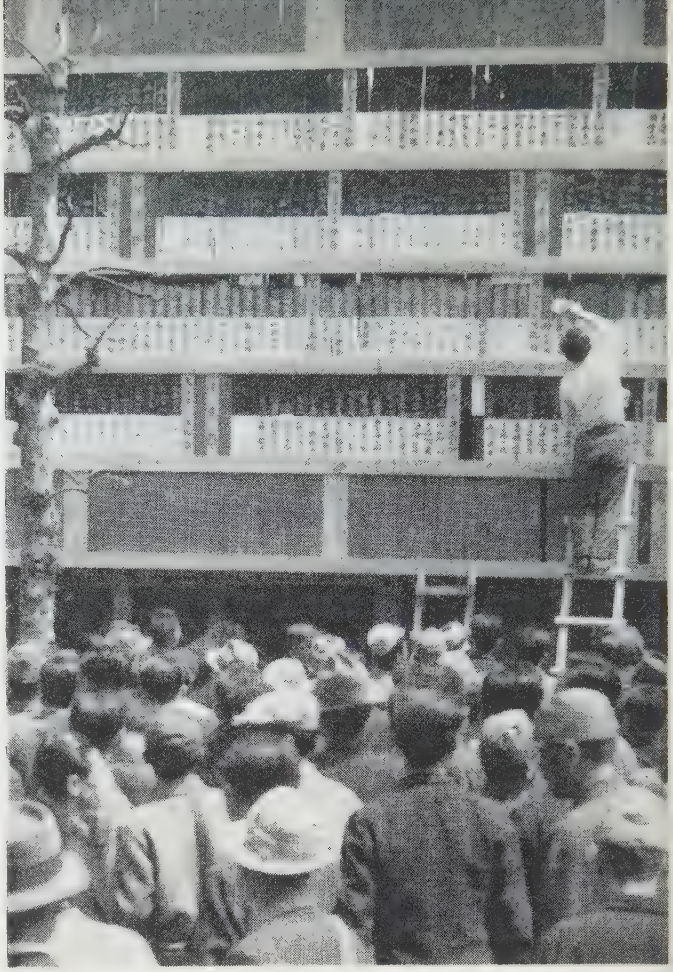
**Tokyo.** The capital and largest city of Japan; situated in a small metropolitan prefecture of the same name at the head of Tokyo bay (at 35° 45′ N., 139° 45′ E.) on the southeast coast of Honshu, largest of the Japanese islands; area, 223 sq.mi. The 1946 census recorded 3,442,000 residents, reflecting a period of repatriation of armed forces and return of refugees who had fled to less congested areas in the last months of World War II. The 1940 census had recorded a population of 6,778,804; in Nov. 1945 it had been 2,777,000.

Reconstruction to replace some 750,000 war-destroyed dwellings was reported by July 1, 1947, to have added 93,380 newly built dwellings to the 569,068 remaining after the war.

In elections during April 1947 for the Tokyo governorship, an independent backed by the conservative Liberal and Democratic parties, 57-year-old Seiichiro Yasui, defeated Socialist Daikichiro Tagawa who had moderate and left-wing support. For Tokyo's 22 ward assemblies, the Liberal party obtained a slight plurality of the total 895 posts.

More effective government control measures resulted in better supply of some foodstuffs, such as vegetables and fish, early in the summer, but heavy food imports by the occupation authorities continued to be necessary to complement short domestic production, such imports, for example, comprising 44% of the October staple food ration. While Tokyo rents were held to about 170% of the 1937 figures, price indexes for consumers' goods, staple foods and clothing continued to rise, increasing by Oct. 31 to 316%, 282% and 453% over the preceding year's figures.

In the wake of a severe typhoon on Sept. 16, heavy floods, especially of the Tone river, broke levees and inundated three of Tokyo's most crowded wards (in some places up to 15 ft.). Damage in Tokyo was estimated at $200,000,000 and there were 100,000 refugees.



JAPANESE ELECTION RETURNS being posted on the bulletin board of a newspaper office in Tokyo during the local elections of April 5, 1947

The Tokyo war crimes trials proceeded slowly throughout the year. The prosecution of the 25 leaders before the seven-nation military tribunal, which had begun eight months before, rested its case on Jan. 24 and the defense phase of the trials occupied the rest of the year in face of little public interest in Japan or abroad till Hideki Tojo, wartime premier and last but one of the defendants to present his case, took the stand on his own behalf on Dec. 26.

Diverse indications of social change included the reduction of 51 collateral members of the imperial family to commoner status; the extension of purge techniques from the political sphere to include media of public information and such organizations as labour unions; the widespread appearance, despite police measures to curtail it, of gangsterism and rowdyism on the city streets; the planned and partly completed removal of some 120 monuments and memorials of a nationalistic or militaristic nature.

(T. F. M-O.)

**Tomatoes.** The U.S. tomato crop of 1947 was smaller than the high record crop of 1946 but greater than the average. The crop for processing was only 2% less than that of 1946 and 30% more than the 1934–45 average. The crop for sale in the fresh vegetable markets was about one-sixth less than the crop of 1946 but more than the ten-year average. Acreage of tomatoes grown for juice and canning was more than double the area grown for sale on the fresh market. Tomato juice output had increased from fewer than 5,000,000 cases in 1936 to approximately 30,000,000 cases.

Tomato pulp production also increased from 3,000,000 cases to 9,500,000 cases.

The commercial crop for fresh market was estimated at 28,830,000 bu. in 1947, compared with 34,229,000 bu. in 1946 and the 10-year average of 26,099,000 bu. Acreage declined almost 50,000 ac. from 1946, but the yield was 118 bu. per acre compared with 116 bu. in 1946 and 117 bu. average. There was a decline in acreage in both early and summer crops. Prices at the same time were higher than in 1946, but a glut in the August markets caused prices to break below the level of Aug. 1946. Average price in 1947 was $3.02 per bushel, compared with $2.87 in 1946 and $1.92 average.

*U.S. Tomato Production for Fresh Market, 1947, 1946 and 10-year Average*

(In bushels)

| Crop | 1947 | 1946 | Average 1936–45 |
|---|---|---|---|
| Winter | 949,000 | 1,964,000 | 1,777,000 |
| Spring | 8,905,000 | 11,381,000 | 7,615,000 |
| Summer | 14,876,000 | 15,029,000 | 13,278,000 |
| Fall | 4,000,000 | 5,855,000 | 2,599,000 |

The tomato crop for processing was estimated at 3,327,900 tons compared with 3,380,900 tons in 1946 and 2,442,100 tons average. The acreage was smaller than in 1946 but yields were high. Prices received for the 1947 crop were slightly less than in 1946. While much of the tonnage was grown on contract at about the same prices as a year earlier, a large amount of uncontracted tonnage in the eastern states sold at lower prices. The hurricane that crossed Florida in September destroyed about 50% of the 5,000 ac. then growing. Only a part was replanted.

Stocks of canned tomato juice were about twice the average on Aug. 1, 1947, because of the increased rate of consumption. Supplies of canned tomatoes, while four times the quantity available a year earlier, were less than half the average carry-over. (*See* also VEGETABLES.) (J. C. Ms.)

**Tongking:** *see* FRENCH OVERSEAS TERRITORIES.
**Tornadoes:** *see* DISASTERS.

## Toronto.

In 1793, in colonial days, the British governor, John Graves Simcoe, laid out the present site of Toronto as the capital of the province of Upper Canada (now Ontario) and named it York. Earlier the British settlement had succeeded a French trading post called Fort Rouillé. In 1834 it was incorporated as a city and its name changed to Toronto, the old Indian name, meaning "a place of meeting." The city grew steadily and soundly until in 1947 it covered about 35 sq.mi. and had a population of about 700,000 persons. Toronto manufactures and distributes goods in a large way, having excellent advantages in location and communications; it is also the centre of the great mining industry of Ontario. The city corporation, in addition to the usual municipal services, owns and operates through commissions the city and suburban street railway and bus system and the local hydroelectric system, with exclusive distribution of electricity for light and power. The Canadian National exhibition, inaugurated in 1878 and held annually until 1941 when its entire facilities were turned over to the armed services, resumed operations in 1947. The exhibition of 1947, lasting for two weeks, was highly successful and attracted a paid attendance of 2,360,500 persons. In 1946 the assessment of values on which the tax rate was levied was $964,830,522; the tax rate was 38.10 mills on the dollar for public school supporters, 40.85 for separate school supporters. The net debt was $56,011,706.68 of which $27,852,989.44 was revenue producing and specially rated. (G. R. G.)

## Toronto, University of.

A provincial institution in Toronto, Ontario, Canada. In addition to the more than 17,000 students enrolled in 1947, which was more than double the prewar peak, another 13,199 persons took extension courses and 8,000 registered with the Royal Conservatory of Music. The school of graduate studies began its 26th year under a revised statute designed to retain the initiative and resourcefulness of departments while developing a greater degree of unity. Of 1,100 in this school almost half had done their undergraduate work at the University of Toronto. The others were graduates of 22 institutions in Canada, 36 in the United States, 6 in the British Isles, 13 in India, 6 in China, 3 in continental Europe, 2 in South America, and 1 each in Australia, New Zealand, Mexico and Palestine. The board of governors allocated more than $100,000 for direct support of research and publication in the physical and biological sciences, the humanities and social sciences. The University of Toronto Press published 17 scholarly works including: *Democratic Government and Politics,* by J. A. Corry; *Democracy in the Dominions,* by A. Brady; *Monopolies and Patents,* by Harold G. Fox; *Godwin's Enquiry Concerning Political Justice,* in three volumes edited by F. E. L. Priestley; *The Virtues Reconciled: An Iconographical Study,* by S. C. Chew. At special convocations the degree of doctor of laws (*honoris causa*) was conferred on Lord Beaverbrook, Sir Alexander Cadogan, Dr. Harold Willis Dodds, Prof. D. A. L. Graham, Lawrence Hunt, Ray Lawson, George McCullagh, Lieut. Col. W. E. Phillips, Helen Ogden Reid, Thibaudeau Rinfret, and Mgr. Ferdinand Vandry. (For statistics of endowment, enrolment, faculty, library volumes, etc., *see* UNIVERSITIES AND COLLEGES.)

## Town and Regional Planning.

In 1947 many comprehensive and detailed plans were developed in those nations of the western world where peace permitted civil planning. The final report of the 18th International Conference on Housing and Town Planning, held at Hastings, Eng., in 1946, appeared in 1947. The International Housing and Town Planning association announced the next biennial conference for June 1948 in Zurich, Switz.

Plans were advanced in 1947 for the United Nations headquarters in New York, and most of the site was cleared.

In the United States, under state authorizing acts, some progress was made in realizing urban redevelopment plans, notably in Indianapolis, Ind., Providence, R.I., San Francisco, Calif., and Washington, D.C. Many planning reports were issued. Because of curtailed federal appropriations and the failure of congress to pass the Taft-Ellender-Wagner Housing bill there was little construction of public housing. The activities of the Bureau of Community Facilities in the Federal Works agency were terminated June 30, 1947, but the agency continued to maintain contact and interest in urban redevelopment programs throughout the United States. Through the Public Roads administration, it co-operated with local planning commissions in the location and design of the through federal-aid highways authorized by congress in urban areas, and through the Public Buildings administration it co-operated with local planning commissions in the location and design of federal buildings.

The ambitious Philadelphia exhibit presented graphically the comprehensive plans of the commission and was visited by many thousands of citizens of the area and by planners from all parts of the U.S.

A number of significant planning conferences were held. The American Institute of Planners met in Providence, R.I., in January and held regional conferences in Milwaukee, Cincinnati and Philadelphia. The American Planning and Civic association held its annual Citizens Planning conference in Milwaukee April 28–30, 1947. The American Society of Planning Officials met in Cincinnati May 5–7, 1947. The chamber of commerce of the United States held a Businessmen's Conference on Urban Problems in Washington, D.C., on Sept. 11–12.

An increasing number of smaller cities and towns published plans, including Ann Arbor, Mich., Dedham, Mass., Cheshire, Conn., Highland Park, Ill., La Jolla, Calif., Stockton, Calif., and Wichita, Kan.

**Canada.**—Canadian cities active in planning, included Hamilton, Montreal, St. Johns, Vancouver and Winnipeg. A National Conference on Community Planning, sponsored by the Community Planning association of Canada, was held Oct. 2–4, 1947.

**Great Britain.**—Plans were carried forward under the New Towns act passed in 1946. A number of planning books and reports were issued during 1947. Planning reports were issued for cities in Australia. In Pretoria, S. Af., a plan was published as a pilot survey to guide native towns.

**Europe.**—The Netherlands was active in planning and issued a number of reports, including one on the Replanning of Rotterdam. Germany issued a new planning bulletin from Stuttgart. (*See* also HOUSING.)

## Track and Field Sports.

Aiming at the 1948 Olympic games with their first full charge of post World War II athletic prowess, United States athletes broke or flirted with more than a half dozen world records during 1947. As was the case the year before, the outstanding performances were offered by two Negro stars—Herbert McKenley of the University of Illinois, Urbana, and Harrison Dillard of Baldwin-Wallace, Berea, O.

McKenley shattered the world 440-yd. record in the National Collegiate Athletic association championships at Salt Lake City, Utah, lowering the mark by .2 sec. with a time of 46.2 sec. Later, in the dual meet between the Big Nine and Pacific Coast, he registered 46.3 sec. for the quarter-mile distance. Dillard negotiated the 220-yd. low hurdles in 22.3 sec. or .2 sec. under the previous mark.

Steve Seymour of Los Angeles, Calif., set a national javelin record with a toss of 248 ft. 10 in. in the National Amateur Athletic union championships at Lincoln, Neb. Miko Hietanen of Finland, the European marathon champion, set a U.S. mark of 1 hr. 21 min. 45.3 sec. for the 15-mi. run at New York city and a Swedish team set a world record of 7:29 for the 2-mi. relay, in Stockholm.

The annual Boston marathon, in its 51st running, was won by a 115-lb. Korean, Yum Bok Suh, a sophomore at Seoul university, Korea, in the record time of 2:35.39. His mark bettered the previous low for the 26-mi. 385-yd. distance by 1 min. 12 sec.

HERB McKENLEY, University of Illinois track star, shown at the Big Nine-Pacific Coast all-star meet as he set a new world record of 46.3 sec. for the 440-yd. event. The meet was held at Berkeley, Calif., on June 28, 1947

The University of Illinois highlighted the team competition by winning the National Collegiate tournament with 59⅔ points. The Illini also won the Western conference track and cross-country titles, and dominated the Penn relays. New York university won the Intercollegiate A.A.A.A. outdoor crown, while the New York Athletic club captured the National A.A.U. championship with 76¼ points to 63⅝ points for the Los Angeles Athletic club. The Big Nine easily outclassed the Pacific Coast, 94½–37½, in their annual meet.

Irving Mondschein of the New York Pioneer club won his

*Outstanding U.S. Track and Field Performances (Outdoor), 1947*

100 Yards

9.4 sec.—Patton, U.S.C.
9.5—Conwell, J.C.B.R.; Martinsen, Baylor; Fox, San Francisco State Col.; Jay, Texas A. & M.; Davis, Kempt, Tex., H.S.

Hop, Step and Jump

46 ft. 5¼ in.—Beckus, Unattached, Los Angeles
45:5½—Ganslen, Shore A.C.
45:4—Theriot, A.A.F.
44:9—Robertson, San Antonio A.C.

third straight National A.A.U. decathlon championship with 6,715 points, just 10 points more than recorded by Lloyd T. Duff of Ohio State university, Columbus. John Voight of Baltimore, Md., 20-year-old Oklahoma A. and M. (Stillwater) freshman, captured the national pentathlon crown. He scored 2,927 points to 2,626 points for Charles Covino of the New York Athletic club.

**Indoor Track.**—Gilbert Dodds, returning to the mile and two-mile grind after a two-year layoff, completely dominated the indoor season. He won 12 straight races, including the National A.A.U. championship mile. His indoor record included 9 mile and 3 two-mile victories, and reached its peak with a 4 min. 6.8 sec. mile in the Chicago relays. Coupled with his victories in 1943 and 1944, prior to his layoff, the Boston preacher won 23 successive indoor races.

New York university won both the National A.A.U. and Intercollegiate 4-A indoor crowns, outlasting Manhattan college in each meet. The Violets won the A.A.U. title, 18½–15, over Manhattan and gained the I.C.4-A crown, 35–30.

**Women.**—Continued success of three veteran campaigners—Stella Walsh of Cleveland, Alice Coachman of Albany State college, Ga., and Nancy Cowperthwaite of the German-American A.C.—marked the women's National A.A.U. championships. Although without the aid of Miss Coachman, Tuskegee institute, Ala., easily won the team title with 106 points.

Both Miss Coachman and Dorothy Dodson of Chicago, the only triple winners of 1946, settled for two firsts and a second in 1947. Miss Walsh, on her 17th year of national competition, defended her 200-m. title. (M. P. W.)

## Trans-Jordan.

An Arab kingdom of the middle east bounded by Palestine (west), Saudi Arabia (south and southeast), Iraq (northeast), and Syria (north). Area: 34,750 sq.mi. Pop. (est. 1944) *c.* 340,000; pop. (est. 1946) 370,794. Religion: Arab Moslems (Sunnis) 300,000; Caucasian Moslems (Shi'ites) 10,000; Christians 30,000. Capital: Amman, the ancient Rabbat Ammon. Chief cities: Amman (45,000); Es-Salt (14,500); Ma'an (8,000). Ruler: King Abdullah ibn Hussein.

**History.**—During 1947 Trans-Jordan's economic development continued, and the country was unaffected by the disturbed state of Palestine. King Abdullah granted permission for the projected new pipe line from Saudi Arabia to pass through his country.

King Abdullah was not only the ruler of Trans-Jordan, but also the head of the royal Hashemite house, which ruled in Mecca until expelled by King Ibn Sa'ud and for a brief period after World War I in Damascus, whence King Feisal was ejected by the French. Hashemites now reign in Trans-Jordan and Iraq. King Abdullah's activities and pronouncements therefore bore a double significance, and exercised a wider effect on Arabian politics than the size and importance of Trans-Jordan alone would warrant. In April 1947 the prince regent of Iraq (King Abdullah's nephew) visited Amman, and an Iraqi-Trans-Jordan treaty was the outcome of the visit. (*See* Iraq.)

King Ibn Sa'ud was alarmed by what he conceived to be a Hashemite bloc aimed at himself, and protested that the treaty would interfere with free communication between his kingdom and Syria through a "corridor" which he claimed existed, though in fact the territories of Syria and Saudi Arabia were nowhere contiguous.

King Abdullah called forth further protests from Ibn Sa'ud during the summer, by his renewed advocacy of "Greater Syria"; *i.e.*, the union of Syria and Trans-Jordan under King Abdullah. King Ibn Sa'ud made the point that it was unpatriotic of King Abdullah to raise an issue which must divide Arab opinion, just when it should be united in support of the Palestine Arabs' case before the United Nations. Official Syrian reaction was, naturally enough, even more pronouncedly hostile. King Abdullah's renewal of his claim to a Syrian throne caused a worsening of Syria's relations not only with Trans-Jordan but with the Hashemites in general, and accentuated the division of Arabian political forces into two parties, the Hashemites (Trans-Jordan and Iraq) on one side, and Syria and Saudi Arabia on the other. (F. St.)

**Education.**—1944: government schools, Moslem scholars, boys 6,811, girls, 1,617, Christian scholars, boys 939, girls 240; nongovernment schools, Moslem scholars, boys 1,492, girls 268, Christian scholars, boys 2,101, girls 1,733.

**Finance, Trade and Communication.**—Revenue (1945) £P.926,204, grants in aid, £P.1,610,000; expenditure, ordinary, £P.2,731,899, extraordinary, £P.81,000. Imports (1944) £P.2,986,296; exports £P.1,792,255. (Palestine £ = British £ = 403 U.S. cents). Railways open to traffic (1945) 226 mi. All-weather roads (1944) 371 mi. Telephones (1946) 1,354; motor vehicles (1938) cars 335; buses 24; trucks 320.

**Agricultural Production.**—(1944) in short tons: wheat 121,253; barley 44,092; grapes and raisins 23,148; millet 7,165; lentils 13,228; (1943) kersennah 10,200; melons 23,000; tomatoes 16,000; beans and peas 2,400; tobacco 10.

**Transportation:** *see* Aviation, Civil; Electric Transportation; Motor Transportation; Railroads.
**Transylvania:** *see* Hungary; Rumania.

## Trap-shooting.

A record entry of 1,786 fired away at the Grand American handicap at Vandalia, O., with another newcomer to the championship circle—Hugh Crossen of Gardiner, Mont.—capturing the title. Crossen, a 41-year-old rancher, sporting goods dealer and tavern operator, won the 48th championship with 99 targets out of 100 in a brisk wind at 22 yd. It was his sixth attempt for the Roaring Grand, and netted him approximately $5,000. Fifteen shooters were tied for second with 98.

Kenton Sargent Stewart, 31-year-old Wichita, Kan., paving contractor, won the preliminary handicap with a possible 100. Cliff Doughman, 36, of Morrow, O., won the North American amateur with 249 out of 250 in a shoot-off with 10 others. The original 11 leaders were tied at 200 out of 200.

D. Lee Braun, 36, of Dallas, Tex., won the professional North American clay target championship as well as the national skeet title, and set a record of 546 out of 550 in the latter event and ran 491 in a row. The veteran Joe Hiestand of Hillsboro, O., won the champion of champions event for state titleholders. Ohio won the team title with 497 out of 500. Members of the Ohio team were: Doughman, Heistand, Ralph Smith of Dayton, Don Englebry of Vermilion and P. O. Harbage of West Jefferson.

Rudy Etchen, 24, of Dallas, Ia., topped the field in both the Grand American professional singles and doubles. He won the singles with 95 out of 100 and the doubles with a 20 out of 20 shoot-off with Braun and John Jahn of Spirit Lake, Ia., after the 3 were tied at 94 out of 100 in the regular shoot.

Other men's winners were: 16-yd. North American—Cliff Doughman, 200 out of 200; veterans—H. B. Greenamyer of Piqua, O., 99 out of 100; junior—Fred David Waldock of Sandusky, O., 100 out of 100; class AA—Earl Colson, Tacoma, Wash.; class A—Edward W. Castanedo, Shreveport, La.; class C—Allen Tomnitz, Sioux Falls, S.D.; class D—Al Nock, New Richland, Minn.; doubles—Homer Clark, Jr., Alton, Ill.

Mrs. Roy Meadows of Grimes, Ia., won the women's Grand American in a shoot-off with Mrs. Reba Peters of Springfield,

O. They were tied at 95 out of 100, after which Mrs. Meadows won the shoot-off with 48 out of 50 to 46 out of 50. Mrs. Lela Hall Frank of Sierra Madre, Calif., won her seventh women's North American title with a 25 out of 25 score in a shoot-off with Florence Mos of Wichita, Kan., and Helen O'Dell of La Grange, Calif. The trio was tied at 197 out of 200.

Mrs. George P. Faïrchild of Reading, Pa., won the women's preliminary in a shoot-off with Mrs. Clyde King, Jr., of Atlanta, Ga., and Mrs. Meadows. (M. P. W.)

**Treasury, U.S. Department of:** *see* Government Departments and Bureaus.

## Trieste, The Free Territory of.

A small state at the northern end of the Adriatic sea, between Italy and Yugoslavia, demilitarized and neutral, whose integrity and independence were assured from Sept. 15, 1947, by the Security council of the United Nations. Area: 258.18 sq.mi., pop. (1947 est.): 341,000, composed of 85% Italians, 10% Yugoslavs and 5% others. Military governors under provisional regime: British-American zone (known as B.U.S.Z.): Major-General T. S. Airey (British); Yugoslav zone (known as J.A.Z.): Lieutenant-General Danilo Lekić.

**History.**—At midnight on Sept. 15–16, 1947, Trieste formally became a free territory. At the same time, the previous division of the former Italian province of Venezia Giulia by the so-called Morgan line into two zones—zone A under Anglo-American occupation and zone B occupied by the Yugoslavs—came to an end. North of Trieste troops of the Yugoslav 4th army under Lt.-General Lekić moved from the Morgan line to the new frontier, and the Italians re-entered the area Gorizia-Monfalcone, about one-twelfth of all the territory round Trieste that they had taken from Austria-Hungary after World War I and had had to evacuate in May 1945 when the area came under Anglo-American occupation.

The free territory proper, as defined by Article 21 of the peace treaty with Italy (ratified on Sept. 15), was temporarily divided into two zones: 5,000 British and 5,000 Americans under Major-General Airey held the coast from Duino to Muggia with the city of Trieste, and 5,000 Yugoslavs were in occupation of the coastline from Muggia to Cittanuova and of the countryside south of Trieste.

Annex VI of the peace treaty, containing the permanent statute of Trieste, stated that a governor of the free territory (who must not be an Italian or Yugoslav citizen) was to be appointed by the Security council of the United Nations after consultation with the Italian and Yugoslav governments at the earliest possible moment after the ratification of the peace treaty. The governor, officially described as the representative of the Security council, was to select a provisional council of government and a director of public security, who also could not be an Italian or Yugoslav citizen, to reorganize the police. The 15,000 foreign soldiers were to remain at the disposal of the governor for 90 days after he assumed office and be withdrawn in 45 days from then unless he advised otherwise. Four months after his assumption of office the governor was to organize free elections, with proportional representation, to a constituent assembly which was to adopt the constitution of the free territory by a two-thirds majority; the council of government was to be formed by, and be responsible to, the assembly.

Although several candidates had been proposed for the governorship at the council of foreign ministers in New York in the autumn of 1946, no agreement had been reached. The deadlock was not solved on Sept. 24, 1947, when the Security council of the United Nations discussed new candidatures at a secret session at Lake Success, Long Island, N.Y. At the end of December no governor of Trieste had been appointed and—according to Annex VII of the peace treaty dealing with the provisional regime—the free territory, pending the assumption of office by the governor, was still administered by the Allied military command, within their two respective zones.

The Anglo-American military command was unwilling to yield to the constant pressure exerted by the Communist-controlled Slovene-Italian antifascist union with the avowed aim of setting up in Trieste a popular front on the Yugoslav pattern, and the integration of the free territory within a federation of similar popular fronts. It was announced on Nov. 9 that the Yugoslav government had informed the Security council that it was discontented with the present administration of the Anglo-American zone of the free territory. (K. Sm.)

## Trinidad.

An island and British colony lying a few miles off the South American continent north of the Orinoco river delta. The separate island of Tobago, situated northeast of Trinidad, forms part of the colony. Area (including Tobago): 1,980 sq.mi.; pop. (1946 census): 558,413, of which a large proportion, estimated at approximately one-third, consists of East Indians. Chief towns: Port of Spain (cap., 92,782); San Fernando (28,830). The Christian churches, both Protestant and Roman Catholic, exercise great influence in the colony. Executive authority is vested in a governor appointed by the British crown and assisted by an executive council and by a legislative council containing a substantial elective element. Governor: Sir John Shaw (appointed 1946).

**History.**—Trinidad was among the colonies represented at the conference held in Jamaica in Sept. 1947 to consider the question of West Indian federation. The Trinidad delegation to the conference took a strong stand in favour of immediate federation as against the view, held in some quarters, that federation might retard the advance toward responsible government in individual colonies. On the economic side a memorandum surveying the general progress of the development program of the colony was laid before the Trinidad legislative council in Jan. 1947. Two reports of some importance from Trinidad received consideration during the year. The first, prepared by the social welfare officer, dealt with the general question of social welfare in the island. The second related to new measures for the control of leprosy. As a result of experiments in the use of sulfone drugs, there was reason to hope that a new era was beginning in the treatment of what was once regarded as an incurable disease.

**Finance and Trade.**—British currency and Trinidad government notes are legal tender. Accounts are kept in dollars ($1 = 4*s.* 2*d.* or 85 cents U.S.); the coinage in circulation is almost exclusively British silver and bronze. Revenue (1946) £8,602,000; expenditure £6,411,000. Imports £15,709; exports £12,849,000. Sugar and cocoa are the most important agricultural products; but Trinidad differs from the majority of British colonies in possessing considerable mineral, as well as agricultural, resources. The island is the largest producer of mineral oil within the British colonial empire and also contains an extensive deposit of natural asphalt known as the "Pitch Lake," situated in the ward of La Brea. The principal exports of the colony include sugar-cane products, cocoa, oil and asphalt. (J. E. Sh.)

## Truman, Harry S.

(1884– ), 33rd president of the United States, was born on May 8 in Lamar, Mo. See *Encyclopædia Britannica* for an extended biography.

President Truman reversed his political field in a startling manner during 1947. Whereas he began the year as a middle-of-the-roader with respect to major appointments and policies, he ended it in such a way that hostile and friendly critics alike characterized him as a more earnest New Dealer than Franklin D. Roosevelt.

Late in 1946 and early in 1947, largely because of Democratic defeats in the 1946 congressional elections, he scrapped many of his predecessor's domestic policies. He lifted many irksome wartime controls from the domestic economy, defied and fought various segments of organized labour and urged a cut in government costs. Although he advocated extension of federal aid in such fields as housing, health and social security, he was not earnest or energetic enough to satisfy left-wing elements of the Democratic party. Moreover, he looked to the more conservative members of the cabinet and congress for advice.

As the year closed, however, Truman had aligned himself further "left of center" than F.D.R. ever stood. He advocated new and expensive government supports and services in almost every human field. He urged upon congress higher minimum wages, extension of social security and unemployment insurance on the basis of higher payments, a national medical program, crop insurance and continued subsidy of farm prices.

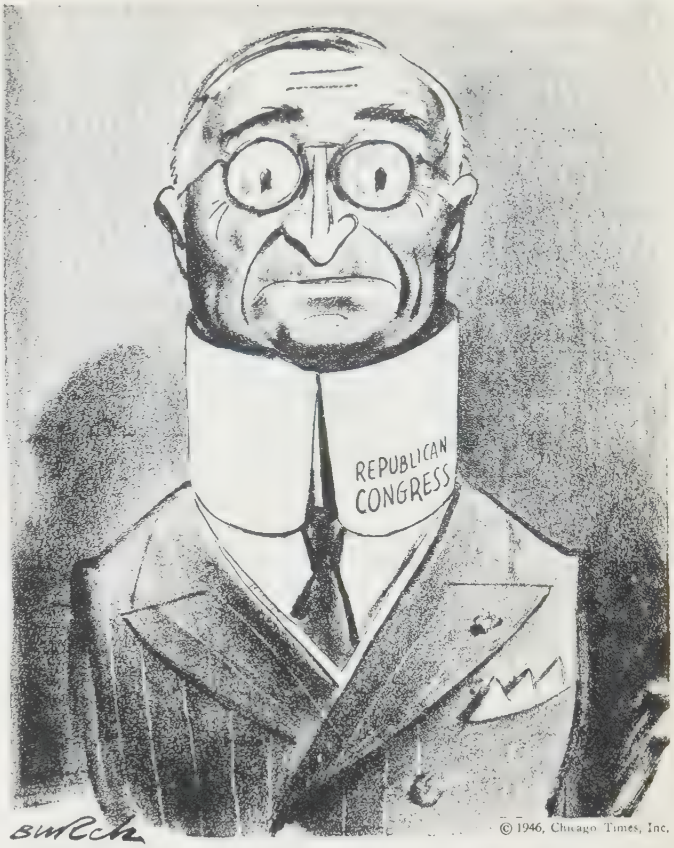
He held out the promise of federally financed homes, schools, public works and a "public power" system that envisaged a series of TVA's across the country. He urged an end to "segregation," especially in the realm of education. He asked for reimposition of selective controls on wages, prices and allocation of basic materials like steel, lumber and oil.

Abandoning his former attitude that there should be no tax reduction for fear of its inflationary effect, he proposed a "cost-of-living" deduction of $40 annually for each individual taxpayer and his dependents. Estimating that this scheme would eliminate 10,000,000 low-income taxpayers from the list at an annual cost of $3,200,000,000, he proposed that this revenue loss be made up through higher taxes on corporations.

Truman's critics declared that he had "out-Wallaced Wallace" following the former vice-president's announcement that he would run as a third-party candidate in opposition to the administration's domestic and foreign program. It was the consensus of political and editorial opinion that in order to outflank Wallace and prevent his candidacy from making certain a Republican presidential victory in 1948, the president had veered sharply to the left, definitely and deliberately.

The Truman strategy seemed to have the desired effect. Powerful labour unions once friendly to Wallace—steel, automobile, garment workers, etc.—deserted him on the theory that his entry might elect a Republican president. The Roosevelt wing, including Eleanor Roosevelt and Franklin D., Jr., declared their support of Truman, and in their writings and speeches depicted the rebellious Iowan as a politician "more to be pitied than scorned." The Democratic high command planned to brand the insurgent as a "Stalin stooge," if he carried out his plan of running as a third-party candidate.

In foreign affairs, Truman was forced by Russian hostility and recalcitrance to scrap his predecessor's friendly attitude toward Moscow. In the spring he sprang a surprise by asking congress for $400,000,000 to aid Greece and Turkey in resisting Communist attempts to bring those nations within the soviet orbit. Subsequently, he requested congressional approval of the Marshall plan, a four-year, $17,000,000,000 program to rehabilitate 16 nations of western Europe so that they would not fall under the influence of the U.S.S.R. and communism.



© 1946, Chicago Times, Inc.

"HOW DO I LOOK?" was President Truman's query in this cartoon by Burck in the *Chicago Times*, as the 80th U.S. congress convened in Jan. 1947, with a Republican majority in both houses

Moscow, naturally, set out to wreck this recovery scheme. In eastern Europe, Germany, the Balkans, the middle east and in the orient, the United States and the U.S.S.R. engaged in what became known as the "cold war." It seemed to mark the end of joint hopes and efforts for world recovery through the United Nations, the Conference of Foreign Ministers or any other agency. The sacrifices and burdens involved in the contest threatened to jeopardize the U.S. economy in the form of continued scarcities of commodities, high taxes, an inflated cost of living and general social, political and economic unrest.

Although Capitol Hill Republicans generally agreed to the need for an approximation of the Marshall plan, they disagreed over the amount involved and the details of its operation. These differences, together with disputes over Truman's expanded domestic program, brought to an abrupt end the honeymoon which had existed between the White House and congress. Another factor in breaking off friendly relations was the approach of the 1948 presidential campaign.

Truman made several moves to consolidate the western hemisphere, as if in preparation for an ideological, economic or military conflict with the U.S.S.R. He continued F.D.R.'s "good neighbour" policy. He made a state visit to Mexico City, where he was widely acclaimed, and President Miguel Alemán of Mexico repaid the compliment with a journey to Washington. Truman also attended the signing of a draft of a defense treaty for the western hemisphere at Rio de Janeiro, Brazil. It provided for the use of U.S. weapons and training methods by Latin-American armies and navies.

President Truman became chief executive and boss of the Democratic party in his own right during 1947. In his press conferences, meetings with congressional leaders and in his day-to-day relationships, he assumed a more positive, even aggressive attitude. He fixed policy, especially in the domestic field, without consulting his advisers. He got rid of many Roosevelt holdovers in high office, replacing them with men of his own choosing. He even proposed the addition of a new balcony on the rear White House portico so that he could enjoy more privacy on hot summer evenings—a suggestion which drew criticism from artistic and historical groups.

Truman placed his own man in charge of the Democratic National committee. When Robert E. Hannegan resigned, he named Senator J. Howard McGrath of Rhode Island as successor. There was some significance to this shift. Although Hannegan was a Missouri man, he was an important political figure there when Truman was only a mere beginner. Moreover, Hannegan was a Roosevelt appointee. In Senator McGrath, an old Capitol Hill crony, the president picked a man without any allegiances or obligations save to the man in the White House.

President Truman's 1947 activities convinced every observant politician, Democrats and Republicans alike, that he was an extremely active candidate to succeed himself. In their opinion, he had outlined the pattern of expected victory—a coalition of labour, leftists, racial and religious groups in the great metropolitan centres, and dyed-in-the-wool Democrats. His shift from right to left of centre during the year was interpreted as evidence of his ambition.

So, National Chairman McGrath caused some surprise when, in addressing various groups of Democrats throughout the country, he quoted President Truman as follows: "I don't care whether I am President of the United States again. If only I see the day of peace that Franklin Roosevelt fought so hard to achieve, and the brotherly love he fought to get, I'll be happy. It wouldn't make any difference who is President of the United States then!" (*See* also United States.)

## Trustee Territories.

The first session of the Trusteeship council of the United Nations opened at Lake Success, Long Island, N.Y., on March 26, 1947. Nine members attended, Australia (trustee for New Guinea), Belgium (Ruanda-Urundi), China, France (Cameroons and Togoland), Iraq, Mexico, New Zealand (Western Samoa), Great Britain (Tanganyika, Cameroons, Togoland) and the U.S.A. (Japanese mandated islands in Pacific). The U.S.S.R. was not represented at the first session, maintaining the view that the trustee agreements did not go far enough and would tend to slow down the progress of the peoples toward independence.

The agenda was concerned with rules of procedure, the details of the questionnaires on political, social and educational advancement of the inhabitants of each trusteeship territory, and the consideration of petitions already presented. A final set of rules was adopted at the 22nd meeting. A committee was chosen to examine the various drafts and formulate a model questionnaire, to be the basis of the annual reports of administering authorities. A final model was sent to these authorities, open to revision in special cases at the second session of the trusteeship council in Nov. The petitions came from Western Samoa, with a request for self-government, and from a number of German and Italian residents or former residents in Tanganyika requesting that they should be allowed to remain, or return to Tanganyika. In the latter cases the council decided that no action on their part was called for, and approved the action of the administering authority. At its 23rd meeting it decided to send a visiting mission to Western Samoa, consisting of the representatives of the U.S.A., Belgium and Iraq. In Oct. the commission reported unanimously in favour of a considerably larger measure of self-government.

The trusteeship system came up before the second U.N. general assembly, which opened in New York on Sept. 16, when South Africa's refusal to transform its mandate over South-West Africa into a trusteeship was again discussed. During 1947 a second consultation of the native population had been held, resulting in a very large majority for maintaining close relations with the Union. Faced with this situation the second general assembly firmly maintained its earlier recommendation that South Africa should, following the example of other administrators of League of Nations mandates, submit a trusteeship agreement for South-West Africa for the assembly's third session. The trusteeship committee accepted a ninth trusteeship agreement, for Nauru; administering powers being shared between Great Britain, Australia and New Zealand. (*See* also International Law; Occupied Areas, Administration of; Pacific Islands under Trusteeship.) (M. Fe.)

*Trustee and Mandated Territories, Dec. 1947*

| Territory | Area | Date of League of Nations Mandate | Date of United Nations Trusteeship | Administering Authority |
|---|---|---|---|---|
| *South-West Africa, including Caprivi Zipfel, formerly part of Bechuanaland protectorate | 317,725 sq.mi. | Dec. 17, 1920 | — | Union of South Africa |
| Togo, comprising | | | | |
| (1) Togoland; *i.e.*, western section, excluding the seaboard | 13,041 sq.mi. | July 20, 1922 | Jan. 25, 1947 | Great Britain |
| (2) Togo; *i.e.*, eastern section and seaboard | 20,463 sq.mi. | | Jan. 25, 1947 | France |
| Cameroons, comprising | | | | |
| (1) Cameroons adjoining Nigeria | 34,081 sq.mi. | July 20, 1922 | Jan. 25, 1947 | Great Britain |
| (2) Cameroons adjoining French Equatorial Africa | 169,436 sq.mi. | | Jan. 25, 1947 | France |
| Tanganyika | 362,688 sq.mi. | July 20, 1922 | Jan. 25, 1947 | Great Britain |
| Ruanda-Urundi | 20,120 sq.mi. | | Jan. 25, 1947 | Belgium |

## Tsaldaris, Constantin

(1884– ), Greek politician, was born in Alexandria, Egypt. Graduated from the University of Athens law school, he studied law and political science at universities in France, England and Germany. He entered the government as minister in Crete (1920–22). A royalist by conviction, he was imprisoned in 1926 for plotting against the republic. Elected to the Greek parliament in 1932, he was re-elected in 1933 and 1935.

Tsaldaris fled to Egypt during the German occupation. Returning to his homeland toward the end of World War II, he became a leader of the proroyalist Populist party and formed his own government on April 18, 1946. The Tsaldaris government's suspension of civil liberties and trade union activities fanned leftist hostility, and the outbreak of civil war in the Greek border areas added to his difficulties. In early 1947, the government was reshuffled, and Demetrios Maximos became premier, although Tsaldaris was retained as vice-premier and foreign minister. But the Maximos government was unable to survive the stress and strain of civil war, and Tsaldaris formed a new government on Aug. 29. Tsaldaris' ultraconservatism resulted in his own downfall, Sept. 7, and he was replaced as premier by Themistocles Sophoulis; however, Tsaldaris again retained the key posts of vice-premier and foreign minister in the Sophoulis regime. In a statement before the U.N. general assembly (Sept. 29), he appealed to the U.N. to save Greek independence and expressed the hope that British troops would remain in Greece to protect that country against "external pressure."

**Tuberculosis.** The Committee on Tuberculosis of the American Student Health association reported in 1947 that 17.6% of more than 127,000 students in 184 U.S. colleges reacted to tuberculin. In 362 colleges (50 more than in 1946), some kind of a tuberculosis control program was in effect. These schools reported 508 cases of tuberculosis among their students.

E. R. Long pointed out that by Aug. 1, 1945, approximately 15,065,000 Selective Service registrants had been examined at local boards and induction stations. Because of tuberculosis, 129,900 were rejected as physically unfit; this was 2.7% of all persons in the IV-F class. Discharges from the army because of tuberculosis totalled approximately 15,000 men in the years 1942–45. The examinations on separation from the service revealed a large number of cases of minimal tuberculosis. New infections apparently were acquired in greater numbers overseas than at home.

**Diagnosis and Case Finding.**—M. R. Lichtenstein reported that among 11,749 cases admitted to the Municipal Tuberculosis sanatorium in Chicago from 1932 to 1946, omitting cachectic and senile patients, only 142 nonreactors were found, 138 of whom were proved to be nontuberculous. In Lancashire, Eng., F. C. S. Bradbury reported that among 74,208 persons examined many had X-ray shadows but only 239 active cases of tuberculosis were found. Following this work he advocated that mass X-ray inspection of the chest not be extended to the general population but that it be concentrated on contacts of tuberculous persons.

The division of tuberculosis control of the U.S. public health service, co-operating with medical societies, tuberculosis societies and health departments, extended its chest X-ray survey work during 1947. Photofluorograms were made of the chests of approximately 175,000 persons in Milwaukee, Wis. From May 5 to Aug. 25, the 400,000 citizens of Minneapolis, Minn., beyond the age of 15 years were offered free photofluorographic inspections of their chests. This was the largest city in the U.S. in which such a survey had ever been attempted. The total number from whom satisfactory films were obtained was 301,513. No final diagnoses were attempted from shadows; those whose X-ray films revealed abnormalities were referred to physicians or clinics of their choice, where the various necessary phases of the examination were performed to determine the cause of the disease casting the shadow. In October a similar survey was begun in St. Paul, Minn. The division of tuberculosis control of the U.S. public health service hoped that similar surveys could be conducted in every U.S. city of 100,000 or more during the coming years.

The controversy over the cause of deposition of calcium in the lungs was less intense during 1947 than in former years. It now appeared that in the eastern central part of the U.S. far more of the deposits of calcium are due to some cause other than tuberculosis, probably the fungus infection known as histoplasmosis. E. M. Medlar found at postmortem examination that many so-called scars in the apices of the lungs usually regarded as due to tuberculosis actually do not represent this disease.

H. E. Hilleboe published a *Guide for the Disposition of Persons with Abnormal Lung Findings on X-ray Films,* intended to prevent indiscriminate diagnoses of pulmonary tuberculosis on the basis of X-ray inspection alone. Extensive studies revealed that photofluorograms, 14x17 in. paper and celluloid films, are equally valuable in determining the location and extent of shadows in the lungs.

G. N. Scatchard and D. O. Duszynski made X-ray inspections of the chests of patients admitted to the Edward J. Meyer Memorial hospital in Buffalo, N.Y. Shadows of lesions previously unsuspected were found in 3.7% of the cases, and 1.8% proved to be due to tuberculosis. J. V. Sherwood reported the results of a community tuberculosis control program in Grand Rapids, Mich., where the tuberculin test, X-ray film of the reactors and complete examination of those with shadows was in progress. The mortality rate dropped from 103 in 1905 to 15.9 in 1945—the lowest rate of any city of 100,000 population or more in the U.S. In 1929, 25% of the high school students reacted to tuberculin, but in 1946, only 8%. In 1920, 105 deaths occurred outside the sanatoriums, but only 7 in 1944. The Alabama legislature enacted a statute authorizing the state health department to order tuberculosis examinations for persons between 13 and 50 years of age in any or all counties. In Buenos Aires, Argentina, an X-ray inspection of the chest of every pregnant woman, without cost to the patient, was made obligatory. The problem of tuberculosis among the aged was under consideration in many places. E. M. Medlar emphasized that in those over 50 years of age many cases of tuberculosis are overlooked clinically and, thus, insufficient precautions are taken to prevent the spread of tuberculosis.

**Treatment.**—No other treatment for tuberculosis had ever created as much interest, activity and expenditure of large sums of money over such a short period of time as did streptomycin.

**ANTI-TUBERCULOSIS** poster warning residents of Berlin to submit to examination in cases of persistent coughing or excessive fatigue, as part of a 1947 drive to combat the high rate of infection in the city

It was studied extensively by the tuberculosis control division of the U.S. public health service, the Mayo clinic and others. Tuberculous sinuses draining on the surface of the body from deeper areas of disease usually close quite promptly on streptomycin treatment. Areas of disease in the tongue, tonsils, intestines, larynx, trachea and bronchi with frank ulceration usually respond well. In generalized miliary tuberculosis some remarkable results were observed. Moreover, the lives of a sizable number of persons with tuberculous meningitis were prolonged.

As far as was known in 1947, streptomycin does not destroy tubercle bacilli in the human body but does suppress their activities. In tuberculosis of the lungs, significant improvement was not observed in chronic disease of long standing. In recently developed lesions, however, progress seemed to be retarded, but the drug alone usually was not found adequate to control the condition. Streptomycin administered before and immediately after surgery was believed to be helpful in preventing the spread of the disease. The long duration of life of tubercle bacilli in the human body and the vicissitudes of the disease made it impossible to draw more than tentative conclusions regarding the effectiveness of this antibiotic.

Some strains of tubercle bacilli are resistant to streptomycin and others may become so. Wherever a preponderance of such organisms exists or develops, streptomycin obviously is not effective. Because of certain toxic effects, great care in administration of the drug and close observation of the patient are required. A considerable percentage of patients develop vertigo and some suffer impairment of hearing. The occasional person is sensitive to streptomycin. Appearance of any toxic manifestation may require reduction in dosage or complete withdrawal of the drug. There was some evidence that smaller doses of streptomycin are as effective as the larger, and reduce the likelihood of toxic effects.

J. R. Haserick and H. E. Michelson and others reported that vitamin $D_2$ (calciferol) played an important role in controlling tuberculosis of the skin. R. Heller concluded that cases of minimal tuberculosis are less likely to relapse following treatment if collapse therapy is instituted. Large numbers of the usual collapse procedures, such as pneumothorax and extrapleural thoracoplasty, were done. R. H. Overholt and associates presented an analysis of 88 patients, of whom 55 had an entire lung and 33 had one or more lobes removed between 1934 and 1944. When the report was made, 48.1% of those with lungs removed and 42.4% of those with lobes removed were clinically well and noncontagious, while 41.2% of those with lungs removed and 18.2% with only lobes removed, were dead. The operative fatality rate for both of these operations in 1947 was approximately 5% for patients regarded as reasonable risks, but it was nearly 44% in the desperate risk group.

**Immunization.**—The Oxford, Eng., investigators of the vole bacillus vaccine concluded that a controlled experiment in tuberculosis vaccination in humans was so difficult as to be practically impossible. This belief was supported by the fact that approximately 7,000,000 humans had received BCG (Bacillus-Calmette Guérin) vaccine, and still there was no unanimity of opinion with reference to its efficaciousness. In Norway it was recommended that administration of BCG be made compulsory for all children who did not react to tuberculin at the time of leaving school. K. Birkhaug reported that in Scandinavia this substance had been given to several hundred thousand people. K. A. Jensen demonstrated that there were variations in virulence and so-called immunizing properties of BCG vaccine. This cast suspicion on the often-made statement that BCG is safe. C. Cameron and I. A. Purdie called attention to this apparent instability of BCG and suggested that if the vole tubercle bacillus met certain qualifications it would have obvious advantages over BCG. J. B. Amberson declared there was reason to hope that an immunizing agent without living organisms might be developed, and urged further research. The important question yet unanswered in 1947 was whether BCG, vole bacillus or any other preparation made from tubercle bacilli of any kind might be capable of producing dependable immunity. The division of tuberculosis control of the U.S. public health service began a study in Atlanta, Ga., applied to a limited group, carefully controlled and scientifically observed. Many years would be required, however, before fundamental facts could be established either for or against the use of BCG.

**Tuberculosis in Animals.**—At the end of the fiscal year 1947, 296,002,872 tuberculin tests had been administered to cattle in the U.S. since 1917, and 3,928,080 animals with the tuberculin reaction had been destroyed. During the fiscal year 1947, 8,312,919 cattle were tested, and only 0.2% reacted. At the points of federal inspection, only 939 carcasses were condemned as unfit for food. H. M. O'Rear presented convincing figures pertaining to the relationship between tuberculosis among cattle and people. Further progress was made in controlling tuberculosis among swine and poultry, as well as other domestic animals. Although B. Bang had devised methods of controlling tuberculosis among the cattle of Denmark in 1892, apparently this work was not continuously prosecuted, since in 1937 the disease had been stamped out in barely half the herds. A later systematic campaign, however, resulted in 95% to 100% of the dairy herds being tuberculosis-free. Apparently the control of the disease among cattle contributed largely to the marked decrease in incidence of infection among children.

K. Habel found tuberculosis a highly fatal disease in a laboratory monkey colony. However, it was readily controlled by repeated tuberculin testing with removal of the reactors. As in cattle and other animals, he demonstrated a close correlation between tuberculin reactions and autopsy evidence of tuberculosis in these animals. ## Tulane University.

Founded in New Orleans, La., in 1834 as the Medical College of Louisiana, this privately endowed, coeducational institution was renamed the Tulane University of Louisiana in 1882 in honour of Paul Tulane, New Orleans philanthropist and the university's first benefactor.

The university includes the colleges of arts and sciences, commerce and business administration, engineering, law, Newcomb college (women's division), University college (night division), school of social work, graduate school, school of medicine, division of graduate medicine, the summer session and the Middle American Research institute.

Beginning with the 1947–48 school year, six additional programs leading to a doctor of philosophy degree were added to the curriculum of the graduate school. They include English, Spanish, French, German, mathematics and history. This brought the total programs in the Ph.D. field at the university to 13.

Among other additions to the curriculum in 1947 were the establishment of the biophysics research program; combination of the departments of tropical and preventive medicine making possible a graduate degree in public health; establishment of an army reserve officers training corps, composed of transportation and air units and an affiliation between the university and Le Pétit Théâtre du Vieux Carré.

To take care of an increase in enrolment, a social studies building and a geology building were constructed and a two-story wing was added to the college of commerce. (For statistics of endowment, enrolment, faculty, library volumes, etc., *see* UNIVERSITIES AND COLLEGES.) (H. C. R.)

The heavy prewar outputs of Burma and China had not been re-established by 1947, and most of those expanded to meet war demand had dropped back to below their 1939 level. World production in 1946 was less than a third of the 1943 peak and less than half of the 1939 total. Of the prewar major producers, the United States was the only one whose 1946 output was greater than in 1939.

**United States.**—Salient data of the tungsten industry in the United States are shown in Table II.

Domestic production declined throughout 1946, but responded to an upturn in consumption in the latter part of the year, and increased somewhat in 1947. The output during the first three quarters of 1947 was 2,178 short tons of 60% concentrates, against 4,908 tons in 1946. Imports in the same period were 3,995 tons, against 6,968 tons for all of 1946. The major improvement was in consumption, totalling 6,134 tons in nine months of 1947, as compared with 6,784 tons in 12 months of 1946.

**Canada.**—Production of 288 short tons of concentrates was reported in 1947. (*See* also MINERAL AND METAL PRODUCTION AND PRICES.) (G. A. Ro.)

## Tunnels.

Tunnelling operations throughout the world advanced in 1947, but projects outside the United States were handicapped by shortages in equipment, such as drills and compressors.

Driving of the twin-tube Brooklyn-Battery vehicle tunnel extending 1.2 mi. under New York bay was plagued by labour trouble throughout the year, and work was shut down for an indefinite time early in November because of strikes. At the time of the shut-down the Governors Island ventilating shaft had been sunk to tunnel level, and shields in both Manhattan and Brooklyn headings were advancing through enlarged sections.

In Chicago, Ill., work was resumed at the south end of the Dearborn street subway tunnels, extending them to and westward into Congress street for operation of the subway system. Driving of the 23,000-ft., 12x20-ft. intercepting sewer tunnel in the stockyards area was about completed, though this project would continue into a 17,000-ft. section.

Sinking of two shafts on the 5.5-mile City tunnel for Boston's water supply was completed, and driving of the tunnel was scheduled to start shortly. Seven tunnels, from 500 ft. to 5,700 ft. long, were finished and put in service on the San Diego, Calif., aqueduct. On the Colorado-Big Thompson irrigation project in Colorado, the 13-mi. Alva B. Adams tunnel under the continental divide went into service, the Rams Horn and Prospect mountain tunnels neared completion, and the Horse Tooth Mesa reservoir tunnel was started.

Two new tunnels were started in the western United States—the single-track Aspen tunnel, 6,700 ft. long, for the Union Pacific railroad in Wyoming, and the 8.1-mile Electra hydro tunnel on the Mokelumne river in California, both scheduled to be completed in 1948. Work continued on the 23-ft. Bacon tunnel, 1.9 miles long, on the Columbia basin irrigation project in Washington. Work also progressed on a 2-mi. tunnel for the Baltimore, Md., water supply.

In the United Kingdom, several tunnels were being driven for the North-of-Scotland Hydro-Electric board for power development, including the Loch Mullardoch-Loch Benevean, Loch Benevean-Fasnakyle station, Ben Vorlich, Loch Tummel-Clunie, and Fannich tunnels. These bores ranged from 10 ft. to 23 ft. in diameter and up to 3¼ mi. long. Work was resumed in 1947 on two subaqueous projects delayed by World War II—the Dartford-Purfleet vehicle tunnel under the Thames 15 mi. below London; and the pedestrian and cycle tunnels under the Tyne (Jarrow), to be followed by a vehicle tunnel. Plans were announced for 49½ mi. of tunnels in London for suburban train service.

A big hydroelectric program on the Ashni Nadi river, Patiala, India, was approved late in 1947, to include an 8-ft. tunnel, 5½ mi. long, developing 16,000 kw. under an 860-ft. head.

In Italy, surveys revealed that out of 1,849 railroad tunnels with total length of 566 mi., 346, totalling 117 mi. in length, were destroyed during World War II. Most of these were restored in 1946 and 1947. The new double-track Granaralo tunnel, 9,842.4 ft. long, was nearing completion near Genoa on the Genoa-Turin line. Two long sections of tunnels on the Peschiera Hydro project were also about complete. One section, 16.16 mi. long, 7.87 ft. diameter, led to Solisana power station. The other, 35.42 mi. long, from 8.2 ft. to 10.33 ft. diameter, led to Monte Mario in Rome.

Considerable reconstruction of war-damaged railroad tunnels was under way in Greece as part of the United States rehabilitation aid program.

The largest tunnel under construction in the world during 1947 was the 50-ft. semicircular vehicle tunnel through Croix-Rousse hill in Lyon, France, to be more than a mile long.

In Mexico work on two long tunnels, the 10-mi. Lerma aqueduct for Mexico City and the 7-mi. Lerma sewer tunnel neared completion, with 12-ft. and 9-ft. bores, respectively. The 7-mi.

El Nuiado irrigation tunnel near Pueblo went into service in 1947.

The Rio de Janeiro Tramway, Light & Power company hydro project, west of the city, got under way in 1947. Included were two tunnels, the 30x25-ft. Santa Cecilia tunnel, 3 mi. long, and the 1-mi. twin-bore Vigario tunnel.

Work continued on the 5½-mi. tunnel for the Canon del Pato hydro project on Rio Santa in Peru, where five 6-ft. drop shafts were being sunk 1,435 ft. through solid rock.

In the U.S.S.R., the 12.5-mi. Moscow Loop subway was still under construction at the end of 1947. It was expected that the first section would be opened late in 1948, but that the entire route, known as Subway no. 4, would not be completed until 1952. (H. W. Rn.)

**Turkey.** A republic in the southeastern Balkans and Asia Minor, bounded on the west by the Aegean sea, on the northwest by Greece and Bulgaria, on the north by the Black sea, on the northeast by the U.S.S.R., on the east by Iran and on the south by Iraq, Syria and the Mediterranean. Area: 296,185 sq.mi.; pop. (census 1945) 18,861,609. Chief towns (pop. census 1945): Ankara (cap., 226,712); Istanbul (845,316); Izmir (Smyrna; 200,088); Seyhan (Adana; 100,367). Religion: predominantly Moslem (97.9% in 1935). President: General Ismet Inönü; prime minister (appointed Sept. 9, 1947): Hasan Saka.

**History.**—At the beginning of 1947, Recep Peker's government was in the saddle, four months after the publication of the "decisions of Sept. 7," by which the *lira* or Turkish pound was devaluated by 40% and many wartime regulations were lifted. The commercial world was watching with keen interest the development of events, the general public impatiently waiting for the promised reduction in the cost of living.

The novel influence of party government was being felt; the young Democratic party, led by Celal Bayar, a former prime minister, had been in existence as an organized opposition only six months, but was becoming more and more vocal. In 1945 President Inönü had made it clear that, after 22 years of single-party government, the time had come to introduce plural parties, but political inertia and tradition continued to support the Republican People's party, with its elaborate ramifications and highly organized discipline. The task in front of the Democratic party was, therefore, no easy one, and consisted largely in educating the masses politically. It accused the government of fascist methods and of making use of government organs for political purposes. The controversy ranged over finance, commerce, press, electoral laws and administration with increasing acerbity. There was unity, however, on questions of foreign policy.

In his speech of June 12 President Inönü pointed out that there should be absolute equality of treatment of the two parties. This was interpreted as a reproof to the Peker administration, but the president was criticized because he was himself permanent president of the Republican People's party; shortly afterward he divested himself of this chairmanship, which was taken over by Shükrü Saracoglu, a former prime minister (1942–46). Thus the president became supreme arbiter between the two parties in his position as head of the state. In a tour in the eastern provinces in the late summer he paid marked attention to the local Democratic organizations.

On Sept. 6 Peker dismissed six of his ministers without explanation. This action was loudly criticized by the Democrats, who called upon him to resign, pointing out that in a true democracy the dismissal of nearly half the cabinet was tantamount to a resignation of the whole. Four days after nominating his new ministers, Peker abruptly resigned, again without explanation. It was generally believed that the government felt the weight of the president's snub and of the increasing Democratic opposition and popularity.

A new government was formed on Sept. 11 by Hasan Saka, who had been foreign minister during World War II. It did not enjoy a popular press and seemed to be generally regarded as a stopgap. The prime minister was looked upon rather as a safe than as an adventurous politician, but on a vote of confidence he secured 362 votes against 49.

Early in October two secret sessions were held of the parliamentary group of the Republican People's party, in which proceedings were apparently stormy: the news leaked out that 35

TURKISH STUDENTS at work in 1947 on a drainage ditch for their school near Erzurum. The school was part of a national program for training instructors qualified to teach formal and practical subjects to youth and adults in rural areas

members had voted in opposition. A sensation was caused by the publication in the opposition press of an alleged political plot by extremist members of the party, the object of which was to by-pass the president and vest all power in Peker. It seemed clear that the People's party was again divided into a right and a left wing, as it had been in 1945, when the left wing seceded and formed the Democratic party.

The policy of the Democratic party was summed up by Bayar as the substantial reduction of state trading and industry with the encouragement of private enterprise and the abolition of the surviving antidemocratic laws, in particular the electoral and press laws.

In foreign affairs Turkey did not deviate from the policy already long laid down of maintaining friendly relations with all foreign powers, especially with the western democracies, and at the same time of defending its territory at any cost against the slightest infringement of its sovereignty.

The war of nerves unleashed by Moscow immediately after World War II made no impression upon the Turks. Their firm attitude to Russian demands for control of the Straits and resistance to any claims for territorial readjustment was as unshaken in 1947 as in previous years. In October the soviet government protested against Turkey's admitting refugees of Turkish race and Moslem faith but foreign political status. The Turks replied that they had not taken any initiative in the matter, but were acting at the request of the International Organization of Refugees attached to the United Nations, a request parallel with that addressed to other countries: the protest, therefore, should have been addressed to the United Nations. On May 28 the government voted an extension for another six months of the state of martial law, in force after 1940, in the areas of the Dardanelles, Istanbul and Turkish Thrace. On May 5 it was announced that a permanent delegation to the United Nations would be established under the leadership of Selim Sarper, the ambassador to Italy. A treaty of friendship with Trans-Jordan was concluded in January.

The U.S. grant to Turkey of $100,000,000 under the Truman doctrine for military aid and essential rehabilitation projects, announced in March, was met with satisfaction and relief throughout the country. A U.S. mission headed by Major-General Lunsford Oliver arrived in Ankara on May 23 to supervise the carrying out of the grant. Economic aid from Britain came to an end in March. Turkey also participated in the European Economic conference held in Paris in July for discussions on the proposed U.S. aid to Europe. (Ma. B.)

**Education.**—On July 2, the government sanctioned the opening of schools for instruction in the Islamic faith. Primary schools (1946) 14,981; scholars 1,357,200; secondary schools (1944) 325, scholars 104,225; universities (Istanbul and Ankara) and colleges (1944) 26. Expenditure on education in 1947 £T100,716,321.

**Trade and Communication.**—Foreign trade: imports (1946) £T224,400,000; exports (1946) £T432,000,000. Communications: roads *c.* 103,600 mi.; railways (1945) 4,462 mi.; (1945–46) passenger mi. 1,331,760,000; short ton mi. 1,446,035,000; radio receiving sets (1947) 195,221.

**Finance.**—Revenue (est. 1947) £T1,109,000,000; expenditure (est. 1947) £T1,133,000,000; notes in circulation (June 1947) £T929,000,000; gold reserve (July 1947) U.S. $185,000,000; commercial bank deposits (May 1947) £T703,000,000. Currency: the *lira* or Turkish pound (£T). Rate of exchange (May 1947) £T=35.34 U.S. cents.

**Agricultural and Mineral Production.**—(1946), in short tons: coal 4,218,000; lignite 491,900; copper, 11,100; cement 358,300; cotton yarn 29,500; wool yarn 7,140; wheat 4,055,000; barley (1945) 1,029,500; oats (1945) 282,000; maize (1945) 324,800.

## Union of Soviet Socialist Republics.

The former Russian empire, an Eurasian state covering the whole of eastern Europe and northern Asia and much of central Asia, is a federation of soviet socialist republics. Area (Sept. 17, 1939): 8,173,557 sq.mi., pop. (Jan. 17, 1939, census): 170,467,186. The union then consisted of 11 republics of which the Russian Soviet Federated Socialist Republic was by far the largest (78% of the whole territory and 64% of the population). Of the remaining 36% of the population, almost one-half lived in the Ukrainian Soviet Socialist Republic (2% of the territory) and the other half in the nine other republics of the union. The Soviet Union is inhabited by almost 100 different nationalities speaking different languages. In Jan. 1939 Great Russians constituted 58.4% of the population, Ukrainians 16.6% and Byelorussians 3.1%. None of the other nationalities, all of them non-Slav and most of them non-Europeans, reached 3% of the total. In 1939 the U.S.S.R. consisted of the following republics: Russian S.F.S.R. (cap. Moscow; area 6,372,860 sq.mi.; pop. 109,278,614); Ukrainian S.S.R. (Kiev; 171,777 sq.mi.; pop. 30,960,221); Byelorussian S.S.R. (Minsk; 49,022 sq.mi.; pop. 5,567,976); Azerbaijan S.S.R. (Baku; 33,196 sq.mi.; pop. 3,209,727); Georgian S.S.R. (Tiflis or Tbilisi; 27,020 sq.mi.; pop. 3,542,289); Armenian S.S.R. (Erivan; 11,580 sq.mi.; pop. 1,281,599); Turkmen S.S.R. (Ashkhabad; 171,384 sq. mi.; pop. 1,253,985); Uzbek S.S.R. (Tashkent; 145,908 sq.mi.; pop. 6,282,446); Tadzhik S.S.R. (Stalinabad; 55,584 sq.mi.; pop. 1,485,091); Kazakh S.S.R. (Alma-Ata; 1,059,184 sq.mi.; pop. 6,145,937), Kirghiz S.S.R. (Frunze; 76,042 sq.mi.; pop. 1,459,301).

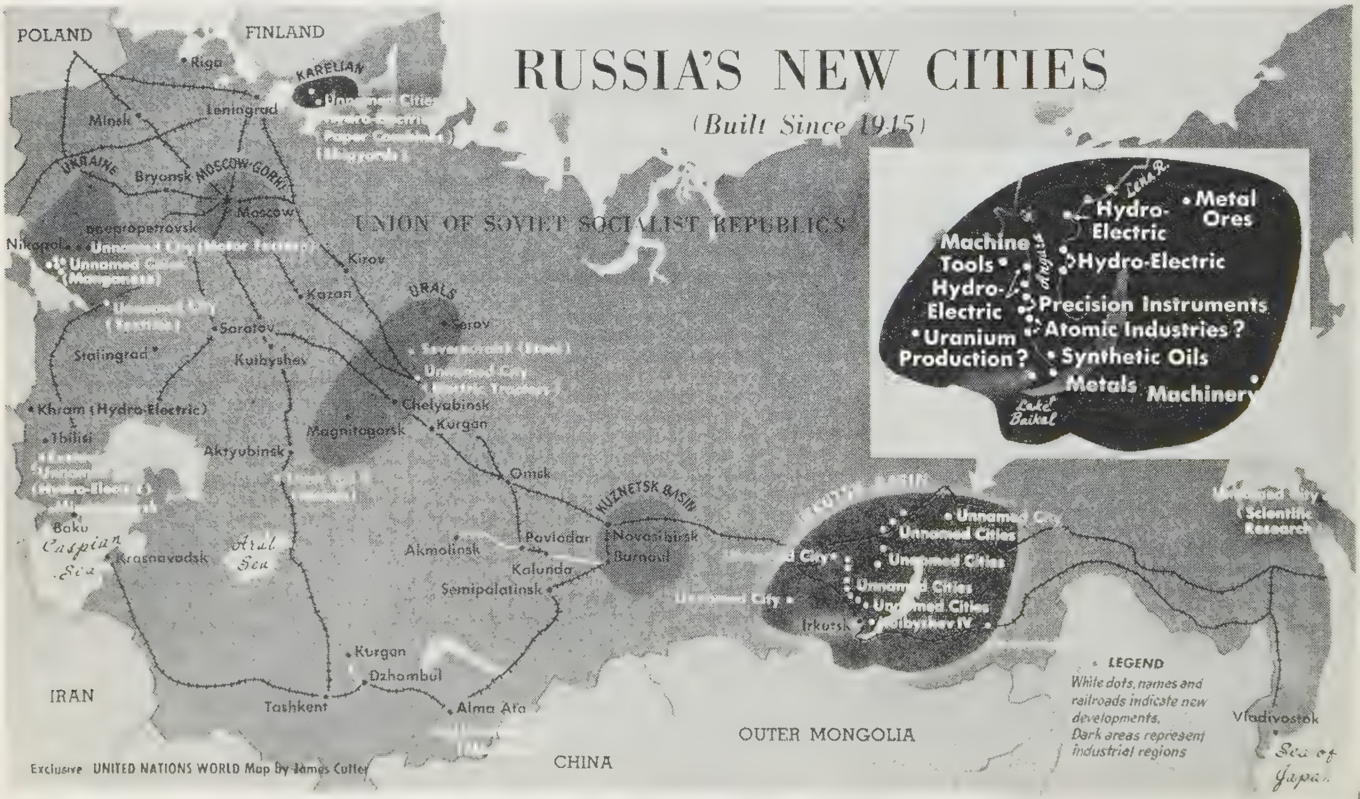
In the years between 1939 and 1945 the U.S.S.R. expanded its territory considerably. It annexed in Europe the three Baltic republics of Estonia (cap. Tallinn; 18,371 sq.mi.; pop. 1,222,000), Latvia (Riga; 25,016 sq.mi.; pop. 1,995,000) and Lithuania (Vilnius or Wilno; 22,959 sq.mi. [including Vilnius, but excluding Memel]; pop. 2,879,000), and acquired from Finland 16,173 sq.mi. with a pop. of *c.* 500,000, from Poland 66,788 sq.mi. (excluding 3,219 sq.mi. of the Vilnius area) with a pop. of *c.* 10,279,000, from Rumania 19,300 sq.mi. (Bessarabia and northern Bukovina) with a pop. of *c.* 3,500,000, from Czechoslovakia 12,617 sq.mi. (sub-Carpathian Ruthenia) with a pop. of 725,400 and the northeastern part of East Prussia from Germany (*c.* 7,000 sq.mi. with a pop. of *c.* 1,000,000). From Japan the U.S.S.R. acquired Karafuto (southern Sakhalin), an area of 13,935 sq.mi. with a pop. (1935 census) of 331,943, and the Chishima or Kurile Islands (3,994 sq.mi.). In addition the formerly "independent" republic of Tannu Tuva in Outer Mongolia (64,000 sq.mi.) was annexed to the union. As the result of this territorial expansion the U.S.S.R. formed after World War II a federation of 16 republics. The five new ones were: the Karelo-Finnish S.S.R. consisting of the territory ceded by Finland and of the former autonomous soviet Karelia; the Moldavian S.S.R. consisting of most of Rumanian Bessarabia and the former autonomous soviet Moldavia; and the three Baltic states transformed into soviet republics. Total *de facto* area (1947): 8,443,710 sq.mi., total pop. (1945 est.) 192,900,000. Chief towns (1939 census): Moscow (cap., 4,137,018); Leningrad (3,191,304); Kiev (846,293); Kharkov (833,432); Baku (809,347); Gorki, formerly Nizhni Novgorod (644,116); Odessa (604,223); Tashkent (585,005); Tbilisi (519,175);

Rostov-on-Don (510,253); Dnepropetrovsk (500,662). Chairman of the presidium of the supreme soviet of the U.S.S.R. (president of the union): Nikolai M. Shvernik; chairman of the council of ministers: Marshal Joseph V. Stalin. (X.)

**History.**—The year 1947 was characterized in the U.S.S.R. by a notable change-over from extraterritorial expansion to the securing and consolidation of political gains and the rehabilitation of domestic economy. Soviet statesmen turned their eyes toward their own country and away from the west, using every means at their command to compel not only the soviet people, but also the neighbouring states within the soviet sphere of influence to follow their example. All the energies of those responsible for directing and carrying out state policy were concentrated on one clearly definable end: establishment of the absolute autarchy, political, economic, cultural and moral, of the U.S.S.R. and the binding of the smaller states of eastern Europe more closely to this system. Such a purpose would certainly involve an indefinite number of subsidiary activities, the chief of which in this case was the sustained attempt to embarrass and divide those countries of the west which were regarded as hostile to the main purpose.

This policy clarified slowly and came into being by instalments. Until the failure of the Moscow conference of foreign ministers in April 1947 its drift was clear only to the closest students of the U.S.S.R.; but during the late spring and early summer the new line could be traced through almost every soviet utterance and action. Thus, when in June the U.S. state department invited the U.S.S.R. to share in any plan which Europe could devise for its own salvation with assistance from the U.S., the question immediately arose whether the soviet government would abandon a policy which was clearly incompatible with whole-hearted economic collaboration with western Europe and the U.S., or whether it would be forced to burn its boats and confirm unambiguously its hostile detachment from the aspirations of the west. When in July Vyacheslav M. Molotov with his entire delegation suddenly left Paris, his return to Moscow was nothing less than a formal retreat from the west, while the foundation in October of the Communist Information bureau, or Cominform, with its headquarters in Belgrade, was the declaration of an exclusive alliance of eastern Europe, with strong but uncertain outposts in Italy and France, against the British empire and the U.S.

All this took place against a background of hard times. The soviet economy, in the process of laborious restoration after the disasters of war, had suffered a calamitous setback in the late summer of 1946 as a result of one of the worst droughts in Russian history. Vast areas of crops in White Russia, the Ukraine and the black earth provinces as far as the middle Volga were lost. This natural disaster was complicated by further agrarian troubles, particularly the partial breakdown of the collective system during the war; the recalcitrant behaviour of the peasants in large areas of the Ukraine; and the failure of the industries concerned to achieve the very moderate target for agricultural machinery and road transport during the first year of the plan. Throughout the earlier part of the year the press devoted the greater part of its front-page space to interminable exhortations to the peasants and the publishing of a monotonous stream of pledges to "the Great Stalin" from every collective in the country. Meanwhile, rationing was severe and prices in the "commercial" shops astronomical. In the afflicted areas, although wide-scale famine was avoided, many died of hunger, most were weak with undernourishment, and the state of affairs was reflected in the falling off of industrial production during the first quarter of the year. The spring sowings were gravely hampered by the shortage of machinery and horses. It was no uncommon sight to see gangs of women turning the soil with spades for lack of the simplest plow. As a result of unremitting effort and with the help of favourable weather, the 1947 harvest was a good one. Nearly every region exceeded its target, not only for production, but also for grain deliveries to the state, although, as always, delivery lagged behind production and was effected only under harsh and ruthless pressure. In October, nevertheless, it was officially announced that the 1946 harvest had been exceeded by 58%, although no aggregate figures were



RUSSIA'S NEW CITIES

(*Built Since 1945*)

Exclusive UNITED NATIONS WORLD Map by James Cutter

RUSSIANS queued up for potatoes at an outdoor market in Stalingrad during April 1947. Potatoes were being sold at the soviet equivalent of $1.20 per pound in U.S. currency

published. The success of the harvest was reflected, long before the deliveries were completed, by a sharp fall in the price of essential food in the "commercial shops," in some cases by as much as 70% in a fortnight.

The peasant, nevertheless, was given no rest. During the course of the year two decrees were published directed at increasing the efficiency of the collectives. In June a new inspectorate of harvest yields was created, headed by B. V. Savelev, with 450 deputy inspectors stationed throughout the U.S.S.R. This inspectorate was an offshoot of the state planning commission, and its chief functions were to ensure the delivery of harvested crops to the state, to carry out all means of raising the yield per acre, and to recommend special rewards for particularly efficient collectives and individuals. This last function went hand in hand with a departure from the old system of payment by "work days" and a venture into a new piece-work system conditioned by quality of work. Until then responsibility for overseeing the grain deliveries had been vested in the machine tractor stations, but a clause in the decree setting up the state inspectorate indicated that the officials at these centres were becoming absorbed into the life of their local communities and thus too sympathetic to local interests; it emphasized that one of the main duties of the inspectorate was to shield the grain deliveries "from the influence of parochial tendencies running counter to the interests of the state." The second development was the abolition by decree in July of the *Gosstrakhfond,* or state insurance fund, which had been set up originally to enable collectives to buy first-grade seed. *Gosstrakhfond,* the decree stated, "has in fact become a fund for doling out loans for the support of idle administrations." Over and above these sharp measures designed to put the screw on the peasants, agriculture in the larger sphere was shaken up by a ministerial reorganization in Feb. 1947, when the ministries of industrial crops and of the livestock industry were absorbed into the old ministry of agriculture under its existing chief, Ivan Benediktov. Nikolai Skvortsov, formerly minister of industrial crops, became chief of an entirely new ministry of state farms. The main purpose of this reorganization seems to have been to concentrate the collective farms (*kolkhozy*) in every branch of agriculture under one minister (doubtless as part of the drive for purifying the collectives), and to put all the state farms (*sovkhozy*) under another minister, instead of leaving them under the control of a variety of ministries utilizing their products, such as the ministry of food. In 1938 the collectives accounted for more than 60% of all agricultural produce and the state farms, of which there were 4,000, with an average extent of 7,000 ac., for only 10%, mainly pedigree livestock, while personal holdings accounted for the remainder.

It seemed probable that beneath the new dispensation the state farm system, which involved treating the peasants as employees of the state, was to be expanded as a result of serious trouble in certain districts with the collective system. It was probable, furthermore, that a development of the state farm system was called for by the tremendous program for the extension of agriculture in new areas of the U.S.S.R., notably east of the Urals. The size of this program was best indicated by comparing the production targets for the Ukraine, the ancient granary of Russia, with those of the R.S.F.S.R. (Russian Soviet Federated Socialist Republic), which includes much of Siberia, under the new plan. The 1950 target for grain in the R.S.F.S.R. was 88,440,000 short tons, or two-thirds of the total planned output for the U.S.S.R., while the 1950 target for the Ukraine, which had hitherto provided almost precisely two-thirds of the total output, was only 29,700,000 short tons.

This development of Asiatic Russia was not confined to agriculture. The Ukraine, until 1941, was not only the granary of the U.S.S.R.; it was also the leading centre of heavy industry. But by 1950 the R.S.F.S.R. was scheduled to overtake the

Ukrainian production of pig iron, increasing its 1940 figure by 66% to 10,450,000 short tons, while the Ukraine production during the same period was to improve on its 1940 figure by only 5%, to 10,670,000 short tons.

Nothing at all was known about the rate of development of arsenals in the east, nor of the development of atomic energy. Molotov in his speech on Nov. 6, 1947, observed that the atom bomb had been no secret for a long time past, a remark which was taken by most western commentators at less than its face value; but it was known that the U.S.S.R. was devoting itself unsparingly to the problem of atomic energy, including, presumably, its lethal properties. The state had at its disposal a leading nuclear physicist in Professor Peter Kapitza, and was able to benefit to an unknown extent from the experience of German physicists and engineers. Lavrenti P. Beria, former head of the security police and one of the ablest organizers and most powerful men in the U.S.S.R., was reputed to be in charge of the atomic project.

Industry generally in 1947 did well. In 1946, the first year of the new plan, the industrial program as a whole was fulfilled up to only 96%. But on Nov. 6 Molotov was able to announce that during the first nine months of 1947 the second year's target had been overfulfilled by 10%. This was all the more remarkable in view of the poor performance of many industries during the first quarter of the year. It meant that the industrial targets of the first two years of the plan, taken together, were successfully attained. The most serious failure during 1946 was in the road transport and agricultural machinery industries. In a country which had been left by the Germans with scarcely a plow or a tractor in the whole of its western provinces, this failure was critical. In 1947 it was successfully made up. Molotov in his speech also stated that in spite of serious shortcomings in the iron and steel industry and in the output of the oil industry, more coal was being mined than before the war, while in the month of October the gross output of the large-scale industry reached the average monthly output of 1940.

RECONSTRUCTION WORK in progress at the Krasny Oktyabr iron and steel works in Stalingrad, U.S.S.R. Scheduled for completion in 1947, the work of restoration included the laying of a new oil pipe line and railway feeder

The most marked failure was in the timber industry, which still fell well below its target, with unfortunate effects on the rehousing program. This failure was largely bound up with a lack of transport facilities. From the soviet point of view one of the main advantages of the Anglo-Soviet trade pact, negotiations for which dragged on intermittently over several months of the year, was the proposed supply by Great Britain of light rails for transporting timber. In this context, throughout 1947 the housing shortage continued to bear heavily on the people of the U.S.S.R., and in Byelorussia and the Ukraine hundreds of thousands were still living in extemporized dug-outs. About 400,000 new dwellings were built in the years 1946–47, but this was a small contribution toward replacement of the 6,000,000 buildings destroyed by the Germans—from peasant huts to modern apartment-blocks—and the 25,000,000 soviet citizens rendered homeless. This shortage of houses was likely to remain a nightmare for many years in view of the expanding population and the radical deterioration of many of the existing buildings in the cities.

On Dec. 14 the supreme soviet decreed the simultaneous abolition of rationing and the devaluation of the currency. This devaluation, on the face of it an anti-inflationary device and an insurance against the buying up of all the goods in the new open market by hoarders and speculators, in fact struck more deeply. For ten roubles in the old currency one new one was given in exchange for cash in hand. This not only hit black marketeers but also ordinary citizens, above all peasants, who preferred the stocking to the bank. When it came to the conversion of the state loan the rich and the very rich appeared to be the main sufferers. Deposits below 3,000 roubles were unaffected; deposits from 3,000 to 10,000 roubles were written down at the rate of 2 new roubles for 3 old ones, while deposits from 10,000 roubles upwards were halved. Nor was the picture complete without reference to the new fixed prices following the end of rationing. Here basic foodstuffs (apart from milk, eggs, tea and fruit) remained at the low "ration-price" level, or went slightly down. The poor could thus buy as much as they could afford at the old prices; but the rich, hitherto relying on the "commercial shops" for off-the-ration purchases and paying up to 20 times more, could now buy as much food as they wanted at, for them, heavily reduced prices. As for consumer goods, these were reduced by two-thirds below the old "commercial" prices, while remaining well above the old "ration" prices, putting them often out of reach of the majority while making them cheaper to the rich. It remained to be seen whether this manipulation was a deliberate attempt to confirm gross inequalities of income, or whether this was an accidental aspect only. The official rate of exchange remained at 5.3 roubles to the United States dollar. The rate of exchange for diplomats was set at 8 roubles to the dollar, instead of the old rate of 12.

Meanwhile, in the cultural and social sphere, the diplomatic isolationism of the Soviet Union was paralleled by an intensive domestic drive, in which all the arts were conscripted, to exalt the superiority of "soviet man" over all other men and to dissociate the vaunted strength and vitality of soviet culture from the so-called decadence of western culture. This campaign touched its peak during the summer. First, the Spaniard, Pablo Picasso, *doyen* of Communist artists, was execrated in Moscow as the supreme and most contemptible exponent of decadent western "formalism." A little later, the soviet minister for agitation and propaganda, Gheorghi Alexandrov, until then respon-

THRESHERS on a collective farm in Kabarda, U.S.S.R., who were awarded the Red Banner (left) for outstanding labour achievement in their district during 1947

sible for the whole campaign for ideological purity, and the scourge of errant writers, was himself publicly rebuked by Andrei Zhdanov for certain passages in his *History of Western Philosophy* which suggested that Marxism arose by a process of natural evolution from the old philosophies of the west, whereas, according to the 1947 soviet doctrine, Marxism was something utterly new, owing nothing to the past, and marking an absolute break with it.

While writers and artists were being bidden to glorify the spirit of soviet man and never to look beyond him, the soviet people were summoned by every publicist in the country to believe in themselves and to cast no tender glances westwards. At the same time a number of official acts were calculated on the one hand to close the last chinks in the iron curtain and on the other to help the Russian people feel a new security and optimism. Thus, in March the supreme soviet passed a law forbidding marriage between a soviet citizen and any foreigner. In June a new decree about state secrets was issued, which, after defining every category of state secret and the punishments for divulging them, contained a blanket clause to prevent any soviet citizen from discussing his work, of whatever kind, with any foreigner. The issue of this decree was accompanied by a strong attack on those scientists who, by wanting to publish their discoveries, set their own vanity above the security of their fatherland.

On the other hand, there was a great deal of activity in revising the penal code. The chief and, in Russian eyes, supremely important aspect of this, was the formal abolition of the death penalty in May and its substitution by 25 years confinement in "reformatory labour-camps." At the same time, the citizens of the U.S.S.R. were invited to contemplate the majesty and grandeur of their judicial system, regarded as a strong shield against ill-doers of every kind—in other words, the people were expected to realize that the law was for them and not, as might sometimes seem, against them. This campaign, taken together with hints of a new and more liberal constitution, all of it coming on top of the division of the central administration of the ministry of the interior during the previous year, seemed to have been calculated to reassure the people and convince them that although their country might be an armed camp in a hostile world, life within it, for the ordinary citizen, was on the way to becoming milder.

**Education.**—(1946) Total scholars in elementary and secondary schools 29,339,000; universities and colleges 772, students 653,000.

**Finance.**—Budget estimates (1947, in millions of roubles): revenue 394,200, expenditure 374,000 (industry 79,900; agriculture 4,300; transport and communications 3,500; commerce and stocks 3,800; education 52,400; health and physical culture 18,900; social insurance 9,300; family allocations 1,500; social security 20,500; armed forces 67,000; loan services 6,100; administrative expenses 12,800). Budgets of the federal republics: estimated revenue and expenditure for 1947 was balanced at the following (in millions of roubles): Russian S.F.S.R. 45,852; Ukrainian S.S.R. 1,789; Byelorussian S.S.R. 3,192; Uzbek S.S.R. 3,161; Kazakh S.S.R. 2,868; Georgian S.S.R. 2,160; Azerbaijan S.S.R. 1,761; Kirghiz S.S.R. 845; Tadzhik S.S.R. 956; Armenian S.S.R. 1,041; Turkmen S.S.R. 819; Moldavian S.S.R. 949; Lithuanian S.S.R. 1,065; Latvian S.S.R. 1,261; Estonian S.S.R. 649; Karelo-Finnish S.S.R. 540.

**Communication and Transport.**—Communications: roads (1945) 849,520 mi.; railways (1945) length of lines 66,000 mi.; new lines under construction (1946) 1,991 mi.; planned (1947) 1,552 mi.; lines newly electrified (1946) 372 mi.; planned (1947) 298 mi.; navigable rivers 68,000 mi.

**Agricultural Production.**—(Plantings, in thousands of acres, with acreage from different regions):

| | | Acreage 1946 | Acreage 1947 |
|---|---|---|---|
| Autumn wheat | U.S.S.R.. | 13,984 | 19,908 |
| | Ukraine | ... | 10,860 |
| Spring wheat | Siberia | 17,395 | 20,740 |
| | Volga | 5,189 | 6,422 |
| | Central north | 2,716 | 3,953 |
| | Ukraine | 1,448 | 1,853 |

Other agricultural plantings for the whole of the U.S.S.R. (in thousands of acres):

| | Acreage 1946 | Acreage 1947 |
|---|---|---|
| Vegetables | 2,471 | 3,212 |
| Maize | 4,892 | 5,584 |
| Sarrazin | 2,668 | 3,706 |
| Millet | nil | 2,471 |
| Rice | 3,333 | 370 |
| Cotton | 3,211 | 3,624 |
| Sugar beets | 2,317 | 2,614 |
| Flax | 2,307 | 3,212 |
| Potatoes | 18,955 | 19,553 |
| Tobacco | 202 | 242 |

Livestock pop. (est. 1947): cattle 52,000,000; sheep 24,000,000; pigs 13,400,000; horses 11,900,000; draft oxen 3,500,000.

**Industrial Production.**—Current production figures were not published. Unofficial estimates for 1946 were (in thousands of short tons): steel 14,870; pig iron 16,530; laminations 14,326. In 1940 official figures were: steel 21,048; coal 181,830; under the postwar five-year plan the figures for 1950 were expected to reach: 26,448 for steel; 275,500 for coal. An unofficial estimate of soviet gold production for 1946 was 3,000 fine oz.

## Unitarian Church.

For the Unitarian churches the year 1947 was one of increased activities. The Service committee, at the request of the World Health Organization Interim commission, sent to Austria a medical teaching mission similar to that sent during 1946 to Czechoslovakia; and an occupational therapy team to Czechoslovakia at the request of the Czech ministry of health. It renovated a large hospital in Piekary, Upper Silesia, Poland; operated a dental clinic in Vienna for former concentration camp inmates and supplied a team of child-care specialists for displaced persons centres in the British and United States zones of Germany. A southwest area project was established to meet needs of migrant workers in that part of the U.S. Officers and staff members of the Service committee were decorated by the French and Hungarian governments.

Under the division of education of the American Unitarian association, 26 Unitarian young people worked on rehabilitation projects in various parts of central Europe. More than 1,000 adults attended leadership training institutes held in various parts of the U.S., and ten specialized training institutes were held for young people. The most significant step in the educational field was the employment of Dr. E. Merrill Bush as full-time director of adult education and social relations.

During the year The Beacon Press expanded its field to include philosophy, biography and art and a number of its volumes by internationally known authors had wide sales, such as *Albert Schweitzer: An Anthology, The Wit and Wisdom of Whitehead,* or the companion volumes of Renaissance woodcuts illustrating the Old Testament and the life of Jesus. Curriculum material for liberal church schools and pamphlets expounding Unitarian views were issued in increasing quantity. It may be noted that there was a marked advance in press notices and articles concerning Unitarian affairs. Magazines and newspapers with a total circulation of more than 240,000,000 carried such items.

At the annual meeting of the American Unitarian association in Boston in May and at the biennial general conference in Washington in October, unusually vigorous discussions took place concerning the denominational journal, *The Christian Register.* It was a healthy display of the zeal of Unitarians for the maintenance of a medium for the free exchange of opinion. (J. H. L.)

## United Church of Canada.

The United Church of Canada, which in 1925 united the Presbyterian Church in Canada, the Methodist Church (Canada) and the Congregational Churches of Canada, reported for 1946 a membership of 767,998 with 1,820,050 persons under pastoral oversight, a Sunday school enrolment of 481,870 and 6,670 preaching places. The church owned property worth approximately $95,211,619 and raised a total of $17,817,949 for all purposes.

The missionary and maintenance givings of the church in 1946 totalled $1,988,098, an increase of $115,735 over 1945. It was estimated that the church would need a budget of $2,750,000 by 1950.

Among the important features in the life of the United Church during 1947 were the sending of a deputation to India and the far east to study the missionary situation and report; a plan to bring selected students from Europe to Canada to be educated in one or more theological colleges; the setting up of a summer school for the training of lay ministers; a planned effort to raise the level of ministerial salaries; progress in negotiations to bring both the British and the African Methodist Episcopal Churches (Negro) into the United Church of Canada; and the appointment of six representatives to attend the first meeting of the World Council of Churches.

Two new appointments were made as follows: Rev. W. Harold Young, secretary of the board of colleges and secondary schools; Rev. W. G. Berry, assistant secretary of the board of evangelism and social service. (G. A. Si.)

**United Kingdom:** *see* GREAT BRITAIN AND NORTHERN IRELAND, UNITED KINGDOM OF.

## United Nations (U. N.).

The year 1947 was the second year of the actual operation of the United Nations. During 1946 the work of the U.N. was to a large extent organizational in character. It was necessary during this first year to determine detailed organization, procedures and methods needed for performing the functions of the U.N. and achieving the purposes set down in the charter. The year 1947, by contrast, was devoted more largely to the consideration of substantive problems.

**Membership.**—Two new members were admitted during the year, Pakistan and Yemen, bringing the total membership of the organization to 57. The membership at the close of the year 1947 was as follows: Afghanistan, Argentina, Australia, Belgium, Bolivia, Brazil, the Byelorussian Soviet Socialist Republic, Canada, Chile, China, Colombia, Costa Rica, Cuba, Czechoslovakia, Denmark, the Dominican Republic, Ecuador, Egypt, El Salvador, Ethiopia, France, Greece, Guatemala, Haiti, Honduras, Iceland, India, Iran, Iraq, Lebanon, Liberia, Luxembourg, Mexico, the Netherlands, New Zealand, Nicaragua, Norway, Pakistan, Panamá, Paraguay, Peru, the Republic of the Philippines, Poland, Saudi Arabia, Siam, Sweden, Syria, Turkey, the Ukrainian Soviet Socialist Republic, the Union of South Africa, the Union of Soviet Socialist Republics, the United Kingdom, the United States of America, Uruguay, Venezuela, Yemen and Yugoslavia.

Eight new applications for membership—from Austria, Bulgaria, Finland, Hungary, Italy, Pakistan, Rumania and Yemen—were received during the year. Of these six were turned down by the Security council. Three received the necessary majority of seven, but were opposed by one or more of the permanent members. Three failed to receive the necessary majority support. The five applications for membership refused by the Security council in 1946, that is, the applications from Albania, Eire (Ireland), the Mongolian People's Republic, Portugal and Trans-Jordan, were reconsidered by the Security council at the request of the general assembly and the earlier action reaffirmed. The failure of the Security council to take favourable action on 11 out of 17 applications received during 1946–47 led the general assembly to consider the whole matter at some length in its second session. There was criticism of the permanent members of the Security council, particularly the Soviet Union, for voting against applications for reasons not stated in the charter and for even voting against applications while admitting the qualification of the applicant under the terms of the charter. The general assembly adopted a resolution expressing the judgment that six of the applicant states which had thus been refused admission, *i.e.*, Austria, Eire, Finland, Italy, Portugal, and Trans-Jordan, were "peace-loving" within the meaning of the charter. It adopted a second resolution asking the International Court of Justice for an advisory opinion on the question whether a member of the Security council was justified in voting against a membership application on grounds not stated in article 4 of the charter. The general assembly also asked the permanent members of the Security council to consult with a view to reaching agreement on applications for membership.

**The General Assembly.**—The first special session of the general assembly was held during 1947. It met in New York from April 28 to May 15 to consider the Palestine question brought before it at the request of the British government. The second regular session met in New York from Sept. 16 to Nov. 29. Forty-three items were on the provisional agenda and 19 on the supplementary list. Additional items were introduced during the session. Forty-five plenary sessions were held, 455 committee and subcommittee meetings were held and 93 resolutions were adopted.

Dr. Oswaldo Aranha (*q.v.*) of Brazil, who had been elected president of the general assembly at its special session, was elected to the office for the second regular session. The chairmen of the six main committees were as follows: (1) Political and Security, Joseph Bech, Luxembourg; (2) Economic and Financial, Hernán Santa Cruz, Chile; (3) Social, Humanitarian and Cultural, Dr. Oscar Lange, Poland; (4) Trusteeship, Sir Carl A. Berendsen, New Zealand; (5) Administrative and Budgetary, Justice Fazl Ali, India; and (6) Legal, Faris Bey el-Khouri, Syria. The heads of the delegations of the following states were elected vice-presidents: China, Cuba, France, Mexico, the Soviet Union, the United Kingdom and the United States. The president, the six committee chairmen, and the seven vice-presidents constituted the General committee.

The matters which were considered by the general assembly during its second session included the following: the Palestine question, the Balkan situation involving relations between Greece and its northern neighbours, the Korean situation resulting from the failure of the United States and the Soviet Union to agree on a plan for the establishment of a Korean government, the United States proposal for a "little assembly," the alleged abuse of the veto by the permanent members of the Security council, the treatment of Indians by the government of the Union of South Africa, the Franco government in Spain, the soviet charge of warmongering, the action of the Security council on applications for membership, the failure of the government of the Union of South Africa to submit a trusteeship agreement for the mandated territories of South Africa, reports from members administering nonself-governing territories, agreements with specialized agencies defining their relationship to the U.N., problems of refugees and displaced persons, the development and codification of international law, the transfer to the U.N. of League of Nations functions regarding traffic in women and children, the U.N. budget for 1948, plans for the permanent headquarters of the U.N. and the headquarters agreement with the United States. On practically all of these matters, resolutions of varying degrees of force and adequacy were adopted. As one of its last acts, the second session decided that the third regular session should be held in Europe at a place to be selected by a special committee.

To carry out its functions under the charter, more particularly in connection with matters before it at the second session, the general assembly created a number of subsidiary organs. These included: (1) the Commission for Palestine to supervise the carrying out of the plan for the partition of that country into Jewish and Arab states; (2) the Special Balkan committee to watch over the carrying out of the general assembly's recommendations for the settlement of the Balkan question; (3) the Temporary Commission on Korea, to supervise the holding of elections in Korea and assist in the establishment of a Korean government; (4) the Interim committee, established to perform certain functions of the general assembly during the interval between the sessions of that organ; and (5) an advisory committee to assist the Security council in carrying out plans for the construction of permanent headquarters.

**The Security Council.**—The composition of the Security council during 1947 was as follows: permanent members—China, France, the Soviet Union, the United Kingdom and the United States; members elected by the general assembly—Australia, Brazil and Poland (terms expiring Dec. 31, 1947) and Belgium, Colombia and Syria (terms expiring Dec. 31, 1948). During the second session the general assembly elected Argentina, Canada and the Ukraine for two-year terms beginning Jan. 1, 1948. The Ukraine was elected on the 13th ballot after a prolonged deadlock, caused by opposition to the Ukraine as a successor to Poland and to considerable feeling that the Asiatic-Pacific area was entitled to an elected representative, had been broken by the withdrawal of India as a candidate.

Among the matters which came before the Security council during 1947 were the following: the implementation of the general assembly resolution of Dec. 14, 1946, on principles governing the regulation and reduction of armaments; the first report of the Atomic Energy commission; the Statute of Trieste, and the appointment of the first governor; the proposals of the United States for placing the former Japanese mandated islands under trusteeship; the Corfu incident between the United Kingdom and Albania; the Egyptian complaint against the continued presence of British troops and failure to settle the Sudan question; the outbreak of hostilities in Indonesia; the report of the Commission of Investigation Concerning Greek Frontier Incidents; the report of the Military Staff committee; and the consideration of new and the reconsideration of old applications for membership in the U.N.

The requirement of the unanimity of the permanent members for decisions on substantive questions prevented Security council action on many of these matters. Thus the Security council was unable to reach a decision on the merits of the Corfu incident, the Egyptian complaint and the report of the Greek commission. On only 2 of the 13 applications for membership considered by the council during 1947 was it possible to arrive at a decision in favour of recommendation. The same disagreements which prevented unanimous recommendations by the Military Staff committee and the Atomic Energy commission on the questions referred to them persisted in the Security council and prevented substantive decisions from being taken on the reports of these bodies. The whole question of the alleged "abuse of the veto" was considered by the general assembly at some length and referred to the Interim committee for study. The inability of the Security council to take action resulted in greater use of the general assembly and the establishment of the Interim committee with a view to making it possible to bring a matter before the general assembly, or its subsidiary organ, at any time.

Article 43 of the charter provides for agreements defining the military forces and facilities to be placed at the disposal of the Security council for enforcement action. The Military Staff committee had been asked to study and report on principles governing the organization of such forces. This report was submitted on April 30. It contained 41 articles, on 25 of which there was full agreement. The 16 remaining articles, however, dealt with such fundamental questions as the size of contributions to be made, the nature of facilities to be made available, the location of forces at the disposal of the Security council and the amount of such forces. As the consequence of the failure to agree on these matters, no progress was made during 1947 in implementing the provisions of article 43.

"WEARIED AND GETTING NOWHERE," was how Bishop of the *St. Louis Star-Times* viewed the effect of soviet blocking in U.N. affairs during 1947

**Economic and Social Council.**—During 1947 the Economic and Social council was composed of the following members: those with terms expiring Dec. 31, 1947—Cuba, Czechoslovakia, India, Norway, the Soviet Union and the United Kingdom; those with terms expiring Dec. 31, 1948—Belgium, Canada, Chile, China, France and Peru; those with terms expiring Dec. 31, 1949—Byelorussian S.S.R., Lebanon, New Zealand, Turkey, the United States and Venezuela. During the second session of the general assembly the following were elected members with three-year terms beginning Jan. 1, 1948: Australia, Brazil, Denmark, Poland, the Soviet Union and the United Kingdom. The council held two sessions in 1947, both at Lake Success, its fourth session from Feb. 28 to March 29, and its fifth session from July 19 to Aug. 17. The president of the council during 1947 was Sir A. Ramaswami Mudaliar of India. Because of his inability to be present at the fifth session the first vice-president, Dr. Jan Papanek of Czechoslovakia, presided.

At its fourth session, the council established two regional commissions, the Economic Commission for Europe and the Economic Commission for Asia and the Far East, to assist it in the economic reconstruction and development of these areas. Added to the 9 commissions established in 1946, this made a total of 11 commissions. All of these commissions held their first meetings in 1947 except for the Narcotics commission, which met in Dec. 1946. The council relies heavily on these commissions for detailed studies and recommendations and technical advice, as well as for the performance of limited administrative functions. At the fifth session, consideration was given to the establishment of two additional regional commissions, one for Latin America and one for the near east. An *ad hoc* committee was created to consider factors bearing on the establishment of the first.

The matters which came before the Economic and Social council for consideration and decision during 1947 included the following: reports of the council's commissions, including the Economic Commission for Europe and the Economic Commission for Asia and the Far East, reports on the work of the International Children's Emergency fund, negotiations with specialized agencies of agreements defining their relationship to the U.N., preparations for a Conference on Trade and Employment which convened at Havana, Cuba, on Nov. 21, preparations for a Conference on Freedom of Information to be held at Geneva in the spring of 1948, preparation of a draft convention defining the crime of genocide, a report from the International Labour organization on the right of workers to organize, steps to bring certain synthetic drugs of a habit-forming nature within the system of international narcotics control, and the granting of consultive status to additional nongovernmental organizations. The decision was taken to hold two sessions of the council in 1948, the first at Lake Success in February, and the second at Geneva, Switzerland, in July.

**Trusteeship Council.**—As the result of the failure of any trusteeship agreements to enter into force until Dec. 13, 1946, it was not possible for the Trusteeship council to be organized and to hold its first session until after this date. The initial composition of the Trusteeship council was as follows: (1) members administering trust territories—Australia, Belgium, France, New Zealand and the United Kingdom; (2) other permanent members of the Security council—China, the Soviet Union and the United States; (3) members elected by the general assembly for three-year terms beginning Jan. 1, 1947—Iraq and Mexico. The Soviet Union was not represented because of its refusal to accept the Trusteeship council as properly constituted, in view of the manner in which trusteeship agreements had been made and their provisions.

Following the entrance into force on July 18 of the trusteeship agreement for the administration of the former Japanese mandated islands by the United States, it became necessary for the general assembly to elect two additional members of the council to restore the balance between members administering trust territories and those not administering such territories. This was done during the second session of the general assembly when Costa Rica and the Republic of the Philippines were elected for three-year terms ending Jan. 1, 1951, but with the special provision that they take office immediately upon election.

The council held two sessions during 1947, both at Lake Success: the first from March 26 to April 28, and the second from Nov. 20 to Dec. 16. Francis B. Sayre and Sir Carl Berendsen were elected president and vice-president respectively at the first session, to hold office until their successors were elected in the June 1948 session.

The first session of the council was devoted almost entirely to procedural matters. The council adopted its rules of procedure, which are of special importance as they determine the manner in which the functions of the council are to be performed. The council also drafted a provisional questionnaire which was to serve as the basis for reports made by the administering authorities. It received a number of petitions and decided to send a visiting mission to Western Samoa. In its second session, the council gave consideration to additional petitions that had been received, arrangements for periodic visiting missions to trust territories, a revision of the original questionnaire, the report of its visiting mission to Western Samoa, and relations with the Economic and Social council and the Security council.

**International Court of Justice.**—The International Court of Justice had one case submitted to it during 1947—the dispute between Albania and the United Kingdom over the Corfu channel incidents. This case was submitted by the parties following recommendation by the Security council. (For further details, *see* INTERNATIONAL COURT OF JUSTICE.)

**Consideration of Disputes and Situations Affecting Friendly Relations.**—During 1947 the organs of the U.N. were called upon to deal with a number of disputes and situations affecting friendly relations and in some instances involving the threat or actuality of hostilities. On Jan. 10, the British government brought before the Security council its dispute with Albania arising from damage to British ships and loss of life as the result of mine explosions and firing from shore batteries in the Corfu channel. The council was unable to take any decision on the merits of the case because of the refusal of the Soviet Union to accept the conclusion that Albania was responsible, but the council finally decided to ask the parties to refer the matter to the International Court of Justice. The case was submitted and was to come up for decision early in 1948.

The claim of the Greek government that Albania, Bulgaria and Yugoslavia were giving support to guerrilla activities along its northern frontier was the subject of investigation by a commission of the Security council which made its report on May 27. The majority of the commission found that the Greek charges were substantiated and recommended measures to deal with the situation. The Soviet Union opposed the findings of the commission and its conclusions, and prevented any decision of the Security council from being reached. Finally, on Sept. 15, the matter was removed from the list of matters with which the Security council was seized, and on the initiative of the United States was brought before the general assembly. On Oct. 21, the general assembly adopted a resolution calling upon the states directly concerned to settle the dispute peacefully, making recommendations looking to the establishment of normal relations, and establishing a special Balkan commission to assist in carrying out these recommendations. The members of the soviet bloc opposed the adoption of the resolution and announced that they did not intend to co-operate.

The Palestine question was brought before the general assembly at the request of the United Kingdom following failure to reach agreement with the Jewish and Arab groups. The general assembly in its first special session voted to establish a special committee to investigate the situation and made recommendations for the settlement of the problem. During the summer of 1947 this committee made a thorough investigation of the situation, and submitted a report which the general assembly considered during its second session. The majority recommendations of the committee, providing for partition, with provision for economic unity, and the establishment of Jerusalem as a trust territory under the Trusteeship council, were incorporated in the resolution adopted by the general assembly. The general assembly established a five-member commission to supervise the carrying out of the plan. Enforcement action was recognized to be the function of the Security council.

Following an extended deadlock in diplomatic negotiations, the Egyptian government on July 11 brought before the Security council its dispute with the United Kingdom over the continued presence of British troops in Egyptian territory and the future status of the Sudan. None of the proposed resolutions received the support necessary to adoption. After all proposals had been considered and defeated, the council turned to other business, leaving the question on the list of matters with which it was seized.

The Indonesian question was brought before the Security council by the Indian and Australian governments on July 30, following an outbreak of armed conflict between the Dutch and Indonesian forces. On Aug. 1, the council adopted a resolution calling upon the parties to cease hostilities and settle their differences by peaceful means. Though the two parties agreed, hostilities did not cease in fact, and on Aug. 26 the Security council voted to call for strict observation of the Aug. 1 resolution, asked the career consuls in Batavia to report on the situation, and tendered its good offices. After receiving a report from the consular commission indicating an unsatisfactory condition, the Security council on Oct. 3 requested its Committee of Good Offices to proceed immediately with its work. Later on Oct. 14 it adopted a resolution requesting the parties to consult with each other with a view to giving effect to the resolution of Aug. 1 and directed the Committee of Good Offices to assist.

The question of the treatment of Indians in South Africa was brought before the general assembly by India. The general assembly in Dec. 1946 adopted a resolution expressing the opinion that treatment should be in accordance with international obligations and requesting the two governments to report on measures adopted. The matter was taken up again during the second session and after extended discussion a resolution requesting round table discussions between the two governments on the basis of respect for international obligations failed to receive the necessary two-thirds majority support. A somewhat similar result occurred with respect to the Spanish situation. In its second session the general assembly adopted a resolution which failed to reaffirm the action it had taken in 1946 in calling upon members to withdraw their ambassadors and ministers and simply expressed confidence that the Security council would exercise its responsibilities.

Failure of the United States and the Soviet Union to agree on steps to be taken to implement the decisions of the Council of Ministers at Moscow in Dec. 1945, with respect to Korea led the United States to bring this matter before the general assembly at its second session. In the face of strong soviet opposition the general assembly adopted a resolution recommending the holding of elections in Korea for establishing a democratic Korean government and creating a temporary commission to aid in carrying out the program. The Soviet Union announced that it would not co-operate.

**Security and Regulation of Armaments.**—In carrying out the terms of the general assembly resolution of Dec. 13, 1946, on principles governing the reduction of armaments, the Security council considered the first report of the Atomic Energy commission and after extensive discussion, in the course of which the disagreements which had emerged in the council were repeated, decided on May 10 to refer the matter back to the council for further study and for the preparation of the necessary treaties and conventions. New soviet proposals submitted to the council on June 11 did not substantially narrow the area of disagreement and the second report of the commission adopted on Sept. 11 by a vote of ten to one, with one abstention, left the same impasse and substantially the same points of disagreement as had formerly existed. (*See* ATOMIC ENERGY.)

To prepare and report on proposals for the limitation of armaments not falling within the category of atomic weapons and other weapons of mass destruction, the Security council, by decision of Feb. 13, created the Commission on Conventional Armaments. On July 8, the Security council approved a plan of work for this commission. No further progress was made.

A similar lack of success attended the efforts to implement the enforcement provisions of articles 42 and 43 of the charter. The report of the Military Staff committee showed disagreement among the permanent members on important issues, and no progress was made in the Security council in resolving these differences. Consequently, responsibility for enforcement action by military means continued to rest on the permanent members of the Security council under the transitional arrangements contained in article 106 of the charter.

The general assembly during its first session also created an *ad hoc* commission on the progressive development of international law and its codification. (*See* INTERNATIONAL LAW.)

**Economic and Social Co-operation.**—The work of the U.N. in this field followed the general lines that had been laid down in 1946. For the most part it consisted of fact-finding, analysis and the preparation of recommendations and the bases of possible agreement between governments.

The needs of economic reconstruction and development were considered in great detail and from many angles. The Economic Commission for Europe held two sessions, as the result of which machinery was set up to take over the functions of the Emergency Economic Committee for Europe, the European Central Inland Transport organization and the European Coal organization. It was decided that at its next session in Jan. 1948, it would consider measures of concerted action for the reconstruction of Europe. The task of the commission was limited, however, by the initiation of Secretary George C. Marshall's proposals for economic reconstruction outside the framework of the U.N. (*See* EUROPEAN RECOVERY PROGRAM.) The work of the Economic Commission for Asia and the Far East was advanced by the decision of the Economic and Social council that specified dependent territories should have associate membership in the council. At Geneva the Preparatory committee of the U.N. Conference on Trade and Employment completed the draft charter of a proposed international trade organization and arrangements were made for the holding of a U.N. Conference on Trade and Employment at Havana which began its meetings on Nov. 21. Negotiations between 16 countries at Geneva with a view to the reduction of tariffs were successfully completed. Arrangements were made for regular reports on world economic conditions and trends.

In the area of social policy, the U.N. reaffirmed its position that while every reasonable effort should be made to secure the return of displaced persons to countries of origin, the permanent settlement of persons not so returned is an international responsibility. Necessary support, financial and other, was given to the Interim committee of the International Refugee organization. The secretary-general continued his efforts to facilitate the relief activities of national governments and private agencies, made necessary by the termination of U.N.R.R.A. (*See* UNITED NATIONS RELIEF AND REHABILITATION ADMINISTRATION.) The work of the International Children's Emergency fund was vigorously carried on. Functions of the League of Nations in relation to traffic in women and children were taken over by the U.N. The international control of narcotic drugs was perfected, with special attention to synthetic drugs of a habit-forming nature.

To promote respect for basic human rights and improve cultural relations, plans were laid for a world conference on freedom of information to be convened at Geneva, March 3, 1948. The Commission on Human Rights, meeting at Geneva, completed the first draft of an international bill of rights. The general assembly in its second session adopted resolutions calling upon members to encourage the dissemination of information expressing the desire of peoples for peace and to consider measures to combat the diffusion of false or distorted reports. The general assembly also requested that members improve education on the U.N.

**Specialized Agencies.**—Much of the work for the achievement of the purposes of the U.N. in the economic and social fields continued to be accomplished through the specialized agencies. Specialized agencies in existence or in process of formation in 1947 were the following:

*International Labour Organization* (I.L.O.).—*See* separate article.

*Food and Agriculture Organization* (F.A.O.).—*See* FOOD SUPPLY OF THE WORLD.

*International Monetary Fund* (Fund).—*See* separate article.

*International Bank for Reconstruction and Development* (Bank).—*See* separate article.

*International Civil Aviation Organization* (I.C.A.O.).—*See* AVIATION, CIVIL.

*International Refugee Organization* (I.R.O.).—*See* REFUGEES.

*Universal Postal Union* (U.P.U.).

*International Telecommunications Union* (I.T.U.).

*International Trade Organization* (I.T.O.).—*See* TARIFFS.

*United Nations Educational, Scientific and Cultural Organization* (U.N.E.S.C.O).

The work of U.N.E.S.C.O. during 1947 stemmed from the program adopted at the Paris conference in 1946. It consisted of gathering and co-ordinating information on the needs for educational reconstruction, assistance to governments in developing programs of fundamental education, the promotion of international understanding by such methods as scholarships and the exchange of teachers, co-operation with U.N. organs in preparing for the Conference on Freedom of Information, scientific exploration of the Hylean Amazon and related activities. The second general conference met at Mexico City, Nov. 26 to Dec. 4. Austria, Colombia, Cuba, El Salvador, Hungary, Italy, Liberia, Luxembourg and Switzerland were admitted to membership, bringing the total number of members to 39. The work of the year 1947 was reviewed and a program giving education first priority was adopted for 1948. It was decided to hold the 1948 conference in Beirut, Syria.

(*See* also LIBRARIES.)

*World Health Organization* (W.H.O.).—The constitution of the World Health organization was originally signed by 64 states. Ratification by 26 U.N. members was necessary to bring the constitution into force. At the end of 1947, 24 states had ratified, of which 17 were members of the U.N. Pending the establishment of W.H.O., the Interim commission performed numerous health activities which would later be assumed by the permanent organization. The commission took over the functions of the League of Nations Health organization. It took over the Singapore Epidemiological station and assumed certain of the functions of U.N.R.R.A. in the health field. It also took over the duties of the Office international d'hygiène publique at Paris. Operating through committees of experts and special missions, the commission assisted in combatting the cholera outbreak in Egypt and in developing long-range programs for malaria and tuberculosis. It provided technical aid for countries in need, including Austria, China, Greece and Poland, and put into operation a fellowship program permitting doctors and other health experts to study in world centres of medical knowledge.

The general assembly in its second session approved agreements defining the relationship of the U.N. to the fund, the bank, U.P.U., I.T.U. and W.H.O. These agreements, because of the specialized character of certain of the agencies concerned, contained features not found in the earlier agreements with F.A.O., I.L.O., U.N.E.S.C.O. and I.C.A.O. In particular, the agreements with the fund and the bank went less far than the other agreements in providing the U.N. with effective means of co-ordinating the activities of the specialized agencies with those of the U.N.

The Co-ordination commission, consisting of the secretary-general of the U.N. and of corresponding officers of the specialized agencies brought into relationship with it, held its first meeting on Feb. 4. To implement agreements that had been reached, a working committee was set up.

**Nonself-Governing Territories and Trusteeship Matters.**—Under article 73e of the charter members are obligated to transmit regularly to the secretary-general statistical and other information of a technical character on the economic, social, and educational conditions in nonself-governing territories in which they are represented. By its resolution of Dec. 14, 1946, the general assembly directed the secretary-general to summarize, classify, and analyze this information and established an

*ad hoc* committee to examine the summary thus prepared and make recommendations to the general assembly at its second session. Eight members of the U.N. listed 74 territories in respect to which they intended to transmit information. Information with respect to 62 territories was received and summarized by the secretary-general, in time for consideration by the *ad hoc* committee. The committee recommended to the general assembly that a permanent special committee be created to assist the general assembly in the consideration of this information, with a standard form to be used in its preparation, that the secretary-general in preparing his own summary be allowed to use supplementary sources of information, and that the transmission of political information be encouraged. The general assembly adopted resolutions along these lines. Thus considerable progress was made in the development of a system of international accountability for all nonself-governing territories.

The year 1947 saw the establishment of the trusteeship system in effective operation and substantial progress in the development of procedures for carrying out its purposes. In addition to the eight agreements approved in 1946, the general assembly in its second session approved a trust agreement for the island of Nauru to be administered by Australia on behalf of Australia, New Zealand and the United Kingdom. The trusteeship system was first extended to a strategic area by the approval of the Security council and the subsequent ratification by the United States of an agreement for the administration by the United States of the former Japanese mandated islands. Under the terms of the agreement, the United States accepted the provisions of articles 87 and 88 of the charter subject only to the right to determine the extent of their application in areas closed for security reasons.

In its first session the Trusteeship council determined its procedure for hearing reports, receiving petitions and conducting inquiries. It also drafted a provisional questionnaire to be used as the basis of reports by administering authorities. It received a number of petitions, including one from groups in Western Samoa asking for greater autonomy, which led it to exercise its right to investigate on the spot by sending a visiting mission to the islands. The mission made a report containing concrete recommendations for the improvement of the administration of the islands. These recommendations were adopted by the Trusteeship council in its second session and accepted by New Zealand, the administering authority. The Trusteeship council in its second session also established a working committee to prepare a detailed statute for the city of Jerusalem and gave consideration to a petition for the unification of Eweland, which was divided between Togoland under British administration and Togo under French administration. Plans were advanced for periodic visits to trustee territories. (For further consideration of the trusteeship system, *see* TRUSTEE TERRITORIES.)

**General Administration.**—The details of the internal organization of the secretariat were substantially altered during 1947, but the original departmental organization was preserved. Only one change was made in the top personnel. John B. Hutson resigned as assistant secretary-general in charge of the Department of Administrative and Financial Services and was replaced by Byron Price. Progress was made in the building up of a permanent staff. Salary adjustments were made in response to rising living costs. A joint staff pension scheme was inaugurated on Jan. 27.

On Dec. 14, 1946, the general assembly had decided on the location of the permanent headquarters in New York city. Early in Jan. 1947 a headquarters planning staff was established which prepared a general plan for the permanent headquarters, including designs of buildings. This plan was approved by the general assembly in its second session. At the same time the secretary-general was authorized to negotiate a $65,000,000 interest-free loan with the United States government for the construction of the permanent headquarters.

The secretary-general was authorized by the general assembly resolution of Dec. 14, 1946, to conclude with the appropriate authorities of the United States an agreement concerning arrangements required for the satisfactory performance of the organization's work as the result of the establishment of the headquarters in New York. On June 26 the text of an agreement between the United Nations and the United States was signed by Secretary-General Trygve Lie and Secretary of State Marshall, and was subsequently approved by the general assembly. Further accessions to the Convention on the Privileges and Immunities were received, but the secretary-general in his annual report felt it necessary to call the attention of members to the urgency of more speedy action.

**Finances.**—The financial year corresponds to the calendar year. The 1948 budget adopted by the general assembly provided for the expenditure of $34,825,125. The members of the soviet bloc abstained from voting because the budget made provision for the Interim committee and the Greek and Korean commissions which they had opposed as contrary to the charter. The assembly also appropriated $876,568 as a supplement to the original 1947 budget of $27,740,000. The U.N. budgets for the years 1947 and 1948 compared with the budget of $19,390,000 in 1946. The working capital fund for 1948 was maintained at $20,000,000.

The scale of members' contributions to the 1948 budget as adopted by the general assembly at its second session differed only slightly from the 1947 scale. The allocations ranged from 0.04% for Costa Rica, Yemen and several other members to 39.89% for the United States. The U.S. representative on the Administrative and Budgetary committee of the general assembly stated that his country accepted the figure for 1948 only because of existing economic conditions.

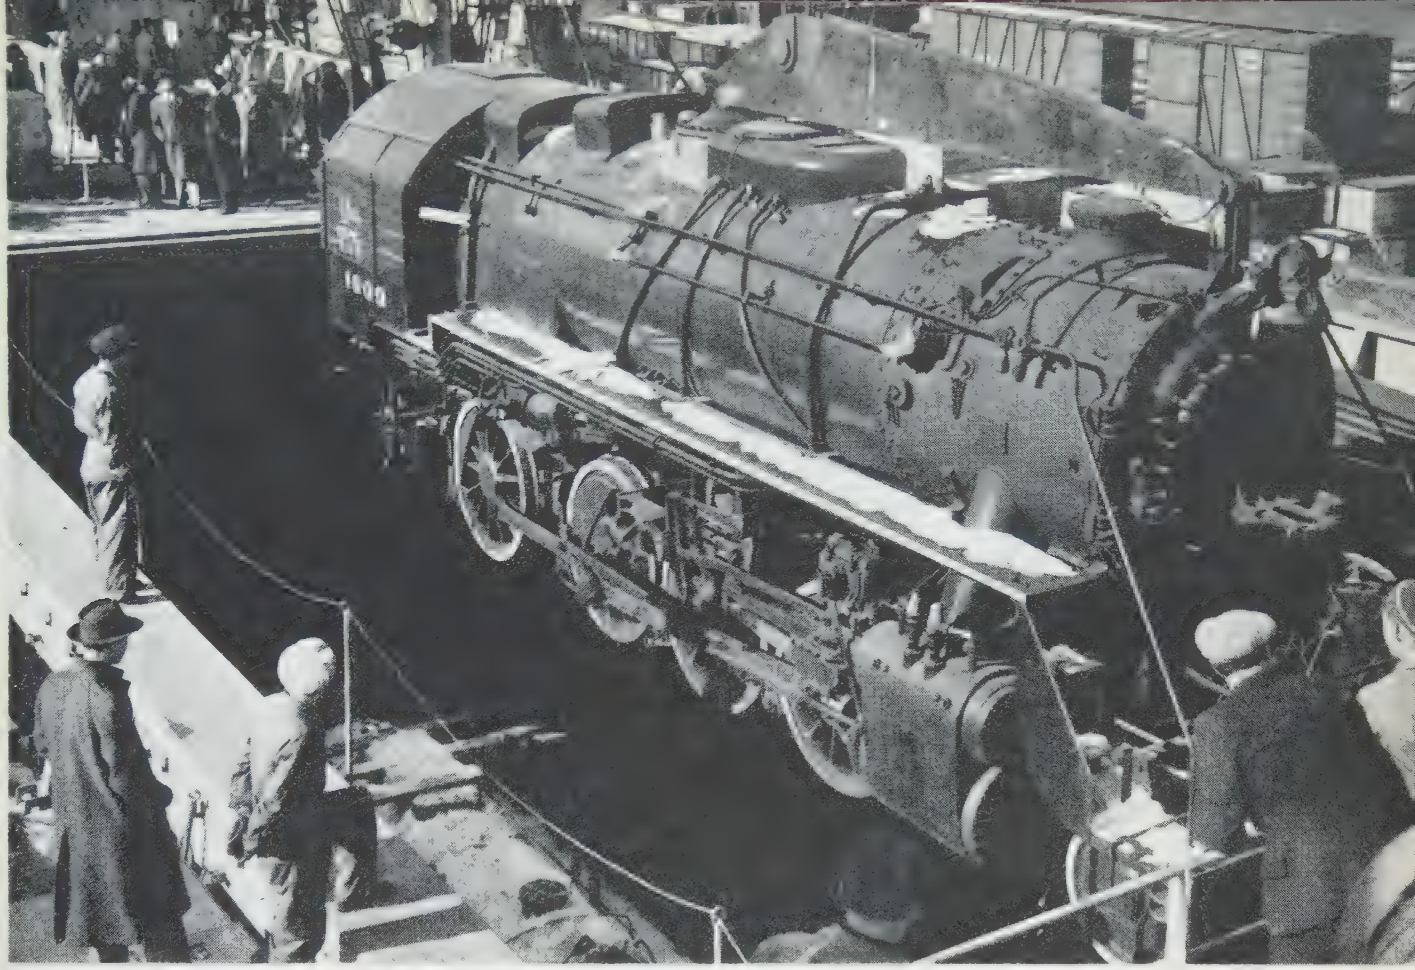
## United Nations Relief and Rehabilitation Administration.

The United Nations Relief and Rehabilitation administration (U.N.R.R.A.), an international agency, composed of 48 United Nations, completed its programs of postwar aid during 1947. Created in 1943 to help victims of World War II in liberated areas, its operations concentrated primarily on assisting those nations with the greatest need and without adequate foreign exchange resources to finance their own relief imports. The assistance consisted of relief supplies—food, clothing, fuel, medicines; relief services—trained personnel to advise how best to use the supplies; and rehabilitation supplies and services—seeds, fertilizers, insecticides, basic farm tools, repair parts for the rehabilitation of industry, transportation and other public utilities and raw materials. In addition, U.N.R.R.A. also furnished aid for the care and repatriation of millions of the war's displaced persons.

As operator of the largest peacetime shipping business in history, U.N.R.R.A. sent out more than 25,000,000 long tons of supplies. The value of the goods shipped was almost $3,000,000,000, or about three times the relief goods distributed after World War I.

The principal supplies shipped (as of Sept. 30, 1947), are shown in Table I on page 753.



RAILROAD LOCOMOTIVE, one of 47 built for U.N.R.R.A. for shipment to China, being lowered into the hold of the S.S. "Beljeanne" at Weehawken, N.J., on Feb. 11, 1947

Table I.—*Principal U.N.R.R.A. Supplies Shipped as of Sept. 30, 1947, and Countries Assisted*

| Category | Value | Long Tons |
|---|---|---|
| Food | $1,242,846,000 | 8,952,804 |
| Clothing, textiles and footwear | 436,590,000 | 607,050 |
| Medical and sanitation | 108,392,000 | 105,308 |
| Agricultural rehabilitation | 315,341,000 | 2,277,721 |

| Yugoslavia | 407,152,000 | 2,539,137 |

*Programs of limited emergency aid.

Member nations not invaded during World War II were asked to contribute for operating expenses a total of 2% of their national income for the fiscal year ending June 30, 1943. All member nations, including those that were invaded, made contributions toward the administrative expenses. The three largest contributors were United States ($2,700,000,000), United Kingdom ($624,650,000) and Canada ($138,738,000).

Compelled by the conditions in the liberated countries, U.N.R.R.A. was forced to concentrate on immediate relief needs, rather than on a full-rounded rehabilitation program that would put the countries back on their feet. Since hunger had to be dealt with first, the bulk of U.N.R.R.A. shipments was food, undoubtedly the deciding factor in the prevention of widespread starvation during the first two postwar years.

During 1947 U.N.R.R.A. transferred its major health activities to the World Health organization; some of its welfare activities and functions to the International Children's Emergency fund; some of its technical and advisory services in connection with agricultural rehabilitation to the Food and Agriculture organization; and all its responsibility for the displaced persons to the Preparatory commission of the International Refugee organization; and to implement these transfers sums aggregating approximately $10,000,000 were conveyed to the appropriate agencies.

Missions to aid relief programs in Europe were closed on June 30, 1947. The office in China remained open through December, and a trusteeship plan, to be administered under a board including both foreign and Chinese nationals, was set up to carry forward the U.N.R.R.A.-initiated, long-range rehabilitation projects in that country. (*See* also FOOD SUPPLY OF THE WORLD; REFUGEES.) (L. W. R.)

**United Nations War Crimes Commission:** *see* WAR CRIMES.

## United States.

According to figures released by the bureau of the census on Nov. 28, 1947, the population of continental United States on Oct. 1 was 144,708,000, of whom 143,373,000 were civilians and 1,335,000 were still in the armed forces. The increase in population from April 1940 was more than 13,000,000, or 7% of the population in 1940. The urban population increased 12.7%, and the rural nonfarm population 14.3%, while the farm population fell off about 9.6% from 30,219,000 in 1941 to 27,305,000 in 1947. On a regional basis the increase of 24.7% in the west contrasted sharply with that of 2.7% in the south; and the rate of increase of the nonwhite population exceeded that of the whites in the ratio of 11.6% to 7.5%. There was little change in the two trends of population noticeable in recent decades: namely, the slow rate of increase as compared with that of the early and middle years of the country, and the growing tendency toward a higher age level of the population. The total area of continental United States is 3,022,387 sq.mi.

**History.**—On the domestic front the chief concerns of the people of the U.S. in 1947 were the constantly mounting cost of food, clothing and other necessities of life, which resulted from the spiral of inflation caused by reciprocal boosts in wages and prices as well as to the excess of demand over supplies; and the persistent shortage of housing, which President Harry S. Truman declared in November to be "the foremost of the many problems facing the nation." On the international front, despite all the meetings of the foreign ministers (the tenth being held in London, Nov.–Dec. 1947) and of the delegates to the United Nations, little or no progress was made toward harmony between the western democracies and the U.S.S.R. To be sure, treaties were signed with the former German satellite states; but the major settlements with Germany and Austria had not made any substantial progress when the year came to an end. On every question affecting the future peace and security of the world—the control of atomic energy, the check to the spread of communism in Europe, the plans for United States aid to the destitute peoples of the old world, the scheme for giving the smaller nations a larger influence in the councils of the United Nations—the soviet representatives, on instructions from Moscow, interposed their veto and reiterated the charges that the U.S., aiming at an imperialistic domination of the world, was fomenting the war spirit. It was evident that no reconciliation of the opposing ideologies of the two great protagonists, the U.S. and the Union of Soviet Socialist Republics, seemed possible. Whether they could live together in the same world without coming to blows was a question which hung over the heads of the people like the sword of Damocles.

**Congress.**—The 80th congress convened on Jan. 3, 1947, with 51 Republicans and 45 Democrats in the senate and 245 Republicans and 187 Democrats in the house. It was the first time in 16 years that the Republicans had control of both houses, and the first time after Woodrow Wilson's second ad-

*As of Feb. 1948, the following 18 states had ratified the proposed amendment: California, Colorado, Connecticut, Delaware, Illinois, Iowa, Kansas, Maine, Michigan, Missouri, Nebraska, New Hampshire, New Jersey, Ohio, Oregon, Pennsylvania, Vermont and Wisconsin.

GRAVE RECEPTION of Pres. Truman's speech of March 12, 1947, outlining the U.S. plan to aid Greece and Turkey in combating communism. Left to right, top: Sen. C. W. Brooks, Sen. A. Wiley and C. B. Henderson, an RFC director; bottom: Sen. Tom Connally and Sen. W. H. White

ministration that the president and the majorities in congress were of opposite parties. The Republican victory in the 1946 elections brought changes in the presiding officers of congress and the chairmanship of the standing committees (which had been reduced from 33 to 15 in the senate and from 48 to 19 in the house). Joseph W. Martin, Jr., of Massachusetts replaced Sam Rayburn of Texas as speaker of the house, and Arthur H. Vandenberg of Michigan became president pro tem. of the senate and succeeded Tom Connally of Texas as chairman of the foreign relations committee. Robert A. Taft, regarded as the most influential man in the senate and a prominent candidate for the presidential nomination in 1948, became the chairman of the key committee on policy.

The Republicans came into power pledged to two major measures: tax reduction and effective labour legislation to replace the Wagner act of 1935. They had insisted in their campaign on reductions in income taxes ranging from 10% to 30%, and the first bill introduced into the house made such provisions. It was passed in June by a vote of 220 to 99, the senate concurring by 48 to 28. Both President Truman and Secretary of the Treasury John W. Snyder insisted that the anticipated surplus in the treasury should be used for the reduction of the debt, and warned that, in view of the financial aid which must be furnished to the distressed countries of Europe, it would be unwise to reduce taxes. On June 16, therefore, the president vetoed the bill, despite the fact that the veto of a tax bill was a most unusual thing. The house failed by 2 votes (268 to 137) to muster the two-thirds majority to override the veto, and the first project of the Republicans was killed.

They were more successful, however, in the second. There had been a growing feeling, strengthened by the unprecedented wave of strikes in 1946 and the defiance of the government by John L. Lewis, that the Wagner act was overweighted in favour of labour, and on this feeling the Republicans capitalized in writing the Taft-Hartley bill of 1947. President Truman warned against the passage of any "vindictive law" against labour, with a clear indication that he would veto such a law. But the Republican leaders paid little attention to his counsel. The Taft-Hartley bill, passed by votes of 320 to 79 in the house and 54 to 17 in the senate, contained drastic curbs on the privileges of labour. It forbade the closed shop and the secondary boycott, gave the employer the same right as the union to appeal to the National Labor Relations board, prescribed a cooling-off period before a strike could begin, authorized injunction proceedings in certain cases and generally held labour responsible for complying with the rules and regulations which business had to observe in regard to its financial operations. President Truman vetoed the bill, but his veto was overridden in both houses of congress.

Other measures of the session, which ended on July 26, were the appropriation of $34,500,000,000 to run the government for the ensuing year; the ratification of the peace treaties with Italy, Hungary, Rumania and Bulgaria; a constitutional amendment limiting the presidency to two terms; a law fixing the presidential succession (the speaker of the house and then the president pro tem of the senate); a small appropriation ($12,000,000) for the continuance of the "Voice of America"; a $400,000,000 appropriation for combating communistic influence in Greece and Turkey; and an act merging the armed forces into a single department of national defense, with separate secretaries (noncabinet members) for army, navy and air. The most important matters left unsettled were the Marshall plan for European recovery, universal military training, health and housing legislation, flood control, and the (Stratton) bill for the admission of displaced persons.

On Oct. 23 President Truman called congress together for Nov. 17, in the first extra session after 1939: (1) to provide immediate relief for France, Italy and Austria, whose resources would not tide them over the winter, and (2) to curb the rising price index. As its final act before adjournment on Dec. 19, congress voted $540,000,000 "stop-gap" aid for the three European countries plus China, and on the same day sent to the president an anti-inflation bill which he was expected to sign, although it fell short of granting him the powers he had asked.

**The Budget.**—On Jan. 10, 1947, the president sent to congress his budget message for the year 1948, estimating expenditures at $37,500,000,000, of which national defense and veterans' benefits comprised approximately one-half. In mid-August the budget went into the black for the first time after 1930, showing a surplus of $184,000,000. The national debt had been reduced from $279,000,000,000 in 1946 to $259,000,000,000. The estimated income for the ensuing year was $37,700,000,000. The administration, backed by the Democratic minority in congress, favoured the devotion of such surplus as might accrue, after furnishing aid to the European countries, to a further reduction of the debt, while the Republicans argued that the president's "rock-bottom" estimate of expenses could be reduced by $4,000,000,000 to $5,000,000,000 and that a lowering of taxes would release funds for investment and provide a consequent stimulus to increased production. As mentioned above, the president vetoed the tax reduction bill; but the Republican leaders, prophesying a surplus of several billions for the next fiscal year, had ready in December a (Knutson) bill, calling for tax reductions of more than $5,000,000,000, for introduction into the second session of the 80th congress beginning Jan. 6, 1948. (*See* also TAXATION.)

In May of 1947 the nation was producing at an annual rate of $210,000,000,000, and the current rate of annual income was $177,000,000,000, as against $168,000,000,000 in 1946. On the whole the financial situation of the country seemed to justify the optimism of the president's midsummer economic report. Profits were at the highest level in history. The average per capita income was $1,060 compared with $479 in 1939, and five times as much money was being paid in taxes as in the earlier year. Weekly earnings in the manufacturing industries were 70% higher than in 1941, while living costs had increased by approximately 50%. There were approximately 58,000,000 employed workers. But there were two alarming factors in the situation. First, prices were mounting at a rate which defied any curbs that either the government or voluntary efforts could impose; and second, exports were mounting to more than $1,000,000,000 a month as against imports of scarcely more than half that figure—an imbalance which could be remedied only by the restoration of normal exporting power in foreign countries and the willingness of the U.S., in spite of the advocates of prohibitive tariffs, to take the products of those countries on equitable terms.

**Agriculture.**—In spite of heavy spring rains and midsummer droughts which cut down the corn harvest to the smallest after 1936, the total crop production of the country in 1947 was the fourth largest on record, being surpassed only in the years 1942, 1944, and 1946. The final estimate (Dec. 1947) was 2,400,952,000 bu. of corn (26% less than the 1946 yield) and 1,364,917,000 bu. of wheat. The farm population of 27,305,000 represented slightly less than one-fifth of the total population, and the farmers' profits were at an all-time peak. Farm income for the year 1947 was estimated (Dec. 20) at $18,000,000,000, or 20% above the figure for 1946 and 400% above that of 1940. Bank deposits in 20 leading farm states were 5% higher than a year earlier. But fewer than one-third of the 6,000,000 farms produced more than two-thirds of the crops, by virtue of their superior equipment in machinery, electric power and scientific fertilization. The total farm assets were reckoned at about $90,000,000,000, or more than double the figure of a decade earlier. Yet only about one-half the farm homes had electric light, one in four had running water, one in six had bathrooms, and fewer still had central heating. Fruits, vegetables and dairy products maintained the high levels of the previous year, and while livestock declined from the peak figures of the war years, the supply of meat was sufficient to enable the civilian population to increase their per capita consumption to about 150 lb. a year, as compared with 125 lb. in the prewar period. In the same period only 2.6% of the national food supply went into exports; but during the war the needs of the armed forces and the demands of lend-lease and U.N.R.R.A. (the United Nations Relief and Rehabilitation administration) took up to 17% and 8.8% respectively of the country's farm products. With the termination of these agencies, food exports reverted to normal levels.

However, the fluctuations in prices and markets occasioned in 1946 by the vacillating policy of lifting, restoring and finally removing price controls were succeeded in 1947 by a continuous rise in farm prices. Based on 100 for the year 1939, the index of all farm prices reached 275. The protests of housewives against the exorbitant cost of meat, eggs and butter did not avail to halt the upward swing. Farmers were solidly opposed to any government action to reduce prices or to the cancellation of farm subsidies. In view of the need of food supplies to tide the hungry people of Europe over the winter, the administration in the late autumn recommended a voluntary conservation program. People should cut meat from their diet on Tuesdays and eggs and poultry on Thursdays. Hotels and restaurants were asked not to serve bread unless it was called for by the customers. But sumptuary regulation, especially in time of peace, is difficult to enforce. There was a widespread suspicion that products were being withheld from the market in the hope of still further rises in price.

One farm was said to have more than 600,000 bu. of wheat stored in warehouses; and a poll of late Nov. 1947 reported

"UMTEES" at mess in the experimental camp for 18-year-olds maintained by the U.S. army at Fort Knox, Ky., as a testing ground for a possible universal military training (UMT) program

45% of the farmers consulted as expecting prices to rise still further in 1948. On Dec. 18 the senate adopted unanimously a resolution authorizing Secretary of Agriculture Clinton P. Anderson to make public the names of all speculators in grain and other commodities.

**Industry.**—On Aug. 21 President Truman issued a report on the industrial situation, based on the figures submitted by his council of economic advisers. It was a highly optimistic report. The U.S. had more than half the industrial capacity, the gold, and the shipping of the world. Production was humming, jobs were plentiful and incomes were high. Corporation profits after the deduction of taxes were $17,000,000,000 for the first half of the year, as compared with $12,000,000,000 in the same period of 1946. Exports in midsummer were running at the rate of about $15,000,000,000 a year, which was more than five times the prewar figure. They comprised 6.5% of the gross production of the country, and the chief exported commodities in order of value were machinery, grain, textiles, automobiles and iron and steel. Imports, however, the chief of which were coffee, sugar, rubber, wool and paper, failed by half to keep pace with exports, and the serious question was raised as to how foreign countries would be able to meet their unfavourable balances of trade. Obviously, they could not borrow themselves out of debt or expect the U.S. to support them like poor relatives. The only remedy lay in the recovery of their own volume of production and the readiness of the U.S. to take their goods without prohibitive tariff restrictions.

A plan to help Europe help itself out of its economic plight was proposed by Secretary of State George C. Marshall in a speech at Harvard on June 5, 1947. The "Marshall plan," later named the European Recovery program (E.R.P.), envisaged the expenditure of a large sum of money, perhaps from $16,000,000,000 to $20,000,000,000 over a period of four years, to encourage the rebuilding by their own people of the shattered industries and finances of the European states. It was a kind of pump-priming for foreign recovery. Delegates of 16 nations meeting at Paris made a careful study of Europe's needs. In the U.S., committees headed by Secretary of the Interior Julius A. Krug, Secretary of Commerce W. Averell Harriman, and the government economist Edwin G. Nourse, prepared reports on the capacity of the country to undertake the program proposed and on its effects on U.S. industrial and financial prosperity. On Dec. 18 William L. Clayton, former under secretary of state for economic affairs, declared that by devoting only from 2% to 2½% of the gross national production to the implementation of the Marshall plan over the next four years, the United States could restore the economy of western Europe and forestall the danger of communist domination there, without prejudice to its own high standard of living.

**Labour.**—The most important event of the year 1947 in the realm of labour was the passage over the president's veto of the Taft-Hartley Labor-Management Relations bill (see *Congress*). Although by the end of the year enough time had not yet passed after the act became effective (Aug. 23) to test the claims of either its champions or its opponents, there seemed to be few indications that management intended to use the law to deprive labour of its fundamental rights of unionization, collective bargaining, and the strike (except in certain industries "affected with the public welfare"); nor had organized labour staged such a revolt as might have been expected against an act which its leaders characterized as "infamous." Indeed, as contrasted with the turbulent year preceding, when 113,000,000 man-days were lost through strikes, 1947 was remarkably free from labour strife. For the first 3 months of the year the man-days lost were less than 10% of the 58,000,000 man-days lost in the same period of 1946. However, in April there came threats of strikes in the coal, telephone, steel and automotive industries. The substantial wage increases of 1946, averaging 18.5 cents an hour, did not satisfy the workers, who were moved to demand another round of wage raises both by the rising cost of living and the mounting profits of the corporations. Yet there were no such sinister incidents as John L. Lewis' defiance of the government the year before. On the whole, Lewis had gained more for his United Mine Workers than any other labour leader had done for his union, their wages having risen from an average of $30.86 in 1941 to more than double that figure in 1947.

On March 25 at Centralia, Ill., 111 men were killed in the worst mine accident that had occurred in 20 years. Mr. Lewis, asserting gross negligence on the part of the government, whose management of the mines was about to terminate, demanded that all but two of the soft coal mines of the country be closed until their safety could be certified, and proclaimed a "mourning" strike of a week in memory of the Centralia victims.

The most controversial part of the Taft-Hartley act proved to be section 9(h), which required officers of the unions to file affidavits disclaiming any connection with communism. The question was whether the regulation applied to the heads of the unions. The C.I.O. was bitterly opposed to the requirement;

but William Green of the A.F. of L., who was hardly more favourable to the act as a whole, was inclined to accept section 9(h). Whereupon Lewis withdrew his 600,000 United Mine Workers from the A.F. of L., which they had rejoined a few months before, and sent Green the curt message "We disaffiliate."

**Housing.**—Adequate housing both for the returning veterans and for the general public remained a major problem throughout the year. There was a vast backlog demand for housing, created during the depression and later during World War II, when building was virtually stopped. The Wagner-Ellinger-Taft bill of 1945, a plan for the construction of 12,000,000 to 15,000,000 new housing units over a period of 10 years, had passed the senate in 1946, but had died in the house committee. In March 1947, with 20,000,000 persons living in crowded and substandard quarters, congress again took up the question. The construction of at least 1,000,000 housing units a year was needed. Approximately 40% of the G.I.s were living "doubled up" with relatives or friends, and 25% of the married veterans were vainly seeking homes. From 400,000 to 500,000 new families were being added to the population annually. Programs for public construction of big housing projects for families of low income were opposed by realty interests as a threat to private enterprise. The construction of small houses within the price limits of the average family was frustrated by the great increase in labour wages and in building materials. Lumber had advanced 100% from 1941 prices; hardware was up 114%; many items (like window shades) were 300% more expensive. From Jan. to April 1947 only about 60,000 new houses were built. Furthermore, after the removal of war controls from building materials, not only did the prices of the materials skyrocket, but the supply tended to be absorbed by the demand for the construction of new factories, stores, banks and other commercial buildings. Old houses, many of them lacking heating, plumbing and running water, were scarce at twice their prewar prices; and less than one-fifth of the new houses built could be afforded by families with an income of $2,000 a year. Before the war, President Franklin D. Roosevelt had deplored the fact that one-third of the people of the United States were "ill-housed." More than two years after the end of the war little had been done to remedy that situation. (*See* also BUILDING AND CONSTRUCTION INDUSTRY; HOUSING.)

**The Armed Forces.**—A plan, which had been under discussion ever since the Spanish-American war, was consummated in 1947: namely the unification of the armed forces of the country. It had been generally favoured by the army, but opposed by the navy on the ground that the larger arm of the service would tend to absorb or overshadow the navy's functions. In July, however, congress passed and the president signed the unification bill. It provided for a (civilian) secretary of national defense with a seat in the cabinet, and separate noncabinet secretaries for the army, the navy and the air force. James Forrestal, then secretary of the navy, was appointed secretary of national defense, while the three minor posts were given to Kenneth C. Royal (army), J. L. Sullivan (navy), and W. S. Symington (air force). The act also created new agencies: a national security council, a resources board, a munitions board, a research board, and a joint board of chiefs of staff.

The draft, established by the Selective Service act of 1940, ended on March 31, 1947, and was not extended by the president. But the voluntary enlistments relied upon failed to supply the 30,000 men per month wanted by the army and the 12,500 sought by the navy, to keep the former's strength at 1,070,000 and the latter's at 570,000 (including 98,000 marines) for the year 1948. Universal military training for young men from 18 to 20 years of age, with 6 months in camp and 6 months in school or college, was favoured by the army as a better recruiting agency than the draft.

The strong desire of the soldiers of the U.S. to get back home after the cessation of hostilities and of their families to have them back resulted in some deterioration in the quality of the forces which had to be left as garrisons in Europe and Asia. Younger and less experienced officers took the place of those familiar with the conditions abroad, and there were complaints of irregular conduct, such as black-market operations, on the part of the soldiers. There were altogether more than 300,000 men of the U.S. armed forces in garrison duty abroad, about 150,000 in Germany and the same number in Japan, with smaller forces elsewhere. Since the announced purpose was to maintain U.S. garrisons abroad until a satisfactory peace was made (as expressed in former Secretary of State James F. Byrnes' Stuttgart speech of Sept. 1946), and Secretary Marshall in his first press conference had declared the U.S. would "avoid unilateral disarmament," it was of great importance to maintain not only the numbers but also the quality of the armed forces. The U.S. planned to spend 34% of its 1948 budget on military items, as against 26% set aside by Great Britain and 19% by the U.S.S.R. Only China, with 80%, planned to spend a larger share of its budget on its armed forces than the U.S. The total expenses for the world's armies of 19,000,000 men were estimated at $27,000,000,000. U.S. naval tonnage of 3,820,000 exceeded the combined tonnage of the rest of the world by approximately 1,000,000 tons, and compared with Great Britain's 1,531,600 tons, the U.S.S.R.'s 445,000 tons, and France's 250,000 tons. (*See* ARMIES OF THE WORLD; NAVIES OF THE WORLD.)

A defense problem of the first importance was presented by the condition of the U.S. air force. At the peak of the wartime effort the army was operating about 80,000 planes, and during the year 1944 U.S. factories produced the enormous number of 96,000 planes. By 1947, the rapid advance in engineering had rendered obsolete many types of planes rated as first class three or four years before. For example, the navy's new jet and rocket powered "Skyrocket," which was being tested at the end of the year, was expected to travel at a speed of 1500 to 1700 mi. an hour. The huge B-29 bombers, which did such effective work against Japan, had already been superseded by the B-36's, the largest land-based bombers in the world, powered by six 28-cylinder engines, and said to be capable of a nonstop round trip flight to the most remote spot on the earth. The commanding general of the air force, Gen. Carl Spaatz, declared in 1947 that the U.S. had in use only about 5,000 military planes of highest quality, whereas it needed at least 7,000 in active operation, besides a considerable reserve force. Shortly after the war, the army air force developed an expansion program providing for an outlay of $270,000,000 a year but congress, intent on cutting government expense all along the line, granted less than the $147,000,000 which President Truman had asked for the year 1947–1948. (*See* also AVIATION, MILITARY.)

Little progress was made during 1947 on the vexing question of the control of atomic energy. On Dec. 30, 1946, the United Nations Atomic Energy commission adopted the Baruch plan (with the U.S.S.R. and Poland dissenting) and sent it to the Security council. Its main features were the creation of an international Atomic Development authority (the A.D.A.), with a monopoly of the production of fissionable materials and a vetoless power of inspection and punishment for the infraction of the A.D.A.'s regulations. When assured of the promise of adequate control, but not before, the U.S. would consent to surrender its stockpile of atomic bombs. The soviet proposal, put forth by Andrei A. Gromyko, reversed the Baruch plan. The U.S. must first destroy its bombs and then the machinery would be set up for the international control of atomic energy. The controlling authority, Gromyko insisted, should be vested not in the A.D.A. but in the Security council, where a Russian veto would be effective. (*See* also ATOMIC ENERGY.)

**Latin-American Relations.**—The outstanding event of the year in Latin-American relations was the meeting of the foreign ministers of all the American republics except Nicaragua at Rio de Janeiro, Brazil, in August to conclude a pact for hemispheric defense. The Rio de Janeiro pact, known officially as the "Inter-American Treaty of Reciprocal Assistance," was to supplement and implement the Act of Chapultepec drafted at Mexico City in March 1945. On Sept. 2, 1947, all the American nations except Nicaragua and Ecuador signed the treaty (and it was provided that those states and Canada could sign later, if they should desire). It provided that all should assist in repelling an armed attack from outside upon any of them, and advocated the settlement of all disputes between them by the use of "procedures in force in the inter-American system." It bound the nations not to resort to war in violation of the provisions of the charter of the United Nations. Secretary of State Marshall and Senators Vandenberg and Connally were cordially received at Rio, and contributed much to the drafting of the pact. "We are building upon mutual trust," said the secretary; "this is a true partnership, which represents the greatest advance ever made in the business of collective peace." The senate ratified the pact in December. At the same time an economic commission for Latin-America was recommended by a subcommittee of the United Nations at Lake Success "to promote the development of industry, agriculture, transportation and communications in the undeveloped areas" of Latin-America. A heartening aspect of these procedures was the adherence of Argentina, with whom U.S. relations had been strained for some years. (*See* also INTER-AMERICAN DEFENSE CONFERENCE.)

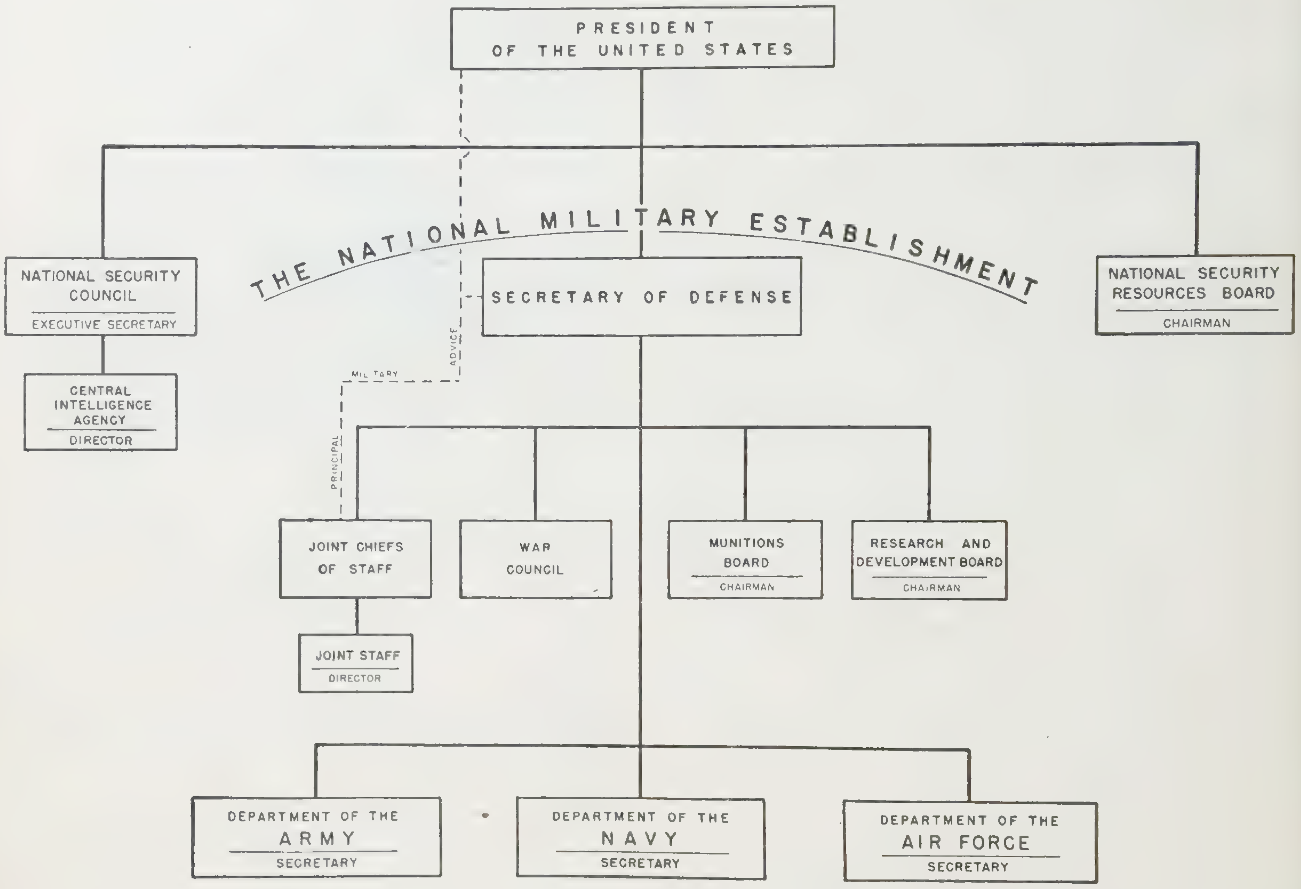
A ninth Pan-American congress was planned to be held at Bogota, Colombia, in Jan. 1948.

**International Affairs.**—Aside from the encouraging events noted in relations between the U.S. and other American countries, there was little progress made during the year 1947 in solving the persistent problem of the world's unrest. The fate of nearly 400,000,000 persons in Europe (exclusive of the U.S.S.R.), belonging to 29 governments and speaking 44 languages, depended on the restoration of political order and economic security. The 17 countries occupied by the nazis had been "liberated" only to fall a prey to factional strife within or the threat of domination by the expanding soviet power. The central problem was the formulation of peace treaties with Germany, Austria, Italy and the Balkan satellite states, a task which was entrusted to the foreign ministers of the great powers (the United States, Great Britain, Russia and later France) by the Potsdam agreement of Aug. 1945. Time and again the foreign ministers met, at Moscow, London, Paris and New York, but aside from the treaties with the minor states, concluded in Dec. 1946, nothing was accomplished. Secretary Byrnes made seven trips to foreign capitals, travelling 70,000 mi. and spending three-fifths of his 18 months of tenure abroad. General George C. Marshall, chief of staff of the army, returned from a special mission in China in January, to succeed Secretary Byrnes. In March he left for Moscow to attend the ninth meeting of the foreign ministers, which sat for 46 days in complete deadlock. On his return he warned the country that the patient (Germany) was sinking while the doctors deliberated. At Potsdam the heads of state (Truman, Clement R. Attlee and Joseph Stalin) had pledged a united Germany; but the country remained divided into four zones under the military government of the four great powers. The Russians in the eastern zone were accused of setting up a communistic puppet State and of draining the resources of the country in reparations; while they accused the three other occupying powers of attempting to convert western Germany into a separate hostile state. On Nov. 25, 1947, the foreign ministers met again, at London, only to have the conference terminated after a brief session filled with bitter denunciation of the Western democracies by Vyacheslav Molotov, the soviet foreign minister, and General Marshall's patient but firm rebuttal of the extravagant abuse. As the year closed the rift between the Soviet government and the Western powers seemed wider than ever. (*See* also FOREIGN MINISTERS' CONFERENCES.)

**"SIFTING 'EM OUT,"** a Roche cartoon which appeared in the *Buffalo Courier Express* following Pres. Truman's order of March 22, 1947, banning members of or sympathizers with communist parties from employment in the executive branch of the government

Two propositions made by the U.S. government in 1947 added to the tension between Washington and Moscow. The first was the announcement by President Truman on March 12 of a plan (the so-called "Truman doctrine") to "contain" the expansion of communism in southeastern Europe by furnishing financial and military aid to Greece and Turkey. The regimes which it was proposed to support in those countries were not democracies; and the plan was not only resented in Moscow, but was opposed by many Americans as an encouragement of reactionary governments and a meddling in the turbid affairs of Greece which would prolong factional strife and sacrifice American lives. However, for better or worse, the $400,000,000 was voted by congress. The second provocative proposition was the Marshall plan or European Recovery program which recommended generous U.S. aid to the states of Western Europe for the recovery of their economic stability. The initiative, insisted Marshall, must come from the European countries themselves. They must show a convincing readiness to speed up their production, straighten out their finances, and co-operate in sound methods of trade and commerce. On July 3 representatives of 16 European nations met at Paris and, after a session of 12 weeks, submitted a 25,000 word report on their resources and their needs. On the basis of the reports of three committees who were working in the United States on estimates of the

ORGANIZATION FOR NATIONAL SECURITY



country's capacity to furnish extensive aid to Europe and on the effect of such aid on the U.S. standard of living, President Truman sent a long message to congress a few hours before its adjournment on Dec. 19. He asked for a provision of $15,000,000,000 to $17,000,000,000 over a period of four years, with an initial grant of $6,800,000,000 for the first 15 months to July 1, 1949. The administration of the fund, he suggested, should be vested in a single director with a salary of $20,000, a deputy at $17,000, and a roving official with ambassadorial rank and a salary of $25,000, to co-ordinate the work in the various countries receiving aid. He sent in this message before the legislators dispersed for the Christmas recess, in order that they might have time to study the plan before the opening of the second session of the 80th congress on Jan. 6, 1948. He hoped that congress would act on the plan by April of the new year. But it was certain that the measure would produce heated debates in congress, both as to the size of the sum asked for and as to its administration. Russia and its satellites protested that they would make every effort to sabotage the Marshall plan, declaring that it was nothing less than a scheme of the U.S. to impose an economic dictatorship on the countries of western Europe. ## U.S. Investments Abroad.

The value of U.S. investments in foreign countries on June 30, 1947,[1] was at the unprecedented peak of $26,700,000,000, following a net outflow of $5,800,000,000 of loans and investments in the first 6 months of the year, practically all U.S. government capital. The major portion of the total value of investments, $16,000,000,000, was private capital and the remainder of $10,700,000,000 was government. These were $400,000,000 and $5,400,000,000 higher, respectively, than on Dec. 31, 1946. The major portion of the outflow from the U.S., both private and government, was in the form of long-term capital, although the outflow of private short-term capital (assets with an original maturity of one year or less) exceeded $200,000,000 during the first half of 1947. Increased U.S. investments of various types in foreign countries raised the net creditor position of the U.S. to $9,300,000,000 on June 30, 1947 (*see* also Foreign Investments in the United States).

The U.S. government invested $2,745,000,000 in the International Monetary fund and $317,000,000 in the International bank in the 6 months under discussion. The United Kingdom borrowed an additional $1,450,000,000 of its loan of $3,750,000,000, while Export-Import bank loans, credit sales of surplus property and surplus vessels and other long-term loans to foreigners aggregated an additional $750,000,000. In the third quarter of 1947 the U.S. government advanced an additional $1,384,000,000 of long-term credits to foreigners.

Increased foreign aid and loans from the U.S. government to foreign governments were imminent at the end of 1947 in the so-called "Marshall plan." (*See* European Recovery Program.)

The foreign shortage of U.S. dollars with which to purchase vitally needed foodstuffs and commodities for reconstruction and development became particularly acute in the fall of 1947 as most of the relief planned and credits granted to foreigners for these purposes approached exhaustion. On Oct. 13, the Export-Import bank liberalized the terms and purposes of an earlier credit to France whereby that country was able to purchase industrial raw materials, such as coal, with funds originally loaned for the purchase of items such as machinery. A month later, the same bank granted a $300,000,000 credit to Canada to enable that country to continue making purchases of essential U.S. equipment and raw materials.

The movement of private U.S. capital to foreign countries was of a mixed character. The U.S. department of commerce reported a very definite movement to foreign countries of direct investment capital in the first half of the year, while in contrast, the repatriation of capital formerly loaned to foreigners continued.

The outflow of direct investment capital exceeded $200,000,000 compared with a return flow from abroad of about $25,000,000 during 1946.

Among the operations of U.S.-controlled enterprises in foreign countries (direct investments), the intensive quest for oil-bearing land and the development of oil resources received most attention during 1947. Practically every large U.S. petroleum company was reported to be making sizable capital investments abroad, of which the most spectacular was the program announced by the Standard Oil company (New Jersey) and its subsidiaries. The expansion program of this and of other enterprises was based on estimates by some economists that by 1951 the oil industry could expect a world demand of nearly 3,750,000,000 bbl. of crude oil and refined products annually. This potential market, if attained, would represent a 35% increase over world consumption in 1945, when military demand was at its peak. Most of the new sources of petroleum, mainly in the middle east and Venezuela, were expected to direct their products principally to Europe and the far east.

The Standard Oil group planned to spend $100,000,000 to construct a refinery, pipe line, tanker terminal and town in Venezuela; $140,000,000 to erect a large refinery in England, an unstated amount to restore refining facilities in France, and with other U.S. companies perhaps several hundred million dollars for two pipe lines running from the Persian gulf to the Mediterranean about 1,000 mi. away.

Other well known petroleum companies were making or planning additional foreign investments. The Gulf Oil corporation announced that it had borrowed $100,000,000 presumably to fulfil its intention of extensive exploration work in the United States, Canada, Venezuela, Colombia, Nicaragua, Cuba, Denmark and the Bahamas, and to drill new wells in the Persian gulf area. It was also reported that a number of smaller U.S. companies had affiliated and raised about $100,000,000 for the purpose of operating in the middle east and elsewhere. The press noted that the state department would aid U.S. companies interested in obtaining oil concessions in this area.

The Sinclair Oil corporation was drilling a well on its concession of 335,000 sq.mi. in Ethiopia. The Phillips Petroleum company was expected to spend between $10,000,000 and $15,000,000 in Venezuela in 1947. The California-Texas corporation planned to build an $18,000,000 refinery in Holland. A subsidiary of the Standard-Vacuum Oil Company, Inc., joined with Australian and British companies in a search for both oil and gas on the Australian continent. Bolivia, which had excluded foreign oil companies from that country since 1936, granted a U.S. company a concession to drill 50 wells in one field.

Other U.S. industries were also actively engaged in developing new facilities and in expanding existing investments in foreign countries, particularly in the production of iron ore, steel, copper, newsprint, wood pulp, gold, automobiles, agricultural machinery, lead, and hotel construction.

Gradual depletion of high-grade iron ore reserves in the U.S.

---

| Total | 5,505 | 4,925 | 10,575 | 2,320 | *26,711 | *20,883 |

*Includes investments by the U. S. government of $3,386,000,000 on June 30, 1947, and $323,000,000 on Dec. 31, 1946, in the International Bank for Reconstruction and Development and in the International Monetary fund. These are not included in the data for the areas noted.

Source: Estimates prepared by the United States treasury department, commerce department, and the author.

had turned the attention of several U.S. companies to foreign iron ore deposits. The Bethlehem Steel corporation allocated $37,500,000 for the development of iron ore properties and facilities in Latin America. The M. A. Hanna company was awarded a 50-year contract for the exploration of iron ore deposits in the Brazilian federal district of Amapa on the northernmost coast. This area was estimated to hold 160,000,000 tons of iron ore and would require the construction of a railroad into the district. The same company together with a Canadian enterprise was reported to have made some investments in the exploration and development of the vast undeveloped tracts of rich iron ore astride the Labrador-Canada boundary. In Egypt, the establishment of that country's first steel plant was forecast by a reported $60,000,000 commitment by a U.S. financial group.

The Anaconda Copper Mining company was reported ready to invest up to $150,000,000 more in copper mines in Chile. A group of eastern and central U.S. publishers agreed during the year to construct a newsprint mill in Canada costing $65,000,000 or more. In Mexico, an attempt was made to meet the newsprint shortage through the use of local vegetation by erecting a pulp factory with U.S. and Mexican capital. The plant was to use bamboo, banana stalks and other Mexican vegetation as raw materials.

In South Africa, the American-Anglo-Transvaal corporation, formed in 1946 by a United States-United Kingdom financial group, became actively interested in gold mining during 1947 and was expected to exercise great influence over the industry in that country. A U.S. tire manufacturing company opened a new plant in the Union of South Africa and another competitor announced it would also open a new tire plant there. In Australia, $3,250,000 was to be spent on the extension of plants manufacturing Ford automobiles and $3,000,000 for General Motors cars; International Harvester Ltd. planned to expand its agricultural machinery works with an additional investment of $8,000,000.

Private U.S. capital was not unequivocally welcome in all countries, however, and at least two countries were added to the list of those imposing restrictions on importation of foreign capital. It was reported during April 1947 that Belgium had rejected the offer of a leading U.S. glass manufacturer to invest some $3,500,000 on the grounds that there was no room for an additional competitor in the industry. In July, the government of Mexico decreed that foreigners must obtain permission from the ministry of foreign affairs to invest their capital in that country and limited their share holdings in certain types of enterprises to 49% of the stock.

Private U.S. loan capital, as distinguished from equity capital (mainly direct investment), evidenced no particular desire during 1947 to share substantially in the dollar financing required for world reconstruction. A major exception to this situation was the U.S. subscription in July to practically all of the $250,000,000 of bonds offered for sale by the International Bank for Reconstruction and Development. Since the U.S. government's subscription to the bank's shares was well in excess of this sum, it was generally believed that holders of the bonds would suffer no loss in the event that the bank's debtors defaulted on their obligations. Nevertheless, during the last half of the year, this issue and all other foreign issues (except Canadian) offered in the U.S. during the preceding 12 months were quoted at less than offering prices, and in the case of Australian issues, considerably less. The Australian government, which had very successfully marketed 3 issues in the New York market, but found that a fourth and fifth had not sold so promptly, announced that there would be no further operations in that market before 1952.

Denmark's plans to convert its 6% obligations into a new dollar bond issue bearing a lower interest rate had to be abandoned because of the deterioration of the market in the United States for foreign bonds. Instead the credit was obtained from Swiss bankers.

During the latter half of 1947 a few small borrowers paid off their U.S. loans, and little progress was made toward the settlement of defaulted dollar bonds. The republic of Haiti and the Dominican Republic announced the redemption of their bonds payable in U.S. dollars.

The Italian government proposed a plan to resume partial service on Italian dollar bonds, service on which had been suspended since 1940. The terms of the Peruvian government's plan to resume service on its debt held in the U.S. and elsewhere appeared to have received unenthusiastic response from investors.

The U.S. government announced that U.S. holders of the dollar obligations of Germany and Japan could file claims until Sept. 2, 1947, against the properties of those countries in the U.S. seized by it.

## Uranium.

The wartime development and use of uranium in the atomic bomb, and its prospective use in power generation by atomic fission, led to a world-wide survey of all known and prospective sources of uranium, but for security reasons very little information was made public in this connection. For the same reason, no country reported its output of uranium ores or products.

Prewar consumption was so small that it was supplied by by-product uranium recovered from radium and vanadium ores, but war developments caused uranium to be sought and mined for its own sake. Metallic uranium, which before the war was little more than a laboratory curiosity, was later produced by the ton.

There were wide differences of opinion as to possibility and feasibility of developing commercial power from fissionable material. It was soon recognized that the driving of an automobile or aeroplane was not feasible, but large-scale central station power seemed to have definite possibilities. However, while in some quarters it was asserted that this could be accomplished in from five to ten years, more conservative opinions multiplied these figures by five. (*See* also Atomic Energy; Chemistry; Metallurgy; Physics.) (G. A. Ro.)

## Urology.

The administration of a mixture of two or more sulfonamides for the purpose of combating infections of the urinary system proved successful in 1947 in preventing renal complications. Equal amounts of small doses of sulfathiazole and sulfadiazine or sulfamerazine were found to have a high antibacterial activity, with evidence that they would cause little, if any, damage to the kidneys.

The supply of antibiotic agents was no longer limited, and these drugs were used to an increasing extent. The antibiotics were used frequently in combination with the sulfonamide drugs to good effect. The value of streptomycin in combating gram-negative organisms was attested. Large initial doses are essential, since resistance to the drug develops rapidly. The use of streptomycin, however, was curtailed because toxicity developed in some persons after long-continued use of the drug. This toxicity was especially manifested by involvement of the eighth, or acoustic, nerve apparatus, which results in ataxia and deafness. Systemic reaction was observed so frequently that legal measures were considered which would forbid the administration of streptomycin except under the guidance of a physician. For persistent local infections, such as genitourinary conditions, sinuses and open wounds, tyrothricin administered in a solution of 1:5,000 was found to be of value.

An interesting complication which followed transurethral operations on the prostate gland was reported; namely, haemolysis. An unexplained so-called oliguric syndrome, consisting of a reduction in the daily output of urine and uraemia after operations on the prostate gland, had occurred occasionally and no cause for it could be determined. On investigation, evidence of haemolysis was found, which apparently resulted from the entrance of sterile water, used as an irrigating agent, into the blood stream. The portal of entry was believed to be the prostatic veins that had been severed during operation. The resulting damage to the kidneys resembled the haemoglobinuric nephrosis observed in such situations as the transfusion of incompatible blood, blackwater fever, severe crushing injuries, etc. Considerable investigation was done on this subject, although it was realized that the condition probably is only one of several factors that may be important in the oliguric syndrome. To eliminate this factor, attempts were made to prevent haemolysis by the use of isotonic solutions, such as a 5% solution of glucose, as irrigating fluids during operations on the prostate gland.

Much interest was aroused in the possibilities of the tiding-over of acute renal failure and uraemia (when the renal condition is such that some improvement might be expected), either by means of an artificial kidney or by peritoneal dialysis. Such a situation may be encountered in a variety of conditions, including the one mentioned. By such a procedure the nitrogenous waste products of metabolism are eliminated by means other than the kidneys until the kidneys are able to resume their normal function. With improved mechanism, the artificial kidney was successful in selected cases. Among older persons peritoneal lavage was of some value without necessitating the complicated mechanism of the other method.

Ferris, "Treatment of Acute Renal Insufficiency with Peritoneal Lavage," *Proc. Staff Mect., Mayo Clin.*, 22:305–313 (Aug. 6, 1947). (W. F. BR.)

**Uruguay.** A republic in the southeastern part of South America, bounded on the east, south, west and north, respectively, by the Atlantic ocean, the Río de la Plata, Argentina and Brazil. Area, 72,172 sq.mi. (the smallest of any South American republic); est. pop. (1944), 2,235,000. Racial distribution is estimated at 90% white and most of the rest mestizo; large numbers of Europeans, especially Italians and Spaniards, live in Uruguay. The capital and chief port is Montevideo (1945 est. pop., 747,665); other important cities (with 1945 pop. ests. unless otherwise stated) are Paysandú (50,000), Salto (48,000), Mercedes (33,000), Minas (1942 est., 32,000), Tucuarembó (30,000), San José (1942 est., 30,000), Rocha (28,500), Melo (28,000), Durazno (1942 est., 27,000) and Santa Lucía (1942 est., 27,000). Presidents in 1947: Juan José Amézaga, until March 1; Tomás Berreta, March 1–Aug. 1; Luis Batlle Berres, from Aug. 1.

**History.**—Presidential elections on Nov. 24, 1946, had apparently placed Tomás Berreta, public works minister and candidate of the *Batllista Colorado* party, and his running mate, Deputy Luis Batlle Berres, in line for inauguration early in 1947, with a popular vote of 264,626 over the Nationalist candidate, Luis Alberto Herrera, and his vice-presidential running mate Martín Echegoyen, who polled 176,628 votes. Congress on Feb. 11 proclaimed Berreta and Batlle as the officially elected candidates. Berreta at the time was in the U.S. on a trip officially announced as aimed at seeking aid in getting farm machinery for Uruguayan agricultural expansion. Berreta and Batlle were inaugurated on March 1 for the term ending in 1951. Montevideo was host to the third plenary session of the Inter-American Council of Commerce and Production from April 8 to April 11; the meeting, which was attended by 300 business men, mostly from South American countries, was concerned chiefly with problems of readjustment from a wartime economy to peacetime production. Beginning June 30, a 24-hr. general strike crippled public transportation and other services in Montevideo; the strike was called by 60 unions in protest against a government ban on strikes in the public services. Pres. Berreta's health became increasingly bad in midyear and on Aug. 1 he received a leave of absence from the office, Vice-President Batlle succeeding to active control. Berreta died the following day and Batlle then became constitutional president for the balance of the term.

**Finance.**—The monetary unit is the peso, valued at 52.63 cents U.S. currency on Oct. 31, 1947. The public debt continued to grow steadily through the year; successive figures for it were: May 31, 685,700,000 pesos; June 30, 692,100,000 pesos; Aug. 31, 694,200,000 pesos. Government revenues for the first three months of 1947 were 47,300,000 pesos as against 32,700,000 pesos in the same period in 1946. The total gold and foreign exchange holdings available for foreign payments on Feb. 28 were about $145,000,000, including $70,000,000 in blocked sterling, $69,000,000 in gold, $4,400,000 in various currencies and $1,600,000 in an oversold dollar position. Gold held abroad by the Bank of the Republic on June 30 totalled 89,600,000 pesos in contrast with holdings of 142,900,000 pesos on the same date in 1946. A financial agreement with Great Britain was concluded in London on July 15 covering £17,000,000 in frozen credits held by Uruguay; the agreement provided that 10% of the total was to be made available to Uruguay within one year and that most of the balance would be used to buy British-owned public utilities in Uruguay. According to terms of the agreement, £1,000,000 would be released immediately for free disposal by Uruguay and up to £700,000 additional within the following 12 months after ratification of the agreement. Distribution of portions of the remaining credits involved these items: £2,000,000 for purchase of the Montevideo street railways; approximately £3,000,000 for purchase of other utilities exclusive of the Central Uruguayan railway; £6,000,000 for purchase of Uruguayan bonds held in Great Britain; and £100,000 for purchase of buildings in London for use as the Uruguayan embassy and consulate; any remaining balance was to be frozen until 1951.

**Agriculture.**—The area in wheat in 1946–47 was stated to be 903,166 ac. (1945–46: 864,602 ac.) and production for the season was estimated at 188,529 metric tons (1945–46: 216,595 tons); the lower yield was blamed largely on damage by locusts and frost. Tobacco production in 1946 was 1,156,007 kg. (1945: 823,442 kg.). The area devoted to linseed in 1946 was 410,144 ac. (1945: 592,103 ac.) and the production of linseed in 1946–47 was 83,227 metric tons (1945–46: 131,039 tons). The estimate of the area in rice in 1947 was 25,849 ac., an increase of 4,639 ac. over 1946, and production for the year was estimated at 37,000 metric tons, a gain of 20% over 1946. An estimate of the corn crop, made in June, was for a 58% increase in quantity over 1946, although the area was down 6%. Simultaneous estimates of peanut production forecast an increase of 22%, although the area was down 7%; the sunflower seed estimate dropped, however, by 8% and the area devoted to it by 12% from 1946 figures. It was thought by September that locusts would prove an unusually serious menace to agricultural prospects. Cattle sales at Montevideo in the first three months of 1947 were 73,493 (same period in 1946: 161,434); sheep sales in the same period were 447,730 (same period in 1946: 293,179). The decline in cattle sales was attributed to the prevailing low prices.

The government during the year considered a 25,000,000-peso irrigation plan designed to bring into cultivation 247,000 ac. of additional land over a ten-year period.

**Trade and Communications.**—The foreign trade import balance for the first four months of 1947 was approximately $15,000,000; the import balance with the U.S. for the first six months of 1947 was $34,000,000. Frozen mutton exports in the first three months of 1947 were 1,120 metric tons (same period in 1946: 3,466 tons); canned beef exports in the same period were 2,420 metric tons (same period in 1946: 3,828 tons); jerked beef exports in the same period were 1,540 metric tons (same period in 1946: 1,642 tons). Tanned cattle hide exports in the first three months of 1947 were 247,122 kg. (fourth quarter of 1946: 487,809 kg.); sole leather exports in the same period were 70,883 kg. (fourth quarter of 1946: 120,283 kg.). Wool exports from Oct. 1, 1946, to March 31, 1947, were 55,109 bales (same period in 1945–46: 70,727 bales); woollen yarn exports in the first three months of 1947 were 140,594 kg. (same period in 1946: 147,960 kg.); woollen fabric exports in the first three months of 1947 were 44,989 kg. (same period in 1946: 98,714 kg.). Uruguay concluded an agreement with Great Britain during the year for the export of 100,000 metric tons of meat annually, 60,000 tons in canned meats and the balance in chilled or frozen meats; the two governments were also negotiating a sales agreement covering eggs, cheese and powdered milk.

The municipality of Montevideo contracted to buy the city's transportation system, including buses and street cars, for which it was proposed to issue 17,000,000 pesos in bonds; a further 14,000,000-peso bond issue was proposed for improvements in the system. According to such plans, the city would operate all its transportation by 1954. The government extended its telephone monopoly during the first quarter of 1947, by which time it was almost complete. Automotive vehicles in operation Jan. 1, 1947, included: 47,800 passenger cars (49.4% of U.S. and Canadian makes), 19,000 trucks (60.5% of U.S. and Canadian makes), 1,550 buses (20.3% of U.S. and Canadian makes), 650 truck trailers and 1,800 motorcycles and three-wheeled vehicles. Authorities considered plans for building a three-branch, 14.9 mi. subway in Montevideo but press reaction to it was adverse.

The government concluded a treaty with Brazil for construction of an international bridge over the Cuareim river.

**Manufacturing.**—Cotton yarn production in the first three months of 1947 totalled about 750,000 kg. The estimate of wine production in 1947 was 60,000,000 l. (1946: 72,000,000 l.). Crude oil runs to stills in 1946 were 2,503,866 bbl. (1945: 1,965,417 bbl.); by-products produced in 1946 included: gasoline, 781,553 bbl.; aviation gasoline, 14,364 bbl.; kerosene, 428,992 bbl.; gas oil, 226,680 bbl.; fuel oil, 894,896 bbl.; diesel oil, 92,919 bbl. A proposal considered during the year involved harnessing of the Quequay river at a cost of 11,000,000 pesos to develop 70,000,000 kw. of electricity annually.

BIBLIOGRAPHY.—*Foreign Commerce Weekly; South American Handbook* (1947); Pan American Union, *Bulletin* (monthly). (R. H. FN.)

**U.S.S.R.:** *see* UNION OF SOVIET SOCIALIST REPUBLICS.

**Utah.** A Rocky Mountain state, admitted to the union in 1896, popularly known as the "Beehive state." Area 84,916 sq.mi. (82,346 sq.mi. land; 2,570 sq.mi. water); pop. (Dec. 31, 1947) 650,000; (U.S. census 1940) 550,310. The rural (nonfarm) population was 150,465 in 1940, (farm) 94,352;

urban 305,493, with the following origins: white (native) 510,662; (foreign-born) 32,298; Negro (native) 1,225 (est. 1947, 3,000); (foreign-born) 10. Farm population decreased considerably after 1940, but was again increasing. Urban population increased about 60% because of war conditions and changed little after the close of the war. Capital, Salt Lake City (pop. est. 1947, 200,000). Other principal cities with 1947 est. pop.: Ogden (62,000), Provo (25,000) and Logan (15,000). In 1946 the Mormon Church gave its membership total as 996,505, a little less than one-half, or 495,000, in Utah and 113,750 in Salt Lake City.

**History.**—In 1947 state-wide and local observances were held commemorating the coming of the Mormon pioneers to the Salt Lake valley 100 years before. Visitors to Salt Lake City's famous Temple square exceeded the 1,000,000 mark—a new tourist record.

One of the best attended and most active National Governors' conferences took place in Salt Lake City, July 13 to 16.

One of the major developments brought about by the administration of Governor Herbert B. Maw during the centennial year was the final conversion of the Geneva Steel plant to private industry under the United States Steel corporation. During the 16 months this plant had been privately operated, it had employed 5,600 persons and paid out $18,000,000 in salaries. The benefits of this plant would extend to coal, oil and limestone mining and to many other industries that were planning to locate in the state.

On April 17, 1947, Heber Bennion, Jr., was appointed secretary of state to fill the unexpired term of E. E. Monson, who died suddenly on April 8; Ferrell H. Adams was auditor; Reese M. Reese, treasurer; Grover A. Giles, attorney-general; and Dr. E. Allen Bateman, superintendent of public instruction.

**Education.**—There were 149,948 children of school age in Utah in 1946 (fiscal year), and an average daily attendance at school of only 129,271 out of an enrolment of 144,118. The total cost of education for the fiscal year July 1946–July 1947, was $20,983,482.51 with $18,498,409.92 devoted to operating expenses. There were 4,857 teachers and 333 principals.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—Total obligations of $9.654,801.35 incurred in 1946 for public assistance exclusive of administration, were distributed as follows: Old-age assistance, $6,226,377.87; aid to dependent children, $2,041,139.52; aid to blind, $74,624.75; aid to employables, $96,316.27; aid to unemployables, $810,116.59; other assistance, $402,226.35. A total of 15,395 households were receiving assistance in June 1946, as compared with 14,895 households in June 1945. From Jan. 1 to June 30, 1947, $5,699,565.53 was distributed for public assistance.

The 1947 legislature fixed the amount of "budgetary needs" for recipients of public assistance at not to exceed (per month) $45 for a one-person case, $90 for a two-person case, $114 for a three-person case and $15 per person for each additional person beyond three in a case, with an over-all maximum of $175 for any case. The maximum must be adjusted according to changes in the U.S. cost of living index Jan. 1 and July 1 each year.

**Communications.**—In 1947 there were 29,780 mi. of roads maintained in Utah by the following agencies: state highway department 5,427; counties 15,427; cities and towns 2,588; and by the U.S. government in various federal reservations and by the grazing service 6,338 mi. Celebration of Utah's centennial year increased vehicle-miles of highway travel by 14% over the previous high year, 1946, and motor vehicle registration went to 180,000 licences, a new high, with registration receipts totalling $1,785,000 for 1947. Receipts from the 4-cent gasoline tax were $6,186,000. State highway expenditures were $9,000,000 of which $4,200,000 were federal co-operative funds. Beginning July 1, 1947, the state was to distribute $1,500,000 annually to cities and counties from motor vehicle registration receipts for expenditure on local roads. There were 63.27 mi. of electric railway and approximately 2,370 mi. of steam railway in 1947.

**Banking and Finance.**—The 60 banks, 48 state and 12 national, had total assets of $572,166,650.45 on Oct. 6, 1947, and total bank deposits reached $538,698,632.87. On Dec. 31, 1946, the 13 state-chartered building and loan associations had aggregate assets of $36,739,158.68. On June 30, 1946, the 6 federal savings and loan associations had aggregate assets of $19,913,720.90.

State receipts for the year ending June 30, 1947, were $61,902,432.72; expenditures were $57,453,374.34. The total of outstanding bonds in 1947 was $1,220,000, with this amount available from the state liquor control fund for retirement of all outstanding bonds. Thus the state was out of debt.

**Agriculture.**—Figures not yet final showed cash income from farm marketings in 1946 was $35,819,000 for crops and $93,783,000 for livestock and livestock products, as compared with final figures of $38,500,000 for crops and $87,734,000 for livestock and livestock products in 1945.

Preliminary value of truck and canning crops was $6,436,000 for 1946; for 1945 $8,318,000. The value of canning tomatoes in 1947 was $1,755,000 and shipping tomatoes $38,000.

Table I.—*Principal Agricultural Products of Utah, 1947 and 1946*

| Crop | Preliminary 1947 | 1946 |
|---|---|---|
| Wheat, tons | 262,020 | 209,430 |
| Hay (tame and wild), tons | 1,208,000 | 1,118,000 |
| Potatoes, bu. | 2,660,000 | 2,775,000 |
| Sugar beets, short tons | 704,000 | 568,000 |
| Celery, crates | 480,000 | 618,000 |
| Tomatoes, fresh, bu. | 82,000 | 66,000 |
| " processing, tons | 72,900 | 66,800 |
| Onions, 100-lb. sacks | 275,000 | 412,000 |
| Peas, tons (processed) | 15,120 | 17,260 |

Because of international agreements, all German and Italian prisoners of war were repatriated as of July 1, 1946, which caused a shortage of agricultural workers. However, these were replaced by approximately 800 Mexican nationals, which number increased to about 975 during the peak of the fall harvest. During May and June, 1947, the number of Mexican nationals, who aided in the thinning of the sugar beets and in the fruit and vegetable harvests, reached nearly 1,950. In October and the early part of November, they were used primarily in the sugar beet, tomato and potato harvests.

**Manufacturing.**—Manufacturing employment in Utah during 1947 was at a rate 65% greater than during the immediate prewar years—1937–41. The average number of workers in manufacturing in 1947 was about 27,500, by a large margin the highest postwar figure. Principal manufacturing fields are food products and primary metal industries. Several large new industrial plants were being built in 1947; many more were in the planning stage. Some of these were plants which would use products from the Geneva Steel mills but others were in such fields as gypsum, rubber products, oil refining, paint, cement, batteries and chemicals.

Annual manufacturing pay rolls in 1944, 1945 and 1946 were slightly in excess of $50,000,000. In 1947 the total was expected to approach $70,000,000. The gross value of Utah's manufactured goods was estimated at $450,000,000.

**Mineral Production.**—Preliminary reports show that metal mining in Utah in 1947 rebounded with great vigour from the lows of 1946, giving the state one of the best peacetime years in its mining history. Gold output climbed to a new all-time peak, and, except for three years during World War II, copper had its best year in state history. Silver, lead and zinc also made good gains.

In 1946, prolonged labour strikes and continued shortages of labour drove production of gold, silver, copper, lead and zinc to the lowest levels in recent years. Copper bore the brunt of the precipitous decline, but the output of each of the other four metals also slumped markedly. Despite appreciable increases in average prices of the five metals, except gold, the value of the five decreased 33% from $90,018,641 in 1945 to $60,202,627 in 1946. Production of manganiferous and tungsten ores increased in 1946, but output of molybdenum, fluorspar, coal, iron ore and vanadium declined. In 1946 the state had a production of 178,533 fine oz. of gold and 4,118,453 fine oz. of silver, as compared with 279,979 fine oz. of gold and 6,106,545 fine oz. of silver in 1945. The peak production year for copper was 1943.

Table II.—*Principal Mineral Production in Utah, 1946 and 1945*

| Mineral | 1946 | 1945 |
|---|---|---|
| Copper, lb. | 228,568,000 | 452,752,000 |
| Lead, lb. | 61,422,000 | 81,634,000 |
| Zinc, lb. | 56,584,000 | 67,260,000 |
| Value of all ores. | $60,202,627 | $90,018,641 |

The 1947 coal production was 1,740.889 tons; the 1947 coke production was 1,078,462 tons. Oil production reached 55,000 bbl. per day.

(J. C. AR.)

**Utilities, Public:** *see* PUBLIC UTILITIES.

**Vanadium.** The vanadium content of ores and concentrates produced by the major sources of supply is as follows, in short tons.

*World Production of Vanadium*

(Short tons of metal content)

| | 1937 | 1939 | 1941 | 1943 | 1945 | 1946 |
|---|---|---|---|---|---|---|
| Northern Rhodesia | 259 | 423 | 377 | 470 | 241 | 75 |
| Peru | 643 | 1,097 | 1,121 | 934 | 758 | 357 |
| South-West Africa | 652 | 567 | 297 | 636 | 141 | 110 |
| United States | 544 | 992 | 1,257 | 2,793 | 1,482 | 636 |
| Total | 2,150 | 3,200 | 3,100 | 4,850 | 2,600 | 1,178 |

Vanadium has been produced in small amounts in several other countries, and during the years of World War II there were appreciable outputs in Japan and Germany, the exact magnitude of which are not known, but which are reported to have been of the order of about half of the known outputs recorded above.

**United States.**—The trend of the vanadium industry in the United States is indicated by the following data, in short tons of vanadium content of ores and concentrates:

| | 1937 | 1939 | 1941 | 1943 | 1945 | 1946 |
|---|---|---|---|---|---|---|
| Mine shipments . . . . . . | 543 | 992 | 1,257 | 2,793 | 1,482 | 636 |
| Imports . . . . . . . . . | 629 | 1,066 | 1,069 | 1,058 | 789 | 406 |
| Peru . . . . . . . . . | 629 | 1,066 | 1,068 | 1,026 | 776 | 396 |
| Consumption . . . . . . . | ? | ? | ? | 3,631 | 2,547 | 825 |

While production and consumption declined each year after the war peak in 1943, consumption took an upward turn in the latter half of 1946, and by midyear of 1947 stood at the highest point after the close of the war. The resulting reaction on production brought receipts of ore at the mills during the first half of 1947 up to more than in the full year 1946. Although output dropped off during the third quarter, mill receipts for the nine months totalled 814 short tons. Imports also improved during 1947, but the total for the three quarters was only 315 short tons. (G. A. Ro.)

## Vandenberg, Arthur Hendrick

(1884– ), U.S. senator and statesman, was born March 22, in Grand Rapids, Mich. He studied at the University of Michigan law school, Ann Arbor, Mich., for one year, and joined the *Grand Rapids Herald* as a reporter, becoming editor and general manager of the paper. He was appointed to fill a U.S. senate vacancy in 1928 and was re-elected in 1934, 1940 and 1946.

Before the United States entered World War II, Vandenberg, a noninterventionist, attacked the lend-lease bill and aid to Britain. After the Japanese struck Pearl Harbor, Vandenberg generally approved the administration's foreign policy.

In 1945 Pres. Franklin D. Roosevelt appointed him delegate to the United Nations conference in San Francisco, Calif. Vandenberg subsequently urged the senate to ratify the U.N. charter which he supported because "this plan regardless of its infirmities, holds great promise that the United Nations may collaborate for peace as effectively as they have made common cause for war."

On Dec. 30, 1946, Vandenberg was named president pro tempore of the senate. During 1946 and 1947, he supported Pres. Harry S. Truman's bipartisan foreign policy. His relations with the president were cordial, and his advice was frequently sought by James F. Byrnes and George C. Marshall.

In 1947, Vandenberg vigorously backed the Truman doctrine and the Marshall plan and advocated a policy of "friendly firmness" toward the Soviet Union.

The latter, however, regarded him as an "imperialist" and "warmaker."

On Dec. 31, Vandenberg definitely renounced any presidential aspirations, declaring he was convinced he could best serve the country by completing his senate term.

**Varnishes:** *see* PAINTS AND VARNISHES.

## Vassar College.

A college for women at Poughkeepsie, N.Y., founded by Matthew Vassar in 1861. The college year 1946–47 was the first in the administration of President Sarah Gibson Blanding, Vassar's sixth, and first woman, president, who had succeeded Dr. Henry Noble MacCracken upon his retirement the preceding July.

Vassar's enrolment in Sept. 1947 was 1,370 women resident undergraduate students, 44 of whom came from foreign countries, 11 graduate students and 47 male veterans. The latter group consisted of nonresident students from the nearby community who were first admitted in April 1946 when Vassar took the lead among women's colleges in making temporary room for veterans.

In May 1947 more than 3,000 Vassar alumnae, members of all living classes, revisited the campus for a series of five reunion week ends during which they discussed problems of family and community life of concern to college women.

In 1947 Vassar college put into operation its revised curriculum providing for less specialization and more correlation of student electives. To meet increased costs and salaries, the trustees voted in March to raise the tuition to $1,600, effective in 1946–47. (For statistics of endowment, enrolment, faculty, library volumes, etc., *see* UNIVERSITIES AND COLLEGES.)

## Vatican City State.

A sovereign independent state, established by the Lateran treaty between the Holy See and the Italian government on Feb. 11, 1929. The treaty is recognized in international law, and the reigning pope is the sovereign. The area of Vatican City is 0.5 sq.mi., excluding the papal estate of Castel Gandolfo and certain basilicas in Rome which are extraterritorial. Pop. (1938 est.): 750. Executive powers are exercised by the governor, responsible to the pope.

The Vatican in 1947 maintained diplomatic relations with 40 states. The status of relations with several additional countries was unsettled because of disturbed conditions. The Vatican had 28 nuncios, representatives of ambassadorial rank, and 5 internuncios, representatives of lesser rank, in as many countries. Bishop Gerald P. O'Hara, of Savannah-Atlanta, Ga., was named regent to the nunciature in Bucharest, Rumania. Bishop Joseph P. Hurley of Saint Augustine, Fla., continued as regent in Belgrade, Yugoslavia. The Vatican sent apostolic delegates, representatives without accredited rank, to 18 countries, including Canada, Great Britain and the United States.

During 1947 there was an exchange of correspondence between Pope Pius XII and Pres. Harry S. Truman dealing with world peace, and implicitly condemning communism. Myron Taylor continued at the Vatican as Truman's personal representative. Baptists in the United States protested both the interchange of letters and the return of Taylor as presidential representative at the Vatican as a violation of their doctrine of the separation of church and state. However, the president stated that he found the relationship helpful during the existing world crisis.

In March the Vatican gave a new interpretation to article xii of the 1929 concordat with Italy. Subsequently, the constituent assembly reaffirmed the Lateran agreement, regulating church-state relations in Italy.

In July the *Osservatore Romano,* semiofficial Vatican daily newspaper, attributed the break-up of the foreign ministers conference in Paris to soviet opposition to Allied peace plans and commented in strong language on Russia's rejection of the Marshall plan.

On the occasion of Secy. of State George C. Marshall's speech in Rio de Janeiro, Brazil, in August, the paper expressed its conviction that the Latin-American policy of the United States paved the way for peace and continental security, whereas communism constituted a threat to both. *L'Osservatore* recalled that similar principles had been expressed by many popes, and as late as Christmas Eve 1945, by Pius XII, who said that totalitarianism is not only incompatible with a true and sound democracy but also represents a permanent danger of war.

Extensive changes in Greek ecclesiastical jurisdictions were announced by the Holy See. The Rev. Marco Sigala was named archbishop of Athens, Greece, by Pope Pius XII, accompanied by other transfers and appointments.

The Vatican in August approved creation of an international relief organization to co-ordinate the relief work of Catholic groups in all countries. In announcing the program the pope paid tribute to the "grandiosity" of Catholic relief work in the United States.

During September the Food and Agricultural organization invited the pope to send an observer to future meetings of that body. (*See* also PIUS XII; ROMAN CATHOLIC CHURCH.)

(J. LAF.)

**Veal:** *see* MEAT.

## Vegetable Oils and Animal Fats.

Total U.S. production of fats and oils from domestic materials increased in 1947 to 9,900,000,000 lb. compared with 8,848,000,000 lb. in 1946 and the high record of 10,847,000,000 lb. in 1943. The increase in 1947 was principally in butter, lard, tallow and grease and cottonseed oil. Consumption of oils and fats also increased but less rapidly than production and imports. The principal increases in imports were in linseed oil, tung and copra. Stocks were increased during 1947 to replace the 460,000,000 lb. withdrawn in 1946. Stocks as a whole were down to 1,266,000,000 lb. on Dec. 31, 1946—the lowest level after the 1930s. By Aug. 1947 stocks had recovered to more than 1,400,000,000 lb.

Total U.S. butter production was estimated at 1,700,000,000 lb. in 1947, which was a gain of about 12% over 1946. Production of lard and pork fats also increased in 1947, although it was lower in the fall months than a year earlier. Linseed oil production was below 1946 as well as the average 1937–41. All of the drying oils were in reduced supply except tung oil, of which a larger amount was imported. Peanut-oil production increased sharply under the stimulus of a price support of $200 per ton through 1947—$28 per ton above the 1946 price. Crushers at times paid more than the support price. Large exports were made for crushing abroad. Civilian consumption of peanuts as food declined to 5.2 lb. per capita, lowest for 5 years, and allowed more of the crop to be crushed for oil. Cottonseed increased from the low level of 1946. Soybeans increased only slightly although support prices were maintained at the level of 1944–46.

*U.S. Production of Principal Fats and Oils, 1943–1947*

(In millions of pounds)

| | 1947* | 1946 | 1945 | 1944 | 1943 |
|---|---|---|---|---|---|
| Butter | 718 | 1,450 | 1,699 | 1,818 | 2,015 |
| Lard | 901 | 2,130 | 2,132 | 3,203 | 3,056 |
| Edible tallow | 98 | 140 | 202 | 198 | 259 |

*January to June.

Prices of all fats and oils rose through the years of World War II, and after price ceilings were removed in 1946 advanced rapidly. The index of prices of 27 items was 148% of prewar, 1935–39, in 1945; 216% in 1946 and had advanced to 251% by Sept. 1947. Strong export demand from Europe as well as the large domestic consumption was expected to support prices through 1948. Animal fats were especially short and not likely to be produced in increased quantity in 1948. Supplies for import were increasing; but the strong demand of Europe was holding imports down to less than half the prewar volume, the total amounting to almost the same as exports. The world's production of animal fats was increasing slowly and oil seeds at a somewhat more rapid rate.

Consumption of fats and foods containing them increased slightly in 1947. In 1946 the total of food products consisting of butter, lard, margarine, shortening and other edible oils amounted to only 39.6 lb. per person compared with 47.4 lb. in 1940. Butter amounted to 8.2 lb., lard 11.8 lb., margarine 3.1 lb., shortening 10 lb. and oils 6.3 lb. The consumption of all oils including soap, paints, etc., was 63.7 lb. in 1946 and slightly more in 1947. Government operations in oils and fats were in smaller quantities than during the war years, but about 55,000,000 lb. of lard was bought for export to Austria and Germany in July and August. Total allocation of all kinds of fats and oils for 1947 amounted to 1,116,000,000 lb.

Production of fats and oils was smaller than in 1946 in Europe because of drought and the feed scarcity which held down livestock productions. Larger output of whale oil, copra and some other oils offset the reduction in Europe and provided exports amounting to nearly 1,000,000 tons more than was shipped in 1946. (J. C. MS.)

## Vegetables.

The U.S. crop of 25 vegetables, classed as truck crops for fresh market, in 1947 was 12% below the record crop of 1946 but 15% above average. New high records were made by sweet corn, kale, lettuce and watermelons. Other vegetables mostly yielded less than in 1946 but were above the ten-year average 1936–45. The tonnage of eight crops for processing was 13% less than in 1946 but 21% above average. Only three crops, cabbage, beets and spinach, were below average, while lima beans set a new high record. The total acreage of vegetable crops was 3,617,000 ac. compared with the record acreage of 4,035,000 ac. grown in 1946.

Prices of fresh vegetables were at high levels through 1947 in spite of continued high production and large stocks of canned vegetables. Consumption of fresh vegetables continued to be large, except for occasional gluts of heavy shipments of some crops. Crops for processing sold at high prices in the face of the large stocks of canned vegetables. Contracted tonnage prices were about the same as in 1946 but some open-market tonnage sold at lower prices.

**Commercial Truck Crops for the Fresh Market.**—The total tonnage of 25 truck crops grown for the fresh market was estimated at 7,978,000 tons in 1947 compared with the record of 9,064,000 tons raised in 1946 and a ten-year average (1936–45) of 6,933,000 tons. The acreage of these crops was 10% less in 1947 than a year earlier, amounting to 1,844,000 ac., about 6% above the average. Yields were 2% below 1946 but 9% above average.

The crops that exceeded production of 1946 were kale, lettuce, sweet corn, artichokes, asparagus and watermelons, while the shortest crops were onions, melons, cabbage, eggplant and escarole. Higher market prices were reflected in the total value of the smaller crop, $597,589,000 compared with $577,366,000 in 1946 and the average of $338,677,000 in 1936–45. The top crops in total value were: lettuce $108,367,000; tomatoes $87,112,000; celery $56,864,000 and onions $53,142,000. Cabbage,

U.S. GOVERNMENT INSPECTORS spot-checking the condition of fresh celery shipped into Philadelphia produce yards by refrigerator car in 1947

cantaloupes and carrots were each worth more than $40,000,000. In value of truck crops, leading states were as follows: California $224,184,000; Florida $68,760,000; Texas $43,277,000; Arizona $39,477,000; New York $34,163,000; New Jersey $24,534,000; Michigan $23,040,000 and Colorado $20,022,000. Texas had advanced to third place and Arizona to fourth from sixth. New York and New Jersey had declined in comparative output. The steady development of southwestern truck production continued.

A study of the losses in retailing fresh fruits and vegetables in a number of stores in Pennsylvania and New Jersey disclosed an average of 7.4% of the value of the actual sales or $74 for each $1,000 of goods sold. The largest losses were in lettuce, tomatoes, melons, peppers and cauliflower among the vegetables and bananas, oranges, and apples among the fruits.

**Commercial Truck Crops for Processing.**—The total tonnage of 11 U.S. truck crops for processing harvested in 1947 was 5,470,930 tons compared with 6,304,060 tons raised in 1946 and the 10-year average 1936–45 of 4,522,080 tons. The acreage —1,800,000—of these 11 crops was 10% less than that of 1946 but 13% above the average of 1,600,000 ac., 1936–45. Yields per acre were above average in 1947 for asparagus, green lima beans, cucumbers, green peas, spinach and tomatoes and below average for snap beans, beets, cabbage for sauerkraut and sweet corn. Prices per ton for these processing crops were lower in 1947 than in 1946 for 6 crops and higher for 5, with the general result that the total value of the 11 crops was $209,125,000 in 1947 compared with $249,489,000 in 1946 and $114,943,000 for the 10-year average 1936–45. Crops that brought higher average season prices in 1947 were green lima beans, beets, cabbage, sweet corn, green peas and tomatoes.

The pack of canned vegetables for the calendar year 1947 was estimated at 6,461,000,000 lb. compared with 7,612,000,000 lb. in 1946 and the prewar average of 4,084,000,000 lb. (1935–39). Stocks at the beginning of 1947 were 4,562,000,000 lb., a high record, making a total available supply near the record of 1946. Civilian consumption was estimated at about 46 lb. per capita. The production of frozen vegetables, 390,000,000 lb., was the highest on record, except for 1946. Stocks of 332,000,000 lb. were the largest on record and tended to depress retail prices somewhat. Consumption of frozen vegetables increased steadily from a prewar average of less than ½ lb. to 2.25 lb. in 1947. Exports of canned vegetables declined from the high record of 1946. ## Venereal Diseases.

According to a report made available in late 1947 by the interim commission, World Health organization, increases throughout the world in the incidence of venereal diseases because of World War II brought control to the fore as a major international problem. In war-torn and occupied countries the incidence rates of the venereal diseases were not only doubled and tripled, but, as in one of the European countries the increase was twelvefold. There was some evidence at the end of the year, however, that further increases had been checked in most European countries and that in some the number of cases had begun to decline.

In the U.S., the number of reported cases of civilian primary and secondary syphilis increased over 1946 for the second year in succession. This increase was the result of the return to civilian life of millions of adult males in the age group in which syphilis occurs frequently. The rates per 1,000 total population of primary and secondary syphilis cases reported by civilian and military sources did not reflect the sharp increase noted in the number of such cases reported for civilians in 1946–47. A study made by the U.S. public health service based on rates calculated for the combined civilian-armed forces' population of the U.S. showed a continuous increase in the rate of primary and secondary syphilis reported from 1941–46 with a levelling off in 1947. (*See* table on page 776.)

Since a steady decrease was shown in the congenital and late syphilis rates, the total syphilis reported rate had shown a continuous decline after 1943. New cases of early latent and congenital syphilis reported were approximately the same in fiscal 1947 as in fiscal 1946. Late and late latent cases reported were below the number in the previous year, although the downward trend in this group for 1947 was much less than it had been in 1944–45–46.

The general mortality and infant mortality rates for syphilis, as well as admissions to mental hospitals rates, all reached new low points for the latest years in which data were available in 1947. These were 9.3 (estimated) per 100,000 population for general mortality in 1946; .25 per 1,000 live births for infant mortality in 1945; and 5.7 per 100,000 population for admissions to mental hospitals in 1945. These figures probably reflected the effectiveness of treatment in prevention.

More than 400,000 civilian cases of gonorrhoea were reported in 1947, the largest number yet reported to the U.S. public health service. There was evidence, however, that this was far

*As of Jan. 1 (mid-point of fiscal year).

below the real incidence of gonorrhoea and it was not possible to interpret the increase in gonorrhoea reporting as being attributable to a higher incidence rate. Treatment of gonorrhoea on epidemiologic or clinical evidence rather than bacteriologic identification of the gonococcus was an increasingly widespread practice.

During the fiscal year health department clinics made approximately 1,500,000 diagnostic observations of persons to detect the presence or absence of venereal disease. About a third of these observations resulted in the diagnosis of at least one venereal disease. Among the previously untreated syphilis infections found by clinics, approximately 57,000 were primary and secondary, 56,000 early latent, 8,000 congenital and 38,000 late syphilis cases. About 70% of the primary and secondary cases without previous treatment were referred to in-patient care for therapy. Less than 5% of approximately 300,000 gonorrhoea cases diagnosed by clinics were referred for in-patient care. Clinics (excluding rapid treatment centres) obtained on an average of about one contact from each primary and secondary syphilis case diagnosed.

State-wide in-patient treatment services were provided through special federal grants supplementing local funds in 42 states, the District of Columbia and the Virgin Islands. Federal grants amounted to 75% of the total cost. Allotments were made to 36 rapid treatment centres and 29 bed contract plans in which syphilis patients were referred to general hospitals by health departments. During the year, 181,000 patients were admitted to rapid treatment centres. This was a 3% increase over the previous year. Syphilis patients comprised an even greater proportion of total admissions in 1947 (85%) than in 1946 (68%). Gonorrhoea admissions declined to 5% of total admissions in 1947 as compared with 18% in 1946.

Treatment for gonorrhoea was stabilized to one or two injections of penicillin on out-patient schedules. Studies on the treatment of syphilis with penicillin continued to show no factors detracting from the great promise indicated in early reports. Penicillin administered every two or three hours during an average of nine days was used successfully for the in-patient treatment of most cases of early acquired syphilis, and the treatment of syphilitic pregnant women. Out-patient schedules utilizing penicillin in oil and beeswax, administered once daily were also used with encouraging results.

New elements entering into projects developed by the venereal division of the U.S. public health service included an attempt to intensify contact investigation during the course of a program of mass blood testing; a program of public education designed specifically to spread an awareness of the symptoms of venereal disease in order to encourage infected individuals voluntarily to seek diagnosis, a program in which mobile clinics were used to examine persons on large plantations in the rural south, and a plan to intensify and speed up the process of contact investigation.

Congress appropriated $17,426,300 for the fiscal year for venereal disease control; $8,764,400 was allocated to the states and territories; $6,681,882 was expended for maintenance and operation of rapid treatment centres and project grants for other in-patient care; $1,980,018 was used for administration, clinical and laboratory research, demonstrations, scientific information, public and professional education and other control activities.

**Great Britain and Europe.**—Increases in venereal disease in Europe, as mentioned above, were apparently checked at the end of 1947. In Great Britain the incidence of syphilis during the first six months showed a decrease in most London and provincial clinics, and there was every indication that the drop would be maintained. In 1946 the number of cases of syphilis had been twice as high as in 1945, an increase similar to that of 1920, two years after World War I. Cases of venereal diseases in the British army in 1946, per 1,000 per annum, had been 185 in Germany, 168 in Austria and Italy and 33 at home; the incidence of fresh cases among British soldiers for 1947 in the British zone was 31.2 per 1,000 per annum. In Berlin the number of cases was higher than this, but in Hamburg it was lower. There was on the other hand a large increase in venereal diseases in France. This was attributed to the closing of brothels by the decree of April 13, 1946, but H. Gounelle and P. Girault maintained that this was only a contributory cause and that the steep rise in incidence really began as far back as 1941.

Official figures in this field may be fallacious, however, as a much larger number of cases of gonorrhoea and syphilis, both service and civilian, were being treated with penicillin by specialists and general practitioners, and of these there was no record.

The success of the educational campaign carried out by the Central Council for Health Education in Britain in making the population "V.D. conscious" was shown by the increasing number of both men and women (106,000 in 1946) who attended clinics with signs or symptoms simulating venereal disease, but which on examination were considered to be nonvenereal in origin. In 1946 more than 50% of these cases were suffering from such diseases as nongonococcal urethritis, vaginitis, warts and balanitis.

Advances in treatment continued. R. B. Greenblatt and his collaborators showed that streptomycin was far more efficacious than antimony in the treatment of *granuloma venereum* (4th venereal disease). Streptomycin was also found to be effective in the treatment of gonorrhoea, but there was little indication that this antibiotic would replace penicillin, a relatively nontoxic drug. Pleuropneumonialike organisms are sensitive to streptomycin, and A. H. Harkness obtained an excellent result in a case of Reiter's diseases (nongonococcal urethritis with polyarthritis) after a ten days' course of this antibiotic.

British anti-lewisite, or BAL (known as AX 217 for security reasons during the war), was used extensively in Britain and the U.S., usually with excellent results, in the treatment of arsenical dermatitis. Its therapeutic value was established and plans were well advanced for an issue by firms in Britain of ampoules for intramuscular injection, subject to biological control. The preparation was used with success in other arsenical intoxications, such as granulo-cytopenia and encephalopathy.

Penicillin in oily suspensions (used largely for the one injection treatment of gonorrhoea) was employed more frequently in Britain for the treatment of syphilis (300,000 units twice daily for ten days); the three-hourly therapy with aqueous solutions, for which patients had to be admitted to hospital, was less favoured. Many cases of syphilis were, however, treated with aqueous solutions of twice-daily injections of 300,000 units or more; the results, as gauged by clinical response and serological tests, appeared to be equal to those obtained with multiple injections, but the final assessment demanded many years of clinical and serological observation.

Regulation 33B, a wartime measure that provided for the notification of persons alleged to have spread venereal disease, lapsed at the end of 1947. (*See* also PUBLIC HEALTH SERVICES.)

(A. H. Hs.)

**Venezuela.** A north-coast South American republic, bounded on the west, south, east and north, respectively, by Colombia, Brazil, British Guiana and the Caribbean. Area: 352,143 sq.mi.; pop. (1946 est.): 4,300,000, including slightly more than 100,000 forest-dwelling Indians and 23,320 Venezuelans living abroad. Racial distribution has never been officially calculated or estimated, but important fractions are mestizo, Negro and mulatto; about 80% of the population is rural. The capital is Caracas (1942 est. pop., 269,930); other important cities (with pop. by 1941 census) are Maracaibo (112,519), Valencia (53,938), Barquisimeto (54,176), Maracay (32,992), San Cristóbal (31,447), Cumaná (25,893), Puerto Cabello (22,087), Ciudad Bolívar (19,789), Coro (18,962) and Carúpano (16,548). President in 1947: Rómulo Betancourt.

**History.**—The year 1947 brought a virtual end to the provisional regime which had been in power after the successful revolution against the regime of Pres. Isaías Medina Angarita in Oct. 1945. Principal events of 1947 were the adoption of a new constitution in July and the election of a president and legislators in December. The provisional government resigned on March 23 and was reformed with the addition of four members; control remained essentially in the hands of the left-of-centre Acción Democrática, the political party which had taken the lead in the 1945 revolution. The new cabinet on March 26 declared amnesty for political exiles. United States Ambassador Frank P. Corrigan on April 11 walked out of a session of the constituent assembly when a Communist member spoke denouncing United States policies. The government on April 13 arrested 11 alleged conspirators and accused Gen. Eleázar López Contreras, president from 1935 to 1941 and a political exile from Oct. 1945, of plotting to return from the United States.

The constituent assembly signed and the provisional president promulgated the new constitution on July 5; it was Venezuela's 20th constitution and supplanted the one of 1936. The 1947 law provided for a federal government based on advanced domestic and international principles and divided territorially into 20 states, 2 territories and various small insular dependencies. The constitution established comprehensive individual and social rights and duties, including woman suffrage. The government is headed by a president elected by direct, popular vote for a five-year term and assisted by cabinet ministers of his own appointment. The bicameral congress is composed of a senate, in which the states have two senators each, and a chamber of deputies, members of which are chosen on a population basis; both senators and deputies serve for five years and the constitution authorizes proportional representation. The judiciary is headed by a supreme court of justice of ten members. The constitution provided for a good deal of economic planning.

The government reported on July 26 that a revolt plot in the Maracay garrison near Caracas had been suppressed, with one officer killed. Jovito Villalba, head of the leftist Democratic Republican Union party, was arrested Aug. 18 for holding an unauthorized political meeting. The government on Sept. 12 reported that another armed coup, at Caracas, had been crushed. Acción Democrática at a mass meeting on Sept. 12 nominated Rómulo Gallegos, aged 63, a prominent Venezuelan novelist, as its presidential candidate in the later elections. Copei, a conservative party with church support, subsequently nominated Rafael Caldera, aged 31, as its candidate. The provisional government and the constituent assembly took positive views in different foreign matters; on Oct. 11 the assembly termed the Paraguayan government, where a civil war had recently ended unsuccessfully for the rebels, one of "usurpation and terror" and "a menace to the continent." Authorities on Nov. 15 charged that the Dominican Republic might be concealing a plot by Venezuelan "reactionaries"; this charge was related to the ill feeling which for months had persisted between those two governments. As early as Feb. 2, leftist papers in Caracas had reported plans for an alleged invasion of Venezuela from the Caribbean; that rumoured invasion was attributed to López Contreras, a complicity which he denied at Miami, Fla.

National elections were held Dec. 13. Early and incomplete returns credited Gallegos with 121,799 votes, Caldera with 36,578 and Gustavo Machado (Communist) with 5,987; congressional candidates of Acción Democrática reportedly led by about a three-to-one margin. The government on Feb. 26 rejected a United Nations Relief and Rehabilitation association request for an additional $5,000,000 contribution. Two members of a scientific expedition were killed March 3 when attacked by Indians in the Guiana jungle. The government on May 11 announced that 740,000 ac. of land would be distributed to landless Venezuelans and European immigrants.

**Religion.**—Archbishop Lucas Guillermo Castillo on March 8 excommunicated four priests who quit the Roman Catholic Church to found a Venezuelan apostolic church.

**Finance.**—The monetary unit is the bolívar, valued on Oct. 31, 1947, at 29.85 cents, U.S. currency. The 1947–48 budget, submitted to the constituent assembly June 25, was the highest in Venezuela's history. It provided for expenditures of 1,199,500,000 bolívares and estimated revenues at 1,099,928,500 bolívares, the balance to be taken from treasury reserves. The 1946–47 budget, which originally totalled 787,109,000 bolívares, was ultimately increased to 1,038,991,054 bolívares. Liquid treasury reserves April 30, 1947, were 212,198,181 bolívares. Purchases of foreign exchange in 1947 by the central bank up to July 31 were $254,857,251 and sales in the same period were $258,465,881; purchases and sales, respectively, during the same period in 1946 were $163,282,551 and $161,587,548. Government revenues for the fiscal year 1946–47 were 1,095,286,000 bolívares, 65,000,000 higher than budget estimates and 31,176,043 higher than total expenditures. Foreign exchange held abroad, including earmarked gold, on July 31 were $88,960,460 (July 31, 1946: $71,625,095). The government during 1947 considered establishment of a federal mortgage bank.

**Trade and Communications.**—Crude oil exports for the first 5 months of 1947 were 161,282,072 bbl. The government considered plans for dredging the bar at the mouth of Lake Maracaibo which had long handicapped access to the rich oil deposits around and under the lake. The government made tentative plans in 1947 for establishment of a new national merchant fleet, the Compañía Venezolana de Navegación, with 6,000,000 bolívares of government and 4,000,000 bolívares of private capital. Plans developed during the year for additions to the joint merchant-marine project begun initially with Colombia and Ecuador in 1946. The Caracas transportation system was impeded by serious bus strikes in August. Air France began plane service via Martinique to La Guaira, near Caracas, in August. Venezuela concluded a commercial pact with Czechoslovakia Nov. 27.

**Production.**—Sugar production in the first four months of 1947 was 12,198 metric tons, the smallest figure in six years. Corn prospects for the year were considerably hurt by army worm damage. Nelson A. Rockefeller, former U.S. assistant secretary of state, announced in Caracas on Jan. 26 that he would establish a project, with U.S. and Venezuelan private capital, to aid Venezuelan agricultural production; the plan came to fruition with the signing of an agreement by Rockefeller at Caracas on June 23 to supply capital to stimulate Venezuelan agriculture and industry. Crude oil production in the first five months of 1947 was 176,643,149 bbl.; 273 new wells were completed during that period. The amount of crude petroleum refined in the same period was 13,770,168 bbl.

## Vermiculite.

Following a doubling of the United States output of vermiculite during the war years, production was still growing in 1947 under the demand created by new building construction. After some decline in output in 1943 and 1944, there was an increase to 64,808 short tons in 1945 and 86,390 short tons in 1946. The chief uses are in lightweight concrete and plaster, and as a heat insulator.

(G. A. Ro.)

## Vermont.

A north Atlantic state of the United States of America, the only one of the New England states without a sea coast; popularly known as the "Green Mountain state"; admitted to the union in 1791. Area: 9,609 sq.mi., of which 331 sq.mi. are water. Population (1940): 359,231 (including 235,992 rural, 123,239 urban); 327,079 native white, 31,727 foreign-born, 384 Negro, 41 of other races. The U.S. bureau of the census on July 1, 1947, estimated the civilian population of the state to be 364,000. Montpelier is the capital city, with a population (1940) of 8,006. The chief cities are Burlington (27,686) and Rutland (17,082).

**History.**—Bills enacted by the general assembly in session from Jan. 8, 1947, to April 26, 1947, included measures relating to the state income tax, a minimum salary and retirement system for teachers, creation of a state department of public safety and the writing of a textbook of Vermont history. George D. Aiken and Ralph E. Flanders were U.S. senators from Vermont; Charles A. Plumley, representative to congress. Chief state officers were Ernest W. Gibson, Jr., governor; Lee E. Emerson, lieutenant governor; Rawson C. Myrick, secretary of state, and Levi R. Kelley, state treasurer. On Aug. 31, 1947, Myrick resigned from office and Helen E. Burbank, his deputy, became acting secretary of state. Miss Burbank was appointed to the office of secretary of state on Oct. 15, 1947, by Governor Gibson.

**Education.**—There were 857 elementary schools in the state in 1947, with a teaching staff of 1,751. The elementary school enrolment in 1946 was 43,849 (previously estimated at 38,608). In 1947 there were 568 one-room rural elementary schools. There were 85 approved public high schools in 1947, with a teaching staff of 707 and an enrolment of 18,905. The 3 state teachers colleges had a total enrolment of 365 and a teaching staff of 31. The state superintendent of schools in 1947 was the commissioner of education, Ralph E. Noble.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—Relief in general was administered by the overseer of the poor in each town. A total of $2,132,648.50 was expended from state funds for old-age assistance; 5,823 persons received such aid in 1947. Dependent children receiving aid from state funds numbered 1,888 in 685 families during the month of June 1947; the amount expended from these funds during the year ending June 30, 1947, was $333,154.33; 1,122 children were under the care of the state as state wards. Blind assistance funds were distributed to 178 persons in the month of June 1947. The 3 state correctional institutions had a total of 337 inmates during the year 1947, with total expenses amounting to $510,909.12. Unemployment compensation benefits payments numbered 64,515 in 1947, and amounted to $1,055,140; 52,996 payments of readjustment allowances amounting to $1,046,421 and 1,795 self-employment payments amounting to $164,709 were made to World War II veterans.

**Communications.**—The total mileage of the public highway system (state, state-aid and town highways) as of June 30, 1947, was 14,214.22 of which 1,808.06 mi. were in the state highway system and 2,710.52 mi. were in the state-aid highway system. Construction and maintenance expenditures for state highways amounted to $3,850,685.16 during the fiscal year ending June 30, 1947, for state-aid highways in the same period $1,362,999.05 and for town highways $1,050,003.21. There were 954.79 mi. of steam railroads and 4.25 mi. of electric railroads on Dec. 31, 1947. There were 207 mi. of airways, with 21 airports and 2 airways in Vermont in 1947. Telephone subscribers were estimated at 80,000 on Dec. 31, 1947.

**Banking and Finance.**—The number of state and national banks as of June 30, 1947, was 80, of which 41 were state banks with total deposits of $201,908,674.70. There were 9 state co-operative building savings and loan associations with total assets of $3,083,228.45.

Total receipts of the state as of June 30, 1947, were $27,468,914.31; disbursements $28,640,833.46; unappropriated surplus $262,923.26; state debt $1,484,000.

**Agriculture.**—The total acreage of harvested crops in the state in 1947 according to the U.S. bureau of agricultural economics was 1,140,000 compared with 1,163,000 in 1946.

Table I.—*Leading Agricultural Products of Vermont, 1947 and 1946*

| Crop | 1947 (est.) | 1946 |
|---|---|---|
| All corn, bu. | 1,920,000 | 2,300,000 |
| Hay, all, tons | 1,590,000 | 1,499,000 |
| Potatoes, late, bu. | 1,080,000 | 1,392,000 |
| Oats, bu. | 810,000 | 1,530,000 |
| Apples, bu. | 777,000 | 424,000 |
| Maple syrup, gal. | 799,000 | 607,000 |

**Manufacturing.**—The total value of production (including manufacturing, processing, mining and quarrying, but not public utilities), as reported to the state department of industrial relations, was estimated at $304,000,000; there were about 38,500 persons employed in these industries, earning approximately $70,450,000 per year.

Table II.—*Principal Manufacturing Industries of Vermont, 1947 and 1946*

| Industry | Value of products | |
|---|---|---|
| | 1947 (est. year ending Dec. 31) | 1946 (year ending June 30) |
| Machines and machine tools | $62,000,000 | $71,520,380 |
| Dairy products | 56,000,000 | 53,167,512 |
| Woollen and cotton goods | 38,200,000 | 40,610,595 |
| Woodworking | 31,110,000* | 17,462,350 |
| Paper and paper products | 20,000,000 | 19,107,551 |

*1947 estimate for woodworking includes lumbering and furniture.

**Mineral Production.**—Total output value of mineral products of the state as reported to the state geologist for the year ending June 30, 1946, was $21,134,274 (est.).

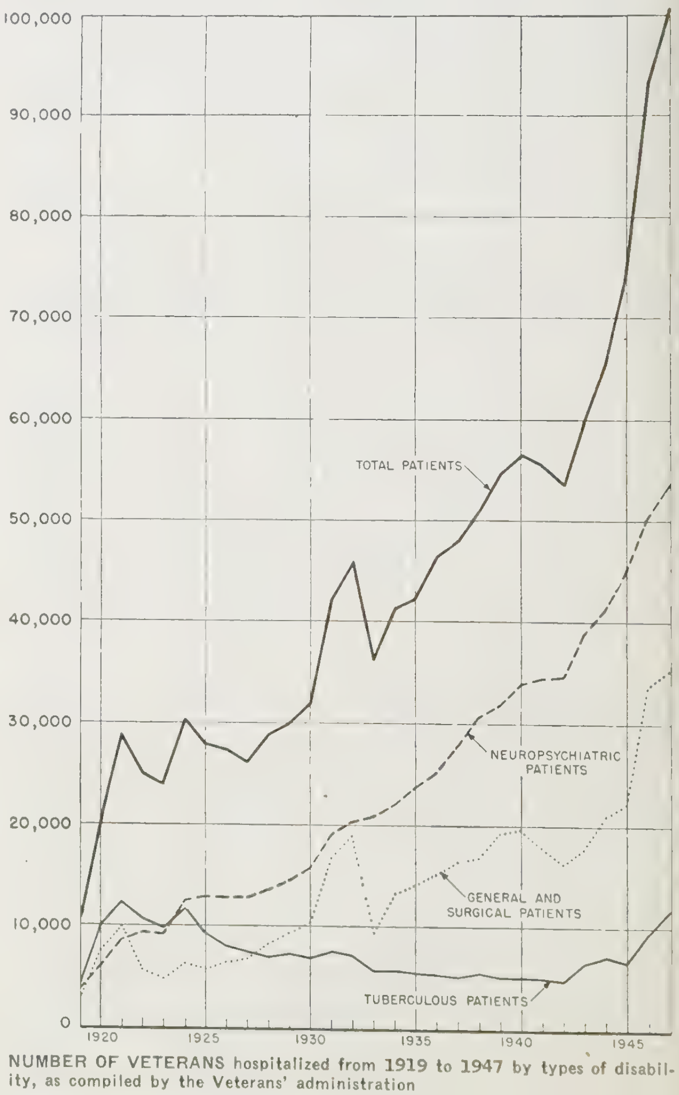
(C. E. Fe.)

Table III.—*Principal Mineral Products of Vermont, 1946 and 1945*

| Mineral | Value, 1946 (est.) | Value, 1945 |
|---|---|---|
| Granite | $12,682,000 | $10,731,000 |
| Marble | 3,308,000 | 1,537,000 |
| Lime products | 1,263,140 | 1,276,865 |
| Talc | 763,834 | 841,012 |

## Veterans' Administration.

To bring its services closer to the home-town level, the U.S. Veterans' administration decentralized many of its major functions in 1945. In addition to a central office in Washington, D.C., the agency had established 13 branch offices throughout the country for the purpose of supervising the field operations



NUMBER OF VETERANS hospitalized from 1919 to 1947 by types of disability, as compiled by the Veterans' administration of nearly 1,000 offices, hospitals and homes in the continental U.S. and in Alaska, Puerto Rico, the Hawaiian Islands and the Philippine Islands.

On Nov. 1, 1947, the near 1,000 total included 736 field offices (formerly known as contact and subregional offices), 70 regional offices (9 of which were located at VA centres), 126 hospitals (21 of which were at VA centres) and 12 homes. The central office continued to exercise general control over all these operations.

**Education and Training.**—*Vocational Rehabilitation.*—Veterans with service-connected disabilities, enrolled under the Vocational Rehabilitation act in schools or on-the-job training establishments, had to undergo preliminary extensive advisement and guidance tests and interviews by trained VA personnel. The guidance was to continue as long as they were in training.

While training—and for two months after establishment of employability—a disabled veteran could receive a subsistence allowance of $65 a month if he had no dependents or $90 if he had dependents. Disability compensation payments were in no way reduced because of subsistence.

Compensation-plus-subsistence minimums were raised during 1947. For veterans with disabilities rated at less than 30%, compensation and subsistence had to total at least $105 without dependents or $115 with 1 dependent. If the totals were less, they would receive an additional sum from VA to make up the difference. The minimums for veterans with disabilities rated at 30% or more were $115 without dependents and $135 with 1 dependent. Additional amounts were paid to veterans with more than one dependent.

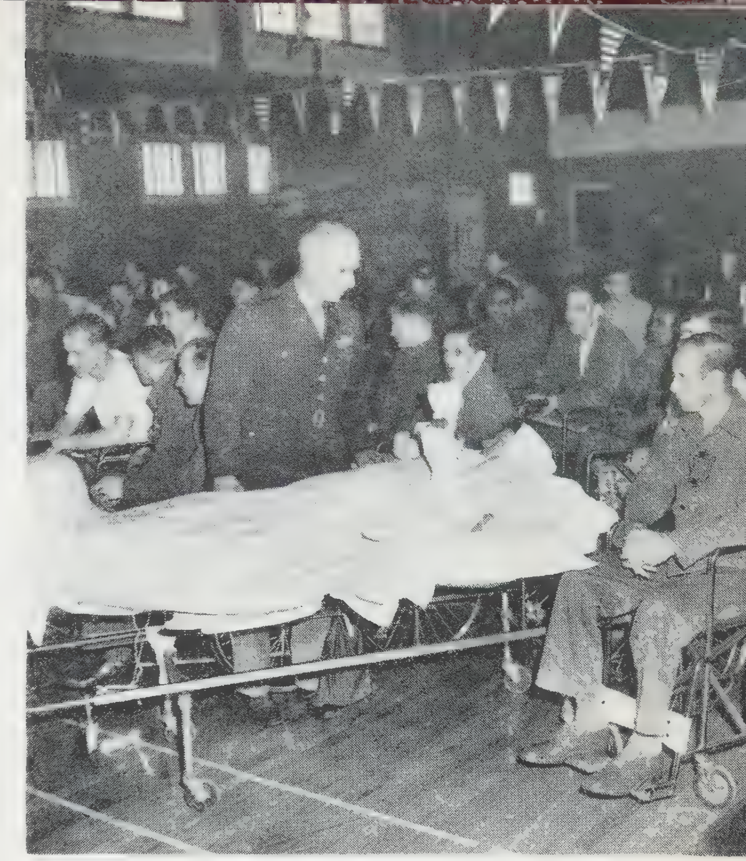
By Nov. 1, a total of 244,780 disabled veterans were in training under the rehabilitation act. Of these, 136,884 were enrolled in educational institutions and 107,649 were taking on-the-job training. At the same time, 20,649 trainees had been declared rehabilitated. This figure accounted for only 17% of the 123,613 disabled veterans who had interrupted their training for one reason or another.

*G.I. Bill Training.*—Veterans training under the G.I. Bill of Rights continued to receive $65 a month subsistence allowance if they had no dependents, or $90 if they had dependents. If the veteran took on-the-job training, he retained whatever wages were paid him. However, if salary plus subsistence surpassed the wages of a beginning trained journeyman, VA cut his subsistence accordingly. Also, subsistence was reduced if his combined monthly income—subsistence plus wages—totalled more than $175 if he had no dependents, or $200 if he had dependents.

By Nov. 1, there were 2,413,576 veterans in schools and job-training establishments under the G.I. bill. The majority, or 1,859,545, were enrolled in educational institutions, while the remaining 554,031 were taking on-the-job training.

At that date, about 1,890,000 former G.I. bill students and trainees had dropped their courses. All but a mere 8,400 (who had used up all their available entitlement) were eligible for further training. G.I. bill discontinuances amounted to 44% of the 4,302,000 veterans who had entered training after the G.I. bill program went into effect.

Most education and training under both laws were scheduled to end July 25, 1956. G.I. bill education and training, for the majority of veterans, had to begin before July 26, 1951. An exception was made for persons who enlisted between Oct. 6, 1945, and Oct. 5, 1946, under the Voluntary Recruitment act. The period during which they could earn entitlement to all G.I. bill benefits—education, training, loan guarantee privileges and readjustment allowances—was not to expire until the end of their enlistment.



COL. JOHN N. ANDREWS of the Veterans' administration speaking with one of a group of veterans paralyzed in World War II who convened at Vaughan hospital in Hines, Ill., during Feb. 1947, to form a Paralyzed Veterans' association

**Veterans' Loans.**—Public law 346, as amended, established provisions for the guarantee of loans or the insurance of credit, through private lending institutions, for veterans desiring to buy or build homes, purchase farms or farm equipment or go into business. The amount of the guarantee could not exceed 50% of the loan, or a maximum of $4,000 on real estate and $2,000 on non-real estate loans. Farm realty loans were to be paid off within 40 years; other real estate loans within 25 years, and non-real estate loans within 10 years. By Nov. 1, 1947, a total of more than 1,000,000 G.I. loans of all types, amounting to more than $6,000,000,000, had been approved for guarantee or insurance by VA. Nearly 90% of the loans, or about 972,000, were for homes; nearly 37,000 were farm loans and about 81,000 were business loans.

A VA analysis of G.I. home loans over a 4-month period (May through Aug. 1947) revealed that more than 45% of the veterans utilizing their loan guarantee privileges bought newly built houses at an average selling price of $8,200. The remaining veterans purchased homes previously occupied for sales prices averaging $6,675.

The deadline for applying for guaranteed loans was set at July 25, 1957, for all veterans except enlistees under the Voluntary Recruitment act.

**Readjustment Allowances.**—Readjustment allowances, provided for by public law 346 as amended, were designed to assist eligible veterans during periods of unemployment, or when self-employed and earning less than $100 a month. A totally unemployed veteran could receive $20 a week; a partially employed veteran up to $20 a week, less earnings above $3. A self-employed veteran could receive $100 a month, minus any net earnings during the month. Maximum unemployment allowance entitlement was for 52 weeks; for self-employment, 10⅔ months.

During the week ending Nov. 1, 1947, 395,939 veterans claimed readjustment allowances for unemployment. During the same week, state unemployment compensation offices paid out more than $7,600,000. In Oct. 1947, 102,757 veterans claimed self-employment allowances. Unemployment compensation offices during the month disbursed nearly $10,000,000 in self-employment claims.

Allowances could be claimed through July 24, 1949, or two years after the date of discharge—whichever was later—but not later than July 25, 1952, except for enlistees under the Voluntary Recruitment act.

**Medicine and Surgery.**—On Nov. 1, 1947, 126 VA hospitals were in operation, including a number of temporary structures declared surplus by the armed forces. More than 101,200 beds were available for use in the hospitals, in addition to nearly 14,000 beds in other federal government, state and civil hospitals. In VA hospitals there were 11,500 beds for tuberculosis cases, 55,100 for neuropsychiatrics and 34,600 for general medical and surgical patients.

Considerably more than half of all patients in VA hospitals were neuropsychiatric cases, for whom 34 hospitals were in operation. Eighty-six mental-hygiene clinics were available to treat veterans not requiring hospitalization. VA also operated 18 tuberculosis hospitals, in addition to tuberculosis departments in its general hospitals, and tuberculosis-neuropsychiatric units in its neuropsychiatric hospitals.

Seventy-four general medicine and surgery hospitals were in operation by VA. General medicine also was practised in tuberculosis and neuropsychiatric hospitals. Surgical facilities—consisting of operating suites and the necessary trained personnel—were available in all the hospitals.

Intensive courses in medical rehabilitation were offered in all the hospitals to patients to help them after release. Amputees and paraplegics learned how to get up and down steps, on and off buses, cross streets, go shopping and the like. If they wished, patients could further their education or explore posthospital job possibilities by taking complete academic courses and vocational rehabilitation programs.

VA during 1947 embarked upon the greatest hospital construction program in the nation's history, providing for 91 new hospitals, located near medical centres whenever possible.

**VA Homes.**—A patient, to be admitted to any of VA's 12 homes, must have a condition essentially chronic in character, not susceptible of cure or decided improvement by hospital treatment, and must be incapacitated from earning a living for a protracted period. More than 14,600 veterans were in VA homes on Nov. 1, 1947.

**Insurance.**—National Service Life Insurance for World War II veterans originally was issued on a five-year level premium plan, providing the maximum temporary protection at the lowest cost. The term period of all insurance issued before Jan. 1, 1946, was extended three more years by Public Law 118, 79th congress. These policies, therefore, could be continued in their term form for eight years from the date of issue.

By the end of 1947, VA had written more than 19,200,000 N.S.L.I. policies, with a total face value of more than $150,000,000,000. On Nov. 1, 1947, less than one-third—or an estimated 6,000,000 policies—still were in force. Nearly 4,800,000 of these were term policies; the remainder were policies converted to the half-dozen VA permanent plans available: ordinary life, 30-payment life, 20-payment life, 20-year endowment, endowment at age 60 and endowment at age 65.

As a direct result of war casualties and other deaths, the beneficiaries of 398,175 World War II veterans were receiving insurance payments on Nov. 1, 1947.

More than 524,000 U.S. government life insurance policies for World War I veterans, representing nearly $2,300,000,000 of insurance, were in force on Nov. 1, 1947.

**Pensions and Compensation.**—In 1947 VA was paying monthly pensions and compensation to more than 3,200,000 disabled veterans and dependents of deceased veterans. Payments ranged from $13.80 to $360 a month for service-connected disabilities. On Nov. 1, 1947, the following cases were on VA's compensation and pension rolls:

| War | Living veterans | Dependents of deceased veterans |
|---|---|---|
| Mexican War | 0 | 45 |
| Indian wars | 797 | 2,278 |
| Civil War | 83 | 17,895 |
| Spanish-American War | 112,355 | 80,679 |
| World War I | 438,121 | 389,232 |
| Regular establishment | 42,692 | 19,291 |
| World War II | 1,712,696 | 416,370 |

**Guardianship.**—VA's guardianship load rose from 134,583 wards on Nov. 1, 1946, to 177,761 wards 1 year later. Of the latter figure, 93,591 were entitled to benefits because of service by veterans of World War I and earlier wars, and 84,170 were entitled to benefits because of service by World War II veterans. (*See* also MEDICAL REHABILITATION OF DISABLED VETERANS.)

(C. R. GY.)

## Veterans of Foreign Wars.

The Veterans of Foreign Wars devoted its major effort in 1947 to a campaign to alleviate the housing shortage, which it termed the most critical problem facing veterans.

Declaring that the government housing program had proved to be an almost complete failure, the V.F.W. attacked the problem of providing homes for veterans on both the national and the community levels. The organization called frequent conferences between leaders in government and the building industry. It stressed the need for more prefabricated housing and persuaded federal authorities to accept the principle of government financing for the production of factory-built homes. On the community level, many of the 10,000 posts of the V.F.W. took the lead in organizing veteran housing projects and veteran housing co-operative associations. At its 48th national encampment in Cleveland, O., Sept. 4–9, the V.F.W. strongly endorsed the Taft-Ellender-Wagner housing bill, with certain amendments to protect private enterprise, and gave it highest priority in the organization's legislative program.

Along with its housing campaign, the V.F.W. conducted an intensified drive to promote national security through enlargement and modernization of the nation's military forces and the curbing of communist influence within the United States. As major points in its security program the V.F.W. asked enactment of a universal military training law, creation of the world's most powerful air force in being, return of atomic energy control to military authorities and government subsidization of a program of scientific research to develop new weapons. In a resolution approved by its national encampment, the V.F.W. demanded action to outlaw the Communist party in the United States and enjoin publication of the *Daily Worker*.

Pensions for all World War I veterans past the age of 65 were given first priority by the V.F.W. over all other veteran benefits which the organization was seeking. World War II veterans, who constitute a large majority in the V.F.W., voted through their delegates at the encampment to support their World War I comrades in the pension drive. Meanwhile, the V.F.W. reiterated support of the principle of adjusted service compensation for veterans of World War II.

The influence of younger veterans became more apparent in the organization during the year, with an increasing number of important offices and committee assignments going to the World War II men. World War II veterans were elected to the national offices of junior vice commander in chief and judge advocate general. Approximately one-half of the state departments chose veterans of the last conflict as department commanders.

Ray H. Brannaman of Denver, Colo., was commander in chief of the Veterans of Foreign Wars for the 1947–48 term. A former chairman of the Colorado Industrial commission and former executive director of the Colorado Good Roads association, Brannaman was moved up to the top job in the V.F.W. from the office of senior vice commander in chief. Other elective officers were Lyall T. Beggs, Madison, Wis., senior vice commander in chief; Clyde A. Lewis, Plattsburg, N.Y., junior vice commander in chief; R. B. Handy, Jr., Washington, D.C., quartermaster general; Hudson Hyatt, Cleveland, O., judge advocate general; Dr. William R. Morrison, Boston, Mass., surgeon general, and Canon Merritt F. Williams, Washington, D.C., national chaplain. (B. Y.)

## Veterans' Organizations.

In 1947 7,000,000 U.S. veterans were members of veterans' organizations. Five million were in the American Legion and the Veterans of Foreign Wars, and 1,000,000 more were in the other major national organizations—the Disabled American Veterans, Army and Navy union, American Veterans committee, American Veterans of World War II (Amvets), Air Forces association, Jewish War Veterans, Catholic War Veterans and Regular Veterans association.

The estimated number of U.S. veterans' organizations dropped from about 1,000 to 600 during 1947. Most of the decrease was because of local organizations being absorbed by the larger national groups, or dropped because of lack of interest by the participants. Of the old line organizations, only the American Legion continued to gain. The Veterans of Foreign Wars suffered a deficit for the first time in 20 years after overestimating their 1947 membership by considerably more than 1,000,000.

The World War II groups found progress difficult. Nationally, the field became limited to two organizations—The American Veterans committee, and the Amvets, representing a more conservative element. The quickest-growing of the new organizations was the Air Forces association, which had acquired a semiofficial status. Its membership rose to more than 100,000 in 1 year.

Attempts by the communists to infiltrate the American Legion failed during 1947. They then turned to the American Veterans committee and made a drive for control but were thoroughly defeated at the A.V.C.'s 1947 convention in Milwaukee, Wis.

The principal policy trends in U.S. veterans' organizations during 1947 were as follows:

(1) A refusal to use, to any great extent, powerful political pressure for anything except veterans' benefits. Organizational support was given to such measures as the cashing of terminal leave bonds, benefits for disabled veterans and bonus measures in the separate states.

(2) A series of abortive attempts to form political blocs.

(3) A determined campaign against communism. The American Legion sponsored a seminar on how to combat communism; the Jewish War Veterans barred communists from membership and the American Veterans committee passed a resolution attacking both communism and fascism. (*See* also American Legion; American Veterans Committee; American Veterans of World War II (Amvets); Disabled American Veterans; Veterans of Foreign Wars.) (Rt. A. B.)

**Canada.**—The oldest veterans' organization in Canada, Army, Navy and Air Force Veterans, Inc., originally established after the War of 1812, had 271 units throughout the dominion in 1947, with a membership of 187,000. The Canadian Legion, formed in 1926 by amalgamation of a number of Canadian veterans' organizations, had 1,685 branches in Canada and 135 in the U.S., to which 300,000 members belonged. During 1947 the Legion successfully pressed for an increase in the government's rates of war pensions and veterans' allowances and conducted a citizenship training program. The Canadian Corps association was incorporated in 1947 and reported 30,000 members. During the year the corps promoted veterans' preference in civil service employment and pressed for military preparedness.

The National Council of Veterans Associations in Canada—made up of the Army, Navy and Air Force Veterans, the War Amputations of Canada, the Sir Arthur Pearson Association of War Blinded, the Canadian Pensioners association, the Canadian Paraplegic association and the Canadian Corps association—successfully placed legislative proposals before the government for the correction of defects and deficiencies in veterans' administration.

The International War Veterans' alliance, an organization of veterans in western Canada and the north-central United States, moved to unite all veterans' organizations in the British commonwealth and the United States into a body to perpetuate peace. (C. Cy.)

**Other Countries.**—In every nation which took part in World War II there was at least one ex-servicemen's, or veterans', organization in 1947. In Great Britain the British Legion (*q.v.*), formed after World War I, had adapted itself to serve as the organization for ex-servicemen of both world wars.

In France the picture was more confused because many leaders of pre-World War II associations were compromised by collaboration with the Pétain-sponsored *Légion Française des Anciens Combattants.* After liberation, however, the majority of the old associations were reformed, under new leadership, and they all joined the U.F.A.C. (*Union Française des Anciens Combattants*) whose honorary president was René Cassin, chairman Léon Viala and secretary general Maurice de Barral—all three active in the ex-servicemen movement before World War II. According to a report published July 2, 1947, in the *Journal Officiel,* 1,211,297 disabled ex-servicemen of both world wars were receiving a pension; there were also 785,000 pensioned war widows and 610,525 pensioners' parents.

The communist-sponsored F.T.P.F. (*Franc-Tireurs et Partisans Français*) formed a separate group. The same happened in Italy where an A.N.P.I. (*Associazione Nazionale Partigiani d'Italia*) was formed in 1947. In Yugoslavia the Union of Ex-Freedom Fighters was created. The same development could be observed in Poland, Rumania, Bulgaria and Czechoslovakia. On Dec. 8, 1947, in Rome, at the executive meeting of the A.N.P.I., Gen. Sidor Kovpak, the soviet guerrilla leader, called on European partisans to unite to fight against "fascism."

In July 1947 Sir Ian Fraser, president of the British Legion, visited the United States as a fraternal delegate to the American Legion convention in New York. In September Paul H. Griffith, national commander of the American Legion, heading a delegation of legionnaires, visited Great Britain, France, Belgium and Luxembourg. During these visits the idea of forming an interallied federation of ex-servicemen was discussed. Between the two world wars the *Fédération Interalliée des Anciens Combattants* (F.I.D.A.C.), with the American and British Legions as principal members, had its headquarters in Paris.

## Veterinary Medicine.

**Control of Rabies.**—A conference was held in 1947 to formulate plans for handling the United States rabies problem under central direction in lieu of municipal, county and state agencies. Represented were the American Public Health association, American Medical association, U.S. public health service, U.S. bureau of animal industry, U.S. Livestock Sanitary association, American Hospital association, and American Veterinary Medical association. The conference adopted the committee's codified program and recommended that control of the disease on a national basis be vested jointly in (1) the U.S. bureau of animal industry, (2) the U.S. fish and wildlife service, and (3) the U.S. public health service.

The outbreak of foot-and-mouth disease in Mexico during 1946–47 (*see* below) raised a controversy as to whether wild animals susceptible to the infection should be killed also as a control measure. The killing of more than 22,000 deer in California as the final step to eradicate the epizootic of 1924 had been criticized as over-fastidious. Veterinary officials reported that only 10% of the deer in Yosemite National park had been affected in 1924.

**Fowl Cholera.**—Fowl cholera (*Pasteurelle aviseptica* infection) among migratory waterfowl in Texas, reported by the U.S. fish and wildlife service as obviously contracted from barnyard poultry, added another infectious disease to those interchangeable between wildlife and farm animals. Distemper in foxes and other wild carnivores and in domestic dogs was shown to be caused by the same specific virus. Mange in foxes and other wild animals in New England was found to infect livestock.

**Bovine and Porcine Brucellosis.**—Brucellosis of cattle and swine remained first in importance among diseases of domestic animals. In respect to financial losses suffered from animal disease, the bovine type, commonly named Bang's disease, continued to rank high, if not first, in the United States. Porcine brucellosis was found to be the principal source of the human infection (undulant fever). The 38,508 human cases with 1,340 deaths reported in the United States from 1927–42 were acknowledged to be but a fraction of the total incidence.

**Equine Encephalomyelitis.**—A report released by the U.S. bureau of animal industry May 7, 1947, indicated that the incidence of infectious equine encephalomyelitis in the United States was the lowest in 12 years. The total number of cases in 37 states was 2,805. There were fewer cases in the south Atlantic and Pacific coast states and more in the north and south central states. The virus-serum division of the U.S. bureau of animal industry estimated that 400,000 horses were vaccinated against the infection and attributed the lower incidence to that protection. No human cases suspected of being of equine origin were reported.

**Foot-and-Mouth Disease in Mexico.**—The appearance of foot-and-mouth disease in five Mexican states surrounding the federal district during the late fall of 1946 caused alarm among the cattle-raising and meat-packing interests of North America. The outbreak was charged to the importation of zebu bulls from Brazil. It had spread to the cattle herds of a vast area before its nature and potential were generally recognized. Except for enzootics, at long intervals, which were quickly stamped out, North America previously had been free from foot-and-mouth disease and as a consequence was able to develop the world's most profitable livestock industry. Alarm over the Mexican visitation prompted the two governments to form a Mexican-United States organization of veterinarians charged with the duty of planning and enforcing vigorous measures against spread of the infection beyond the original territory involved and to wage a co-operative campaign of complete eradication.

The quarantine against exportation of cattle "on the hoof" to the United States was a hardship to the Mexican cattle interests and necessitated the installation of large canning plants on Mexican territory as an emergency relief. The quarantine was reportedly a factor in the high price of beef in the United States. Dr. T. B. Simms, chief of the U.S. bureau of animal industry, reported that a relentless campaign of at least two years' duration would be required to achieve complete eradication.

**Enzootics of Infectious Anaemia.**—Infectious anaemia of horses is caused by a filtrable virus with the unique property of sojourning in the infected animal's blood, in highly virulent form, for the entire duration of its life, all the time capable of being transmitted to healthy horses by stinging insects. The disease remained incurable. The course of the illness may be acute, subacute, chronic or latent. The acute case may be fatal after a brief febrile illness, the subacute and chronic case may die in a matter of months and the prolonged or latent one may last for years with various degrees of impaired health interrupted at irregular intervals by spells (exacerbations) of weakness and fever. Usually, mosquitoes, stable flies or other insects are the transmitting agents.

In April 1947, enzootics of this grave equine infection broke out at several New England race tracks. Ordinarily, the disease is handled by killing the proved cases and by sanitary disposal of the carcasses. The significance of this outbreak lay in the 900 horses involved, the 47 deaths, the undetermined number of infected and the controversy raised by the livestock insurance companies as to their obligations in the lingering cases killed as a sanitary measure.

**Problems of Mink Ranches.**—The diseases of mink had been the most neglected in the investigational work and the literature of the growing industry of fur ranches. Based on 4,425 autopsies held on mink from 685 widely separated sources, deaths were found to have been caused by 89 causes. Predominating were pneumonia, food poisonings, hepatic degeneration, distemper-virus infection, malnutrition, renal and cystic calculi, gastroenteritis and unidentified generalized infections. Recognizable salmonellosis was found in 87 cases, splanchnic carcinoma in 9, and anthrax in 3. Owing to their wildness, mink show symptoms of illness only when grievously stricken.

**Army Animals of the Japanese.**—During the Asiatic operations of World War II, the Japanese used a large number of animals and left serious veterinary problems behind. The surplus animals abandoned in Burma, Indo-China and Malaya were distributed among the natives but were not permitted in India on account of the high incidence of epizootic lymphangitis. The riding horses, pack ponies and mules captured from the Japanese were sold to the Siamese army. Animal welfare of the Japanese was the worst of all the countries at war. The 33rd Japanese division lost 5,000 animals from starvation according to the report of the senior Japanese veterinary officer. Horses were kept ungroomed without bedding on undrained standings. The Japanese veterinary service had little besides mercurochrome in their outfits.

**Hepatic Distomiasis.**—The heavy financial losses suffered from liver-fluke infection of farm ruminants were reduced considerably during and after World War II by the use of hexachlorethane, a chemical related to the popular flukicides, carbon tetrachloride and tetrachlorethylene, but much less toxic for livestock. In extensive trials made by the zoological division of the U.S. bureau of animal industry the new chemical removed 70% of the adult flukes and 50% of the immature ones. The flukicides formerly employed were ineffective against the immature flukes and, therefore, left the livers of all the treated animals in a state of infection. Because hexachlorethane does not dissolve in the usual nontoxic solvents, it was used in the form of a suspension consisting of bentonite, flour and water mixed with a speedy, power-driven apparatus to ensure even distribution and passing the mixture twice through a 20-mesh screen.

Liver-fluke infection was found to be prevalent in the gulf, southwestern, Rocky mountain and Pacific coast states in regions where pasture lands were invested with fresh water snails which are essential intermediate hosts of the parasite (*Fasciola hepatica*). Besides impairing the health and thrift of cattle, sheep and goats, hepatic distomiasis was estimated to have caused a loss of $1,000,000 worth of livers in 1945. The annual loss of beef and calf livers in the Gulf coast area alone was reported to be 90,000 lb.

**Newcastle Disease.**—The greatest threat ever to overtake the poultry industry of the western hemisphere was the exotic neurotropic virus infection which made its appearance in California in 1944 and which by 1947 had been recognized in nearly all the 48 states. The disease was known by various names: pseudo-foul pest in the East Indies, Ranikhet disease in India, avian distemper in the Philippines, Newcastle disease in Great Britain and avian pneumoencephalitis or the British eponym in the United States.

The infection strikes the respiratory and central nervous system simultaneously or consecutively. Whereas mortality in European and Asiatic theatres reportedly ranged up to 100%, the U.S. outbreak was comparatively mild, owing, it was said, to the disease being predominantly respiratory rather than pneumocephalic. The federal bureau of animal industry co-operated with the various poultry associations in conducting a nationwide educational program instructing poultrymen and veterinarians on methods of diagnosis and control. In the presence of the low mortality, the small poultrymen did not always identify the scattered enzootics.

Formalin-treated virus obtained from infected organs and crystal-violet vaccine prepared from infected chick-embryos were proved to possess immunogenicity of considerable importance but varied greatly in duration. Formalin-treated chick-embryo virus made under specified directions gave the most promising results. Hope of early eradication was not entertained despite the vigorous actions taken by state livestock sanitary services.

**Man-to-Animal Transmissions of Tuberculosis.**—J. Arthur Myers, phthisiologist of the school of medicine, University of Minnesota, pointed out the need of giving attention to the transmission of tuberculosis from man to animals, especially by persons suffering from the contagious pulmonary form. W. H. Feldman of the Mayo foundation, a well known investigator of interspecies transmissibility of the different types of *Mycobacterium tuberculosis,* showed that while cattle experimentally inoculated with the human type did not develop macroscopic lesions, they did show evidence of having the disease by reacting to the tuberculin test. Although no case of transmission of the human type from one animal to another was ever reported, there was a record of four herds of healthy dairy cows infected by a man suffering from pulmonary tuberculosis which proved to have been caused by the bovine type of the tubercle bacillus.

(L. A. M.)

## Virginia.

One of the 13 original United States, Virginia is known as the "Old Dominion" and as the "Mother of Presidents." It is southernmost among the middle Atlantic states and has an area of 40,815 sq.mi., including 916 sq.mi. of water. Pop. (1940) 2,677,773, of which 35.3% were urban and 64.7% rural. On July 1, 1944, the bureau of the census estimated the state's civilian population at 3,199,115. Capital, Richmond (193,042 in 1940 and 225,000 in July 1944). Other major cities include Norfolk (144,332 and 167,900), Roanoke (69,287 and 66,641) and Portsmouth (50,745 and 59,472).

**History.**—The general assembly convened in special session in Jan. 1947. At the request of Gov. William M. Tuck, the legislators approved two major laws in the field of labour relations, one designed to assure a "right to work" to any citizen regardless of affiliation with a labour union and the other designed to prevent sudden interruptions in operation of public utilities because of labour disputes. The latter law was invoked by the governor in May, when the commonwealth seized and operated some telephone facilities for a brief period until a strike was settled. The assembly also voted an additional $9,000,000 in state funds for public instruction and established a new system of licensing for general hospitals and nursing homes. During the summer, interim study commissions were active in investigating insurance laws, statutes governing inspection of tourist establishments, public school problems, taxation and reorganization of the state government. At a general election in November, 10 Republicans and 130 Democrats were elected to the general assembly. L. Preston Collins was lieutenant governor in 1947; G. Tyler Miller was superintendent of public instruction.

**Education.**—In 1946–47, elementary school enrolment was 427,404, with a teaching staff of 12,548; secondary school enrolment was 137,670, with a teaching staff of 6,226.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—For the year ended June 30, 1947, 12,002 persons received $1,011,446 in general relief; 18,482 received $3,033,169 in old-age assistance; 5,811 families with 17,120 dependent children, $1,781,466; 1,265 blind, $269,679; 2,240 under the regular foster care program, $386,544. In 1947, 288,046 checks for civilian unemployment compensation were written, amounting to $4,173,943, and 449,879 war veterans' readjustment allowance checks were written for $14,169,224. The civilian checks were 20% fewer than the preceding year, and the veterans' payments were down more than 30%. An average daily population of 4,364 was in 6 penal institutions for adults, and of 649, in 4 industrial schools for juveniles at the end of the fiscal year in June 1947.

**Communications.**—On Jan. 1, 1947, there were 9,320 mi. of highway in the state's primary system; on July 1, 1947, there were 38,136 mi. in the secondary system. During the year ended June 30, 1947, the state spent $54,534,742 on its highways, nearly double the previous year's expenditure. The total railroad mileage was 4,091.07 on Jan. 1, 1947. There were 440,090 telephones in Virginia on Nov. 30, 1947.

**Banking and Finance.**—On June 30, 1947, Virginia had 184 state banks with 54 branches, and 130 national banks and branches. On June 30, 1947, deposits of national banks were $996,797,000, and assets, $1,076,401,000. On June 30, 1947, deposits in state banks totalled $696,457,934, and assets, $755,473,267. Resources on Dec. 31, 1946, of 15 industrial loan associations were $9,389,447; of 56 building and loan associations, $42,963,130; of 26 credit unions, $1,262,642. For the fiscal year ended June

**Table I.**—*Leading Agricultural Products of Virginia, 1947 and 1946*

| Crop | 1947 | 1946 | 1947 Value |
|---|---|---|---|
| Corn, bu | 42,490,000 | 40,284,000 | $98,762,000 |
| Wheat, bu. | 8,522,000 | 8,344,000 | 21,305,000 |
| Oats, bu. | 3,456,000 | 4,260,000 | 3,802,000 |
| Rye, bu. | 392,000 | 392,000 | 843,000 |
| Barley, bu. | 2,478,000 | 2,272,000 | 3,593,000 |
| Buckwheat, bu. | 96,000 | 105,000 | 182,000 |
| Tobacco, all types, lb. | 161,112,000 | 178,821,000 | 62,873,000 |
| Peanuts for nuts, lb. | 199,260,000 | 191,250,000 | 22,118,000 |
| Hay, all tame, tons | 1,438,000 | 1,744,000 | 33,793,000 |
| Apples, commercial, bu. | 5,010,000 | 12,975,000 | 9,770,000 |
| Peaches, bu. | 1,800,000 | 2,640,000 | 3,420,000 |
| Cotton, lint, bales | 18,000 | 17,000 | 2,817,000 |
| Potatoes, bu. | 9,450,000 | 10,676,000 | 15,592,000 |
| Sweet potatoes, bu. | 3,500,000 | 3,250,000 | 6,125,000 |
| Soybeans for beans, bu. | 1,425,000 | 1,106,000 | 4,275,000 |

Table II.—*Principal Industries of Virginia, 1945 and 1944*

| Industry | Value of products<br>1945 | Value of products<br>1944 |
|---|---|---|
| Tobacco products | $790,582,323 | $760,800,542 |
| Food and kindred products | 308,793,770 | 298,882,246 |
| Textiles and their products | 400,185,144 | 377,549,000 |
| Wood products | 95,684,644 | 105,860,200 |
| Paper and printing | 134,072,940 | 142,556,943 |
| Chemical products | 121,750,914 | 111,694,596 |
| Transportation equipment | 200,419,947 | 244,324,461 |
| Metals and machinery | 78,910,459 | 70,437,607 |

30, 1947, the state treasury received revenues of $252,300,660, about 25% more than in the previous year; expenditures were $248,750,205. The gross debt on June 30 was $14,287,952; there was no net debt, since a sinking fund of $16,153,824 left an excess of $1,865,872. The fiscal year ended with a general fund surplus of $22,940,351.

**Agriculture.**—The 1947 growing season was an irregular one. Late frosts in May cut the apple crop 61% below 1946, and unusually dry weather caused a poor crop of early corn. Improving conditions in the late summer brought total corn production to nearly 43,000,000 bu., highest in 27 years; the crop was produced on the second to lowest corn acreage in 80 years. The tobacco crop dropped to second place in value with a production down 10% from 1946. The value of principal crops was placed at $301,248,000, up 1% from 1946. Farmers harvested an estimated 3,681,000 ac., 4% below the average for 1936–45. The shortage of farm labour continued acute over most of the state. Prices for farm land tended to level off late in the year, but remained 117% above prices in 1939. Cash receipts to Virginia farmers in 1947 from farm marketings were estimated at 15% above 1946, when cash income (including government payments of $10,356,000) amounted to $370,956,000.

**Manufacturing.**—The total value of manufactured products for the year ended Dec. 31, 1945, was $2,197,718,834. Wage earners received $307,672,769 in this period, and total salaries amounted to $70,338,849. Figures on estimated production for 1946 had not been compiled by the state at the close of 1947, but it was estimated that probably 211,600 persons were engaged in manufacturing at the close of 1947 with substantially higher income than was received by the 210,000 wage earners and salaried workers of 1945. Principal industries in 1947 were tobacco products, food and kindred products, transportation equipment, textiles, paper and printing and chemical products.

**Mineral Production.**—The production value of raw mineral resources in the year ending Dec. 31, 1945, was placed at $84,081,000, 5% less than during the preceding year but far more than the $50,003,672 of 1940. Coal production in 1945 was valued at $61,140,000, 5% less than the 1944 output. Production in 1947 was believed to have been far more than this figure. Approximately 4,000 bbl. of petroleum and 54,000 cu.ft. of natural gas were produced in 1945. Nonmetallic minerals in that year had a production value of $17,210,000. The value of metallic ores exclusive of coal, chiefly zinc, titanium and manganese, was about $5,731,000.

(J. J. Kt.)

**Virginia, University of.** A state institution for higher education at Charlottesville, Va. Colgate Whitehead Darden, Jr., became the third president of the university on June 23, 1947. He succeeded John Lloyd Newcomb, who had held the office for 16 years. The new president, an alumnus of the university, of Columbia university and of Oxford university, had served Virginia in its general assembly, the U.S. house of representatives and as governor. Plans were announced during the year for the launching of a development fund campaign to be headed by Adm. William F. Halsey. The Virginia Geographical institute, under the direction of Col. Sidman P. Poole, began its work on terrain studies and by the end of the year had brought together a staff of eminent geographers. The Virginia Music festival, planned as an annual spring event, was held at the university during three days in June. The Friends of the University, composed of students, faculty and citizens at large and devoted to the cultivation of fine arts, came into being, and the Bibliographical Society of the University of Virginia was organized. (For statistics of endowment, enrolment, faculty, library volumes, etc., *see* UNIVERSITIES AND COLLEGES.) (C. W. Dn.)

**Virgin Islands.** The Virgin Islands are an insular possession of the United States located 1,400 mi. southeast of New York and 39 mi. east of Puerto Rico. They form part of the chain of islands between the Caribbean sea and the Atlantic ocean. The three largest islands with an area of 133 sq.mi. are St. Croix (pop. 13,000 est. 1946); St. Thomas (16,200) and St. John (800). The chief cities are Charlotte Amalie, the capital on St. Thomas (9,801); Christiansted (4,495) and Frederiksted (2,498) on St. Croix.

The governor of the Virgin Islands is William Henry Hastie who was appointed by President Truman in 1946.

**Education.**—The public school enrolment in St. Thomas in 1947 was 2,624 of which 785 pupils were enrolled in the junior and senior high schools. In St. Croix the enrolment was 1,570 with about 361 pupils in high schools. The average expenditure per child in St. Thomas was $79.62. In St. Croix the average cost per pupil was $52.59. The average salary of teachers in St. Thomas was $1,400 and in St. Croix $1,035.

**Finance.**—The revenues of the municipality of St. Thomas and St. John during the fiscal year 1947 were $817,898.53 compared with $862,396.95 in the fiscal year 1946. Budget expenditures were $1,121,306.94. Income tax collections were $511,870 as compared with $622,573.27 in 1946.

For the municipality of St. Croix, revenues were $273,026.86 as compared with $262,257.54 in the preceding year. Budgeted expenditures were $428,226.86. Congress appropriated $135,000 toward the expenses of local government in the municipality of St. Croix. Income tax collections there amounted to $86,232.22 as against $103,069.94 in the previous year.

**Trade and Communication.**—In 1947 360 ocean-going vessels with a gross tonnage of 2,631,887 entered the St. Thomas harbour as against 353 with a gross tonnage of 1,493,725 in 1946. The volume of shipping was still considerably lower than in the years before World War II. Imports into the Virgin Islands from the United States during the calendar year 1946 totalled approximately $1,782,577; exports amounted to approximately $750,987.

During 1947 the Pan American Airways and Caribbean Atlantic Airlines served the islands with two daily flights.

St. Thomas and St. Croix are adequately provided with roads. A few miles of roads have been developed in St. John. Radio telephone service among the three islands and to the continental United States through Puerto Rico began in 1946.

**Industry.**—The growing and processing of sugar cane and its allied industries and the business derived through the harbour activities in St. Thomas constitute the economic life of the islands. Exports of rum in 1947 amounted to 244,809 proof gallons from St. Thomas and 146,071 proof gallons from St. Croix as against a total of 955,049 proof gallons in 1946.

St. Croix produces the entire sugar crop of the islands. This basic industry suffered seriously in 1947 because of severe drought. Despite increased acreage and higher prices and subsidies the yield dropped from 47,160 tons in 1946 to 36,304 tons in 1947, with a corresponding reduction in sucrose content from 4,970 tons in 1946 to 2,946 tons in 1947.

Plans were on foot to develop and construct additional facilities for the accommodation of tourists.

The economic problem of the Virgin Islands can be solved only when local foodstuffs and other essential supplies are produced and manufactured to such an extent as to make unnecessary the expenditure of large sums on importations. Great emphasis was laid in 1947 on the need for greater production and consumption of local products. The department of the interior and the department of commerce along with other local agencies were developing plans to help solve this situation.

The federal public works program, delayed considerably because of material shortages and inadequate shipping facilities, was under way in 1947. (W. H. He.)

**Viruses:** *see* INFANTILE PARALYSIS; MEDICINE; PNEUMONIA.

**Vishinsky, Andrei Y.** (1883– ), soviet statesman, jurist and diplomat, was born in Kiev of an ancient Polish family. He studied law at the University of Kiev and joined the Menshevist group of the Social Democrats in 1902. He participated in the revolt of 1905 and served a year in prison. When the bolshevists took power, Vishinsky deserted the Menshevists, served in the red army for a year and joined the Communist party in 1920. He was professor of jurisprudence at Moscow university, 1925–27, was named the all-union deputy public prosecutor in 1933 and was public prosecutor from 1935 to 1939. He rose to fame as the public prosecutor in the treason and purge trials, 1936–38, and was appointed vice-chairman of the council of peoples' commissars and deputy commissar for foreign affairs in 1940. He attended virtually all of the important inter-Allied and United Nations conferences from 1945 through 1947. A skilled lawyer, Vishinsky was a formidable opponent in U.N. debate by virtue of his vast knowledge of legal and parliamentary technicalities. In June 1947, he won the Stalin prize (worth about $40,000) for his "work in legal science."

However, he was also given to impassioned oratory as attested in his vitriolic 92-minute attack on U.S. foreign policy before the United Nations general assembly (Sept. 18) in which he accused influential "reactionary circles" in the U.S. of "warmongering" against the Soviet Union; simultaneously he offered a resolution urging the U.N. to forbid its members to engage in war propaganda. The resolution, however, was defeated (Oct. 27), and the assembly's political and security committee instead adopted unanimously a substitute measure condemning all forms of propaganda that might threaten the peace.

**Vital Statistics:** *see* BIRTH STATISTICS; CENSUS DATA, 1947; DEATH STATISTICS; INFANT MORTALITY; MARRIAGE AND DIVORCE; SUICIDE STATISTICS.

## Vitamins.

The synthesis of vitamin A was reported simultaneously and independently from two laboratories in 1947, by D. A. van Dorp and J. F. Arans working in the Netherlands and J. B. Cauley and co-workers in the United States. In neither case were accurate descriptions of the methods given. It was reported that the biologic potencies and the physical and chemical properties of the natural and synthetic vitamins were identical. This synthesis, if verified, was an important discovery in the field of vitamin chemistry.

Significant advances were made in finding the role of biotin, one of the B-complex vitamins, in metabolism. The older observation that biotin is concerned in the oxidation of pyruvate and lactate was narrowed down to a function in carbon-dioxide fixation by which pyruvate is converted to oxalacetate. It was shown by H. A. Lardy and colleagues that the function of biotin was definitely associated with carbon-dioxide fixation. They noted that oxalacetate as well as aspartic acid spared biotin needs for certain bacteria and further that carbon dioxide greatly stimulated growth in the presence, but not in the absence, of biotin. The same metabolic role for biotin was advanced by W. L. Shive and L. L. Rogers, who demonstrated that oxalacetate or aspartic acid compensated for the depression of bacterial growth caused by a biotin anti-metabolite. H. C. Lichstein and W. W. Umbreit demonstrated the need for biotin in the decarboxylation of oxalacetate, and these same workers demonstrated a second role for biotin in metabolism involving the enzyme systems concerned with the deamination of certain amino acids.

Of the known water-soluble vitamins, thiamin, riboflavin, pyridoxine, and niacin were shown to exert their physiologic action in the form of phosphoralated derivatives which combine with specific proteins to effect the catalysis of certain known reactions of intermediary metabolism. Largely as a result of the brilliant work of F. Lipmann and his collaborators, pantothenic acid was added to the list of vitamins which had been shown to function in this manner. Lipmann and his colleagues isolated a coenzyme concerned with acetylation, another process of intermediary metabolism, and this coenzyme was found to contain pantothenic acid. Further information on the chemistry and distribution of the coenzyme for acetylation was announced at the meeting of the American Society of Biological Chemists. In view of the universal presence of the pantothenic acid containing coenzyme in cells it seemed unlikely that its function is limited to acetylation processes.

Observations were made concerning transaminase and succinoxidase in normal and vitamin $B_6$ deficient rats; it had previously been shown that this vitamin is concerned with these two important enzyme activities. In earlier results it was shown that rats maintained on the vitamin $B_6$ deficient diet for six weeks had low levels of transaminase in all tissues examined. To find whether the effect was specific for transaminase activity or whether other enzymes were equally affected in vitamin $B_6$ deficiency, the succinoxidase activity was also determined in deficient and controlled rats. The vitamin $B_6$ deficient rats showed only a slight decrease of succinoxidase activity to about 80% to 90% of the normal level, thus suggesting a definite specificity of the effect on the transaminases.

The important role played by a number of the vitamins of the B-complex group in the enzyme systems which are involved in energy transformations in the living organism made it seem possible that a direct decrease in the work output of the muscle might result from dietary deficiencies. A number of investigators reported an increased fatigability, deterioration of physical fitness and decreased work output within a few days or weeks after certain of the vitamin B-complex factors were missing from the diet, or present in small quantities. Others failed to obtain such results. Part of this apparent disagreement may have resulted from the difficulty of measuring fatigue, work output, or physical fitness. N. W. Shock and W. H. Sebrell attempted to overcome this difficulty by studying the effect of various members of the vitamin B-complex on the work output of standardized frog muscle preparations and found some interesting, if not as yet explainable, results. They compared the work output of isolated muscles of frogs with the work output of the same muscles of the opposite legs perfused with glucose ringer solution containing variable amounts of the various vitamins of the B-complex. Thiamin, co-carboxylase, pantothenic acid, pyridoxine and riboflavin when present in small concentrations in the perfusion fluid were found to lead to work output of the muscles approximately 20% over that of the corresponding controls. All the substances tested gave about the same response. It was puzzling that so many substances of different chemical structure which are usually characterized by the specificity of their physiologic reactions gave the same effect.

In Vitamin $B_1$ or thiamin deficiency, pyruvate accumulates as does lactate, frequently in a definite ratio to pyruvate. F. S. Randalls and colleagues were interested in determining whether the impaired ability of the body to utilize pyruvate in the presence of thiamin deficiency is a uniform abnormality of all tissues or whether this impairment of metabolism may be more marked in the heart. Experimental work on dogs revealed that the pyruvate balance of the heart appears to be unlike that of other tissues. The workers concluded that normally the heart not only oxidizes all the carbohydrate products formed within it but also utilizes some poured into the blood stream by other organs. In thiamin deficiency this function is impaired. It was suggested that an important source of the increased pyruvic acid blood levels observed in thiamin deficiency is the heart tissue itself.

Additional evidence of the importance of certain vitamins of the B-complex in the formation of antibodies was obtained by A. E. Axelrod and associates. A severe impairment of antibody response was observed in pantothenic acid and pyridoxine-deficient rats. Variable but low antibody titers were observed in riboflavin-deficient animals. Good antibody response was observed in well nourished and starved control animals. (*See* also BIOCHEMISTRY; CHEMISTRY; CHEMOTHERAPY; FISHERIES; FLOUR; FOOD RESEARCH; MEDICINE.)

## Vocational Rehabilitation, Office of.

Physically and mentally handicapped civilians of working age requiring vocational rehabilitation services in order to obtain or retain employment commensurate with their potential capacities, numbered at least

U.S. VETERANS, injured in World War II, are shown in Chicago demonstrating their skill in making automobile identification tags, during the 1947 observance of National Employ the Physical Handicapped week

1,500,000 in the United States in 1947, not including veterans of the armed forces with service-incurred disabilities. The number was increasing at the rate of 200,000 a year. All 48 states, the District of Columbia, Puerto Rico, Hawaii and Alaska entered into partnership with the Federal Security agency's Office of Vocational Rehabilitation to provide the necessary services and facilities.

There were during the year 52 general rehabilitation agencies administered by the state boards of education through divisions of vocational rehabilitation. In 35 states, there were agencies authorized by state laws to provide vocational rehabilitation services to rehabilitate blind persons. In 17 states general rehabilitation agencies provided services for all types of handicapped clients, including the blind.

The states and territories actually operated the programs, purchasing rehabilitation services from existing facilities and necessary medical care from general practitioners, specialists, clinics, hospitals and other sources—either public or private—available in the communities. The federal government, through the Office of Vocational Rehabilitation in the Federal Security agency, assisted the states and territories through financial grants-in-aid, establishment of standards of service and technical aid. The federal government assumed all necessary administrative costs incurred by the states as well as their expenditures for guidance and placement of disabled individuals. Medical examinations and treatment, training and the costs of other services were shared equally by the states and the federal government.

The states were fully reimbursed by the federal government for costs of services to war-disabled civilians such as merchant seamen, members of the Civil Air Patrol and the aircraft warning service injured in performance of duty.

During the fiscal year 1947, 43,880 clients—32,015 men and 11,865 women, including the blind—were rehabilitated into employment, and their cases were closed to the mutual satisfaction of themselves and their employers. Total annual earnings—not including those of farmers and family workers, whose earnings were difficult to estimate—increased almost 400% after rehabilitation, rising from an estimated annual rate of $13,922,100 before rehabilitation to $67,796,700 afterward. Of this group, 32,384 or 74% were unemployed when they were surveyed for services, 6,245 never having worked before and 9,250 only part time.

In addition, 19,900 other clients made vocational adjustments during the same period following diagnosis or counselling and planning, while 102,711 were still in process of rehabilitation at the close of the fiscal period.

Clients found employment in various professional and semiprofessional fields, and in skilled, semiskilled and unskilled occupations.

Rehabilitation programs were conducted at a total cost, during the 1947 fiscal year, of $19,313,314, of which the federal share was $14,188,933. The states' participation totalled $5,124,411, which represented state and local governmental funds supplemented by contributions from interested welfare, health, fraternal and other organizations. (*See* also VETERANS' ADMINISTRATION.) (M. J. SY.)

## Wages and Hours.

Manufacturing pay rolls of the U.S. were substantially larger in the first nine months of 1947 than in the corresponding months of 1946 and increased during the rest of the year. The index numbers for Jan. 1947 were more than 34% higher than the figures for Jan. 1946. Substantial wage increases accounted for most of the increase. There were also more workers employed and fewer strikes.

Table I shows employment indexes for 1946 and the first nine months of 1947 in all manufactures, durable goods and nondurable goods. The table shows wage-earner employment and pay-rolls in both durable and nondurable goods industries. These indexes were based upon 1939 as 100. The chart on page 787 shows employment and pay-roll variations from 1919 to June 1947.

**Table I.—*Indexes of Production-Worker Employment and Pay Rolls in Manufacturing Industries***

| Dec. . | ... | 152.8 | ... | 306.2 | ... | 177.0 | ... | 337.3 | ... | 133.6 | ... | 275.8 |

This table compiled from statistics released by the *Monthly Labor Review*, United States bureau of labour statistics.

*Indexes are based on 1939 average and adjusted to census of manufacturers. They are not comparable to indexes published prior to Dec. 1942 by the bureau of labour statistics.

Table II shows the average hours and earnings in Aug. 1946 and 1947 in the principal manufacturing and nonmanufacturing industries.

It is evident that a high level of wage earners' weekly "take-home" continued through Aug. 1947, as the result of higher hourly earnings.

Table II.—*Average Weekly Earnings, Average Weekly Hours and Average Earnings per Hour in Major Industrial Classifications, Month of August 1947 and 1946: U.S.*

| Industry | Average weekly earnings 1947 | Average weekly earnings 1946 | Average weekly hours 1947 | Average weekly hours 1946 | Average hourly earnings cents 1947 | Average hourly earnings cents 1946 |
|---|---|---|---|---|---|---|
| ALL MANUFACTURING | $49.21 | $44.99 | 39.8 | 40.5 | 123.8 | 111.2 |

*Not available.

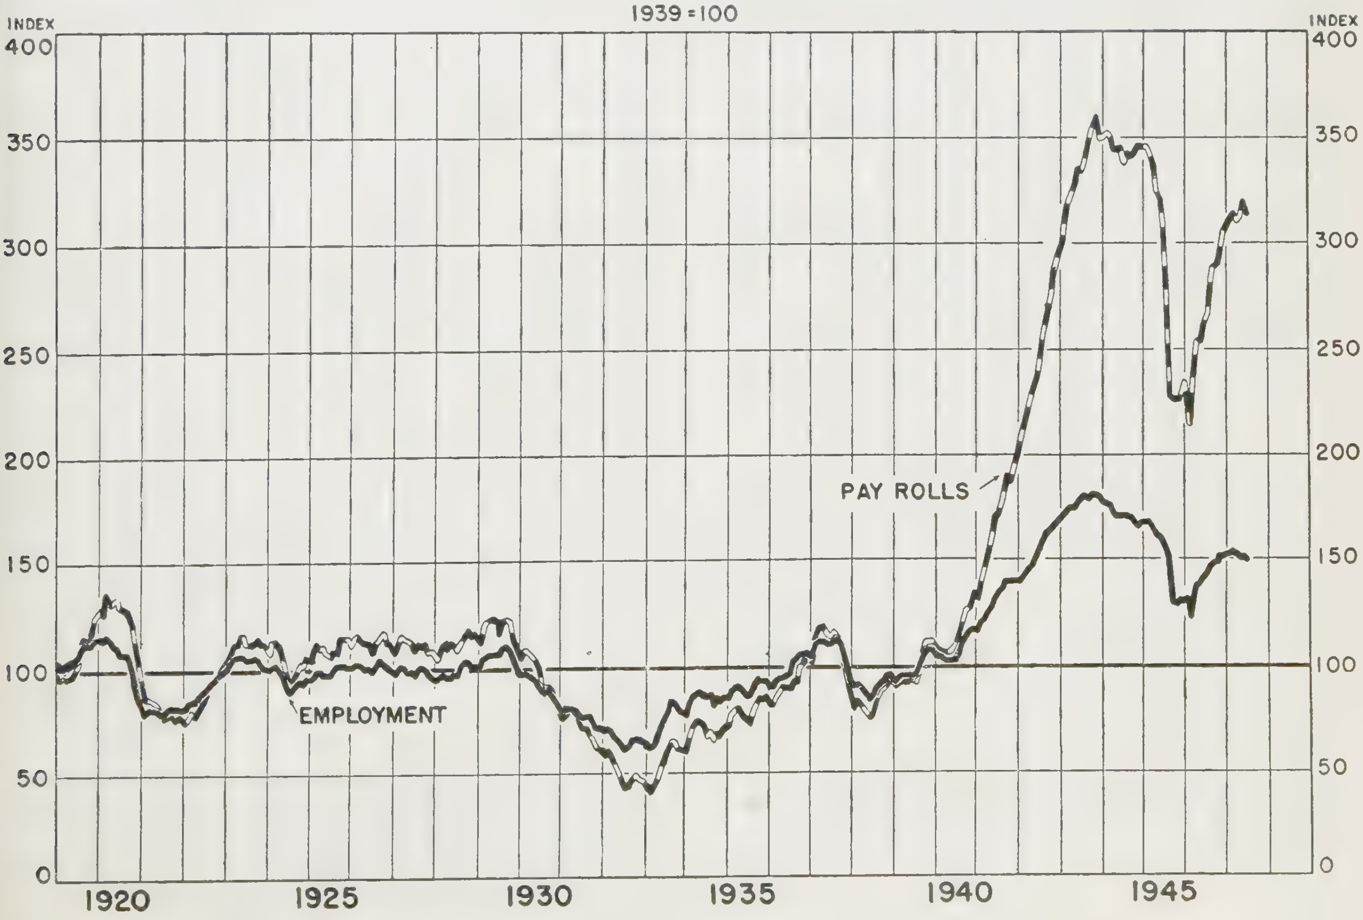
Table III shows a steady rise in average hourly earnings from 1941 to 1947. It was not possible to separate the increment added to hourly earnings by overtime work from the prevailing rates paid for standard hours of employment but additional increases occurred in many industries in 1947.

The much higher hourly earnings in some industries were the result of one or more of the following factors: (1) character of the labour supply employed, as to sex, age and skill; (2) productivity of the industry, principally determined by its degree of modernization, technical equipment and proportion of skilled workers; (3) degree to which union working conditions prevailed and (4) necessity of paying high wages to attract labour supply.

Weekly earnings measure wage-earner welfare better than do hourly rates (Table II). There were 3 industries of the 31 studied in which average weekly earnings exceeded $60 per week in Aug. 1947. The maximum was $71.49 in bituminous coal mining. The lowest weekly earnings were in hotels: $29.38. Of course, hotel earnings are supplemented by tips, and the statistics do not reveal this part of the employees' income. In Aug. 1947, there were 18 industries in which average weekly earnings were between $50 and $59.71 and 6 industries between $40 and $50. The average weekly earnings of durable goods manufacturers were $52.56 in Aug. 1947 compared with $48.02 in 1946.

The wages of farm labour, both monthly and daily wages, rose a little from 1946 levels, judging by the reports of the U.S.

EMPLOYMENT and pay rolls* for all manufacturing industries, 1919 to June 1947, as compiled by the U.S. bureau of labour statistics (1939=100)



bureau of agricultural economics; adequate statistical data were not yet available. (D. D. L.)

**Great Britain.**—There was a considerable slackening off of the upward trend of wage rates; for the first eight months of 1947 the total estimated increases in weekly rates amounted to only £832,000, spread over 2,600,000 workers, as compared with £2,350,000, spread over 6,700,000 workers, in the corresponding period of 1946, when wage rates were already being kept largely stable in order to avoid inflation. The trade unions supported wage increases only in exceptional cases, mainly where they were clearly needed in order to remedy deficiencies in labour supply. The government, for its part, continued to hold the cost of essential foodstuffs as nearly stable as possible by means of subsidies, which had become much more costly because of higher world prices. There were some proposals to reduce the food subsidies on financial grounds, but no action was taken.

There was further discussion of the desirability of adopting some "national wages policy" to bring the supply of labour for the different industries into better relation to the requirements of the plan of production. The government's general attitude was that wage increases should be granted only where labour needed to be attracted into undermanned industries, or where they were linked with increases in productivity under systems of payment by results.

The old cost-of-living index (July 1914=100), stood at 155 in Sept. 1939 and at 203 in July 1947, when it was issued for the last time. The new index, which had no connection with the old, was based on June 1947, and stood in August at 100.1. It should be emphasized that, despite the food subsidies, the actual rise in the cost of living since 1939 had been much greater than the old index suggested, as it gave a disproportionately heavy weight to subsidized food items. The new policy on subsidies announced in the budget of Nov. 1947, whereby the total expenditure on them was to be kept stable, meant that further increases in prices would show up in retail prices and so increase the cost of living. The index of retail prices rose at the end of the year, and further rises were expected.

For earnings, as distinct from wage rates, in industry generally the latest published figures available in 1947 were for Oct. 1946, when the average for all workers covered by the figures stood at 101*s.*, or 90% above the level in Oct. 1938. For men over 21 the figure was 120*s.* 9*d.*, a rise of 75%; for women over 18 it was 65*s.* 3*d.*, a rise of 101%. Youths' earnings had risen slightly more than men's, and girls' slightly more than women's. The increases were greatest in textile and clothing, and smallest in building, printing and paper, and public utilities. Working hours averaged 47.6 per week for men and 42.6 for women, as compared with 47.7 and 43.5 in 1938. Hours per week had fallen for youths from 46.2 to 44.7, and for girls from 44.6 to 42.6.

The highest weekly earnings were in the metal, engineering and shipbuilding trades—men 132*s.* 9*d.* per week, women 70*s.* 7*d.* Certain important industries were not covered by the general figures. Of these, coal mining showed for the final quarter of 1946 average earnings of 24*s.* per man shift, as compared with 11*s.* 3*d.* in 1938, when miners' earnings were abnormally low. For adult miners only, the average for Oct.–Dec. 1946 was 134*s.* 8*d.* weekly, as compared with 62*s.* in 1938. Allowances in kind were valued at 5*s.* 1*d.* in 1946, and 2*s.* 1*d.* in 1938. For dock workers, weekly earnings in Oct. 1946 averaged 143*s.* 3*d.* (no prewar comparison was available). For railway workers, there were no complete figures later than March 1946, when weekly earnings averaged 121*s.* 6*d.* for adult men and 88*s.* 4*d.* for women, a rise, in the case of men, of 77% above the 1939 level. In agriculture the statutory minimum wage for adult men was raised from 80*s.* to 90*s.* per week, and for women from 62*s.* to 68*s.*, in both cases for a standard week of 48 hr. Statutory regulation under the Wages Councils act was extended to cover certain further groups of distributive workers. ## Wallace, Henry Agard

(1888– ), U.S. statesman. (See *Encyclopædia Britannica* for his early career.) Wallace was secretary of agriculture in the Roosevelt cabinet, 1933–40. He was elected vice-president in 1940 and after completion of his term became secretary of commerce in 1945. He resigned from the latter position on Sept. 20, 1946, at Pres. Harry S. Truman's request because of his attack on the administration's "get-tough-with-Russia" policy, which proved embarrassing to Secretary of State James F. Byrnes, then attending the Paris peace conference. Later Wallace became editor of the *New Republic.*

In 1947, Wallace launched a whirlwind crusade to reverse what he believed to be the faulty direction of U.S. foreign policy. He started his campaign with a visit to England, France and the Scandinavian countries in April, continuing it on his return to the United States with an 18,000-mi. tour of 15 states and the District of Columbia.

Although his tour at home and abroad attracted political criticism, it also drew large audiences, a phenomenon explained by some observers as a tribute to his "messianic" fervour. The motif running through Wallace's denunciations of the administration's foreign policy was that it would lead inevitably to war with the Soviet Union, and in a New York speech, Sept. 11, he said he would work within the Democratic party, but if it proved to be "a war party . . . then the people must have a new party."

Wallace announced (Dec. 29) that he would run for president in 1948 on a third party platform of "peace and abundance" for all, and he resigned the *New Republic* editorship.

## War Crimes.

Data available to the United Nations War Crimes commission in Oct. 1947 indicated that eight Allied countries (United States, United Kingdom, France, Netherlands, Norway, Greece, Yugoslavia and Australia) had conducted 1,600 war crimes trials, with an average of three persons tried in each. Of some 5,000 accused, 17% were acquitted. Of the 83% found guilty, one-third were sentenced to death and the remaining to fine or imprisonment. These trials were about equally divided between the European and far eastern areas. In the former area, half were tried in United States tribunals, and in the latter, less than a quarter. Data for trials by the Soviet Union and China were lacking. Czechoslovakia and Poland classified war criminals and collaborators together. They had dealt with nearly 28,000 persons accused of these crimes, of which about 1,000 had been sentenced to death and 18,000 to fine and imprisonment. The remaining 9,000 were acquitted.

**Europe.**—Since conclusion of the trial of major war criminals at Nuernberg in Oct. 1946, there were numerous trials of lesser war criminals. During 1947 death sentences were decreed by U.S. courts for officers of concentration camps at Dachau, Kaufbeuren and Buchenwald and for Captain Carl Hildebrand; Field

Marshal Erhard Milch was sentenced to life imprisonment for war crimes. Seven SS men, mostly physicians, were found guilty of war crimes and crimes against humanity for experiments on inmates of concentration camps. Three industrial magnates, including Friedrich Flick, were sentenced to imprisonment for exploiting slave labour.

British courts sentenced to death members of the staff of the Ravensbrueck women's concentration camp, including four women, and sentenced Field Marshal Albert Kesselring to death (later commuted to life imprisonment) for the massacre of Italian civilians at the Ardeatine caves.

French courts sentenced to death 21 SS men for murdering prisoners, and sentenced Captain Heinrich Tillesen to 15 years' imprisonment for murdering Dr. Matthias Erzberger, former chancellor of Germany.

The soviet court at Stalino obtained confessions from 4 of 12 German officers on the charge of participating in the massacre of 170,000 soviet civilians and 150,000 prisoners of war and the destruction of $2,000,000,000 worth of mining and industrial equipment. The Polish tribunal at Krakow sentenced to death 23 SS officers for crimes against humanity at the Auschwitz extermination camp.

In addition to these trials, preparations were made for the trial of the members of the four organizations (the SS, the SD, the gestapo, and the leadership corps of the nazi party) which had been found to be criminal organizations by the International tribunal at Nuernberg. According to the judgment of that tribunal, each alleged member of a criminal organization was entitled to individual trial.

Apart from war criminal trials, several trials were held by the Allied courts in the European zone for persons accused of sedition against military government. Thus on Feb. 23, it was announced that British and U.S. forces had arrested a number of higher officers of the SS and others for collaboration in an underground movement to restore nazi government and to lead Europe into war against Russia. On March 26, the U.S. commander at Frankfurt stated that a nazi plot in that city had been frustrated, and four former SA officers had been arrested.

German denazification courts sentenced the three men who had been acquitted by the International tribunal at Nuernberg (Hans Fritsche, Franz von Papen and Hjalmar Schacht) to prison terms of eight or nine years. Hitler's photographer, Heinrich Hoffman, was also sentenced to imprisonment by one of these courts. More than 2,000,000 persons were subject to denazification proceedings in the U.S. zone, and more than 400 German denazification tribunals were established to deal with them. In July 1946 General Joseph T. McNarney extended amnesty to youths and on the following Christmas to persons not charged as "major offenders" or "offenders" and whose financial status indicated they had not profited from the nazi regime or who were more than 50% disabled. These amnesties reduced those subject to trial by half. By the beginning of 1947, 125,738 persons had been tried, of whom more than 4% were found to be "major offenders" or "offenders," less than 9% "lesser offenders," and nearly 10% were exonerated. The rest were classified as "followers" not interned but subject to supervision and to certain limitations of occupation and public service.

A new United States directive for military government in Germany issued on July 11, 1947, urged "every effort to facilitate and bring to early completion the war crimes program. . . ."

**Far East.**—The trial of Japanese accused as "major war criminals," begun June 3, 1946, continued through 1947. The fact that there were more defendants (28) and more counts in the indictment (55) accounted in part for the greater length of the trial as compared with that at Nuernberg. General Hideki Tojo, whose defense began near the end of the year, assumed major responsibility for the war, which, however, he alleged was a defensive necessity for Japan.

BUCHENWALD concentration camp officials who were among the 31 defendants being tried for war crimes by a U.S. military tribunal at Dachau, Germany. All 31 were convicted on Aug. 12, 1947, with 22 sentenced to death and the remainder to life or long-term imprisonment

In the far eastern zone, there were numerous trials of lesser war criminals. The British court at Hong Kong sentenced to death the commandant and the doctor of the Shamshaipo prison camp for murdering prisoners, the chief of the Japanese gendarmery in Hong Kong, Colonel Noma Kennosuke, for atrocities against civilians and Colonel Nakano and Captain Imamura for maltreatment of prisoners of war in Formosa. The British court at Singapore sentenced Lt. Gen. Sabura Kawamura and Lt. Col. Masayuke Oishi to death for complicity in the murder of 5,000 Chinese after the fall of Singapore.

The French court at Şaigon sentenced 13 members of the Japanese police for torturing French men and women.

The Australian court at Rabaul sentenced to death Lt. Masao Baba for ordering forced marches of British and Australian prisoners in Borneo in 1945 and Commander Hatakeyama for participation in the murder of Allied troops in the Netherlands Indies.

A Chinese court at Nanking sentenced to death Lt. Gen. Rensuke Isogai, governor of Hong Kong during the Japanese occupation, for ill treatment and starvation of civilians in Hong Kong.

**Activities of the United Nations.**—The trial and sentencing of war criminals had proceeded with a high degree of co-operation among the powers. Yugoslavia, however, complained that certain categories of war criminals, traitors and quislings in the U.S., British and French zones had not been turned over for trial in its zone. With the support of the Soviet Union, it introduced a resolution concerning this matter in the second general assembly of the United Nations in Oct. 1947. The assembly rejected the resolution, which criticized the western powers, and approved a British resolution recommending that member states "continue with unabated energy to carry out their responsibilities for the surrender and trial of war crimes."

The United Nations War Crimes commission continued to function in London under the chairmanship of Lord Wright. It initiated the publication of a series of reports of war crimes trials, thus making available the legal principles developed in these trials.

The United Nations has proceeded with studies in pursuance of the resolutions of the first general assembly concerning the codification of international criminal law, including the war crimes set forth in the Nuernberg charter and the crime of genocide. *The German government had been notified that the government of the United States would look to the German government for the discharge of this indebtedness of the government of Austria to the government of the United States.

†Indebtedness to the United States under agreements of June 23, 1930, and May 26, 1932.

(E. F. B.)

**United States Loans, World War II and Later.**—Although the total indebtedness of other countries to the United States government incurred during and after World War II approaches in amount that of World War I, the pattern differs materially. Whereas 70% of the original World War I debt was for war goods acquired prior to the armistice, 90% ascribable to World War II (as of June 30, 1947) arose in the two postwar years and was largely for rehabilitation and reconstruction purposes.

The main difference in the financing of the two wars was in

the introduction of lend-lease in the later conflict. For the war period from July 1, 1940, to June 30, 1945, including the 18 months prior to Pearl Harbor, foreign aid in the form of grants and credits totalled about $50,000,000,000, the greater part of which represented lend-lease or other grants for which payment was not expected. For the first two postwar years, July 1, 1945, through June 30, 1947, aid amounted to about $12,000,000,000, the portion in the form of credits being somewhat larger than in grants.

The figures presented in the table on page 790 are exclusively credits, for which there is a definite obligation to repay principal, invariably with interest. The amounts shown relate to indebtedness as of June 30, 1947, and include a relatively small amount still due on some loans granted by the Export-Import bank prior to the war. They are, however, exclusive of World War I debts. The amount outstanding is the total amount originally disbursed or utilized less repayments. Unutilized commitments represent amounts still available to the borrower under the terms of the agreement. It was probable that, for one reason or another, some of this would never be utilized. For example, new sales of surplus property to Czechoslovakia and Hungary were suspended.

On the other hand, all except $300,000,000 of the $1,700,000,000 balance under the special loan to the United Kingdom had been utilized by Dec. 31, 1947.

The total of outstanding and unutilized commitments represented the maximum amount of credit which could be extended on the basis of authorizations at June 30, 1947. It was exclusive of the more than $800,000,000 uncommitted lending capacity of the Export-Import bank and other credits which might be approved thereafter by other agencies under programs authorized by the congress.

Credits extended abroad by the U.S. government were of three main types: Loans, property credits and commodity credits. Loans were invariably in the form of dollar credits, either restricted to expenditures on specific items or unrestricted as to locale or method of expenditure. Property credits and commodity credits, on the other hand, were expressed in terms of existing goods, most of which were produced or contracted for during the war years.

While loans thus added to the demand for new commodities, the other types of credit generally did not have a similar effect.

Property credits were extended in connection with the disposal of surplus property, including merchant ships, and in settlement for lend-lease goods on hand at the end of the war or in process of manufacture and part of the so-called lend-lease pipe line. Commodity programs involved credits extended to the military governments of Germany and Japan in the form of advances of cotton and other commodities to assist in the economic rehabilitation of these areas. (R. C. Pe.)

**War Prisoners:** *see* Prisoners of War.

**Warren, Earl** (1891– ), U.S. politician and governor of California, was born on March 19 in Los Angeles, Calif. He was graduated from the University of California in 1912, received his law degree in 1914 and was admitted to the bar the same year. He joined the army during World War I, but was not sent overseas.

He became deputy city attorney of Oakland in 1919. Six years later he was elected to the district attorneyship, and in 1938 California Republicans elected him as the state's attorney-general.

Warren, whose reputation as a "racket-busting" prosecutor rivalled that of Thomas E. Dewey in New York, was elected in 1942 as governor of California. Two years later, he turned down a G.O.P. offer to run for vice-president of the United States on the ground that he was obligated to complete his term as governor.

In the 1946 gubernatorial elections, Warren shattered precedent in California by winning both the Republican and Democratic nominations in the June 4 primaries, making his re-election in the November polls a foregone conclusion.

Because California's large number of electoral votes made it a "key" state, Warren figured in 1947 as a prominent aspirant for the G.O.P. presidential nomination. While he agreed on Nov. 13 to enter the state's primary, he said he would confine his campaign to California alone.

**War Savings Stamps:** *see* Post Office.

**Washington.** A state in the extreme northwest United States, popularly known as the "Evergreen state," admitted to the union Nov. 11, 1889. Total area, 68,192 sq.mi. of which 66,977 sq.mi. are land; pop. (1940) 1,736,191; native, 1,525,812; foreign born 210,379. An estimate as of July 1, 1947, placed the population of the state at 2,233,000, an increase of 28.6% more than 1940. Capital, Olympia 16,000 (est.). The 1940 census and 1947 estimates for three largest cities were respectively: Seattle, 368,302 and 470,000; Spokane, 122,001 and 147,000; Tacoma, 109,308 and 136,000. Wartime growth and postwar stabilization are reflected in 1940 census and the estimates for 1945 and 1947 for two cities: Bremerton 15,134 to 72,000 to 35,000; Vancouver 18,788 to 39,510 to 26,000. The urban population in 1940 was 921,969 or 53.1%; in 1947 it was 1,350,507 (est.) or 60.5%.

**History.**—The state legislature in its 30th biennial session from Jan. 13 to March 13, was in complete control of a Republican majority whose influence was enhanced by its coalition with a group of right-wing Democrats. Changes made in the state's administrative structure were material, particularly with the reallocation of the functions of the former department of finance, budget and business to a new department of public institutions and to a director of the budget. A new state board of education was to consist of 12 members, of whom 2 were to be elected from each of the state's 6 congressional districts by conventions of representatives of local school directors. Nine ad interim committees were formed. One, a bipartisan legislative council of 21, was delegated primarily to study and examine administrative procedure. Its constitutionality was questioned, but its legality was upheld by the state supreme court. A similar committee was instructed to investigate un-American activities. Two of the constitutional amendments to be placed on the state's 1948 ballot related to local government. One was so worded that Seattle could sever its connection with King county and set up a new city-county jurisdiction; another would permit counties to adopt "Home Rule Charters" and effect radical administrative reorganization. The death of Fred Norman, Republican congressman from the 3rd district, on April 18, resulted in a spirited campaign in which Russell Mack on June 7 won over Charles Savage, Democratic member of the 79th congress but defeated for re-election in 1946.

State officers for 1948: governor, Monrad C. Wallgren; lieutenant governor, Victor A. Meyers; secretary of state, Belle Reeves (died Jan. 2, 1948, successor appointed by governor, Earl S. Coe); treasurer, Russell H. Fluent; auditor, Cliff Yelle; attorney general, Smith Troy; state superintendent of public instruction, Pearl Wanamaker (elected on nonpartisan basis); chief justice of the state supreme court, William F. Millard; speaker, house of representatives, Herbert M. Hamblen.

**Education.**—During the school year 1946–47, average daily attendance in elementary and secondary schools was 295,405; the total number of teachers 13,844 whose average salary was $2,624.01. Total current expenditures were $60,085,676.92, and the cost per pupil in attendance was $192.39. The 1947 legislature, furthermore, appropriated $20,000,000 to help finance school district building projects, and by increasing subventions to districts required them to grant salary increases of from $500 to $700 to public school teachers.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—During the period Nov. 1946 through Oct. 1947, inclusive, public assistance in the state, including federal direct expenditures and state aid, cost $69,724,742.30. An average of 115,019 persons received assistance to the total amount of $66,186,635.42. An average of 16,662 persons per month received home assistance to the amount of $5,480,402.11. An average number of 65,772 old persons received a total of $45,552,983.73. An average number of 26,911 children received a total of $9,849,077.64. An average number of 645 blind persons received a total of $483,126. A total of 128,645 unemployed workers who had received at least one check were paid a total of $36,455,482 during the benefit year ending June 30, 1947. On Nov. 30, 1947, ten charitable institutions had a total population of 9,739 and four correctional institutions had 2,268 inmates, and both programs cost the state $8,607,740.17 during the fiscal year of April 1, 1946, to March 31, 1947.

**Communications.**—In 1944 there were 5,524 mi. of railroad in the state. In 1947 mileage of both state and rural highways was 52,126.99; federal-aid funds applied to 9,214.01. During 1947 up to Oct. 1, the state spent $10,561,017.46 for construction. On Oct. 31 the largest telephone company in the state reported 516,208 units, an annual gain of 45,657; independent firms had 75,000 (est.) subscribers.

**Banking and Finance.**—Whereas the per capita property tax of $25.64 during 1946 was the lowest for any of the far-western states, the total per capita of $84.05 for the fiscal year ending June 30, 1947, was the highest for any of the United States. In 1946 the total assessed valuation of real and personal property was $1,578,922,506. On March 31, 1947, the bond indebtedness of $4,240,000 and outstanding warrants amounting to $10,237,919.02 were easily covered by investments and cash balances. The treasurer's cash balance was $128,521,211.19. For the year ending on March 31, 1947, total receipts were $299,962,319.43 and disbursements were $299,100,407.37. One hundred and twenty-five banks in the state reported a total capital of $38,627,600; capital surpluses and undivided profits of $95,731,269.28; and assets of $2,297,613,881.55.

**Agriculture.**—In 1945 the state had 79,887 farms whose acreage totalled 16,719,726, and of these 4,186,000 ac. were in 1946 devoted to 52 crops. In 1946 the total farm crop was valued at $597,001,000, and in 1947 an official estimate placed this value at an all-time high of $625,000,000. The total farm income (exclusive of changes in inventory) in 1946 was $567,107,000; from crops $359,291,000; from livestock $185,646,000; from government payments $12,172,000. The state led all others in rural electrification with 95.1% of all farms on power lines.

*Leading Agricultural Products of Washington, 1947 and 1946*

| Crop | 1947 (est.) | 1946 |
|---|---|---|
| Wheat, bu. | 68,368,000 | 77,965,000 |
| Apples, bu. | 33,480,000 | 32,710,000 |
| Hay (all), tons | 1,661,000 | 1,811,000 |
| Pears, bu. | 8,305,000 | 8,890,000 |
| Peas (100-lb. bags) | 6,542,000 | 6,926,000 |
| Hops, lb. | 19,824,000 | 19,720,000 |
| Potatoes, bu. | 8,000,000 | 10,120,000 |
| Cherries, tons | 33,400 | 34,700 |
| Peaches, bu. | 2,817,000 | 2,700,000 |
| Oats, bu. | 7,000,000 | 6,144,000 |

**Manufacturing and Trade.**—In 1946, income payments in the state amounted to $3,112,000,000 in contrast with $1,012,000,000 in 1939. Business transactions for the period May 1, 1946, to April 30, 1947, amounted to $6,459,711,783 representing an increase of 20.6% more than the previous year. Of this amount, manufactures constituted $1,326,177.99; wholesaling $1,413,478,336; retailing $3,122,357,800; services (including professional) $360,376,716; mining and extracting $136,309,108. Total civilian employment in July 1947 was 957,000; wage earners and salaried persons 671,000; tradesmen and service personnel 262,000; transport and communication workers 69,000; employees of government and government contractors and others 164,000. Value of operating properties of public utilities in 1947 was $424,040,120. The Washington customs district reported exports valued at $151,694,868 and imports at $64,925,408 for the period Jan. through Aug. 1947.

Record catches of bottom fish, sole, ling and cod, found a ready market and indicated a new development in the fishing industry.

**Mineral Production.**—Mineral production in 1945 amounted to $31,588,000 of which metals accounted for $7,140,242, and in 1946 the latter were estimated at $6,886,749. There was a steady decline in the yield of copper. In the northeastern part of the state, development of the largest known body of low-grade lead-zinc ore in the United States was begun.

(H. J. De.)

**Washington,** District of Columbia, national capital of the U.S.A., 11th largest of U.S. cities, had in 1940 a population of 663,091. In 1946, Washington reached a peak of population which had declined by June 30, 1947, to an estimated 861,000 for the district and 1,205,220 for the metropolitan area. The number of government employees, which reached about 300,000 during World War II, declined to 250,000 at the end of 1946 and to 195,000 by Dec. 1, 1947. The acute housing shortage continued through 1947. Some new private housing was provided in the suburbs and a few apartment houses built in the city. No new public housing was built and most of the temporary war housing remained in use.

From 1926, the National Capital Park and Planning commission had served as the co-ordinating planning agency. In 1947, the staff of the commission, with the aid of a planning consultant, made progress in bringing up to date the comprehensive plan of Washington, as authorized by the Urban Development act of 1946.

The total appropriation of congress for the fiscal year running from July 1947–48, was $95,516,741.80. The federal contribution to the budget was $12,000,000—about one-eighth of the total. For some years the federal government contributed 50%, but contributions gradually declined to less than 10%. The area of private property covering less than half the area of the district, but in 1947 assessed at full value at the rate of $2 per $100, could not carry the tax load for a city developed on the scale of the national capital. No taxes were paid by the federal government on the 41% of land in federal ownership.

Washington is governed in all legislative matters by the congress of the United States, as provided in the constitution. The principal administrative agency is a commission of three, appointed by the president of the United States, one of whom is nominated from the corps of engineers, U.S. army. In 1947, a subcommittee of the committee on the District of Columbia of the house of representatives conducted a study and recommended that congress delegate to a locally elected council of 12 most of the responsibility conferred on congress by the constitution, the chief executive to be appointed by the council. In view of the character and function of the federal city, it was not expected that the federal government would forfeit its essential control of its national capital. (H. Js.)

**Washington, University of (Seattle).** On April 10, 1947, announcement was made of a $150,000 grant to the university by the Rockefeller foundation for a modern research program to be carried out by the university's far eastern department.

Climaxing three days of symposia concerning atomic energy, labour economics and the humanities, Dr. Raymond Bernard Allen was formally invested as the university's 21st president in a colourful academic ceremony, May 24, 1947. A few of the outstanding participants in the inauguration were Ernest O. Lawrence, Nobel prize winner in physics; Edward U. Condon, director of the national bureau of standards; Robert A. Millikan, former president of the California Institute of Technology; L. A. DuBridge, president of the California Institute of Technology; Edgar L. Warren, director of the U.S. conciliation service; Senator Elbert D. Thomas of Utah; Dr. Stafford Warren, dean of the University of California at Los Angeles medical school; and Robert Gordon Sproul, president of the University of California.

On Oct. 23, 1947, President Allen announced the planned construction of a 200-ton, 60-in. cyclotron, to cost $375,000. Also planned were a large cloud chamber for cosmic ray studies and a 4,000,000-volt Graaf generator.

As the year ended, a $20,000,000 building program was under construction, while $11,000,000 in additional construction was in the planning stage. Buildings nearing completion were units of the health sciences group, Thomson hall, Engineering hall, C. C. More hall, and additions to Johnson hall, Physics hall and the library. Planned for early completion were a student union building, an administration building, the Hiram Conibear Crew house, Fisheries hall and a fine arts building. (For statistics of endowment, enrolment, faculty, library volumes, etc., *see* UNIVERSITIES AND COLLEGES.) (R. B. A.)

## Washington University (St. Louis).

Washington university, at St. Louis, Mo., is nondenominational and coeducational. It comprises the college of liberal arts, the schools of engineering, architecture, law, social studies, fine arts, business and public administration, medicine, dentistry, nursing, botany, graduate studies and the University college (principally adult education). A department of music was inaugurated in 1947.

Completion of a laboratory during the year provided facilities for research in the chemistry of radioactive substances, supplementing work carried on in the university's cyclotron.

Other new buildings were a 70-family apartment building for faculty members, and a centre for student and alumni activities.

During the year the Washington university school of medicine was appointed to advise in health services and research carried on at the Los Alamos Atomic Bomb project in New Mexico.

Gifts and bequests totalling $732,269 were received during the fiscal year ending June 30, 1947.

Dr. Arthur Holly Compton, Nobel prize winner and leader in the development of atomic energy, is the chancellor of the university. (For statistics of endowment, enrolment, faculty, library volumes, etc., *see* UNIVERSITIES AND COLLEGES.)

(A. H. C.)

**Water Supply:** *see* PUBLIC HEALTH ENGINEERING.

## Wealth and Income, Distribution of.

A report on the distribution of U.S. liquid assets and income, published in 1947 by the federal reserve board, provided data for 1946 and early 1947 on the basis of a small field canvass of family spending units. An earlier report had provided similar information for the year 1945. The summary data on liquid asset holdings are provided in Tables I and II. Holdings covered by these data included government bonds and savings and checking accounts; the investigators were unable to obtain satisfactory information on holdings of currency.

Table I.—*Distribution of Spending Units and Liquid Assets by Amount of Liquid Asset Holdings,* Early 1947*

| Spending units ranked according to their holdings of liquid assets | Per cent of total liquid assets held | Amount of liquid assets held by smallest holder in group |
|---|---|---|
| Highest tenth | 60 | $4,250 |
| Second | 17 | 2,150 |
| Third | 10 | 1,300 |
| Fourth | 6 | 800 |
| Fifth | 4 | 450 |
| Sixth | 2 | 250 |
| Seventh | 1 | 50 |
| Eighth | † | 0 |
| Ninth | 0 | 0 |
| Lowest tenth | 0 | 0 |
| All spending units | 100 | |

*The term "total liquid assets" is used to represent total holdings in U.S. government bonds and in savings and checking accounts.
†Less than one-half of 1%.

Table I shows the distribution of the spending units—either single individuals or family groups pooling their major items of income and expense—according to their holdings of liquid assets. It may be seen that these holdings were unevenly distributed over the ten units.

Table II shows the distribution of spending units and liquid assets by the size of income of each unit, for 1946 and 1945. It is readily apparent from these data that the 50% of the spending units holding small liquid assets was not so highly concentrated at the lower end of the income scale. There was, however, a marked tendency for the higher income groups to have substantially larger accumulated savings in the form of liquid assets. The group with incomes of $4,000 or more represented only 18% of the spending units in 1946, but this group owned more than 50% of total liquid assets.

Table II.—*Distribution of Spending Units and Liquid Assets by Income Classes, 1946 and 1945*

| Annual income (money income before taxes) | Proportion of spending units 1946 | Proportion of spending units 1945 | Per cent of total liquid assets held* 1946 | Per cent of total liquid assets held* 1945 |
|---|---|---|---|---|
| $ 0– 999 | 17% | 20% | 5% | 7% |
| 1,000–1,999 | 23 | 27 | 11 | 14 |
| 2,000–2,999 | 25 | 23 | 17 | 17 |
| 3,000–3,999 | 17 | 15 | 16 | 16 |
| 4,000–4,999 | 8 | 7 | 12 | 10 |
| 5,000–7,499 | 6 | 5 | 13 | 13 |
| 7,500 and over | 4 | 3 | 26 | 23 |
| All spending units | 100% | 100% | 100% | 100% |

*The term "total liquid assets" is used to represent total holdings in U.S. government bonds and in savings and checking accounts.

Interest in the distribution of liquid assets arose from its possible effect upon the postwar level of U.S. economic activity. Because holdings of these assets were so concentrated, it was concluded that the effect on the postwar economy would depend largely upon the decisions of a small part of the population. The survey inquired into the intentions of the spending units in regard to possible disposal of their liquid assets and found that the majority considered their liquid assets as a nest egg for long-range purposes. Most of them did not intend to use their assets for current expenditures, even for durable goods and housing, but planned to finance these outlays out of current income or borrowing. Intentions to buy consumer durable goods other than automobiles in 1947 were significantly less pronounced than were intentions to buy those same goods in 1946. In purchasing durable goods during 1947, consumers planned to use their liquid asset holdings to a greater extent than in the previous year.

Table III.—*Distribution of Spending Units, Income, and Saving by Income Classes in 1941, 1945 and 1946**

| Annual income (money income before taxes) | Percentage of total 1941 | | | 1945 | | | 1946 | | |
|---|---|---|---|---|---|---|---|---|---|
| | Spending units | Total income | Total saving | Spending units | Total income | Total saving | Spending units | Total income | Total saving |
| Under $1,000 | 35% | 9% | −6% | 20% | 5% | −1% | 17% | 3% | −7% |
| $1,000–$1,999 | 30 | 21 | 9 | 27 | 16 | 11 | 23 | 12 | 2 |
| $2,000–$2,999 | 20 | 24 | 11 | 23 | 23 | 14 | 25 | 21 | 9 |
| $3,000–$4,999 | 10 | 18 | 18 | 22 | 32 | 36 | 25 | 33 | 35 |
| $5,000 and over | 5 | 28 | 68 | 8 | 24 | 40 | 10 | 31 | 61 |
| All classes | 100% | 100% | 100% | 100% | 100% | 100% | 100% | 100% | 100% |

*Figures for 1941 taken from *Spending and Saving of the Nation's Families in Wartime*, bureau of labour statistics bulletin No. 723, Oct. 1942. Table I of this bulletin gave the distribution of income by income classes, and Tables I and IV were used to estimate total net saving by income classes. For 1945 and 1946, the data were taken from the national liquid assets survey, and the survey of consumer finances.

Readers are cautioned that the findings of the surveys are not strictly comparable. The surveys for 1945 and 1946 differ somewhat from that for 1941 in the definition of spending units, in the coverage of spending units and in the methods used in collecting the data. Moreover, the form used to estimate savings in 1945 was less complete than the forms used in 1946 and 1941.

As the survey of liquid assets included information on the size distribution of income, changes in the distribution since 1941 could be traced by comparison with earlier studies. Such a comparison is presented in Table III. It can be seen that the distribution of income in 1946 differed greatly from that of 1941. The major trends over the war period were a shifting of spending units from the lower to the higher income groups and a large decline between 1941 and 1945 in the percentage of saving that was accounted for by the spending units with high incomes. Between 1945 and 1946, the proportion of total savings accounted for by units in the top income bracket increased substantially, reversing the wartime trend.

**State Distribution of Income.**—Income payments to individuals in 1946 were at a record level in nearly every state. For the continental United States as a whole, total income received by individuals was more than $169,000,000,000, approximately one-tenth above the previous all-time high of $155,000,-

Table IV.—*Income Payments to Individuals, by States and Regions*

| States and regions | Total income payments: Amount (In millions of dollars) 1940 | 1945 | 1946 | Per cent change 1940 to 1946 | Per cent change 1945 to 1946 | Per capita income: Amount (dollars) 1940 | 1946 | Per cent change 1940 to 1946 |
|---|---|---|---|---|---|---|---|---|

*Less than five-tenths of 1%.

000,000 in 1945. Higher prices were an important element in the 1946 income rise.

The state and regional income totals for 1946, shown in Table IV, reflected swift adjustments to peacetime conditions in all parts of the country. Most of the large relative gains achieved by the south and west over the war years were left intact. From 1940 to 1946 there was a significant relative shift of income from New England and the middle eastern states to the south and west. While, particularly for purposes of market analysis, significance attached to the latter shift, correlative data on population and levels of average incomes also should be taken into account. For example, New England and the middle eastern states, despite their long-term declining relative trends in total income, still had comparatively high per capita incomes and were principal centres of population. In 1946 they received more than one-third of all income paid out in the nation.

Also to be noted was the concentration of low-income states in the south. Although the substantial income gains by the southern states after 1929 had narrowed the relative difference between them and the rest of the country, these states had an average per capita income in 1946 only three-fifths as high as the average for all other states.

The record $1,200 per capita income of the continental United States in 1946 was 109% above the average of $575 for 1940. In almost all states, the 1946 per capita income exceeded wartime highs. In three-fourths of the states, it was at least double the 1940 level.

Particularly noteworthy, in view of its top-ranking advance in total income payments, was the fact that the far west's rise in per capita income from 1940 to 1946 was less than the national average. The upsurge of total income was accompanied by a large increase (37%) in population. The 1940–46 increase in population for the nation as a whole was 7%. (*See* also INCOME AND PRODUCT, U.S.) (M. GT.)

**Great Britain.**—Figures for the distribution of incomes in 1945 (*see* Table V) were published in 1947; although they were provisional, the improved method of estimation made them much more accurate than the figures for the previous year, so that comparison would be misleading; comparison with 1938, however, is possible if an allowance is made for the changed level of prices.

Table V.—*Distribution of Incomes in the United Kingdom, 1945*

| Ranges of income £ | Number of incomes 000's | % | Amount of income £,000,000 | % | Proportion of income retained after tax % |
|---|---|---|---|---|---|
| Under 250 | (19,000) | 71.5 | 3,565 | 46.1 | 96.7 |
| 250– 500 | 5,400 | 20.3 | 1,895 | 24.5 | 85.5 |
| 500– 1,000 | 1,650 | 6.2 | 1,140 | 14.7 | 73.1 |
| 1,000– 2,000 | 410 | 1.5 | 535 | 6.9 | 63.4 |
| 2,000–10,000 | 124 | 0.5 | 462 | 6.0 | 47.6 |
| 10,000 and over | 8 | 0.03 | 138 | 1.8 | 18.8 |
| TOTAL | (26,500) | 100.0 | 7,735 | 100.0 | 84.0 |

Note: £1,480,000,000 of private incomes (£870,000,000 after tax), consisting mainly of excess profits tax and undistributed profits of companies, could not be allocated to ranges of income and are not included in the total shown. Increases from social insurance and assistance are included in the lowest range.

Source: *National Income and Expenditure of the United Kingdom, 1938-1946* (Cmd. 7,099, H.M.S.O., 1947) crown copyright reserved. The figures in brackets are approximate private estimates.

**Eire.**—The official study of the national income in Eire, following the British White Papers, made it possible for the first time to prepare a comprehensive distribution of incomes, though excluding the agricultural population, about one-half of the total population of Eire. The results published for 1938 and 1943 are given in Table VI. The concentration of the distribution in the lower ranges was definitely greater than in the British distribution.

Table VI.—*Distribution of Incomes in Eire, 1938 and 1943*

(Excluding agricultural occupations)

| Ranges of Income £ | Number of Incomes (000's) 1938 | 1943 | Amount of income (£.000,000) 1938 | 1943 |
|---|---|---|---|---|
| Under 150 | (490) | (450) | 52.7 | 69.1 |
| 150–250 | 85.0 | 103.1 | 16.9 | 20.5 |
| 250–500 | 53.6 | 65.1 | 17.9 | 21.5 |
| 500–1,000 | 16.4 | 20.9 | 10.9 | 14.0 |
| 1,000–2,000 | 4.3 | 6.3 | 5.8 | 8.6 |
| 2,000–10,000 | 1.8 | 2.7 | 6.1 | 8.9 |
| 10,000 and over | 0.1 | 0.1 | 1.8 | 1.7 |
| Total | (650) | (650) | 112.1 | 144.3 |

Note: The total of the table falls short of the total of private incomes by agricultural incomes (£39,300,000 in 1938 and £84,600,000 in 1943) and other private income, such as undistributed company profits (£12,500,000 in 1938 and £23,800,000 in 1943).

Source: *Eire National Income and Expenditure* (P. No. 7,356, 1946). The figures in brackets are approximate private estimates.

**Sweden.**—In Sweden distribution of incomes was published for 1945 in a form comparable with previous years, and is given in Table VII. The total of the table falls short of the national income by a large sum. There had been during 1945–47 a shift of incomes from the lower toward the middle ranges above

Table VII.—*Distribution of Incomes in Sweden, 1945*

| Ranges of income Kr. | Number of incomes 000's | % | Amount of income Kr. 000,000 | % |
|---|---|---|---|---|
| 600– 1,000 | 230 | 7.7 | 187 | 1.5 |
| 1,000– 2,000 | 664 | 21.6 | 990 | 8.0 |
| 2,000– 4,000 | 1,099 | 35.7 | 3,252 | 26.3 |
| 4,000– 8,000 | 851 | 27.6 | 4,570 | 37.0 |
| 8,000–15,000 | 174 | 5.6 | 1,786 | 14.4 |
| 15,000–30,000 | 44 | 1.4 | 874 | 7.1 |
| 30,000 and over | 13 | 0.4 | 699 | 5.7 |
| TOTAL | 3,075 | 100.0 | 12,358 | 100.0 |

Note: The national income exceeded the total shown here by about 5,000,000,000 Kr.
Source: *Swedish Statistical Yearbook.*

kr.4,000, which may be explained by the general rise in prices.

**Australia.**—In Australia the official estimates of the national income similarly made the preparation of a distribution of incomes possible. The estimates published for 1938–39 and 1943–44, given in Table VIII, do not give the number of incomes in each range, but only the amount of income. As a rough guide it may be assumed that the relationship of numbers to amounts in any range is about the same as in the preceding tables.

Table VIII.—*Distribution of Incomes in Australia, 1938–39 and 1943–44*

| Ranges of income £ | Amount of income 1938–39 (£.000,000) | 1938–39 (%) | 1943–44 (£.000,000) | 1943–44 (%) |
|---|---|---|---|---|
| Under £150 | 142.4 | 21.3 | 66.2 | 7.4 |
| 150–250 | 163.7 | 24.5 | 102.4 | 11.5 |
| 250–500 | 207.1 | 31.0 | 407.8 | 45.9 |
| 500–1,000 | 69.5 | 10.4 | 159.7 | 18.0 |
| 1,000–2,000 | 38.8 | 5.8 | 74.3 | 8.4 |
| 2,000 and over | 46.5 | 7.0 | 78.6 | 8.8 |
| Total | 668.0 | 100.0 | 889.0 | 100.0 |

Note: The total of the table falls short of the total of private incomes by £159,000,000 in 1938–39 and £429,000,000 in 1943–44, including pensions, pay of the armed forces and undistributed company profits, etc.

## Wedemeyer, Albert Coady

(1897– ), U.S. army officer. was born on July 9 in Omaha, Neb. A graduate of the U.S. Military academy at West Point, N.Y., 1918, he was commissioned a 2nd lieutenant in the army and advanced through the grades to the rank of lieutenant general in Jan. 1945.

He was graduated in 1936 from the Command and General Staff school at Fort Leavenworth, Kan., attended the Kriegs (war) Akademie in Berlin from 1936 to 1938 and was on the U.S. war department's general staff from 1941 to 1943.

Wedemeyer was dispatched to the Southeast Asia theatre in 1943 where, in October, he was appointed deputy chief of staff to Adm. Lord Louis Mountbatten, Allied theatre commander. After Gen. Joseph W. Stilwell's removal from China on Oct. 27, 1944, Wedemeyer was given command of U.S. forces there and was named chief of staff of the China theatre.

Nearly two years after the end of World War II, Wedemeyer was dispatched to China and Korea by Pres. Harry S. Truman (July 1947) to make "an appraisal of the over-all situation" there. On completing his four-week tour of duty, Wedemeyer severely criticized the "greed and incompetence" in Chiang Kai-shek's government in a statement issued in Nanking, Aug. 24. However, in his appearance Dec. 17 before the senate appropriations committee, Wedemeyer urged all-out aid to Chiang Kai-shek in his fight against Chinese communists, declaring that more important than Chiang's "benevolent despotism" was the fact that "the man has fought communism all his life."

Earlier (Oct. 27, 1947), the army department announced that Wedemeyer would become director of plans and operations in the army general staff.

## Wellesley College.

A four-year liberal arts college for women, founded in 1870 by Henry Fowle Durant and located in Wellesley, Mass. The 1947 enrolment was the largest in the history of the college. Pre-eminently for candidates for the B.A. degree, Wellesley offers also the degrees of M.A., M.A. in education, M.S. and a certificate in hygiene and physical education.

Convinced that tax-exempt institutions are socially obligated to serve their communities as directly and continuously as possible, the trustees of Wellesley college made available the facilities of the college for summer educational ventures related to but not identical with the winter program of an undergraduate liberal arts college for women.

The summer of 1947 marked the second summer for the Institute for Foreign Students. This institute was established to orient 42 men and women from 24 countries to North American college life and community living and to help them acquire a greater comprehension of the English language. It was unusual in its attempt to teach students with 15 different language backgrounds, who were registered for entrance to 24 different colleges or universities.

The summer of 1947 also saw the inauguration of the Wellesley summer theatre and school. Five productions were presented by students of the theatre with a professional staff of actors and a star for each production. Plans were made to continue the Wellesley summer theatre and school in 1948.

The year 1947 was the fourth year for Wellesley's summer internship program, sponsored by the department of political science to enable qualified students to gain first-hand knowledge about the work of the federal government. Ten students spent six weeks of the summer working as interns in the offices of senators, congressmen, federal agencies and the Democratic and Republican national committees.

The Anne L. Page Memorial school, for children from three through eight years of age, is completely maintained by the college and serves as a centre for child study, observation and participation for students from all departments of the college.

The organization of the 75th anniversary fund campaign was a major activity of all the administrative officers of the college. It was hoped that $7,500,000 would be raised by June 1950 for faculty salaries and student scholarships and the construction of a new dormitory and library.

(For statistics of endowment, enrolment, faculty, library volumes, etc., *see* UNIVERSITIES AND COLLEGES.) (M. M. HN.)

## West Indies.

An archipelago between Florida and the South American coast opposite the mouth of the Orinoco river. The West Indies include: the Greater Antilles (in order of size, Cuba, Hispaniola or Haiti, Jamaica and Puerto Rico); the Lesser Antilles (grouped generally into the Leeward Islands, to the north, and the Windward Islands, to the south) between Puerto Rico and the Venezuelan coast; the Bahama group northeast of Cuba; and certain more distant islands, including Curaçao and Aruba near the mouth of Lake Maracaibo in Venezuela. The whole West Indies group is less commonly known as the Antilles. The land area is approximately 92,000 sq.mi. The population is about 14,883,000 (this represents the total of the latest figures for each unit, which are not all for the same year), and in some of the islands has a very high density, *e.g.*, in Barbados where there are almost 1,200 people per sq.mi. The racial distribution is approximately 75% white and 25% Negro and mulatto in Cuba and Puerto Rico, and from 80% to 100% Negro and mulatto elsewhere, except that in Trinidad about 40% are of East Indian origin. Roman Catholicism is the predominant religion except in Trinidad and a few other places; a considerable practice of African-inspired voodooism still prevails in Haiti. Languages include Spanish, English, French and Dutch, in addition to various patois largely of African origin but influenced also by word importations from Portuguese and many other sources. Politically, the West Indies include the three independent republics of Cuba, Haiti and the Dominican Republic, two United States territories and six British, one Dutch and two French colonies. In addition to prewar bases, the West Indies are the location of five U.S. naval bases, the sites for which were obtained from Great Britain by lease in 1940.

**History.**—The chief general developments in 1947 affecting the archipelago as a whole revolved around the continuing activity of the Caribbean commission. This agency was an outgrowth of the Anglo-American Caribbean commission established in 1942 to concern itself with the economic and social problems of British and United States possessions in the Caribbean area. The structure of and participation in the commission were broadened in 1945 to include representatives of France and the Netherlands for their respective colonies in the Caribbean. The second West Indian conference, held in the U.S. Virgin Islands in February and March of 1946, considerably broadened and stimulated the work of the commission and its activities continued to expand during 1947. It was engaged especially in studies of food supply and migration of agricultural workers from one unit to another. The commission also undertook a study during 1947 of the feasibility of establishing a schooner pool to facilitate small-scale interisland shipping services. The staff of the commission was altered by the addition of a larger number of persons from the West Indian islands themselves. Another feature of the year was the increased interest displayed in the activities of the Caribbean commission by the independent republics.

**Trade and Communications.**—West Indian economy is based primarily upon export of agricultural staples, of which sugar is by far the most important. The principal exceptions are banana production in some of the islands, petroleum and asphalt production in Trinidad, and oil refining in Aruba and Curaçao where two of the world's largest refineries operate, chiefly on the basis of oil imported from Venezuela. Many of the islands have other mineral resources of greater or less potential value, though these are little developed. The Cuban sugar crop reached a record figure in 1947 and another large production was anticipated for 1948.

The largest mileage, both of railways and highways, is found in Cuba. Other islands are, on the whole, poorly served with surface transportation arteries. Despite the closeness of the islands, interisland transportation is chronically difficult and increasing dependence is placed for passenger traffic on the air lines, of which the most important are the British West Indian Airways, Pan American World Airways and its affiliated companies, and K.L.M. (Royal Dutch Airlines).

**Agriculture.**—West Indian agriculture as a whole experienced a reasonably prosperous year in 1947, although local production of different crops was adversely affected in different islands by a wide variety of factors. Political and economic unrest in some of the islands also had an unfavourable reaction on agricultural production. (*See* also Bahamas; Barbados; Cuba; Curaçao; Dominican Republic; French Overseas Territories; Haiti; Jamaica; Leeward Islands; Puerto Rico; Trinidad; Virgin Islands; Windward Islands.)

Simey, *Welfare and Planning in the West Indies* (1947); *South American Handbook* (1947); Fernando Ortiz, *Cuban Counterpoint: Sugar and Tobacco* (1947); *Foreign Commerce Weekly* (Washington). (R. H. Fn.)

**West Indies, British:** *see* Bahamas; Barbados; Jamaica; Leeward Islands; Trinidad; Windward Islands.

**West Virginia.** The 35th state in the union was conditionally admitted on Dec. 31, 1862, and proclaimed a separate state on April 20, 1863, effective 60 days later. It has an area of 24,282 sq.mi., of which 148 sq.mi. are water surface. The population (1940) was 1,901,974, of which 1,742,320 were white and 41,782 were foreign born. The urban residents numbered 534,292 or 28.1% of the total population. Charleston (pop. 67,914) is the capital. Other cities, in the order of size, are: Huntington (78,836), Wheeling (61,099), Clarksburg (30,579), Parkersburg (30,103), Fairmont (23,105) and Bluefield (20,641).

**History.**—The chief state officers in 1947 were: governor, Clarence W. Meadows; secretary of state, William S. O'Brien; treasurer, R. E. Talbott; auditor, Edgar B. Sims; attorney general, Ira J. Parthlow; state superintendent of free schools, W. W. Trent. In the 1946 general election a registered Democratic majority of 178,000 was all but wiped out at the polls. Harley M. Kilgore (D.) was re-elected to the U.S. senate over Thomas B. Sweeney (R.) by about 3,500 votes, and Frank C. Haymond (D.) was elected by about the same majority to the state supreme court of appeals to succeed Judge H. H. Rose, deceased. Representatives in congress, elected in Nov. 1946, were: First district, Francis J. Love (R.); second district, Melvin C. Snyder (R.); third district, E. G. Rohrbaugh (R.); fourth district, Hubert S. Ellis (R.); fifth district, John Kee (D.); sixth district, Dr. E. H. Hedrick (D.).

**Education.**—For the year 1946–47 the total pupil enrolment (net) in the 4,197 state elementary schools was 287,360. In the 378 state high schools it was 129,322. There were 10,106 elementary and 5,158 high school teachers. The total state appropriation for elementary and secondary education was $21,364,029. The state supported nine teacher-training colleges which in the first semester had a total student enrolment of 8,388 and teaching staff of 340. It also supported the university (Morgantown), West Virginia State college (Negro, Institute), West Virginia Institute of Technology (Montgomery), and Potomac State school (Keyser, a junior college under control of the university).

**Social Insurance and Assistance, Public Welfare and Related Programs.**—For the year ending June 30, 1947, the total expenditure for old-age assistance was $4,177,345; for the blind, $207,693; for dependent children, $3.561,737. The total cost including administration was $8,386,184.66. The total general relief fund was $1,490,284.87. Eight correctional institutions were largely self-sustaining but they cost the state in excess of $200,000.

**Communications.**—On Jan. 1, 1947, the state contained about 3,350 mi. of steam railway, or 6,677 mi. including double tracks and sidings. There were 8 mi. of electric railways. There were 17,601 mi. of improved highways (15,585 mi. hard surfaced), and a road system aggregating 33,186 mi., both primary and secondary. There were 294,500 telephones (Bell, 260,000 and connecting lines, 31,000), not including 3,500 local nonconnecting phones.

**Banking and Finance.**—On June 30, 1947, the total deposits of the 105 state banks and trust companies were $389,488,849.48; the total for the 76 national banks was $472,471,891.80; resources of 22 federal savings and loan associations were $32,227,152.31; resources of 19 active building and loan associations, $10,426,462.66; and resources of 23 loan companies were $14,244,052.92. State receipts for 1946–47 were $190,317,423.70; disbursements, $177,315,633.36; balance, June 30, 1947, $44,571,667.84. On June 30, 1946, the total state funded indebtedness was $63,995,000, less a sinking fund of $5,203,853.50, leaving a net indebtedness of $58,791,146.50.

**Agriculture.**—The total cash income from farm crops and livestock in 1946 was $110,191,000; income from government payments was $4,340,000. The number of farms in 1945 was 97,600 with a total acreage of 8,741,017, valued at $341,000,000.

*Principal Agricultural Products of West Virginia, 1946*

| | Yield, 1946 | Value, 1946 |
|---|---|---|
| Corn, bu. | 10,200,000 | $18,360,000 |
| Wheat, bu. | 1,501,000 | 3,107,000 |
| Oats, bu. | 1,792,000 | 1,846,000 |
| Buckwheat, bu. | 133,000 | 205,000 |
| Hay (all), tons | 1,060,000 | 21,412,000 |
| Apples (commercial), bu. | 4,550,000 | 10,692,000 |
| Potatoes (Irish), bu. | 2,970,000 | 5,346,000 |
| Barley, bu. | 203,000 | 311,000 |

**Industry.**—In 1945–46 industry and business employed 606,500 persons who earned $1,300,000,000 in a total estimated production valued in excess of $1,656,000,000. In the order of the number of persons employed, the largest industrial groups, together with the total sums paid each were: coal mining and coke making 115,021—$380,661,000; iron, steel and metals 41,753—$109,047,000; chemical and allied products 20,179—$64,522,000; glass and glassware 19,792—$49,114,000; lumber and wood products 18,210—$29,631,000; clothing and textiles 14,044—$28,444,000; clay, stone, etc., 15,426—$34,188,000; automobiles and trucks 16,530—$34,847,000; petroleum and its products 11,002—$24,297,000; construction (not buildings) 12,335—$27,387,000; and public utilities 8,600—$19,350,000.

**Mineral Production.**—The production of crude oil for 1946 was 2,940,000 bbl.; in 1945 the natural gas production was 200,000,000,000 cu.ft.; coal (1945) 151,909,714 short tons; and coke (bee-hive and by-products, 1945) 2,738,422 short tons. The total value of mineral production (1945) was $597,377,000.

**Whaling:** *see* Fisheries.

**Wheat.** The U.S. wheat crop broke all records again in 1947; it was not only far above the average but more than 20% above the crop of 1946. Large acreage and heavy yield, the result of favourable weather from seedtime to harvest, produced the record outturn.

The crop was estimated at 1,364,919,000 bu. compared with a crop of 1,153,046,000 bu. in 1946, 1,108,224,000 bu. in 1945 and 1,060,111,000 bu. in 1944. The 10-year average 1936–45 was 890,306,000 bu. Acreage harvested was 74,186,000, 10% above the 67,075,000 ac. of 1946. Only 3,152,000 ac. were not harvested in 1947 because of good growth in all areas. About 2,000,000 ac. of "volunteer" wheat, which grew from seed left in the soil from previous crops, were included in the 1947 crop.

The winter wheat crop of 1947 amounted to 1,067,970,000 bu. and spring seeded wheat 296,949,000 bu. This was the first 1,000,000,000 bu. winter wheat crop in U.S. history; the acreage was 12% above 1946 and the average yield 19.5 bu. per acre, compared with an average of 16.1 bu. per acre in the 10 years 1936–45. High yields in the big wheat states were: Kansas 20 bu.; Texas 18 bu.; Oklahoma 15.5 bu.; Colorado 24 bu. and Washington 26 bu.

The spring wheat crop was made up of 43,983,000 bu. of durum, grown almost entirely in the Dakotas and Minnesota, and 286,365,000 bu. of other spring wheats grown in 19 states. The durum yield was 15 bu. and other spring wheats 17.2 bu. per acre. North Dakota led in the production of spring wheat with 146,038,000 bu. including durum.

Production of wheat was greater in all classes in 1947, with hard red winter increasing 31% over 1946. The total crop included 761,894,000 bu. of hard red winter and 228,138,000 bu. of hard red spring; 241,913,000 bu. of soft red winter; 43,600,000 bu. of durum and 131,216,000 bu. of white wheat, winter and spring.

From 1941 the U.S. wheat supply had exceeded 1,200,000,000 bu. Stocks in carry over were large in 1941 and 1942, amounting to more than 600,000,000 bu., more than equal to the amount used for food in the United States. Use of wheat for domestic food, feed and alcohol, however, increased from about 700,000,000 bu. in 1941 to 1,216,000,000 bu. in 1943 and reduced the carry over rapidly to 316,700,000 bu. in the latter year. Exports began to increase in 1943 and were up to about 400,000,000 bu. in 1946 and an estimated 450,000,000 bu. in 1947–48. The carry over had dropped to 83,400,000 bu. in 1946 and was only 184,100,000 bu. in 1947. Domestic uses declined to 927,000,000 bu. in 1947 with restrictions on industrial uses, reduced feeding to livestock and the voluntary wheat-saving campaign. In December the secretary of agriculture estimated that about 450,000,000 bu. of the 1947 supply would be exported, leaving 957,000,000 bu. for use as food, feed, seed and carry over. The total amount of wheat allocated for export was estimated at 209,000,000 bu. by Dec. 1, 1947. Had U.S. production not reached remarkable proportions the world shortage of bread grain would have been vastly more serious.

Table I.—*U.S. Wheat Production, 1947, 1946 and 10-yr. Average, 1936–45*

(In thousands of bushels)

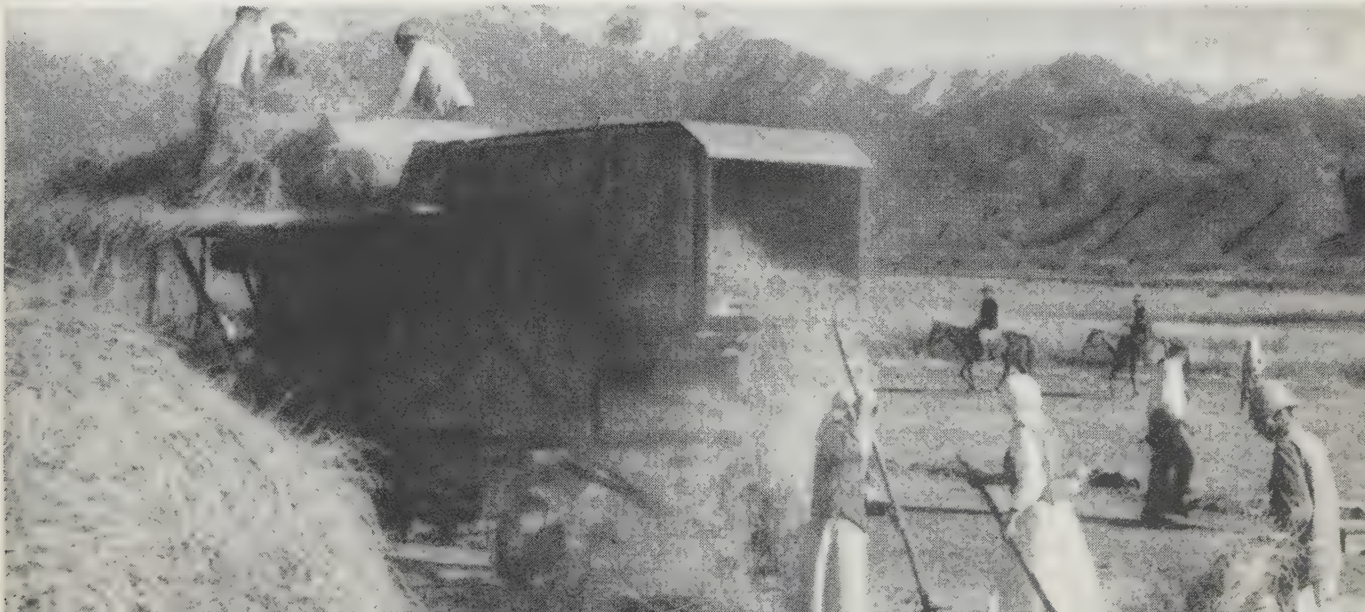
| State | 1947 | 1946 | 10-yr. Average | State | 1947 | 1946 | 10-yr. Average |
|---|---|---|---|---|---|---|---|
| Kansas | 286,702 | 212,977 | 158,517 | New Mexico | 9,420 | 2,896 | 3,047 |
| North Dakota | 146,038 | 139,824 | 106,205 | New York | 9,272 | 5,648 | 7,270 |
| Texas | 124,270 | 62,916 | 41,287 | Virginia | 8,522 | 8,344 | 7,976 |
| Oklahoma | 104,734 | 88,262 | 57,618 | North Carolina | 8,449 | 6,307 | 6,456 |
| Nebraska | 90,300 | 90,677 | 50,328 | Utah | 8,082 | 6,981 | 5,812 |
| Washington | 64,750 | 77,965 | 53,182 | Maryland | 7,770 | 7,320 | 7,389 |
| Montana | 64,325 | 62,888 | 54,564 | Wyoming | 6,130 | 6,232 | 3,290 |
| Colorado | 59,052 | 37,080 | 20,070 | Tennessee | 5,190 | 3,870 | 4,981 |
| South Dakota | 53,628 | 53,197 | 28,815 | Kentucky | 5,184 | 4,158 | 6,246 |
| Ohio | 49,028 | 48,522 | 42,154 | South Carolina | 4,356 | 2,706 | 2,612 |
| Idaho | 37,935 | 34,846 | 27,297 | Iowa | 3,252 | 4,335 | 6,060 |
| Indiana | 35,811 | 29,396 | 27,229 | Georgia | 3,240 | 2,093 | 2,049 |
| Michigan | 29,800 | 22,896 | 18,242 | Wisconsin | 2,793 | 2,265 | 1,538 |
| Illinois | 28,524 | 19,361 | 31,458 | New Jersey | 1,875 | 1,550 | 1,245 |
| Missouri | 24,438 | 18,195 | 25,020 | West Virginia | 1,763 | 1,463 | 1,776 |
| Pennsylvania | 22,296 | 19,912 | 18,537 | Delaware | 1,407 | 1,216 | 1,298 |
| Oregon | 21,615 | 25,168 | 20,585 | Nevada | 612 | 545 | 442 |
| Minnesota | 20,633 | 27,080 | 24,536 | Mississippi | 460 | 198 | 226 |
| California | 12,028 | 12,597 | 12,942 | Arkansas | 372 | 420 | 485 |

The wheat situation at the end of 1947 was as follows: A small carry over of 84,000,000 bu., a new crop of 1,406,000,000 bu., an export goal of 400,000,000 to 450,000,000 bu., restricted domestic consumption of about 925,000,000 bu.; and a carry over for July 1948 of about 100,000,000 bu. The wheat-saving campaign was expected to provide the quantity needed for export and reserve. These needs indicated the forces making for higher prices of wheat both in the U.S. and abroad.

During 1947 the price of wheat soared to the high peaks attained during and after World War I. At that time the supply of wheat was small and demand increased suddenly in contrast to World War II when the supply was large and the demand even larger. The price of wheat to growers was $1.92 per bushel average for the year ending July 1, 1947, the highest after 1919, when it was $2.16. In spite of the largest crop on record, prices advanced to $2.14 per bushel to growers in July, on to $2.43 in September and to $2.79 per bushel in December, the all-time record to that date. On the central markets prices broke all records, with No. 1 dark northern cash wheat selling at $3.30 at Minneapolis in November. The price of corn was also high and in September averaged $2.40 per bushel to growers, as compared with $2.43 for wheat. Rice was at the same general level and rye not far below. At no time in U.S. history had bread grains and feed grains ranged so high together.

Wheat prices remained above parity most of the time after early 1946, and by Nov. 1947 were 28% above parity of $2.14.

Public agitation over the high price of wheat led to an inquiry as to the amount and character of trading at the Chicago



**THRESHING WHEAT** at a collective farm in the Kazakh S.S.R. where a bumper crop was harvested in 1947

Table II.—*World Wheat Production, Revised Estimates for 1947, 1946, 1945 and 1944 and Average 1935–39**

(In million bushels)

| | 1947 | 1946 | 1945 | 1944 | Average 1935–39 |
|---|---|---|---|---|---|
| United States | 1,364 | 1,153 | 1,108 | 1,060 | 758 |
| Canada | 341 | 413 | 305 | 416 | 312 |

| Argentina | 175 | 206 | 143 | 150 | 221 |
| Australia | 250 | 116 | 144 | 52 | 169 |
| U.S.S.R. | 875 | .... | .... | .... | .... |
| World Total | 5,775 | 5,735 | 3,570 | 4,010 | 4,040 |

*Revised estimates by the U.S. department of agriculture on basis of incomplete reports from several countries with adjustments for year of harvest.

board of trade. An analysis of the accounts on Sept. 17, 1947, showed that in a total of 3,827 accounts, there were: 456 hedging accounts; 846 farmers; 364 real estate men; 319 merchants; 308 housewives and 139 retired people and professional traders. The remainder included all classes of labourers, clerks, etc. These accounts were in the positions of about 45,000,000 bu. "long" and 35,000,000 bu. "short."

The world wheat crop of 1947 was estimated in December at 5,775,000,000 bu., compared with 5,735,000,000 bu. in 1946 and the prewar average of 4,040,000,000 bu. in 1935–39. (*See* Table II.) North American production was increased by the large U.S. crop, which more than offset the reduction of about 70,000,000 bu. in Canada. Severe drought in western Canada was responsible for the reduced crop there.

Production in Europe was estimated at 17% below 1946 and 32% below prewar levels. The severe winter cut the crop in France and droughts reduced yields in Italy and Spain. Eire was the only country showing a substantial increase. The European crop was more than 200,000,000 bu. below 1946 and 400,000,000 bu. below prewar averages. The United Kingdom crop was about 10% less than that of 1946 and a little above the prewar average. The Danube valley crops were reduced in acreage.

The Soviet Union crop was estimated to be larger, because of expanded acreage and better yields. While reports from behind the "iron curtain" were conflicting, enough was known to justify the estimate of somewhat less than the prewar output which was frequently more than 1,000,000,000 bu. The Chinese crop was reported as 8% above that of 1946 and above the prewar level. Conditions were unfavourable in India, and the crop was reported to be the smallest after 1928. Turkey's crop was about average.

Early estimates of prospects in Argentina showed a 13% reduction in acreage which would indicate a below-average crop. North Africa had crops comparable with those of the 1946 level and below domestic needs. Australia's outlook was good for a crop of about 250,000,000 bu., which would be above prewar levels.

World exports in the crop year ending July 1947 amounted to about 758,000,000 bu., compared with 560,000,000 bu. in prewar years. This export total was made up as follows: United States, 400,000,000 bu.; Canada, 229,000,000 bu.; Argentina, 70,000,000 bu.; Australia, 49,000,000 bu.; other countries, about 10,000,000 bu. (*See* also Flour.) (J. C. Ms.)

## Wilderness Preservation.

The national policy of preserving dedicated remnants of wilderness in the United States prevailed in 1947 over specific threats from various enterprises in various localities, and the conservation movement to support this policy appeared stronger at the close of the year than ever before. Success in combating many of the exploitation enterprises was, however, not final, and several conflicts were unresolved.

The most dramatic demonstration of public concern with wilderness preservation resulted from a proposal to construct a road, hotel-resort, parking area and mechanical ski lift in the San Gorgonio Primitive area—a dedicated tract of 35,365 ac. in the San Bernardino National forest in southern California. Advocated by the California Chamber of Commerce, the California Ski association and the National Ski association (though opposed by the national association's ski mountaineering committee), the proposal had in 1946 received the tentative endorsement of the U.S. forest service, and a public hearing had been announced for Feb. 19, 1947. Early in the year the proposal seemed certain of adoption, but as studies of both skiing and wilderness opportunities in the region were made and publicized, unexpected demands for preservation of the primitive area arose both locally and nationally. Thousands of letters, the forest service reported, were received from conservation organizations and from individuals in all parts of the country. Summing up a case for preservation, *The Living Wilderness* pointed out that "southern California's demands for skiing can certainly be reasonably well met without sacrificing this unique wilderness." The magazine emphasized that the many skiers already using the area would lose what all southern Californians would lose—"the choice of finding their outdoor recreation in a wilderness if they so wish"—and declared:

> If there were abundant opportunities for wilderness recreation in this region it might then be valid to balance 100,000 skiers against 10,000 wilderness users at a specific site and conclude that skiing facilities would be for the good of the greater number. But when we are considering a precious wilderness remnant, we are in fact balancing 100,000 skiers against the entire population, for we are threatening to deprive everybody forever of a choice that is the right of every American. And we are threatening to do this for a part of the population that has elsewhere reasonably good opportunities, and still better prospects, for the sport that they most enjoy. (*The Living Wilderness,* The Wilderness Society, Washington 9, D.C., 1947.)

The hearing, which required use of the San Bernardino municipal auditorium for two days and an intervening night session, revealed also protests from water users who valued wilderness preservation for watershed protection and from scientists who pointed out that the area included unique forms of plant life. As a result of the hearing and an intensive study of the proposal, the forest service in June concluded that the area had "higher public value as a wilderness and a watershed than as a downhill skiing area" and resolved the controversy by eliminating from the primitive area only some 1,400 ac. to permit road construction that would make the area readily accessible for wilderness skiing without affecting the rest of it.

This test case became celebrated among conservationists throughout the U.S., and the impetus and encouragement given the wilderness preservation movement by the decision were such as to suggest that it would come to have historic significance. This decision, with its related debate in which basic principles were dramatically publicized, was without doubt the year's outstanding event in wilderness preservation.

Notable also were the decision of Secretary of the Interior Julius A. Krug, announced on Aug. 15, to withhold leasing privileges that had been applied for oil and gas prospecting in the Teton Wilderness area, Wyoming, and the announcement by Gov. Thomas E. Dewey of New York on Nov. 13 of abandonment of the Higley Mountain dam project, which had been strenuously opposed because it would destroy the famous Moose river flats in the Adirondack wilderness, including one of the best deeryarding areas in the east.

Controversies which remained unresolved but in which preservationists had preliminary success during 1947 involved a proposal of lumber interests to remove large areas of virgin rainforest wilderness from Olympic National park in Washington, a move to abolish the Jackson Hole National monument in

Wyoming backed by certain cattle interests and by local enterprise concerned with prospects for commercial developments on lands within the monument and a project to construct an irrigation reservoir which would destroy Lake Solitude, the outstanding feature of the Cloud Peak Primitive area in the Big Horn National forest, Wyoming.

No dedicated wilderness area was lost from the national system during the year, and an invaluable area was added by establishment of the Everglades National park in Florida, dedicated by Pres. Harry S. Truman on Dec. 6. Progress was made toward establishing the proposed Quetico-Superior International Peace Memorial forest in the wilderness canoe country shared by the state of Minnesota and the Canadian province of Ontario. On Sept. 6 Pres. Truman restated the authority of the President's Quetico-Superior committee previously established by executive order and appointed Olaus J. Murie, director of the Wilderness society, to fill a vacancy on the committee and to serve as a member along with Charles S. Kelly, lawyer and conservationist of Chicago, Ill.; Ernest C. Oberholtzer of Ranier, Minn., president of the Quetico-Superior council; Regional Forester Jay H. Price of the U.S. forest service, Milwaukee, Wis.; and William Zimmerman, Jr., assistant commissioner of the U.S. office of Indian affairs. (H. Z.)

**Wildlife Conservation.** "Wildlife conservation"—according to a definition phrased by Harrison F. Lewis, superintendent of wildlife protection in Canada, at the annual meeting of the International Association of Game, Fish and Conservation Commissioners in Denver, Colo., on Sept. 8, 1947, "is the common term for the adjustment and development of the relationships between our species—mankind—and the large numbers of fellow-species that inhabit this same great globe with us. Its proper organization and application require the development and consideration of a philosophy whose ramifications and implications extend throughout all human affairs and down to the very foundations of life itself."

The further development and widened acceptance of this concept were highly significant in 1947.

As wildlife conservationists emerged rather completely from difficulties in their peacetime pursuit created by World War II, they faced a twofold basic problem. Land and water areas available to the wild species were increasingly threatened with curtailment by the human enterprise that had already appropriated so much of the continent. At the same time the numbers of sportsmen were increasing at a surprising rate, causing considerable concern for all the species that are hunted. It was apparent that preservation of wildlife habitat and control of hunting would both be dependent on effective public action based on a sense of the fundamental values involved.

The wildlife situation was in the main encouraging only as regards the prospects for intensified and more effective public interest. Smaller species that have made themselves at home around town and city dwellings and in rural farm areas, where they are prized for their song, their beauty and their protection of plantlife from insects, were abundant and in no apparent jeopardy. Deer in most of their habitat were in good numbers—in some places, where hunters are their only effective predators, even overabundant. Director Newton B. Drury of the national park service said: "The point has been reached in protection of wildlife in the national park areas where we can give quite general assurances that normal numbers of most species will be preserved." But throughout the North American continent most of the species that are hunted for sport and most of the fur animals and predators (other than coyotes) were present in small numbers, diminishing, and/or threatened.

The so-called big-game animals remained in the status described in 1946 as generally favourable, but in addition to increased tension over the status of the mountain sheep there was general concern over some prospects. Aeroplane travel to once remote regions, and threatened diminishing of the still remaining comparatively extensive wilderness areas available to these larger creatures led to frequent expressions of alarm.

Fur consumption in the U.S., already double the country's production, continued to increase. The fish and wildlife service reported that trappers in the face of this demand still took wild fur animals with an extravagant disregard for maintenance of breeding stocks. Surveys by the service resulted in estimates that about 2,700,000 trappers in the U.S. and Alaska (three-fourths of them farmers and farm boys) take in excess of 28,000,000 pieces annually and receive for them between $100,000,000 and $125,000,000.

An organization called Defenders of Furbearers and "devoted solely to eliminating as far as possible, by the use of humane traps, the torture suffered by millions of trapped furbearing animals every year, and to promoting, through education, the conservation of these animals" was established with headquarters at 1214 Sixteenth Street, N.W., Washington, D.C.

Among the birds that are hunted, the waterfowl continued to be most prominent in national interest. In fact, the still deepening waterfowl crisis was of international importance, the protection of these migratory birds being by treaty a joint concern of the U.S. with Canada and with Mexico. The fish and wildlife service, which conducts and correlates continent-wide and year-round investigations, reported that the continental population had continued its downward trend "at an alarming pace." An inventory of birds wintering in Canada, Alaska, coastal Latin-America, and the U.S. conducted in Jan. 1947, indicated an estimated total of only 54,000,000—a decrease of 26,000,000 from the 1946 estimate, more than 51,000,000 from the 1945 total, and a loss of more than 71,000,000 (more than 56%) from the 125,350,000 birds estimated in 1944. So drastic had the decline been that many, led by the National Audubon society and the American Nature association and even numerous sportsmen, advocated a prohibition of all waterfowl hunting. The regulations adopted for the hunting seasons that were allowed were drastic—so drastic that the Wildlife Management institute and others believed that the restrictions "should halt the decline." At the end of the year (and the shooting seasons) no official predictions were obtainable, but preparations had been made for another thorough inventory early in Jan. 1948.

The amazing increase in the numbers of hunters, which began while World War II was still being waged, continued. Sales of federal migratory-bird hunting stamps (the so-called "duck stamps" required of all wildfowlers over 16 years of age) totalled 2,016,819 in the fiscal year ended June 30, 1947—as compared with 1,725,505 the preceding year, 1,487,029 in 1945, and 1,169,352 in 1944. Not only wildfowlers but all hunters continued to increase in numbers. Total sales of hunting licences by the 48 states, which included all legal hunters, had not been summarized for 1947 by the end of the year, but a tabulation of sales during the year ended June 30, 1946, showed a total of 9,854,313 as compared with 8,194,296 in the preceding year. Indications, the fish and wildlife service reported, pointed to a continuation of the pronounced upward trend during 1947, and it seemed safe to speculate that there were in the U.S. in 1947 more than 10,000,000 licensed hunters.

With such increases in numbers of hunters, in the face of declining or threatened wildlife populations, wildlife management officials were especially encouraged by great advances made during the year in connection with the Federal Aid to Wildlife Restoration program. Financed from the 11% federal excise tax on firearms, shells and cartridges, this program as in previous years provided individual states with 75% of the costs of approved projects to conduct wildlife studies and to acquire, restore, develop and maintain land and water areas devoted to wildlife. A total of more than $2,000,000 was made available to 47 states during the 1947 fiscal year, and for the fiscal year to end June 30, 1948, the full amount of the tax collected in the year ended June 30, 1946, was made available to the fish and wildlife service for apportionment to the states—a sum of $9,854,313, which if fully used would be increased by 33⅓% by participating states.

Outstanding event of the year was probably the 12th North American Wildlife conference sponsored by the Wildlife Management institute and held in San Antonio, Tex., Feb. 3–5 on the theme "Americans, Wildlife, and Their Land." Addresses by outstanding conservationists at general sessions and research reports by scientists at technical sessions were later published by the institute under the editorship of Ethel M. Quee as *Transactions of the Twelfth North American Wildlife Conference*—a 632-page volume constituting a remarkable representation of the current status of wildlife conservation and research. A notable feature of the book was an index covering not only this volume but also 18 earlier annual volumes in which were printed the proceedings of comparable conferences.

The principal source of wildlife information in the United States was the fish and wildlife service, U.S. department of the interior, Washington 25, D.C., which had available lists of federal publications and compilations—including a list of officials and organizations concerned with wildlife conservation and *Wildlife Review*, a periodical listing books, articles in journals and other publications and including critical notations. Leading private organizations were: American Forest association, publisher of *American Forests*, 919 Seventeenth Street, N.W., Washington 6, D.C.; American Nature association, publisher of *Nature Magazine*, 1214 Sixteenth Street, N.W., Washington 6, D.C.; Izaak Walton League of America, publisher of *Outdoor America*, 31 N. State Street, Chicago 2, Ill.; National Audubon society, publisher of *Audubon Magazine*, 1006 Fifth Avenue, New York 28, N.Y.; National Parks association, publisher of *National Parks Magazine*, 1212 Sixteenth Street, N.W., Washington 6, D.C.; National Wildlife federation, publisher of *Conservation News*, 3308 Fourteenth Street, N.W., Washington 10, D.C.; the Wilderness society, publisher of *The Living Wilderness*, 1840 Mintwood Place, N.W., Washington 9, D.C.; and the Wildlife Management institute, 822 Investment Bldg., Washington 5, D.C., sponsor of research projects, special investigations, annual North American wildlife conferences, and monographs. Scientific periodicals were notably *The Journal of Wildlife Management*, *The Journal of Mammalogy*, and *The Auk: A Quarterly Journal of Ornithology*—organs respectively of the Wildlife society, the American society of Mammalogists, and the American Ornithologists' union. (H. Z.)

**Canada.**—Most important event in an active year was the establishment of the dominion wildlife service, under the department of mines and resources. The new unit was empowered to administer the Migratory Birds' Convention act, the Northwest Game act and the Fur Export ordinance of the Northwest Territories. It was made responsible for the conservation of game and fur resources and other wild creatures in the Northwest Territories, the management of animals and birds and fish in the national parks of Canada, the handling of international problems relating to wildlife resources.

Early in April the Canadian parliament gave its approval to the establishment in Canada of a National Wildlife week to begin each year on April 10, the birthdate of Jack Miner, famed Kingsville, Ont., wildlife conservationist.

During the year U.S. biologists tagged more than 6,000 ducks and geese in Canada. At Lake Newell, Alberta, some of the banding was done for the first time with the aid of an aeroplane, which herded flocks of ducks and geese toward traps. Records were made of the age and sex of birds, as well as their numbers, in order to obtain later information on population survivals, hunting pressures, natural sex ratios and the flyways of individual species.

Ducks Unlimited (Canada) announced the banding of 4,347 waterfowl during 1947 in Manitoba, Saskatchewan and Alberta. At the end of 1947, the engineering department of D.U. reported that 6 projects started in 1946 were completed in 1947, 23 new projects built and 12 projects were still under construction. (C. Cy.)

**Great Britain and Europe.**—The British wildlife conservation special committee presented a report in July in connection with the national parks scheme that had been planned during the year (*see* National Parks and Monuments). The report urged the need for the preservation of scenic beauty, for nature reserves within the national parks as well as natural conservation outside them, and for wider government responsibility, a constructive scientific policy and educational facilities in the matter. It emphasized the importance of separate management for the nature reserves in the national parks and recommended preservation of tracts of land as conservation areas.

The International Office for the Protection of Nature was reorganized, with its headquarters in Amsterdam. The Society for the Preservation of the European Bison was in process of revival. In the summer an International Conference for the Protection of Nature was held at Brunnen under Swiss auspices. The promoters contemplated the formation of an international union of world-wide scope, but it was decided to invite U.N.E.S.C.O. to consider whether it could not undertake the pioneer work. Among the interesting conclusions of the conference was the recognition of the need for scientific research relating to the protection of nature and for the spread of public knowledge of the subject, and the particular importance of educating children in the study and appreciation of nature. The conference appeared to accept the view that the protection of nature was not merely a cultural question, but might also closely affect the welfare and even the existence of mankind. Somewhat ironically, on the conclusion of their discussions, the members of the conference were taken to visit the popular Swiss national park, only to learn that it was threatened with destruction in favour of a hydroelectric scheme. It seemed probable, however, that popular reaction against this project would be widespread.

Other evidences of revived interest in the protection of wildlife were the reversal of the decision—taken on financial grounds—to dismiss the staff of gamekeepers in the Gran Paradiso national park in Italy, where, in particular, chamois and ibex are protected; the establishment in Holland of a youth organization, already some 4,000 strong, with the protection of nature as one of its principal aims; and, lastly, a very well attended meeting in London of the International Committee for Bird Protection.

**Africa.**—Measures for the destruction of wildlife in Africa showed little, if any, sign of abatement in 1947, but representations made by the Society for the Preservation of the Fauna of the Empire to the colonial secretary were partly responsible for the holding of a conference by the governors of the east African colonies to discuss the obligations to protect wildlife undertaken on their behalf by the British government, and how those obligations not hitherto implemented should be honoured. The society, meanwhile, had sent out their own representative to study conditions in the different colonies and to take part in the conference. The conference report was not published before the end of the year.

The Fauna society feared that the example of Southern Rhodesia, whose government had pinned its faith on wholesale destruction of wild animals as the only method of controlling the tsetse fly, would be followed in other parts of Africa. The tsetse fly, which lives on blood, is well known as a vehicle of the trypanosomes which, when introduced into the blood stream of men or cattle, cause the diseases known in men as sleeping sickness and in cattle as *ngana*. The game animals, or some of them, are immune hosts of the trypanosomes. It was argued that by getting rid of the game, the source of supply and, at the same time, the vehicle of transmission to susceptible men or cattle would be eliminated. The society questioned whether the destruction of game would eliminate the fly, whether other means could not be found of getting rid of it, and whether the slaughter of the animals which provide the fly with its natural food might not make matters worse by dispersing it over wider areas and driving it to feed on men and cattle. The Fauna society further pointed out that the government had as recently as 1933 procured a convention for the protection of African wildlife, which the British colonies had failed to implement, and that, so far as the tsetse fly and its control were concerned, many material facts could only be clarified by widespread scientific field research.

There were more hopeful signs elsewhere during the year. The Wild Life Conservation Society of South Africa continued its outspoken propaganda. The Natal Society for the Preservation of Wild Life and Natural Resorts and the Nigerian Field society were again active; a movement was on foot in Nyasaland to organize a society with the same objects in view; and the *Institut des Parcs Nationaux du Congo Belge* and the French *Institut de l'Afrique Noire* continued their good work. (H. G. M.)

**Wilhelmina** (Wilhelmina Helena Pauline Maria of Orange-Nassau) (1880– ), queen of the Netherlands, daughter of William III, king of the Netherlands, and Queen Emma, was born on Aug. 31. She succeeded to the throne in 1890 under the regency of her mother, and was enthroned in 1898. In 1901 she married Henry, duke of Mecklenburg-Schwerin (d. 1934), and in 1909 Princess Juliana, heir to the throne, was born. When the Netherlands were invaded on May 10, 1940, the royal family with members of the government sought refuge in London. Queen Wilhelmina returned to the royal palace at The Hague in July 1945.

In Jan. 1947 the queen acted as personal host to Prince Gustav Adolf of Sweden on the occasion of his state visit to Holland. The U.S. deputation from Albany, N.Y., which had come to Holland in connection with Albany's adoption of the Dutch town of Nijmegen, was received by her at Soestdijk on March 28. On May 5 the queen was present at the commemoration ceremony at the Canadian cemetery at Groesbeek, and on May 30 she flew from Soestdijk to Beek to be present at a similar ceremony at the U.S. cemetery at Margraten. Later in the year Queen Wilhelmina paid a flying visit to the British royal family in Scotland. On June 16 she marked the importance of the "Benelux" union by receiving the Dutch-Belgian-Luxembourg interparliamentary commission, and on Sept. 17 she received Tjokordo Gde Rake Soekawati, president of the independent state of East Indonesia.

Because of ill health and the need of rest, the queen was relieved from all official duties by a bill presented to parliament and passed on Oct. 10, appointing Princess Juliana regent until Dec. 1; the queen then resumed her duties.

**Windward Islands.** The British Windward Islands (in the Caribbean sea) comprise the four islands of Dominica, St. Lucia, St. Vincent and Grenada—each ranking as a separate colony for purposes of internal administration—together with the smaller islands known as the Grenadines, which lie between St. Vincent and Grenada and are attached partly to the one island and partly to the other. Total area: 821 sq.mi.; total pop. (1946 census): 251,671 (Dominica 47,682; Grenada 72,374; St. Lucia 69,955; St. Vincent 61,660); the great majority of the inhabitants are Negroes: a few aboriginal Caribs still remain in St. Vincent and Dominica. St. George's is the headquarters of the governor of the Windward Islands as well as the capital of Grenada; it has a pop. (1946 census) of 5,774. Roseau (pop. 9,751) is the capital of Dominica, Castries (7,056) of St. Lucia and Kingstown (4,831) of St. Vincent. Each of the four islands retains its own institutions and is presided over by a resident administrator assisted by an executive council. There is a local legislative council, with an elective element, in all of them; but there is no central legislature for the Windward Islands as a whole, nor are there common laws, revenue or tariff unit. The governor, appointed by the British crown and assisted by a chief secretary for the Windward Islands, exercises general executive authority over the whole group. Governor: Sir Arthur Grimble (appointed 1942).

**History.**—The Windward Islands were among the territories represented at the conference held in Jamaica in Sept. 1947 to consider the question of closer union between the British colonies in the Caribbean arc. They were also concerned in the discussions held early in the year in St. Kitts (Leeward Islands) on the narrower issue of Leeward-Windward Islands amalgamation. Conclusions favourable to amalgamation were reached (*see* Leeward Islands). A grant of £14,319 was sanctioned in July 1947, under the Colonial Development and Welfare act, for the training of teachers in St. Lucia.

**Finance and Trade.**—The legal tender throughout the Windward Islands is British sterling and the gold coins of the United States. Revenue (1946): Dominica £200,000; Grenada £472,000; St. Lucia £385,000; St. Vincent £292,000; total £1,349,000. Expenditure: Dominica £263,000; Grenada £473,000; St. Lucia £370,000; St. Vincent £309,000; total £1,415,000. Total imports (1946): £1,721,000; exports £1,232,000. The resources of the islands are almost wholly agricultural. The principal product of Grenada is cocoa, that of St. Lucia sugar and that of St. Vincent arrowroot. Other products of importance are nutmegs (Grenada) and Sea Island cotton (St. Vincent). Apart from these commodities, exports from the various islands include mace, bananas, coconuts and essential oils. The St. Vincent arrowroot industry is of primary significance, the island being the principal source of world supply. (J. E. Sh.)

**Wines.** Wine production showed an average increase throughout the world in 1947. The quality in countries whose climate and methods of production allow annual variances was excellent and in some countries exceptional.

France maintained its position as largest producer of wines, although the yield was but 80% of the average crop prior to World War II. Champagne produced amounted to 7,000,000 gal. and, it was hoped, might rank high among the famous vintages. Burgundy and Rhône fared almost as well, with 87,000,000 gal. of remarkable wines high in alcohol. The Bordeaux area produced 73,000,000 gal. of fine wines, particularly white, of which there was 31,000,000 gal., a larger proportion than usual.

BARREL-MAKERS' exhibit at the wine fair which was opened in Macon, France, by Premier Paul Ramadier (left, carrying papers) during May 1947

*World Production of Wine, 1946 and 1947*

Millions of gallons

| Country | 1947 | 1946 | Average | | 1947 Quality |

| Total | 3,965.6 | 3,742.5† | | | |

*Unknown. †1946 total does not include countries with * in 1947.

Italy reported a good year in quality and normal production, which reflected favourably on its competitive position in the world market. In Spain the Jerez district produced 20% more than in 1946, all wine of exceptional quality. Portugal produced an average crop Its port production, controlled to the world demand, was fixed at 4,200,000 gal. of superlative quality.

The U.S. produced an estimated 100.000,000 gal., about 60% of the previous year, one-quarter of which was unfortified wine and three-quarters fortified with brandy; 95% of the crop was from California.

(*See* also LIQUORS, ALCOHOLIC.) (J. WE.)

## Wisconsin.

One of the north-central states of the United States, Wisconsin, popularly called the "Badger state," entered the union as the 30th state in 1848. Area, 56,154 sq.mi. of which 1,439 sq.mi. are water. The population was estimated, as of July 1, 1947, at 3,283,000, an increase of 145,413 as against the federal census figures of 1940. The urban population in 1940 was 1,679,144 and the rural 1,458,443. Only 24,835 were nonwhite. Foreign-born whites numbered 288,774. Capital, Madison (pop. 1940, 67,447). Milwaukee is the largest city with a population of 587,472. Other large cities are Racine (67,195), Kenosha (48,765), Green Bay (46,235), La Crosse (42,707) and Sheboygan (40,638).

**History.**—The legislature, meeting in biennial session during 1947, passed the largest budget in the history of the state, $142,000,000 for the fiscal biennium 1947–49, including $19,000,000 for the state university. It provided a veterans' housing program of more than $8,000,000, to be financed by a special tax of $1 per gallon on whiskey. It prohibited strikes in public utilities, providing instead for compulsory arbitration. It increased state educational aids to a record $13,000,000. It added 1,000 mi. to the state highway system, authorized co-operatives to establish health and sickness plans for members. It gave the Rural Electrification administration co-operatives the right of eminent domain except for lands held by a private utility for power purposes. It defeated plans for the reapportionment of senate and assembly districts, but took an important forward step in state government by establishing a permanent interim legislative council.

The state officers in 1947 were all Republican. The death on March 12, 1947, of Walter S. Goodland, who at 83 had won reelection as the nation's oldest governor the previous fall, brought Oscar Rennebohm, Madison, to the executive mansion. The subsequent death of John Smith, 76-year-old state treasurer, created a vacancy to which Rennebohm named John Sonderegger on Aug. 19, 1947. As 1947 was not an election year, other state officers were the same as in 1946: F. R. Zimmerman, secretary of state; J. E. Martin, attorney-general; John Callahan, superintendent of public instruction. The chief justice of the state supreme court was Marvin B. Rosenberry.

OSCAR RENNEBOHM, who became acting governor of Wisconsin on March 13, 1947, following the death of Gov. Walter S. Goodland

Wisconsin would in 1948 observe its centennial of statehood. Plans for the celebration were being formulated by a special centennial committee headed by Dr. Ora Rice, Delavan.

**Education.**—There were 6,037 elementary schools, 457 secondary schools, 24 county normal schools and 9 teachers' colleges in 1945–46. Enrolment in the elementary schools totalled 342,437; in secondary schools it was 141,919 and in county normal schools 614. Elementary schools employed 13,889 teachers, while secondary schools had 6,328 and the county normal schools had 94. The teachers' colleges had 446 faculty members teaching 3,738 college and 2,148 training-school students. State aid for education in the fiscal year 1945–46 totalled $9,534,361. Total expenditures in all elementary and secondary public schools was $66,812,932.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—The number of cases receiving public assistance as of June 1947 was as follows: general relief 4,879; old-age assistance 47,137; aid to dependent children 7,156; aid to the blind 1,278; totally and permanently disabled 439—a total of 53,128 households. Expenditures for public assistance in the year ending June 30, 1947, were as follows: general relief $2,637,995; old-age assistance $21,281,391; aid to dependent children $6,371,247; aid to the blind $573,648; totally and permanently disabled $247,207—making a grand total of $31,111,488. Civilian unemployment benefit payments in 1946 were $7,771,329 as compared with $4,264,654 in 1945 and $1,249,692 in 1944. The contributions for 1946 totalled $7,590,280 as compared with $27,575,988 for 1945 and $42,081,693 for 1944.

Wisconsin's 13 charitable, mental and correctional institutions during the year ended June 30, 1947, were operated at a cost of $7,714,172. The average daily population for June 1947 was 9,318.

**Communications.**—Public highways as of Jan. 1, 1947, totalled 93,188 mi. divided as follows: 84,781 (towns), 2,400 (villages) and 6,006 (cities). Expenditures by the highway commission for the fiscal year 1946–47 were $35,842,047, much of which was returned to municipalities as aids. The total railway mileage (steam and electric) as of Dec. 31, 1946, was 6,780.42, with 52.69 mi. of trolley-coach routes (trackless). Airports numbered 124. There were 768,120 telephones.

**Banking and Finance.**—At the end of 1946 there were 463 state and 95 national banks. Deposits in the state banks totalled $1,496,290,304; the assets were $1,587,368,028. National banks had deposits of $1,346,990,000 and assets of $1,427,724,000. The 524 credit unions (12 fewer than in 1945) listed assets of $20,659,988. Assets of the 114 building and loan associations totalled $155,658,756.

State receipts for the fiscal year ending June 30, 1947, were $138,459,327; disbursements $126,166,587. Taxes collected by the state and returned to local subdivisions totalled $40,395,454; agency collections returned to counties were $1,012,983; state aids amounted to $36,842,845. There was no state debt.

**Agriculture.**—The total acreage harvested in 1946 was 10,265,000. The gross farm income excluding government payments was estimated at $990,275,000, consisting of $134,942,000 from crops and $855,333,000 from livestock and its products, including milk. The year 1946 was a record crop year for Wisconsin. Diversified farming is the foundation on which Wisconsin agriculture is built, and the amount of land used for farming has increased steadily as the state's agriculture has developed.

**Manufacturing.**—The total value of Wisconsin manufactured products in 1939 was $1,604,507,356. Wages paid were $251,946,993. The number of wage earners was 200,897 (average for the year). Wisconsin, with an extremely diversified industry, ranked first in the manufacture of cheese,

Table I.—*Leading Agricultural Products of Wisconsin, 1947 and 1946*

| | 1947 (est.) | 1946 | Value, 1947 (est.) |
|---|---|---|---|
| Corn (bu.) | 105,840,000 | 111,980,000 | $248,724,000 |
| Oats (bu.) | 120,873,000 | 124,758,000 | 132,960,000 |
| Canning peas (lb.) | 288,020,000 | 306,220,000 | 11,967,000 |
| All tame hay (tons) | 6,796,000 | 6,094,000 | 127,983,000 |
| All clover and timothy (tons) | 4,222,000 | 3,713,000 | .... |
| Alfalfa (tons) | 2,263,000 | 1,517,000 | .... |

milk products, malt and canned peas at that time. Within the state, the most important industries in value of manufactured products were: motor vehicles, paper and paperboard mills and wholesale meat packing. In 1946 the estimated average number of wage earners in Wisconsin manufacturing establishments was 308,400, compared with 327,225 in 1945, while the estimated weekly pay rolls had decreased from $15,245,000 to $14,087,000 in the same period.

Table II.—*Value of Mineral Products of Wisconsin, 1945 and 1944*

| Mineral | 1945 | 1944 |
|---|---|---|
| Stone | $8,442,921 | $7,741,499 |
| Iron ore | 3,575,133 | 4,190,380 |
| Zinc | 3,579,030 | 3,545,172 |
| Sand and gravel | 4,111,282 | 4,128,434 |

**Mineral Production.**—In 1945 the value of all mineral production in Wisconsin was $22,213,000 as compared with $22,794,000 for 1944 and $18,930,000 in 1943. (C. L. L.)

**Wisconsin, University of.** An institution of higher education at Madison, Wis. A record number of 2,100 students received degrees at Wisconsin's annual commencement in May 1947, the 94th in the university's 98-year history.

When the university opened for its 99th year on Sept. 29, 1947, a total of 23,442 students registered for instruction, 18,693 at Madison and 4,749 at 17 extension centres continued in cities in all parts of the state. This was an 85% increase over the highest prewar enrolment of 12,674 in 1939 and continued the university's record enrolment at the same high level set in 1946. The extension centre classes, taught by university instructors of regular faculty rank, were held in high schools, vocational schools and regular university centres for both freshmen and sophomores.

More than 46,625 young people and adults were enrolled in correspondence courses provided by the extension division during the year. More special institutes, 40 to be exact, attended by more than 7,000 citizens, were conducted for labour, agriculture, education, business and industry during 1947 than in any other of the university's 98 years.

With the huge demand for its educational services sustained through 1947, Wisconsin continued taking emergency measures to meet the situation and continued to carry forward plans, first inaugurated during World War II, involving the expenditure of more than $50,000,000 over a 10-year period for expansion and development of campus and building facilities. Besides the 17 extension centres, other emergency steps continued at Wisconsin to meet the immediate problems of the situation included temporary housing for students, temporary classrooms in the form of 15 Quonset huts and 27 temporary frame buildings. The faculty, increased by 65 full-time members to a record high of 883 members, established an integrated curriculum of liberal arts studies, and approved, on recommendation of Pres. Edwin Broun Fred, an intensive self-analysis of the university's work in education, science research and public service. (For statistics of endowment, enrolment, faculty, library volumes, etc., *see* UNIVERSITIES AND COLLEGES.) (R. Fs.)

**Withholding Tax:** *see* TAXATION.

**Woman's Christian Temperance Union, National:** *see* SOCIETIES AND ASSOCIATIONS.

**Women's Clubs, General Federation of:** *see* SOCIETIES AND ASSOCIATIONS.

**Wool.** The quantity of wool shorn in the U.S. in 1947, as estimated by the U.S. department of agriculture, was 256,302,000 lb., or 24,000,000 lb. less than in 1946 and 104,000,000 lb. less than the 1936–45 average. The record production of raw wool amounted to 459,000,000 lb. in 1942. The estimated number of sheep shorn in 1947 was 31,723,000, or about 3,000,000 head less than in 1946 and 13,500,000 below the 10-year average. The estimated weight per fleece was 8.8 lb., compared with 8.6 lb. in 1946 and the 10-year average of 7.97 lb. Pulled wool production for the year was estimated at 48,000,000 lb. against a total of 61,300,000 lb. in 1946 and a sharp reduction from the record production of 73,500,000 lb. in 1944. The reduction in poundage of both shorn and pulled wools may be attributed entirely to a decrease in the number of sheep shorn and slaughtered.

The 1947 world wool output, however, was equal to that of 1946, despite the decrease in United States production. The department of agriculture in October estimated the world wool production for the 1947–48 season at 3,700,000,000 lb. This was 12% smaller than the 1941 record of 4,200,000,000 lb. World production of apparel wool was estimated at about 2,900,000,000 lb. and consumption at 3,400,000,000 lb. This reduced the carry-over stock by 500,000,000 lb. The world carry-over of apparel wool on July 1, 1947, was estimated at 4,500,000,000 lb.

The Australian wool production in 1947 was estimated at 903,632,541 lb., an increase of approximately 25,000,000 lb. over the previous year. In New Zealand the clip was estimated at 349,873,367 lb., a decrease of nearly 3,000,000 lb. from the previous year. The estimated production of wool in Argentina for the year was 506,000,000 lb. Shipments for the year ending Sept. 30, 1947, amounted to 180,000 tons of greasy wool, which was nearly 40% under the record figure of the previous season. The United States purchased about 50%, while Belgium took 10%, France 8%, the U.S.S.R. 6%, and smaller quantities went chiefly to Italy, the Netherlands, Sweden, Spain, Switzerland and Poland.

During the month of March, negotiations by the Australian Wool Realization commission, involving the sale to Japan of lower-grade wools, were announced. The proposed $32,300,000 sale was the result of nearly a year's discussion and negotiation. As the Japanese government had no foreign exchange with which to finance the contract, and since all Australian wool is required by law to be sold by auction, the financing was done by a United States agency.

The first meeting of the International Wool Study group was held in London March 31 to April 3, and representatives of 25 countries participated. At about this time meetings were held in London and in Bradford, England, at which the utilization by British firms of surplus wool for processing in Germany was discussed, as well as the allocation of available combing and spinning space.

During early March three wool bills were brought before the house agriculture committee in Washington, D.C. All of these bills would allow the sale of domestic wools, in the government stockpile, by the secretary of agriculture for less than parity, to meet competition from abroad; and would permit, or require, the establishment of import quotas on foreign wools. One bill, which included the principal features of all, passed the senate but was vetoed by the president on June 26. His statement was to the effect that the bill in its original form contained features which were unnecessary for the support of the wool producers and would have a bad effect on international relations. Later the senate agricultural committee unanimously approved a new Wool Price Support bill, which was passed by the senate only four hours after the president's veto message had been received. On Aug. 5, President Harry S. Truman signed the Wool Price Support bill (S.1498) and the department of agriculture at once announced the new support program to be effective Aug. 15. This measure did two things: it authorized the Commodity Credit corporation to purchase the domestic wool clip until Dec. 31, 1948, at the 1946 level (an average price of 42.3 cents a pound, grease basis); and allowed the CCC to sell its stocks, consisting of about 400,000,000 lb. of the domestic wool stockpile, at prices competitive with those of foreign wool. Under the last price support law, such wools could not have been sold at less than parity. With this new law in effect and with the continued rise in price of the finer grades of wool in Australia and other wool centres, there were large weights of wool sold.

Following the offer of the United States to cut by 25% its duty of 34 cents per clean lb. on Australian wool, the commonwealth minister for reconstruction, who was in Geneva attending the United Nations Conference on Trade and Employment, was authorized to reopen negotiations with the United States on trade concessions. This would establish a new duty of 25½ cents per lb. clean basis on Australian wool entering the United States. This reduction in duty of the Tariff act of 1930, par. 1102 (b) for raw wool finer than 44s in grade, which was applicable to all most-favoured nations, including Argentina and Uruguay, was signed at Geneva on Oct. 30, to become effective Jan. 1, 1948.

The unprecedented demand for merino type of wools, principally from the continent, caused prices to advance rapidly at all sales in Australia as well as at London. A large credit, a revolving fund of £12,500,000, was granted the French wool textile interests by London banking institutions, the repayment being made in French exports of wool textiles. It was expected that this revolving fund would enable France to import £35,000,000 of British-owned wools as well as substantial quantities from South America. This large amount of credit caused France to outbid other nations, including the U.S., at all auction sales, both in Australia and South Africa. Other countries, except the United States, followed the upward swing in prices. The U.S., because of the tariff of 34 cents per lb., clean content, in effect at the time, was unable to compete, other than in certain specialty types. From January to November, prices rose at the Australian sales 50% on 64/70s and 42% on 58s. Other markets followed this upswing in prices.

Choice 60s/64s Chubut wool, from Argentina, rose in price from 33 cents per lb. in the grease in February to 41 cents per lb. in December.

United States wool textile mills consumed 358,700,000 scoured lb. of apparel wool in the first eight months of 1947, according to a report issued by the National Association of Wool Manufacturers. This was 13% less than that consumed in the corresponding period of 1946 but 95% greater than the average January–August consumption in the years 1935–1939. Domestic wool consumption in the Jan.–Aug. 1947 period was 60% greater than in the first eight months of 1946. The quantity of foreign apparel wool used in 1947 was down 25% from the same period in 1946.

In addition to higher prices of wool, increased wages were paid to labour in the woollen industry in the United States. A $27,456,000 annual wage increase went into effect Feb. 4 for 88,000 woollen workers covered by contracts with the Textile Workers Union of America (C.I.O.). All but 7 of 164 mills, which had agreements with the T.W.U.A., agreed on that day to a 15 cents an hour wage increase, lifting the minimum from 75 cents an hour, or $30 a week, to 90 cents an hour, or $36 a week.

On the basis of statistics of wool imports to the end of August, available from the department of commerce, it was estimated that the total of apparel types imported during the year amounted to 471,000,000 lb. (which included 80,000,000 lb. of 40s aside from those classed as "carpet" types). This indicated for the entire year little more than half the volume of apparel types, including the same 40s, imported in the calendar year 1946, which was 939,969,841 lb. The department of agriculture estimated the wool consumption for 1947 to be between 950,000,000 and 1,000,000,000 lb. (*See* also SHEEP; TEXTILE INDUSTRY.) (C. M. AN.)

## Words and Meanings, New.

The most certain characteristic of a living language is its tendency to change. New conditions of all kinds, new ideas, new inventions—all must be described by new words, by extensions of old words or by new combinations of words. English thus adds many new words to its vocabulary every year, some destined to live long, others to die soon. The words listed below are but a small residue of those collected by the committee preparing this article.

Several groups of the coinages below are deserving of brief comment. As usual, scientific discoveries are well represented among the new words, witness "astatine," "bevatron," "gleep," "hurricane-buster plane," "sonic barrier," and "synchro-cyclotron." Medical science, in particular, is represented by such coinages as "Amidone," "Caronamide," "chloromycetin," "electronarcosis," "grisein," and "rickettsialpox." An extremely interesting group of coinages reflect economic and political problems, especially in the foreign sphere: "Benelux," "Bizonia," "cold war," "Cominform," "crypto-Communist," "Marshall plan," and "police state."

Finally may be mentioned those words which reflect domestic activities, sometimes in the lighter vein: "baby sit," "bubble gum" (a 1947 fad), "flying saucer," "new look," and "Trumanburger."

These words became prominent or were seemingly used for the first time during the years 1946 and 1947. Dates within the parentheses following a word or definition indicate the first recorded use of the new word or meaning in the files of the committee.

A preceding hyphen means that the word or meaning is suspected to be older than the date given. If no date is given, the first record on file is 1947.

**across the board,** *adj.* Touching or affecting all parts of (a system); general; as, "an across the board wage increase." (1945)

**A.E.C.** United States **A**tomic **E**nergy **C**ommission.

**air letter.** A letter developed by the U.S. post office consisting of a single sheet of paper (stamped with a ten-cent air mail stamp), which can be folded into the shape of an envelope, sealed and sent anywhere in the world.

**airmark,** *v.* To provide with **airmarkers** (1942), prominently placed signs for the direction of fliers.

**Airphibian.** A two-seater, single-engine monoplane made by Continental, Incorporated, which can be converted into an automobile quickly and easily. Trade name. (1946)

**Amidone.** A drug (4-4-diphenyl-6-dimethylamino-heptanone-3), still in the experimental stage, with some of the properties of morphia. Also known as **Dolophine, Methadon** and **10820.**

**astatine.** Element number 85, which was produced by radio decay.

**Astra Dome.** The observation deck built in the roofs of the coach, diner, sleeper and observation lounge car of the General Motors "Train of Tomorrow." The deck is 30 ft. long and 10 ft. wide, and its transparent dome is 2 ft. above the roof of the car. Trade-mark.

**atomic itch.** A skin irritation, accompanied by high fever, brought about by exposure to radiations from the atomic bomb.

**atomic propulsion.** Propulsion by means of atomic energy. (1945)

**baby sit,** *v. i.* To sit with a baby while its parents are out.

**Bathyscaphe,** *n.* The 3½-in.-thick steel chamber, with an outside diameter of 6½ ft., with which Professor Auguste Piccard planned to descend far into the ocean. Also called **Hydrostrat.**

**Benelux.** Word formed from **Bel**gium, **Ne**therlands and **Lux**embourg to describe their economic association.

**bevatron.** A super-cyclotron, as yet only a design.

**biocide.** Term proposed by Dr. E. M. Greenberg to describe the gradual destruction of body tissues brought about by self-indulgence and the unhealthy living habits and pressures accompanying civilization.

**Bizonia.** The Anglo-U.S. zone in western Germany.

**blackmarketing,** *n.* Operating on a black market.

**bubble gum.** A kind of chewing gum capable of being blown into large bubbles which eventually pop. (-1938)

**-burger.** *See* **Trumanburger.**

**bush pilot.** A pilot who operates an aeroplane, especially in Alaska, over sparsely settled country and to out-of-the-way places. (1945)

**-buster.** *See* **hurricane-buster plane.**

**can,** *v. t.* To enclose (a plane or ship) within corrugated-steel chambers as a protection against weather. (1946)

**CARE.** Cooperative for American Remittances to Europe, Inc. (1946)

**Caronamide.** A drug (4-carboxyphenylmethanesulfonanilide) developed by Dr. Karl H. Beyer, of Sharp and Dohme, which, by checking the excretion of penicillin, makes the latter drug more efficacious in those cases where a high concentration of penicillin is required.

**chain reaction.** *Fig.* A series of results, one caused by another.

**chlordane.** A contact insecticide. Also **1068**, because it contains ten parts of carbon, six of hydrogen and eight of chlorine.

**chloromycetin.** A drug of the penicillin-streptomycin family recently discovered by Dr. Paul R. Burkholder, of Yale university, which may be effective against such diseases as epidemic typhus fever and parrot fever.

**civilian,** *n. & adj.* Pertaining to one not a (regular) member of a group, as, a temporary stenographer.

**cold war.** Bitter economic and political rivalry without outright fighting. (1946)

**Cominform.** Communist Information bureau.

**crypto-Communist.** One who sympathizes secretly with communism; a "fellow traveller." (1946)

**cyclonium.** *See* **prometheum.**

**deep,** *adj. Football.* Said of reserve players; as, "four deep in the line." (1942)

**depth,** *n. Football.* A supply of reserve players. (1945)

**Diapene.** Trade name of a bactericide for diaper rash.

**dollar crisis.** Condition resulting when a country whose exports to the United States fail to balance its imports begins using up its dollars.

**EDVAC.** Electronic Discrete Variable Computer, an electronic calculator.

**electronarcosis,** *n.* A treatment for the mentally ill in which the patient is kept unconscious for a short period of time by means of a mild electric current which is run through his brain.

**Elgiloy.** An alloy used in watchmaking, made by the Elgin National Watch Co.

**ERP.** European Recovery plan. The **Marshall plan** (*see* below).

**fan-marker.** *Aviation.* A vertical radio beam which indicates to the pilot of a descending aeroplane the distance to the end of the runway. (1944)

**flying disk.** *See* **flying saucer.**

**flying saucer.** One of a number of mysterious objects, first sighted over Oregon June 24, 1947, and later at other places, flying at great heights and at high speeds. Though the saucers were attributed in part to hallucinations resulting from mass hysteria, they were not satisfactorily explained.

**francium.** Name given by Mlle. Marguerite Perey to element number 87.

**Freedom Train.** A seven-car train, sponsored by the American Heritage foundation, containing an exhibit of important U.S. historical documents, which were displayed at various cities and towns throughout the United States.

**Friendship Train.** A train which went from Los Angeles to New York city, collecting voluntary contributions of food for Europe. Beginning as a train of 12 cars, it swelled to one of 266 by the time it reached New York. The food was shipped to Europe early in December on **Friend Ships.**

**gleep.** Name derived from the initials of "graphite low energy experimental pile" to describe Great Britain's first atomic pile.

**Glocca Morra.** Name that can be used for any desired place; as, "Things are fairly good in Glocca Morra." (-1947)

**grisein.** An antibiotic which complements streptomycin.

**grovesium.** *See* **prometheum.**

**hot rod.** *Slang.* A jalopy, stripped of excess trimmings, whose motor has been stepped up for high speeds. (-1945)

**hot war.** Actual fighting. Opposed to **cold war** (*q.v.*).

**hurricane-buster plane.** An aeroplane which attempts to break up hurricanes.

**hurricane-hunter plane.** An aeroplane for searching out and locating hurricanes.

**Hydrostrat.** *See* **Bathyscaphe.**

**Hypospray.** An instrument that forces liquid medicine under the skin.

**ILS.** Instrument Landing System, a radar system whereby a pilot is aided in landing his aeroplane. (1946)

**IRO.** International Refugee Organization. (1946)

**jump-pass,** *n. & v. Football.* A forward pass thrown as the passer jumps into the air. (-1947)

**Launderette.** A trade name of the Telecoin Corp. applied to a self-service laundry equipped with Bendix washing machines. (-1946)

**lay-up,** *n. Basketball.* A basket made by putting the ball through a basket by a jump and a gentle, one-handed push, usually off the back-board. (-1945)

**Mach number.** (After Dr. Ernest Mach.) The ratio between the speed of an object (as an aeroplane) and the speed of sound under the conditions (as of temperature) obtaining in the particular medium (usually air) in which the object is travelling. (1945)

**MANIAC.** The Mechanical and Numerical Integrator and Calculator, a calculating machine invented by John von Neumann.

**Marshall plan.** Term applied to the proposal of Secretary of State George C. Marshall that the United States give financial aid to western Europe to assist it in a long-term plan for recovery and rehabilitation.

**Mesantoin.** A trade name for an anticonvulsant drug.

**Methadon.** *See* **Amidone.**

**momism.** (From *mom,* colloquial for "mother.") Word coined by Philip Wylie to describe an American matriarchy, one aspect of which is the excessive "mothering" responsible for many neuroses, especially among men. (1942)

**nation,** *n.* A group of young people who meet to learn and practise the ways of democratic government.

**new look.** The new appearance of women's clothes resulting from innovations in style in 1947.

**1947N.** A comet, visible to the naked eye, so named because the 14th discovered during the year 1947.

**one-worlder,** *n.* An internationalist. (-1947)

**PCA.** Progressive Citizens of America.

**Phone Vision.** A principle developed by Zenith Radio Corp. for transmitting television over telephone wires.

**pipe line.** A channel of distribution. (1946)

**police state.** A state whose economic life is controlled by the government. Opposed to a country of free enterprise. **police statism.**

**post atom(ic),** *adj.* Subsequent to the dropping of the atomic bomb. (1945)

**power line carrier.** A type of telephone service, especially adapted to rural areas, which utilizes power lines. (1946)

**price (a person) out of the market.** To set prices so high that people refuse to buy. (1938) **price (goods) out of the market.** To price goods so high that they cease competing with their natural competitors. (1946)

**prometheum.** (After Prometheus.) Name proposed for the synthetically produced element number 61. Other proposals are **cyclonium, florentium, grovesium, illinium** and **thanium.**

**propylthiouracil.** A drug used in the treatment of goitre.

**Radarange.** A cooking range built by Raytheon Manufacturing Co. which utilizes the energy of ultra-high-frequency radio waves. (1946)

**rickettsialpox,** *n.* A disease, first identified in June 1946, with symptoms of chills, fever, sweating, backache and rash.

**seeding,** *n.* The dropping of chemicals, such as dry ice, from an aeroplane into a cloud to induce condensation. (Extension of older chemical usage, —1934.)

**sideline,** *v. t. Sport.* To keep (a player) on the sidelines, that is, out of play, because of an injury or the like. (-1946)

**silken curtain.** The well-mannered but firm censorship exercised by Great Britain over some of its foreign problems.

**sky barrier.** Same as **sonic barrier** (*see* below).

**Skystreak.** The U.S. navy's jet-propelled D-558 (made by the Douglas Aircraft Co.), which flew 650.6 m.p.h.

**sonic barrier.** *Aviation.* Point at the speed of sound where air disturbances supposedly create hazards for faster aeroplane flight. Also **sonic wall.** (-1947)

**spiv,** *n.* British. An operator on the black market; a minor racketeer.

**spot check.** A rough sampling. (-1945)

**stanine,** *n.* A blend (from "**stan**dard **nine**") that originated in 1942 in Psychological Research Unit No. 1, AAF classification centre, Maxwell field, Ala., to describe (a) a score on a 9-point scale in an AAF aptitude test or (b) the combined score in several such tests, as for pilot, bombardier, etc. (-1942)

**Stratofreighter.** The Boeing cargo aeroplane, capable of hauling 20 tons of freight. Trade-mark. (1946)

**Stratojet.** The Boeing XB-47, a bomber powered by six jet engines. Trade-mark.

**strip,** *n.* In California, a section of road or highway on which are located high-class eating places. (1938)

**synchro-cyclotron,** *n.* A cyclotron with some features of a betatron; its modifications in design make it more powerful than the cyclotron.

**1068.** *See* **chlordane.**

**thanium,** *n.* *See* **prometheum.**

**Trizonia,** *n.* The United States, British and French zones in western Germany.

**Trumanburger,** *n.* A meat substitute (bun sandwich whose filling consists of mashed beans and barbecue sauce).

**Truman doctrine.** Name given to the policy of President Harry S. Truman of giving financial aid to nations (specifically Greece and Turkey) for rehabilitation and resistance to Communist control.

**Tuf-Flex.** An unbreakable glass made by Libby-Owens-Ford, recently used as a baseball backstop instead of the conventional wire netting. Trade name. (1945)

**Ultrafax.** Trade name of a high-speed communications system employing television.

**UMT.** Universal Military Training program.

**Umtee** (Pron. of UMT). A trainee in the Universal Military Training program.

**venture,** *adj.* Not controlled; as, "venture money," money one is willing to risk in a new enterprise. (1938)

**watchdog commission.** A government commission set up for careful observation of some trouble spot. (I. W. R.)

**Works Agency, Federal:** *see* Federal Works Agency.

**World Bank:** *see* International Bank for Reconstruction and Development; International Monetary Fund.

**World Commerce:** *see* International Trade.

**World Council of Churches:** *see* Christian Unity.

**World Federation of Trade Unions.** At its general council meeting in June 1947, the federation elected Arthur Deakin, general secretary of the British Transport and General Workers' union, as president. Its secretary was Louis Saillant, of the French Confédération Générale du Travail. A special W.F.T.U. mission visited Germany in Jan.–Feb. 1947, and reported strongly in favour of the maintenance of a united German trade union movement, which had then reached a membership of 6,000,000. The W.F.T.U. asked the military governments in Germany to avoid all steps that might endanger trade union unity, to allow the trade unions to play a larger part in denazification of industry, and to give them "on all official and semi-official bodies a representation at least equal to that of other groups of the community." The W.F.T.U. also set up a liaison bureau for Germany, and agreed in principle to accept the affiliation of the German trade union movement as soon as it had been able to establish a common trade union centre. W.F.T.U. delegations also visited Japan and Iran; a conference on trade unions in Africa was organized at Dakar in April when demands were put forward for the organization of effective social and health services in African colonial territories, on the same basis as those provided in the metropolitan countries. The British delegation dissented from this recommendation as impracticable at the present stage of African development.

The main work of the W.F.T.U. in 1947 was concerned with the organization of trade departments representing the workers in particular industries and services, to replace the prewar independent Trade Federation of Transport Workers, Miners, Textile Workers, etc.; separate conferences of the various trade groups were being held, and a set of approved rules were drawn up for adoption by the trade departments, regulating their relations with the W.F.T.U. There were discussions with the United Nations Economic and Social council concerning the form of recognition to be given to the W.F.T.U. by that body, so as to secure its right to speak at plenary sessions on all questions in which it has an interest. The W.F.T.U. placed a number of questions on the agenda of the Economic and Social council, including those of equal pay for men and women, abolition of racial and national discrimination, full employment, treatment of immigrant workers, suppression of trusts and monopolies, and standards of living in different countries. Discussions were also opened with the International Labour organization concerning the relation of the W.F.T.U. to that body under its revised constitution.

Early in 1947 the W.F.T.U. represented trade unions in 32 countries, with an approximate total membership of 65,000,000. Of these, 27,000,000 were in the U.S.S.R., and 26,000,000 in the rest of Europe, including 7,000,000 in Great Britain, 6,000,000 in France and 5,000,000 in Italy. Germany was not represented. Asia accounted for nearly 4,000,000, including 1,600,000 in China, and there were 860,000 in India. The United States was represented only by the Congress of Industrial Organizations, with 6,500,000 members. In Africa, only Nigeria was affiliated, with 500,000, and in the Pacific only Australia, with 625,000. No figures were available for Latin America.

(G. D. H. C.)

**World Health Organization:** *see* UNITED NATIONS (U.N.).

## World War II.

The surrender dates of World War II follow:

*Sept. 3, 1943:* Italy surrendered unconditionally. On Oct. 13, 1943, Italy declared war against Germany and on July 15, 1945, against Japan.

*Aug. 23, 1944:* Rumania accepted the Allies' armistice terms and, on Aug. 25, declared war against Germany and Hungary.

*Sept. 9, 1944:* Bulgaria accepted Allied armistice terms.

*Sept. 19, 1944:* Finland signed armistice terms with Great Britain and Russia (the United States was not at war with Finland). On March 3, 1945, Finland announced it had been at war with Germany since Sept. 15, 1944.

*Jan. 20, 1945:* Hungary capitulated.

*May 7, 1945:* Germany surrendered.

*Aug. 14, 1945:* Japan surrendered.

It must be remembered in connection with the above listing that Germany, as early as 1942, had made overtures to Russia with the purpose of accomplishing a separate armistice with that power. Josef Goebbels was sure that Germany's position was weak and he enlisted Japanese aid in seeking a separate peace with Russia. Playing on that country's ire over the nonestablishment of a "second front," Germany tried to sell Russia the idea of a definite break with its allies, along with a peace with Germany. However, Russia could not reconcile these two points and nothing came of the attempt. In 1943, when things looked gloomy for the Germans, their diplomats again worked feverishly to effect a separate peace with Russia. They were ready to throw Finland and Rumania in as bribes. If the worst came to pass, the nazis would have preferred to capitulate to Marshal Joseph Stalin rather than to Franklin D. Roosevelt or Winston Churchill. However, German home sentiment soon revealed that if Russia should show any intention to pick up Germany's offer, Adolf Hitler would lose a considerable following. Since he had already lost Italy, he could not afford further loss at home. Russia turned a deaf ear to the proposition and nothing came of it.

Along with the national surrenders listed above, it is of interest to note several instances wherein groups of the enemy did not surrender, mentally or physically, according to accepted schedules.

U.S. forces fired first on Guam in July 1944 and in the next month had control of the island. A year later, in July 1945, a Japanese officer, his lieutenant, his orderly and 33 ragged soldiers surrendered on Guam to Col. Howard Stent of the U.S. marine corps. This Japanese group had hidden out in the jungles after their comrades in arms had surrendered. On Feb. 24, 1947, Allied police forces were forced to round up and arrest hundreds of diehard nazis in Berlin who fostered the idea of waging bacteriological warfare in an effort to restore Germany's armed might. The public press of July 18, 1947, reported a holdout force of 50,000 Japanese troops still battling in the Korean-Manchurian area, having failed to surrender on V-J day.

**Official End of Hostilities.**—The proclamation quoted below did not terminate the states of emergency declared by President Roosevelt on Sept. 8, 1939, and May 27, 1941, nor did it have the effect of terminating the state of war itself; it merely terminated the period of hostilities. It did, however, terminate immediately government powers under about 20 statutes and about 33 others at a later date, generally on July 1, 1947.

BY THE PRESIDENT OF THE UNITED STATES OF AMERICA

A PROCLAMATION

With God's help, this nation and our Allies, through sacrifice and devotion, courage and perseverance, wrung final and unconditional surrender from our enemies. Thereafter, we, together with the other United Nations, set about building a world in which justice shall replace force. With a spirit, through faith, with a determination that there shall be no more wars of aggression calculated to enslave the peoples of the world and destroy their civilization, and with the guidance of Almighty Providence, great gains have been made in translating military victory into permanent peace. Although a state of war still exists, it is at this time possible to declare, and I find it to be in the public interest to declare that hostilities have terminated.

Now, therefore, I, Harry S. Truman, President of the United States of America, do hereby proclaim the cessation of hostilities of World War II, effective twelve o'clock noon, December 31, 1946.

IN WITNESS WHEREOF, I have hereunto set my hand and caused the seal of the United States of America to be affixed.

DONE at the city of Washington this 31st day of December in the year of our Lord nineteen hundred and forty-six and of the Independence of the United States the one hundred and seventy-first.

By the President:

HARRY S. TRUMAN

James F. Byrnes
The Secretary of State.

ANTI-AIRCRAFT SHELLS being dumped into the Gulf of Mexico at a depth of 3,000 ft. in April 1947, as part of the lengthy operations for disposal of surplus naval ammunition remaining after World War II

Through the medium of official and nonofficial private publications released after V-E and V-J days, the general public was informed of World War II facts not thoroughly comprehended previously. The keynote of written and spoken material dealing with World War II had been utmost frankness. Books like Ralph Ingersoll's *Top Secret,* Robert Merriam's *Dark December,* William Huie's *The Case against the Admirals,* R. S. Allen's *Lucky Forward* and James Byrnes's *Speaking Frankly,* written from the viewpoint of the individual author, spared no one.

**Costs and Casualties.**—In April the department of the army released World War II cost figures, in lives and dollars. These figures show that World War II was almost twice as expensive in U.S. lives—313,000 against 193,663—and 20 times as expensive in wealth as World War I. The money bill for World War I was $21,850,000,000 which was 20 times the prewar debt and enough to pay the entire expenses of the United States government from 1791 to 1917. The bill for World War II was $340,000,000,000. Viewed in another dimension, World War II cost approximately 87.5% of the entire national wealth with 15% of the 1940 population in the armed forces during the course of the conflict. A hundred years earlier, the Mexican War had involved 0.6% of the nation's population and had cost 0.26% of the national wealth at that time. Reduced to tabular form, comparative costs in lives and wealth were:

| Wars | Dates | Total U.S. troops | Total dead | Total cost |
|---|---|---|---|---|
| Mexican | 1846–48 | 104,284 | 12,946 | $ 139,500,208 |
| Spanish | 1898–99 | 408,391 | 6,472 | 992,159,840 |
| World War I | 1917–21 | 3,665,000 | 193,663 | 21,850,000,000 |
| World War II | 1941–* | 10,200,000 | 313,000 | 340,000,000,000 |

*War not officially terminated at end of 1947.

Furthermore, it is estimated that, by 1972, accruing costs directly connected with World War II will raise the $340,000,000,000 figure to $700,000,000,000.

**Ship Losses in World War II.**—The *Eastern Underwriter* (Eastern Underwriter Co., New York, N.Y.) released the following statistics on ship losses in World War II from Sept. 3, 1939, to May 5, 1945:

| | |
|---|---|
| British empire | 2,570 |
| United States | 538 |
| All other Allies | 1,172 |
| Neutrals | 490 |
| Total | 4,770 |

Available sources for enemy losses show:

| | |
|---|---|
| Japan | 318 |
| Germany | 1,266* |
| Italy | 257† |
| Total | 1,841 |

*204 of these were surrendered.
†49 of these were surrendered.

**Operation "Torch."**—In his book *Our Vichy Gamble,* William L. Langer, professor of history at Harvard university, brings out many interesting facts concerning U.S. relations with Vichy France. His discussion of U.S. operations in North Africa, Operation "Torch," sheds considerable light on the interplay of political and military factors operative in that area, factors outside the ken of the average reader at that time.

At the outset, Generals Dwight D. Eisenhower and Mark Clark found themselves enmeshed in a welter of political factionalism from which there seemed to be no clear path of escape. Under the German aegis, Pierre Laval held the reins in France, although Henri Pétain was nominally in command at Vichy; Adm. Jean Darlan was commander in chief under Pétain, of all French armed forces—land, sea and air; Gen. Henri Giraud, a hero of World Wars I and II, had to be reckoned with from a command and sentimental standpoint and, finally, Gen. Charles de Gaulle, leader of the Free French, could not understand why he should divide the spotlight with any other Frenchman. Faced with this situation which was present throughout all the planning and operational stages of Operation "Torch," Eisenhower named General Clark to the command of the U.S. 5th army, leaving the position of deputy commander purposely open.

As the operations were shaped, De Gaulle, difficult to get along with, was deliberately kept in ignorance of the exact plans. To Allied political and military leaders, it seemed that General Giraud might bring to bear the most weight in asking Frenchmen, under his leadership, to fight against Frenchmen in Africa in order that the Allied invasion might succeed. Generals Eisenhower and Clark met with Giraud at Gibraltar to formulate the final plans. They ran into trouble immediately. Deaf to all arguments, Giraud insisted that he must be commander in chief in North Africa and be without responsibility to the U.S. and British combined chiefs of staff. He said the U.S. could look after his reinforcements of personnel and supplies. Further, Giraud was determined upon an immediate invasion of southern France. On this point, he was told definitely that such move would be predicated entirely on initial success in North Africa. Finally, Giraud yielded to the extent of acknowledging U.S. military leadership for the operation in exchange for which Giraud would be commander in chief of all French forces in the North African region and governor of the French North African provinces. In the meantime, military operations had begun.

At 1:00 A.M., Nov. 8, 1942, the task force was in motion. On the German side, the U.S. invasion came as a surprise. They had expected some operation either against Dakar or Casablanca, but they had not expected the landings in Algeria.

On Nov. 8, Gen. Alphonse Juin, commanding land and air forces in French North and West Africa, was called upon by Robert D. Murphy, counsellor of the U.S. embassy at Vichy, to recognize the fact of U.S. invasion and was urged to throw his strength on the side of the Allies to liberate France. Juin, faithful to Pétain, countered that it was not his responsibility to make such decision since Darlan was right then in Algiers. Darlan, summoned by phone, now made the argument a three-sided one with Murphy momentarily expecting to hear the sounds of invasion forces landing. Darlan, ever the opportunist, consented finally to throw in with the Americans, provided Pétain would approve. This news, when it reached Eisenhower at Gibraltar, created a tense problem. Giraud, after hours of urging, had just been won over to some form of agreement in return for which he had been made certain promises. What to do with him now? Could he and Darlan work together? Eisenhower immediately sent Giraud (Nov. 9) by plane to Algiers where his fellow French officers refused to have anything to do with him. General Clark even had to find him a hiding place where it would be safe to confer with Juin and Darlan. The latter, still apprehensive of Pétain's approval of his actions, was finally convinced enough to give a cease-firing order which undoubtedly saved hundreds of lives of the invasion forces. He also ordered the French fleet to be ready to move from Toulon should the Germans proceed to occupy all of France. In the meanwhile, he assumed command of all North Africa in the name of Pétain. When Darlan's message reached Pétain, he was urged to approve it, to order the French fleet to sea and to command French garrisons to take to the hills. To this he agreed, but the message he sent to Darlan to that effect was intercepted by the Germans, who called upon Laval to bring Pétain into line. This he did. Pétain reversed himself, named Gen. Auguste Noguès as commander in chief in North Africa but, at the same time, sent a secret message in code to Darlan telling him that he approved everything the latter had done. Receiving first the message concerning Noguès's appointment, Darlan told General Clark that he must rescind his previous cease-firing order. Clark's response was characteristic and immediate, "Damned if you do."

Darlan refused to budge; Giraud, lacking military recognition by his own uniformed people, was helpless. At this moment, the secret approval message of Pétain came through to Darlan, along with the news that the Germans were occupying all France.

Laval hastened to Munich only to learn from Hitler that, unless France allied itself with Germany, it would be occupied *in toto* and would lose its entire colonial empire. In North Africa, Clark and Eisenhower were moving the pieces on the chessboard somewhat feverishly. Summoned from Morocco, Noguès threw in his lot with Darlan; Pierre Boisson, governor general of West Africa, elected the Allied cause; Giraud accepted the post of military chief in the Darlan group; De Gaulle was out of the picture. Thus, by Nov. 22, the Allies, exploiting to the full Darlan's usefulness to them, had gained a measure of security in the rear and were assured of being able to open new and improved air supply lines across the Atlantic to U.S. troops. The French were immediately committed to helping the Allies to capture Tunisia, plus making every effort to get the fleet at Toulon. This latter failed when the French commander, Adm. Jean de la Borde, hating Darlan, scuttled the fleet in the harbour.

The invasion of North Africa, in point of time, was most fortunate. It came in conjunction with Gen. Bernard L. Montgomery's breaking of the German lines at El Alamein, the prelude to the British drive through Libya.

The dominating position to which Darlan had now succeeded roused a storm of protest; he was branded "Vichy traitor," "notorious quisling" and even "skunk." The possibility of uniting the De Gaulle and Giraud factions was, for the time, blasted. Darlan, opportunist to the end, now envisioned himself as the successor to Pétain. His supporters were all officers committed to Vichy. Thus, Eisenhower and Clark found themselves with a new problem on their hands. Darlan was told bluntly that he was acceptable so long as he collaborated to break the axis power and eventually thus to free France, but that he was not to indulge in building up a political organization which had no bearing on the military effort. He disavowed any such political intentions but his actions ran contrary to his words. It was finally decided that he must resign. However, on Christmas Eve, 1942, he was assassinated. The man was dead but not the problem.

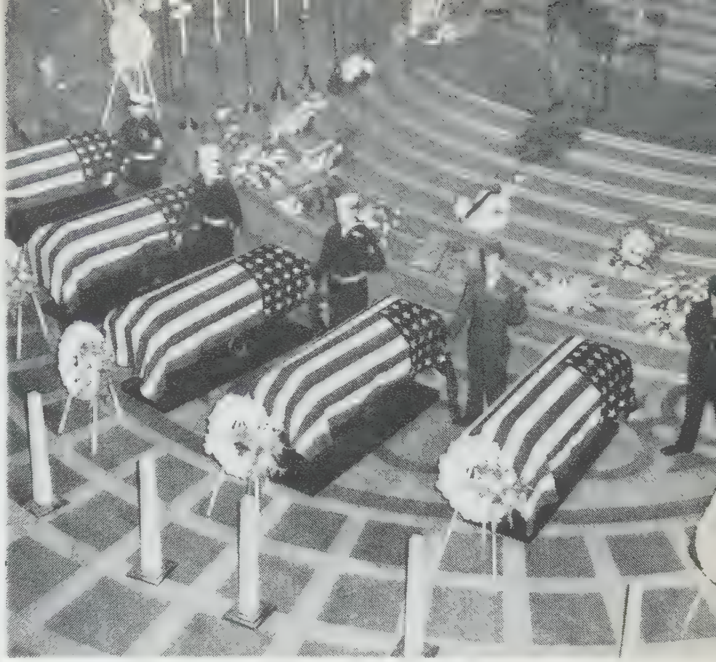
**Turkey in World War II.**—The role of Turkey during World War II has been often commented upon unfavourably in the press. It declared war against Germany only at the last possible moment, in fact only when the Allies announced that only states which had declared war on Germany would be invited to the San Francisco conference. The blame for allowing Turkey to dangle so long as a dubious ally or uncertain neutral must be equally shared by the United States and Great Britain. They figured that Turkey was an ally and could be counted on to (1) hold the Anatolian line and (2) come into the war on the Allied side. The first gamble, a winning one as was the second, allowed Great Britain to consolidate its position in Iran, Syria and Iraq.

From 1940 to 1944, Turkish soil was a battlefield for economic warfare. Before the war, Germany was Turkey's best customer, buying more from it than all the other countries of the world put together. Great Britain and other countries, if they bought, did so at the fantastic prices Turkey elected to charge. But when the World War II sea blockade went into effect, things began to look different. Turkey, thinking it was doing the right thing, veered commercially to France and Great Britain. Of its own accord it refused to renew its treaty of commerce with Germany. But, when its surpluses began to pile up, Turkey signified that it was ready to pick up the previous commercial tie with Germany. This was a serious matter for the Allies. Since Great Britain looked upon Turkey as an ally, it felt that vital war commodities should not flow from Turkey to the axis powers. The Turks argued that they needed arms and equipment for their army—machinery, locomotives, rolling stock and other essentials for their interior economy. They preferred to get these things from Great Britain but, since this seemed impossible, they knew they could get them from Germany in exchange for raw materials and foodstuffs. Clearly, Turkey was straddling two horses at the same time.

The principal items at stake were Turkey's chrome, cotton, tobacco, oil seeds, copper, valonea and dried fruits. Allied mass

TALK OF THE "NEXT WAR"
WE'LL JUST CLIP HIS WINGS AND HE WON'T FLY AWAY
CRAWFORD

"BLESSED ARE THE PEACEMAKERS." Wry comment, by Crawford of the *Newark Evening News*, on the widespread references, in 1947, to a third world war



FLAG-DRAPED COFFINS of U.S. soldier, marine, sailor, coast guardsman, air corpsman and civilian who lost their lives in World War II are shown lying in state at the city hall in San Francisco, Calif., as the return of overseas war dead to the U.S. was begun in Oct. 1947

buying kept Germany from getting all the things it wanted but for a long time Turkey traded in both camps.

In April 1944, the governments of Great Britain and the United States finally cracked the whip. Turkey was told that if it continued to trade with Germany it could expect to be blockaded like other neutrals. Faced with this ultimatum, Turkey, after three years of straddling, admitted that chrome was being used in the manufacture of weapons which were being used against its allies; therefore, no more chrome must be sent to the axis countries. Four months later it completely severed economic and political relations with Germany.

Turkey came out of World War II undamaged and with all the basic elements of its economy unimpaired. In 1947 it possessed greater resources than it did in 1939.

By the fortunes of war, Germany was eliminated as Great Britain's sharpest competitor for Turkey's commercial favour—but that place was taken by Russia.

**War Crimes.**—On May 30, 1924, the German courts rendered judgment that the whole nazi party was a criminal organization; when the German wehrmacht grovelled in defeat in 1945, that "criminal organization," from a position of brutal power, had written a horribly gory page in history. On this page was the record of crime and atrocity beyond civilized human belief.

On Aug. 8, 1945, the governments of the United States, Great Britain, Russia and France, along with 19 lesser governments of the United Nations, established the International Military tribunal to meet at Nuernberg, Germany, to try such war criminals whose offenses had no particular geographical location. Before this tribunal appeared 22 leaders of the infamous Hitler hierarchy to answer for their crimes. These were: Hermann Goering, Rudolf Hess, Joachim von Ribbentrop, Wilhelm Keitel, Ernst Kaltenbrunner, Alfred Rosenberg, Hans Frank, Wilhelm Frick, Julius Streicher, Walter Funk, Hjalmar Schacht, Karl Doenitz, Erich Raeder, Baldur von Shirach, Fritz Sauckel, Alfred Jodl, Martin Borman, Franz von Papen, Arthur Seyss-Inquart, Albert Speer, Constantin von Neurath, Hans Fritzsche. Of these, 3 were acquitted, 7 were given jail sentences ranging from 10 years to life and 12 were condemned to death by hanging.

Of this latter number, Goering cheated the gallows by committing suicide in jail. The principal charges were: (1) war crimes; (2) crimes against the peace and (3) crimes against humanity.

It was proved that war crimes were deliberately planned long in advance, as witness the invasion of soviet Russia wherein the program of plunder and cruelty to civilian populations had all been worked out beforehand. Similarly, the German government had carefully worked out a plan to exploit the inhabitants of all occupied countries for slave labour on a gigantic scale. This they considered an integral part of their war economy. Defying all principles of international law, prisoners of war and civilians in occupied territories were ill-treated, tortured and murdered. Whole populations were deported to Germany for purposes of slave labour upon defense works, armament production and other war-effort tasks. Civilian hostages seized in occupied countries were shot as it suited their German captors. Property, public, church or private, was plundered and pillaged to enlarge the resources of Germany. Cities, towns and villages were wantonly razed with no shred of military justification or necessity. Lidice, Czechoslovakia, must be remembered as one of these. Persecution of the Jews raged unchecked. Long before World War II, Goering had written, ". . . Vienna cannot rightly claim to be a German city. One cannot speak of a German City in which 300,000 Jews live. This City [Vienna] has an important German mission in the field of culture as well as in economics. For neither of these can we make use of the Jews." Before the Nuernberg tribunal it was brought out that, under the nazi party program, "Only a member of the race can be a citizen. A member of the race can only be one who is of German blood, without consideration of creed. Consequently, no Jew can be a member of the race." That the Jew might be eliminated from the fabric of German life, at least 5,000,000 murders were committed. Heinrich Himmler and his satellite officers did the killings, ran the infamous camps where mass cremations snuffed out thousands of lives; where other thousands were beaten to death; where countless numbers went mad, starved to death or were shot down like animals. Himmler executed but Goering, in his own or in Hitler's name, gave the orders. Dachau, Buchenwald, Langwasser, Rowno, Dubno, Treblinka, Flossenburg, Auerbach, Auschwitz, Staumehle and Garmisch are a few of the place names where the manifestations of German *Kultur* sank to noisome depths of infamy.

The tribunal charged and proved guilty those nazi leaders who, under the heading of crimes against the peace, planned and carried into execution the territorial moves against Belgium, the Netherlands, Austria, Norway, Denmark, Czechoslovakia, Poland and Greece. On the high seas, German submarine warfare had preyed on neutral and enemy ships alike. The tribunal placed the blame on those nazi leaders who were guilty of unrestricted submarine warfare, including the sinking of unarmed merchant ships and of neutrals, and of the nonrescue and machine-gunning of survivors. (*See* WAR CRIMES.)

**Atomic Bombing.**—The first atomic bomb, the first weapon of its type to be used against an enemy target, burst over Hiroshima, Japan, at 8:15 A.M. on Aug. 6, 1945. Three days later, another such bomb was dropped on Nagasaki. The United States Strategic Bombing survey estimates the dead at Hiroshima to have been between 70,000 and 80,000, with an equal number injured; at Nagasaki, more than 35,000 dead and somewhat more than that injured. At Hiroshima the proportion of deaths from burns (flash or flame) was placed at 70%; from falling debris at 20% and from other injuries at 10%. Of those who died later, the greater proportion died from radiation effects. Of the traced survivors who were within 3,000 ft. of the immediate explosion, 95% suffered from radiation disease. Scientists have determined that the radiation effects upon survivors resulted from the gamma rays liberated by the fission process rather than from induced radioactivity or the lingering radioactivity of deposits of primary fission products.

Hiroshima required complete rebuilding; the heart of the city, the main administrative and commercial, as well as residential, sections were all wiped out. Only 50 reinforced concrete buildings in that area remained standing and all of those suffered blast or fire damage. Japanese figures summed up building destruction at 62,000 out of a total of 90,000 buildings in the urban area.

At Nagasaki, the scale of destruction was greater than at Hiroshima, though the actual area destroyed was smaller. Parts of the city were protected by hills so that more than half of the residential units escaped serious damage. Of the 52,000 residential units, 14,146 were completely destroyed and 5,441 were half-burned or destroyed; but 90% of the industrial output of the city was seriously damaged.

The purpose of the bombing attacks, both of them all-Japan events, was to break the fighting spirit of the Japanese people and their leaders, not just of the residents of Hiroshima and Nagasaki. The reactions in the bombed cities tallied closely with those of the whole country—fear and terror, anger and hatred against the United States, grudging admiration for the scientific achievement. However, it cannot be said that the atomic bomb alone convinced the Japanese leaders of the necessity of surrender. Since 1944 a political group close to the emperor had been trying to end the war. But the army stood for a fight-to-the-end policy. The peace group now brought the emperor into the picture with his declaration for the acceptance of the Potsdam terms. Even in the face of the atomic bombings, the military party was not completely convinced that defense of the home islands was impossible. True to their "saving-face" tradition, the military had a way out by announcing that no army without the atom bomb could possibly resist an enemy who had it. Such a view reflected no disparagement on the competence of Japanese industrialists or the courage of the Japanese soldier.

Pres. Harry S. Truman had been reluctant to order the use of the atomic bomb. Every effort was made to urge upon Japan acceptance of the Potsdam terms for ending the war. However, the Japanese military party was in control and there was no other way.

On Aug. 6, President Truman's message to the Japanese was that if they did not accept the Potsdam terms they could "expect a rain of ruin from the air, the like of which has never been seen on this earth."

**Conferences of the Great Powers.**—The following brief statements cover the outstanding activities of the several conferences by the great powers. These conferences, starting while the war was in progress, extended over well into the peace-forming era:

*Moscow.*—Oct. 19–30, 1943. Present: Cordell Hull for the United States; Anthony Eden for Great Britain; Vyacheslav Molotov for Russia. An agreement was reached stating that the making of peace and the keeping of peace could be best achieved if the task were regarded not as one problem but two related problems. On Nov. 1, 1943, the three nations were joined by China in a declaration which stated that, ". . . they recognize the necessity of establishing at the earliest practicable date a general international organization, based on the principle of the sovereign equality of all peace-loving states, large and small, for the maintenance of international peace and security." Here was the germ of the United Nations idea.

*Cairo.*—Nov. 22–26, 1943 (first meeting). Present: President Roosevelt for the United States; Generalissimo Chiang Kai-shek for China; Prime Minister Churchill for Great Britain. Russia, not being at war with Japan, was not represented. The three Allies agreed to restrain and punish the aggression of Japan; to strip from Japan all the islands in the Pacific which it had seized or occupied after 1914 and to restore to China the stolen territories of Manchuria, Formosa and the Pescadores. Korea was to emerge free and independent.

*Tehran.*—Nov. 28–Dec. 1, 1943. Present: President Roosevelt for the United States; Prime Minister Churchill for Great Britain; Marshal Stalin for Russia. Principal item of business was the co-ordination of Allied and soviet military operations for a major assault upon Hitler's Europe. It was at the end of this conference that Roosevelt said, ". . . I got along fine with Marshal Stalin. . . . I believe we are going to get along well with him and the Russian people . . . very well indeed." Subsequent events did not substantiate this.

*Cairo.*—Dec. 4–6, 1943 (second meeting). Present: President Roosevelt for the United States; Prime Minister Churchill for Great Britain; Pres. Ismet Inönü for Turkey. This meeting was called to reassure Turkey as to the purpose and intentions of the Soviet Union. (Keeping in mind that at this time Turkey was reaping a rich dollar harvest from the axis and the Allies simultaneously, the solicitude for Turkey's welfare displayed at this conference must have been welcomed by Inönü.)

*Bretton Woods (N.H.).*—July 1–22, 1944. Present: delegates representing the United States and 43 countries invited to participate. Purpose of the conference was to establish an international monetary fund as the most practical method of ensuring international monetary co-operation. Out of this meeting came the establishment of the International Bank for Reconstruction and Development, more familiarly known as the World bank. The Soviet Union cast the only dissenting vote on the question of setting up this bank.

*Dumbarton Oaks (Washington, D.C.).*—Aug. 21–Oct. 7, 1944 (first phase). Present: Edward R. Stettinius, Jr., for the United States; Sir Alexander Cadogan for Great Britain; Andrei Gromyko for Russia. For the second phase of the conversations, Russia dropped out and its place was taken by Wellington Koo for China. Avoiding tangential problems created by the war, the conference concentrated on the means of establishing machinery to implement an international security organization. The most important of their agreements was the one stating, "There should be established an international organization to be known as the United Nations." A considerable part of the U.S. population watched the activities of this organization since its formation. A repeated and logical question has been: since the League of Nations did not prevent World War II, do the Dumbarton Oaks proposals represent any improvement on the League covenant?

*Yalta.*—Feb. 3–11, 1945. Present: President Roosevelt for the United States; Prime Minister Churchill for Great Britain; Marshal Stalin for Russia. This meeting was in reality a preliminary peace conference. Territorial and political agreements were reached to have tremendous impact later. European territorial agreements chiefly concerned Poland. Its eastern boundary was to become that of the Curzon line, drawn in 1919, and lying west of Poland's 1937 boundary with the Soviet Union. In compensation for the loss of territory involved, Poland was to receive land to be taken from Germany. Politically it was agreed that: (1) there must be unconditional surrender upon the part of the nazis; (2) there would be zone occupation, by nationalities, of German territory—France to participate if it so desired; (3) Germany would be disarmed and denazified.

At the time of this Yalta conference, Russia was not at war with Japan. Therefore, in order not to disrupt Allied military strategy, no announcements were made of the agreements reached regarding Japan. These came out in 1946 and included: (1) ceding the Kurile Islands to Russia; (2) restoring Russian

GEORGE C. MARSHALL, U.S. secretary of state, making a public address on his arrival at Moscow for the Conference of Foreign Ministers which met in March 1947 to discuss peace terms for Germany and Austria. He was greeted by soviet deputy Foreign Minister Andrei Vishinsky (right)

sovereignty over the southern part of Sakhalin Island; (3) preservation of the status quo in Outer Mongolia; (4) restoration of the Russian lease on Port Arthur as a naval base and (5) jointly with China, Russia to operate the Chinese and South Manchurian railroads. Russia had exacted a high price, in advance, for its promise eventually to declare war upon Japan.

*Mexico City.*—Feb. 21–March 8, 1945. Present: all members of the Pan American Union, except Argentina. Though not listed on the agenda, Argentina, suspected of pronazi leanings, was a principal subject of discussion. Three main documents were adopted: (1) the economic charter of the Americas; (2) the resolution on reorganization, consolidation and strengthening of the inter-American system and (3) the act of Chapultepec, a reaffirmation of certain fundamental principles striven for after 1890. Among these were: (1) proscription of territorial conquest and nonrecognition of acquisitions made by force; (2) condemnation of intervention by a state in the internal or external affairs of another; (3) recognition that every war or threat of war affects all civilized peoples and endangers the American ideals of liberty and justice; (4) the seeking of means for peaceful co-operation in the event of war or threat of war between American countries; (5) recognition of the fact that every act susceptible of disturbing the peace of America justifies initiation of consultation procedure; (6) settlements of differences or disputes by conciliation, free arbitration or through operation of international justice; (7) recognition of respect for personality, sovereignty and independence of each American state—the essence of international order sustained by continental solidarity; (8) respect for and observance of treaties as the indispensable rule for development of peaceful relations between states; (9) any threat against peace, security or territorial integrity of any American republic to be a matter of common concern; (10) the attempt by any non-American state to defile the integrity, sovereignty or political independence of an American state to be considered as an act of aggression against all the American states. This latter provision is similar in character to the Monroe doctrine of 1820.

*San Francisco.*—April 25–June 26, 1945. Present: delegates from 50 United Nations which had declared war on either Germany or Japan, or both. The conference had a twofold job: first, to frame a charter on the basis of the Dumbarton Oaks proposals and, second, to tackle the problems of the approaching peace settlements. At the outset, Russia was viewed with suspicion. What were its aspirations in Europe and Asia? Could the Yalta formula be applied? Roosevelt had announced to the United States that responsible unanimity must be maintained among the only powers that could possibly back up the decisions of the Security council with force. In other words, no action to preserve or restore peace could be successful unless the Big Five agreed to it unanimously. This formula, the U.S. now found out, had been agreed upon at Yalta. Stalin rode this idea in the conference until it seemed that all progress toward agreements was stalled. However, on June 7, 1945, he modified his stand and the Big Five on the following day announced an agreement clarifying the Yalta formula. This clarification required unanimity of permanent members of the Security council in all decisions relating to enforcement action and in all decisions for peaceful settlement.

The San Francisco charter, as finally adopted, kept the core of the Dumbarton Oaks proposals and set the United Nations organization up in business with the great-power coalition embedded in the structure of the Security council.

*Potsdam* (sometimes referred to as the Berlin conference).—July 17–Aug. 2, 1945. Present: President Truman and Secretary of State Byrnes for the United States; Prime Minister Churchill (succeeded by Prime Minister Clement Attlee) for Great Britain; Generalissimo Stalin and Minister Molotov for Russia. The conference was primarily concerned with the liquidation of Germany's military power and the limiting of its industrial potentialities to wage war in the future. Politically it was provided that: (1) so far as is possible there shall be uniformity of treatment of the German population throughout Germany; (2) the German political structure shall be decentralized and emphasis placed, instead, upon local responsibility; (3) no central German government to be established for the present. Economically it was provided that: (1) German economy should be decentralized to destroy the power of cartels, syndicates and trusts; (2) primary emphasis to be given to the development of agriculture and peaceful domestic industries; (3) during the period of occupation, Germany to be treated as a single economic unit.

Reparations claims were to be met by removals of industrial plants and equipment and from Germany's external assets. Sufficient machinery and resources were to be left to enable the German people to reach a fairly decent standard of living.

Territorially, Germany was split into two areas: the area east of the Oder to be divided between Russia and Poland, and the area west of the Oder to be divided into four Allied zones of occupation—U.S., British, Russian and French.

No agreement was reached in the Potsdam conference on regulation of traffic on the Danube river, the Dardanelles, the Black Sea straits, the Rhine, the Kiel canal and the inland waterways which border two or more European nations.

*Paris.*—July 29–Oct. 15, 1946. Present: representatives of 21 nations that had waged war with substantial force against the European members of the axis. The conference met, primarily, to consider and make recommendations for the Security council's draft treaties for Italy, the Balkan states of Rumania, Bulgaria and Hungary and for Finland. Substantive issues, generated by consideration of the treaties, concerned: (1) boundary of Trieste and that between Italy and Yugoslavia; (2) the form and administration of a government of Trieste; (3) territorial adjustments between Russia and Poland of territory east of the Oder; (4) reparations; (5) compensations (finally based on a compromise formula of 75% proposed by France); (6) restitutions; *e.g.,* objects of artistic, historical or archaeological value and property seized during religious or racial persecution; (7) settlements of disputes arising from enforcing the draft treaties and (8) principles of foreign trade and navigation on the Danube.

**Official Histories and Studies.**—Both the army and the navy had under way in 1947 extensive history publication programs. In the navy, the division of naval history of the office of public relations was established as the office of naval history on July 31, 1944. The program of this office includes a *History of United States Naval Operations in World War II* and a *History of United States Naval Administration in World War II.* The first-named title was being written by Dr. Samuel Eliot Morison (Captain, U.S.N.R.), professor of American history at Harvard university; the second would be the work of Dr. R. G. Albion, professor of history at Princeton university. The first volume of the administrative series was to appear in 1948. Other volumes on logistics, procurement and personnel were contemplated.

In the army, the historical program was handled by the historical division of the special staff, headed by Brig. Gen. Harry J. Malony. The civilian chief historian was Dr. Kent R. Greenfield, a lieutenant colonel in the army ground forces during World War II and, prior to that, head of the history department of Johns Hopkins university. This office had already published and distributed 12 monographs in an *American Forces in Action* series. The titles are: "Volturno," "The Winter Line," "Papuan Campaign," "Salerno," "Merrill's Marauders," "Guam," "The Admiralties," "To Bizerte with the II Corps," "Makin," "Small Unit Action," "St. Lô" and "Omaha Beachhead." Two more were to be released in 1948, completing the series. They were to be entitled "Anzio Beachhead," and "Utah Beach to Cherbourg." However, the principal work of the historical division was the preparation of a 93-vol. history of World War II. This was designed to cover the organization and functioning of the army ground forces, the army service forces and the army air forces. Following these volumes was to be adequate coverage of all military engagements in every theatre of operations. The series was to be completed with individual treatment of the several services which functioned during World War II; *e.g.,* signal corps, women's army corps (WAC), ordnance department, medical corps, quartermaster corps and others. For this work there was assembled a corps of trained historians and writers drawn from many of the leading colleges and universities of the nation. The first volume of this project, *Organization of Ground Combat Troops,* was released in Oct. 1947. Seven volumes were scheduled for release in 1948.

The merger of army, navy and air forces into the department of national defense made necessary the preparation of many studies and manuals designed to modernize administrative, tactical and instructional procedures. In the tactical field, definite progress was being made in thorough planning for the successful employment of the many new weapons developed during and after World War II. In the personnel field, studies were under preparation to determine the best means of officer procurement and for providing career-service channels of advancement for men joining the armed forces.

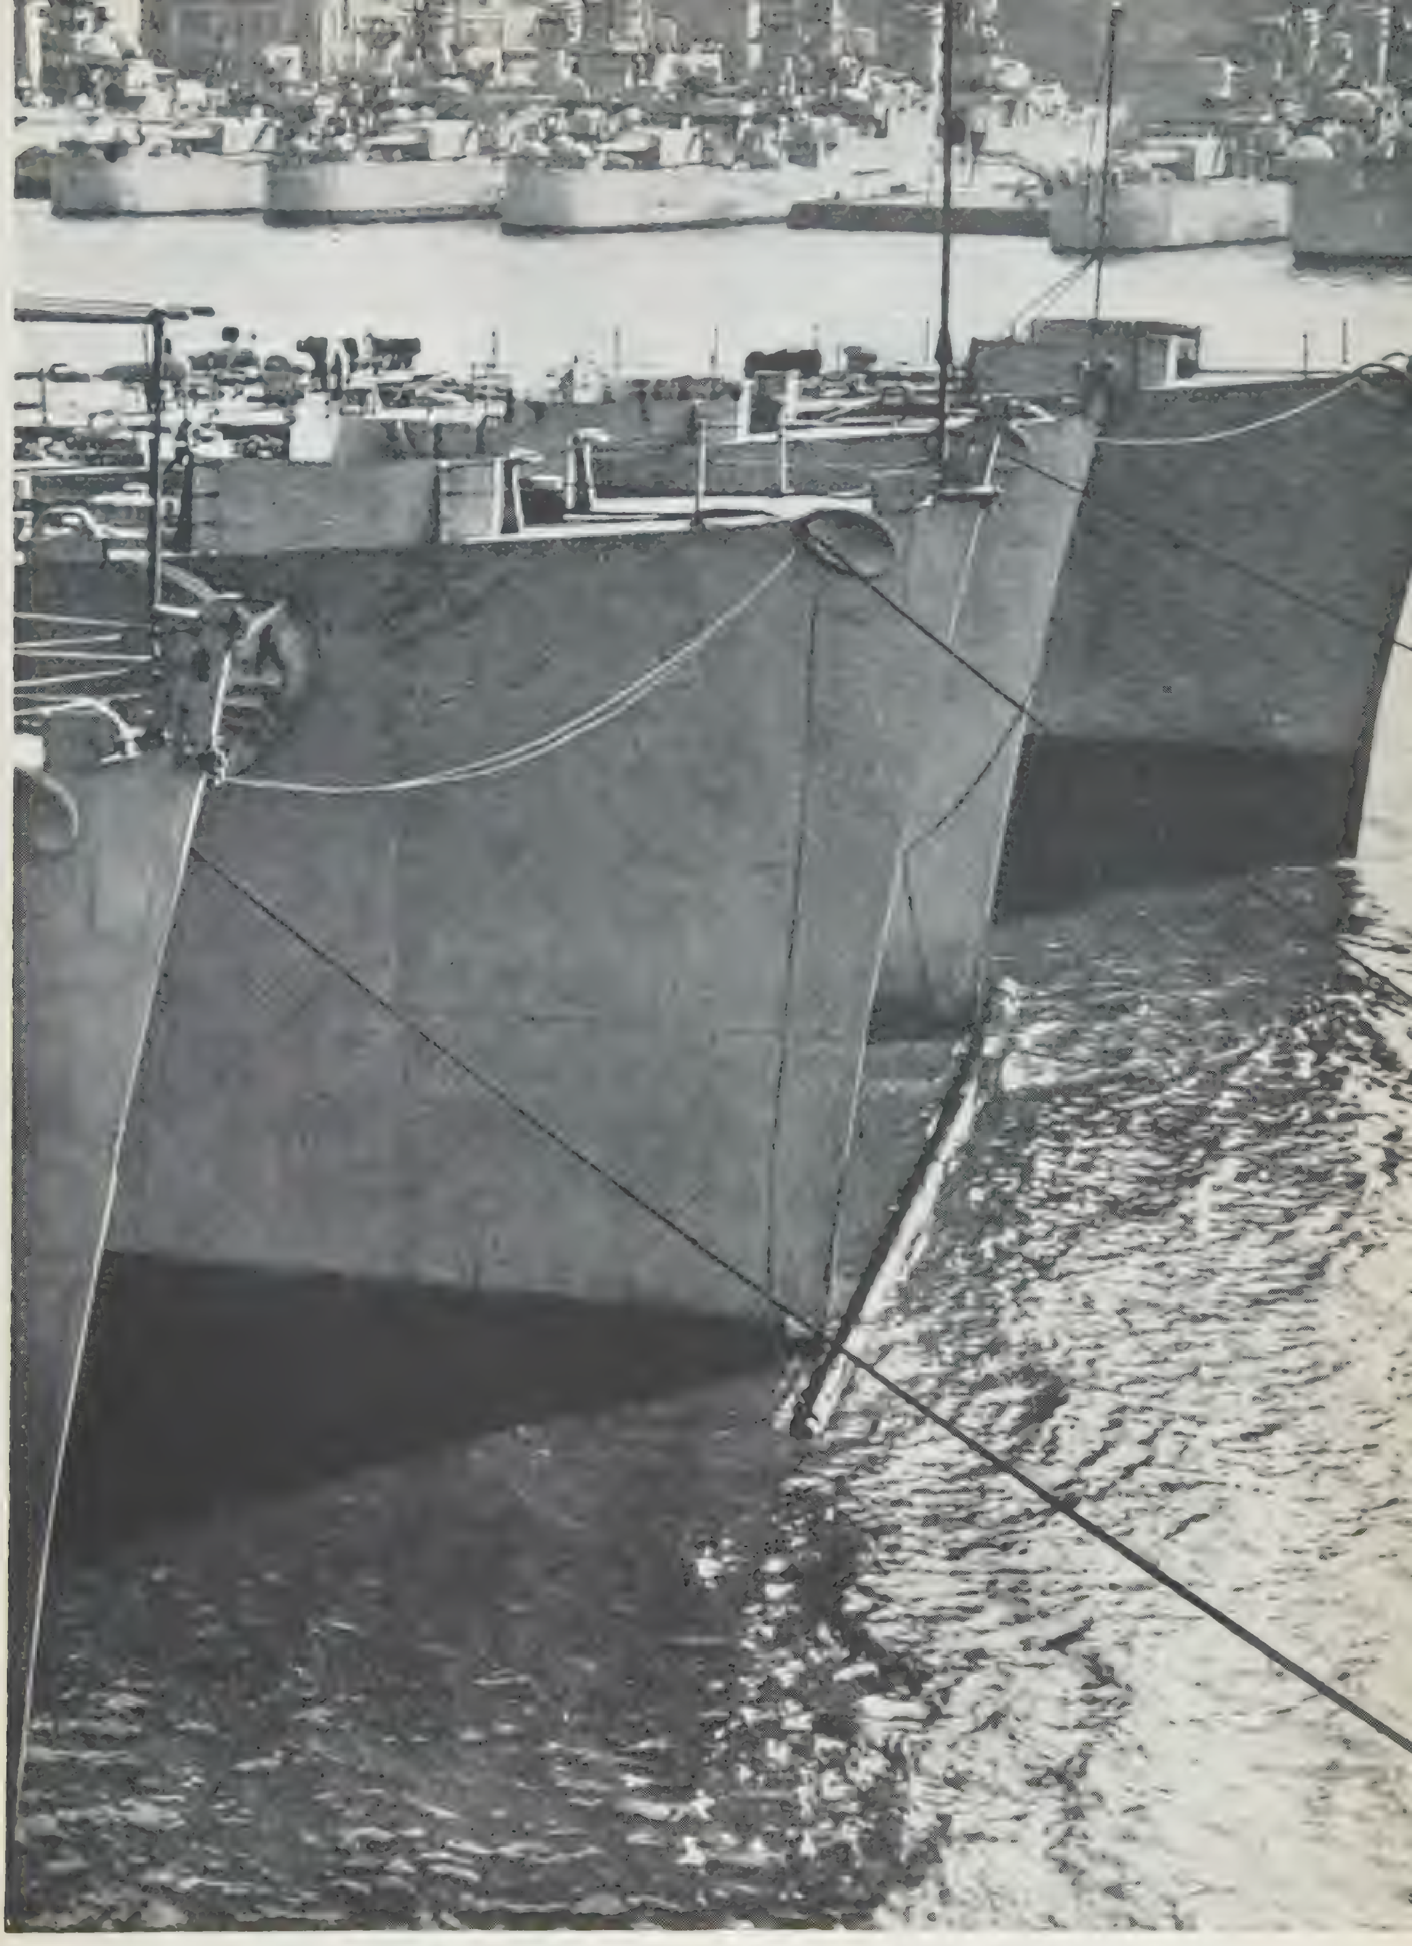
**Paper Balloons.**—One of Japan's major disappointments in the use of weapons was its failure to get results from its paper balloon terror weapons. Made of gray, white or greenish-blue paper, these balloons, 33 ft. in diameter, were set adrift toward the western coast of the United States. They carried either high-explosive demolition bombs or incendiaries. Many were sighted in western areas of Canada and the United States, one was located as far east as Pennsylvania. Competent aviation authority claimed that their chances of hitting a military target were "one in many millions." From a military standpoint, this terror weapon of the Japanese proved to be a complete dud.

**Burials and War Memorials.**—During October, there were returned to the United States the bodies of 10,000 World War II casualties. Three thousand of these, men and women who had lost their lives in the Pacific theatre of war, were returned to the United States through San Francisco; the remainder were returned through New York. An estimated 200,000 dead would be so returned at the request of the next-of-kin. Bodies returned to the United States would be interred in military or private cemeteries at the option of the next-of-kin. The first $75 expense of private burials would be defrayed by the government, while national cemetery interment would be entirely at government expense.

It would be impracticable here to attempt a listing of memorials erected to the dead, erected or planned by states or municipalities. The American Battle Monuments commission began the preliminary work necessary to carry out its functions of providing permanent improvements in U.S. overseas cemeteries for the dead of World War II and of erecting suitable memorials to the achievements of U.S. armed forces, as it did after World War I.

Three memorials were the subject of considerable press comment during the year. The heroic representation of U.S. heroes raising the U.S. flag on Mount Surabachi had been pretty well imprinted on the public mind. During the year, this dramatic memorial, commemorating a glorious feat of arms, was removed from its first location on Constitution avenue in Washington, D.C., to a more appropriate setting near the marine barracks at Quantico, Va.

William C. Westcott, U.S. sculptor, made a striking bust of Maj. Thomas D. Howie, Charleston, S.C., the "Major of St. Lô," who died as his troops broke through German defenses of St. Lô in 1944.



THE ATLANTIC RESERVE FLEET, including battleships and cruisers, anchored at the Philadelphia naval base in 1947, where it was prepared for any action on 30 days' notice. Potentially the most powerful U.S. task force, it had a local reserve complement of more than 1,000 men

"SIGNS OF THE TIMES," a 1947 cartoon by Manning of the *Arizona Republic* (Phoenix) based on communist opposition to what soviet spokesmen termed U.S. dollar imperialism

This bust was presented by Staunton Military academy, Va., where Major Howie had formerly coached football, to the city of St. Lô, France, where it was to be placed in the town square which was to be renamed Place Majeur Thomas D. Howie.

Perhaps one of the most poignant of World War II memorials is to be found at Rindge, N.H. It is known as the Cathedral of the Pines.

Sandy Sloane, U.S. bomber pilot, came from Rindge. A loved spot in his childhood memories had been a knoll on his father's farm where stood a splendid growth of giant pines. The hurricane which swept the New England states in 1938 flattened them, but it also opened up a heretofore unseen view of the whole Wachusett divide. When Sandy became a war casualty, his family and his neighbours began the work of love that today stands as the Cathedral of the Pines. Rocks from every state in the union were sent to be incorporated in the altar of the shrine; someone even sent a pebble from the grave of the marquis de La Fayette. Religious services are held at this simple, rustic shrine.

On Sept. 8, 1946, the Cathedral of the Pines was dedicated to the memory of 1st Lieut. Sanderson Sloane; the Altar of the Nation there erected was consecrated as a memorial to the men and women of New Hampshire who gave their lives in World War II; the field stone pulpit there was named as sacred to the men and women of Rindge who served their country in time of battle.

One interesting factor in World War II memorials is that the man on horseback disappeared from the scene. He and his steed were definitely relegated to a prior era. This too happened to the post-World War I cannon and machine-gun memorials. Instead, communities planned and executed World War II memorials of infinite variety—community centres and auditoriums; parks, playgrounds, athletic stadiums and swimming pools; hospitals; bridges; museums; scholarship funds in colleges; libraries; in one locality a bell tower, in another an airport; the planting of living trees such as the double lane of flowering trees bordering the approach avenue to Baxter General hospital in Spokane, Wash., and the 7,000 trees, one for each of its servicemen and women, at Hagerstown, Md., and a Salvation Army centre honouring the organization's dead.

The cold memorial disappeared.

In its place was one of warmth, radiating the humanity of the U.S. people.

**Who Won World War II.**—The last gun had scarcely ceased firing in World War II when certain sectors of the European press began a systematic crusade to belittle the part played by the United States in that conflict. The following statement by Stalin on Sept. 2, 1946, was somewhat typical: "Today we celebrate the day of victory over imperialist Japan. A year ago the Soviet people and its armed forces victoriously concluded the war against imperialist Japan. Japan signed the act of unconditional surrender. The Soviet people and their armed forces won the victory.

"By so doing, they made an enormous contribution toward world peace."

The campaign continued through 1947. Moscow radio broadcasts, monitored and reprinted in the U.S. press, carried the story along. One such broadcast in December stated that: "The strangulation of democracy, the annihilation of the national sovereignty of the independent European states, the change of these states into American colonies, the imposition on those colonies of a regime like the one in Greece, that is what is concealed behind the trumpeted schemes of American aid to Europe."

(R. S. T.)

**Wrestling.** Little Cornell college of Mount Vernon, Ia., highlighted 1947 wrestling by capturing the National A.A.U. team title with 17 points, 5 more than Oklahoma A. and M. Cornell, with a male enrolment of approximately 370 students, also won the National Intercollegiate mat title.

Henry Wittenberg of the New York city police department topped individual competitors with his sixth National A.A.U. title, a record. He retained his 191-lb. championship with the only fall of the final matches. He was voted the outstanding wrestler of the meet.

National A.A.U. champions were: 115 lb.—Grady Peninger, Oklahoma A. and M.; 121 lb.—Charles Ridenour, New York A.C.; 126 lb.—Louis Kachiroubas, University of Illinois; 135 lb.—Lowell Lange, Cornell college; 145 lb.—James Miller, Ithaca, N.Y., Y.M.C.A.; 155 lb.—Orville Long, Southwestern Tech.; 165 lb.—Douglas Lee, Baltimore, Md., Y.M.C.A.; 175 lb.—Dale Thomas, Cornell college; 191 lb.—Henry Wittenberg, New York, N.Y.; heavyweight—Ray Gunkel, Purdue university.

(M. P. W.)

## Wyoming.

A Rocky mountain state, admitted to the union July 10, 1890, as the 44th state. Leadership in the extension of rights to women gave it the name "Equality state." Land area 97,506 sq.mi.; water area 408 sq.mi.; pop. (1947 est.) 301,546. The 1940 census of 250,742 listed rural population 157,165; urban 93,577; 229,818 native white; 950 Negro; 17,107 foreign born. Capital, Cheyenne (1940: 22,474). Other cities of 10,000 or more: Casper (17,964); Laramie (10,627); Sheridan (10,529).

**History.**—State officials during 1947, elected in Nov. 1946, were: governor, Lester C. Hunt (D.), second term; secretary of state, A. G. Crane (R.); auditor, Everett T. Copenhaver (R.); treasurer, C. J. Rogers (R.); superintendent of public instruction, Edna B. Stolt (R.). Fred H. Blume was re-elected associate justice of the supreme court. Holdover justices were Ralph Kimball and William A. Riner. By rotation William A. Riner became chief justice. A Republican legislature was elected.

State officers are elected for terms of four years; justices six years; members of the senate four years; members of the house of representatives two years. The legislature meets in January of each odd-numbered year.

**Education.**—In 1946–47 there were 626 elementary schools with 1,722 teachers and an enrolment of 40,628. There were 123 high schools with 796 teachers and an enrolment of 13,170.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—Funds allocated in 1947 included $427,509 for dependent children; $2,263,215 for old-age assistance; $329,790 for general welfare; $73,394 for aid to the blind; and $12,500 for child welfare.

There were 3 correctional institutions with inmates (average) and expenditures as follows: penitentiary at Rawlins (290 inmates) $263,000; girls' school at Sheridan (52 inmates) $66,000; and boys' industrial institute at Worland (51 inmates) $92,000.

**Communications.**—Wyoming had 4,312 mi. of oiled or paved roads in 1947. Highway construction contracts totalling more than $15,000,000 including 500 mi. of road were let in 1946 and 1947. The state railroad mileage in 1947 was 1,912.32.

**Banking and Finance.**—On June 30, 1947, there were 29 state banks with deposits of $64,984,638 and resources of $69,293,515. There were 26 national banks with deposits of $139,047,100 and resources of $147,825,918. There were ten savings and loan associations, all but one insured by the federal government.

Total state receipts for the fiscal year ending Sept. 30, 1947, were $26,281,644. Total disbursements were $23,988,674. The bonded debt Sept. 30, 1947, was $1,520,000.

**Ranching and Agriculture.**—Wyoming livestock products sold for approximately $100,000,000 in 1947. Cattle marketing decreased 4%; sheep marketing remained about the same. Other farm products were valued at an estimated $45,000,000. Crop production was above average.

*Leading Agricultural Products of Wyoming, 1947 and 1946*

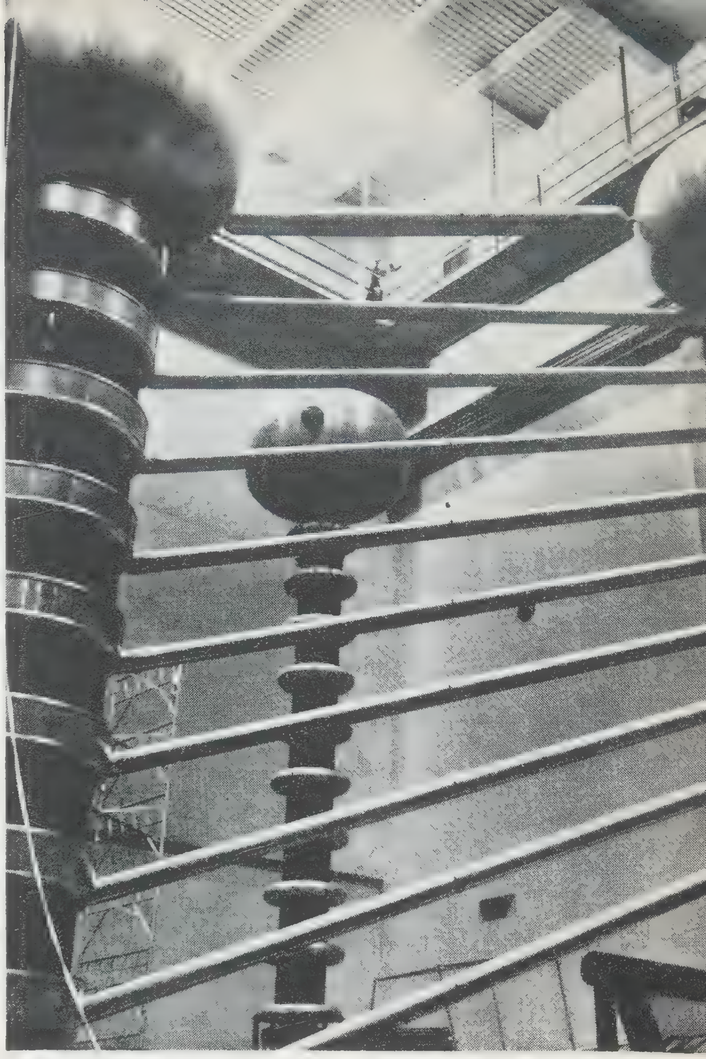
| Crop | 1947 | 1946 |
|---|---|---|
| Corn, bu. | 1,235,000 | 1,122,000 |
| Winter wheat, bu. | 4,687,000 | 4,902,000 |
| Spring wheat, bu. | 1,443,000 | 1,330,000 |
| Oats, bu. | 5,049,000 | 4,666,000 |
| Barley, bu. | 4,712,000 | 4,500,000 |
| All hay, tons | 1,325,000 | 1,243,000 |
| Beans, cwt. | 1,444,000 | 1,305,000 |
| Sugar beets, tons | 454,000 | 421,000 |
| Potatoes, bu. | 2,480,000 | 2,542,000 |

**Manufacturing.**—Employment in manufacturing (average, April, May and June 1947) 6,374; 8,485 were employed in mineral and oil production and 16,075 in trade. (L. C. H.)

**Mineral Production.**—The taxable valuation of Wyoming mineral products in 1947 on 1946 production was as follows: petroleum $40,406,248; bituminous coal $15,128,508; iron $1,761,833; bentonite $317,886; natural gas $1,537,109; other minerals $318,209.

## X-Ray and Radiology.

The importance of standardization of X-ray apparatus, in order to ensure efficiency of operation and interchangeability of essential parts produced by different manufacturers, had been recognized for many years. A degree of success in standardization of some accessories had been attained by the American Standards association. A useful publication approved by this association is *American Standard Definitions of Electrical Terms* which contains sections on radiology. Not until 1947 did attempts to standardize apparatus for use in medical radiology meet with practical success. This achievement was the result of work of the department of medicine and surgery of the Veterans' administration of the U.S. government.



THE 1,400,000-VOLT X-ray generator at the national bureau of standards laboratory in Washington, D.C., which was being used in 1947 to study X-radiation hazards and proper safety measures for industrial workers using high-voltage X-ray machines

In April 1946 the chief medical director of the Veterans' administration appointed a director for radiology. The latter in turn appointed a branch director of radiology in each of the 13 branch areas into which the U.S. was divided. Surveys made by the branch directors indicated that most of the X-ray equipment in hospitals of the Veterans' administration was obsolete and should be replaced by modern apparatus. It was apparent that equipment available on the market at that time was designed prior to World War II and should be modernized.

During World War II the U.S. army had procured X-ray equipment under U.S. army specification number 1319-F. This specification was used by the director for radiology of the Veterans' administration as a foundation. Manufacturers of X-ray apparatus and the branch directors of radiology were requested to furnish information and criticism that would be helpful in developing a modern roentgenographic unit and establishment of standard specifications. This resulted in a tentative specification, VA-XM-20, which was submitted for study to the manufacturers and the branch directors for radiology. A meeting of the manufacturers and branch directors was held and each item of the specification was subjected to careful scrutiny and criticism. Following this the specifications were again rewritten and presented for criticism at a second joint meeting of manufacturers and branch directors. A final draft was then adopted as VA-XM-20A and became the official procurement specification of the Veterans' administration. In this the specifications were set forth in much detail but they provided for the following essential components of a diagnostic roentgenological unit:

1. A 200 milliamperes full-wave rectified transformer arranged for two-tube operation.
2. A control cabinet containing 5 steps of fixed milliamperages; a roentgenographic-fluoroscopic change-over device; starting equipment for a rotating anode tube; and a kilovoltage selector of 2 kv. or less per step.
3. A quick and quiet-acting motor-driven tilt table of rigid construction, providing for 10-in. cross travel of the fluoroscopic tube, the focal spot of which is located 18 in. below the table top. A spot film device capable of taking four exposures on one film is a component part of the table.
4. A floor to ceiling tube stand equipped with a rotating anode tube.

Many requirements of VA-XM-20A represented improvements over apparatus available at the conclusion of World War II and indeed over that generally available when the new specifications became operative early in 1947. Improvements in the tilt table are illustrative of the general modernization of the entire diagnostic roentgenological unit. For example, it is required to have a shockproof fluoroscopic tube; the greater lateral excursion of the fluoroscopic tube enables the radiologist to cover the entire chest or abdomen of the patient without movement of the latter even though the illuminated screen area is small; the fluoroscopic image is clearer and definition sharper than on the old tables because of the 18-in. distance from focal spot to table top; the increased lateral excursion and target-table top distance result in reduced radiation for both patient and fluoroscopist.

The new specifications are important not only because of the improvements which they embody but acceptance of them by all large manufacturers of X-ray apparatus would lead to standardization and consequent elimination of waste and inefficiency.

Equipment of each manufacturer was being subjected to tests by the national bureau of standards to ensure compliance with VA-XM-20A. The data collected from the tests were to be used to perfect the specifications to the end that a federal specification might be published and used by all government agencies for procurement of roentgenological equipment.

Since the government is the largest single purchaser of X-ray equipment it is apparent that government specifications can determine what manufacturers produce. The government, properly advised by civilian radiologists and physicists, would thus provide the best type of equipment for its agencies and assure its availability for civilian hospitals and radiologists throughout the nation.

There were other developments in radiology during 1947 which are worthy of note.

Frank Windholz reported newly recognized roentgenological signs of retroperitoneal lipoma.

There were several reports by independent workers on venous catheterization of the heart. The method is of value as a diagnostic aid in congenital heart disease and in the study of the haemodynamics and the physiology of the cardiovascular system. The technique used by Sosman is as follows: A size 9 French radiopaque catheter, 100–125 cm. in length with opening at the tip, is threaded into the basilic vein and advanced under fluoroscopic control. Fluoroscopy is done on a horizontal table equipped with a spot-film device. The catheter is passed upward into the axillary vein and then into the superior vena cava and right auricle. From there it may be passed either into the inferior vena cava and the renal or hepatic vein or through the tricuspid valve into the right ventricle. From the right ventricle it may be introduced into the pulmonary artery and its branches. Saline perfusion prevents clotting in the catheter.

A book published during 1947 describes the results of treatment of the macrocytic anaemias by the remarkable new synthetic drug, folic acid. Sprue is one of the diseases in which beneficial and curative results had been obtained by administration of this drug. The results in this disease were well demonstrated by roentgenological studies of the small intestine in patients with tropical sprue which was accompanied by macrocytic hyperchromic anaemia. The roentgenographic manifestations of tropical sprue are due to mucosal oedema resulting in segmentation of the small intestine, with alternating spasm, dilatation and hypomotility. The restoration of the small intestine to a normal roentgenographic appearance in patients with tropical sprue under folic acid treatment was striking and conclusive.

Reports from numerous therapists during 1947 indicate that an agent for the effective control of irradiation sickness had at last been found. Sometimes the sickness produced by irradiation treatment is so severe as to necessitate discontinuance of the treatment. The agent used for alleviation of this distressing condition was vitamin $B_6$ (pyridoxine). It is not only an effective treatment for irradiation sickness but there is evidence that it has at least one additional beneficial action, namely, that it increases the leucocyte count and thus offsets the effect of the irradiation which tends to produce leucopenia. (*See* also CANCER; PHOTOGRAPHY; TUBERCULOSIS.)

CH.)

**Yachting.** The 1947 yachting season was marked by a continued growth of popular interest and participation in sailing, particularly in boats of the smaller sizes. Among the outstanding events of international interest were the Los Angeles–Honolulu and the Fastnet races, in the deep-water branch of the sport, and the six-metre international events for the Seawanhaka and Scandinavian gold cups.

In the Transpacific race the 70-ft. schooner "Dolphin II," owned by Frank Morgan, U.S. motion picture and radio star, was the winner on corrected time in a fleet of 34 yachts. Class trophies went to W. L. Stewart, Jr.'s "Chubasco" and J. A. Johnson's "Suomi."

In the first postwar revival of the Fastnet, British deep-water classic, the winner among 25 starters was a much-discussed new small cutter, "Myth of Malham," owned by Capt. John H. Illingsworth, R.N., a yacht of many innovations in design and equipment. David Z. Bailey's sloop "Alar" won the Newport–Annapolis race, chief long-distance event on the U.S. Atlantic coast.

On the Great Lakes top honours in the Chicago–Mackinac race went to L. L. Karas' "Cara Mia" and J. B. Ford, Jr.'s "Royono III," while Port Huron–Mackinac winners were O. A. Johnson's "Spookie" and Robert Schleman's "Nyala."

Two U.S. six-metre sloops, "Djinn," owned by a Seawanhaka Corinthian Yacht club syndicate, and George Nichols' "Goose," both built in 1938, were the international winners in this class. "Djinn," sailed by Robert B. Meyer in a series on the Clyde in Scotland, wrested the Seawanhaka cup from the Royal Northern Y.C.'s defender "Johan," sailed by J. Howden Hume, which throughout the season proved the top British yacht in this class. In September six yachts, representing Finland, Great Britain, Italy, Norway, Sweden and the United States met off Oyster Bay, L.I., N.Y., in a series for the Scandinavian Gold cup. Although three of them were new postwar boats—Finland's "Violet," England's "Marletta" and Sweden's "Maybe VI"—"Goose," with Briggs S. Cunningham at its helm, had no trouble

SLOOPS preparing for the first of five ocean course races starting from Los Angeles harbour during the 1947 international championship series. Durwood Knowles of the Bahamas took the title on Sept. 1

in successfully defending the cup in three straight races in behalf of the Seawanhaka Corinthian Y.C.

In the number of boats participating, the fleets at the race week regattas of both Marblehead, Mass., and Larchmont, N.Y., leading U.S. east coast yachting ports, hit new all-time high marks during the season; 522 yachts took part in a single day's racing at Marblehead and 447 at Larchmont.

In spite of a prohibition on the use of timber for yacht building in Great Britain, some shortages of timber and other materials in the European and South American yachting countries, and inflated building costs in North America, a great number of new boats were built, some large yachts but the great majority small craft.

A home-and-home series between the International one-design classes of Bermuda and Long Island sound resulted in a victory for each team in its home waters.

Winners in the international championships series of some of the better-known classes during 1947 were: Star class, "Gem II," Durwood Knowles of Nassau, Bahamas; Snipe class (race held in Switzerland), T. A. Wells, U.S.; Comet class, "Barfly," Owen Merrill, Edgewater Park, N.J.; One-Ten class, Roger Willcox, Cambridge, Mass.

Among the winners of famous trophies was Joseph V. Santry's schooner "Pleione," winner of the King's cup; the yawl "Cotton Blossom III," under charter to W. Mahlon Dickerson, Astor cup; Lincoln Davis, Jr.'s 210 class sloop "Amourette," Manhasset cup; DeCoursey Fales's schooner "Nina," Vineyard trophy; the Buzzards' junior crew (Pocasset, Mass.), Sears cup (U.S. national junior championship); the American Y.C. crew (Rye, N.Y.), Mrs. C. F. Adams trophy (U.S. national women's championship); Indian Harbor (Conn.) Y.C., the Ocean-Great Lakes Challenge cup. (H. L. St.)

## Yale University.

With student and faculty populations reaching a record peak in numbers, 1947 marked the final return of Yale to a peacetime basis. The Yale community of students, faculty and employees amounted to 12,000 persons. Academic attainments also broke records.

Postwar reorganization of certain academic disciplines at the university reached fulfilment in establishment of the divisions of the humanities, the sciences, the arts, engineering and medical affairs under nationally prominent directors.

Alumni participation in Yale affairs was strengthened by creation of a new university council which provides for alumni assistance in examining the contributions of Yale to American life and in making recommendations for strengthening various areas of research and teaching.

Most dramatic event of the year was the formal celebration of the centennial of the Sheffield Scientific school in the fall, marked by awards of honorary degrees to distinguished Yale men in science and presentation of original reports on research by famous scientists. This celebration noted Yale's re-emphasis of its long-standing premise that there should be no artificial barriers separating science and the humanities.

The program of the liberal arts student is so designed that he gains a knowledge of nature through the appropriate sciences in addition to his concentrated work in the humanities. Simultaneously, the undergraduate whose interests are centred in the sciences is expected to have a knowledge of the humanities so his college education will be well rounded.

Scientific research advanced on all fronts in 1947. In botany, genetic studies showed that bacteria can possess sex characteristics. One of the most important U.S. science reports came from the department of psychology where studies indicated that the sense of smell is dependent on radiation and not on chemistry. Yale's cancer program was expanded with creation of a special chair to study the applications of existing research knowledge to treatment of patients. Funds from the navy were used to finance research in astronomy, physics and engineering. (For statistics of endowment, enrolment, faculty, library volumes, etc., *see* UNIVERSITIES AND COLLEGES.) (C. A. L.)

## Yeast.

Brewers' type yeast was shown in 1947 to have protein of higher biological value than torula yeast. A method was published for treating inactive dry yeast so that large amounts may be used in bread. On the basis of urinary excretion studies, the vitamins of active dry yeast were shown to be somewhat more available to human beings than those of compressed yeast. The rickets-producing effect of animal rations high in yeast was explained.

Sparging with carbon dioxide was shown to double fermentative ability of yeast. The mechanism of fermentation was explored by observations of the fact that yeast does not ferment the sugar *d*-fructopyranose. Extensive information on fermentation characteristics and bios requirements of brewers' yeasts was published.

Hexosediphosphoric acid was identified as a normal intermediate substance in the carbohydrate metabolism of yeasts, and existing theories of carbohydrate metabolism in yeast were confirmed through studies of acetate assimilation. The nature of the combined forms of pyridoxine in yeast was investigated. The structure of yeast ribonucleic acid was studied by observing action of the enzyme ribonucleinase.

White sugar was shown to contain substances capable of promoting yeast growth. Research on thermal death rates of yeast cells was published. Melibiose broth fermentation and bios factor response were recommended for use in classifying yeasts. The ability to produce extracellular starch was found to be limited to capsulated nonfermenting asporogenous yeasts. A nonrespiratory variant of the common yeast *Saccharomyces cerevisiae* was produced by exposure to ethylene oxide. Yeast autolyzate was used as a medium for growing the organism that causes a form of influenza. Fermentation by yeast was used to remove sugar from raw egg white before drying in order to improve keeping quality of the dried product.

## Young Men's Christian Association.

The Young Men's Christian association is a world-wide fellowship seeking to improve the spiritual, social, recreational and physical life of young people, particularly young men and boys.

In the United States more than 1,500 students from Y.M.C.A.s, Young Womens Christian associations and Student Christian associations met at the University of Illinois during the 1947 Christmas holidays as the National Student assembly. The Y.M.C.A.s and Y.W.C.A.s co-operated in bringing together approximately 1,100 boys and girls in the first national high school youth conference. The 75th anniversary of Y.M.C.A. work with railroad men was celebrated at an international transportation conference in Cleveland, O.

North American Y.M.C.A.s reached the halfway point in their campaigns to raise an $8,650,000 World Youth fund for restoration of buildings and equipment and strengthening of Y.M.C.A.s in war-devastated countries of Europe and Asia. With the termination of U.S.O. at the end of 1947 the government and public looked to the Y.M.C.A. to take over a major part of the spiritual and recreational service to the armed forces. To do this adequately would mean continuation of the 23 army and navy Y.M.C.A.s which served the armed forces before World War II, large-scale service to men in uniform by civilian Y.M.C.A.s in the United States and new organization at strategic points overseas. The National Council of Y.M.C.A.s in June challenged local associations to find support in their communities for this national service.

The 1,540 Y.M.C.A.s in the United States continued to provide dormitory and food service; spiritual, recreational, social, educational and health programs; personal and vocational counselling for their 1,665,722 members and others. About 224,355 high school boys were enrolled in 7,766 Hi-Y clubs in schools across the country. An outstanding feature of Y.M.C.A. work with youth is the Youth and Government program, an effort to teach democracy by actual practice. Model legislatures met in 11 state capitals. Nine other states made final plans to start the program in 1948.

Expenditures by Y.M.C.A.s in the United States during the year totalled $84,685,300 while capital investments totalled $231,323,800. Officers were Kirtley F. Mather, president, and Eugene E. Barnett, general secretary. Headquarters of the National Council of the Y.M.C.A.s were at 347 Madison avenue, New York 17, N.Y. (O. E. P.)

**Great Britain.**—The 470 associations and Red Triangle clubs in Britain had 83,000 members in 1947, including more than 20,000 former servicemen. More than 300 Y.M.C.A. centres in Britain and 100 overseas served the men and women of the forces, providing not only facilities for rest and refreshment, but also a vast variety of cultural, social and religious activities. A hundred mobile canteens, music and entertainment vans, travelling libraries and cinema vans served isolated posts in 15 countries. A new development in Britain was the work done among thousands of European volunteer workers. Other community services continued.

Civilian Y.M.C.A. members under 30 contributed one-fifth of the British delegation to the World Conference of Christian Youth at Oslo, Norway, of which the Y.M.C.A. was a sponsor. At the plenary meeting of the World's Committee of the Y.M.C.A. at Edinburgh, Scotland, 250 delegates from 46 countries met to plan the reconstruction and extension of Y.M.C.A. work in needy and strategic areas. This meeting was followed by an international Y.M.C.A. conference in Sweden. The services among prisoners of war and displaced persons were to continue; new developments, especially in Africa, were to be initiated. (R. W. J. K.)

## Young Womens Christian Association.

To aid women in 30 war-affected countries, the National Board of the Young Womens Christian Associations of the United States of America held a nation-wide Round-the-World Y.W.C.A. Reconstruction Fund campaign for $2,100,000 during 1947. The drive opened in January, and as early as May the Y.W.C.A. had begun sending its most expert fieldworkers abroad to train new young women leaders, make possible rest leaves for exhausted prewar personnel, assist in repair of bombed-out centres and meet emergency needs in other areas. In addition, students from other countries were brought to the United States for study and observation.

Another innovation during the year was the first joint interracial Y.W.C.A.-Y.M.C.A. youth conference held at Grinnell college, Grinnell, Ia., for 1,300 teen-agers and coeds. In a further effort to prepare young women for the responsibilities of the postwar world, the Y.W.C.A. held 20 Leadership Training institutes for volunteers and professional staff at focal points throughout the U.S. Its 435 community associations participated in National Y.W.C.A. day on Oct. 14 and the entire constituency of 3,000,000 observed World Fellowship week from Nov. 9 to 15 with appropriate services. The National board sent ten delegates to the conference of the World's Council of the Y.W.C.A. held in Hangchow, China, in October.

In 1947 Mrs. Arthur Forrest Anderson was president, and Mrs. Harrison S. Elliott, general secretary of the National Board of the Y.W.C.A., which had headquarters at 600 Lexington avenue, New York 22, N.Y. Continuing publications were: *The Woman's Press; The Bookshelf.* (M. E. S.)

**Great Britain.**—During 1947 the opening of more hostels for young workers and students was the most urgent concern of the Y.W.C.A. in Great Britain; among several opened in London, one provided accommodation for 350 workers. Centres were still being run for women serving overseas, and there were Y.W.C.A. representatives in the international teams working in displaced persons' camps.

Membership had increased by 25% during World War II, and more than 20,000 service women who had used Y.W.C.A. service centres in Britain and overseas wished to keep in touch with the association.

Delegates attended the Oslo World Conference of Christian Youth, and members in other countries shared their holiday camps with British members. Students of many nationalities came to train at the Y.W.C.A. college at Hampstead, London, while British students who had completed the two-year course were working in Lagos, Jerusalem and China.

A conference attended by members from 14 countries was held at Windsor, and in October representatives attended the first postwar conference of the World's Council of the Y.W.C.A. in China. (M. Kr.)

## Yugoslavia.

A federal republic of southeastern Europe, bounded on the north by Austria, on the northeast by Hungary and Rumania, on the east by Bulgaria, on the south by Greece, and on the west by Albania, the Adriatic sea and Italy. Area: approximately 96,200 sq.mi. (including newly acquired territory of Istria and the Julian march); pop. (est. 1947): 15,713,000. Federal units (pop. est. 1947): Serbia 6,566,000; Croatia 3,564,000; Slovenia 1,178,000; Bosnia and Hercegovina 2,414,000; Macedonia 1,120,000; Montenegro 371,000; (Istria and the Julian march 500,000). Chief towns (pop. census 1931): Belgrade (cap. 266,849); Zagreb (185,581); Sarajevo (78,173); Subotica (100,058); Ljubljana (79,056). Languages: Serbo-Croat, Slovene and Macedonian are the official languages; German, Hungarian and Albanian are also spoken by the minorities. Religion: 1931 census, Greek Orthodox 48.7%; Roman Catholics 37.5%; Moslem 11.2%. President of the republic: Dr. Ivan Ribar; prime minister, minister of national defense and commander in chief: Marshal Josip Brozovich or Broz (Tito) (*q.v.*).

**History.**—A five year plan was accepted by the Yugoslav parliament in April 1947. It aimed at the improvement of agriculture and a very large expansion of industry: by 1951 production of coal, coke and iron ore was to be double that of 1939; a strong domestic heavy industry was regarded as an essential basis for the general development of industry and for the raising of the people's standard of living. Output of electricity was to be four times that of 1939. The country's need of agricultural machinery was to be met by home production; artificial fertilizers were to be produced at five times the prewar level, industrial crops and fodder were to be encouraged, and large schemes of irrigation and drainage were to be undertaken in the coastal highlands and the big river valleys.

The plan was directed toward generally accepted ends, for the

CELEBRATION IN BELGRADE, Yugoslavia, on June 22, 1947, commemorating the sixth anniversary of Russia's entrance into World War II. Marshall Tito (wearing white) is shown at the centre of the reviewing stand

over-population and under-employment of the Yugoslav villages could only be relieved by industrialization, and vast public works were necessary before the country would be able even to make good the ravages of war and return to the far from prosperous level of 1939. The source of equipment for these ambitious projects, however, was a primary problem. Trade with Sweden and with Switzerland had brought some valuable machinery, and more was expected from those countries and from Czechoslovakia; but the new regime had made clear its hostility to western financial aid, by declining the invitation to the European Economic conference in July, and even ordinary trade with western countries was made difficult by the strained state of political relations. Trade negotiations had been carried on for some time with Britain, but results had so far been precluded, partly by failure to agree on compensation of expropriated British firms in Yugoslavia and partly by the inability of the British government to deal directly with Belgrade on behalf of individual British exporters.

Throughout the year there were a series of trials for espionage, sabotage and conspiracy. Some were concerned with armed bands of Slovene "White Guards," Croatian "Crusaders" and Serbian "Chetniks." These did undoubtedly exist, although their numbers seemed small and their activities not very dangerous. Other trials seemed intended simply to discourage Yugoslav subjects from having any contact with British or U.S. citizens. Heavy terms of imprisonment, and in some cases death sentences, were given for passing "state secrets" or "slanderous information" to "foreigners," but the evidence published at the trials seemed to show that the former were neither secrets nor dangerous to the state, while the latter were not more than general criticisms of the regime. The most eminent persons condemned in the year's trials were Milos Trifunovitch, former leader of the Serbian Radical party (eight years' imprisonment, January); Professor Boris Furlan, a Slovene scholar of advanced democratic views (death sentence, commuted to life imprisonment, August), and Dragoljub Yovanovitch, Serb left-wing Peasant party leader (nine years' imprisonment, October). By a decree of March 9, former king Peter II and the royal family were deprived of Yugoslav nationality.

Treaties of friendship, co-operation and mutual aid were made with Bulgaria on Nov. 29, with Hungary on Dec. 8 and with Rumania on Dec. 19. Agitation by Communist leaders of the Yugoslav Macedonians against alleged Greek oppression of Macedonian Slavs across the frontier continued and the Yugoslav chargé d'affaires in Athens was withdrawn on Aug. 15. The claims of Yugoslav propaganda with regard to Trieste and Carinthia were, as before, combined with bitter attacks on Britain and the United States. Relations with the authorities of the British zone in Austria were not improved by the existence in the zone of political refugees from Yugoslavia; a special commission was formed by the British government to investigate such cases, and during the year a certain number of Yugoslav "war criminals" were returned to Yugoslavia. There were numerous cases of arrests by the Yugoslav frontier troops of British or U.S. soldiers who had inadvertently strayed across the Yugoslav frontier. In some cases the arrests appeared to have taken place outside Yugoslav territory. The soldiers were sometimes held for weeks or months, and badly treated.

Diplomatic relations with Chile were broken off in October after the expulsion of Yugoslav diplomats there by the Chilean government, which claimed in an official communiqué of Oct. 8 that Yugoslavia was creating in South America "a vast Communist espionage and sabotage organization." (H. S.-W.)

**Education.**—(1946–47) Elementary schools 10,747, scholars 1,500,000; grammar schools 149, scholars 257,937; secondary schools 260, scholars 17,523; secondary technical schools 169, scholars 30,729; faculties at universities and technical colleges 30, students 38,192.

**Finance.**—General state budget (1947): revenue and expenditure amount to 85,854,000,000 dinars. The unit of currency is the dinar; in 1940, 1 dinar = 2.25 U.S. cents.

**Communications.**—Railways (1947) 6,717 mi.; main roads (1947) 20,646 mi.; radio stations 13; receiving sets licensed 210,000.

**Agriculture.**—Wheat (1946) 1,986,000 short tons; under the five-year plan (1946) acreages planted were expected to reach the following figures in 1951: wheat 5,680,000; maize 5,680,000; industrial crops 12,350,000; fruit trees 17,964,000.

**Mineral Production.**—No figures for current production were available in 1947; according to the five-year plan (1946), output in 1951 would attain the following figures (in short tons): coal 18,180,000; crude oil 496,000; iron ore 1,653,000; pig iron 606,000; copper 44,000; lead 71,000.

**Yukon Territory.** Yukon, the most northwesterly political division of Canada, was created in 1898; it is bounded by Alaska, British Columbia, the Northwest Territories and the Arctic ocean. Area, 207,076 sq.mi., of which 1,730 are fresh water; pop. (1941) 4,914, (1947 est.) 8,000. Seat of government: Dawson City. The Yukon is administered by a three-member territorial legislative council elected triennially, and a controller, and is represented federally by one member of parliament.

**History.**—The biggest single economic event of the year 1947 was the sale in August by the U.S. Foreign Liquidation commission of the White Horse refinery to Imperial Oil Ltd. for $1,000,000. From April 1944 to March 1945, the refinery had processed 976,764 bbl. of crude oil brought to it by the Canol pipe line from wells 600 mi. away at Norman Wells, N.W.T. It had cost $6,000,000. Imperial Oil dismantled the refinery and moved it by special trucks over the Alaska highway to Edmonton for reassembly and use in cracking crude oil from the new Leduc, Alberta, fields.

Heavy traffic continued throughout the year on the Alaska highway, kept in good shape by Canadian army engineers. Two bus lines operated from Dawson Creek to Fairbanks, Alaska, via White Horse. Gas stations and stopping places for passengers were established at a few points along the highway.

The coldest Canadian official thermometer reading in history came on Feb. 6, at Fort Selkirk in the Yukon, when the mercury dropped to 86° below zero. This was also the coldest North American reading on record. Barking dogs could be heard 4 mi., an aeroplane engine motor 20 mi. Human breath left vapour trails 100 yd. long. Thousands of rabbits died, adversely affecting fox trapping.

**Mining.**—Placer gold, running up to $100 a pan, was discovered on the banks of the Firth river, 400 mi. north of Dawson City. A new silver-lead mine was opened at Keno Hill, in the famous Mayo district. Production averaged 100 tons of ore daily. An agreement was entered into between the dominion government and the Yukon Coal company for the development and operation of bituminous coal deposits at Tantalus Butte, near Carmacks, on the Lewes river about 100 air miles northwest of White Horse. The coal was for mining, steamship navigation and domestic use.

**Production.**—The gross value of production in 1945 was $5,152,544 (value of Northwest Territories included). The net value was $4,656,166, which was .07% of Canada's 1945 production. The per capita production was $273.89. (*See* also CANADA.) (C. CY.)

**Zanzibar and Pemba:** *see* BRITISH EAST AFRICA.

**Zinc.** The data on world production of zinc, shown in Table I was revised by the addition of figures reported during 1947 giving the best picture of world output that had been available from before the war.

Of the various shifts in output resulting from World War II, those in Europe are, of course, the most striking, especially those in Germany, Belgium and Poland. The 1946 output of these countries was less than a third of the tonnage reported in 1939.

**United States.**—The salient features of the zinc industry in the United States are shown in Table II.

There was an improvement in mine production in the first half of 1947, with a slump in the third quarter. The total for the nine months was 478,563 tons. Production of slab zinc followed

| Secondary recovery | 189.6 | 284.0 | 330.5 | 368.5 | 345.5 | 360.4 | 300.7 |
| Consumption | 626.0 | 827.4 | 728.2 | 816.8 | 888.6 | 852.3 | 801.2 |
| Stocks | ? | 92.0 | 155.6 | 261.0 | 298.5 | 328.6 | 269.2 |
| Producers' | 86.3 | 25.1 | 84.4 | 170.6 | 233.7 | 256.2 | 176.2 |
| Consumers' | ? | 66.9 | 71.2 | 90.4 | 64.8 | 72.4 | 93.0 |

the same pattern, with a total of 635,604 tons in the nine months.

**Canada.**—Primary zinc production dropped from 258,607 short tons in 1945 to 235,310 tons in 1946—185,683 tons of metal and 49,627 tons of recoverable zinc in ores exported. This decline extended into 1947, with a total of 207,390 tons for the year.

**Mexico.**—Mine production increased from 153,200 short tons in 1946 to 141,200 tons in the first seven months of 1947, almost equal to the peak war rate of 240,750 tons in 1944.

**Australia.**—Production showed little change in 1947, with 58,270 short tons in the first nine months.

**Belgium.**—The monthly production rate rose from 4,100 short tons in Jan. 1946 to 12,450 tons in Aug. 1947, and the 1947 total through August was 88,460 tons.

**Poland.**—Postwar recovery was not so far advanced as in Belgium. Metal output through Sept. 1947 totalled 58,250 short tons, against 128,955 tons in 1939. (G. A. Ro.)

**Zirconium.** The production of zirconium ores in the United States is not reported, but in 1946 the total shipments of domestic and imported concentrates to consumers exceeded imports by about 7,000 short tons, while at the same time stocks declined by 1,300 tons. The imports include baddeleyite from Brazil, and zircon concentrates and mixed zircon-rutile-ilmenite concentrates, mostly from Australia.

The following table shows such data as were available, in short tons:

| Zircon | 1941 | 1942 | 1943 | 1944 | 1945 | 1946 |
|---|---|---|---|---|---|---|
| Imports | 15,652 | 11,341 | 11,582 | 11,317 | 17,144 | 11,152 |
| Shipments | ? | 5,766 | 8,954 | 14,484 | 15,988 | 20,555 |
| Stocks | | | | | | |
| Industry | 6,549 | 6,705 | 8,197 | 4,867 | 6,313 | 5,059 |
| Government | ? | 4,500 | 5,040 | 4,840 | 2,581 | 2,251 |
| Baddeleyite | | | | | | |
| Imports | 5,002 | 15,283 | 8,891 | 2,332 | 792 | 2,432 |
| Stocks, government | ? | 4,156 | 14,599 | 15,848 | 15,829 | ? |

About two-thirds of the zircon consumption goes into ceramics and the other third is divided about equally among refractories and metals and alloys. Baddeleyite goes mainly to refractories and alloys. (G. A. Ro.)

**Zoology.** The Bikini Scientific Resurvey (Press Summary No. 27, Sept. 11, 1947) conducted by the U.S. navy and co-operating civilian scientists showed that one year after the explosion of two atomic bombs, fish, clams, lobsters, sea urchins, and other inhabitants of the lagoon continued to be slightly radioactive. Contrary to expectation, there were no notable effects on the reproductive cycles of the marine organisms exposed to radiation, nor was there any evidence of mutation in the thousands of plants and animals examined.

WATER-OPOSSUM (yapock), a rare animal added to the Bronx zoo in New York city during 1947. The animal's 14-in. tail was 2 in. longer than its body

The American Society of Zoologists met jointly with the American Association for the Advancement of Science in Chicago, Ill., Dec. 29–31, 1947. A total of 286 papers were scheduled at this meeting compared with 197 in 1946, an increase of 45%.

**Research and Publication.**—From the welter of publications of zoological interest it is possible to consider only a small sample here.

*Embryology and Anatomy.*—Albert Tyler's review of developmental physiology reflects the shift of embryological interest away from morphological problems and toward an increasing preoccupation with the chemistry and physics of the embryo: fertilizin (a substance essential to fertilization in many marine invertebrates) and the fertilization reaction, immunological relations of developing organs and enzyme systems in development. Much work was devoted to the elucidation of the role of a newly-discovered enzyme, hyaluronidase, in fertilization. This enzyme, found in the testes and sperm of mammals, disperses the follicle cells that surround the freshly-ovulated egg, thus making the entry of the fertilizing spermatozoan possible. Lord Rothschild, in a review of the problems of fertilization, suggested that the reason so large a number of spermatozoa are necessary for successful fertilization in mammals is that smaller numbers would fail to provide enough of the enzyme to disperse the coat of follicle cells.

Jane M. Oppenheimer summarized the results of her own and others' mapping of prospective embryonic regions in the eggs of bony fish and the transplantation experiments performed in this group. The basic results were similar to those found in amphibians.

C. H. Danforth, in an important contribution, showed how it is possible for correlated anatomical changes to occur as a consequence of a single gene mutation. He found that a single dominant gene is responsible for various grades of polydactyly (extra digits) in cats. The primary effect of the gene appears to be an increase in the amount of tissue in the embryonic limb, resulting in a change in the size or number of the digits; associated with this change, possibly induced by it, is the development of extra cartilages; these in turn attract extra tendon terminals; this leads to splitting of the muscles to which they lead; and finally nerves, blood vessels and structures of the skin adjust to the altered relations. The new limb with five or six toes is a completely harmonious structure.

Charles Singer and C. Rabin published a definitive study of the preliminary series of six illustrations issued by Andreas Vesalius in 1538, seven years before the publication of his great anatomy. This is an important document for understanding the transition from the anatomy of Galen to that of the renaissance and modern periods.

*Radiobiology.*—Many investigators turned their attention to the possibilities of using radioactive substances, which in 1947 were available in quantity, for physiological studies. M. D. Kamen considered radioactive tracers in biology in a valuable handbook. Miriam P. Finkel studied the transfer of plutonium and radioactive strontium across the placenta following their injection into pregnant mice. Young mice treated *in utero* with strontium and before weaning show retarded growth, defective bone formation and bone cancer (osteogenic sarcoma). Plutonium-treated young showed no immediate pathological changes.

*Natural History, Biography and Taxonomy.*—Edward A. Steinhaus gathered and integrated information bearing on the interrelationships of insects and micro-organisms (viruses, rickettsiae, bacteria, etc.)—a stupendous undertaking for one man. David Lack, in a book of interest to naturalists and students of speciation, restudied Darwin's finches, a group confined to the Galapagos Islands.

The Pacific World series of handbooks was continued by two volumes: one on the birds of the Philippines by Jean Delacour and Ernst Mayr, the other on the mammals of Asia by G. H. H. Tate. Both maintain the high level of the series and the latter would perhaps be of special interest to occidental naturalists for its accurate description of the ecology, habits and taxonomy of unfamiliar forms, among which might be mentioned moles, shrews, bats in great variety, pangolins, monkeys, gibbons, greater and lesser pandas and the civets and mongooses.

G. H. Parker's autobiography is an account of an active life as teacher, traveller and investigator, and contains much of interest about the intimate history of Harvard's biology department over a 60-year period. (*See* also ENDOCRINOLOGY; ENTOMOLOGY; GENETICS; MARINE BIOLOGY; PALAEONTOLOGY, VERTEBRATE; PHYSIOLOGY.)

Steinhaus, *Insect Microbiology* (1946); G. H. H. Tate, *Mammals of Eastern Asia* (1947); Albert Tyler, "Developmental Physiology," *Annual Review of Physiology*, vol. 9 (1947).

(G. P. DU S.)

**Zoological Parks.**—*Australia.*—Laws of the commonwealth prohibiting the importation of all wild ruminants and primates continued in force in 1947; consequently no important collections could be secured from abroad.

*Africa.*—From a comparison of official records, Pretoria, the largest zoo in Africa, might be accredited for propagating more species of valuable mammals than any zoo in the world. The husbandry of the Pretoria collection, in every respect, was appraised the most careful in the world.

*Europe.*—The magnificent collection and country park at Cleres was opened to the public for the first time; the owner, Jean T. Delacour, made arrangements eventually to present the collection to the government of France. The London zoo catalogue indicated that the collection was substantially larger than any other in the world. The zoos of Europe, excepting those in Germany, appeared to be flourishing, particularly those in Antwerp and Copenhagen.

*North and South America.*—No costly or especially interesting physical improvement in any American zoo was undertaken during the year 1947. Instead of erecting new structures there was extensive remodelling of existing buildings and enclosures. These new devices were installed—darkened public space, glass cage fronts, fluorescent lighting, therapeutic lighting, contact heating and air conditioning. Attendance and income at all zoos exceeded that of 1946. The trend to place the building and management of zoological parks under nonprofit zoological societies continued to involve additional institutions, new and old. Commercial dealers imported meagre collections containing only the most familiar species. It was thought that the management of parks probably would find it necessary to employ their own collectors and to arrange exchange of collections with zoos and game departments in other countries. The New York Zoological society secured animals from Africa, Central America and Australia by this means. Several new and interesting species were secured. The acquisition made by New York included platypus and Pere David deer. Charles Wharton secured and brought the first large collection from the Philippines. His collection included: flying lemur, tarsier, tree shrew, cloud rat and monkey-eating eagle. The American Association of Zoological Parks and Aquariums elected Lee S. Crandall, general curator of the New York Zoological park, president of the association for the year 1948. Functions and transactions of the association increased in benefit and scope throughout the year. (RO. B.)

# INDEX

**The black type entries are article headings and cross references. These black type article entries do not show page notations because they are to be found in their alphabetical position in the body of the book, but they show the dates of the issues of the** *Book of the Year* **in which the articles appear.** For example **"Austria 48, 47, 46, 45"** indicates that the entry "Austria" is to be found in the *1948 Book of the Year*, the *1947 Book of the Year*, the *1946 Book of the Year* and the *1945 Book of the Year*. The reference **"Air Forces of the World:** *see* **Aviation, Military 48, 47, 46, 45.** *See* **Air Forces of the World 44,"** indicates that the entry "Air Forces of the World" is to be found in the article "Aviation, Military" in the *1948 Book of the Year*, the *1947 Book of the Year*, the *1946 Book of the Year* and the *1945 Book of the Year* and under the heading "Air Forces of the World" in the *1944 Book of the Year*. **All black type entries without dates indicate that the same entries appear in all previous issues. Examples,** not **Advertising 48, 47, 46, 45, 44,** but **Advertising;** not **Abyssinia:** *see* **Ethiopia 48, 47, 46, 45, 44,** but **Abyssinia:** *see* **Ethiopia.**

The light type headings which are indented under black type article headings and cross references refer to articles elsewhere in the text (of this issue only) related to the entry listed in black type. The light type headings which are not indented refer to information in the text (of this issue only) not given a special article. All the light type headings show page references.

All headings whether consisting of a single word or more are treated for the purpose of alphabetization as single complete headings. Names beginning with "Mc" and "Mac" are alphabetized as "Mac"; "St." is treated as "Saint." All references below show the exact quarter of the page by means of the letters *a*, *b*, *c*, and *d*, signifying respectively the upper and lower halves of the first column and the upper and lower halves of the second column.
